The ship *Rosalinda*, Captain Timpson, which sailed from Quebec about the 30th day of August for Liverpool, on the night of the 9th of September broached to, filled, and capsized. The captain and mate were drowned in the cabin; ten seamen and two apprentices were washed overboard and drowned; and eight surviving seamen were picked up by a French vessel and landed at St. Pierre, whence they were brought to Sydney, C.B., on the 30th ult. Two of the seamen were sick, and one was severely injured.

It is confidently stated (says the *Monmouthshire Merlin*) that Lord Abergavenny will shortly resign his seat for Glamorganshire, in consequence of the close attention to matters connected with his Lordship's Irish estates, rendered necessary by the demise of the late Earl.

A pretty smart hurricane visited Liverpool on Monday morning, but, happily, soon expended its fury, without inflicting any damage in the Channel or on shore

The Electric Telegraph Company have given notice of their intention to apply to Parliament for the ensuing session for a prolongation of the term for the use of their patents; and in accordance with a requisition from the inhabitants of Coventry, they have determined on extending the telegraph wires into that town

The Board of Trinity College, Dublin, has reduced the rents and forgiven some years' fines on their estates in the barony of Kenmare, in Kerry

On Sunday night last, the residence of the Rev. William Bellamy, at Sheffield, was entered during the absence of the family, plundered of a quantity of valuable property, including silver spoons, a cream-jug, a silver half-pint mug marked "J. J.," another marked "T. B.;" a gold locket with the letters "T. B." in the Gothic character; another in silver with the name "Jane Perrin;" nine gold rings in a box, two silver fruit-knives, case marked "Anne," and various other articles

The number of emigrants whose names were registered at Fort Laramie, June 16, on the overland route from the United States to California, amounted to 25,000 men, women, and children. The sufferings endured on the route were of the most severe kind.

The Emperor of Russia proposes, it is said, to have a tunnel bored under the Neva, similar to that executed by Mr. Brunel under the Thames. M. Alarc Falconnet, a celebrated French engineer, has been applied to, to furnish plans for this undertaking.

On Sunday night, the house of Mr. Matthew S. Finch, at Standishgate, near Wigan, was entered and robbed of a quantity of plate marked "F.," an oval-shaped silver tea-pot, a gentleman's gold ring with green stone, and a mourning ring with the inscription "Henry Finch," various other rings and brooches, a silver snuff-box, and other property;

The convict prisons at Dartmoor are in such an advanced state of preparation as to be ready for the reception of a limited number of prisoners. Last week sixty convicts were lodged in them. These men are to be employed first in completing the works on the prisons, and then in agricultural operations on a part of the moor

The question of representative boards, for the disbursement of county rates and funds, is to be taken into consideration at a public meeting of the West Riding of York, to be held at the Railway Hotel, in Normanton, on Wednesday, the 13th inst., at 12 o'clock at noon.

The last accounts from Oregon present a flattering description of the spirit of improvement and progress which generally prevails. Governor Gaines was received on his arrival with every manifestation of respect and hospitality.

It was reported at Panama at the last date, that a revolution, headed by General Flores, was about to be attempted against the republic at Guyaquil.

We learn from Cincinnati (United States), that on the 31st ult. an officer from Glasgow, Scotland, arrested a person who some short time since absconded from one of the Glasgow banks; 1400 dollars were recovered, and he was discharged from custody.

From Nova Scotia we are informed that Earl Grey had notified the Provisional committee that the British Government will grant assistance towards constructing the Halifax and Portland Railway. Earl Grey, it is said, approved of the enterprise, and considered that Halifax would ultimately become the chief port for transatlantic communication

The *Carlisle Patriot* states that the working men of that city gave a public dinner to the Mayor (Joseph Rome, Esq.), last week, as "a mark of respect for the courteous, impartial, and independent manner in which he has discharged the duties of chief magistrate during the past year."

A letter from Milan states that the Marquis and Marchioness of Ely had a narrow escape on a journey in crossing the Alps, by St. Gothard, and when within a few yards of Airolo, the horses took fright, and the postilion lost all command over them. At the time they were but a few inches from the precipice, when their courier, Vincenzi, seeing the danger, leaped from the box, and in an instant arrested the horses. The danger was averted, but Vincenzi had an ankle dislocated, and was carried to an *auberge*, where he remained some days; but Lord and Lady Ely were enabled to proceed to Milan on the following morning, *en route* to Florence

On Friday night week, the house of Mr. John Bolland, in Kirkgate, Yorkshire, was broken into, and the sum of £364 10s. stolen therefrom. The money was taken from a place very near where the owner was sleeping; but he heard no noise, and did not find out his loss until he got up. Mr. Bolland is a horse-dealer, and had prepared on Friday to start the following day for Ireland to purchase horses.

The Hon. B. Beilby Lawley, the eldest son of Lord Wenlock, is a candidate for the vacant by the elevation of Mr. Martin, Q.C., to the judicial bench.

Hiram Smith, *alias* Richard Trowler, Levi Harwood, and James Jones, three of the men committed by the coroner and the magistrates of Guildford, for the late murder and robbery at Frimley, have been removed to Horsemonger-lane gaol. Trowler was also committed on Wednesday last. They will have to remain in the county gaol until the end of March, when they will be removed to Kingston, to be tried at the Spring Assizes which will be held in that town

As John Stephenson, of Driffield, Yorkshire, a butcher's cad, was leaving the Red Lion Inn, a few nights ago, a woman inserted her hand into his pocket in which he kept his butcher's knife with the point upwards, which entered her hand and cut her severely Her object was plunder, but the biter was bit

The ship *Persia*, Captain Stevens, arrived in the West India Docks, from Ceylon, on the 31st ult., having on board two very fine young elephants, the property of a large number of monkeys, deer, civet cats, porcupines, moose deer, &c., consigned to the Zoological Society, Regent's-park. The animals are all in very fine condition, and can be seen at present on board the vessel in the import dock. The elephants are male and female, being about two years old, and standing about four feet high, and are remarkable for their docility and playfulness, which won the kind attention and esteem of all the passengers during the voyage homeward.

When Major Campbell, of Ornadale, in Argyleshire, and a party of friends, were roe-hunting on Friday week, with Captain Campbell, of Glendarnel's hounds, a most extraordinary circumstance occurred. A roe, hard pressed by the hounds, sprang over a precipice, and was killed on the spot; three of the dogs followed, but were so little injured that two of them were fit for work the next day. The rock has since been measured, and found to be 93½ feet in height.

THE GREAT INDUSTRIAL EXHIBITION OF 1851.

Ludicrous enough are some of the valicinations respecting the vast edifice gradually arising in Hyde Park. It has been prophecied, that the strength of the columns being inadequate, the whole building will come down with a run. When this assertion was mentioned to Mr. Fox, one of the contractors, "Ah!" he exclaimed, "that was what they said about our Pembroke Dockyard building-sheds: they were some hundred feet high, and more than that wide, and the shipwrights refused to work in them, from fear of their slim and delicate outline giving way. When the Admiral-Superintendent mentioned this to me, I said, 'We will willingly thicken them with hay-bands.'" These sheds, we may tell our readers, have well withstood the test of the severest Atlantic gales.

We may here apprize exhibitors who may require glass cases, that they can be specially supplied with them, at very reduced charges, by Messrs Fox, Henderson, and Co. The object of this, when is planned with the progression of the interior, has designed glass cases harmonious to the character of the building.

The demands for space poured in upon the executive committee nearly double the amount of accommodation at their disposal within the United Kingdom.

The committee are unceasing in their exertions towards a liberal and fair adjustment. When the amount of space which each local committee shall occupy with its contributions is decided upon, the commissioners will despatch some practical and intelligent representative to assist the local committees in their allotment of the space assigned to them.

A novel case occurred at the Mansion House on the 6th instant. A Mr. Adam Young, of Lower Thames-street, was brought up on a charge of receiving one shillings from a Mrs. Richardson, a staymaker, who appied for counter space in the Great Exhibition. The lady evidently acted under the impression that she was securing a right to a considerable amount of room; but the defendant affirmed that his fee was demanded on account of the trouble he should undergo in making application for space to the proper authorities. The magistrate, in finding bail, said the defendant must appear at the sessions to answer any charge that may be brought against him. We are here particularly requested to remark, that *no fee or pecuniary charge is allowed to be made by anybody in connexion with the admission of articles into the Exhibition.*

Various inquiries have been attempted respecting advertisements for the catalogues, which are the exclusive property of Messrs. Clowes, the printers, and Messrs. Spicer, the paper makers. These gent emen successfully tendered for a catalogue of sixty-four pages, printed in double columns, and on fine paper of type, to be sold for one shilling, with a royalty of twopence to the Commissioners

In other departments of the Exhibition, the news is strikingly interesting. Specimens of locomotives will be exhibited by Stevensons, Trevithick; the Great Western will, it is said, forward their "mammoth" engine, and the London and Birmingham is doing their handsomest by sending a specimen of Liverpool." Mr. Farburn will also contribute in locomotive machinery; and the veritable hydraulic press which raised the Britannia Bridge will be brought up by train.

By the report from Bolton, we see there will be contributions of lace, nets, gloves, cloth, prints, ginghams, and specimens of cotton goods bleached at Bolton. Prizes have been offered for variety of patterns of figured muslins for toilet quilts, dimity bed-furniture, suiting for waistcoats, and brocade muslin.

Several Bristol merchants will forward African products, &c. Gloucester sends principally iron, earths, coal, sandstone, agricultural implements, cotton manufactures, specimens of cloth, with linen weft and silk warp, with cotton from Briggate, Leeds; and a woven New Testament from Bradford.

The Executive Committee, forced by the dilatory return of subscriptions, and by the necessity of meeting the demands of the contractors, have issued a circular requesting a collection of contributions within the existing month.

Kensington takes the lead in providing for the influx of strangers. Mr. Abbott Lawrence, the American Minister, has recommended his countrymen to come into this district, which has already established a provisional committee, who recommend not mercey the preparation of existing lodging-houses, but also the erection of temporary wooden barracks on the fields to the north-western district, down to the river's edge at Chelsea and Brompton, is peculiarly fitted for the accommodation of visitors.

The club associations seem to flourish, and are met with a pleasing liberality by the proprietors of the districts. The Manx Bank, Isle of Man, agrees to allow a higher rate of interest for the local deposits of the district. The excursionists are on the alert for providing means of transit from Dublin and the west of Ireland. A gentleman just returns from the local committee in Belfast, flax in its raw and undressed state, and worked up into articles of consummate beauty and use, prominently appears. The Royal Flax Society are reported to be making arrangements to exhibit the various processes connected with the growth and manufacture of flax, and some of the sewed muslin manufacturers would prepare specimens to illustrate the different processes employed in the trade.

Paris's Birmingham Gun — a return of the trades of Birmingham who will exhibit. The exhibitors number 287: the space applied for—floor, 10,880 feet; table, 2,222 feet; 6265; total, 19,367 feet. Among these are the brassfounders, button-makers, gun and pistol makers, ironfounders, jewellers, lock and hinge makers, general and agricultural machinists, *paper maché* manufacturers, saddlers, and steel manufacturers.

From the Leeds district claims have been made for 9000 superficial feet of space: out of which 5000 feet are claimed by parties for machinery alone. The mineral productions of the district are, however, but poorly represented.

The inspection of machinery in Bonnington has been commenced. One firm alone, amongst the [illegible] can claim admission, will exhibit goods to the amount of £100,000.

The attention of exhibitors is to be called to the following order:—

"The Attorney-General, with the assent and concurrence of the Solicitor-General, hereby gives notice that every person applying for a patent after the 2nd day of November next, intending to describe or refer in the Specification to any Attorney or Solicitor-General an outline description in writing or drawing, to be approved by the Attorney-General or Solicitor-General before any report will be made to the Queen."

An official circular from the Commissioners has been despatched to the Swiss committee respecting the admission of cheeses, in which they state that "when cheeses are transmitted as specimens illustrative of some novelty, they must thereby be in the mode of making them, or, in other words, when they represent processes of manufacture, in such cases the commissioners will be prepared to admit them to the Exhibition. They regret, however, that it will not be in their power to provide cellars for their reception in the manner indicated by you in your letter."

The Royal Yacht Club have decided on exhibiting some of their models, shewing the latest improvements. The Royal Thames Yacht Club have voted £50 to the funds of the Exhibition.

Mr. Weld, the owner of the well known [illegible] House, proposes to submit a perfect model of a 12-gun brig-of-war [illegible], both in the lines of his own vessel.

At Newcastle they propose a rehearsal of the part they should play in the Great Exhibition, by preparing for the public view all the specimens which that town will forward to London

Besides the mineral and other productions of Jersey, the committee report that a pilot and a barque fully rigged

Amongst the curiosities exhibited, Yarmouth proposes to send summer skates, to be used on turnpike roads, and a mastacating knife for those who have lost their teeth!

The Barnsley manufacturers do not intend to compete against each other, but collectively to take care that the best of everything shall be exhibited, from the finest drills and diapers down to oyster cloths

Among the various productions of the district, the *Dumfries Courier* notices that the Duke of Buccleuch forwards a series of illustrations of the process of separating silver from lead by crystallization, with a block of silver from lead by the same process.

The enterprising committee of Dundee have applied for an apartment in the building, to be furnished entirely by artic-s of linen and hemp manufactured in their town.

The model of docks and town at Liverpool is progressing rapidly. It will be forty feet long, and ten feet wide in its broadest parts. It has been suggested to add a mode. of the old town as it appeared in 1600.

On Friday last the City of London Committee to promote the Exhibition of 1851 was held at the Mansion House: Sir Moses Montefiore in the chair; when it was resolved to appoint a sub-committee to secure unity among the metropolitan committees, to examine the articles proposed to be exhibited, and make such arrangements as should prevent the exhibition of duplicate articles. It was stated in the course of the proceedings that the total subscriptions did not yet amount to £20,000, notwithstanding the liberality of the barristers who had subscribed £26,440. The number of proposing exhibitors from the City is [illegible] requiring 49,837 feet of flooring, 19,794 feet of counter, and 40,436 feet of wa-

The Ladies' Carpet, of which we spoke three weeks since, is progressing in a manner which must be delightful to the philanthropic persons by whom it was suggested and carried out. At a meeting of the executive on Wednesday, at the Mansion House, the Lady Mayoress presiding, the various portions in course of execution were exhibited by the ladies at present in London, several having travelled some distance for the purpose. The beauty of the harmonious arrangement of the colours, and the general brilliancy of effect in the detached portions, gave a very favourable impression of what will result when all are combined; and it is to be hoped that the few remaining armed divisions will soon find workers to fill up the list of the 150, especially as nothing [illegible] to be doing with reference to the other carpet mentioned by our correspondents. A careful drawing of the whole design will be open for inspection next week, by the kindness of Mr. W. B. Simpson, one of the committee, at 486, West Strand.

The above are only selections from the vast mass of returns with the contents of which we shall endeavour to make our readers shortly present our readers with notices of what may be expected from foreign countries.

The Marquis of Cavelli (of Rome), well-known as the proprietor of the great collection of Etruscan antiquities in the world, has just concluded the [illegible] marriage engagement with an English Catholic lady, Miss [illegible], whose ancestors were distinguished as partisans of the Stuart family, and lost the title of baronet on that account. The Marquis has purchased a palace at the Villa del Borgherini (Rome), which he is fitting up for his bride in a sumptuous style, and where his interesting and valuable Etruscan collection will form a rare ornament. The bridegroom is nearly 40, whilst the lady is in her 27th year, and is possessed of an income of £2500 per annum. The marriage is to take place before Christmas.

NATIONAL SPORTS.

The racing season is now really drawing to a close—the register being limited to five meetings, of which one only (Liverpool) comes off next week. The sport there will be a combination of flat and steeple racing—Tuesday being devoted to the former, and Wednesday to the events "across the country." The coursing appointments are Swaffham, Newcastle, Ashdown Park, and Swinton, on Tuesday; Malton and Aberdeen, on Thursday: and the Spelthorne (in the Home Park, Hampton), on Saturday. The Pontypool, on Wednesday, and Liverpool are the only steeple-chases fixtures. The week, altogether, without being an important one, will be averagely brisk.

TATTERSALL'S.

MONDAY.—There was an immense crowd this afternoon, but, owing to the settling, little was done on future events. The following were the closing prices:—

	EPSOM HANDICAP.		
9 to 2 agst Chantrey	7 to 1 agst Chief Justice	9 to 1 agst Dark Susan	
9 to 2 —— Sauter la Coupe	8 to 1 —— M.Jody	10 to 1 —— Brington	
	THE STEWARDS' CUP.		
5 to 2 agst Maria Day	7 to 2 agst Sir Woman	4 to 1 agst Gulnare	
	DERBY.		
11 to 2 agst Grecian (t)	25 to 1 agst Teddington	40 to 1 agst Confessor	
14 to 1 —— Mountain Sylph c. (t)	33 to 1 —— Black Doctor	40 to 1 —— Arfasto	
	40 to 1 —— Midas	40 to 1 —— Lightfoot	
	50 to 1 agst Robert the Bruce		

FRIDAY.—The betting this afternoon was confined to the under-mentioned horses, and, as far as it went, was tolerably brisk.

SEPTON HANDICAP.—3 to 1 agst Chief Justice (t)

LEICESTER CUP.

[illegible] 15 each laid against The Hallen, Cornish Boy, Montague, Rhenza, Rassborough, [illegible] Richard, Cockersmouth, and Chief Justice.

DERBY.

11 to 1 agst Grecian	25 to 1 agst Teddington	40 to 1 agst Midas
20 to 1 —— Lamartine (t)	22 to 1 —— Newminster	40 to 1 —— Lightfoot
	50 to 1 agst Robert the Bruce	

EPSOM AUTUMN MEETING. TUESDAY.

These races, the last of the season, commenced on Tuesday. As the weather was exceedingly propitious, several well-filled trains left the London Bridge station, the grand stand enclosure was crowded, and the general show of company, considering the lateness of the season, was very fair; still, it must be admitted, not by any means so large as the superiority of the list had led us to anticipate. The arrangements on the course were in most respects good, and well deserved commendation which followed on the manner in which the refreshment rooms were provided by Mr. Davis, the cook to the Jockey Club.

Of the sport too much cannot be said in praise It was as good as it was abundant, and highly creditable to Mr. Dorling and his supporters. The following is a resume:—

The NORMANTON STAKES of 10 sovs each, with 25 added.—Mr. Carew's d dpus (Buckley), 1. Mr. Sadd's Salute (Kendall), 2.

The BRIDGNORTH (HANDICAP) STAKES of 10 sovs each, with 100 added to G. Heathcote's b. f. out of Dark Susan (R. Sherwood), 1. Mr. Fletcher's b. f. St. Hilda (W. Sharpe), 2.

The EPSOM AUTUMN HANDICAP of 15 sovs each, with 200 added.

Mr. Drinkall's Sauter la Coupe	.. ..	(Rodney)
Mr. Williams's Chief Justice	.. ..	(Alderoft) 2
Sir G. Heathcote's br. c. out of Dark Susan	..	(T. Sherwood) 3

Betting.—3 to 2 agst Sauter la Coupe, 5 to 2 each Chantrey and Dark Susan, 4 agst Chief Justice, 10 to 1 agst the Dark Susan colt, and 12 to 1 agst any other. Docility took the lead at starting, followed in rotation by Chief Justice, Glen Saddel, Cossack, and Cauntrey; Sauter la Coupe lying off, and Cora, who got off last, bringing up the rear. No change took place in the front rank until they reached the three-quarter of a mile post, where Cossack gave way, and Chantrey took the second place, Docility still leading; they went on in this order to the distance, where Chief Justice took up the running, closely attended by the Dark Susan colt, Chantrey, Brington, Valentine, and Sauter-la-Coupe, the race being left entirely to this lot. Opposite the stand, Chantrey and Brington gave way, and Sauter-la-Coupe, challenging Chief Justice, ran a dead heat with him and Docility from home, and won by a short length, the Dark Susan colt was beaten a neck for the second place, and was closely run in by Valentine; Brington fifth. Run 2 min. 46 sec.

Maria Mont was weighed for and went into the paddock, but turned restive, ran against a post and fell; the boy received a cut on the forehead, and was led back to the stand; but, after a short delay, remounted, too late, however, to go to the post in time to start.

The WELTER STAKES of 10 sovs each, with 25 added. Mr. Carew's Agis (Captain Little), 1. Lord Strathmore's Magician (Mr. Berville), 2.

The TWO-YEAR-OLD SELLING STAKES of 5 sovs each, with 25 added Mr. Wilkin's Aristos (T. Lye), 1. Mr. Osbaldeston's Faux Pas (Simpson), 2

The BENTWICK PLATE of 100 sovs.—Lord Strathmore's Garforth (J. Smith), 1. Mr. Wood's Impression (Arnull), 2.

The SELLING STAKES of 5 sovs each, and 25 added Mr Death's Lady Frances (Dockeray), 1. Mr Manning's Elopement (Moon), 2.

WEDNESDAY

The nominations of the races "across the country" were in every respect inferior to those of the first week of Tuesday. The fields were small, and no public interest was excited. Fortunately, the weather turned out exceedingly fine, and the company was numerous. The events were as follow

The SURREY HUNT STEEPLE-CHASE of 5 sovs each, and 15 added.—Mr Mason's Tuns-me-not (J. Mason), 1. Mr. Carew's Lansquenet (W. Butler), 2.

EPSOM AUTUMN STEEPLE-CHASE of 15 sovs each, with 100 added.—Mr. Anson's Springbok (Oliver), 1. Mr Carew's British Yeoman (J. Mason), 2

The FARE HANDICAP HURDLE RACE of 5 sovs each, with 40 added.—Mr. Hughes's Miss Collingwood (Owner), 1. Mr. P. Barling's Bedford (Lund), 2. This was a very amusing affair. Miss Collingwood took the lead, and made all the running, and won (once round) in a canter. The tussle was between Bedford, who persisted in turning to scale, when they were informed that the two miles were twice round. The race immediately recommenced, Premier winning in a canter, Miss Collingwood, who was not so soon in action, finishing second. The race was, of course, claimed by the owners of Miss Collingwood and Premier, and the matter having been referred to Mr. Carew, the steward, the Honourable R. Grimston, and F. Heathcote, Esq., it was proved that the riders were prevented, both by the steward and the starter, that the race was once round. The race was given to Miss Collingwood

The SCRAMBLE STEEPLE-CHASE of 3 sovs each, with 25 added.—Mr. Land's The Painter (Owner), 1. Mr. Smith's Tamworth (Burwaas), 2.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

The continued fall in the Continental Exchanges has engaged, and still occupies, the attention of the monied interest, without, at present, the most sagacious venturing to offer any opinion as to future results. For the first time in the history of commerce, *gold* is refused as payment for the balance of trade: Holland declines to receive any; while in Belgium and France the value of the sovereign is so fast depreciating, that no man pulled up were he turning to scale, when they were informed that the two miles were twice round. The race immediately recommenced, Premier winning in a canter, Miss Collingwood, who was not so soon in action, finishing second. The race was, of course, claimed by the owners of Miss Collingwood and Premier, and the matter having been referred to Mr. Carew, the steward, the Honourable R. Grimston, and F. Heathcote, Esq., it was proved that the riders were prevented, both by the steward and the starter, that the race was once round. The race was given to Miss Collingwood

The SCRAMBLE STEEPLE-CHASE of 3 sovs each, with 25 added.—Mr. Land's The Painter (Owner), 1. Mr. Smith's Tamworth (Burwaas), 2.

THE MARKETS.

CORN EXCHANGE (Friday).—The present week's supply of English wheat for our markets' coast wise, has been confined to 1580 quarters Fresh up-to-day the arrivals of that grain by carriage were small, hence the show of samples of both red and white was trifling. Although the number of buyers in attendance was not large, the weeks of the wheat changed hands at prices quite equal to those obtained on Monday From abroad the imports of wheat have not exceeded 3500 quarters. Selected examples moved off steadily at full rates of currency. In the middling and inferior kinds next to nothing was doing. Malting barley sold readily at extreme quotations, Grinding and distilling sorts were tolerably firm. Notwithstanding that the supply of malt was small, the article moved off slowly, at late rates. The total quantity of oats exhibited is decided falling off The trade was, therefore, steady, at full currencies. The Irish oats are coming to hand in good condition. Beans, peas, and Indian corn were very dull. Larger quantities of foreign flour changed hands

ARRIVALS:—English: wheat, 1580 quarters; barley, 1490; malt, 880; oats, 1980; flour, 790. Irish: oats, 7750 Foreign: wheat, 3210, barley, ——; malt, ——; oats, 3900; flour, 7510 sacks.

English: Wheat, Essex and Kent, red, 37s to 43s; ditto, white, 39s to 49s; Norfolk and Suffolk, red, 35s to 41s; ditto, white, 37s to 43s; rye, 26s to 28s; grinding barley, 21s to 23s; distilling ditto, 24s to 27s; malting ditto, 25s to 28s; Norfolk and Lincoln malt, 44s to 48s; brown ditto, 40s to 43s; Kingston and Ware, 46s to 50s; Chevalier, 50s to 54s; Yorkshire and Lincolnshire feed oats, 19s to 21s; potato ditto, 18s to 20s; Youghal and Cork, black, 14s to 17s; ditto, white, 16s to 17s; tick beans, new, 26s to 27s; ditto, old, 28s to 30s; grey peas, 26s to 31s; maple, 28s to 32s; white, 28s to 30s; boilers, 29s to 30s per quarter. Town-made flour, 35s to 40s; Suffolk, 29s to 34s; Stockton and Yorkshire, 29s to 33s per 280 lbs.

Foreign: Dantzig red wheat,—to —; white,—to —; barley,—to —; oats,—to —; beans,—to —; peas,—to —; per quarter. Flour, American, 20s to 24s per barrel; Canada, 20s to 23s per barrel

The Seed Market. We have to notice a slight improvement in the demand for canary seed, at very full prices. Linseed and rapeseed steady. In other articles very little is doing.—

Linseed, English, sowing, 54s to 56s; Baltic, crushing, 38s to 44s; Mediterranean and Odessa, 42s to 46s. Rapeseed, 32s to 36s per quarter. Coriander, 16s to 24s per cwt. Brown mustard, 10s to 12s; white ditto, 6s 6d to 7s 6d Tares, 3s 6d to 4s 6d per bushel English rape-seed, new, 42s to 47s per last of ten quarters. Linseed cakes, English, 6l 10s to 6l 15s; ditto, foreign, 6l 5s to 6l 10s per ton. Rapeseed cakes, 4l 5s to 4l 10s per ton. Canary, 48s to 56s per quarter. English clover-seed, red,—to 0s; extra,—to —s, white,—to —s; extra,—to —s. Foreign, red,—to —s; extra,—to —s; white,—to —s; extra,—to —s per cwt.

Bread.—The prices of wheaten bread in the metropolis are from 7d to 7½d, of household ditto, 5d to 6d per 4lb loaf

Imperial Weekly Average.—Wheat, 40s 2d; barley, 24s 1d; oats, 17s 3d; rye, 33s 6d, beans, 29s 1d, peas, 30s 0d

The Six Weeks' Average.—Wheat, 40s 11d; barley, 24s 3d; oats, 16s 10d; rye, 35s, 8d; beans, 29s 0d, peas, 30s 3d.

Duties.—Wheat, 1s; barley, 1s; oats, 1s; rye, 1s; beans, 1s; peas, 1s

FLAX.—Still sales of nearly 16,000 packages have been sold this week. A very small quantity changed hands, at barely stationary prices. Privately, the demand is inactive, yet common sound could be sold at 34l to 34l 10s per ton.

Sugar.—A full average business has been doing in raw sugars, and prices have ruled steadily firm. Yellow Barbadoes is worth 45s, and grainy Bengal, 47s to 47s 6d per cwt. Refined goods steady, and brown lumps are nothing 55s to 56s 6d per cwt.

Coffee.—About 1000 bags good ordinary native Ceylon have changed hands, at 53s 6d to 56s 6d per cwt. In plantation kinds a moderate business is doing.

Rice.—Madras and Bengal qualities are slow in sale, and somewhat lower to purchase. In other sorts very little is doing.

Provisions. Owing to the heavy stock, the demand for Irish butter is very tenative, at drooping prices. Carlow, Clonmel, and Kilkenny, 76s to 80s; Waterford, 72s to 76s; Cork, 72s to 76s; Limerick, 72s to 76s; and Sligo, 70s to 74s per cwt. Dutch butter has given way 2s per cwt., but very little is doing. English butter is limited in quantity, and sells at up to 96s per cwt. Bacon market is very dull, at a further reduction of 2s per cwt: Waterford, streaky, 46s to 48s; Limerick, 44s to 46s. Lard firm, at 54s to 56s for hailsetts, and 48s to 49s for kitchen and fat.

Tallow.—Owing to the increased stock, the demand ruled heavy, at drooping prices. P. Y. C. on the spot is selling at 36s to 36s 6d per cwt. For delivery during the first three months, the quotation is 36s per cwt.

Oils.—The linseed markets steady, but the transactions are chiefly for home use.

Spirits.—Leeward Island rum is slow in sale, at 1s 6d to 1s 6½d per gallon, proof. Several purchases of Rest Jamaica have been made, at 1s 8d per gallon, proof. Brandy dull. In cognac, of the vintage of 1842, are selling at 3s 1d to 3s 3d per gallon. British-made spirits, 9s 6d per gallon.

Hops 6d to 8d per cwt.—Meadow hay, 2l 8s to 3l 15s; clover ditto, 3l to 4l 4s; and straw, 1l 1s to 1l 8s per load

Potatoes.—Moderate business is doing, at prices varying from 40s to 80s per ton. The arrivals are in excellent condition.

Coals.—Braddyll, 16s; Cresswell Main, 14s 3d; Tanfield Moor, 13s 3d, Hilton, 16s Hawvell, 16s; Lumley, 15s; Stewart's, 16s; Whitworth, 13s 6d per ton.

Wool.—Fleece.—The old duty having been declared at £233,263 14s 5d, the amount for Canterbury being £85,932. for Hants, £18,903; for Rochester, £105,728; and Sussex, £715,990, in which are included both duties, the demand for all kinds of hops has become inactive, and prices are very unlikely supported. The market is heavily supplied. Nearly 2000 bales have arrived this week.—

New Kent, 60s to 68s; ditto—Mondow hay, 2l 8s to 3l 15s; clover ditto, 3l to 4l 4s; and straw, 1l 1s to 1l 8s per load

Provisions.—Moderate business is doing, at prices varying from 40s to 80s per ton. The arrivals are in excellent condition.

Coals.—Braddyll, Cresswell Main, 14s 3d; Tanfield Moor, 13s 3d, Hilton, 16s Hawvell, 16s; Lumley, 15s; Stewart's, 16s; Whitworth, 13s 6d per ton.

Hops.—Friday.—The old duty having been declared at £233,263 14s 5d, the amount for Canterbury being £85,932. for Hants, £18,903; for Rochester, £105,728; and Sussex, £715,990, in which are included both duties, the demand for all kinds of hops has become inactive, and prices are very unlikely supported. The market is heavily supplied. Nearly 2000 bales have arrived this week.—

New Kent, 60s to 68s; ditto Weald, 58s to 66s; New Mid Kent ditto, 44 8s to 48 6s: New Weald of Kent ditto, 42 18s to 54 12s; New Sussex ditto, 42 5s to 45 18s; New Farnhams, 46 0s to 48 0s.

Wool.—Friday.—The supply of home on sale to-day's market was moderate as to number, and very deficient quality. Owing to the extreme heaviness in Newgate and Leadenhall markets, prices ruled very heavy, and Monday's quotations were with difficulty supported. We had only a moderate number of sheep on offer, nevertheless they were quite equal to the demand, which continued heavy, at barely last week's prices. Prime small calves were in demand, and sold readily at full quotations. Pigs commanded scarcely any inquiry, at last week's rates. Beasts, 2,600; sheep, 22,000; calves, 270; pigs, 400.

Monday.—Per Sack.—Inferior beef, 1s 10d to 2s 2d, middling ditto, 2s 4d to 2s 6d; prime large ditto, 2s 8d to 3s 0d; prime small ditto, 2s 2d to 3s 4d; large pork, 2s 6d to 3s 4d; inferior ditto, 2s 0d to 2s 6d; middling ditto, 2s 8d to 3s 2d; prime ditto, 3s 4d to 3s 6d; prime calves, 3s 4d to 3s 8d.

MANUFACTURE OF SUGAR.
In crown 8vo, price 5s. cloth,
A PRACTICAL TREATISE on the CULTIVATION of the SUGAR-CANE and the MANUFACTURE of SUGAR, MOLASSES, and RUM.
By C. and J. GRIFFIN and Co., London: R. GRIFFIN and Co., Glasgow.

GREAT EXHIBITION of MANUFACTURES in 1851.
ENCYCLOPÆDIA of ARTS, MANUFACTURES, and MACHINERY. By PETER BARLOW, Esq., F.R.S., and CHARLES BABBAGE, Esq., M.A., F.R.S. One large volume, 4to, of 850 pages, illustrated by 37 steel plates, by Lavry, containing 620 Figures of Machinery and Implements. Price £2 8s. cloth.
The important Exhibition of the products of the Manufacturing Industry of All Nations, which is to take place in London in 1851, renders the publication of a work, professing, as this does, to represent the existing state of the diversified Arts, Manufactures, and Machinery of Great Britain, peculiarly appropriate and interesting. This Encyclopædia will form a comprehensive Companion of the main objects that must necessarily constitute the approaching Great Exhibition, and it will shew that strong light upon the entire subject which its vast extent and multitudinous details render desirable. By this catalogue of the objects that will next year be collected in one vast Museum, such as the world never saw before, can give a fuller and more informed effect to that will be supplied by a work in which those Principles are illustrated, and that Machinery is explained, by which our great Chemical and Mechanical Arts are supported and carried to perfection. This work will therefore form a lasting guide to all who are interested in the great Exhibition. GRIFFIN and Co., London and Glasgow.

THE GREAT EXHIBITION OF 1851.
THE ILLUSTRATED LONDON NEWS
IN THREE LANGUAGES.
The Proprietors of THE ILLUSTRATED LONDON NEWS have the honour to announce to their readers and the public generally, that they have made arrangements for the publication of a complete, carefully written, and profusely illustrated History and Description of the GREAT EXHIBITION of the INDUSTRY of ALL NATIONS, to be held in London in 1851. During the whole period of the Exhibition they will issue a Series of SUPPLEMENTS of THE ILLUSTRATED LONDON NEWS, containing the fullest and most authentic Reports of the Proceedings and Descriptions of the various Objects of Art and Manufacture, with illustrations designed by the most competent Artists, and executed in the highest style of Engraving.
No expense will be spared to make the Publication in all respects worthy of the great undertaking which forms the Permanent Record, and its price, as well as excellence, will be such as will not only defy all possible competition, but place it within the reach of all classes of the community.
In order, also, that the Artists and Manufacturers of Foreign Nations, who shall send their productions to the Exhibition of the World's Industry and Skill, may have the full advantage of a permanent and intelligible record of so interesting an event, the SUPPLEMENTS of the ILLUSTRATED LONDON NEWS will be issued in the FRENCH and GERMAN LANGUAGES as well as ENGLISH.

GRANDE EXPOSITION DE 1851.
L'ILLUSTRATED LONDON NEWS
EN TROIS LANGAGES.
Les Propriétaires de L'ILLUSTRATED LONDON NEWS ont l'honneur d'annoncer au public Français, qu'ils ont disposé avec de grands soins une complète publication, qui contiendra graduellement l'histoire et Description de la GRANDE EXPOSITION de L'INDUSTRIE de TOUTES NATIONS, qui se tiendra à Londres en 1851. Pendant toute la durée de l'Exposition les publications une série de SUPPLEMENTS à L'ILLUSTRATED LONDON NEWS, contenant les plus complètes et les plus exactes Descriptions des Produits et Invention des Objets variés d'Art et de la Manufacture, avec des illustrations dessinés par les plus eminentes Artistes et executées avec le plus grande perfection, en Gravure sur Bois.
Aucune dépense sera épargnée pour rendre la Publication en tous points digne de la grande Exposition, de la quelle elle fera, une permanent Rapport. Son prix, aussi bon que son excellence, seront tels qu'elle trouvera place dans toute de la société.
Afin, aussi, quelles Artistes et les Manufacturer des Nations Etrangères, qui enverront leurs productions à l'Exposition de l'Industrie Universelle, puissent avoir l'immense avantage du permanent et intelligible Rapport d'un événement si important, les SUPPLEMENTS de L'ILLUSTRATED LONDON NEWS seront publiés en FRANCAIS, en ALLEMAND, aussi bien qu'en ANGLAIS.

THE ILLUSTRATED LONDON NEWS
IN DREI SPRACHEN.
DIE GROSSE KUNST- und GEWERBE-AUSSTELLUNG ALLER NATIONEN 1851.
Die Eigenthümer der ILLUSTRATED LONDON NEWS beehren sich hiermit dem deutschen Publikum anzuzeigen, dass sie eine sehr sorgsam abgefasste und vollständig illustrirte Beschreibung der GROSSEN KUNST- und GEWERBE-AUSSTELLUNG ALLER NATIONEN welche im Jahre 1851 in London statt finden wird, herausgeben werden. Während der ganzen Dauer dieser Ausstellung wird die ILLUSTRIRTE LONDON NEWS mit einer Reihe von BESONDERN BEILAGEN erscheinen, welche genaue und authentische Berichte von allem was in Betreff jener Ausstellung Interessantes vorkommt, nebst Beschreibung der vorzüglichsten Kunst und Gewerbi-Erzeugnisse und erläuternden ILLUSTRATIONEN, gezeichnet von den besten Künstlern und ausgeführt in Holzschnitt der ersten Classe, enthalten werden.
Die Eigenthümer der ILLUSTRATED LONDON NEWS haben keine Kosten das beabsichtigte Werk dem grossen Unternehmen in jeder Beziehung würdig zu machen der Welt darzubieten, und vollständig illustrirte Beschreibung jener grossen Ausstellung in einer neben welche als Methode, die Allgemeine Übersicht, Beschränkung Ausführlichkeit wird, und zwar in einer so eleganten Form und so einem so leichtigen Preise dass, während die Anschaffung derselben auch Classen leicht wird, sie mit der Eleganze in den Salons der Reichen harmonirt.
Um solche Nationen, und besonders deren Künstlern und Fabrikanten, die es gewünscht zu sehen, auch ohne tiefen und leicht verständliche Beschreibung aller Erzeugnisse von Fabriken, welche in der grossen universal Ausstellung von 1851, Platz finden, zu verschaffen, werden die erwähnten BEILAGEN der ILLUSTRATED LONDON NEWS in DEUTSCHER und FRANZOSISCHER, sowohl als in ENGLISCHER Sprache, erscheinen.

Now ready, 8vo, price 8s,
DR. BURNETT'S NEW WORK — The PHILOSOPHY of SPIRITS in RELATION to MATTER; shewing the real existence of two very distinct kinds of reality, which unite to form the different bodies that compose the Universe, organic and inorganic, by which the phenomena of Light, Electricity, Motion, Life, and Mind are reconciled and explained.
London: SAMUEL HIGHLEY, 32, Fleet-street.

GEO. H. PINCOTT, Resident Secretary.
99, Great Russell-street, Bloomsbury, London.

BOND'S PERMANENT MARKING INK.—The original, and by far the best, requiring no preparation, and the most means of protection for every variety of household linen and clothing. Sold by all booksellers. Be sure to ask for Bond's, and be careful to ask for the genuine article, prepared by the inventor, JOHN BOND, 98, Long-lane, West Smithfield, London. Sold by most Chemists, Stationers, and Medicine-vendors. Price is a Bottle.

BIRCHER, HEREFORDSHIRE.—To be LET by immediately, Furnished, a most desirable residence, called the MANSION, for a small genteel family. A good walled Garden, well stocked with fruit trees, and land adjoining sufficient to keep one or two cows, and more may be had if required. It is situated four miles from Leominster, and five from Kingsland Station. For further particulars, apply to THOMAS DUNNE, Esq., Bircher Hall, Leominster.

HUBBUCK'S PATENT WHITE ZINC PAINT (Healthful, Durable, and Economical).—The gentlemen of the medical profession are invited to test this article, commencing its actual qualities which render it a powerful corrective where contagious diseases prevail. Apartments painted with it are not injurious to the health of children or the most delicate constitution, but may be immediately occupied. It is the whitest paint ever produced, and retains its colour for hundreds of years, whether exposed to the vapour from gas or the most noxious gases. Each cask is stamped "Hubbuck London Patent." Full particulars may be had at the works, of THOMAS HUBBUCK and SON, Chemical Manufacturers, London.

PATENT STAFFORDSHIRE HORNS, Bath, Gem, Solar, and Transposing CORNETS, &c., by J. F. OATES, Inventor of nearly all the scientific improvements in this class of instruments which have appeared, both in this country and on the Continent, during the last seven years. Professors, amateurs, commanding officers in the army, and bandmasters, the trade, and the musical public generally, are respectfully informed that an immense saving will be effected by purchasing the above, as well as every other description of Brass Instrument, manufactured by the Patentee. Instruments sent on approval.—Lichfield, October 7, 1850.

ROYAL PAPIER MACHE WORKS and SHOW-ROOMS—JENNENS and BETTRIDGE, Manufacturers by distinct appointment to the Queen, her Royal Highness Prince Albert, and the Royal Family, 5, Baldin-street West, Belgrave-square London; and 93, Wheeley-street, Birmingham.

TO THE LADIES.—TORTOISESHELL COMBS of every kind, from the smallest band, of a few pence value, to the most splendid dress comb made, at, of superior quality, and moderate charges.—FROUT, Brush and Comb Maker, 229, Strand, near Temple-bar

DECORATIVE PAPER-HANGING MANUFACTORY and general FURNISHING ESTABLISHMENT, 18, CHEAPSIDE and 13, NEWGATE-STREET, Oxford-street.—E. T. ARCHER solicits an inspection of his superior Paper-Hangings (made by his patented invention), fitted up on the walls of the Show-rooms, which are the superior character of their PORTRAITS, comprising the very best designs of the day, both French and English, and which, with the greatest variety of other descriptions of Paper-Hangings, are offered at prices considerably below those usually charged for the same quality of goods. Also, a large assortment of Fire-screens, Chimney-boards, and Cloth, to measure rooms, which, with a specimen of Cotterell's celebrated Penny Paper for bedrooms, will be sent post-paid on receipt of two postage stamps. COTTERELL'S BROTHERS' complete Designs for walls and ceilings are well worth the inspection of persons of taste. The New Oxford-street Paper-Hangings Warehouse. No. 50, a few doors from Holborn; also at Bristol and Bath

TO PARENTS and GUARDIANS.—A Portion of the Extensive Premises in Regent-street, occupied by Messrs. CLARK and Co., Tailors, Hosiers, and Outfitters, to the ROYAL and YOUTH'S CLOTHING, such as to exhibit unusual good taste style, and fit, and having a further recommendation in their durability and very moderate cost.
College Caps and Gowns, with every kind of garment calculated for pleasure, duties, or exercise, and such as are worn by young gentlemen at the colleges and great public schools. These are always ready to be met with at the warerooms of H. J. and D. NICOLL, Merchant Clothiers, Patent Patentees, and manufacturers of cloth, Regent-street (from 114 to 120 inclusive), and 22, Cornhill.
CAUTION.—Many have assumed the use of the word "PALETOT," but Messrs. NICOLL are the sole Patentees of the design and material (in Winter or Summer substances, employed in the manufacture of this inexpensive and gentlemanly article of costume.

NEW MUSIC, &c.

COCKS'S MUSICAL ALMANAC for 1851. 8vo, 1s.—Also,
COCKS'S MUSICAL ANNUAL, No. 2, for November, 1850. Price 2s.
London: Messrs. R. COCKS and Co., New Burlington-street; and Messrs SIMPKIN, MARSHALL, and Co.: and to be had of all Music-sellers, Booksellers, Newsvenders, &c.—New Catalogues gratis, and postage-free.

"THOSE HAPPY DAYS ARE GONE."
"OH, BEING HERE," etc. "WHY ARE YOU WEEPING FOR THEE?" The above are the most favourite Ballads sung by Miss Catherine Hayes; composed by Lavenu, Osborne, and Wallace. Price 2s each.—CRAMER, BEALE, and Co., 201, Regent-street, and 67, Cornhill-street.

Furs altered, repaired, or taken in exchange.—Observe the only address, 34, Regent-street, St. Victorines, is 6d.—E. C BOURNE, Managing Proprietor Russian, Hudson's Bay and Canadian Fur Company, 244, Regent-street, established twenty-five years.

NIGHT LIGHTS.—CAUTION
PATENT ALBERT NIGHT LIGHTS.—Registered 30th March, 1844, CAMPBELL'S NIGHT LIGHTS, registered 30th September, 1845, are sold by all Grocers and Wax Chandlers throughout the country, at 6d per box The sale of the above, accumulated to the present time to many tons weekly, shews that they meet with the approbation of the public. Any description of wax is therefore unnecessary. The object of this advertisement is to request purchasers to examine the name on the Boxes, so as to insure their getting what they require.
Night Lights are liable not to last the time that they profess (frequently extinguishing in the middle of the night); or be affected by the temperature of the room they are burnt in; to be attended to by keeping any length of time; and to have an unpleasant smell
The Albert Night Lights are free from all these defects, as proved to them by several Patentees, and by long experience of the Manufacture, that they have been, and are, the best; and they therefore beg that they should any attempted substitutes be recommended, they may be carefully compared with the above specimens.
PRICE'S PATENT CANDLE COMPANY, Belmont, Vauxhall

FOOD for INFANTS, LADIES SUCKLING, and INVALIDS.—BULLOCK'S SEMOLA is agreeable to the taste, and is the most pure and nutritious substance ever introduced. For mothers suckling, for weakly children, and invalids suff

THE ILLUSTRATED LONDON NEWS.

No. 455.—VOL. XVII.] SATURDAY, NOVEMBER 16, 1850. [SIXPENCE. {WITH SUPPLEMENT, GRATIS.

THE NATIONAL GALLERY.

FROM the hubbub of politics, from the rumours of continental wars, and from the angry theological polemics which Pius IX. has so wantonly launched into this country, and to which the Prime Minister has given so pungent a stimulus by his memorable letter to the Bishop of Durham—from these, and other topics of irritation we are glad to turn to the pleasanter subject of the National Gallery, and to the Report of the Select Committee appointed to consider the present state of the accommodation which it affords, and the best means of preserving and exhibiting the works of art which belong to the nation.

The Report of the Committee, which has just been published, is dated on the 25th of July last. Before venturing to form any ideas of their own, they examined the reports of previous committees, which had been referred to them—namely, the Report of the Select Committee of 1836 on Arts and Manufactures; the Report of the Committee of 1841 on the State of the National Monuments; the minutes of evidence taken before the Select Committee on Works of Art, in 1847—48; and the Report of the Commission appointed during the present year to inquire into the state of the pictures in the National Gallery.

The inquiries of the Committee resolved themselves into several branches, amongst which were the site and construction of the National Gallery; the preservation of the pictures, and the circumstances which operated, or might operate, to their injury; the admission of the public; and the propriety or necessity of constructing a new Gallery more worthy of the nation. Upon most, if not all, of these points of their inquiry, the Committee have been unconscionably chary in giving their opinion. Like Sir Roger de Coverley, they have found so much to be said on both sides, that they have been fairly puzzled, and compelled to remain neuter on matters whereon they were expected to speak out. They seem to agree, however, that the present edifice does not afford sufficient space for the accommodation and exhibition of the pictures; and express a vague idea that it is too near the smoke of the large club-houses in Pall-Mall, and to the engines of the establishment for Baths and Wash-houses in the rear. But, while avowing their own fears, or adopting those of others, in this respect, they are not prepared to state that the preservation of the pictures and convenient access for the purposes of study and the improvement of taste would not be better secured in a gallery further removed from the smoke and dust of London. Being in ignorance of a better place, "they cannot positively recommend its removal elsewhere." As regards the preservation of the pictures in the present building, and the admission of the public to view them, they think that injury is or may be done them, because so many on the average as three thousand people per day throng to the gallery, bringing not only their wives and children or their sweet-

TRIUMPHAL ARCH AT WEST LYNN.—(SEE NEXT PAGE.)

NORFOLK ESTUARY.—THE PROCESSION IN LYNN.—(SEE NEXT PAGE.)

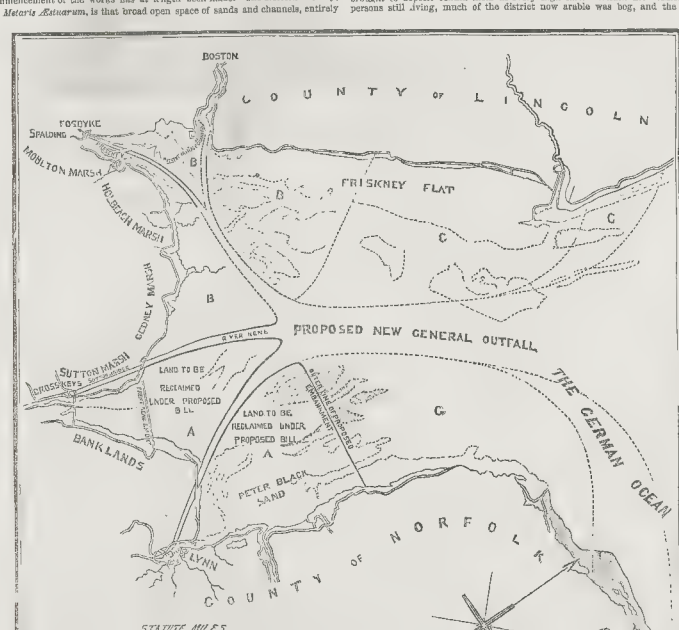
hearts, but taking refreshments and eating them in the rooms. They do not seem altogether to like the idea that the breath of so many people should deteriorate the atmosphere of the rooms, nor that any one should take refuge within their sacred precincts from the rain and storm, nor that a pair of lovers should now and then meet before a picture, rather than under a lamp in the street, or under a tree in the neighbouring park. The one great point of agreement, however, is their decided objection to the presence of "babbies," for sundry reasons given by Mr. Uwins, which remind us of the work composed by the illustrious Tristram Shandy ere he was a twelvemonth old, and which his father, as is well known to every reader of fiction, spoke of with considerable irreverence. The Committee think that if very young children, who are subject to the little weaknesses of which Mr. Shandy and Mr. Uwins make mention, were excluded—if some of the small and moderate-sized pictures were covered with glass—and if the backs of the larger pictures were preserved from dirt and impurities, by some means which they do not name, that a sensible improvement in the management of the National Gallery, and in the preservation of its treasures, would be effected. The conclusion of the document is the lamest part of all. Although they are not satisfied with the size of the present building—although they will not recommend any expense to be incurred in enlarging and improving it—and although they will not recommend any other site for the purpose, either now or at a future time, they wind up their Report by stating that a building large enough for the present national collection, and constructed in a style admitting of successive additions in future years, would induce patriotic and generous men to follow the examples from which the country has already derived so much benefit. They add, that it is of great importance, independently of the preservation of the pictures which the National Gallery already contains, that there should be a well-founded confidence that pictures presented or bequeathed to the nation shall be preserved with every possible care; and consider it to be obvious that if any general impression should prevail that pictures deposited in the National Gallery are liable to more injury than those in other collections, such an impression would check the liberality which it is for the interest of the nation to encourage.

But, as they make no recommendation or suggestion on the subject, except the slight ones we have mentioned, their Report is like a play without a plot, a tale without a moral, or a body without a soul. It is, in fact, a hash of stale materials, without the smallest quantity of spice or flavour. It contains, in fact, no other suggestion than that children should be more rigidly excluded, on account of the Shandean propensities aforesaid; and that the fronts of some and the backs of other pictures should be more carefully protected. And this is the sole result and summing up of four Parliamentary inquiries!

One moral, however, may be drawn from this rather vague and purposeless report. The average daily number of persons who visit the National Gallery in Berlin is 200, while that of the visitors to the English National Gallery is about 3000. If no more than 800 visited the Trafalgar-square exhibition—if no children were among the number—if no holiday people ate buns and apples within its walls, and if no assignations took place under the pictures, the Select Committee would be more satisfied than they now appear to be, both with the site and regulations of the Gallery, and more at ease as to the preservation of the pictures. We would, however, ask the Committee to consider, why the Berlin Gallery is so little and the English Gallery so much crowded? Simply, because the National Gallery in Trafalgar-square is almost the only exhibition to which the public of this metropolis have access, while the people of Berlin have access to many. The people flock to Trafalgar-square because they have no other place to go to; because St. Paul's, and Westminster Abbey, and the Tower of London are closed against them, unless they pay a fee; and because even the British Museum is not open to them every day of the week. It would, for instance, greatly relieve the pressure of the crowd on the National Gallery if the Zoological Gardens were free to the public every Monday; and we have no doubt that the proprietors would willingly agree to throw them open on that day, if the Government would grant them a reasonable compensation. If these and other places were open to the people—who have never harmed the pictures in the National Gallery or at Hampton Court, unless the necessary act of respiration be an injury—and if the means for their free intellectual recreation upon their holidays were increased, it is possible, and very probable, that so many young children would not be brought into the National Gallery, and that it would no longer be conspicuous as a place for assignations. In spite, therefore, of high authority of the Committee, we should give our vote for the continued admission of the "babbies," and of all the lovers and holiday folks of St. Monday. If their number be at all inconvenient in the Gallery, a double good will be effected by opening some other places to which the people (even babies and sweethearts included) may resort for intellectual improvement, the cultivation of a taste for art and nature, and the gratification of their laudable curiosity.

THE NORFOLK ESTUARY WORKS.

The ceremony of turning the first turf of this great national undertaking took place at Lynn, on Friday, the 8th inst. After a long period of expectancy, from the year 1839 to the present time, after many alternations of hope and fear, many "hair-breadth 'scapes," many bills and improved bills, one after another defeated by the forms of Parliament or by the opposition of interested parties, a commencement of the works has at length been made. The Norfolk Estuary, or *Materia Æstuarum*, is that broad open space of sands and channels, entirely covered at high tide, lying between the counties of Norfolk and Lincoln, and into which are discharged the waters of the Ouse, the Nene, the Witham, and the Welland. There can be no doubt but that, many centuries ago, efforts were made by the Romans resident in Britain to reclaim portions of this waste, and in several instances the sea has been successfully repelled, and many hundreds of fertile acres of land permanently added to the island. This has been effected by straightening and embanking the course of the rivers outward to the estuary, and by the erection of barrier banks, which have barred off the swell of the turbulent waters, and have also served to retain the sod held in suspension, and brought to deposit behind them at every high tide. Within the memory of persons still living, much of the district now arable was bog, and the passenger had to be conducted by guides across the swampy marsh, fordable only at low water.



PLAN OF THE "WASH," BETWEEN THE COASTS OF NORFOLK AND LINCOLNSHIRE.

From the time of the Earl of Bedford, the many proprietors of the Levels have, by the powers of several acts of Parliament, carried out measures of improvement of drainage, and many elaborate reports have been published from time to time by eminent engineers upon the drainage and navigation of these districts. In possession of all the knowledge, and aware of every improvements yet to be effected, Lord William Bentinck, when recently appointed Governor-General of British India, having large property in the district, turned his attention to a further enclosure of the Estuary. The demise of his Lordship, however, stopped the development of his ideas until, in 1837, the matter was again taken up by the late Lord George Bentinck, who, being member for the borough of Lynn, placed himself at the head of the adventure. The project of that date comprehended the joint training of the several rivers to a contracted and common outfall, and the reclamation on either side of the channel on the coasts of Norfolk and Lincoln of tracts of land, amounting in all to about 180,000 acres. This plan was reported upon by several engineers, Sir J. Rennie, Mr. Rendall, Professor Gordon, and others, and has been defended in Parliament upon a part of form as to detail by gentlemen of the House, was finally abandoned as being too comprehensive and difficult. We are informed that the late Sir J. Rennie had recommended the magnificent plan of entirely deviating the course of the Ouse from above Lynn, turning it on the opposite side of the town, and by a straight ship canal direct laying its waters at once into the North Sea, near to Hunstanton. After much labour, much opposition, and much disquietude, Lord G. Bentinck and his co-directors having formed a joint-stock company for the reclamation of 32,000 acres, by the straightening and improving the outfall of the Ouse, obtained the powers of an act of Parliament to authorise the project, in the year 1846. The estimated cost of the works was £250,000, which was raised in shares of £50 each; and we are informed that a large proportion of the shares are held by the family and immediate friends of the late noble chairman. After the bill was obtained, Lord G. Bentinck applied himself to the pecuniary prospective remuneration of the company, and resolved, chiefly because of the then unproved state of the money market, and also because he thought that other interests might be induced to assist the company, to pause before commencing the works. The result fully justified his Lordship's forethought; and the town of Lynn, the Sea-bank Commissioners, representing above 200,000 acres of land, have agreed to contribute each to the company the sum of £50,000, making a clear bonus to the shareholders of £150,000, besides their first estimated profits. In 1849, the company, under the guidance of the present chairman, Sir W. Folkes, obtained a bill to empower them to receive the contributions of Lynn and the Levels. Sir W. Folkes, adhering to the policy of the noble Lord, and in concert with the directors, resolved not to proceed with the works until every obstacle was removed, every possible scrutiny submitted to, and until the whole scheme, as regarded the several interests, was submitted to the severest test. Under such circumstances, the Norfolk Estuary Company commenced their labours on Friday week.

The day appointed for the ceremony was kept as a holiday in Lynn. Early in the morning the bells of the churches rang merry peals. A small park of swivel artillery fired various salutes in honour of the occasion from the Quay. Flags floated from every eminence and from the vessels in the harbour. At eleven o'clock the shops and offices were closed. The assembling on the Tuesday Market-hill was a pleasing and interesting sight. Whilst gentlemen's carriages and other equipages and vehicles were drawing into order, the different processions of Odd Fellows, Foresters, navvies, and sailors, marched to their position, each being preceded by a band of music and banners.

The whole *cortège* left the Tuesday Market-place soon afterwards, and took its route down High-street, Saturday Market-place, St. James's-street, the London-road, continuing its way over the New Cut-bridge, and thence to North Lynn. The procession, which extended a very considerable distance, was graced by the presence of Lady Folkes, also the Mayoress of Lynn, and a great number of other ladies; whilst every window was filled with well-dressed fair ones, who smiled their good wishes in reference to this great event. Along the line of road, also, the inhabitants generally turned out in great numbers to witness the procession. The carriages in the South Gates the Royal Standard proudly floated, and a flag bearing the following inscription: "Lady Folkes and the House of Hillington." Some idea may be formed of the length of the procession, when we state that it occupied twenty-five minutes in passing St. Margaret's Church.

Several matters in the pageant deserve notice. There was a bit of cable of extraordinary dimensions borne by twelve sailors; also, two models of ships, in connexion with the object of arrangement. The barrow and shovel were conspicuous. There was a novel feature, Miles' navvie boot, which was mounted on a board and carried by four men. At the entrance of the village of West Lynn, across the road near the post-office, a triumphal arch was erected, in the front of which were the words "We bid you God speed," and on the reverse, "Go on and prosper." We have engraved this beautiful device upon the preceding page.

The ground from which the turf was cut was in the centre of the channel. The ground around was staked out in a circle, and kept by a strong body of police.

The chairman, on entering the enclosure, was received by Sir John Rennie and Mr. Rose, amidst great cheering. At this moment there could not have been less than 10,000 persons present. Sir William Folkes then took the spade, and, in a very workmanlike manner, broke up the ground, and commenced filling the barrow, in which process he was assisted by the Earl of Hardwicke, the Earl of Leicester, Mr. R. C. Townley, M.P., the Rev. G. Townley, Mr. A. Hammond, Mr. R. Bagge, Mr. J. Fryer, and Miss Wodehouse, who severally deposited a spade of earth upon it. It was then wheeled by the Mayor of Lynn some distance, amidst hearty cheering and applause.

After the ceremony had been concluded, Sir W. Folkes addressed the spectators, and expressed his hope that the great undertaking which the company had at last commenced might be brought to a successful issue. The procession then re-formed and returned to the town.

In the evening, the Estuary Company and their friends assembled at a magnificent banquet in the Town Hall. Upwards of two hundred and fifty guests. The chair was taken by Mr. Walter Moyse, the Mayor of Lynn. Amongst the guests were the Earl of Leicester, the Earl of Hardwicke, Viscount Jocelyn, M.P.; Sir W. J. H. B. Folkes, Bart.; Sir J. Rennie, Bart.; Mr. R. G. Townley, M.P.; Mr. S. M. Peto, M.P.; the Rev. Canon Wodehouse, the Revs. H. Folkes, J. Bowen, C. Currie, W. Gale Townley; Major Swatman, Captain Curtis, Lieutenant Garland, Lieutenant Curtis, Messrs. A. Hammond, R. Bagge, R. Errington, J. Creswell, J. Fryer, W. Folkes, H. Bruer, G. Hogge, J. Green, E. Lyre, F. R. Wilson, Simpson, G. G. Day (St. Ives), C. Goodwin, P. Wilson, Sen., E. B. Mann, G. C. Barcham, F. L. Swatman, R. Pitcher, J. Partridge, &c. The general progress of the company formed the subject of several addresses during the evening, and the party did not separate till a late hour.

THE METROPOLITAN COMMISSION OF SEWERS.—On Wednesday evening, a large and influential meeting of delegates, appointed by the vestries of various metropolitan parishes, took place at the Marylebone Court-house, for the purpose of considering the present constitution of the Metropolitan Commission of Sewers, and for taking steps to enforce upon Government the necessity of making it a representative and responsible commission. J. A. Nicholay, Esq., a member of the Marylebone vestry, was called to the chair. Mr. Fowler, of St. Pancras, moved the first resolution—"That the constitution of the present Metropolitan Commission of sewers is defective in principle, and the administration of that body is unsatisfactory in practice, both in regard to sanatory considerations and economy." Mr. Miley, of St. James's, moved the second resolution, to the effect that, with a view to reform, the ratepayers should have a control over the administration of the funds through the medium of representatives. The resolutions having been carried unanimously, a discussion ensued as to matters of detail; and, a copy of the resolutions having been directed to be forwarded to every metropolitan parish, thanks were voted to the chairman, and the meeting separated.

THE COPYING ELECTRIC TELEGRAPH.—This is an invention of Mr. F. C. Bakewell, and its objects are to facilitate, cheapen, and impart greater confidence to telegraphic despatches, and to approximate the mode of communication as closely as possible to epistolary correspondence by post, with the advantage of instantaneous transmission. The communications to be transmitted by the telegraph would be written by the persons corresponding in their usual characters, and the letters, when sent to the telegraph-office, would be copied at the distant station so exactly that the handwriting and signatures might be identified. It is estimated by the inventor that the rapidity of the copying process exceeds that of the needle telegraph in the proportion of ten to one; for whilst five words per minute are transmitted by the needle with the single wire, the copying telegraph would transmit upwards of fifty words in the same time; and if six Roman symbols were used, the rapidity would be quadrupled. A model of this invention has been exhibited this week, and the experiments made were of a very successful description. The working of the machine is as follows:—The message is written with sealing-wax varnish on tinfoil, and then applied to the transmitting instrument, which consists of a cylinder on which a point presses, that point being in connexion with the voltaic battery. The receiving instrument at the other end has a cylinder and point exactly corresponding with that of the transmitting one. On the receiving instrument, a slip of paper, moistened with muriatic acid and prussiate of potash, is placed, and on which a point presses as on the transmitting instrument. The point of the receiving instrument consists of steel wire. When the electric current passes through both instruments a mark is made on the paper by the decomposition of the muriatic acid, and a deposition of iron takes place on the paper. When the instruments are in action, the point of the transmitting instrument, by passing over the varnish writing, comes in contact with the voltaic battery. At the parts where the varnish writing occurs, the current is interrupted, and a blank is left on the receiving instrument; but when it rests on the tinfoil a blue mark is left. As the point passes over each line of writing in different parts, the whole letters are formed by a succession of lines. It is stated by Mr. Bakewell that it is essential to the completeness of this process that the two instruments should move exactly together, and this desideratum is secured by the regulating power of an electric magnet.

EXPLOSION IN MINES.—At the meeting of the Institution of Civil Engineers, on Tuesday, W. Cubitt, Esq., President, in the chair, a paper was read, entitled "A comparative view of recorded Explosions in Coal-mines," by Mr. West. The reports of Faraday, Lyell, De la Beche, Buddle, and others, were carefully analysed and tabulated, from which it appeared that tendencies towards a dangerous condition existed in mines reputed to be comparatively safe, and that these tendencies were so numerous, and varied so suddenly in their nature and extent, as to necessitate attention to every kind of precaution. The proposed appointment, by the Government, of inspectors of mines, was noticed, not with the intention of showing that their supervision would diminish the responsibility of the mining engineers and overmen, but of demonstrating that, by establishing more constant communication between the various districts, they might induce the general adoption of those measures of precaution which were found in certain mines to be so efficacious in averting accidents, or in affording means of safety when they did occur. The different depths of mines, varying from 75 yards at Darley, to 300 yards at Haswell, did not appear to have any influence on the accidents. The tendency to the emission of carbureted hydrogen gas from certain seams would have appeared a more rational reason, though the records did not appear to bear out that theory, as mines receiving a total safe character had been the scene of repeated explosions; for instance, the Jarrow Mine, where, as it was reported "to be not very fiery," there had been six explosions in the course of 28 years, and 140 persons had been killed. The comparability of general good ventilation, with the occasional occurrence of the most fatal explosions, was particularly dwelt on. The witnesses on the inquests after the Haswell and the Jarrow accidents agreed that the "ventilation was perfect," "the pit full of air," and "the air quite good, and plenty of it." The fault, then, did not lie in the quantity of air, but rather in the difficulty of directing it so generally throughout all parts of the mine, as to sweep away the gas as it was produced. The "spats" for the air were noticed, and the conclusion of the goaf, the pockets of gas formed in the roof, and the sudden irruption of the accumulated mass in the goaf and old heads, were dwelt on at great length, and, stimulated with the liquid mass of unprotected lights, and the liability of accident to the lamps, were shown to have been the probable causes of all the explosions. The miners' lamps were passed over somewhat too cursorily, as, at the present moment, when so much has been done for their improvement, that part of the subject might have been dismissed on with advantage. The precautions for saving life on the occurrence of accidents, such as abolishing brattroed shafts, and sinking a pair at each mine at such distances apart as should insure one remaining intact, in case of an explosion injuring the other, or the "capping off" of a portion of the fresh air by the consuming furnace, and conducting the return air in the upcast shaft at some height above the fire; together with several minor details for insuring the constant working of the exhausting apparatus, to draw off the foul "after-damp," or choke-damp," were strongly insisted. The reasons and carelessness of the miners was instanced with regret; but it was shown that by education and good example their better qualities might be brought out, and that then the best safeguard against accident would be the instinctive love of life, and a knowledge of fire, ending danger from the infringement of any of the precautionary regulations established in the mines. The improvement of the workman was, therefore, strongly insisted on, as more real benefit would probably result from such measures, than from the appointment of a host of Government inspectors.

A ton of smuggled tobacco was seized at Manningtree last week; and on Wednesday, three parties, in whose possession it was found, were each fined in the sum of £100. In default of payment they were sentenced to six months' imprisonment in Chelmsford Gaol.

An apostle of the "latter-day" fanatics, called Mormonites, opened a chapel in Belfast a few days ago; but he found the people there too far north for him, and he decamped.

COUNTRY NEWS.

EXPLOSION AND EXTENSIVE LOSS OF LIFE

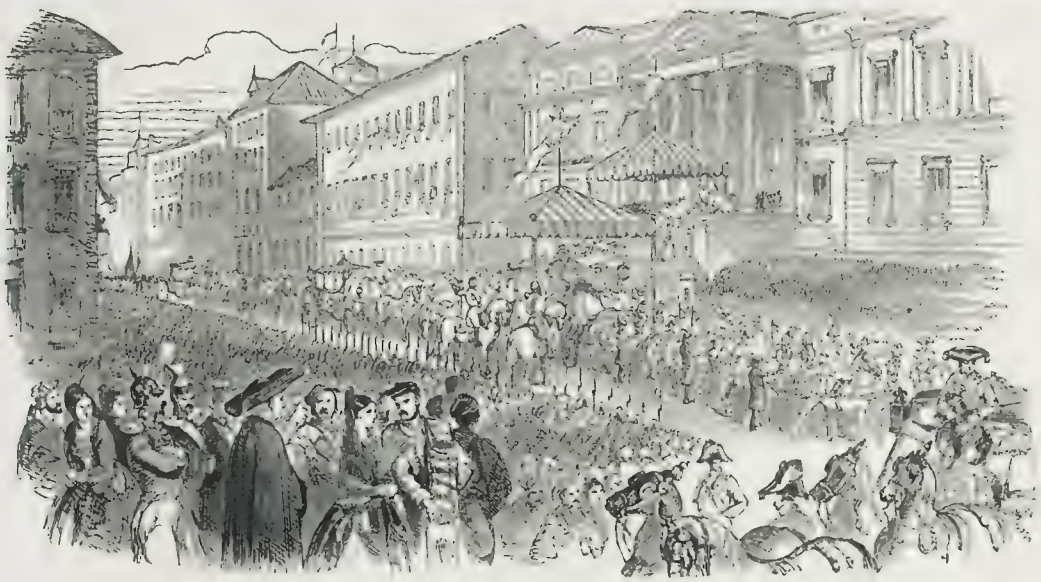
On Monday last, a melancholy catastrophe occurred at the Houghton pit, near Newbottle, in the county of Durham, by an extensive explosion of fire-damp, whereby twenty six men and boys were hurried into eternity. The pit is the property of the Earl of Durham, and is ventilated by means of two shafts, upcast and downcast one. Mr Rutherford is the viewer, and the general conduct of the mine was considered good. At the time of the explosion there were 150 men and boys in the pit employed in the various workings. The explosion was sudden. A loud report was heard, which reverberated through all the workings, and was soon indicated at bank a term applied to the entrance of the shaft.

Twenty-six persons perished, the most of them by attempting to get through the choke-damp towards the shaft. Several were burnt. Some were found without heads, others without legs or arms; portions of the same body were found in different and distant places, showing the great violence of the fire. It is impossible to tell with certainty where the fire originated, as great is the havoc made in its vicinity, and the men working near it were blown to a great distance. The principal portion of the sufferers are colly boys and waggon men. One of the overmen was in the pit at the time, and on hearing the explosion he ran in the direction whence the noise proceeded, in order to ascertain the cause, when he met the rush of fire, which carried him along in its scorching embrace till death terminated his agony. His body was found a calcined mass. The event has created a deep sensation throughout the district, and thousands have visited the locality from a distance, making inquiries, and dwelling with painful interest on the dreadful details.

A coroner's inquest has been formally opened on the bodies of the unfortunate sufferers, but the inquiry cannot be proceeded with until a commencement has been made to the Secretary of State for the Home Department, according to the provisions of a late act. After viewing the bodies, therefore, the coroner will have an order for their interment, and adjourn the inquest.

With respect to the cause of the accident, it is evident, if not of its origin, it is stated by one of the survivors, that Hunter, an overman, was sitting with him, when they heard a rumbling noise, and Hunter immediately proceeded with a candle to ascertain what it was, when in he fired the noxious gas, or choke-damp as it is called, and he was instantly killed, and burned almost to a cinder. It appears that the colliery was abandoned, or "laid in," as it is termed, about twelve o'clock yesterday, and that the ventilating machine did not immediately when it was re-opened, and fresh operations commenced. At the time the pit was closed, it was considered to be in a crit i state; but, on re-opening it, of course, every effort to the cause of the acc

OPENING OF THE SPANISH CORTES.



THE ROYAL PROCESSION TO THE NEW PALACE OF CONGRESS.

precautions for the protection of that possession; and a line of steamers had been established between it and Old Spain, thus decreasing the distance between the two hemispheres. The army preserved its reputation for discipline, and the navy was increasing in importance. Various reforms had been made in the penal code of Spain, all of which would be submitted to the Cortes by the Ministers. Reforms had also been effected in many other branches of the public administration. The public revenues continued to progressively increase. The plan for the definitive settlement of the public debt would be presented, also that of the Basque *fueros*. In a word, the state of the country her Majesty announced to be relatively prosperous and favourable.

The Royal Speech having been concluded, the President of the Council declared the Cortes opened.

On leaving the hall, her Majesty was greeted with another tremendous "*Viva la Reina!*" The Royal party were attended to the portico of the edifice by the Commissioners; and returned to the Palace by the route laid down—along the Prado, up the street of Alcala, and so through the Puerta del Sol and Calle Mayor to the arch of La Armeria. A quarter of an hour afterwards, the last salvos of artillery announced the return of her Majesty to her palace, as the troops immediately commenced returning to quarters; but the people long occupied the streets through which the procession had passed.

A serene and genial day added to the splendour of this solemn festival.

COUNT BRANDENBURGH.

Count Frederick William Von Brandenburgh was the natural son of Frederick William II., King of Prussia, by the Countess of Dönhoff; he was born on the 24th June, 1792. After receiving a military education, he entered the Prussian service in 1807: he soon distinguished himself in several engagements, and, while a Major, in 1813, took part in the actions Mökern, Freiburg, and the taking of Chalons and Château Thierry. He was also present at the battles of Leipzic, Brienne, and Paris. He rose, through subsequent promotion, to be made, in 1848, General in command of the 8th army corps

Till the revolution of 1848 called him into public life, Count Brandenburgh was but little known, the routine duty of the army in time of peace affording no opportunity for distinction; his last military command was that of Breslau. When the excesses of the populace reached their height, at the close of Oct., 1848, the King determined to form a Government that should act decisively against the political leaders of the capital. Count Brandenburgh was appointed the president of that Ministry on the 9th of November; Berlin was declared in a state of siege, the civic guard was

THE LATE COUNT BRANDENBURGH.

disarmed, a strong military garrison placed in the city, and the disorderly scenes of the revolution closed. A Constitution was decreed, and Chambers called, and, though opposed violently at first, the Brandenburgh ministry soon acquired support enough from the overborne conservative opinion of the country, to carry it through all difficulties successfully. Count Brandenburgh was not the most active member of the Ministry: he lent the Government his name and high character, but the directing spirit of the Administration was M. Von Manteuffel. The perilous measures undertaken during the last month by M. Von Radowitz brought about the Congress of Warsaw, at which Count Brandenburgh represented Prussia. The excitement of politics, the toil of attending all the *fêtes* and banquets of the Court of Warsaw, and discharging all the business of his mission at the same time, was too much for his physical powers. He returned from Warsaw on Friday, the 31st of October, and attended a Cabinet Council on the 1st of November. The discussion was a violent and unpleasant one; but the party supported by Count Brandenburgh had the majority. M. Von Radowitz resigned. Count Brandenburgh, on returning home, was seized with illness, became delirious, and lingered in this state till the morning of the 6th, when he expired. He leaves a family of eight children.

FOWLER'S PATENT DRAINING PLOUGH.

An experimental trial of Fowler's Patent Draining Plough and Machinery took place on Thursday, the 7th inst., in a field at the back of Mr. John Smith's iron foundry, at Uxbridge, where considerable improvements have been effected, under the immediate direction of the inventor.

The trial commenced shortly after twelve o'clock, and was attended by a large and most respectable body of agriculturists, amongst whom we noticed Lord Robert Grosvenor and General Wemyss, F. Sherborne, J. and W. Trumper, C. Newman, — Darville, — Houghton, — Cox, H. Riches, and H. Lowcock, Esqrs., who watched the operations of the machine with great interest, and were unanimously of opinion, that, when the result of a few more experiments had enabled the inventor to apportion the strength of the various parts to the relative strain. It would become one of the most practically useful and economical apparatus for draining purposes that has hitherto been introduced to the notice of the agricultural community.

The ground on which the trial was made consisted of a strong loam intermixed with gravel. The requisite preparations for working the plough are simply digging narrow trenches in the line of the intended drain, about 4 feet long and 1 foot wide, and as deep as the pipes are proposed to be laid. These trenches may be from 50 to 100 feet apart, according to the nature of the soil. The end of the trenches, opposite to the direction of the plough, are sloped to an angle of about 23 degrees, to allow the string of pipes, or tiles, to follow the mole without an abrupt bend When these preparations are completed, the plough is placed over the first trench; and the rack coulter, with the mole affixed to it, is lowered to the bottom. On the heel of the mole is a strong staple, to which the rope having the pipes or tiles strung upo it is attached by a hook. The plough is then ready to start, and the windlass, either of two, three, or four horse-power, may be placed at the extremity of the line of drain, or in any intermediate part; when, being put in motion, the plough is drawn forward, and the mole passing through and compressing the soil laterally, leaves a passage for the pipes or tiles to follow, until it reaches the next trench. Another rope is then attached to the mole; and the process is repeated until the whole line is finished. It may be well here to observe, as the experiments will explain, that great attention should be paid to the nature of the soil—its compressibility and tenacity—taking care that the heel of the mole is sufficiently large to leave ample room for the pipes or tiles to follow; otherwise, not only will the friction be increased beyond the force required for the traction of the plough, but great risk will also be incurred of breaking the rope or crushing the tiles in the drain, where they not only become useless, but impede the progress of the work, and have, with much extra labour, to be removed.

The first experiment was made with earthen tiles 2½ inches in diameter, and the plough moved on for few rods at the rate of fifteen feet per minute; but here the defect above alluded to was made apparent by the crushing of the tiles, and consequent stopping of the operations for a short time. The depth worked in each trial was two feet eight inches.

The next experiment was made with wooden pipes, manufactured from poland, and otherwise useless timber (that too frequently disfigure and impoverish theland), by Mr. Fowler's patent machinery, which accompanies the plough wherever such materials are at hand. These pipes are 1¾ inch square outside, varying in length from 12 to 18 inches; the bore is one inch in in diameter: and a square mole being adjusted to the coulter, the rope was hooked on, and the plough proceeded from trench to trench, drawing the pipes in in the most perfect manner, and travelling at the rate of from 18 to 20 feet per minute. Nothing could be more perfectand satisfactory than the success of this experiment.

The last experiment was a *second* trial with the larger earthen tiles, 2½ inches diameter. A larger mole having been affixed to the coulter, the tiles followed without interruption, and fully established the correctness of the principle adopted. The details of mechanical arrangement will, of course, require some revision, but experience will help the inventor over all these difficulties.

After the above trials, and before dinner was announced, the company were shown over the factory by Mr. Smith, the enterprising proprietor of the works, newly erected: their attention drawn to several improved implements, one of which was a skim-plough, with Lomax's patent lever, for raising the scarifiers out of work whilst the skim continued in operation, and an entirely new machine for sifting gravel, cinders, coal, &c., with unusual ease and rapidity.

At half-past three dinner was announced, and what was formerly known only as a noble workshop was now found to be transformed into an elegant saloon, with tasteful devices, in honour of her Majesty, agriculture, manufactures, and commerce. The worthy host, at whose invitation the company had assembled, took the chair, supported by Lord Robert Grosvenor and General Wemyss, and about 100 of the neighbouring gentry. After dinner, the usual toasts were drunk with the customary honours, and some excellent and practical hints fell from various speakers, the tendency of which went to show the necessity of improving the system of agriculture by the use of better machinery and more extensive draining. Mr. F. Sherborne stated that he could hoe his crops for 1s. 6d. per acre by the use of the horse-hoe, that had previously cost him 6s. by manual labour, and then not so well performed; at the same time he employed as many hands as before, but on work—of which there was plenty on a farm—that machinery could not touch.

About half-pas eight the company broke up, and the workmen went in and partook of an excellent supper.

NEW CHURCH AT RYE HARBOUR, SUSSEX.

This Church, situated at the mouth of the port of Rye, among shipping and the houses and towers occupied by the Coast Guard, lately consecrated by the Bishop of Chichester, was built during the summer of 1849, at an estimated cost of £933 11s. 8d., and contains 110 sittings. The architect is Mr. Teulon, of

NEW CHURCH, RYE HARBOUR, SUSSEX.

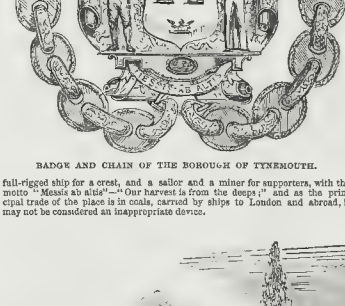
Lansdowne-place, London: the builder is Mr. J. Judge, of Rye. The edifice is plain early Gothic; it is of blue local stone, with Caen stone groins and mouldings: the walls and roof are unusually strong and massive, the situation being extremely exposed to the south-west winds. The campanile, the simple proportions of which have been much admired, comprises at once a bell-tower, an organ-gallery, and a porch.

The Church is about two miles from the site of old Winchelsea, which was suddenly overwhelmed by the sea A.D. 1287; the sea, however, has now for many years been receding.

The building of this Church was projected, and has been carried through, by the Rev. H. B. Whittaker Churton, Vicar of Icklesham, in which parish lies Rye Harbour.

BADGE AND CHAIN OF THE CORPORATION OF TYNEMOUTH.

The Mayor, Aldermen, and Burgesses of the borough of Tynemouth, which was incorporated last year, have lately adopted a Corporation Seal, of which the following is the description; viz. the shield bears the arms of the ancient Priory of Tynemouth, which are, on a field gules three crowns or, to which is added a



BADGE AND CHAIN OF THE BOROUGH OF TYNEMOUTH.

full-rigged ship for a crest, and a sailor and a miner for supporters, with the motto "Mesais ab alte"—"Our harvest is from the deeps;" and as the principal trade of the place is in coals, carried by ships to London and abroad, it may not be considered an inappropriate device.

A Badge and Gold Chain have just been presented to the Corporation by the ladies of the borough, who subscribed the purchase-money. It is to be the chain of office worn by the Mayor for the time being. The Badge is of chased gold, with the borough arms standing out from the back; the shield being enamelled in the proper colour, with the gold crowns upon it. At the back of the Badge is the following inscription:—

Borough of Tynemouth. Incorporated, 1849.
Presented by the Ladies of the Borough to the Corporation.
W. Linskill, Esq., elected first Mayor, 1849.

The Badge fixes into the button-hole, and the ends of the chain hang from it, as in the Sketch.

These handsome insignia were supplied by Messrs. Blackwood, of Tynemouth, silversmiths, who value it at a sum approaching to one hundred guineas. The presentation took place on Saturday last, in the town-hall of the borough.

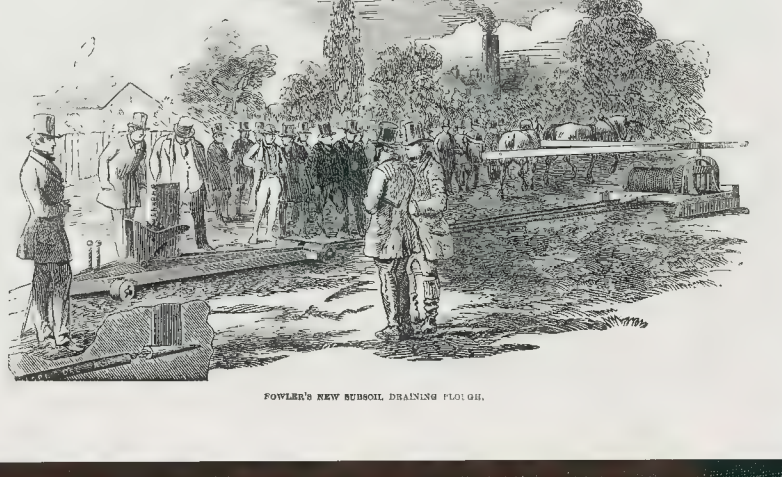
LIEUTENANT-GENERAL JOSEPH VON RADOWITZ.

The name of Radowitz, the late Minister of Foreign Affairs in Prussia, is, in many respects, of dubious political import. A Minister of what is called a Con-

LIEUTENANT-GENERAL JOSEPH VON RADOWITZ.

stitutional state, he belongs to no party, and is known to entertain a contempt for party politics. As the subject of study, or the means of effecting a purpose, all parties appear alike indifferent to him. In his speeches and writings he has swept from the extremes of the most complete freedom to the homage of despotism. All parties suspect him; the democrats assert he is a disguised Jesuit; the Prussian Nationalists say he is a traitor sold to Austria, at Vienna he is hated as a too zealous Prussian; the Constitutionalists have broken with him; the ultra-Royalists fear him; and yet, amid all these jealousies and animosities, he keeps his power and influence unimpaired even by his fall from office. He is a soldier with the education of a priest, and a statesman whose acts are tinged by the smaller wiles of the diplomatist. He has great powers and acquirements: he is learned, eloquent, and imaginative; yet, on the whole, his career is a failure. He has placed the ideal above the real, and lost sight of what was possible in pursuing what he determined was desirable. Compelled to bend to the stern power of facts, he has changed his course so often that men have lost confidence in him. "Unstable as water, how should he excel?"

General Joseph Von Radowitz was born at Blankenburgh in the Harts, in 1792. By origin his family is Sclavonian, of the class of petty nobles, his grandfather having quitted Hungary and settled in Germany in the middle of the last century. It is said that he carried on business as a wine-merchant; but, as if every thing connected with Von Radowitz was destined to be a mystery, the point is still in dispute whether he is a patrician or a plebeian. His father studied the law at Gottingen; became a titular Rath of the grand duchy of Brunswick, having a residence in the Hartz and at Altenburg. Till his fourteenth year he was educated in the religion of his father, who was a Protestant; but in 1813 he embraced that of his mother, who was a Catholic; and for some years he resided at a Jesuit seminary: nay, it is even said that he prepared himself for an ecclesiastical career, and received the first or minor order of a priest; but, like most of the events of his early life, nothing authentic is known respecting it; it is certain only that he is a zealous Catholic, a good theologian, an enthusiastic admirer of the architecture, the painting, and the symbolical sculpture, of the different ages of the Church from the earliest times. His work entitled the "Iconography of the Saints" is a production of extraordinary research, treating the various forms under which the earlier saints and martyrs have been drawn or carved in different nations or centuries, from an exclusively artistic point of view. He left the Jesuit seminary and entered the military service of Westphalia, at that time a mere vassal state of Napoleon, among whose legions the Westphalian army was enrolled. The champion of the German unity, therefore, made his first campaign in the ranks of the most deadly enemy of the German nation. After a short residence in the French and Westphalian military schools, he served through the year 1813, when the star of Napoleon had already begun to decline, and distinguished himself sufficiently to be found worthy of the order of the Legion of Honour. At the battle of Leipsic, where Napoleon said his "good genius forsook him," Von Radowitz commanded a battery of Westphalian artillery, was wounded, and taken prisoner. With Napoleon fell the kingdom he had created; but amid the political wrecks and ruins of the times Radowitz contrived to shape a forward path. With the old princely family of Westphalia he went to Cassel, became known to the Court of Hesse, was employed and favoured, and for four years, from 1815 to 1819, was engaged as teacher of Ma-



FOWLER'S NEW SUBSOIL DRAINING PLOUGH.

thematics and Military Tactics in the school of Cadets. In the *Chronique Scandaleuse* of the German courts, that still loose hands among the most notorious the profligacy of the Elector was unbounded, and out of one shameful act of the Prince, Von Radowitz made the stepping-stone of his future fortune. The Princess of Hesse was the sister of Frederick III., the father of the present King of Prussia; the Elector was enamoured of a certain Emilie Ortlepp, who became his mistress, and was created Countess of Reichenbach just as Lola Montes was, at a much later date, ennobled by the dotage of the King of Bavaria. In the respect, the Princes of Germany still labour under the traditions of the age of our second Charles, of Louis XIV., and the Regency To complete the resemblance to what are called the good old times, the Elector interested that his Princess, the sister of one of the most powerful Monarchs of Europe, should receive the mistress at Court, and lend her countenance to the connexion. The blood of Hanau-Isenburg rebelled against the indignity; M. Von Radowitz sided with the insulted Princess, and advised her by letter to quit the Court; the Prince seized the letter by force, and dismissed the writer from his service. The Princess, however, fled from Cassel to Bonn, and was brought back by force under a guard of Hessian gendarmes, i. e. mounted policemen Such things could happen in the golden days of censorship, when no journals were allowed to publish anything likely to excite "hatred and contempt." The affair was only

E. H. C. JUDY.—Many thanks. A private acknowledgment has been forwarded

SIGMA, Belfast.—It shall be inserted on next week.

R. T. S. Henley.—You should enroll yourself a member of the flourishing club at Reading, which, if we are mistaken, is now entitled the Berkshire County Chess Club.

P. A. H, of Kent.—Three Pawns are usually reckoned as equal to a Bishop or Knight

J. N. M.—The "Chess-Player's Handbook," just issued by Bohn

H. De S.—We by no means do show how the Knight traverses the sixty-four squares

M. P.—The Committee for managing the proposed tournament is nearly completed; when quite ready, due notice shall be given.

SOLUTION of PROBLEM No. 353, by A LIEUT, R.N.; H. P. of Chelsea, RAMSGATE, are correct. All others are wrong

SOLUTIONS of [illegible] are correct. All others are wrong

SOLUTION of [illegible] Sudbury; ALB, AN HARROVIAN, G. E., W. R. of Glasgow; J. A. B. Royal Artillery, ELEPHANTUS, MOOSEHEAD, J. H. R., J. O. W., J. L. of Burnley; W. O., R. F. L., SIGMA, P. O. B., H. McG., B. A. Q. B., P., of Graham's Town; G. L., of Newport, P. S. W. are correct. All others are wrong

SOLUTIONS of No. 353, by R. S. T., I. P., CARLO P., M. B. A. Q., AGNES, BELLAIRE, SIGMA, P. A. H., of Kent; JUVENTUS, YARMOUTH, THO. H. W. B., JUDY, CAPE TOWN, P., of Graham's Town, and R. T. L. G. H., J. N. M., SHERLOCK, DERBYON, D. D., W. B. W., J. A. W., E. H. T., H., of Newton, are correct. All others are wrong

* * We are compelled to defer the consideration of many Chess communications until next week.

SOLUTION OF PROBLEM No. 354.

The author, it appears to us, has overlooked a mode of play by which, in this position, white may mate in two moves, viz.:—

WHITE.	BLACK.
1. R to K 4th	P to Q 3d. (If P to K 4th, R takes P—
Kt mates.	Mate.)

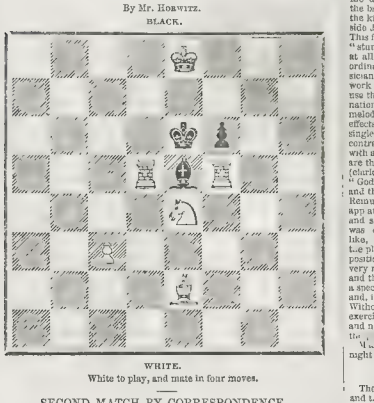
SOLUTION OF PROBLEM No. 355.

WHITE	BLACK.	WHITE.	BLACK.
1. B to Q 7th (ch)	K moves	3. B mates	
2. R to Q 4th	Anything		

PROBLEM No. 356.

By Mr. HORWITZ.

BLACK.



WHITE.

White to play, and mate in four moves.

SECOND MATCH BY CORRESPONDENCE, BETWEEN THE LONDON AND AMSTERDAM CHESS CLUBS.

WHITE (London).	BLACK (Amsterdam).
19. P to Q R 3d	

Amsterdam to play.

CHESS IN THE METROPOLIS.

WELL-CONTESTED GAME BETWEEN MR. W. LL, M.P., AND CAPT. KENNEDY.

(King's Gambit declined.)

BLACK (Mr. W.)	WHITE (Capt. K.)	BLACK (Mr. W.)	WHITE (Capt. K.)
1. P to K 4th	P to K 4th	22. Kt to Q B 4th	B to Q B 4th
2. P to K B 4th	K B to Q B 4th	23. Kt takes Q R P	P to K R 4th
3. K Kt to B 3d	P to Q 3d.	24. K R to K B 3d	Kt to K R 3d
4. P to Q 4th	Q B to K Kt 5th	25. Q B P takes P	B to Q R 5th
5. K B to K 2d	B takes Kt	26. K to Q B 6th (a)	P takes Kt
6. B takes B	Q Kt to B 3d	27. P takes P	P takes K Kt P
7. P to Q Kt 4th	B to Q Kt 3d	28. K R to Q Kt 3d	B to Q 7th
8. P to Q Kt 5th	Q Kt to K 2d	29. R to Q B 3d	Q R to Q 3d (b)
9. P to Q 4th	Q Kt to K Kt 3d	30. P to Q 6th	B takes B
10. P to Q R 4th	P to Q R 4th	31. Q R to Q Kt sq	K to Q sq
11. P to K R 5th	Kt Kt to K R 5th	32. Kt to Q Kt 8th (ch)	K to K 2d
12. Castles	Kt takes B (ch)	33. K R takes R	Kt to K B 3d

White to play, and mate in four moves.

Her Majesty has been pleased to grant a pension of £200 a year to Mr. John Payne Collier, the editor of Shakspeare and author of the "History of English Stage." The warrant is dated the 30th of last month, and the announcement is that the pension is given "in consideration of his literary merits." Mr. Collier was upwards of a quarter of a century connected with the London daily press.

A correspondent of the *Builder* suggests that the proprietor of every lone house should have large bells hanging conspicuously on the top of his house, with cords communicating with two or three of the principal bed rooms, so that upon hearing thieves in the house alarm may be given to the whole village. The fact of its being there would, in all probability, be a preventive to an attempt. The terrier-bell is an old part, but at present almost out of use. Architecturally it makes a nice feature

A testimonial and complimentary address has been presented to Mr. William Andrew, by the inhabitants of the borough of Stockport, as a mark of their esteem for his kind attention to them as a magistrate.

MUSIC.

GRAND NATIONAL CONCERTS.

A Symphony by Taubert, new to this country, a Hunting Glee by Balfe, and Labitzky's "Great Quadrille of all Nations," have been the novelties. Taubert, the *chef d'orchestre* of the Royal Berlin Grand Opera, has the reputation of being an excellent conductor and an accomplished musician. As a symphonist, no very high position can be awarded to him, if we are to judge by the three movements heard last Saturday (the scherzo being unaccountably omitted, although some others who had heard the Symphony in Germany pronounce it to be the best we [illegible]

Taubert was born in Berlin, in 1811, and first won fame as a pianist at the age of fourteen years. His concertos, sonatas, and fantasias for the pianoforte are full of merit: his operatic productions have had less success. His Symphony has interesting features, but the ideas are more those of a pianist than of an imaginative writer. Whilst his forms are unexceptionable, and his orchestral treatment full of variety and tact, the little invention displayed in the themes deserves the epithet of interest, although the slow one is by no means destitute of grace and feeling.

The Hunting Glee, boisterously scored and most coarsely sung, is more ambitious in structure than pleasing in execution, and will not add to Balfe's reputation. His merits as the "Bondman" is far superior in point of originality and effect

There must be a protest entered against the slovenly style in which the symphonies, many of the overtures, and the vocal morceaux of the night are executed. Except the very familiar and noisy overtures, which go, as it were, of themselves, there is a lack of accent and deficiency of colouring unworthy of such a firm band as this one now at Her Majesty's Theatre—decidedly the best players that have ever been engaged within its walls.

To the list of first-rate soloists who have already appeared, must be added the names of Deichman, a clever pupil of Moscheles, and Ernst, the violinist, who, after the famed English violinist; Halle and Sainton have terminated their engagements. Miss Goddard, Molique, Piatti, Richardson, Arban, Baumann, Barret, Remusat, and Peuchers continue to be the instrumental attractions; whilst Mlle. Anna and M. Jules Lefort, who is gaining ground in his French songs with the public, are the vocal stars

The unrivalled Berlin Chorus are applauded nightly to the very echo.

The management stole a march on Jullien, on Wednesday night, by suddenly producing the "Great Quadrille of All Nations," by the popular Labitzky, dedicated by special permission to Prince Albert. "In order," stated the programme, "to give the greatest possible effect to this composition, the Directors have the honour to announce that the orchestra will, on this occasion, comprise 120 artistes, in addition to the band of the 1st Life Guards, under the direction of Mr. Mellell (by the kind permission of Colonel Parker), the band of the Grenadier Guards, under the direction of Mr. Schott (by the kind permission of Colonel Lascelles); the band of the Scots Fusilier Guards, under the direction of M. Ransée (by the kind permission of Colonel Knolys), a complete corps of British military side Drums; the English chorists; and the choristers of the Berlin Chapel Royal." This formidable announcement led to a general opinion that there would be a "stunning" quadrille, full only of noise and stunning effect, but the intention was not at all realised; for, although the *forte*sumo was more remarkable than at the ordinary concerts, the quadrille is scored with the consummate skill of a musician, and is particularly free from vulgar display. Indeed, in form, the work might almost be deemed classical, if the purists will permit us to use the term for dance music. Labitzky has chosen a certain number of national airs, of Russia, Austria, France, Spain, England, &c., and these melodies, compressed and condensed, are combined most felicitously in various effects—the subject being sometimes awarded to the chorus, then assigned to single instruments, with variations, and ultimately all the subjects progress in contrary motion, in two four and six-eight time, vocally and instrumentally, with astounding and so-stirring power. Amongst the solists, the variations are the Russian National Hymn, by Richardson (flute), Franz and Maycock (clarionets), and Baumann (bassoon); those on the Austrian Hymn (Haydn's "God save the Emperor"), by Arban (cornet-à piston), marvellously voluble; and those on "Vive Henri Quatre" and "Yankee Doodle," by Barret (oboe) and Remusat (piccolo). Each piquant display was accompanied by prodigious applause for the executant. Of course, when the whole body of players and singers came in at the last, in the interwoven themes, the climax was overwhelming. The general treatment was thoroughly musicianlike, ingenious, and effective; the only point of objection being, perhaps, the placing of "Yankee Doodle" and "God save the Queen" in juxtaposition, which some of the promenade "swells" pronounced very "wulgar," if not very reasonably. The grand finale (the last figure) was rapturously encored, and the concluding movement was repeated. Labitzky was then summoned for a special ovation, which he gladly merited; this mode of conducting the Quadrille, and, indeed, all the music that comes under his *bâton*, is beyond all praise. Without the slightest affectation in his manner, and without any gymnastic exercises, he keeps the masse, like one instrument, completely under control; and no artillery practice could be more precise and certain than the attack of the [illegible] the conductor's baton.

Meyerbeer's Serenata, "Il Sospe Awakened," was to be produced last night (Friday)—too late for notice in our present edition.

M. JULLIEN'S CONCERTS.

The "Quadrille des Nations," with the ordinary orchestra—four military bands, and the *corps de tambours* of the Parisian National Guard—*ensemble* of 207 executants—will have been produced when our present Number is at press; our notice thereof, therefore, can only appear in our next week's impression. In the mean time, the "Fancy Quadrille," from the Meyerbeer Gallopade, and the chief source of attraction, with Jullien as the commander-in-chief of the contending arms—brass versus stringed. The "single combats" in this noisy conflict are announced with skill, by Delaney (trumpet), Prudent (tuba), Lavigne (clarionet), Collinet (flageolet), Koenig (cornet-à-piston), and Cioffi (trombone) Jullien's forces are admirably disposed during the battle. The approaches of the different regiments of the British Grenadier and Coldstream Guards, and the Scotch infantry—are strategically contrived; and, except the advance of the Prussians at the Battle of Waterloo, nothing could be more artfully contrived than the manœuvres which Jullien brings up his reserve (the Coldstream) at a critical moment, when the "bows" of the army (stringed) were overwhelming the "brass." No wonder the auditory becomes excited, and insists on the National Anthem three over. Equal to boisterous energy is the "Review Galop." Of the quieter order of music, the selections from Meyerbeer's "Prophète" and "Robert le Diable," Weber's overtures, and isolated movements from symphonies by Beethoven and Mendelssohn, have been the most remarkable. Of Mdlle. Clotty Treffz, a notice will be found elsewhere, accompanied by her portrait

The animation of M. Jullien's concerts is as marked as ever. Those amateurs who like to enjoy light composition and dance music with the view of a lively assemblage, can always find the best gratification. Of the policy of mixing more elevated orchestral works, exciting attention for their intellectual enjoyment, with polkas and quadrilles, tunes and contending cornopeans, it would certainly be desirable, if there were localities preserving a separate specialty in the school of music

On Tuesday two first part of the programme was confined to the works of Mendelssohn, including the A minor symphony, the overture and whole of the incidental descriptive music to Shakspeare's "Midsummer Night's Dream," the War March from "Athalie," a pianoforte rondo, with orchestral accompaniments, played by G. A. Billing, and the fine "Hymn of Praise," for soli and "Volkslied," sung by Jetty Treffz. M. Demanck, of the Brussels Conservatoire, the celebrated violoncellist, played a solo by Servais; and M. Jullien's pretty *valse à deux tems*, "Wild Flowers," was repeated in the second part.

FOREIGN MUSICAL NEWS.—The great musical event in Paris was the opening of the Salle Ventadour, last Saturday night, for the Italian Opera, under Mr. Lumley's direction. The house was filled with fashionable notabilities, the attendance of the dip omatic corps being nearly complete. The President of the Republic and the Princess Matilda were in the state-box. Bellini's "Sonnambula" was the opera, and Sontag, who took leave of the Parisian stage on the 18th of January, 1830, when she played in *Semiramide* and in *Amenaide* ("Tancredi"), returned in the part of *Amina*. She was enthusiastically received. Calzolari was the *Elvino*; Morlin, a new baritone, *Count Rodolfo*; and Mdlle. Borlotti, *Lisa*. The two last-mentioned *artistes* made no favourable impression. Morini, however, was only a substitute for Casanova, who had arrived from Italy only two days prior to the opening, and was too fatigued to make his *début*. Donizetti's "Don Pasquale," for the *début* of Labiache, was to be the next opera. Amongst the other engagements were Mdme. Piccolomini, Mdlle Parodi (now in America), Mdle. Ida Bertrand, Mdlle. Augustina Bocconbadini (daughter of the celebrated Lugia Boccabadati, now in America), Signor Gardoni (now in Madrid), Mr. Sims Reeves, Signor Fraschini (now in Italy), Colletti (now at St. Petersburg), Signor Colini (a baritone of note), and Signor Scapini (a bass of note). Negotiations were also pending with Signora Salsari Nini and Mdlle. Gazzaniga.——Rencom, after presenting a memorial to the Council of State against the decree of the Minister of the Interior, depriving him of the privilege of the Italian Opera, has left Paris for Madrid, where he is re-engaged on enormous terms. He will afterwards appear at the French Grand Opera. Whatever may have been the pictures of injustice of Rencom's treatment in Paris, he is not forgiving. It is to be hoped that the greatest tragedian and most lively comedian now on the Italian lyric stage, will remain as an actor rather than as a manager.——Viardot's return to the Grand Opera, at Paris, has been warmly welcomed, and she has been hailed as the only *Fides* of Scribe and Meyerbeer. She is studying (in French) *Valentina* ("Huguenots") and *Rachel* ("Juive"), besides the new part of *Sappho*, in Gounod's opera. The Governm[illegible] has granted [illegible] of the pension of the nightly receipts at all theatres a[illegible]-entr-ees, to that of per cent[illegible] Emperor of Austria has conferred on Meyerbeer the imperial order of Frai[illegible]-h[illegible]. It appears that the salaries of the *artistes* engaged at the new Italian Opera House in Madrid, have been guaranteed by the [illegible] of Spain, are on the following enormous and disproportionate scale: Alboni, for three months, £2500; Malane Frezzolini, six months, [illegible] and her husband, St. Leon, three months, £2400; Her [illegible] Clotti; Sanglovanni, six months, [illegible] £800; and Gardoni (tenor), two months, [illegible] £2000. Lablache, [illegible] has been offered £2000 and [illegible] on St. Petersburgh, but declines the [illegible] which [illegible] Italian Opera last season, may be recollected, has made a great sensation in Verdi's "Lombardi," in connexion with Mdlle. Cortesi and Colotti.——Pavesi, a well-known composer of about fifty operas in Italy, born at Cremona in 1778, has just died.——Madame Stoltz has accepted an engagement of seven months, for the Lisbon Italian Opera, and will make her *début* in *Arsace*, and then play *Cenerentola*, *Rosina* ("Barbiere"), and *Lucia* ("Lammermoor").——Ole Bull, the violinist, is about to make a tour in the principal cities of Asia, and Finland, Russia, and Constantinople

MUSICAL EVENTS.—Miss Dolby commenced on Tuesday night, her 1st residence in Hinde-street, a series of three subscription "Soirées Musicales," in addition to her own charming talent, she has secured the co-operation of Miss Birch, Miss Thornton, and Miss Eliza Birch, Messrs. Benson, Brooks, Swift, and Jules Stockhausen, in the vocal selections; whilst the instrumental pieces are supported by the abilities of Miss Kate Loder, Mr. W. S. Bennett, Mr. W. H. Bennett, Mr. W. H. Palmer, Mr. Rockstro, Mr. Lindsay Sloper, Mr. Ragrove, M. Sainton, Mr. Dando, and Mr. Lucas. The second concert will be on the 26th instant.——Next Wednesday will be the first of Mr. John Hullah's Monthly Concerts, at St. Martin's Hall: Misses Birch and Kearns, Mrs. Noble, Messrs. Lockey and Bodda, are the chief singers; with Mr. Hopkins organist, and Mr. Ragrove leader of the band.——At a general meeting of the members of the Philharmonic Society, George Hogarth, Esq., was unanimously elected as secretary, in the place of the late Mr. Budd.

The Polish Ball and Concert at Guildhall, on Thursday evening, was brilliantly attended by from 1100 to 1200 persons. The concert was given in the Council Chamber; the adjoining apartments were tastefully decorated with statues and other works of art; and in the Alderman's Court-room was a clever picture of the Crystal Palace in Hyde-park. Polkas, quadrilles, and waltzes were danced with unflagging spirit in the Guildhall, which was splendidly illuminated, as on Lord Mayor's Day

SERVICE OF PLATE.—Mr. Hancock, the eminent silversmith, has just completed a very beautiful service of plate for the Crown Prince of Sweden The service comprises a superb centre-piece, consisting of a flower and fruit vase, supported on a stem, from which spring branches, forming an exceedingly graceful candelabrum. Around the base of the stem are the three Graces, beautifully modelled in frosted silver by Frerst. Two other candelabra, modelled and executed *en suite*, complete the service, which is altogether one of the most chaste and elegant we have seen produced for some time past

REMAINS OF A ROMAN THEATRE AT CREMONA.—At the opening meeting of the Royal Institute of Architects, lately, a letter was read from Mr. Octavius Hansard, dated Cremona, stating that Signor Mighiarania, of Vienna, was about to send to England a series of drawings of the innumerable fine remains of a Roman theatre, recently discovered there. "These fragments, and the mass of building remaining, are so perfect, that he has, upon pretty sure foundation, made drawings of a restoration. I may mention (continues the writer), that, amongst the fragments, is an Ionic capital, the volutes of which are not cut, but upon one of the faces is distinctly marked the method of turning them, which appears to be upon a different principle than we have hitherto known."

The *Carnarvon Herald* says, that the communications from the disputant bards of the Rhuddlan Eisteddfod is before him in reams. None seem contented with the decision of the Judges; and one hard-handed bard thinks the poems should be published, even to the extent of seven or eight volumes, of such "compositions of exquisite beauty, poems that would adorn the literature of any age."

On Monday, a meeting to finally wind up the Kingsland and Dalston Literary Institution was held before his Honour Master Brotherton The payment by shareholders of calls in arrear, originally made by the directors, to have found nearly sufficient, together with the sale of the institution, to pay off the liabilities. It is not expected that any call will have to be made.

A member of the Architectural Institute, with reference to Roman works in this country, has directed attention to the excavations commenced at Lynne, commonly called Mattfall Castle, in Kent, adding his regret that a Pompeii should lie at our feet, and, for want of funds, remain entombed.

THE THEATRES.

HAYMARKET.

Mr. Macready re-appeared on Monday as *Othello*, Miss Reynolds performing *Desdemona* with exquisite propriety, and Mr. Davenport supporting *Iago* with fine artistic skill.

LYCEUM

"The White Hood" is the title of a not very successful piece produced on Monday, founded, it would appear, on Auber's opera, "Le Chaperon Blanc." Mr. Charles Mathews, who held his arm in a sling, performed the part of *Peter Pedlerock*, an adventurer's "promise, whose accidental possession of a white hood makes him an unwilling party in the conflict between the Earl of Flanders and the Flemish towns. A lady, of course, "is in the case"—one *Marguerite* (Miss Fanny Baker), the servant of *Jan Vanden* deacon of the druggists (Mr. Basil Baker). These two performers are new to this theatre, and acquitted themselves creditably in their respective *rôles*. Mr. George J. Vining, too, as *Louis de Male*, Count of Flanders, acted with spirit and ingenuity. But, from the want of relief, the general impression was unsatisfactory, though in some parts the situations were not without interest.

A sort of flower-piece was also produced on the same evening: a slight affair, written by Mr. John Oxenford, to introduce a new *pas de fascination, apropos* of "Roses and Thorns." *Couleur de Rose*, Queen of the Roses (Miss Worrell), undertakes to convert the misanthrope, *Count Hubert de Rosenlie* (Miss Gifford), and effects her purpose by a series of visions, or *tableaux vivans*, arranged by Mr. Beverley, representing, by means of a revolving horizontal circle, with inflexible supporters, the four Rosecrucian elements, and revolutions of the invisible beauty in *Air*, *Earth*, *Water*, and *Fire*. The visions are voluptuously attractive, and well calculated to induce a tolerably reasonable man to prefer the Light to the dark side of things. This pretty entertainment gave opportunity to a remarkable *débutante*, Harri Segal, as a wild gipsy girl, who sang to the guitar a mountain song with wonderful effect, unique in character, and accompanied with a *falsetto* peculiarity which proved so attractive that it received a double encore, and was sufficiently pleasing to have justified many more, had theatrical properties admitted. Miss Alice George, as *King of the Thorns*, also had a charming air, by Mr. Tuley, which commanded repetition.

SURREY

"David Copperfield" has been dramatised for this theatre, as well as for the Strand. The adapter has contented himself with merely connecting a series of *tableaux*, by which the novel is symbolised, rather than represented, with a slender thread of action and dialogue; well supported, however, by the mechanical portion of the company

A new farce, called "Copper and Brass," has also been added to the *répertoire* of the theatre.

ASTLEY'S.

It is a long while since we had occasion to criticise a new piece at this theatre; but, at last, an opportunity has arisen of again noticing this favourite place of amusement with peculiar claims on attention. A new spectacle, entitled the "Enchanted Palfrey," was produced on Monday. It is a magnificent illustration of a Persian tale; one, too, admitting almost every kind of embellishment. *Mirza*, a peasant of Ispahan, entering the army of the Shah of Persia, becomes a great general; but, in the midst of his glory, retains a fond remembrance of his early life, and of the humble maiden who was then the object of his affection. Accordingly, he seeks out his betrothed, and brings her to the city of the Shah. The Monarch beholds and loves. The better to carry out his purpose, the despot declares the hero to be a rebel, and takes possession of the true. But, by the aid of his magic palfrey, capable of all manner of marvels, *Mirza* subdues all obstacles, recovers the lady, and gains, besides, the kingdom. The splendour of this piece must render it immensely attractive.

NEW PLAY OF "THE TEMPLAR," AT THE PRINCESS' THEATRE.

"The Templar," by Mr. A. R. Slous, has proved "a great hit" one due to the combined efforts of author, manager, and performers. All have done their parts so worthily, that it is difficult to discriminate their various merits. Suffice it to say, that the play was enthusiastically received, and that the triumph which it then secured was well merited by all concerned in the achievement

The story of the drama is as simple as it is interesting: and is so admirably conducted, that, notwithstanding its simplicity of structure and subject, it is as potent in effect as if the most complex processes had been most skilfully elaborated. A young Templar, *Bernard* (Mr. Bolton), betrayed into taking the vows, obeys the promptings of a loving nature, and becomes enamoured of a damsel in the neighbourhood of Roche Bernard, one *Isolate* (Mrs. Keau), daughter, as she appears, of a Languedoc nobleman, who, suffering persecution with the Albigenses, had lost wife, son, and castle in the wars. But by the hand of *Aymer de la Roche*, now Grand Master of the Preceptory (Mr. Ryder), the discovering his daughter, the father of the maid, *Robert La Marche*, is provoked to anger and vengeance—the latter passion intensified by the further discovery that *Bernard* is a foundling, the long-lost son of *Aymer* himself, born to him before he had taken the sacred vows; and he resolves at once on denouncing the youth to the Order, and thus to make both him and his unconscious parent the host victims to his revenge. All this is done, and the true of *Bernard* takes place in the hall of the Preceptory—a gorgeous scene, such as we have seldom witnessed on any stage. The youth's life may be spared, if he will but surrender his beloved *Isolate* to the fury of these soldier-priests; but he indignantly rejects the temptation. Touched by such evidence of his fidelity, *La Marche* reveals to him the secret of his birth, whereupon (a reveal with *Aymer*), but in vain, for the stern master secludes himself from all approach until after the hour of execution. *Isolate*, however, determines to reward the devotion of her lover with her hand. But the desired spot can only be reached in time, by a lofty and narrow bridge over a chasm in the rocks, such as our Artist has portrayed in the accompanying illustration. This perilous transit, however, *Isolate* dares, while her father and a rough woodman, their friend, crouch below in natural terror. At length she gains the hall of the Temple, and informs *Aymer* of the relationship of *Bernard*. The distracted *Aymer*, accordingly, issues his commands for suspending the execution; but at that moment the troops of Prince [illegible] have attacked the knights, and proclaimed the dissolution of the order. *Bernard* and *Aymer* fight side by side, but the latter gets slain in the conflict. With him the revenge of *La Marche* expires, and the latter joins the hands of the two lovers, *Bernard* being absolved from his vow.

The poetry of this play is always pleasing and spirited, and on some occasions rises to a high dramatic strain, but never exceeds the measure of the action, or stops the business of the scene. Mr. Kean, with unwonted generosity, reclaimed the part of the hero to Mr Bolton, a young and rising actor, assuming to himself a second *rôle*, for the purpose of better promoting the *tout ensemble*. Such noble conduct as this will ensure the success of the theatre, as well as of the dramas entrusted to its stage. Mr. Kean's acting in *La Marche* was indeed powerful and natural, and aided, in a marked manner, to sustain the interest of the entire play. Mrs. Kean, in *Isoline*, moreover, was an exceedingly picturesque representation of the pure-minded and innocent maiden, with a heart of nobleness and a soul capable of sublime devotion. Mr. Ryder also looked majestically impressive in the *Grand Master of the Order*. The piece was throughout triumphant; not a single scene, we may say, not a single speech flagged from the first to the fifth act; and the pause in the midst of the vehement action of the last may be reasonably accepted as a desirable point of repose. The house was crowded; and Mr. and Mrs. Kean, with the author, were summoned to receive the well-deserved honours of the evening.

On Wednesday was produced a new farce, entitled "Betsy Baker." The situations, though somewhat improbable, are highly amusing. *Mr. Mouser* (Mr. Keeley) is over fond of his wife (Miss Murray), and incurs from her the charge of being "too attentive by half." Her cousin contrives a plot to cure her of this impression, by exciting her jealousy. Accordingly, he bribes *Betsy Baker*, a laundress (Mrs. Keeley), to make love to the husband; which, of course, she does in most ludicrous fashion, but, nevertheless, successfully. The acting of Mr. and Mrs. Keeley in this little piece was positively perfect.

MDLLE. JETTY TREFFZ.

MDLLE. JETTY TREFFZ.

Few *artistes* have enjoyed a career less chequered by reverses or vacillations of fortune than the popular subject whose Portrait is here presented. At the very outset of her career, she became a favourite; and, although still very young, her many successes have made her name familiar in Germany and in this country. Jetty Treffz, in addition to her musical abilities, unites the advantages of a pretty and piquant expression of face, and a highly amiable character, attractive manner, and all the accomplishments which a thorough education can bestow.

Jetty Treffz—or rather Henriette de Tr****d, since Treffz is only her family name by the maternal side—was born at Vienna, on the 26th of June, 1826. Her father, a Polish gentleman, was an officer in the Austrian service. Her mother was daughter of the beautiful Laura Schwan, of Manheim, who was beloved by Frederick Schiller, and made immortal by the verses that great dramatic writer wrote in honour of her personal charms and mental accomplishments. Undazzled by the genius of Germany's greatest poet, although flattered by the homage of his deathless muse, Laura Schwan preferred the humbler claims of Professor Treffz, and ultimately was married to him. Jetty's mother, the offspring of this alliance, being independent, gave her daughter the best possible education; but, at the age of thirteen, her mother's fortune was lost, through the embezzlement of an agent: however, Jetty's celebrity was acquired by this untoward event, as she was compelled to resort to her natural endowments, as a means of existence. Prince Giuseppe Poniatowsky, a patron of the arts, and a composer of no mean acquirement, was the first to discover Jetty's precocious abilities. He had been an intimate friend of her father, and induced her to submit her musical capacity to competent guidance. Her first master was Gentilhuomo, an Italian professor of note. Her progress was remarkable, and soon attracted the notice of Merelli, the director of the Viennese Italian Opera, by whom she was engaged. Much, however, to Jetty's disappointment, after she had studied a varied and extensive *répertoire*, the manager gave her no part to play for a whole year; and she then threw up her engagement, and left for Dresden, where, in her fifteenth year, she made her *début* on the stage as *Giulietta*, in Bellini's "I Capuceti ed i Montecchi," the renowned Schroeder Devrient being the *Romeo*. Jetty's success was complete, and she was presented to the Queen of Saxony, in her Majesty's box. So much struck was the Queen with Jetty's promising talents, she not only received the *débutante* most graciously, but she placed her under the famed Morlacchi's tuition for singing lessons, at her Majesty's expense. Schroeder Devrient was her mistress in the dramatic art: a better model, of course, could not have been selected. After a brilliant season of a year in Dresden, Jetty went to Leipzick, where she had the good fortune to attract the notice of the great Mendelssohn, who, with that liberality and generous policy which always marked his conduct towards artists of merit, at once took a lively interest in her welfare, and did all in his power to assist her. He taught her his own songs; and, at the last of the Gewandhaus Concerts, where she sang with the greatest success, composed expressly for her one of the most celebrated of his songs, the well-known Volkslied, "Es ist bestimm in Gottes Rath," which Jetty Treffz sang, for the first time, with the most decided effect. To Mendelssohn Jetty Treffz is indebted for that universality of style which is so remarkable a characteristic of her talent. From Leipsic Jetty returned to Vienna, and was immediately engaged at the Karntnerthor Theatre, where she at once became a favourite: two years after, she joined Pokorney, with the German company, at the An der Wien, with Staudigl, Pischek, Madame Marra and Jenny Lind. Jetty subsequently visited Dresden, Leipsic, Berlin, Frankfort, and Presburg with continued success, more especially in Mozart's operas. Afterwards, she rendered essential service to our distinguished native composer, Balfe, whose comic opera, "Les Quatre Fils d'Aymon," and serious opera "La Bohémienne" (the "Bohemian Girl"), were both played with long-continued popularity at the An der Wien: in the first opera Jetty Treffz played upwards of 200, and in the last more than 100 times. The Vienna revolution of 1848 drove Jetty Treffz, like so many other *artistes*, from her native country, and she came to this country. She made her *début* before the classic audience of our Philharmonic Society, and made a decided impression, her mezzo-soprano organ being much admired, as well as her taste and simplicity, in Mozart's "Voi che sapete," which was encored. She had soon the honour of singing before her Majesty at Buckingham Palace, and was a second time engaged at the Philharmonic Society. She sang at various other concerts in town and in the provinces; and at the opening festival of the new Liverpool Philharmonic Hall, with Grisi, Viardot, Alboni Mario, Herr Formes, &c. M. Jullien ultimately secured her services last season for his concerts, and has re-engaged her for the present year. She is nightly encored twice and thrice in her songs; her "Trab, trab," is on every barrel-organ, and is whistled or sung in every street. Jetty Treffz is distinguished, like Jenny Lind, for her readiness to sing at charities or for brother or sister *artistes* in misfortune; and such amiability adds lustre to the artistic acquirements which prompted Mendelssohn to declare that Jetty Treffz was the best *Lieder-singerin* in Germany; and she bids fair to gain equal distinction here, as she sings our national ballads to the evident delight of her audiences.

SCENE FROM THE NEW PLAY OF "THE TEMPEST," AT THE PRINCESS'S THEATRE.

THE INDUSTRIAL PALACE IN HYDE-PARK.

MR. PAXTON'S LECTURE, AT THE SOCIETY OF ARTS.

THE first Meeting of the Society of Arts for the season was held on Wednesday night, in their rooms, John-street, Adelphi; when a great number of the members and their friends attended, being attracted by the opportunity of hearing a paper read by Mr. Paxton, of Chatsworth, the designer of the Industrial Palace now rising in Hyde-Park, on the origin and mode of construction of that building. Lord Overstone took the chair; and, in announcing the subject of the paper, stated that Mr. Paxton had brought a number of drawings to explain his paper, which, as the meeting would observe, were now hung round the room; but, as it would be impossible for the members to examine them minutely at that meeting, Mr. Paxton had kindly agreed to allow them to remain till Friday week, for the inspection of members. (Hear, hear.)

Mr. Paxton was received by the meeting with great applause. Previous to reading his paper, he stated that when he first brought up his design to London in Midsummer, the Council of the Society kindly offered him the use of that room, for the purpose of a lecture being delivered, though not by himself, on the advantages of his plan. Circumstances occurred at the time to prevent this from being carried into effect, and the Council then proposed that, instead of having a lecture delivered by another, he should read a paper on the subject himself. He had ventured to comply with that request; and as it was the first paper he had ever read in his life, he entreated their indulgence for any defects they might observe in it. (Applause.) Mr. Paxton then proceeded to read the paper as follows, illustrating it as occasion required by a reference to a series of diagrams and models exhibited in the rooms:—

The Great Industrial Building now in the course of erection, and which forms the subject of the present paper, was not the production of a momentary consideration of the subject. Its peculiar construction, in cast iron and glass, together with the manner of forming the vast roof, is the result of much experience in the erection of buildings of a similar kind, although on a smaller scale, which has gradually developed itself through a series of years. In giving, therefore, a description of the Building itself, it may not be uninteresting to give a brief account of the reasons which led me to investigate the subject of glass roofs and glass structures generally, and which have resulted in the Exhibition Building.

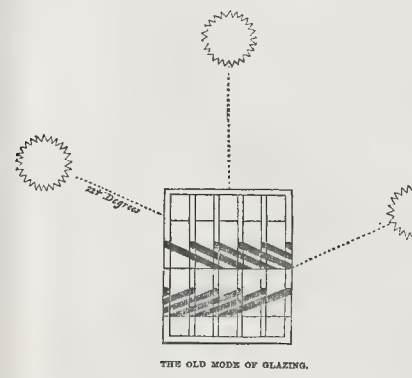
In 1826, when I first turned my attention to the building and improvement of glass structures, the various forcing-houses at Chatsworth, as at other places, were formed of coarse thick glass and heavy woodwork, which rendered the roofs dark and gloomy, and, on this account, very ill suited for the purposes they were intended to answer. My first object was to remove this evil, and, in order to accomplish it, I lightened the rafters and sash-bars, by bevelling off their sides; and some houses which were afterwards built in this manner proved very satisfactory. I also at this time contrived a light sash-bar, having a groove for the reception of the glass; this groove completely obviated a disadvantage connected with the old mode of glazing, namely, the putty becoming continually displaced by sun, frost, and rain, after the sashes had been made for a short time, and the wet by this means finding its way betwixt the glass and the wood, and producing a continual drip in rainy weather.

About this period the desire for metallic roofs began to extend in every direction; and as such structures had a light and graceful appearance, it became a question of importance as to the propriety of using metal sashes and rafters, instead of wooden ones, for horticultural purposes. After carefully observing the effects of those built by various persons, it became apparent to me that the expansion and contraction of metal would always militate against its general adoption, as at no season of the year could the sashes and rafters be made to fit.

The extra expense, also, of erecting metallic-roofed houses was a consideration. In 1833 I contemplated building a new range of hot-houses, and being desirous of knowing how much they would cost if erected of metal, a plan of the range was prepared, and sent to Birmingham, and another to Sheffield, with a desire to be furnished with estimates for that purpose. The estimate from Birmingham was £1400; and the other, from Sheffield, was £1850. These appeared to me such enormous sums, that I at once set about calculating how much the range would cost, if built of wood under my own inspection; and the result was, that I was able to complete the whole range, including masonry (which was omitted in the metal estimates), for less than £500.

Besides the extra cost of metallic roofs, we must add the extreme heat of such houses in hot weather, and their coldness in times of frost; the liability to breakage of glass from expansion and contraction of the metal; the very limited duration of the smaller portions, as sash-bars, from corrosion, by exposure to the alternations of heat, cold, and moisture, inseparable from gardening operations, and which could only be prevented by making use of the expensive material *copper*; and the difficulty, when compared with wood, of repairing any damages, as a wooden roof could at any time be set to rights by a common carpenter. These different items formed in my mind so many objections to its use, and the same disadvantages soon became generally apparent.

It was now thought advisable by some parties, that, in order to obviate the many disadvantages in the use of metal, the rafters and frame-work of the sashes ought to be made of wood, and the sash-bars of metal. This plan certainly presented more advantages than the other, yet it was quite obvious that materials so incongruous could never give satisfaction; and accordingly, in a



THE OLD MODE OF GLAZING.

few years, as I had anticipated, the rage for these structures gradually subsided, and the use of wood again became resorted to by most persons, as the best material for horticultural purposes.

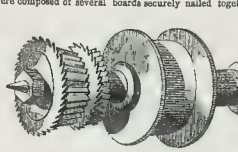
In the construction of glass houses requiring much light, there always appeared to me one important objection, which no person seemed to have taken notice of or obviated; it was this. In plain lean-to, or shed roofs, the morning and evening sun, which is on many accounts of the greatest importance to forcing fruits, presented its direct rays at a low angle, and, consequently, very obliquely to the glass. At those periods most of the rays of light and heat were obstructed by the position of the glass and heavy rafters, so that a considerable portion of time was lost both morning and evening; it consequently became evident that a system by which the glass would be more at right angles to the morning and evening rays of the sun, would obviate the difficulty, and remove the obstruction to rays of light entering the house at an early and late hour of the day. This led me to the adoption of the ridge and furrow principle for glass roofs, which places the glass in such a position that the rays of light in the mornings and evenings enter the house without obstruction, and present themselves more perpendicular to the glass at those times when they are the least powerful, whereas at mid-day, when they are most powerful, they present themselves more obliquely to the glass. Having had this principle fixed in my mind, and being convinced of its importance, I constructed a pine-house in 1833 as an experiment, which still exists unimpaired, and has been found fully to answer the purpose.

In 1834 I resolved to try a further experiment on a larger scale, on the ridge and furrow principle, in the construction of a green-house of considerable dimensions, which also remains, and answers admirably. For this building I made a still lighter sash-bar than any I had previously used; on which account the house, when completed (although possessing all the advantages of wood), was as light as if constructed of metal. The whole length of this structure is 97½ feet, and its breadth 25 feet; the height at the back is 16 feet 9 inches, and in the front 12 feet 3 inches. A span so large as 25 feet could not be safely

THE NEW VICTORIA REGIA HOUSE.—EXTERIOR.

covered with a roof constructed in the ordinary way, unless the sash-bars were stronger, and the assistance of heavy rafters and numerous supports was afforded. The house presents a neat and light appearance, and consists of 15 bays, and pediments in front, supported by sixteen slender reeded cast-iron columns. Whilst it makes an admirable green-house, it is also an economical building; for, at the period of its construction, notwithstanding the heavy tax on glass (since removed), it only cost at the rate 2d. and a fraction per cubic foot. At the present time, considering the change in the price of material, and the removal of the glass tax, it could be constructed at a considerably smaller amount.

Having in contemplation the erection of the Great Conservatory in its present form, it was determined, in 1836, to erect a new curvilinear hot-house 60 feet in length and 26 feet in width, with the elliptical roof on the ridge and furrow principle, to be constructed entirely of wood, for the purpose of exhibiting how roofs of this kind could be supported. The plan adopted was this: the curved rafters were composed of several boards securely nailed together on templets of wood



SASH-BAR MACHINE.

cut to the exact curve; by this means a strength and firmness were obtained sufficient to support an enormous weight. This house was subsequently fitted up for the *Victoria regia*, and it was here I invented a water-wheel to give motion to the water in which the plant grew; and here this singular beautiful aquatic flowered for the first time in this country, on the 8th November, 1849. (Cheers.)

In 1837 the foundations of the Great Conservatory were commenced, and in constructing so great a building, it was found desirable to contrive some means for abridging the great amount of manual labour that would be required in making the immense number of sash-bars requisite for the purpose. Accordingly, I visited all the great workshops in London, Manchester, and Birmingham, to see if anything had been invented that would afford the facilities I required. The only apparatus met with was a grooving machine, which I had at once connected with a steam-engine at Chatsworth, and which was subsequently so improved as to make the sash-bar complete. For this apparatus the Society of Arts, in April, 1841, awarded me a medal; and this machine is the type from which all the sash-bar machines, found in use throughout the country at the present time, are taken. As the Conservatory was erected under my own immediate superintendence, I am able to speak accurately as to the advantages of the machine: it has, in regard to that building alone, saved in expenses £1400. The length of each of the bars of the Conservatory is 48 inches; only one inch shorter than those of the Exhibition Building. The machine was first used in its present form in Aug., 1834; and its original cost, including table, wheels, and everything complete, was £20. The motive power is from a steam-engine employed on the premises for other purposes; and any well-seasoned timber may be used. The attendants required are only a man and a boy, and the expense of the power required for it when in use is comparatively trifling. The sash-bars may be made of any form, by changing the character of the saws.

There is one particular feature in working the machine, namely, the bar is presented to the saws below the centre of motion, instead of above it (as is usual), and to the sides of the saw which are ascending from the table, instead of those which are descending. These arrangements were necessary to suit the direction of the grain of the wood; for when the bars were presented to the saws in the usual way, the wood was crushed instead of being cut and cleaned. It is essential that the machine should revolve 1200 times in a minute, to finish the work in a proper manner.

The glass and glazing of the Chatsworth Conservatory caused me considerable thought and anxiety, as I was very desirous to do away altogether with the numerous overlaps connected with the old system of glazing with short lengths. This old method, even under the best of management, is certain, in the course of a few years, to render unsightly any structure, however well built.

In the course of my enquiries, I heard that Messrs. Chance and Co., of Birmingham, had just introduced from the Continent the manufacture of sheet glass. Accordingly, I went to see them make this new article, and found they were able to manufacture it three feet in length. I was advised to use this glass in two lengths, with one overlap; but to this I could not assent; as I observed, that since they had so far advanced as to be able to produce sheets three feet in length, I saw no reason why they could not accomplish another foot; and, if this could not be done, I would decline giving the order, as, at that time sheet glass was altogether an experiment for horticultural purposes. These gentlemen, however, shortly afterwards informed me that they had one person who could make it the desired length; and, if I would give the order, they would furnish me with all I required.

It may just be remarked here, that the glass for the Exhibition Building is forty-nine inches long—a size which no country except England is able to furnish in any large quantity, even at the present day.

In 1840 the Chatsworth Conservatory was completed and planted. The whole length of this building is 277 feet; its breadth, 123 feet over the walls; and the height, from the floor to the highest part, 67 feet.

Notwithstanding the success which attended the erection of these buildings, it became to me a question of importance how far an extensive structure might be covered in with *flat* ridge and furrow roofs, that is, the ridge and valley rafters placed on a level, instead of at an inclination, as in the greenhouse, or curvilinear, as in the Great Conservatory. I therefore prepared some plans for an erection of the kind for the Earl of Burlington, somewhere about ten years ago; but, on account of the lamented death of the Countess, the design of erection was abandoned. However, from that time, I felt assured, not only that it could be done satisfactorily, but that the most appropriate manner to form and support level glass roofs, to a great extent, was that adopted this year for the New Victoria House at Chatsworth, which may be considered a miniature type of the Great Industrial Building.

Before describing this house, however, it may be well to notice two instances, in which the flat roofs had been previously tried, and in both cases with the most perfect success.

The first of these was a conservatory attached to a villa in Darley Dale, only a short distance from Chatsworth. This building is divided into five bays, with a glass door in the centre, and glass pilasters separating the bays; the ridge and furrow roof covers an opening of 17 feet in the clear. The ventilation is simultaneously effected by a lever connected with a rod, which is attached to all the ventilators. From the various uses to which this little structure has been applied, nothing can be more evident than that this style of building is exactly suited for the purposes of the Industrial Exhibition, as no fear need at any time be entertained that the least damage will occur to any articles which may be exhibited within it. The accompanying letter from Mr. Washington, the gentleman who occupies the villa, will fully bear out the foregoing remarks:—

DARLEY DALE, Near Matlock, 18th July, 1850.

MY DEAR MR. PAXTON,—I have much pleasure in complying with your request, to state how the flat-roofed, boarded conservatory attached to your house here answers, and for what purposes I am able to use it. As a conservatory, it seems fully to answer its purpose. But the use we chiefly make of it is as a sitting-room; we find it so dry, light, and airy. While preparing the house for our residence, during the last winter and spring, it was filled with all sorts of furniture and books, pictures, &c., and a piano: nothing received any injury; indeed, we selected it for being, what it has proved, the most dry and airy part of the house. I cannot conceive the construction could be improved so as to better answer the purposes for which you designed it. Believe me, dear Sir, sincerely yours,

ADAM WASHINGTON.

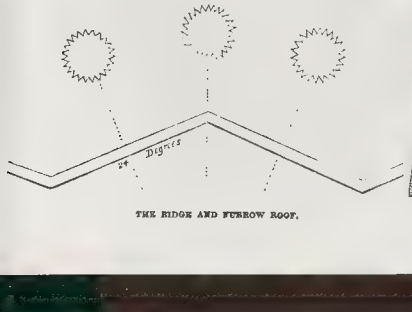
The second instance is this:—In the spring of 1848, plans were prepared for the erection of an ornamental glass structure, to cover the conservative wall at Chatsworth. This wall was previously a plain fluted structure, devoted to the growth of rare and choice plants. The new erection is 331 feet in length, and seven feet in width. It is divided into 10 bays, with an ornamental centre projecting beyond the general line of the building. Each bay is subdivided by smaller bays, which are separated by glass pilasters, the glass sashes are so arranged that they can be removed in summer and the whole thrown open to the gardens, whilst in winter the building affords an extensive promenade under cover. The ground on which this structure is built has a fall of 25 feet 6 inches in its whole length; consequently there is a proportionate fall at each bay, which gives great variety, and obviates the monotony that would be exhibited in a building of such length and dimensions placed on a uniform level. The lower side of each bay is finished by a glass pilaster, three feet in width, and surmounted by a vase on the wall behind. The roof is on the ridge and furrow principle, with the rafters on a very slight inclination; and the ventilation is effected in a similar but more perfect manner than that already described as in use at the conservatory at Darley Dale. The new Victoria Regia House, which presents a light and novel appearance, is 60 feet 6 inches in length, and 40 feet 9 inches in breadth. Although, when compared with the Great Industrial Building, the Victoria House is a very diminutive structure, yet the principles on which it is constructed are the same, and may be carried out to an almost unlimited extent. The form of the roof, the general elevation, the supports, and the mode of construction are all quite simple, and yet fully answer the purposes for which they were intended. The Victoria House, however, was so built as to retain as much moisture and heat as possible, and yet to afford a strong and bright light at all seasons; whilst, on the contrary, the Industrial Building, being intended to accommodate a daily assemblage of many thousands of individuals, and a vast number of natural and mechanical productions, many of which would be destroyed by moisture and heat, is constructed so as to fully answer that end.

THE INDUSTRIAL BUILDING.

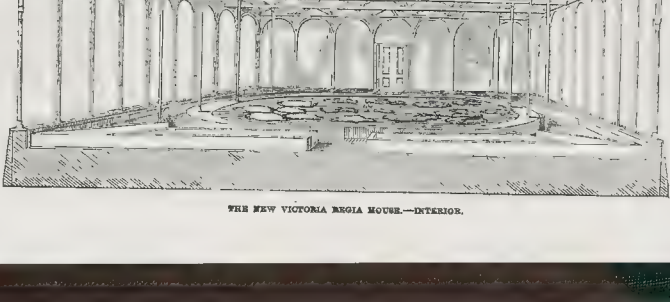
My reasons for offering a design for this building were these:—When plans for the structure were sent in by various parties who answered the invitation of the Commissioners, many forcible and cogent reasons were urged and published in the daily papers against the propriety of erecting a large building of bricks and mortar in Hyde-Park. It was not until this period that I turned my attention to the matter, when I was at once convinced that the least objectionable structure to occupy a public park would be an erection of cast iron and glass; whilst at the same time a building of this description would be in every point of view the best adapted for the purposes of the Exhibition.

The time for receiving the designs had expired; but from having the whole matter already digested, and the system of ridge and furrow *flat* roofs so fully impressed on my mind, it only required the adaptation of the principle on a large scale to suit the vast building for the Exhibition. My plans were got up in about ten days, when I had the satisfaction of their being ultimately approved of by the Commissioners.

The design for the building involved various considerations, and therefore it was planned, first with particular consideration as to its fitness for the object in view, namely, the Exhibition of 1851; and, secondly, its suitableness for the site proposed to be occupied by the structure; and, lastly, with a view to its permanence as a winter garden, or vast horticultural structure, or a building



THE RIDGE AND FURROW ROOF.



THE NEW VICTORIA REGIA HOUSE.—INTERIOR.

which might, if required, be again used at any future period for a similar Exhibition to that of 1851.

One great feature in the present building is, that not a vestige of either stone, brick, or mortar is necessary to be used; but the whole is composed of dry material, ready at once for the introduction of articles for the Exhibition. By no other combination of materials but iron, and wood, and glass, could this important object be effected; and when we consider the limited period allowed for the erection of so stupendous a structure, the attainment of this object has secured what may almost be deemed the most important consideration. The absence of mortar, plaster, or moist material in the construction, together with the provision made for the vapours which will necessarily arise, and are condensed against the glass, enables the exhibitor at once to place his manufactures in favourable situations, without the probability of articles even of polished ware being tarnished by their exposure.

It may be important here to state that it is unnecessary to cut down any of the large timber trees, provision being made by means of a curvilinear roof over the transept of the building for them to stand beneath the glass, and by a proper diffusion of air they will not suffer by the inclosure.

As to the appropriateness of this style or class of building, it has already been remarked that a glass structure is the least objectionable of any description of building that could be erected in a public park, where the mass of the community look with a jealous eye on any matter which they may fancy is an encroachment on their rights. And, on the supposition that the building will remain as a permanent structure, the lights might be removed in summer and the whole thrown open, when the space occupied would still form a part of the park, with the slight obstruction of the cast-iron supports.

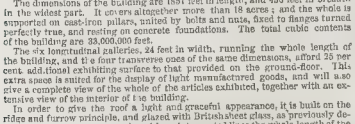
The dimensions of the building are 1851 feet in length, and 456 feet in breadth in the widest part. It covers altogether more than 18 acres; and the whole is supported on cast-iron pillars, united by bolts and nuts, fixed to flanges turned perfectly true, and resting on concrete foundations. The total cubic contents of the building are 33,000,000 feet.

The six longitudinal galleries, 24 feet in width, running the whole length of the building, and the three transverse ones of the same dimensions, afford 25 per cent. additional exhibiting surface to that provided on the ground-floor. This extra space is suited for the display of light manufactured goods, and will also give a complete view of the whole of the articles exhibited, together with an extensive view of the interior of the building.

In order to give the roof a light and graceful appearance, it is built on the principle of a furrow, and glazed with British sheet glass, as previously described. The rafters are continued in uninterrupted lines the whole length of the building. The transept portion, although covered by a semicircular roof, is also on the angular principle.

All the roof and upright sashes being made by machinery, are put together and glazed with great rapidity; for, being fitted and finished before they are brought to the place little more is required on the spot than to place the finished materials in the position intended for them.

The length of sash-bar requisite is 205 miles. The quantity of glass required is about 600,000 feet, weighing upwards of 400 tons. All round the lower tier of the building, however, will be boarded with fillets, planted on in a perpendicular line with the sash-bars above



"PAXTON'S GUTTER."

[We have engraved "the Paxton Gutter," which is one of the most remarkable novelties of the structure. They are arranged longitudinally and transversely; the rain-water passes from the longitudinal gutter into a transverse gutter over the girders, and is thus conveyed to the hollow columns, and thence to the drains below. As these transverse gutters are placed at every 24 feet apart, and as there is a fall in the longitudinal gutters both ways, the water has only to run a distance of 12 feet before it descends into the transverse gutters, which carry it off to the hollow columns, or down-pipes. "Paxton's Gutter" has grooves cut out of the solid, is formed at once by machinery, and is cambered up by tension rods having screws fixed at the ends, so as to adjust the gutter to the greatest nicety, in the same manner as the wrought-iron girders which span the Victoria Lily House.]

FLOORS.

I have tried many experiments in order to find out the most suitable floors for the pathways of horticultural structures. Stone was objectionable on many accounts, but chiefly on account of the moisture and damp which it retained; and was therefore unconformable, especially to those warming flue shoes. The difficulty of getting rid of the water from the watering of plants, was also an objection; but perhaps the greatest is the amount of dust from sweeping, which always proves detrimental to plants. I likewise found that close boarding for pathways was open to many of the inconveniences as stone; for although damp and moisture was in part got rid of, yet still there were no means of immediately getting rid of dust. These various objections led me to the adoption of trellised wooden pathways, with spaces between each board, through which, on sweeping, the dust at once disappears, and falls into the vacuity below.

Whilst the accomplishment of this point was most important in plant-houses, I consider it doubly so with respect to the Industrial Building, where there will be such an accumulation of various articles of delicate texture and workmanship. Before sweeping the floors of the Great Building, the whole will be sprinkled with water from a moveable hose-pipe, which will be immediately followed by a sweeping-machine, consisting of many brooms fixed to an apparatus on light wheels, and drawn by a small. By this means, a large portion of ground will be passed over in a very short space of time.

The boards for the floor will be 9 inches broad, and 1¼ inch thick, laid half an inch apart, on sleeper joists 9 inches deep and 3 inches thick, placed 4 feet apart.

This method of flooring, then, possesses the following advantages:—It is very economical; dry, pleasant to walk upon; admits of the great fitting through the spaces; and even when it requires to be thoroughly washed, the water at once disappears betwixt the openings, and the boards become almost immediately fit for visitors.

The galleries will be laid with close boarding.

VENTILATION OF THE BUILDING.

This point has been most carefully considered. A building where so many individuals will congregate must require a constant admission of pure air, and a most copious supply is provided.

Four feet round the whole of the basement part of the building is made of *louvre-boarding*; and at the top of each tier a similar provision of 3 feet is made, with power to add an additional quantity if required. In the centre aisle, also, the air will be plentifully admitted. By simple machinery the whole of this ventilation can be regulated with the greatest ease. The advantages of this kind of ventilation are several, and it is one of the very simple in construction. They can be opened and closed instantaneously, with the greatest readiness. They nicely distribute the air, and yet admit a large volume of it; and, from the manner in which they are placed over each other, they effectually prevent the entrance of wet in rainy weather.

In order to subdue the intense heat in so large a building covered with glass, all the side of the upright parts, and the whole of the angled roof, will be covered outside with canvas or calico, so fixed as to allow a current of air to pass between the canvas and the roof; in very hot weather water may be poured on, which will very much assist in cooling the temperature within.

Provision will be made to use the Indian plan of ventilation, if the heat is so intense as to render it desirable to have the temperature cooler than out of doors.

A house was fitted up last summer, at Chatsworth, as an experimental place to try the mode of ventilating, which it was found to answer its purpose admirably. The temperature was reduced in an hour from 85 to 78 degrees, without any other means being used to increase the draught through the building.

This sort of covering offers the following advantages: the brightness of the light will be tempered and subdued, the glass will be protected from the possibility of injury by hail; the screen being placed on the outside will render the building much cooler than if it were placed inside; and, through this provision, the ventilation can be regulated at pleasure.

From the side galleries, running the whole length of the building, there will be grand views of the goods and visitors below, whilst the transverse galleries in the middle and at the ends will afford ample means for general supervision, and will serve to communicate between the side galleries.

Magnifying-glasses, working on swivels, placed at short distances, will give additional facility for commanding a more perfect general view of the Exhibition.

After the Exhibition is over, I would convert the building into a permanent winter garden, and would then make carriage drives and equestrian promenades through it. Pedestrians would have about two miles of galleries, and two miles of walks upon the ground-floor, and sufficient room would then be left for plants. The whole intermediate spaces between the walks and drives would be planted with shrubs and climbers from temperate climates. In summer, the upright glass might be removed, so as to give the appearance of continuous park and garden.

A structure where the industry of all nations is intended to be exhibited, should, it is presumed, present to parties from all nations a building for the exhibition of their arts and manufactures, that, while it affords ample accommodation and convenience for the purposes intended, would of itself be the most singular and peculiar feature of the Exhibition. How far this has been accomplished, I must leave to the community to decide.

I have now endeavoured to give a brief outline of the Exhibition Building of 1851. It will be seen, from the simplicity of all its parts, together with the simplicity of the detail, that the construction does not offer a subject that requires me to dwell longer upon. The section of one part shows the whole; for it is only by the multiplication of these parts that the stupendous structure now in progress is extended.

When I consider the cheapness of glass and cast iron, and the great facility with which can be used, I have no doubt but many structures similar to that at Darley will be attached to dwelling-houses, where they may serve as sitting-rooms, conservatories, waiting-rooms, or omnibus-rooms, if I may be allowed the expression. I am now, in fact, engaged in making the design for a gentleman's house, to be covered wholly with glass; and, when we consider that, wherever lead is now used, glass may, with equal propriety, be substituted, I have every hope that it will be used for buildings of various conditions and character. Structures of this kind are also most suitable of the highest kind of ornamentation in stained glass and general painting.

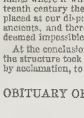
I am not without hope, however, that it will become almost universal in its use, and that the system will be extended for manufacturing purposes, as well as general cemeteries, and also for horticultural buildings, so that even market gardeners will advantageously apply it in the growing of foreign fruits for the London markets.

I even go so far as to indulge in the sanguine hope that agriculture will be ultimately benefited by the application of cast iron and glass. In short, there is no limit to the uses to which it and sheet glass may be brought can define the limits where it will end; and we may congratulate ourselves that in the nineteenth century the progress of science and the spirit of manufacturers have placed at our disposal the application of materials which were unknown to the ancients, and thereby enable us to erect such structures as would have been deemed impossible even in the early part of the present century.

At the conclusion of the lecture, a short conversation on some of the details of the structure took place, after which a vote of thanks was proposed, and passed by acclamation, to Mr. Paxton, for the paper he had read.

OBITUARY OF EMINENT PERSONS RECENTLY DECEASED.

LADY CARDEN.



This amiable and unfortunate lady was the fifth daughter (and the third by the second marriage) of the present Sir William Mordaunt Sturt Milner, Bart., of Nunappleton Hall, in the county of York. Her mother, Harriet Elizabeth, daughter of Lord Edward C. Cavendish Bentinck, the second wife of Sir William, was married to the Baronet the 8th May, 1809. Mr. Milner, M.P. for York, is their eldest son. This daughter Caroline Elizabeth Mary, the subject of this notice, wedded, on the 23rd July, 1840, Sir John Craven Carden, Bart., of Templemore, in the county of Tipperary, and was at the time of her shocking death the mother of a youthful family. Lady Carden who was beloved by all who

knew her, whose virtues were felt and acknowledged by rich and poor, and whose charities were unbounded—has perished in the presence of her husband and children, in a manner awful in the extreme. The event happened thus:

About four o'clock on the evening of Tuesday, November 5, as Sir John Craven Carden and his brother, Mr. Warden Carden, were shooting rabbits in the Priory demesne, Templemore, Lady Carden went towards them and seated herself on a rustic chair, surrounded and covered by shrubs. Both gentlemen immediately placed their rifles, which were on full cock, at the time, against the trees which entwined around the back of the chair, they entered into conversation with Lady Carden, when a sudden gale of wind arose, which shook the trees, and caused one of the rifles to discharge, when, alas! the ball entered under Lady Carden's left ear, and, melancholy to relate, terminated her existence on the spot. She died in the arms of her affectionate husband, whose grief and agony of mind cannot be described. Nothing can equal the gloom which the death of this excellent lady has cast for many miles around the country. To the poor she is a severe loss. She had just previously been inspecting three schools, which she had been the means of establishing for the instruction of the youth of the neighbourhood, when she met with her deplorable end.

Lady Carden has left a family of three young children. She was but twenty-seven years of age.

LIEUTENANT COLONEL FRANCIS ANDREWS DUNDAS.

This gallant officer, a near relative, descendant of the ancient family of Dundas, of Duresbury, county of Chester, entered the service of the Hon. E. I. Company in 1792, was present at the taking of Pondicherry and the capture of Seringapatam (for which he received a medal), and commanded a squadron at the battle of Mallavelly, and served with distinction in many parts of India. In January, 1804, he was body-guard of His Excellency the Marquess Wellesley, when Governor-General. He was born in 1774, and died 3rd November, 1850.

HENRY D'ESTERRE HEMSWORTH, ESQ., OF SHROPHAM HALL, NORFOLK.

This respected country gentlemen, a magistrate for the counties of Norfolk and Suffolk, and a Deputy-Lieutenant of the former, was second son of the late Thomas Hemsworth, Esq., of Abbeville, county of Clare, by Mary his wife, daughter of Henry D'Esterre, Esq., of Rosmanagher, county of Clare. He was born 2d October, 1790, and married in August, 1815, Jane Maria, second daughter and co-heir of General James Hethersett, *aide-de-camp* to the Marquess Townshend at the battle of Quebec, and had by her two sons and three daughters.

WILLS OF EMINENT PERSONS RECENTLY DECEASED.

WILL OF THOMAS THISTLEWAYTE, ESQ., DEPUTY-LIEUTENANT FOR HAMPSHIRE, FORMERLY M.P. FOR THE COUNTY.

THE will of this wealthy landed proprietor was proved on the 8th inst. by the executors, John Guitton, Esq., of Wickham; Captain Henry Stanhope, R.N.; and the Rev. G. Allen. The estates and property liable to probate duty (exclusive of the freeholds) were estimated at £600,000; stamp, £7800.

The castle and borough of Portchester, with the manors, advowsons, and freehold, he has devised to his eldest son, who is also entailed. He directed that the furniture at Southwick House, including all works of art and articles of *vertu*, should be sold. The house at Connaught-place, with the entire furniture, he leaves to his wife and directs her to be handsomely settled. He charged, and for all his daughters, they being the residuary legatees. To his second son he leaves an annuity of £2000; and to his third son the Paddington estate, subject to certain annuities under the will. There are large annuities, as well as legacies, bequeathed to many members of his family and acquaintances. To his late private secretary, H. Whitmore, Esq., he leaves a legacy of £1000.

He bequeaths to the County Hospital, at Winchester, £1000; the Portsmouth, Portsea, and Gosport Hospital, £500; the Southampton Infirmary, £200. He endows with an annuity of £150 the school established by him at Southwick, having a playground, and a residence for master and mistress, which property he leaves to the parish for ever, for the education and clothing of the poor children of Southwick and Burbhurt. He also endows with an annuity of £100 the school, also established by him, at Porchester, having a playground, with residences, which he leaves in like manner to the parish.

The will, with a codicil, are dated 12th August, 1850; the testator died at his seat, Southwick Park, Hants, on the 14th September, aged 71.

CHARITABLE BEQUESTS.—To the British and Foreign Anti-Slavery Society, £50; Peace Society, £50; British and Foreign Bible Society, £50; Tract Association of the Society of Friends, £100; Ackworth School, £100. These legacies are free of duty. The will of the late Mr. Richard Brown, of Llandinam, Montgomeryshire, and he has bequeathed the residue of his property for the education of the children of the poorer classes of the Society of Friends, preference being given to the children of parents connected with North Wales.

AGES OF THE NOBILITY.—The eldest Archbishop is the Archbishop of Armagh, aged 77: the youngest is the Archbishop of York, aged 62. The eldest Duke is the Duke of Hamilton, aged 83; the youngest is the Duke of St. Albans, aged 16. The eldest Marquis is the Marquis of Huntley, aged 89; the youngest is the Marquis of Bute, aged 3. The eldest Earl is the Earl of Bantry, born August 6, 1767, aged 83 (the Earl of Cork was born October 21, 1767, and the Earl of Portsmouth was born December 18, 1767): the youngest Earl is the Earl of Dunmore, aged 9. The eldest Viscount is Viscount St. Vincent, aged 84; the youngest is Viscount Hood, aged 12. The eldest Bishop is the Bishop of Durham, aged 80; the youngest is the Bishop of Down, aged 42. The eldest Baron is Baron Berners, aged 88; the youngest is Baron Louth, aged 18. The eldest Baronet is Sir Charles Villarica Hudson, aged 93; the youngest is Sir Reginald Louis Cabes, aged 3.

DESTRUCTION OF TEA.—A large quantity of refuse tea lying in the bonden warehouses having been found to be not wort. the import duties legally leviable thereon, application was made to the authorities for it to be destroyed, and the duties thereon remitted, and arrangements have been approved for the tea to be taken to the Nore, and there cast into the sea, in various directions, in presence of the revenue officers.

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

On Monday, at the Marylebone police-court, the four men, John Mirchel, William Dyson, James Mahon *alias* Hollensdale, and William Robinson, who were under remand upon the charge of burglary at the mansion of James Ho ford, Esq., Holford-house, Regent's Park, were brought up for final examination; and the depositions being completed, Robinson was discharged, the evidence against him being insufficient, and the others were committed for trial. Mitchel, who had been so severely wounded, was greatly improved in health, in consequence of the better treatment he had received since his apprehension.

The Cardinal Archbishop of Westminster (Dr. Wiseman) arrived in town on Monday, and, as we are informed, until his house in Golden-square has been arranged for his reception, will take up his residence in the chapel of St. George, Lambeth.

M. Gustave Schwan, a popular poet of Germany, died on the 4th, at Stuttgart, aged 58.

The *Paris Constitutionnel*, which has strongly expressed its condemnation of the anti-Papal demonstration in England, still continues to apprehend the most fearful results, hinting broadly at civil war, as the consequences of the insults which the Protestants are offering to the 3,000,000 of English and the 6,000,000 of Irish Catholics."

George Cotter, Esq., is appointed Puisne Judge of the Supreme Court at St. Lucia, in the room of Mr. Lafitte, deceased.

The Liberal students in the University of Glasgow have determined to bring forward Lord Palmerston as a candidate for the Lord Rectorship.

The brig *Lady Flora*, of Malta, Captain Aveta, which took her departure from Fort Ligieri, on the 14th of October, foundered on the same night in a whirlwind 30 miles W. of Gozo, when all hands perished except one, the boatswain, who being an expert swimmer, kept himself afloat until at last the brig *Il Mattese*, in sight at the time, picked him up and landed him at Boca, whence he was conveyed back to Malta in the Austrian brig *Maraviosa*.

A Neapolitan boat, called the *Maria della Lolera*, arrived at Malta on the 28th of October, with the crew and 50 passengers (all fugitives from the district of the Tuscan brig *Carrery* which had been wrecked on the 18th idem in the Gulph of Catania, when on her passage to Malta and Leghorn from Bengasy, laden with wool and wheat. The Sicilian authorities were so pandemicken at on the occasion of the quarantine at Syracuse where the cholera rages, that they lost no time in obliging them to depart in the first craft that could be found, in which, though a mere run across of about 100 miles, these poor miserable people were huddled together for a whole week.

A large fire took place in the village of Witcham, Isle of Ely, on Thursday night week, at Mr. R. Poole's—again the work of an incendiary. The fire destroyed all the stacks of corn, and the outbuildings, excepting only the house. The wind was strong, and the country round about illuminated for many miles.

In Northamptonshire, at Cold Ashby, on Saturday last, a fire, on the premises of Mr. Andrews, baker, destroyed a barn, a large quantity of straw, seven quarters of potatoes, two carts, one rick of oats, and one of hay. There is no doubt but that it was the work of an incendiary, as threatening letters have several times been found in the street.

The *Stockport Advertiser* states that there have been, within the last month, no less than forty robberies from the lobbies of houses in Chorlton-upon-Medlock, Hulme, and Greenheys, Manchester.

Last week, a guard, named Gibbins, connected with the York and North Midland Railway Company, was found dead at the Woodlesford Station, near Leeds. The deceased was on the outside step of one of the carriages of his train, which was stopping at the station, when another train came past, and knocked him down upon the rails. He was removed to Leeds in a dying state, and expired almost immediately on his arrival in that town.

A letter from Pesth, of the 31st ult., states that great sensation had been caused in that city, by the families of several persons, who were executed in virtue of the sentences of the revolutionary courts-martial, having commenced actions against the judges of the courts to recover damages.

Advices from Corfu, of the 25th ult., announce that the cholera has considerably diminished at Cephalonia.

On Tuesday night, about eleven o'clock, a stack of barley, containing between forty and fifty quarters, belonging to Mr. Thomas Russell, at Littington, in Huntingdonshire, was set on fire and the whole consumed. Insured in the Sun fire office.

In various localities in the country, and almost all the metropolitan and suburban parishes, meetings of both clergy and laity have been held during the past week, at which addresses to the Queen have been agreed to, condemnatory of the recent episcopal appointments by the Pope in this country.

On Saturday the 25th of October, at five minutes before one P.M., two very smart shocks of earthquake were felt at Malta, which, though they extended over a period of only a few seconds, have damaged the walls of several old buildings. The first shock was accompanied by a loud rumbling sound.

We learn from Trieste, that on the 2nd a telegraphic despatch arrived there from Vienna with orders to place all the steamers of the Lloyd Company at the disposal of the Government, to convey 20,000 men of the army of Italy to Trieste.

Mr. Faraday, at the last monthly meeting of the Royal Institution, announced to the members present the subject of a paper sent in to the Royal Society) that oxygen is magnetic, that this property of the gas is effected by heat, and that he believes it a diurnal variation of the magnetic needle to be due to the action of solar heat on the newly-discovered character. He also announced the important constituents of the atmosphere. M. Becquerel, also, has recently directed attention to a somewhat similar conclusion, in a communication which he addressed to the Academy of Sciences at Paris.

It is said that there is no foundation for the rumour that Mr. More O'Ferrall's retirement from the government of Malta. He has declared that he shall leave in April next, as his constitution will not permit of his risking another summer on the Malta island. Lord Beaumont, we understand, is to succeed Mr. More O'Ferrall.

The two German travellers, Overbeck and Barth, who accompanied the expedition of Richardson to the interior of Africa, have been heard of. A despatch from Berlin, dated the 14th of August, left them 300 miles southeast of Tripolis, where they intended to wait the termination of the rainy season; they were preparing canoes, which can be carried by camels, and used to cross the rivers. The travellers are assisted by contributions both from the King and the Geographical Society of Berlin.

Day nurseries, as they exist in Paris, are about to be made the subject of official inquiry. The Consell-General of the department of the Seine has taken up the whole question, with a view to ascertain the true merits of the system as it has been tried there since 1844.

Letters from Naples, in the *Journal of the Free Port of Leghorn*, state that on the 26th ult. the Commission of Public Health at Naples established arrivals from France to from ten to fourteen days, and those from Genoa, Leghorn, and Civita-Vecchia to seven days' quarantine.

On Thursday week, at a late hour, Mr. John M'Turk, of Skelton Grange, York city, was stopped on the road by three men, within a few hundred yards of his house, and robbed of his purse, which contained £185 in bank notes, his assistants intending to shoot him if he did not deliver up the property he might have upon him. Mr. M'Turk was at the White Horse, in Bootham, until a late hour on Thursday night.

The Municipal Council of Paris, in its last sitting, voted 1,139,950f. for the year for the expenses attendant on the support of foundlings; and a supplementary sum of 31,000f. for the increase of the number of wet nurses, so as to prevent the casualties which now occur from the want of the proper means of securing the health and good condition of the children confided to their care.

Mr. Charles Mottley, one of the most ardent collectors of books, who died in September last, has bequeathed his library to the French Republic, on condition that it shall be placed in a gallery bearing his name as the donor. The *Constitutionnel* states that the British Museum had offered £12,000 for this collection.

On Saturday last a large and powerful screw steamer, named the *Orestes*, was launched from the building-yard of Messrs. Napier, at Govan, Glasgow, for the Peninsular and Oriental Steam Navigation Company. She is now already in the Mediterranean trade the *Pirate*, *Brigand*, and *Astrologer*, and these will be followed in about two months by the *Arabian*, also building by the Napiers. Besides the Constantinople and Smyrna line, we hear the company have made arrangements to commence one, about the beginning of 1851, to Beyrout and Alexandretta.

Six daily newspapers are now published at Milwaukie—two of them in German. In Chicago there are five dailies, in Detroit three, in Cleveland three, in Buffalo five, in Toledo two. There are 70 papers published in Virginia. In Pennsylvania there are 318 daily and weekly newspapers, 3 semi-weeklys, 8 monthlies, 25 monthly magazines, and 5 quarterlies.—*New York Literary World.*

The vessel, *City of Limerick*, from Dublin, has brought to Liverpool the large number of 173 packages of peat charcoal as a portion of her cargo of Irish produce; and the *Ocean Queen* arrived the same day from Cork, brought 11 bales. Several other arrivals of peat charcoal, and also of moss, have taken place during the past few days.

Mr. Rickman, the Derby station master, has just been publicly presented with a purse made of fine purple velvet, splendidly embroidered with gold. The following is the inscription, worked in letters of gold:—"Presented to Mr. G. H. Rickman, on quitting £365, Derby, November 1, 1850." The Mayor, in presenting it, said, "This purse, containing the handsome sum of £388, is, as you are aware, the product of a subscription from the nobility, gentry, and others, travelling on the Midland Railway, and is presented to you in testimony of their approbation of your uniform attention and courtesy to all parties."

Professor Oldham has resigned the office of secretary to the Geological Society of Ireland, in consequence of his approaching departure for India, to take charge, as director, of the Great Indian Geological Survey, with a salary of £1000 a year.

On Saturday, about half-past one o'clock, and almost at the moment the Lord Mayor's Show was passing, a small wherry, containing four lads, which they had fastened to the mooring buoy off Cory's-roads, Lambeth, was capsized, and the entire party immersed. Fortunately the boats about brought speedy assistance, and two of the party were rescued; but William Allen, aged 14, of No. 11, Denbigh-terrace, Caledonian-road, and John Williams, residing in Clerkenwell, perished.

LORD MAYOR'S DAY.

In our Journal of last week, we engraved the new Pageant for Lord Mayor's Day, on Saturday, and detailed its picturesque novelties.

The procession moved from Guildhal. shortly after eleven o'clock; and, after passing along Cornhill, Leadenhall-street, Fenchurch-street, Mincing-lane, Great Tower-street, Eastcheap, Gracechurch-street, Cornhill, Bishopsgate-street, Shoreditch, High-street, Islington, Upper-street, Islington-road, Pentonville-road, Farringdon-street, Blackfriars-road, Stamford-street, Waterloo-bridge, Strand, Fleet-street, Ludgate-hill, Old Bailey, Newgate-street, Cheapside, St. Paul's Churchyard, Ludgate-street, Ludgate-hill, Fleet-street, Temple-bar, Strand, Whitehall, Parliament-street, Bridge-street, Blackfriars, the Lord Mayor and those who attended him took to their barges, and proceeded up the river to Westminster, that the Lord Mayor might be introduced to the Barons of the Exchequer.

The customary presentation then took place, the usual invitations were given, and the ceremony was brought to an end from the Court.

All then re-embarked, and the procession was re-formed in Bridge-street, Blackfriars, returning by the route it had come, amidst the hearty acclamations of the populace.

The elephant, the camel, and the deer attracted particular attention, and behaved themselves throughout the ceremony with praiseworthy docility and dignity; and the new Pageant was highly successful.

THE BANQUET.

The inaugural banquet at the Guildhall, in the evening, seemed to excite more than usual interest, and the crowds began to arrive early. Her Majesty's Ministers were exceedingly well received; and when Lord John Russell entered the hall, and crossed it to proceed to the reception-room, a cheer arose far beyond the ordinary courtesy accorded to a popular Minister.

Shortly before seven o'clock, the hall being then filled from end to end, with the exception of the chief table at the top, the Lord Mayor and the more distinguished guests entered in procession. They were received with abundant applause, the chief part of which was evidently intended for Lord J. Russell. We observed near the Lord Mayor and Lady Mayoress, the late Lord Mayor, the Lord Chancellor and Lady Truro, the Marquis of Lansdowne, Lord J. Russell, the Marquis of Clanricarde, the Earl of Carlisle, Lord Palmerston, Sir G. Grey, the Dutch Minister, the Costa Rica Minister, the American Minister, the Swedish Minister, the Peruvian Minister, Lord Warncliffe, the Lord Chief Justice of the Queen's Bench, the Lord Chief Justice of the Common Pleas, the Chief Baron, and several of the Judges, the Aldermen, the Sheriffs, Mr. Serjeant Manning, and several of the Ser.eants-at-law. Lord D. Stuart, M.P., Sir Harry Verney, Mr. Pelo, M.P.; Mr. Wyld, M.P., the Dean of St. Paul's, the Rev. Dr. Mortimer, the Hon. and Rev. H. M. Villiers, and several other clergymen; the Governor of the Bank, the Chairman of the East India Company, and Ex-Sheriff Scholefield.

After dinner, the toastmaster, Mr. Harker, announced the loving cup; and when it had gone round, and the trumpeters had sounded the signal for silence, the Lord Mayor rose, and proposed "The health of our most gracious Queen," which was received in a long and loud shout of loyalty, such as is only heard when occasions arise that seem somewhat to put the people to the test. The National Anthem, which followed, was interrupted by a fresh outburst of applause; and when it had finished, the company again rose and drank the health of the toast without another enthusiastic cheer. The Lord Mayor then gave "the health of the Royal Family." The toast was drank amidst loyal applause.

"The Army and Navy," and "Prosperity to the City of London," were next drank, followed by "The health of the late Lord Mayor," which was received with great applause.

"The Health of the Foreign Ministers" was then drunk, and replied to by Mr. Abbot Lawrence, the American Minister, in an eloquent address.

The Lord Mayor then proposed "The Health of the Lord High Chancellor of England," which was drunk with very great applause. His Lordship returned thanks in an eloquent speech, the main topic of which was the recent Papal aggression.

The Lord Mayor then rose, and proposed "The Health of my Lord John Russell and her Majesty's Ministers."

The toast was received with the most enthusiastic cheering, and drunk with the liveliest demonstrations of applause from all parts of the hall.

Lord J. Russell then rose. His appearance was the signal for the renewal of the applause with more enthusiasm than before. Ladies waved their handkerchiefs, and gentlemen cheered with one another in expressions of approbation and delight, and it was some time before the noble Lord could proceed. At length, as by common consent, the welcome terminated in one loud cheer, and almost in silence, which continued as he was heard throughout the hall an entire silence, which continued as long as his address.

His Lordship said, with reference to the recent declarations of her Majesty's Ministers: "I can only say, you see, once, that attachment to the religious freedom of this country of which I have hitherto felt, will always continue to animate my breast: and that it will be my duty to maintain to the utmost of my power the supremacy of our Sovereign—(a loud and general burst of cheering) and the rights of the people from whatever quarter they may be attacked or assailed. (Renewed cheering.) Let me add, however, one thing further. When parties much more grave, much more imminent, impended over this country, it was thought wise at that period to call upon the people to meet in prayer, to call to her aid those, whatever might be their religious persuasion, who were faithful to the throne and true to the interests of their country. Such was the course which was then pursued, and such was the occurred to this country. Such conduct, I will venture to say, is worthy of imitation; and I believe that, with religious liberty established in this country, persons of all religious persuasions, and of all shades of opinion, and of all sciences as to the mode of worship they think it right to adopt, may rally round the best interests of the country, pay a grateful homage to the Crown for the protection we enjoy under it, and feel that peace and order and liberty and freedom is generally, and I trust I may say permanently, established."

"The House of Lords," replied to by Lord Lansdowne, "Lord Campbell and the Judges," responded to by his Lordship, were the next toasts drunk.

The Lord Mayor then gave "The Health of the Commons of England," which was much applauded. His Lordship returned thanks in an eloquent speech, and concluded by proposing "The Health of the Lady Mayoress," which toast was drunk with all honours.

"The Sheriffs," "The Attorney-General and the Bar," and several other toasts followed; and, at a quarter before eleven o'clock, the Lord Mayor and the company retired to the drawing-rooms, where coffee was served, and the guests almost immediately began to take their departure.

(From a Correspondent.)

To us, who from our boyish days have been dreamers "by the shores of old romance," there was something startling in witnessing last week (for the first time) the splendid Banquet in Guildhall. In sitting down amongst the guests within the very walls where Buckingham harangued the old citizens in favour of making Gloucester King, and for which the latter rewarded him by chopping off his head; to know that those echoes had been broken by the gentle voice of Anne Askew, when she boldly declared her creed, and was for that sincerity sent by the brutal Defender of the Faith (?) to the stake—that there Thrmorton nobly defended himself, and that, in those "evil days," a jury of stout, honest citizens were daring enough to acquit him!—while these thoughts passed through our minds, we looked on the monument of Beckford, who (it is said) taught Late King upon his throne; then glances at that of Nelson, who died in the service of his country, and fancied that, if they were fronted by the statues of Charles and Cromwell, the ladies would be in a pretty fright about their hoops!

Although the roof of this ancient hall is gone, and the fire which destroyed thousands of homes, nearly two centuries ago, has blood those time-honoured walls with its lurid glare, many things remain to carry the mind back to the past as fancies blot sand, venerable in their ruins—grey and weather-beaten landmarks, that point out the spot where the battle of English liberty has many a time been fought and won. There is something sentimental of England in this blending of the Past with the Present—a reality of both days when

> Banners hung on high, and battles passed below.

Although the deep braying of the trumpets proclaimed a feast instead of a fray, the sound was in keeping with the scene. "The bruised arms hung up for monuments," the antique dresses, cold statues, and grim portraits, were in unison with the whole; we preferred the thousands of gas-lets which ran like cords of golden light along the tracery of the architecture, though they did reveal the modern flat roof and the unsightly upper windows. The rude drinking-horns, and oaken peg-cups, and wooden trenchers were well replaced by the glittering glass and ornamental china which grace our tables. And romance as it may have been to have carved a baron of beef with the dagger which, a day or two before, had cut a Christian throat, we preferred the modern carving-knife, which had been made "bright and sharp for use, not for show—cleaner;" and thought that the mace looked better as an ornament than if wielded by so brave a Mayor as Sir William Walworth, who, at old corner by Lamb Inn, killed Wat Tyler for burning down the house his Lordship owned, by the Bankside, in Southwark. All these, and a hundred other "old world memories," floated around us while seated in that ancient Hall.

The gorgeous star in the west window made the eye ache while looking on its brilliancy, and harmonized well with the Prince of Wales's plumes, which overshung the ranged shields, at the opposite end of the building, above the baronial dais. The massy chandeliers (high overhead), though rich in colour as the gaudy plumage of the humming-bird, had a dull and dispirited look; and, in our eyes, appeared somewhat too Leary—a waste of beauty placed beyond the reach of vision. The galleries of the Minstrels, filled by musicians and choir singers, pleasantly recalled the days when the minstrel struck his harp, and chanted his heroic strains, before the "beauty and the chivalry" of bygone years.

Then came the procession around the hall, as the gorgeously-clad trumpeters heralded the way, and went with state y march "sounding" to the banquet. Ladies, with no-form clothes, displayed more grace and ease than in the larger flowing wigs, stalked by in scarlet dresses; ministers, whose thoughts seemed far away, as if conceiving some state despatch with as many meanings as there were turnings in Fair Rosamond's labyrinth; brave sailor-looking men, rouzed by sun and wind, who rolled in their gait as if treading the decks of the war-ship they commanded in a stormy sea; soldiers, who would never run, though a bomb-shell exploded at their feet; city lieutenants, who had shed no other blood than that of the grape, though they had bravely stood before many a "Scottish fire;" clergymen, with classic countenances, who glanced on the tables as they passed, as if, amid their spiritual avocations, they had still time to turn their eyes "upon the good things of this world;" finely-clad young gentlemen, who marched along with a swing and a swagger as if they thought that "the eyes of all Europe were upon them." Old men, who had grown grey over eating Guildhall dinners, and, like the war-horse in Job, exclaimed "Ha, ha," as they smelt the turtle afar off; beautiful dames, "mincing in their gait," and looking down with modest eyes, while the light from the jewels they wore trembled on their snow-white necks like moonbeams on the ripples of a river, as they passed with noiseless steps: then came the ricidly dressed servants, with elevated heads, seeming to say—

> Was e link to the great in nan
> We are proud to be servants to.

The costly plate, the piled flowers, and the rich viands which covered the ample tables, were outshone by the many beautiful faces which graced the feast. Pleasant was it to see the recognition, the friendly greeting between many of the old citizens, who seemed as if they had established their legs of green peas a pride to introduce their sons and daughters, trained up to tread in the paths in which they had walked with honour. That old Hall seemed in our eye a fit nursing ground for such scenes as these; it was all of a piece with the old Lord Mayor exchanging seats with the new one—the natural changes of life.

The Bill of Fare we pass over, for it is written, as of old, in the tongues of turtles and turkeys, peas, pine-apples, and preserved ginger, with scores of other things, all excellent, as they always are. To us the clearing of the tables was an amusing sight. Here came No. 60, with a mountain of plates before him, from which projected the drumsticks of turkeys and the hind legs of geese; here Hal's, there a pheasant's tail; here an enormous arm and cradle, in broken pantry; porcupines, whose quills would never again be erected; ices, melting amid cakes and dishes; and half-eaten apples, last stood up like first formations amid the wreck of a world.

One thing we would fain have seen, instead of the crimson drapery which covered the doorways namely,

> Arras rich with huntsman, hawk, and hound,

to have corresponded with the ancient armour and blazoned banners that were placed around.

After healths were drunk and speeches made, we ventured into the retiring-rooms, which seemed set apart for love and beauty, and we marvelled how there could be a bachelor in all London, were looking at that long array of sweet faces. Not that they were all dwellers in the City; but such as we often see in our suburban rambles, pacing smooth grassy lawns, or peering over green hedgerows before the neat villas which are scattered in hundreds around the skirts of this huge metropolis. There was the soft hazel eye of England, a look from which goes at once to the heart; lips that lay like roses resting upon each other; hair so bright and soft, that the richest gold seemed to compare with it in contempt; and though spun by the worms that fed on the mulberry-trees of Eden. Ever and anon forms swam by us more graceful than swans—beautiful as silver clouds sailing side by side over the noiseless blue of heaven. Here one coquetted with her fan; there another was playful with her bouquet; a third sat with her tiny hand half-buried amid a dark cluster of flowing ringlets; while a fourth beat her lit e foot to some we'l-remembered tune. On every hand stood flowers and choice perfume so plenty that the place looked, with a crowned light fed on the crimson carpet; and when we escaped, we scarcely knew whether we stood on our head or our heels, so entangled were our senses in jewels, flowers, rich dresses, bright eyes, long curls and Lorelei-like voices—all temptations, from which we prayed to be delivered; though in journeying homeward we thought of the following lines, as a tribute to the

BEAUTY AT THE LORD MAYOR'S BANQUET.

> Such lips need stir not to persuade;
> But resting, like a folded flower,
> Bespeak last stores of sweets are laid
> Within them ever. They have power
> To draw an ange. from the skies,
> Although the charge to win were given
> Never to take his radiant eyes
> From off the golden gates of heaven.
> Such lips although Le were immortal,
> Would lure him from his dwelling-place;
> He would not stay to close the portal,
> But, leaning on each bnutteous face,
> Swear heaven was no home for rest;
> And, looking in those love-y eyes,
> Vow that the mansions of the blest
> Were here Guildhall, a Paradise!

NATIONAL EDUCATION IN IRELAND.—The sixteenth report of the Commissioners of National Education in Ireland (being for the year 1849) is now printed. From the sheet of receipts and disbursements, the following appears to be the state of the accounts for the period in question:—Balance on the 1st of March, 1849, £11,093 17s. 1d.; treasury grant, £120,000; cash receipts for books, &c., sold to national schools, &c., £12,136 15s. 4d.; receipts from public sources, attending model schools, and other items, £1870 11s. 11d.; total receipts, £145,053 4s. 4d. On the credit side there appears to be expended for normal schools and training departments, £7605 6s. 9d.; model farms, £2705 15s. 11d.; Glasnevin, &c., schools £2305 6s. 10d.; ordinary national schools, £4088 17s. 7d.; agricultural, industrial, and other schools, £2155 5s. 8d.; repairs and salaries of teachers and monitors, £68,777 14s. 2d.; seven district model schools, £16,902 18s.; inspection, £.0,817 11s. 11d.; book department, paper, printing, &c., £1 0 0 0

NEW BOOKS, &c.

THE NEW NOVELS.
Just ready, in three vols, post 8vo,

LOVE AND AMBITION.
By the Author of "Rockingham,"
A New Edition of which the many now be had in 2 vols

"'Rockingham' is a book that will become a standard work, and we look forward to the day when the 'Rockingham' novels will take their place on the book-shelf by the side of the Waverly series."—Sun.

"'Rockingham' is a book which, from internal evidence, must have been written by a person constantly mingling in the highest English society. The work abounds in interest, and we should be at a loss to name another recent novel that shows anything like the same power of painting strong passion."—Quarterly Review.

Also, now ready,

NATHALIE. By JULIA KAVANAGH,
Author of "Woman in France," &c 3 vols.

LETTICE ARNOLD. By the Author of "Emilia Wyndham," &c. 2 vols
HENRY COLBURN, Publisher, 13, Great Marlborough street.

DEDICATED TO THE WOMEN OF ENGLAND
This day is published, post 8vo, 1s.

THE DEFENCELESS STATE of GREAT BRITAIN. By Sir FRANCIS B HEAD, Bart.
JOHN MURRAY, Albemarle-street

Now ready, 8vo, cloth, 2s. 6d.,

DR. BURNETT'S NEW WORK — The PHILOSOPHY of SPIRITS in RELATION to MATTER shewing the real existence of two very distinct kinds of entity, which unite to form the different bodies that compose the Universe, organic and inorganic, by which the phenomena of Light, Electricity, Motion, Life, and Mind are reconciled and explained.
London: SAMUEL HIGHLEY, 32, Fleet-street.

Now ready, Gratis and Post-free,

BOOK CLUBS:
their FORMATION, SUPPLY, and MANAGEMENT, on a Practical Plan, by which all the New Publications may be obtained for Perusal, without purchase.

Sent gratis to orders including two stamps, addressed to Messrs SAUNDERS and OTLEY, Publishers, 66, New Burlington-street.

Now ready, Gratis and Post-free,

A CATALOGUE of BOOKS, in Ancient and Modern Literature, Theology, Topography, Natural History, Fine Arts, Bibliography, &c., on sale by JOSEPH LILLY, 19, New Bond

THE GREAT EXHIBITION OF 1851.—GENERAL VIEW OF THE WORKS.—(LOOKING EAST.)

THE GREAT EXHIBITION OF THE INDUSTRY OF ALL NATIONS

ms building now progressing in Hyde Park, and destined to receive next year
e specimen produce of the industry of the world at large, as perfected at the
ose of the first half of the nineteenth century, is a structure so vast in its
eneral outline, and yet so simple in its practical details, that, although several
ractures of various degrees of merit and pretensions have been raised in France,
elgium, Bavaria, and other countries, for the purpose of public "Exposition,"
t will stand alone, unexampled in the annals of constructive art and general
ndustry. The progress of improvement in the arts of life generally has been
o great during the last fifty years, as to have rendered a species of recapitula-
ion, at certain fixed periods, of the utmost necessity. Difficult as it is now-a-
lays to simply keep pace with the march of mere scientific discovery, it be-
comes a matter of perfect impossibility to follow the many practical applications
such discoveries necessarily give rise to. "In England," observes Emerson, "
masters of all kinds wait on you. Herschel and Faraday investigate for you;
Stephenson made the engine that carries you; Wheatstone the telegraph at
your service. Every day is a working day; and hence the reason why
England is England." As inventions are perfected, practical applications multi-
ply; the produce of native industry increases; and in no country more than in
England can the want of a classification of general industrial produce be
more truly felt—a classification of produce, both native and foreign, in all its
branches, that will enable the man of science and the artisan, the agriculturist
and the labourer, to have set before them at a glance all that has been achieved
as yet in each department; that will enable him to detect flaws and to remedy
imperfections; that will induce the farmer to make use of improved means to
increase the produce of his crops; that will induce the theoretical to bend to the
practical, and the practical to become more learned.

And in importance, connected with a classification of specimens of produce, is
the enclosed space for their reception. Of the real merits and defects of there
be any, of the design for the new building in Hyde Park, in a more accurate
scientific point of view, it is not for us here to inquire. We shall confine our
remarks, as we generally do in matters of this kind, to a statement of the pro-
gress already made, to things as they are and as they are proposed to be; and
projectors and designer, to whom no little degree of praise is due for their in-
defatigable exertions and undaunted energy; prefacing them with a few obser-
vations on earlier attempts in other countries.

Perhaps the earliest display of produce that can be called an "Exposition," in
the French sense of the word, is that of the shelves of a retail-dealer's shop-
window; but we must look to the East for the first real Exhibition of industrial
produce: we allude to the Oriental Bazzars, where articles of native manufacture
all the shops of a large city are not collected instead of being dispersed
about the thoroughfares, as in Europe—but are arranged in divisions, or classes,
according to the various trades and heads of produce. The "Bazaar," or
"market" in Persian, is used not only in Persia, but in India and Asiatic Turkey.
Government works of the Gobelins, of Sèvres and La Savonnerie, all of which
had greatly suffered during the Revolution, although the far-famed Palais de St.
Cloud, then empty and uninhabited, for the purpose. A fitter place could not
have been selected: its beautiful walls, built by some of the Roman pontiffs of
the day (among whom was the celebrated Julius), to whom the Parisian artisan
is indebted for his cheap lodging under the roof, called, after its designer, a
"Mansarde") for the Duke of Orleans, brother of Louis XIV., were hung with
the richest tapestries from the Gobelins, its floors covered with the finest carpets
from La Savnnerie, while the Sèvres, in which place the park extends, contributed
its exquisitely-painted porcelain. A fund was to have been raised by a species
of lottery; but the decree of the Directory banishing the nobility of France from
Paris, issued shortly after the opening, compelled the Marquis to leave the seat
of his labours; and thus ended the first great Exhibition of Industry. The fol-
lowing year, however, he having been recalled, made preparations for a second
and more comprehensive attempt, including all the principal branches of Parisian
industry, at the Hôtel d'Orsey, whose principal suite of rooms was crammed
with produce chiefly obtained within the Barrières. The success of this second
attempt induced Bonaparte to give France a still more favourable opportunity of re-
presenting itself; and the same year, the first building raised for the purpose of
an Exhibition of Industry was erected in the Champs de Mars. It was a simple
construction, principally of wood, and of the simplest kind, but out-
wardly ornamented with banners and orifiamme, and the bright colours of the
victorious *drapeaux tricolores* of the first Italian campaign, and merely requiring
notice here as the first of its kind. It was open three days—the crowd was
excessive. Medals were awarded by a committee of nine, including some of the leading
scientific men of the day, among whom the founder of the Ecole and Conserva-
toire des Arts, the then manager of the Government manufactory of saltpetre for
the army, the eminent chemist, Chaptal,* took a most active part. The since
celebrated chronometer-maker, Bregnet, was one of the 110 exhibitors of this
the first Great National Exhibition. He obtained a prize the first-fruit of his
inventive genius.

In 1801, wooden galleries were erected round the quadrangle of the Palais du
Louvre, to receive the contributions of the principal manufacturing towns of
France and Belgium—of Milan and Ait-la-Chapelle in early all of which had
been previously visited in person by Napoleon, then First Consul, accompanied
by Chaptal and two other great men, whom he had fir- appointed to the
chair the great opposer of the philosophic theories of chemistry, Berthollet; the other,
Monge, of the Polytechnic School, to whom we are indebted for the science of
descriptive geometry, as a distinct branch of our synthetical mathematics. They
had been sent to Italy by the French Directory, to select works of art; and the
fury, with his brother chemist, Guyton de Morveau; the intelligent engineer, De
Prony, and other eminent men. The Exhibition lasted six days, and the num-
ber of exhibitors was 229. The following year, the third "Exposition Nationale"
took place at the Place de Louvre. The number of exhibitors had in-
creased to 540. Manufactures had made up upwards of one-half of the competi-
tors; and with it originated the "Société d'Encouragement," whose members
have rendered such valuable service to French manufacturers in every quarter.

We have passed rapidly over these earlier but important periods in the
annals of French industry, because our object, at present, is more particu-
larly to confine ourselves to a brief history of the buildings which have been
used for National Industrial Exhibitions, of which, until Mr. Paxton's pro-
posal, were marked by either great novelty of design or great skill in constructive
art.

Shortly after the events above alluded to, the Consulate gave way for the
Empire; and, in 1806, the fourth great Exhibition was held, in a manner
more worthy of France and its young Imperial Court. The Louvre
—now once more the "Palais," and destined to other uses—was at this time
rejected, and a better site found on the other side of the Seine, within
the open space, or Esplanade, in front of the Hôtel Royal des Inva-
lides, facing the Champs Elysées, with which it communicated by means of
the Pont des Invalides. A temporary edifice was raised, far more extensive
than any of its predecessors, and in far better taste; yet there was still nothing
very remarkable as novel, or requiring much skill in the construction. It
pass over the fifth, sixth, and seventh Expositions. In 1819, 1823, and 1827, which
were all held in the galleries of the Louvre, to return to England, and allude to
an event which was the means of promoting the formation of many of those
minor collections of works of art and produce in this country which have done
so much towards improving the tastes and increasing the knowledge of our
working manufacturers and operatives. On the 11th of November, 1823, a
public meeting was held at the Crown and Anchor Tavern, for the purpose of forming a
London Mechanics' Institute. Dr. Birkbeck, whose attention had been directed
to the education of the industrial classes, while lecturing at the Andersonian In-
stitution at Glasgow, as also in London while preparing his "Essay on the
Education of the Working Classes," took the chair. He had published in the
Mechanic's Magazine of October 11, 1823, a paper of proposals on the subject;
and, among his supporters who attended the meeting, we find the names of Lord
Brougham, the present Chancellor of the Exchequer, Mr. Hume, and other gen-
tlemen of rank and influence. A temporary building was raised, for the
reception of models, drawings, &c., and the first under the government of Lond
Lushington, and other celebrities of that day. On the 18th, the first officers of the Insti-
tution were appointed, and Dr. Birkbeck elected president. The formation of
provincial Mechanics' Institutes soon followed; and in many we are indebted for
the first attempts, at Manchester and Leeds, to establish temporary exhibitions
of specimens of improved manufactures. Previous to this, however, the eighth
great French "Exposition," and the first under the government of Louis
Philippe, in 1834, took place in the Champs Elysées, on the four sides of
which, facing the river, the Rue de Rivoli, the Jardin de Tuileries, and the
Champs Elysées, were erected four light temporary pavilions, which received the
contributions of 2447 exhibitors. The Exhibition in 1839, far surpassed
all previous attempts, as regards both the convenience of the building raised and
the display of the specimens produced. This time the site fixed upon was
the great space or square that takes the name of the Champs
Elysées. Some 120,000 square feet English were here appropriated for the
building, itself consisting of eight principal apartments, a hall and a spacious
gallery—the whole erected at a cost of nearly £14,860. Every branch of French
industry was represented within its walls: 3281 exhibitors sent specimens of
their produce or industry, and the textile products of Rehausen found place in
the same year the first attempt was made to represent certain branches of
provincial industry in England, at Manchester. We have already alluded to
the establishment of the Mechanics' Institutes in this country. To
Manchester we are indebted for the first public collection of specimens
of provincial manufactures. But the exhibition was not restricted to these
alone—the useful and fine arts, mechanical engineering, and even practical
science, were less or more worthily represented. The greater part of the more
influential portion of the population exerted themselves to the utmost to for-
ward the objects of the committee. Private collections of all kinds were sent,
and the result was found most satisfactory—the balance in hand considerable.
This example was soon followed by the Leeds Mechanics' Institute, then in its
infancy. The success attained enabled the members to begin a fund for the
erection of their present Leeds Institute, and to carry on their proceedings in a
manner well worthy of so important a manufacturing town. Other towns also
followed, in quick succession, so good an example, principally in the northern
and [illegible]

[illegible]

foreign to our purpose to enter here into any details respecting the national
benefits conferred by the establishment of such institutions as the British
Museum—those of the East India Company, in Adam-Street, the United
Service—and the Society of Arts—a society which has done more for the
promotion of industry than perhaps any other scientific body in this country.
We therefore pass on to the year 1844, when, after a lapse of five years, the
tenth "Exposition de l'Industrie Française" was held on a scale of importance
which surpassed all former efforts. The site was once more a plot of ground in
the Champs Elysées, of some 180,000 square feet of surface. The building was
again rectangular, its principal front facing north; in its centre was the chief
entrance, consisting of a handsome portico, to the right and left of which were
respectively the *salon de reception* for the Royal family, and the *conseil de
decision* or juries-room. On the ground-floor were the rooms for the members of
the commission and the directors, while on the east and west were the doors and
gates of exit. A hexastyle portico ornamented each centre of each of the sides
of this large quadrangle, and a simple entablature connected the whole
completed the work as an architectural composition. Its great simplicity
recommended it; and some of the designs sent in from France for adop-
tion by the Building Committee of the Great Exhibition of the present year, bear a
strong affinity to it as regards general arrangement and proportion.

We next find the industry of England more fully represented by the speci-
mens of produce collected within the walls of Drury-Lane Theatre, on the
occasion of the opening of the Anti-Trade Bazaar. All important manufac-
turing towns and districts contributed largely; and the same year (1845) Bava-
ria found the honour of completing the first permanent building devoted exclusively
to the purposes of an Industrial Exhibition of national produce. The site chosen was
that of the Königsplatz of Sculptures, or Glyptothek, at Munich, the principal front
facing the Königsbau. The structure consists of a rusticated basement, supporting
the walls, whose only breaks are the projections of the wings of pilasters and
sculptures from models by Schwanthaler, and, in the centre of the pediment,
finely-proportioned Corinthian portico, with (in the centre of the pediment)
a figure of Bavaria, with, to her right and left, other figures emblematic of the
fine and useful arts, the whole surmounted by a phœnix. The main floor of the
building is lighted by skylights, and is divided into a suite of seven rooms, be-
sides the vestibule, the whole occupying an area of some 18,000 square feet.
The floors are principally of oak, the roofs covered with metal; and large
open floors are principally of oak, the roofs covered with metal; and large
dépôts, warerooms, and apartments for the officers form an under floor. The
first Exhibition held within its walls was restricted to works of art and *verth*.

Meanwhile rapid str ides were being made in England to promote increased
taste among our manufacturing operatives. Mechanics' Institutes were attracting
diffusing knowledge in their reading and lecture rooms—what remained wanting
was the more general diffusion of provincial schools of design, to improve taste,
and link art to science and industry. In 1846 we again find Manchester taking
the lead, at the instigation of the promoters of her school of design, and filling
the museum with specimens of industrial produce obtained chiefly from the
manufacturing districts of Lancashire. In Belgium, too, great progress was
being made. Following the example of her sister country, the two Indus-
trial Exhibitions had already taken place since the political changes had occurred
which had made of it an independent kingdom; and the third "Exposition de
l'Industrie Belge" was held in July, 1847, at the Nouveau Entrepôt, a noble building
regular building, used for corn-stores, &c., on the quay, at Brussels, which
was filled in every part with rare products of artistic skill and designing in lace,
glass, the rarer metals, and more costly works.

The Great Exhibition of 1849 took place—the last we have to record, and
the first of Republican France—far surpassed in every way anything of the
kind that had yet been attempted. The site was the same as that of 1844, but
between the Avenue de Marigny and the Seine there were taken up for the build-
ing about was increased to some 221,000 square feet, about one-third of the
extent of surface that will be covered up by the building in Hyde-park. The
structure was, as before, rectangular—the principal front facing the breadth in
structure was, as before, rectangular—the principal front facing the south—
the whole constructed within with galleries running along its sides. To it
was added a shed, covering 30,000 square feet, as a *dépôt* for agricultural imple-
ments, produce, and live stock. The whole was let out to the trade at so much
per square foot of *dépôt* for the general details respecting this truly great
and national Exhibition of a great nation, we must refer the reader to the very
able and full Report† relating to it by Mr. Digby Wyatt, and to the great
comprehensiveness of which the management adopted in France with
respect to Industrial Exhibitions generally, and of other important details on all
points of interest connected with the last.

At the end of the same year, 1849, on the occasion of the visit of the members
of the British Association to Birmingham, the doors of Bingley House, in that
town, were opened to the public, and a collection of industrial produce exhi-
bited within its walls. Much good resulted from this effort, orders were distri-
buted to the poorer of the working classes, as also to the pupils of the School of
Design, to the members of the association, and a few other public bodies and
schools; and about the same time the Exhibition of Arts and Manufactures—which
was the temporary *dépôt* of specimens of produce of the industry, not of this coun-
try merely, but of the world at large—of establishing a great Exhibition to
represent the progress attained in the arts of life in the nineteenth century. That such a proposal should
have come from no less a person than the consort of our beloved Queen,
has been most truly fortunate, not only as regards the immediate success—which
now admits of no doubt—of so gigantic an undertaking, but more particularly
as to the beneficial influence it is likely to operate on the future pro-
duce for public exhibition; but a truly national and truly "great" Exhibition
was still wanting. Thanks to the exertions of Prince Albert, no time was lost.
On the 25th of January of the present year, we find a meeting taking place at
the Mansion-house, the Lord Mayor in the chair, "for the purpose of taking
into consideration certain resolutions, having in view the promotion of the Great
Exhibition, in 1851, of the Industry of all Nations." The first resolution moved
and carried unanimously was:—That the proposal of his Royal Highness
Prince Albert to open an Exhibition of the Works of Industry of all Nations,
in the year 1851, in this metropolis, is entitled to the general support of the community; and is
peculiarly calculated to improve manufactures, and to aid in diffusing the prin-
ciples of universal peace."

Lord John Russell then proposed the third resolution:—"That, in the opinion of
this meeting, the arrangements made for this Exhibition should be upon a scale
commensurate with the importance of the occasion; and the large pecuniary contributions of
sum for this purpose ought to be provided by the voluntary contributions of
individuals, rather than from the public revenue." And we cannot do better
than quote a portion of the address to the meeting by Sir Robert
Peel, on the origin of the scheme:—"It had been stated with truth,"
he said, "that they owed the original proposition to the intelligent public
spirit of the illustrious Prince Albert, who put himself forward on this
as on every occasion likely to confer honour and advantage. The public feeling
across France, with the Society of Arts, † originated this scheme, and it had
been taken up by the country; but there came from all parts a strong expres-
sion of feeling that, if this public scheme depended for success on private subscri-
it should not be entrusted to any society however meritorious, but ought to be
taken up in a public manner and by public and recognised instruments. The
Royal Commissioners then, acting in deference to the public feeling, had done
well to constitute themselves into a public body, and to call to their aid the
most unqualified men on the liberality of the country for sup-
port. In this he thought the Commissioners had acted rightly,
though at the same time he considered that the public at large
were indebted to the Society of Arts for their original exertions in bring-
ing this plan before the public and in the preparatory efforts
which had been made. The whole of the scheme was now under the control of the Royal
Commissioners, and they depended for the means of adequately carrying out the
object upon the degree of support they received from the country at large. He
object upon the degree of support they received from the country at large. He
had no doubt that they would receive proper support, and that all classes would
feel pride in seeing carried out, in an efficient manner, a plan which he believed
would redound to the honour of the country, and to the benefit of mankind. He
thought it was impossible to contemplate in the world, knitting likewise nations
in bonds of peace and harmony by facilitating the interchange of their products.
He could not too strongly express his opinion that the time was gone by
of this country were to express things in a narrow, contracted, and jealous
spirit. Concert to the first nations; and he thought that this friendly interchange
—this contest, not of injurious ambition, but in the arts of peace—had a
direct tendency to increase the general civilization and industry of the
world. From that industry and civilization this country would derive not
only the present scheme, the people of this country would not only
promoting the present scheme, the people of this country would not only
be advancing their own individual advantage, but the general prosperity
and benefit of the whole civilised world. It was gratifying to him to see so large
and respectable a meeting within that hall on this occasion, and to observe the
general harmony and good feeling which prevailed. He hoped this was an au-
gury of the feeling which would prevail throughout the country, and that they
would all act with a spirit of conciliation in promoting the object in view; and
then he had no fear but that the year 1851 would be marked by the successful
carrying out of an object which he believed would confer the most important
benefits on this country and the civilised world." Large sums were subscribed
at the meeting, and subscriptions subsequently obtained from all parts of the
country—no exertion has been spared during the last year to promote the
good work set on foot by the Prince.

Of the number of designs sent for adoption by the Commission, it is unneces-
sary for us to speak. Some of these have been made public at the Institution of
Civil Engineers, and possess various degrees of merit. The design proposed by
Mr. Paxton, and adopted, and to which our illustrations relate, is highly suited
on account of its great simplicity and novelty, and the convenience afforded by
[illegible] fa-
[illegible] itude
[illegible] great
[illegible] ing
[illegible] ion.
this great metropolitan focus of industry, which, like a polypus with a thou-
sand branches, vegetates and engrafts, so to speak, on its common trunk, quar-
ter on quarter, and town on town.

BRITISH AGRICULTURE.

BY THOMAS ROWLANDSON.

PART VI.—HEREFORDSHIRE.

Area .. 543,800 acres | Population .. 113,878

This county is derived from Worcestershire by the Malvern Ridge, whilst the
Black Mountains on the west separate it from Wales. From many of the eminences of
either, Herefordshire presents a scene of luxuriance and beauty, not surpassed
—perhaps not equalled—by any county in England. Fuller remarks, in
his "English Worthies," that "these parts cannot be given a more effectual evidence
of the healthy air in this shire, than the *vigorous vivacity* of the inhabitants
therein." "Many aged folks," he quaintly adds, "which in other counties are
propensive to the chimneys, or confined to their beds, are here found in the field,
as able (if willing) to work. The ingenious Serjeant Hoskyns gave an enter-
tainment to King James, and provided ten aged people to dance the *morrice*
before him, all of them making more than 1000 years—a neat of Nestors not to
be found in another." Should our present beloved Queen take a trip to Hereford-
shire, we doubt whether a similar number of nimble salutations entertainment
[illegible] soils were drained, and much of the surplus

[illegible]

The soil of Herefordshire [illegible] ter, is a mixture of marl and
clay, peculiarly well adapted to the growth of orchard and timber trees. Oaks
are termed "the weeds of Herefordshire." This remark particularly applies to
soils immediately superposed on the beds of limestone. Here the trees are
known as cornstones. Towards the east, the soil is loose and shallow: the best
soils in this part are found well adapted for the cultivation of a fine-flavoured
hop, not so strong in quality as the hops from the strong soils of Kent,
but well calculated for brewing a fine-flavoured ale. Around the city
of Hereford, a small tract is composed of fine gravelly soil. The term
"ryeland" has been applied to a considerable district around Rose, composed
principally of what is now classed as a fair turnip soil, but which on
a former period has doubtless been occupied in growing rye as food for the in-
habitants, the soil itself not having been considered strong enough for wheat.

A diminutive race of sheep, possessing a very fine fleece, is a remarkable cha-
racteristic of this district under notice; the wool from some flocks has occa-
sionally been pronounced equal to the best Spanish, but not equal to the German
merino. The quantity shorn from each of this breed does not average more than
two pounds. Yet there is only one flock of the pure breed now in ex-
istence. The form of the animal is very similar to that of the Spanish merino,
and, generally speaking, more symmetrical.

As regards the cattle, the purebred breed of cattle are almost wholly reared
in this county, and the show at the Michaelmas fair at Hereford is not exceeded
by any other fair in England; they are principally sold to graziers in the midland
counties. The defect of the purebred Herefords, as a breed, is, that they are not
adapted for the dairy, the cows being bad milkers. Under the circumstances of
the Hereford farmer, we, however, think, that the sale of store cattle will pay him
best. We shall defer treating on the cattle of the various districts from which the pre-
sent celebrated race of Herefords have originally sprung, until we treat of the
agriculture of the adjoining county of Monmouth. In like manner, we shall also
not treat upon hop culture until we arrive at the hop district of the south-east of
England.

Cider and perry are made in great quantities in Hereford, respecting the ma-
nipulation of which we may have an early opportunity of dwelling more at large.
Ordinary little attention is paid to the management and selection of the fruit;
neither is there any rule as to the time of gathering. The latter necessarily de-
pends on the character of the season. Independent of this, opinions are very
different as to the proper time of gathering in the same district, as to the
proper state of maturity in which apples should be taken to the cider-mill. The
middle of October, at an ordinary season, is esteemed the best time for gather-
ing early kinds, whilst such as the "stire" but will keep. The maturity of fruit the season
ing early kinds, whilst such as the "stire" but will keep. The maturity of fruit the season
should be deferred until November. The criterion of a due degree
of ripeness is the spontaneous falling of the apples from the tree.

A few persons in Hereford pride themselves on the management of their cider
and perry; and have occasionally met with cider that might compete with
many of ordinary the Rhine wines, and perry superior to much that has pur-
ported to have been the produce of Champagne.

The latter is a most excellent drink; we have, however, never met with
it out of the neighbourhood of New Ross and Hereford. It is the produce of the
Barland pear. Marshall states, on information which had no reason to doubt,
that twenty hogsheads of cider have been produced from an acre of ground.

PART VII.—WORCESTERSHIRE.

Area .. .. 459,710 acres. | Population 333,336

The climate of Worcestershire, but particularly of the middle, south, and
west of the county, is remarkably mild, soft, healthy, and salubrious; the vale
of the Severn, but little elevated above the level of the sea, and the valley of
the Avon and the Teme upon nearly the same level, with the contiguous up-
lands rising from 50 to 150 feet above their level, have, at this low elevation, a
very genial temperature; thus is modified in the vicinity of the Malvern, Ab-
berley, Lickey, and Bredon hills, which rise from 600 to 1300 feet above the
level of the sea. These are bleak parts of the county, the lowlands and fertile
vales having generally a warm, salubrious, and healthy atmosphere. The vale
of Evesham is probably one of the most favoured spots in England; large quantities
of asparagus and other more valuable early garden produce is here raised and
sent to the metropolis and the large manufacturing and commercial towns in the
North of England.

The soil of Severnside extends the entire length of the county, or about thirty
miles, and from a quarter to a mile in breadth, consisting of a deep rich allu-
vium of great fertility; rich clay and loamy soils occupy the middle, south,
and west of the county, comprise nearly one half the entire area. It is here the
hop-gardens and orchards are principally seen. Hop culture has rather receded
of late years, whilst that of orchards has advanced, a great impetus having been
given to the latter since the numerous railways have been opened to the great
gardeners towns have furnished an opening for the sale of fruit, especially pears,
and stone-fruit; particularly, amongst the latter, plums and damsons—Edinburgh
and Glasgow obtaining their principal supply of fruit from Worcestershire.

The soils here are mostly of the Hereford breed. The land being considered
too good for breeding, a considerable amount of the pastures are occupied with
dairy cows in making butter and milk for the Birmingham and other markets,
which have sprung up in the great central coal and iron district during the pre-
sent century.

As is generally the case amongst good soils, the farms are notusually large,
and the occupations are held annually.

Perry is the peculiar characteristic produce of this county, being made solely
from pears. In making perry, it is considered essential to good management
to collect the fruit and keep it as well as the pears should be crushed or broken:
thus the rind and kernels, as well as the pulp, should be crushed or broken:
when ground, it is put into the press, which is worked by one man, who, with
the boy who drives the horse, and a man to put in the fruit and carry away the
liquor, makes a hogshead in a day or two of cider, being considered
a medium day's work; but, working early and late, five or six hogsheads are
sometimes made. The yield of liquor depends on the species of fruit, and the
season. Pears yield more liquor than apples, and some species more than others:
two hogsheads of perry will yield one of liquor; but some sorts of apples, as the
Haglee crab and the stire apples, in very dry seasons, will require nearly three
hogsheads of fruit to one of liquor. In good years, some trees have been stated
to have yielded as many as fifty bushels of pears.

In the account of Hereford agriculture, we have alluded to the general inat-
tention as to the state of the fruit when taken to the press, as also the time of
gathering. It is, however, of the utmost importance to the maker of cider and
perry that he should fully understand the rapid and important alterations which
take place at the time of, and subsequent to, ripening. Pears and apples have
been investigated by Berard, but there are many interesting points respecting
them which have not hitherto been investigated, especially the rapid change
which many species undergo by the action of oxygen, after being cut and ex-
posed to the air, during which lignine is generally transformed into sugar. The
following are the results obtained by Berard from Burré pears, examined in three
states; viz. 1. ripe and fresh; 2. kept till mellow; 3. kept till brown or begin-
ning to rot, and having lost 23·15 per cent. of water, &c.:—

	1.	2.	3.
Resinous green colouring matter	—	—	0·04
Sugar	2·00	3·00	3·00
Gum	1·00	1·00	1·00
Lignine	3·00	3·00	3·00
Albumen	0·20	0·20	0·20
Malic acid	—	0·03	0·04
Lime	—	0·02	0·02
Water	—	—	23·15

Respecting these changes, so important to the cider-maker, we shall take the
following as the results obtained by Berard from pears, examined in three
states; viz. 1. ripe and fresh; 2. kept till mellow; 3. kept till brown or begin-
ning to rot, and having lost 23·15 per cent. of water, &c.:—

---

* Chaptal, when Minister of the Interior, and afterwards Treasurer of the Senate, he did much to promote the progress of arts and industry in France. The results of his observation are principally contained in his "De l'Industrie Française," Paris, 1819; and his "Chimie appliquée à l'Agriculture," Paris, 1823.

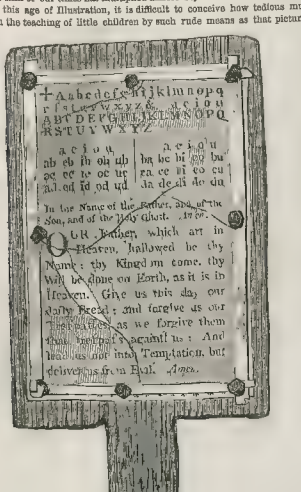
† Chapman and Hall, London.

‡ Independently of the Exhibitions of Modern Industry, and Medieval Exhibitions, held under the auspices of the Society of Arts, there have been provincial displays of improved produce during the present year—at Dublin last July, and at Devonport and Falmouth in September.

§ "Lettre sur l'Angleterre en 1850," par Alphonse de Lamartine.

POPULAR EDUCATION.

Books have been called the tools of Education. Dr. Watts defines them as "a sort of dumb teachers: they cannot answer sudden questions, or explain present doubts; this is, properly, the work of a living instructor." Yet, few are insensible to the aid of a good book in the business of teaching, an advantage which the skill of our times has multiplied almost beyond the limit of calculation. In this age of Illustration, it is difficult to conceive how tedious must have been the teaching of little children by such rude means as that pictured



In the Name of the Father, and of the Son, and of the Holy Ghost. Amen.
OUR Father, which art in Heaven, hallowed be thy Name; thy Kingdom come, thy Will be done on Earth, as it is in Heaven. Give us this day our daily Bread; and forgive us our Trespasses, as we forgive them that trespass against us: And lead us not into Temptation, but deliver us from Evil. Amen.

to the reader, viz. a "Hornbook" of the last century, with which, however, we can readily imagine

> the whining school-boy, with his satchel,
> And shining morning face, creeping like snail
> Unwillingly to school.

The specimen before us was lately found among the old stock of a bookseller at Peterborough, in Lincolnshire: it is about double the size here represented in *fac simile*. The alphabet, &c., are printed upon white paper, which is laid on a thin piece of oak, and is covered with a sheet of horn, secured in its place by eight tacks, driven through a border or mounting of brass; the object of this horn covering being to keep the "book," or rather leaf, unsoiled. The first line is the cross-row, so named, says Johnson, "because a cross is placed at the beginning, to show that the end of learning is piety." Shakspeare has a reference to this line:—

> He hearkens after prophecies and dreams,
> And from the cross-row plucks the letter G;
> And says a wizard told him that by G
> His sons disinherited should be.—*Richard III.*

Again, in "Love's Labour Lost," act v., scene 1, *Moth*, the page to *Armado*, says, in describing *Holofernes*, the schoolmaster: "He teaches boys the Hornbook."

In the library of the British Museum is a specimen of the Hornbook, generally resembling that engraved above; the pruss-mark is 8⅜ x 5½; and it is described in the Catalogue as "Hornbook, the Alphabet, Syllabaram, Lord's Prayer, &c., written in black-letter, in imitation of the type and orthography employed in the first half of the 16th century." This descriptive entry is considered to be a forgery. If this were correct, it would place the use of the Hornbook at an earlier date than that of the Primer (*Primarius*, Latin), a small prayer-book in which children were taught to read, so named from the Romish book of devotions. In 1545, Henry VIII. ordered to be printed an English "form of Public Prayer," entitled the "Primer," said to be "set forth by the Kinge's majestie and his clergie, to be taught, lerned, and red." A copy of this rare book was once the property of Sir John Clark, priest of the chapel of Leedesbrige, and founder of the school. This appears from the following autograph note in the Calendar:—"This day I began the schole at Leeds, July 4, 1585."

In "Notices of Fugitive Tracts and Chap-books," by James Orchard Halliwell, Esq. F.S.A. (printed for the Percy Society, 1849), is engraved a Hornbook, in black letter, of the time of Queen Elizabeth. "Hornbooks are now so completely out of use," says Mr. Halliwell, "that few persons are acquainted with their precise nature. The present one, which appears to be at least as ancient as 1570, is mounted on wood, and protected with transparent horn. There is a large cross, the *criss-cross*, and then the alphabet, in large and small letters. The vowels follow next, and their combinations with the consonants, and the whole is concluded with the Lord's Prayer, and the *Roman* numerals. The Arabic numerals are not given. The Hornbook is mentioned by Shakspeare in "Love's Labour Lost," v. 1; and we have here the *ba*, the *a*, *e*, *i*, *o*, *u*, and the horn; everything, in fact, alluded to by *Moth*. It is also described by Ben Jonson:—

> The letters may be read, *through the horn*,
> That make the story perfect.

Cotgrave has, "*La Croix de par Dieu*, the Christ's-cross-rowe, or *horne-booke*, wherein a child learnes it;" and Florio, ed. 1611, p. 93, "*Centerucla*, a childes horne-booke hanging at his girdle."

"Commether, *Billy Chubb*, an breng tha hornes book. Ges ma the vester in tha windor, you *Pal Canus!*—what! be a sleepid—I'll wake ye. Now *Billy*, there's a good bway! Sten still there, and mind what I da zā to ye, an whaur I da point. Now; cris-cross, girt ā, little ā—b—c—d. That's right *Billy*; you'll zoon larn tha criss-cross-lam—you'll soon anvergit Bobby Lilly—you'll then be a *scholard*. A's a pirty chubby bway—Lord love'n!"—*Specimens of the West Country Dialect.*

"Hornbooks are now," concludes Mr. Halliwell, "of great rarity; and even modern ones are very seldom seen. I have been told, on good authority, that an advertisement, many times repeated, offering a considerable sum for a specimen, failed in producing an answer. A tale, illustrative of Lord Erskine's readiness, relates, that, when asked by a judge if a single sheet could be called a book, he replied, 'The common Hornbook, my Lord.'"

At the meeting of the Archæological Institute, held at Oxford, last summer, in the Museum at the Taylor Gallery, there were exhibited two specimens of books of the reigns of Charles I. and II. These curious relics were from the collection of Sir Thomas Phillipps, at Middlehill.

Locke, in his "Thoughts upon Education," speaks of the "ordinary road of the Hornbook and Primer." We find both mentioned in one of the lists of the old booksellers on London-bridge: "Edward Winter, at the Looking Glasse:" "Testaments, *Premuers*, Psalters, *Hornbooks*, Grammers. And also all sorts of Garlands, and old Ballads, Course-sheet, and sheet-and-half Histories, and Godly Books." The title of Hornbook has also been otherwise applied than to a school book: thus, we have Dekker's "Gull's Hornbook" (1609), a satiric guide to the fashionable follies of the town, and showing, among other things, "How a gallant should behave himself in Paul's Walk." And we find one W. T. Playtes issuing a prospectus of "The Hornbook for the Remembrance of the Signs of Salvation," in 12 vols. 8vo., with 365,000 marginal references, or 1000 for every day in the year.

Shenstone, who was taught to read at a dame-school, near Halesowen, in Shropshire, in his delightfully quaint poem of the "Schoolmistress," commemorating his venerable preceptress, thus records the use of the Hornbook:—

> Lo! now with state she utters her command;
> Eftsoons the urchins to their tasks repair:
> Their books of stature small they take in hand,
> Which with sollicitd horn secured are,
> To save from finger wet the letters fair.

We have somewhere read a story of a mother tempting her son along the cross-row by giving him an apple for each letter he learnt. This brings us to the gingerbread alphabet of our own time, which appears to have been common a century and a half since:—

> To Master John the English maid
> A Hornbook gives of gingerbread;
> And, that the child may learn the better,
> As he can name, he eats the letter. PRIOR.

In the original picture, by Schidone, and formerly in the Gallery of the Earl of Ashburnham, we see the Italian Hornbook of the sixteenth and seventeenth centuries, at which period the painter lived. In this fine composition, the girl in the foreground holds a hornbook, which has, beneath the cross-row, the Lord's Prayer in Latin, &c., the whole within a border of pleasing design. The sandalled feet and flowing robe of the girl give the picture a classical character: a chubby boy is looking over her right shoulder; and in the distance, beneath the arcade of a temple, are two other learners, who, by their studious air, are interesting accessories to the main design. The picture is popularly known as "the Hornbook;" and was beautifully engraved, in 1816, by Robert Cooper, the impressions being in the schedule of Prizes in Tomkins's Picture Lottery.

The Hornbook was not always mounted on a board, as in the Illustration: many were printed on the horn only, or pasted to its back, like one used forty years ago by a friend, when a boy, at Bristol.

We have indulged in this bibliographic ramble, mainly to show the rudeness of the "dumb teacher" formerly employed at the dame-school and elsewhere. The specimen before us is not of any considerable age, as the fashion of the letters denotes; and, in rural districts, such a Hornbook may not be many years passed out of use. It was, in all probability, superseded by the "Battledoor" and "Reading made Easy," with which came the Alphabet illustration; though the Spelling-book is considerably older than either. The Battledoor, by the way, reminds us of a strategy of Milton mention d by Locke: "by pasting the vowels and consonants on the sides of four dice. " I as made this a play for his children, whereby his eldest son in coats has played himself into spelling."

In the majority of these early manuals of teaching children, the illustrations appear to have been not only wretchedly engraved, but drawn without any regard to character or accurate form of the objects represented. Hence the child became thus early familiar with unmeaning figures; and to unlearn this erroneous education of the eye, became the business of after life. But the spread of art has in our days assumed a character as useful as its range is extensive; and well-drawn figures are no longer exclusively to be sought in costly pictures or illustrated books; for this artistic improvement has been extended to the purposes of every-day life. In place of the uninviting Hornbook, we have our school-books filled with well-drawn engravings; and the paper and printing of such works present a bright contrast with the small letters seen through the sheet of horn. Three volumes before us furnish abundant evidence of this advancement in "the tools of Education;" and their plan is being extended to other branches of elementary education than Spelling, Reading, and Elocution, to which the present books are devoted.

The Illustrated London Spelling Book contains no fewer than one hundred and seventy wood-cuts, well executed; and, what is still more important, well chosen as to subject, of a cheerful and practical character, instead of the fantastic, nay cabalistic, forms which disfigured our earliest educational books. Even the alphabet subjects will be suggestive to the little learner, and such as will induce him to ask questions relating to them: this is the moment for imparting information with effect, for it is never so strongly impressed upon the mind as when given the moment it is asked for. At the same time, the progressive plan of the book is closely watched; the child is not frightened by impossibilities at its tender age; but, both in the spelling and reading, the progress of the scholar is consulted by the gradual increase in the length of the words. The reading lessons are pretty little narratives, nearly original, and of just such incidents of amusement and instruction as are most likely to attract the attention of a child: they are cheerful throughout, although "the good seed" is not forgotten to be thrown in the path of childhood—a priceless fragment in its first lessons, in spite of the secular taint and coldness of the day. Among the pictures, subjects of natural history predominate; and there cannot be a readier means of leading children to understand the beauty of earth and all that therein is, than by well-drawn figures of striking objects in the kingdoms of Nature

The Illustrated London Reading Book is the next stage in the series. It contains some hundred and fifty lessons, mostly selected from standard authors. The subjects are not of the old "Tommy and Harry" class, or of a hackneyed character; but of actual living interest, in many instances describing wonders which are at the moment arising around us. Historicites are sprinkled throughout the book. Its leading recommendation is the vivacity as well as variety of its contents: they are, to quote a prospectus, and often misused phrase, "highly graphic:" the events and incidents have a certain picturesqueness of character, which must prove highly attractive to all grown-up; and both teacher and learner may profit in their progress, though in a different ratio. The Engravings are of higher pretensions than those of the Spelling-book: some are from pictures by eminent living painters; and not unfrequently they take the reader to remote corners of the earth, as well as familiarise him with the wonders of his own country. Appended is a vocabulary of words used in the volume, and rendered necessary by the somewhat advanced nature of certain of the information conveyed in the descriptive lessons.

The Illustrated London Instructor, the third volume of the series, has a still higher aim than its predecessors—the teaching of the Art of Elocution, by "selections from the best ancient and modern authors in every branch of English composition, most fitted for the purpose of eliciting and strengthening the powers of reading and speaking." The contents are less discursive than those of the Reading Book; and the Instructor, as its name implies, is more directly educational. The plan commences with an Essay on Elocution and Composition; though the author does not fail to enforce the importance of "the oral example of a competent teacher—without which, all books professing to give instruction in Elocution are comparatively of little value." The selections, about one hundred in number, consist of Moral and Miscellaneous Essays; Historical and Biographical Readings; Ancient Eloquence; Natural History; and Dramatic and Poetic Readings. The masterpieces of English literature, by the elder authors, have supplied the staple of the volume; although there is an almost equal proportion of graceful compositions by living writers. These impart much novelty, whilst they do not impair the soundness of the papers, many of which treat of the best branches of study. The Illustrations are tasteful, various, and appropriate; and are, perhaps, of more artistic design than the Engravings of the "Reading Book."

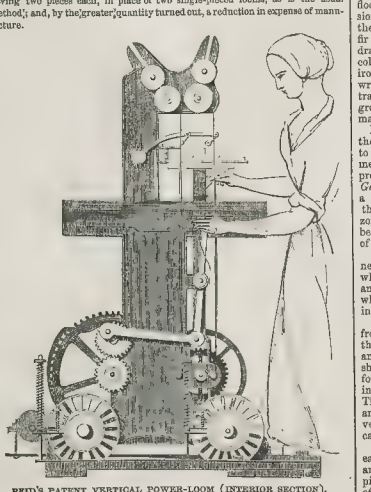
We now take leave of these attractive books, the characteristics of which we have sought to place before the reader in juxta-position with the dull and dingy "Hornbook" of our forefathers. To estimate the gain of the present generation by the change, would be no easy inquiry; but could not fail to prompt universal gratitude for the advantages which we enjoy over our immediate predecessors in everything that aids the growth of the goodly tree, and the gathering of its golden fruit.

For, as old Playtes says, in his "Hornbook" prospectus, "the Cow of the Church of Knowledge giveth abundance of Milk for the Babes of Knowledge."

NEW PLAN OF POWER WEAVING.

THE shortening of the hours of labour by act of Parliament renders every improvement towards a greater quantity of work being turned off by machinery of more consequence than formerly.

The advantages aimed at by the above Loom are—enabling the weaver to attend with greater facility the weaving of four pieces at once, by two looms having two pieces each, in place of two single-pieced looms, as is the usual method; and, by the greater quantity turned out, a reduction in expense of manufacture.



REID'S PATENT VERTICAL POWER-LOOM (INTERIOR SECTION).

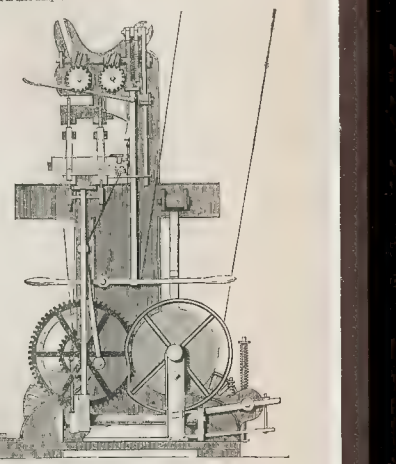
The vertical position is the best for viewing *two pieces* at once, while weaving, and gives a greater facility of taking in the broken threads of warp of the back piece, as is shewn by the Sketch—the weaver is in the act of taking in the broken thread of warp of the back piece.

A division of labour might be carried out (if thought advantageous to keep the loom more constantly at work), by placing a young hand to keep up the weft, with a relay of shuttles, the loom being made to stop instantly of itself when the weft thread breaks or runs out, and stops only when the shuttle is lodged at the gearing end of the loom; so that a young person, standing at the corner of four looms, could command the weft of eight pieces, leaving for the weaver of each four pieces only the warp yarn to attend to; and, besides, by this employment a constant training up of new weavers would be going on.

This Loom takes no more (perhaps less) house-room than the usual single-pieced loom. By the vertical position, a smaller shed, or opening of the warp for the shuttle, can be applied, or a larger shuttle may be used for coarser, stout fabrics, and even enable the use of the throstle bobbin in some kinds of work, as in the worsted for muslin-de-laine, or a smaller shuttle for fine yarns.

The Loom being capable of quick speed, a fly-wheel can be used to greater advantage, owing to the back speed by which the Loom is constructed: say when, at 150 throws of the shuttle per minute, the fly of the Loom is 300 revolutions per minute, it might be more.

The Loom is also adapted for other than plain cloth weaving, as in variety of twills, &c.



END VIEW, AND GEARING.

The weight of the batton, or lay, is nicely balanced by the turn of a nut-screw against a spring, as shewn under, at back of Loom. The batton, or lay, rises and falls, and the shuttle traverses the reed, to suit the vertical position.

THE GREAT EXHIBITION OF 1851.

PROGRESS OF THE BUILDING IN HYDE-PARK.

WE have on previous occasions furnished our readers with views and various statistics respecting the Great Industrial Palace, now rapidly progressing under the direction of those persevering and enterprising contractors, Messrs. Fox and Henderson. In the present Number, we shall commence a series of interesting details with regard to the construction of the building; and also with respect to the perfect mechanical arrangements, by which alone the stupendous undertaking could be accomplished within the prescribed time; and, in order to show the *modus operandi* in laying down the first ground-plan, we may suppose the whole surface of ground to be built upon, divided into perfectly geometrical squares, of *eight feet* each; and, further, that every principal dimension in the ground-plan is an equimultiple of the figure *eight*, which may, therefore, in the present instance, be called the magic number: thus, in the total length of the building, there are *two hundred and thirty-one imaginary squares*, and in the whole width of the building *fifty-one imaginary squares*, the actual length being 1848, and the actual width 408 feet, respectively. Having a clear view of this main point in designing so large a structure to be executed in so short a time, the details will be rendered more easy of comprehension. The main features of the interior of the building are the central aisle and the transept, the former extending the whole length of the structure, and being 72 feet, or *nine squares* wide, and the latter extending the whole width of the structure, and of the same width as the principal aisle. The height of the main aisle to the under side of the gutter is 62 feet 2 inches, and of the transept 66 feet 6 inches, both from the level of the floor On either side of the main aisle are five additional *walks* running parallel therewith, and of the respective widths of 24 feet (or *three* squares), 48 feet (or *six* squares), 24 feet, 48 feet, and 24 feet. Over two of these walks it is intended to construct galleries, in order to obtain altogether about five acres of additional space on the first floor. The details of these galleries we shall give on a future occasion. It is necessary here to state that the principal materials used in the construction of the building are wrought and cast iron, oak and fir woods, and glass, but no bricks whatever, except in the main drains for carrying the whole of the water from the roofs: thus, the columns, trussed girders, and rain-water pipes, are of cast iron; the iron ties in the gutter trusses, bolts, rivets, screws, and nuts, of wrought iron; the gutters, ridge-pieces, frame ribs for the roof of the transept, sham trussed girders, flooring, and external *walls* on the ground level, of wood; and the skylights, and external sides of the main aisle, transept, and galleries, chiefly of glass.

In our *View of the Transept, looking North* (*at page* 393), are seen the stately trees for whose especial protection the transept was added to Mr. Paxton's original design. This transept will be roofed in by means of twelve massive semicircular ribs of timber, which are prominently shown lying on the ground in the central part of the *General View of the Works, looking East* (*at page* 389): there will be a clear space above the trees of about 18 feet 6 inches. Each of these ribs is made up of six sections of wood, three being placed horizontal in section (at springing), and three vertically, the whole depth being 17 inches, and the width 8 inches; the flanch at back, made up of two-inch deals, projecting 1½ inch on either side.

In front of each rib is a moulded piece of wood 1½ inch in thickness, corresponding with the segmental face of the iron columns to which the ribs are to be sustained; an iron plate, 3½ inches by ⅜ths of an inch, both in front and behind the girder, runs throughout the whole length, by means of which, and proper screw-bolts and nuts at intervals of 22 inches, the whole is firmly secured together.

In the View of the Building Works looking East—which was taken from an elevated position on the *south* side of the building—are seen the different stages of construction; thus, the three tiers of columns and trussed girders of the great aisle and transept are prominent shewn. In the foreground are lying the four largest trussed girders for connecting the angles of the great aisle and transept, and carrying the roof of the transept: each of these girders is 72 feet long. The ribs of the roof of the transept, already described, are also seen and also a truck, drawn by two horses, by which the girders are conveyed to their destination. On the right of the picture are seen the carpenters busily engaged in laying the floors.

In the view shewing the glazing of the roof (*at page* 396), three bays of each eight feet wide, and co-extensive with one 24-feet trussed girder are clearly shewn. Seven workmen are seen at different parts of the picture: on the left, is a labourer ascending a ladder, with a supply of putty; and on the right, another man is carrying up part of a plank; while in the middle, a third is descending for materials; the other men are fitting and puttying in the glass. In the three bays shewn, there are three ridge-pieces and four gutters, which last also answer the purpose as of plates, on to which the lower ends of the sash-bars are notched and nailed after the fashion of common rafters on an ordinary roof, the upper ends of the sash-bars being nailed to the longitudinal ridge-pieces. Each piece of crown glass extends from the ridge piece to the gutter, and is 50 inches long, 10 inches wide, and 1-16

(*Continued on page* 396.)

THE BUILDING IN HYDE PARK FOR THE GREAT EXHIBITION OF 1851.—GENERAL VIEW OF THE WORKS.

THE BUILDING IN HYDE PARK FOR THE GREAT EXHIBITION OF 1851.—THE TRANSEPT.—(LOOKING NORTH.)

FRED HOLDERSWORTH; OR, LOVE AND PRIDE.

BY THOMAS MILLER.

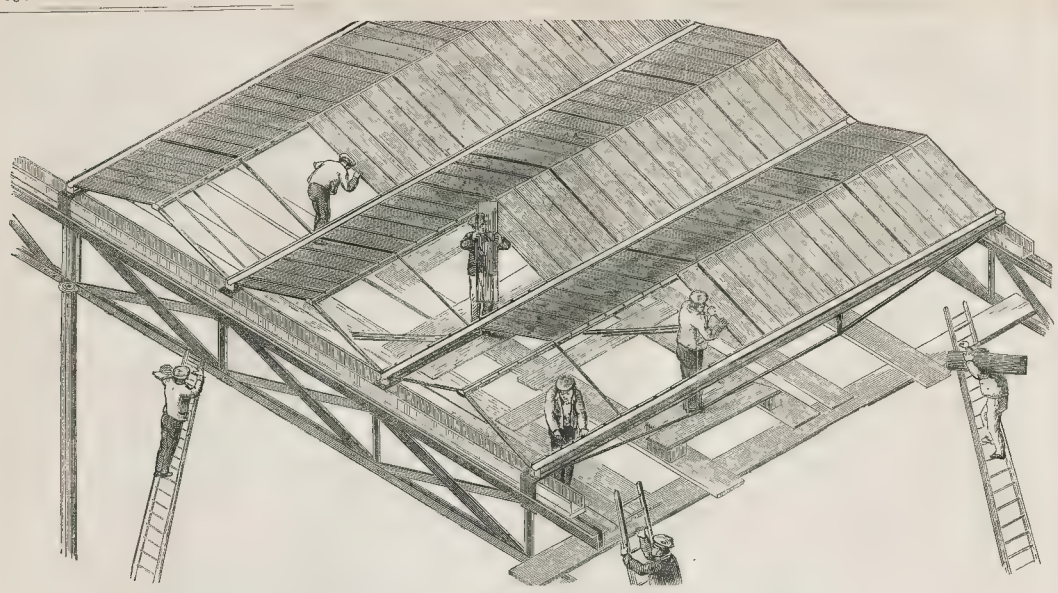
AUTHOR OF "GIDEON GILES," "ROYSTON GOWER," "FAIR ROSAMOND," "LADY JANE GREY," &c., &c.

CHAPTER III.—(*Continued.*)

That night Fred sat down in his chamber, and wrote the following letter to the laundress:—

"MY DEAR MADAM,—In explanation of what you witnessed last night, I beg to say that I was in earnest, which, by advising with your daughter, she will testify to aforesaid; and I doubt not, convinces you that my offer will be duly honoured. Without her, shall embark to some savage solitude. Have long 'sat like Patience on a monument'—too long for my happiness. 'The vacant never take Patience on a monument'—too long for my happiness. 'The vacant never like Patience on a monument'—too long for my happiness. 'The vacant never like Patience on a monument'—too long for my happiness. 'The vacant never like

as came up, and Matilda leaned from the archway with a large basket of nes in her arms, which she was taking home to wash.
llerton drew back, and said, "Not now, my friend; some other time. I ride over with you to-morrow. I respect you, my boy, but, hang it, I can- stand being introduced to her here, with that thundering great basket of y linen in her arms. How do I know who might be passing?" saying which was all ready, he did not know which way to look. He turned to see if ere was a cab at hand, but there was not. The omnibus was now moving on, d everybody who passed turned to look at them. Matilda was overwhelmed with her fear of losing the omnibus, Fred, at last, seized hold of one adle of the clothes' basket, and assisted her to carry it. Just as they reached omnibus, a fine, jolly, red-faced old gentleman, a friend of Fred's uncles, anced to be getting up, and seeing the young man, he nodded to him, and ing him a peculiar look, said, "Doing a little in the laundress's line, ed?"
"We must have a cab," said Fred, without replying; "wait a few moments, dear, while I look for one;" then turning away, he said to himself, "Tol- ton is right; it will not do in our position to be seen in the City with this formal clothes-basket."
In a few moments a cab was found, and the clothes-basket placed on the roof, atilda remarking, as she got in, that the fare would be as much as the whole thing she was taking home would come to.
And this was the first real humbling Fred's Pride had received. He felt—ought not ashamed of her, for her sweet face was an introduction to her any- here—that he was of her humble calling, and he sat silent and thoughtful as de cab, leaving the Borough. She spoke to him once or twice, but as either the noise of the cab prevented him from hearing her, or he was too rapt up in thought to pay any attention to her. At length she placed her and on his arm, and said, "Fred, have I offended you?"
He paused, looked up at her beautiful face, pressed her hand, and neither ered what Tollerton nor the whole City might think of him, for Love had once ore obtained the ascendancy of Pride.
"I thought you seemed ashamed of seeing me with the clothes," she said, eaking just what she thought and felt. "I'm sure the young gentleman did nat was with you, by his hurrying off in the manner he did."
"That was my friend Tollerton," said Fred; "he had an engagement, but has romised to come down to see us to-morrow or the following day."
"If I had thought I should have met you," replied Matilda, "I would have ut one of the omnibus men to have taken the clothes home for me, and have alked back with you. Any of them would have done so without charging nything; they have often taken them when mother and I have walked home ogether."
"You had better do so another time, my dearest," said Fred, "though I hould not like you to be beholden to those men, but would rather you paid hem. They are very well in their way; but, as you are about to become my little wife, you must not be too familiar with them." Fred, while standing eside her in Gracechurch-street, did not feel at all easy at seeing one or two f



THE BUILDING IN HYDE PARK, FOR THE GREAT EXHIBITION OF 1851.—GLAZING THE ROOF.

THE GREAT EXHIBITION OF 1851.

PROGRESS OF THE BUILDING IN HYDE PARK.

(*Continued from page 391.*)

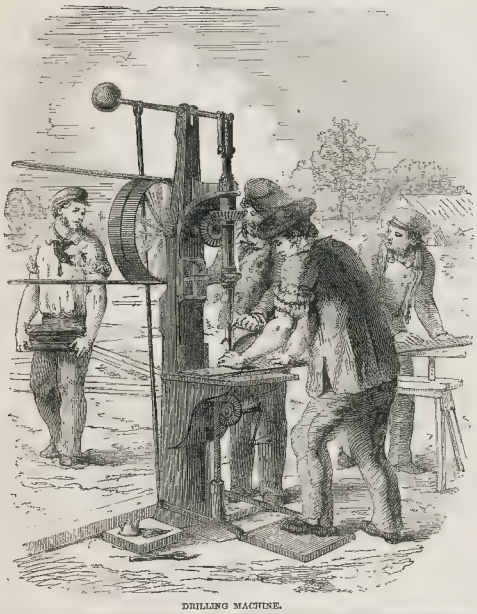
inch in thickness. The longitudinal gutter-plates or troughs, are formed out of solid fir scantling, the hollow being effected by machinery away from the works; but the ends are cut off, and the hollows to receive the rain-water heads are formed by machinery on the works, which will be given on a future occasion, as also the ingenious movable platform, for facilitating the operation of glazing the sashes. The water from the longitudinal troughs runs into the transverse gutters, which are framed on the premises, and are fixed on the top of the transverse trussed girders.

In the *View of the Base of one of the Columns*, the construction of drainage is shown. On the left is seen the melting-pot containing the lead for making the joints of the horizontal water-pipes, which are 6 inches internal diameter, and running underground in the direction of the length of the building, towards the brick culvert at the east end thereof. These horizontal pipes will receive the water from the gutters through the cast-iron columns which support the roofs of the building. A man is seen in the act of pouring in the lead to make the joints. The columns are each placed in sockets, which are, constructed with bases five-eighths of an inch thick 3 feet 1 inch long, and 18 inches wide, the whole being strengthened with vertical flanches: the internal diameter of the socket is 6 inches, and on its surface is enlarged at its four angles for 1¼ inch bolt holes, which correspond with similar perforated projections at the lower end of each column; so that, by screw bolts and nuts, the two are firmly secured to each other. The height of the sockets varies with the ground, which has a fall, from west to east, of 1 in 280. The base of the socket rests on a bed of concrete, made of gravel and lime—the former material being entirely dug from pits sunk at the west end of the building ground: the thickness of concrete varies with the depth of the bed of gravel, which extends under the whole of the ground; thus a very firm natural foundation is obtained.

BASE OF COLUMN.

One of Nathan Gough's four-horse vertical high-pressure engines is used for giving motion to the drilling and punching machines, which are placed one on either side at convenient distances. We have introduced a view of each of these machines. On the horizontal shaft of the engine, which passes through the top of the boiler, are three pullies of various diameters, from which two gutta percha and one leathern band pass to the two machines already mentioned. The *Drilling Machine*, which is one of Nasmyth's construction, is shown in the operation of perforating iron bars for the rivets. Two of the men are attending to place the bar under the drill; and a third is pouring oil into the drill-hole, to keep the drill cool.

In the *View of the Punching Machine* are shown the operations of punching bolt-holes in the bars of iron, and cutting off the ends by the shears. These modes of substituting mechanical for manual labour are to be seen in every large mechanical establishment in the kingdom. It may be mentioned here that about 3000 holes are punched during the present working day of ten hours.



DRILLING MACHINE.

PUNCHING MACHINE.

No. 456.—VOL. XVII.] FOR THE WEEK ENDING SATURDAY, NOVEMBER 23, 1850. [SIXPENCE.

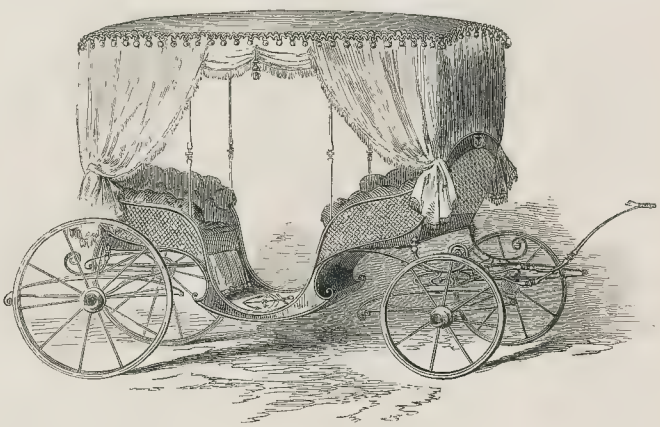
THE PAPAL VINDICATION.

THE Vindication of Cardinal Wiseman is an elaborate and clever document; but it has been issued at too late a period to allay the storm which has been raised—not so much by his elevation, and that of his colleagues, to the Roman Catholic episcopate, as by the presumptuous and offensive tone of exultation and superiority in which the appointments were announced to the world. The Papal Bull would have fallen amid comparative indifference, if it had not been for the pastoral letter of Cardinal Wiseman, and the vain-glorious boasting of other Roman Catholic dignitaries. "*The people of England, who for so many years*," said Dr. Ullathorne, of Birmingham, "*had been separated from the See of Rome, were about, of their own free will, to be added to the Holy Church. He did not recollect any people on earth, but those of Great Britain, who, having rejected the religion of God, were again restored to the bosom of the Church. The hierarchy was restored—the grave was opened—and Christ was coming out.*"

It was this kind of preaching and writing—it was this insolent and exulting, but foolish spirit, manifested somewhat too clumsily by the Roman Catholic priesthood—that aroused the Protestant feeling of England, and which not all the explanations and palliations of Cardinal Wiseman, however temperately worded or cleverly framed, will be able to soothe. The mere appointment of Bishops and Archbishops with new titles, if it had been accompanied by an humble and modest statement, that the change was solely intended for the better internal government of the Roman Catholic Church, would not have offended the Protestants of this country. They would have looked upon such arrangements with the same indifference as they regard the proceedings of the Mormonites, with whom they have no sympathy, but against whom they have no hostility. Cardinal Wiseman's disclaimer of any denial of the Queen's temporal supremacy deserves praise as a piece of composition. It is so temperate and logical, as to increase the public regret that it did not appear a month ago, before the mischief was done, and before this angry flood of theological bitterness was let loose over the land. We wish we could indulge in the hope that it will be effective for the purposes for which it appears to have been framed, and shall greatly rejoice if, at the eleventh hour, it should tend in any degree, however slight, to abate the public mistrust of any class of our fellow-subjects. Whatever distrust may remain will be entirely chargeable upon the blatant indiscretion of the many over-sanguine priests of the Romish persuasion, who have tortured what, if we are to believe Cardinal Wiseman, was a harmless domestic arrangement among the Roman Catholics themselves, into an aggression—in words, if not in deeds—against the Protestant faith and people of this country.

The first alarm has blown over, but no small portion of the indignation remains. It will be well for the Church of England, against whom, and not against the Dissenters, the exultation of Drs. Ullathorne and Wiseman was directed, if the unfriendly criticism of either of them shall have the effect of reviving a zeal which has slumbered—of removing the doubt which was fast leading many conscientious but wavering men into error, and of knitting together in a firmer bond than before the various parties that were forming within its bosom, and threatening it with disruption. Even the taunt of a foe may be productive of good, and the rebuke of an opponent may excite the serious thought which the remonstrances of a friend may have failed to call forth. Many of the sincerest well-wishers of the Church of England have dwelt upon abuses which it would have been for her interest to have remedied long ago; but hitherto the warnings and remonstrances have for the most part fallen upon inattentive, pre-occupied, or obstinate minds. The sneers of Cardinal Wiseman may possibly excite more attention and produce more good. Those are truly the wise men who profit by what their enemies say of them.

When Cardinal Wiseman promises that he will visit the shrine of St. Edward, "and meditate on the olden times when the Church filled without a coronation, and multitudes hourly worshipped without a service," he administers a reproof, not the less valuable because it comes from unfriendly lips. When he adds, "that he will pay his entrance fee, to go into Westminster Abbey like other liege subjects, that he will resign himself meekly to the guidance of the beadle, and listen without rebuke when he points out to his admiration detestable monuments, or shows a hole in the wall for a confessional," it is impossible to deny, that the Roman Catholic dignitary, however much he may err on the doctrinal and theological points in dispute, has discovered and assailed a weak point in the administration of the Abbey. It has been too long a subject of scandal that an admission fee should be demanded at the doors of our metropolitan cathedrals, and that these magnificent edifices, the pride of London, should only be known by their outsides to the great masses of the people. The Cardinal's criticism, as regards the "detestable" monuments, might have been spared; but, in other respects, however unpalatable it may



CARRIAGE FOR HIS HIGHNESS SAID PACHA.—(SEE NEXT PAGE).

THE EMPEROR OF RUSSIA'S STEAM YACHT "PETERHOFF."—(SEE NEXT PAGE.)

be, there is too much foundation for his hard words to allow them to fall unproductively.

We heartily wish, for the sake of the Church of England, that his still keener criticism upon the spiritual destitution of the district immediately around Westminster Abbey, were not supported by facts. "In ancient times," he says, "the existence of an abbey on any spot, with a large staff of clergy and ample revenues, would have sufficed to create around it a little paradise of comfort, cheerfulness, and ease. This, however, is not now the case. Close under the Abbey of Westminster there lie concealed labyrinths of lanes and courts, and alleys and slums, nests of ignorance, vice, depravity, and crime, as well as of squalor, wretchedness, and disease; whose atmosphere is typhus, whose ventilation is cholera; in which swarms a huge and almost countless population, in great measure, nominally at least, Catholic; haunts of filth, which no sewage committee can reach—dark corners, which no lighting-board can brighten. This is the part of Westminster which alone I covet, and which I shall be glad to claim and to visit as a blessed pasture in which sheep of holy Church are to be tended, in which a Bishop's godly work has to be done, of consoling, converting, and preserving. And if, as I humbly trust in God, it shall be seen that this special culture, arising from the establishment of our hierarchy, bears fruits of order, peacefulness, decency, religion, and virtue, it may be that the Holy See shall not be thought to have acted unwisely, when it bound up the very soul and salvation of a chief pastor with those of a city where the name indeed is glorious, but the perilous infamous—in which the very grandeur of its public edifices is as a shadow, to screen from the public eye sin and misery the most appalling. If the wealth of the Abbey be stagnant, and not diffusive, if it in no way rescue the neighbouring population from the depths in which it is sunk, let there be no jealousy of any one who, by whatever name, is ready to make the latter his care, without interfering with the former." If this be the sentiment of Dr. Wiseman, and his too faithful description of the wretched purlieus of Westminster Abbey—without exception, the most immoral and degraded portion of this great metropolis—shall stir up the zeal of the clergy who participate in the revenues and emoluments of the Abbey, to investigate the condition of the population around them; if it shall induce them to establish additional schools for the swarming children of poverty and vice—to visit more frequently the outcasts of society in their miserable homes, and to stir with more kindliness and zeal at the bedside of the expiring sinner, something better than theological rancour will have been excited, and good will have flowed even from so unwelcome a source as the assumptions and presumptions of Popery.

We earnestly hope, that, amid many other good results, which may be expected, sooner or later, from the shock which the Church of England and the feelings of the people have received, a revival of sympathy between Church and people may be the most conspicuous and the most lasting. The lesson has been a rude one, but it cannot with truth be said that it was not needed.

TOTAL LOSS OF THE EMPEROR OF RUSSIA'S STEAM-YACHT.

We regret to announce that the splendid steam-yacht, called the *Peterhoff*, which was built in this country a few months since, expressly for the Emperor of Russia, has been entirely lost on her passage out to St. Petersburgh. The *Peterhoff* was of iron construction, built by Mr. Mare, of Blackwall. She was nearly 400 tons burden, and was fitted with engines of 140 horse power. Her internal arrangements were of the most costly character, and no expense was spared in equipping her for the service of the Emperor. The transmission of the unfortunate yacht to St. Petersburgh was entrusted to an eminent firm on Cornhill, who took every care o supply her with an efficient crew. A master mariner, Mr James Boutland, who had been employed in the Baltic for the last 24 years, was appointed to take charge of her, her crew being selected from men who had been trading in that sea. Some five or six weeks ago she took her departure from the Thames, having on board, in addition to her crew, Mr. George Rennie, the engineer, and Mr. Waterman, jun., who designed the yacht, and who, we understand, was charged with its delivery to the Emperor, with Mr. Eschappar and one or two other gentlemen. She reached Copenhagen in safety, and there she took on board two ladies attached to the embassy there for conveyance to Revel, she resumed her trip.

The following letter from Mr. Waterman, jun., contains full details of the unfortunate occurrence:—

St. Petersburgh Hotel, Revel, October 31, 1850.

SIR,—It is with regret I inform you of our misfortune since we left Copenhagen, which we did on the 22d inst. at 5 P.M. We passed the *Archimede*, a Prussian steam-vessel, that went ashore a few days ago on the island of Bornholm. We had no sooner left the island than it blew a perfect hurricane, and continued blowing until the morning of the 24th, in the evening it was a perfect calm. We were thinking of going to bed about 12 o'clock, when [illegible] we were startled by a terrific rumbling noise. We immediately ran on deck [illegible] horror, we found the *Peterhoff* had her length up a shallow reef of rocks. She immediately began to fill, and was not long before the outer inside [illegible] was level with the sea. Unfortunately, two ladies connected with the embassy at Copenhagen accompanied us, with the intention of landing at this place. We attempted to effect a landing in the boats, but could not succeed, for the rocks; so we had to return to the *Peterhoff* and remained until daylight, firing rockets every consecutive half-hour. At daylight, three boats came from the shore to our assistance. We immediately went, with a portion of our luggage, ashore to a gentleman's [illegible] We immediately went, with a portion of our luggage, ashore to a gentleman's [illegible] [illegible] [illegible]

COUNTRY NEWS.

NORTH SURREY DISTRICT SCHOOL, PENGE, NEAR NORWOOD.

The public opening of this noble institution took place on Wednesday. It is established, under the authority of the Poor-law Board, for the industrial training of the infants poor maintained out of the poor-rates of the parish of St. Luke, Chelsea, and of the several parishes comprised in the Croydon, Kingston, Lewisham, Richmond, and Wandsworth and Clapham unions—a great improvement upon the former system of providing for the children of paupers and others. Among the visitors present were his Grace the Lord Archbishop of Canterbury, the Lord Bishop of London, the Lord Bishop of Winchester, the Rev. Mr. Rider, W. Prescott, Esq., High Sheriff of Surrey; Hon. Locke King, M.P., — Alcock, Esq., M.P., &c.

The building is situated on a piece of land adjoining the Anerley station of the Croydon Railway, which was purchased at the price of £3300; and the cost of the erection, which was conducted under the direction of the architect, Mr. Charles Lee, of Golden-square, is £15,000.

This establishment, which can accommodate 600 children, is strictly industrial, and no pauper officers or servants are allowed on the premises, this being important to prevent the contamination consequent on contact with adult paupers. There are also three divisions, viz. for boys, for girls, and for infants.

The buildings comprise three large school and class-rooms, with apartments for two schoolmistresses, two schoolmistresses, and for infant schoolmaster and mistress; also for drilling masters, steward, matron, other officers, and servants, with dining-room (capable of containing 600 children), chapel, chaplain's room for examining and instructing the children, board-room, work and store-rooms, two receiving-wards for the reception of children before they enter (or until examined by the medical officer), with baths, washing-room, and rooms adjoining for the baking, and deposit of the children's own clothes; also two kitchens, bakery, six lavatories, two plunging and other baths. Up-stairs there are fourteen dormitories, with lavatories and conveniences adjoining each; also a bed-room for an officer or servant, so that no dormitory is left without proper superintendence.

There are extensive enclosed playgrounds for boys, girls, and infants, with large sheds in each for use in wet weather; also distinct airing grounds for invalid boys and girls; likewise a pleasure-garden, for the sole use of the girls.

The farm-buildings are erected at a short distance from the main buildings, comprise a bailiff's house, wash-house, dairy, cow-house for twelve cows, root-house, barn, hay-house, tool and implement-houses, stable, cart, chaise, and sledge-houses, pigsties and fowl-houses. The cooking and dairy are separated from the other buildings for teaching the girls dairy work.

Adjoining the farm-buildings, gas works are erecting, where gas will be manufactured for lighting the whole of the buildings by night as well as by day, this being thought essential.

About seven acres of the ground are laid out as kitchen-gardens, for teaching the boys gardening, and the rest of the land is to be cultivated by the boys entirely.

A feature in the reformatory effect of this establishment is the impossibility of return to it after the age of fourteen. Children, by being brought up in a workhouse, look on it as their home, and, when put out to work, have no dread of returning to it if otherwise than comfortable, or if lazy when out; but children brought up in these schools will look on the workhouse as a degradation, and will not so readily go there, but endeavour to retain their places, to save themselves from the disgrace of a workhouse.

The afternoon service in the chapel commenced at twelve o'clock, the prayers being read by the Rev. Mr. Rudge, the chaplain of the institution. The sermon was preached by the Lord Bishop of Winchester, and was taken from the 39th chapter of Proverbs, part of the 16th verse: "A child left to himself bringeth his mother to shame." After service, the visitors partook of a collation.

FLAX COTTON.—It is understood that arrangements are in progress for making experiments on a large scale in Manchester, with respect to the value of Chevalier F. Claussen's mode of adapting the flax fibre to the cotton machinery. The experiments are to be made in the presence of an impartial and well qualified person, to be selected by some members of the Manchester Chamber of Commerce. Mr. Claussen having formally addressed the Board of Trade, requesting that an opportunity should be afforded him for fully testing the capabilities of his invention on a large scale, it is, we believe, in consequence of this application that the eminent gentlemen connected with manufactures in Manchester have decided upon affording to the inventor the requisite facilities, and of placing some machinery at his disposal.

MARYPORT AND CARLISLE RAILWAY.—On Wednesday, a special meeting, duly convened, was held at Maryport; F. L. Dykes, Esq., in the chair, at which it was resolved to raise a new capital of £83,921, by four per cent. perpetual shares of £.5 each; and to apply to Parliament for powers to redeem the £25 shares, and to raise by shares or mortgage the further sum of capital of £60,000 to cover the excess of debts beyond the Parliamentary powers already incurred.

LIVERPOOL GUNPOWDER MAGAZINE.—A preliminary meeting of gentlemen was held at Mr. William Rathbone's office, Liverpool, on Monday, to consider the subject of the removal of the gunpowder magazines at Liscard. Mr. George Holt, one of the deputation that had waited on Sir George Grey, explained that Sir George Grey had expressed his great surprise that a matter of such alarming interest to Liverpool should only recently have come to the knowledge of Government, and that he could hardly account for the inaction of the town council in the matter. It was shown by one of the speakers that the existence of such a magazine was a disgrace to Liverpool, which left that city for parts unknown

LIVERPOOL GUNPOWDER MAGAZINE.—A preliminary meeting of gentlemen was held at Mr. William Rathbone's office, Liverpool, on Monday, to consider the subject of the removal of the gunpowder magazines at Liscard. Mr. George Holt, one of the deputation that had waited on Sir George Grey, explained that Sir George Grey had expressed his great surprise that a matter of such alarming interest to Liverpool should only recently have come to the knowledge of Government, and that he could hardly account for the inaction of the town council in the matter. It was shown by one of the speakers that the existence of such a magazine was a disgrace to Liverpool, which left that city for parts unknown

A memorial to Government, praying for their immediate removal, was agreed to; and a call was made for the requisite signatures.

INCENDIARISM NEAR GAINSBOROUGH.—We regret to state that a spirit of incendiarism has shown itself within these few days in a part of the country where it was never known previously to exist. Two fires, by both of which the property of the same farmer has been destroyed, have taken place within a few miles of Gainsborough; and, on Sunday night, several stacks were consumed in a yard at Morton, within a mile of that town. Suspicion falls, we hear, upon parties who have been in the employ of the same farmer for many years, and conduct themselves with an insolence which causes much alarm wherever the houses which they approach are not well garrisoned.

POST-OFFICE ROBBERY.—A second case of this kind has just been discovered in the Worcester Post-office, the delinquent being the chief clerk, Mr. Price, who it appears is in good circumstances and has money in a local bank, besides an inheritance *in prospectu*. It appears that for some time the accused party has been the habit of appropriating to his own use part of the moneys received for the payment of Post-office orders, &c., which it was his duty to hand over to the Postmaster, Mr. Harding. When charged with the delinquency, he at once confessed his guilt. The extent of the defalcation is upwards of £50. Price has absconded, but the deficiency has been paid to Mr. Harding by a friend of Price's, from funds of his deposited in Messrs. Farley and Co.'s Bank at Worcester.

INCENDIARY FIRE.—A destructive fire, supposed to be the act of an incendiary, took place on Saturday last, on the premises of Mr. C. H. Osborne, Scotter Common, Butterwick, Yorkshire. The flames were seen issuing from the stack-yard, containing five wheat stacks, one of barley, and two of straw. Assistance being procured, it was discovered that one of the straw stacks had been set fire to on the wind side, and in a few moments the whole was enveloped in flames. The barn adjoining the yard, in which were 80 quarters of good old wheat, stood in a very precarious situation, and water being scarce, it was expected every moment to become a prey to the flames. The greatest exertions, however, were used, happily with success; but so narrow was its escape, that the barn door and window frames were burnt almost into charcoal. The valuable stacks were entirely consumed. It is stated that two men of suspicious appearance were seen lurking about the premises just before the fire broke out, and a cottage not far distant was robbed during the raging of the fire. No clue has, however, yet been discovered to the incendiaries. So great was the body of the flame, that the fire was distinctly perceived in the east field at Epworth. The property is insured in the Sun Fire Office.

EXTENSIVE ROBBERY.—On Thursday (last week), Mr. Armsten, a commercial gentleman from London, was on a visit on a visit to Mr. Hollest, and put up at the Neptune Hotel, Clayton-square. In the evening he placed the dressing-box of his gig, containing money to the amount of £270, in the commercial-room. During the night the lock of the box was forced, and the money, consisting of one £100 bank-note, a £50 note, a £10 note, three £20, and £30 in gold, taken.

The *Chester Courant* states that Lord Feilding was burnt in effigy at St. Asaph last week.

An accident, sufficient to cause serious delay of the train to Birmingham, on the London and North-Western line, took place on Wednesday. An engine broke down four miles on the Birmingham side of Rugby; the result was that the train conveying the London morning papers did not arrive in Birmingham until an hour and a half after the usual time.

ATROCIOUS ATTEMPT TO BLOW UP A SHIP OF WAR.—Advices received by the West India mail acquaint us with the fact that on the 24th August, 1850, in lat. 28° S., 126° 23' W., William Muir, gunner's mate of her Majesty's ship *Calypso*, having misdemanded the neglect of duty, went to the galley fire, lit a slow match, and was discovered by the corporal of Marines in the act of entering the magazine, with the intention of blowing up the ship. Muir was kept in irons till his arrival at Valparaiso, when he contrived to make his escape —how is not stated.

Colonel Blagrave, of Calcot Park, has undergone the operation of couching, and, by the skilful management of Dr. Walton, of Lower Grosvenor-street, is progressing favourably.

The steamer *Tribune* was totally destroyed by fire, recently, on the Ohio, below Cincinnati. No lives were lost, but a large amount of property

A lamentable accident occurred in the harbour of Bombay on Sunday night, October 13, by which Mrs. West, the wife of the steward of the Peninsular and Oriental steamer *Poka*, lost her life.

At Lahore, in India, Captain Gaussen, of the 14th Dragoons, has met with a very serious accident, by walking in his sleep off the flat roof of a summer-house in the Shulimar-gardens, where he was passing the night. It is feared that he will not recover

At Rouen several of the manufacturers have been compelled to put their hands upon half-work in consequence of a want of orders.

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

A vacancy in the direction of the East India Company will, it is expected, very shortly occur by the resignation of Mr. Lyell, the state of whose health is such as to incapacitate him from the performance of the duties of the direction; and should the presidency of Addiscombe be given to Major Oliviant, there will be another vacancy.

Lord Mackenzie will, it is reported, shortly retire from the judicial bench of Scotland, and be succeeded by Lord Advocate

At half-past two on the morning of the 5th inst., the great freight *dépôt* of the Boston and Maine Railroad, United States, in the former city, was discovered to be on fire. It was entirely destroyed, and also 30 cars laden with cotton, flour, &c. The total loss is estimated at upwards of 100,000 dollars.

The solicitors of the "Woods and Forests" have received instructions to give the necessary Parliamentary notices preparatory to the introduction of a bill to extinguish the right of the Crown to stock the New Forest in Hampshire with deer and other wild beasts of the forest, and to empower her Majesty to enclose the several portions of the said forest. It is also intended to put an end to the several encroachments on the Crown lands which have been so much complained of

In addition to the 100 guineas which the Duke of Northumberland offers for the best model life-boat, he also offers (and not the Royal National Shipwreck Institution, as previously stated) 50 guineas for a life-boat built according to the model which shall be approved of.

Exeter Hall is to be re-opened on Friday, the 29th instant, with a performance of the "Messiah" by the sacred Harmonic Society.

According to a General Post-office order just issued, henceforth all newsvenders will be allowed to print on the cover of any newspapers and stamped periodicals which they may send by post, the title or name of such newspaper or periodical, and also their own names and address. No writing or printing of any description whatsoever, either on the outer or inner side of the wrapper, except that above mentioned, and the name and address of the party for whom the newspaper or periodical may be intended, will be permitted.

A benefit for the public on behalf of Mrs. Hollest, widow of the late murdered vicar of Frimley, has just been made by some friends of that lady, and is deserving of every consideration. In addition to the sudden and violent bereavement she sustained, the widow of Mr. Hollest has been left in very narrow circumstances, and a committee has been formed by the neighbouring clergy and gentry to receive the subscriptions of those who may be disposed to contribute to the alleviation of a case of suffering which has excited universal sympathy.

M. Dogère, professor at the Agronomical Institution of Versailles, who had been charged by the Minister of Agriculture to examine the best means of destroying the insects which ravages wheat, has invented one which, by applying a certain amount of heat (from 55 to 60 degrees) to the grain, preserves it in a sound state for bread, whilst it destroys the insect. From 60 to 100 hundredlitres may be passed through the apparatus per day.

Sir George Anderson, C.B., and Mr. John Bonham, C.B., are promoted to the Second Class of the Order of the Bath for civil services; and Sir Thomas Hastings and Mr. H. Robinson are nominated to the rank of C.B., or third class of the same order.

A forgery to the amount of £800, by the master of the Winslow Union Workhouse, was communicated on Saturday to the Metropolitan Police. The delinquent has been traced to the neighbourhood of King's-cross, or Shoreditch, London

The Belgian Chamber of Representatives adopted, last week, an address of condolence to the King on the death of the Queen. The address assures the King of the affection and loyalty of the nation, and of its sincere sympathy in the grief occasioned by so great a calamity.

At his last rent-day, G. H. Wilkinson, Esq., of Harperley Park, returned 10 per cent. to his tenants on their rentals; and at his recent rent-day, Calverley B. Bewicke, Esq., of Cauby Manor, according to his wonted liberality, returned 16 per cent. on the reduced rents to all his Kirkheaton tenantry.

The Shetland correspondent of the *John o'Groat Journal* states that steam communication will be opened next spring between Iceland and Leith, the vessel calling at the Shetland and Faroe islands.

On Monday night, a steam saw-mill at Inverness, the property of Mr. Town-Councillor Anderson, shipowner, was destroyed by fire. The flames were so gigantic, that, according to the *Inverness Courier*, persons could recognise each other at three miles distance by the light.

In New York 4200 foreigners have been this year naturalised. A large number of them just before the late state election.

Mr. W. Appleton, of Boston (United States), has given £20,000 to an asylum in that city

John M'Donough, a miserly millionaire of New Orleans, died a few weeks ago, leaving some 10,000,000 dollars or more chiefly to the poor of New Orleans and Baltimore, and a mere trifle to his sister, who is poor. It is said that the will will be contested

A gold region has been discovered in Venezuela, which is said to produce a richer yield of metal than the mines and diggings in California.

The emigration returns for Canada, furnished by the superintendant at Quebec, exhibit a decrease of 8000 emigrants this year, as compared with 1849.

The City Bank of Montreal has offered a reward of two thousand dollars for the apprehension of Robert Fleming Coles, the cashier of its Quebec branch, who left that city for parts unknown

Upon the decease of Mr. Raphael being known, an influential meeting of the Liberal party of the borough of St. Albans took place, and the name of Mr. Edwin James, the Queen's Counsel, was mentioned as a gentleman to be requested to stand on the Liberal interest. The Conservative party are astir, but have not named their candidate.

The Spanish steam-frigates were launched on Tuesday at Blackwall, in the presence of the Spanish Ambassador and a large concourse of visitors. They were named, respectively, *Reyna* and *Isabella Segunda*. The vessels are of the first-class, and were built from Admiralty plans.

His Excellency the Baron Rehausen, the Swedish Minister at the court of St. James's, is shortly expected to return to this country, to resume his diplomatic functions.

It has been suggested, that, as the great Exhibition in 1851 will draw thousands of persons to the metropolis, a first-rate cricket match should be played at Lord's; as, for instance, the eleven to be composed of the finest players in England (Kent and Sussex against All England).

A very handsome residence, a Gothic palace, is now nearly finished for the new Roman Catholic Bishop of Clifton. It is situate behind the chapel (nearer to York-place). This, with the convent of the sisters of Mercy, the schools, the chapels, &c., form quite a little Roman Catholic colony in that part of Clifton. The Cathedral or Church of the Holy Apostles is to have a new Gothic casing

Sir James Duke, Bart., M.P., had the honour of being presented, by our Ambassador at Constantinople, to his Majesty the Sultan, at a private audience on the 31st ult.

The Blackburn Peel Memorial Committee are still proceeding in raising the funds necessary for the erection of a useful memorial to the late Sir R. Peel, Bart., in the form of public baths for all classes. Upwards of £500 have been promised.

On the 8th instant, a gentleman travelling in a railway carriage between Preston and Tebay station, on the Lancashire and Carlisle line, was robbed of £19 in bank-notes, one of them a £10 note, 66,837, dated August 5, 1850

On Bonne Fair, Dunblane, a farmer was lately robbed of a red morocco pocket-book containing £.07 in bank-notes, consisting of two £20, two £10, four £5, and the rest £1 notes, all of the Bank of Scotland, except a few of the small notes.

Capt. Good Hope intelligence to the 25th of September states that in the northern part of the colony, two native chiefs, with the tribes to which they belong, have caused much trouble, and done much mischief, which the Governor and Government of the British resident to adopt severe measures for their defeat and apprehension.

The Bradford town council have resolved that all steam-engine chimneys within the borough should be raised to the height of 30 yards where the engine is of five-horse power and upwards.

Cockermouth Church was destroyed by fire on Friday morning week. Scarcely a portion, with the exception of the walls and the tower, was left standing.

The Charlotte Town (Prince Edward Island) *Gazette* announces the death, on the 10th instant, of his Excellency Sir Donald Campbell, Lieut.-Governor of that province.

Hayti and the city of the 16th ult. report a collision between the Haytians and Dominicans on the 9th ult. in the pass of Bornico. The Haytians were driven back with terrible slaughter. On the 11th ult. the Emperor marched with his troops for Petit Gomes against the enemy. Two Dominican schooners of war had captured a Haytian brig of war.

It is estimated that more than 1000 fugitive slaves have lately arrived in Canada from the United States.

The treaty between the British Government and the Lake Superior Indians has been settled, the Government paying them 16,000 dollars in cash, and 4000 per annum for ever, in consideration whereof the Indians withdraw from the disputed territory, and the mining companies are free to resume their operations.

The British North American Electric Telegraph Company, at a recent meeting in Quebec, resolved to construct forthwith the line from Riviere du Loup to Woodstock, whereby a perfect telegraphic communication between Quebec and Halifax will be established.

The Government engineers employed in making examinations of the river St. Lawrence, continue to report favourably of their progress, and it is expected that a speedy removal of the impediments to navigation between Montreal and the ocean will be effected. Toronto harbour is hereafter, under an act of Parliament, to be managed by a trust company. The chairman has been appointed by the Government, and the board has entered upon its duties.

At Colchester Market, on Saturday week, a cattle-dealer was robbed of three £5 Bank of England notes, seven or eight £5 Colchester Bank notes, and a cheque for six guineas, drawn by Joseph Kingly on Messrs. Round, Green, and Co.'s Colchester Bank.

GREAT INDUSTRIAL EXHIBITION OF 1851.

We have to congratulate ourselves on the very widely-expressed satisfaction of our subscribers and the public at our last week's Illustrations and notes in connexion with the Great Industrial Palace in Hyde-Park. As an amendment to the suggestion of throwing the building open, when completed, to all classes of visitors gratuitously, it has been proposed to affix a toll for admission of one penny. The number of visitors could thus be accurately registered, whilst upwards of four hundred pounds would be realised for the general funds of the Exhibition.

Consequent on the large demands for floor or counter space, the Commissioners have authorised the erection of an additional gallery, which increases the total exhibiting area for the United Kingdom to about 220,956 superficial feet.

The admission tickets are to be discontinued, from the inconvenience to the progress of the works by the increasing number of visitors. A charge of five shillings for each person will in future be demanded; and should any amount arise from this source, it will form a sick and accident fund for the workmen

The conditions for providing refreshments in the building extend over three areas: the first will supply ices, pastry, sandwiches, fruits, tea, coffee, and aërated waters; the other two are to furnish bread, butter, cheese, tea, coffee, ginger beer, and similar drinks. No cooking will be allowed, and no heating apparatus, except for the purpose of warming water. Fresh filtered water is to be supplied gratis: but the further regulations and lists of prices, &c., can be obtained from the Executive Committee. Tenders for the supply are to be addressed to the Office, Old Palace-yard, by the 9th of December.

Among the collateral advantages of the Great Exhibition will be the downfall of our provincial cumbersome and oppressive patent laws. The rights of exhibitors have been frequently discussed before the Royal Commission; and it is quite certain that these rights will not be left unprotected in the Great Industrial Exhibition, which was originated for the benefit of the ingenuity and industry of the world. The claims of a patentee are to have his labour, skill, and expenditure regarded as his own peculiar property; whilst the claims of the public are, not to have such regard light; bestowed nor afforded, to the detriment or obstruction of the general emulation and advancement. Besides the efforts in London, especially the very praiseworthy advances of the Society of Arts, the Farringdon Committee have been bestirring themselves for an alteration in the existing law. Mr. M. D Hill, Q.C., the recorder of the borough, proposes that "an inventor, by placing his invention in the Exhibition, shall be in the same state as regards a patent right as if he had previously sued out a patent, subject, however, to the condition that the patent shall be sued out within a reasonable and specified time, or not at all." He further apprehends, that some institution is permanently required of the nature of an inventors' mart, where, for a limited period, inventions may be deposited with a similar privilege to that proposed to be conceded to the exhibitors of next year."

The necessity of a full knowledge of the proportions of the allotted space for the building operations of the foreign contributors has been strongly urged on the Continental authorities. The requisite information must be sent before the 18th of December; and the Executive Committee will be only too happy to receive suggestions and personal assistance as to the arrangement of the articles to be contributed

After some misapprehension, especially among the German applicants, it has been determined not to affix prices to articles exhibited, though their cost may enter into the question of rewards. If the exhibitor claims any merit for cheapness, he must declare the price in his invoice.

By our country returns, we perceive that linen fabrics and cotton manufactures, wool-cards and mats, a series of mineralogical specimens, and the dropping-well petrifactions, are to be exhibited from Knaresborough

Complaints are made that the agricultural produce of Lincolnshire will not be adequately represented: the Spalding wheat is not returned, nor mustard, wool, or chicory, which are grown to a considerable extent.

Agricultural implements, with harness, models, tanks applicable for sewage and manure purposes, specimens of every variety of English wool, are noticeable amongst the Chelmsford application

Limerick is being strongly urged to forward her unrivalled lace and gloves. The Queen's Counsel suggests a display of Kildare slates and marbles, Plassey limestone, Irish freestone, leather, cutlery, together with the native ores, earths, and salts of the locality

Sixty-four exhibitors are named from Huddersfield. Plain and fancy woollen manufactures, merinos, dyes, machinery, models, cabinet-furniture, British gram, flour, and meal, together with raw wool, appear in the list

Two subscriptions have been received from the London engineering department of the Great Western, as instalments of the staff of the line. The South-Western staff had previously contributed

All the companies in important railway companies have agreed to allow a deduction of one-half the railway charge for the conveyance of goods of exhibitors. The members of local clubs are to be conveyed at a single fare for the up and down journey, according to no case to be exacting more than single returns for one journey. Other reductions with regard to distance are also promised.

Excursion tickets across the Atlantic are suggested. They will pay well, and, as an American correspondent writes, "at the same time afford John Bull an extensive view of his children who vegetate on the side of the herring pond."

The visiting clubs increase. In the neighbourhood of Norwich, Knaresborough, East Dereham, Spalding, Hartlepool, Yeovil, and Worthing, the funds are reported to be satisfactorily accumulating.

The *Worcester Chronicle* states that the Worcester glove trade is behind in its exertions for the Exhibition

Mr. Chevalier, from Jersey, promises a swinging coast beacon; and the ladies committee are to hold a fancy fair in December, in connexion with the Exhibition.

Among the articles of plate for which the Goldsmiths' Company have set apart £1000 in prizes, one has following:—Group of figures as a candelabrum, not less than 500 ounces; dessert service in not less than four pieces; shield, salver, or altar dish; sideboard ewer; cup candlestick and branch, for three; four cups and saucers; tea and coffee, and communion services; candlesticks, salts, claret-jug; tea-kettle and stand, ink-stand; spoons and forks; silver, silver-gilt, or gilt in part. Parties are to communicate with the clerk of the company's hall, before the 30th instant.

The local committees are informed that no list of intending exhibitors should be given, without first obtaining the authority from each individual exhibitor for the publication of his name

A committee has been appointed by the Bishop of London for providing foreigners and other strangers with the means of attending divine worship during the period of the Exhibition.

With the exception of the Bodmin and St. Germans districts, Cornwall promises well. Ores, stones, ochres, clays, and the various operations of smelting, &c., will be displayed. Nets, illustrative of the Cornish fisheries, hides, and wheat, make a total demand in the first section of 1484 feet. Of the Cornish manufactures in granite, porphyry, and slate, are proffered; and the total space, including 90 feet for the North Abbey Iron and Coal Companies, extends over 2700 superficial feet.

Besides the renowned china and stoneware from the Staffordshire Potteries, architectural decorations from the Staffordshire clays are promised. One manufacturer is, we hear, preparing a china service, at a cost of 600 guineas

Several of the more eminent of the Leicester firms will aid amply with displays of every description of hosiery, gloves, worsted, lambs'-wool, Berlin, gloves, Shetland, and other goods, and the wool in its various stages, until finished into yarn. Geological specimens from the blue lias limestone, fossils, &c., are promised.

Merthyr-Tydvil will forward specimens of Welsh flannel.

There are forty-eight exhibitors from Bradford. Iron in its raw state, ironwork and machinery, power-looms for weaving worsted stuffs, jacquard machines and hand looms, machinery for spinning worsted yarns, wool-combs and stuffing-boxes are enumerated. Models of coal-mines, with explosive lamps, hinges used in spinning; cotton and worsted and silk-throwing are mentioned. The wools are arranged in five departments, and the amount of space assigned is 1622 feet.

A Manchester warehouseman is declared to be spinning a pound of cotton of the finest description, in length two hundred and thirty-eight miles one thousand one hundred and twenty yards. The cotton was imported from Egypt.

Rich mineral products are to be afforded by the Settle district. A specimen of the blue-fag, black marble, and mountain limestone, with the grey Ebchmal marble, are to be contributed.

In our foreign intelligence, we find that the Maharajah Gholsub Singh, of Jammo, has sent a collection of shawls, *papier-maché*, carpets of entirely new patterns, from Cashmere, to Lahore, *en route* to London. Their value is said at £10,000; and they are, it is believed, in the first of the vessels. The chiefs around have forwarded numerous and costly contributions to the contest them is a suit of steel armour inlaid with gold, together with many other warlike and agricultural implements

The Hong-Kong committee were requested to procure the granite, and tools used in cutting it, of the neighbourhood; also, specimens of the wood and instruments used in carving the joss, or idol, in a perfectly finished state, with a model of a joss-house; porcelain in its various stages, with the brushes, paint, &c.; cotton quilts, with the instruments and models for working them.

The President of the United States, after communications with the Marine, has agreed to despatch one of the States vessels on the gratuitous transport the specimens of American industry and art which we are to receive.

Arrivals from Australia are anticipated skins, wool, and hair; specimens of raw silk and native weaving; oils, earths; indigo, and other dyes; finished work and raw materials in stone and marbles; olive and walnut-wood.

It is stated that the French President has some notion of taking a hotel, at Slough, for himself and staff during a month of the Exhibition.

A further consignment of 192 Russian packages is noticed from Hamburgh, that Mr. Funnell, a workman in the employ of Mr. Scott Russell, engineer, of Brighton, is constructing a water-wheel in circumference than a threepenny piece, for the Exhibition of 1851; but it is uncertain whether he will be able to complete it in time.

GREAT INDUSTRIAL EXHIBITION, AT MONTREAL.

A very interesting class of contributions to the Great Exhibition of the Industry of all Nations, to be held next year, is promised from Canada, where a commission has been issued under the great seal of the provinces to conduct a "Provincial Exhibition" at Montreal, with a view to the solution of articles (Canadian production) for transmission to the mother country.

The sum of £2000 having been granted by the Legislature for the purposes of the commission, and local subscriptions to a considerable amount having been added thereto, the Commissioners have awarded prizes amounting in the ag-

PROVINCIAL INDUSTRIAL EXHIBITION OF CANADA, HELD AT MONTREAL.—THE NORTH HALL.

gregate to £1500) to the best articles exhibited in the specified classes. The Exhibition was opened in the Bonsecours Market Hall, at Montreal, on Thursday, the 17th ult. There are two large apartments, both of which are completely filled.

In the Hall, on the left hand from the staircase, or North Hall, beginning at the upper end, is a splendid collection of furniture, chiefly in black walnut, some of it richly carved. There is another collection at the opposite end; the sofas, chairs, centre tables, bedsteads, and cots, with other articles of convenience or luxury, display much taste and skill.

Some elegant grates, enclosed in painted chimney-pieces, evince superior workmanship.

A glass case, containing a silver tea-kettle, goblets, spoons, and brooches set in gold, all manufactured in Canada, is very attractive.

A large collection of minerals, some of them specimens of great size, ranged along the eastern side of the building, gives somes idea of the underground resources of the colony. Bottles of the various mineral waters are also to be found in the same part of the Hall.

The printers and engravers have sent specimens of their work, in plain and ornamental letterpress, lithography, copper-plate engraving, and wood-cuts.

Boots and shoes, fancy slippers -fur caps, gloves, and gauntlets—straw-bonnets and hats, are the principal articles of wearing-apparel exhibited.

The show of woollen and linen goods is extensive, embracing different kinds of cloth, blankets, flannels, shawls, and sheeting of various textures.

Next are a collection of glass, in plates, shades, bottles, and jugs; various articles of dentistry; Daguerréotypes, wigs, specimens of turning, guns and daggers, bungs and corks, brushes, lasts, works in plaster, picture-frames; bottles of porpoise, cod-liver, and black whale's tongue oil; porpoise leather, "never manufactured before;" a steam-boat engine gong, and a fine specimen of bird's-eye maple veneer.

There are numerous models; among which are locomotive engines, a cabinet piano-forte, and a hot-air cooking apparatus.

The South Hall is principally devoted to agricultural produce and machinery, together with carriages, saddlery, and harness.

Here are bundles of wheat, barley, oats, peas, and beans, in the straw; as well as large quantities of those grains in bags; fine specimens of Indian corn; barrels of flour, kegs of butter, pearlashes; barrels of beef, pork, and hams; buckets of hops, cheeses, honey, starch, bees-wax, sugar.

Further on are ploughs of different kinds; harrows, dung and hay forks, rakes, scythes, axes (an excellent assortment), cooper's tools, fanning mills, churns, a turnip-slicer, a reaping machine, shovels, stump extractors, pails, tubs, and brooms.

The carriages are much commended, especially the sleighs. The single sleigh, with its skeleton horses, wearing elegant harness, is generally admired. There are also some saddles, of remarkably good manufacture.

We can only glance at the remainder, including cooking-stoves, with both tin and copper ware; draining and paving tiles; models of bridges; a portable mangle; grist mills, a turning lathe; a church bell and frame complete, the whole made at Montreal in three days, the copper used for the purpose being brought from the Bruce Mines; railroad wheels; a bookbinder's cutting machine, invented and made by a binder; a model of a cannon calculated to regale charges of horse and foot, and which, at a distance of 16 yards, will scatter balls 60 yards in extent; specimens of calf-skins dressed, upper leather, and fancy leather for binding, &c.

The centre of each Hall is given to the Horticultural Society, and is occupied by an octagon stand; that in the North Hall being for fruits and flowers, and the other for vegetables. Both are tastefully ornamented, and they add much to the interest of the Exhibition. The result of the whole is a very favourable impression of the capabilities of the country, and the industry and skill of its inhabitants.

Canada (says the Editor of a Montreal journal), as well as many other countries, will benefit by the impulse and excitement resulting from the happy thought which originated the World's Industrial Exhibition.

PROVINCIAL INDUSTRIAL EXHIBITION OF CANADA, HELD AT MONTREAL.—THE SOUTH HALL.

GREAT EXHIBITION BUILDING.—DETAILS OF CONSTRUCTION.

EVERY step in the progress of the works of the Great Industrial Palace is replete with interest: the results of the labour of nearly eighteen hundred men, besides the power of numerous steam-engines and horses, both on the ground and at the numerous private establishments in London and other parts of the kingdom, engaged in assisting the enterprising contractors, make a great show even at the end of a single week. Surely a new era in building has arrived, when *glazing* and *flooring* can be measured by *the acre*, and *girders* and *gutters* by *the mile!*

We this week illustrate

THE SASH-BAR CUTTING MACHINE.

Before describing the *sash-bar cutting machine*, which is represented, a few words may not be out of place with regard to the origin of this contrivance, as there are more claimants than one to the invention—a circumstance by no means unusual when results are favourable. In the fifty-third volume of the "Transactions of the Society of Arts," we find a communication from Mr. Paxton on this subject, dated 18th March, 1840, in which he says that, "in its first state, it merely performed the part of a grooving-machine, but was subsequently improved so as to make the bar complete;" and that, by its adoption, the labour of *twenty* men for one year was performed, and a consequent saving of £1200 effected in labour alone. Now, we are not aware of sash-bars being completed by machinery before this period; and in the machine represented in *the View*, we perceive the same principle as that of Mr. Paxton's machine, with certain additions, by which double the amount of work is performed in a given time. Thus, in the machine used for the Chatsworth conservatory bars, each bar was passed *twice* through the machine; whereas, by the machine now used, the operation of moulding both sides is performed at once. We may also here allude to the substitution, by Mr. Paxton, of a *groove* for a *ribate*, as used in ordinary sash-bars, whereby he makes his *ridge and furrow plan* very complete, as the putty, being protected by the groove, is not exposed to the alternations of weather, which, in the latter case, cause it to crack, thus admitting the rain, which, in a building destined to receive the choicest wares, would form a very serious objection to top lights of the ordinary construction.

Our *View* of the *sash-bar cutting machine* was taken by the permission of Mr. Birch, of the Phœnix Saw-mills, near Cumberland-market, Regent's-park, who has a contract for supplying skylight bars for the great Building, as also the upright bars for the vertical lights, and ridge-pieces for the skylights.

Mr. Birch's steam power amounts to from 20 to 25 horse-power, of which 4½ to 5 horse-power is appropriated to this machine. From a 21-inch pulley at the level of the floor a leather band passes to the driving pulley of the cutters, which rotate at a speed of about 5000 revolutions per minute: the cutters are secured from dust by a metallic hood, which can be removed at pleasure. The chief novelty, we apprehend, in this machine, is the addition of a second set of cutters, whereby the sash-bars, instead of passing twice, pass *only once*, under the formidable claws which give to them their proper form—thus double the amount of work is performed in a given time. One man and a boy are required to attend to the machine: the former places the planks on the table, to be received by the 3-inch *feed* rollers, which, having parallel indents throughout, in the direction of their length, cause the planks to move forward to the cutters; while the latter receives three, four, or more of the finished bars, according to the width of the plank, and removes them to the floor, near to a bench, where they are examined and cut to their proper length of 15 feet. If found to be *shaky*, they are rejected as unfit to be used in the "model structure." Besides those for cutting out the moulded or bevilled parts, cutters are also applied for separating the bars; but circular saws, each of 8 inches diameter, placed in advance of the moulding cutters, are preferred for that purpose, as the latter are more easily blunted by knots in the wood.

Besides the two feed rollers, there are also three *pressure* rollers, of similar diameter and length, which is regulated by the width of the plank to be cut into bars. One of the pressure rollers is placed in the rear of the cutters, and the other two in front; and in connexion with

PAYING THE WORKMEN.

the pressure rollers, under which the planks severally pass, are suspended weights from adjustable levers, which are seen in the view.

About 307 planks pass through this machine in ten hours, allowing for a stoppage of about ten minutes in each hour for sharpening the cutters, &c. Now, if only three bars are produced out of each plank, it gives a length of sash-bars of about *two miles* and *three-quarters* per diem.

In another part of Mr. Birch's premises a moulding machine has been applied, with suitable modifications for cutting the ridge-pieces for the skylights, which are finished to 24-feet lengths, and cut out of fir timber 3 inches square. By this machine, which is worked with a power of about *five horses*, 100 lengths, or 2400 feet, are produced in the ten working hours, due allowance being made for sharpening the cutters, &c. In forming the skylights, the several lengths of ridge-pieces are put together with ½-inch dowels 3 inches in length.

PAYING THE MEN.

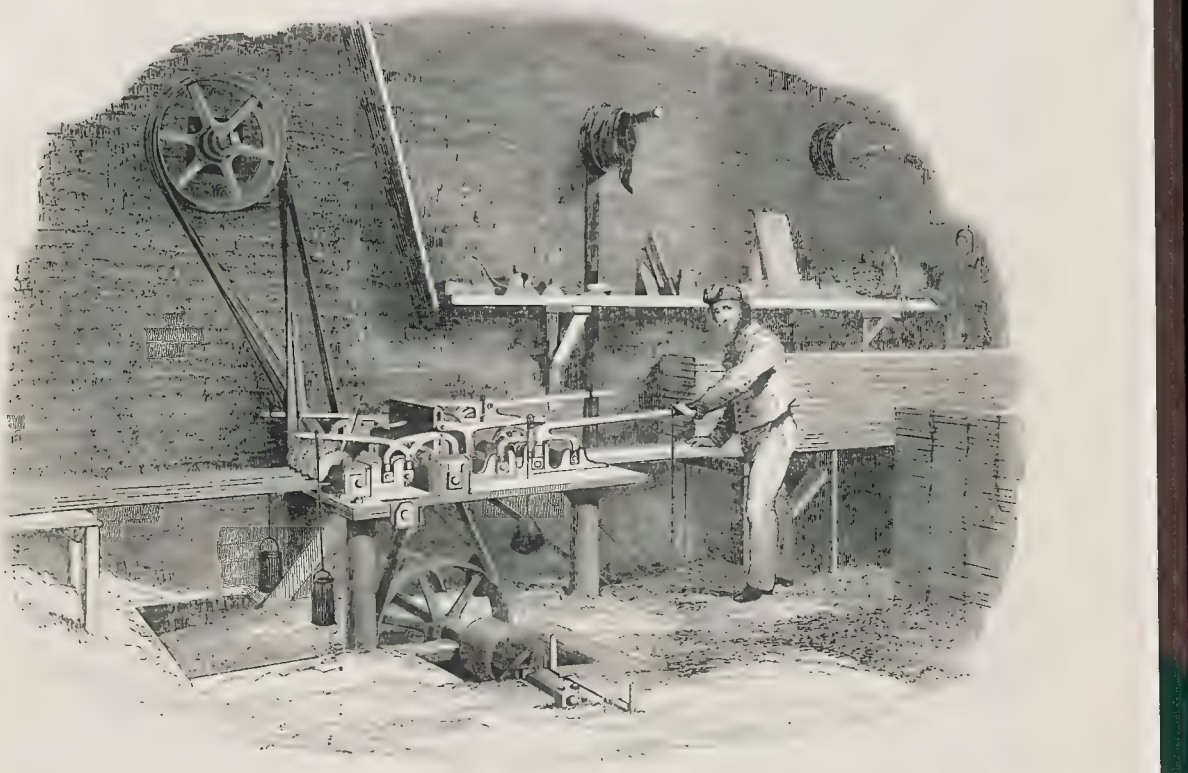
In order fully to estimate the value of a new process, intended to supersede some long-established method of accomplishing the same object, it is necessary to make a comparison between the one and the other, in order to ascertain the advantages to be derived from the supposed improvement. Thus, we shall be better able to judge of the improved method of paying the men engaged in the erection of the "Crystal Palace," by first taking a glance at the plan in ordinary use, as practised in some of the large building and other establishments of London and elsewhere. Pay-day has arrived: the foreman, or pay-clerk, having a list of all the men who have been engaged, either wholly or partially, during the week, and also sufficient *change* both in silver and copper, calls for the men in some established order. The first four or six who appear at the pay desk may be supposed to be old steady hands, very regular, and scarcely ever varying in their time of attendance, so that the sums due to them may be regularly arranged on the desk or counter, and at once handed to them without any delay; but there approach at intervals irregular men, who never keep their proper time, and who, when pay-day arrives, scarcely know what is due to them. A conversation something like the following takes place:—"Well, Smith, what have you to receive this week?" "Why, I believe it's four days and three-quarters, but I'm not quite certain." The pay-clerk then refers to the time-book, and tells Smith that he has been absent altogether, during the week, *seven quarters*; and that, instead of 23s. 9d., he has only 21s. 3d. to receive, which is accordingly handed over to him, and he walks away. Being an expert and clever man, he is not discharged. Now it is evident, with frequent interruptions such as the above, instead of hours, days would almost be required to get through the operation of paying *eighteen hundred men*.

In our *View of paying the men*, the exterior of the pay-office is seen on the right, with a workman in the act of *taking* from the box his weekly wages, contained in a small open cylinder of zinc, together with a slip of paper, having his name, his number, and the exact amount due to him written thereon. The amount is, of course, ascertained beforehand, by an easy method which we shall presently describe. At the *exit* gate, as may be seen in the Engraving, is stationed a policeman whose duty it is to see that each man, as he passes from the pay-box to the exit gate, casts the zinc box into a large basket in front of the policeman. Now, with a view to prevent confusion, separate gangs of men, each numbering 200, are called up *seriatim*; each gang has a distinct series of consecutive numbers, so that the accounts are more easily kept and referred to, and any particular workman may thus be more readily found when required than if his name only were called; as, among so large a number, there may be five *Browns*, six *Joneses*, and seven or more *Robinsons*, and so on. By this system of classification and internal office arrangements, *fifteen* men are paid in *one minute*; and consequently, as there is only one pay-box, four hours are required to pay the whole of the eighteen hundred men.

We have so far endeavoured to make our readers acquainted with the process outside the pay-office; but, without knowing also what takes place *inside*, the entire system cannot be understood.

When a man is first engaged on the works, his name is registered in a book for the purpose, and a vacant number is assigned to him. Three metal counters, having stamped thereon the names of the contractors, and the man's own number, are given to him, by which his time each day is accurately ascertained; for as he enters in the morning he leaves one of such counters at the pay-box, a second after breakfast, and a third after dinner. As received, these counters are placed in long shallow boxes, having each 200 compartments, every compartment having its own number, so that the counters are easily placed in their right compartments when left by the men, and as readily given out to them when they leave the works at night. It is quite clear then, that, by such a system, fraud, irregularity, and delay are entirely prevented, though we think, if it could be effected, and we see no difficulty, a second pay-box should be added.

We shall resume our Illustrations of the constructive details next week.



THE SASH-BAR MACHINE, FOR THE GREAT EXHIBITION BUILDING, IN HYDE-PARK.

CALENDAR FOR THE WEEK.

SUNDAY, November 24.—Twenty-sixth Sunday after Trinity.
MONDAY, 25.—St. Catherine
TUESDAY, 26.—Princess Mar. A [illegible] born, 1833.
WEDNESDAY, 27.—Sun rises 7h. 39m., sets [illegible] 3 m.
THURSDAY, 28.—Oliver Goldsmith born, 1[illegible]
FRIDAY, 29.—Pines first planted by steam, 1[illegible]
SATURDAY, 30.—St. Andrew.

TIMES OF HIGH WATER AT LONDON BRIDGE,
FOR THE WEEK ENDING NOVEMBER 30.

THEATRE ROYAL, DRURY-LANE.—M. JULLIEN'S ANNUAL BENEFIT OF CONCERTS. LAST WEEK BUT ONE.
Mdlle. JETTY TREFFZ and her GREAT EXHIBITION QUADRILLE EVERY Evening.
M. JULLIEN has the honour to announce that the French Dancers from the Bal Masqué de la Garde Nationale de Paris, [illegible] Mdlle. Jetty Treffz, Mdlle. Pauline Desmarets, and Mr. Gentry, and Public [illegible] Quadrille, will be performed every Evening this Week.
In the production of the Quadrille, M. Jullien has endeavoured to bring together every possible element which can contribute to the true interpretation of the characteristic Music of the different Nations thrown into contrast, and has made the Dancing correspond. M. Soualle will perform "The Siel ian Serenade" on the new instrument, the Corno-Musa. The Brothers Chabu will accompany on the Italian and Spanish Bagpipes. M. Leroy (from the Cirque des Champs Elysées, at Paris) will perform on the Monstre Obbligatello. The new Octette for Clarinets (M. Maddeline, Hallay, Mercy, Menon, Halbry, and Meyerlow) to which was awarded the First Prize at the Conservatoire de Musique de Paris, [illegible] National Exposition of 1839, will be played by Mr. A. Winterbottom. The Cachucha, "The Neapolitan Tarantella," and "The Piedmontese Monferina," will be played [illegible] by "The Neapolitan Tarantella," and "The Piedmontese Monferina," will be played [illegible] by [illegible]
The Grand Overture to [illegible] will be aided by the BAND of HER MAJESTY'S 2nd LIFE ARTILLERY, under the direction of Mr. Collins; the BAND of HER MAJESTY'S 3rd LIFE GUARDS, under the direction of Mr Grattan Cooke the BAND of HER MAJESTY'S COLDSTREAM GUARDS, under the direction of Mr Godfrey (by the permission of the Colonel commanding the Brigade of Guards), and the French Pas Accablers Pas Redoublés, the Revellies, Rampel, [illegible] and the Last Lesson of the Lancers, by the FRENCH CORPS of Mr. [illegible] Military Ordonnances of the French Army, by the FRENCH CORPS of Mr. [illegible] the Garde Nationale of Paris, under the direction of M [illegible] the First Lesson of the Lancers, by the FRENCH CORPS of Mr. [illegible] Military Ordonnances of the French Army, by the FRENCH CORPS of Mr. [illegible] Major by [illegible] in this country.

DESCRIPTION OF [illegible] ASSEMBLED.

1. [illegible] to Music of Auber's Acrobate.
2. "The French Pas Accablers, performed by the Corps de Tambours, including La [illegible] Le Chant d'Hommage, and Le Reine. The Grand Pas Redoublé by the Three Military Bands, and Rouleau-drum performed by the Grand Chant d'Hommage.
No. 1. The Spanish Sapateado, with variations for Oboe, by M. Dolwigne; Flute, Mr. Pratten; Flageolet, M. Collinet; Guitar accompaniment, by the Misses Coulon.
[illegible]
Solo, M. Soualle; Harp Obligato, Mr. Sweatman.
No 2.—The Piedmontese Monferina, concluding with the Neapolitan Tarantella. Castanettes, by Signor Baldesci
No. 4.—Parlant pour la Syrie." French air, taken from an old Eastern melody, with variations by [illegible] Benbarjion, by Herr [illegible] mmers; for Trombone, by Signor Ciolfi; and Cornet à [illegible] Pratten.
No 5.—The Marsh of All Nations to London. The opening of the inauguration of the Great Exhibition is supposed to have arrived. The grand way, with fir tire first Lone shutters with wonderful nuances from all the parts of the known world, is as yet still, when at day break the festival is ushered in by the sounding of the chimes of London, echoed far and near from the most celebrated bells of [illegible] Bow, Big Ben, Westminster, St. Paul's, [illegible] Cathedral, Shakspeare's Church at Stratford-on-Avon, Kenilworth

METROPOLITAN NEWS.

INCORPORATED SOCIETY FOR PROMOTING THE ENLARGEMENT, BUILDING, AND REPAIRING OF CHURCHES AND CHAPELS.—The society resumed its sittings on Monday last. The Lord Bishop of London presided at the meeting. There were also present the Rev. Sir Charles Farnaby, Bart.; Sir R. H. Inglis, Bart., M.P.; Revs. Dr. Spry, Robert Tritton, and J. J. Ainger; Messrs. Wm. Davis, James Cocks, H. J. Barchard, Benjamin Harrison, and Arthur Powell. Among other business transacted at the meeting, a.d was granted towards carrying into effect the following objects: Building churches at Werneth, a newly constituted district, lately forming a part of the chapelry of Oldham, in the parish of Prestwich; and at Samford, a district of the parish of Cheltenham; rebuilding churches at Lymm, near Warrington; Compton, near Newbury; Holcombe, in the parish of Bury, Lancashire; Cherry Burton, near Beverley; and Challacombe, near Barnstaple. Enlarging or increasing the accommodation in the churches of Michaelstone-super-Avon, near Neath, Glamorganshire; Narborough, near Leicester; St. Martin-le-Palace, Norwich; St. John, Ousebridge End, York; and Lambeth (parish church).

PATENT LAW REFORM.—The committee appointed by the Society of Arts held their first meeting on Tuesday, at the Society's house, in the Adelphi. The members of the committee present were—The Right Hon. Thomas Milner Gibson, M.P., Mr. Henry T. Hope, M.P., Mr. George Bruce, Mr. Richard Prosser, of Birmingham; Mr. Bennet Woodcroft, Mr. Peter le Neve Foster, Mr. J. H. Elliott, and Dr. Forbes Royle. The committee were unanimous in their affirmation of the following principles:—"1. That inventors, desirous to secure ought not to be subjected to any other expenses than such as may be absolutely necessary to secure to them the protection of their inventions. 2. That the difficulties and anomalies experienced in connection with patent property should be removed." And resolved to prepare a bill, embodying their views, with as little delay as possible.

ROYAL ORTHOPŒDIC HOSPITAL.—A meeting of governors and others interested in the welfare of this charity, instituted for the cure of all contractions and deformities, was held on Wednesday, in the board-room of the institution, in Bloomsbury-square, for general business. The report, being the eleventh of the society's existence, stated, that during the past year there had been 1299 cases admitted, of whom 71 were in-patients, making a total, since its establishment, of nearly 10,000 persons, the most pitiable objects of charity, who have been restored from deformity to active usefulness. There are at present 700 out-patients under treatment, and the weekly applications average 40, and there are more than 300 severe cases on the books waiting for admission. The report concluded with an appeal for support on behalf of the crippled poor, for whom the largest hospital would not be more than commensurate.

CITY OF LONDON HOSPITAL FOR DISEASES OF THE CHEST.—A meeting was held on Monday evening, in the board-room of the above hospital, No. 6, Lombard-street, Finsbury. Henry Tucker, Esq., presided. From the report it appeared, that, since the opening of the charity, in June 1848, upwards of 7100 patients had been treated; and the number since the commencement of the present year reached 1194. The number on the weekly attendance of patients amounted to 506. It was observed that the contractors were actively engaged in enclosing the plot of ground secured for the intended new hospital, at the entrance to the Victoria Park, and the early commencement of the building was a subject of much anxiety, its necessity being greatly manifested by the numbers who have already received the out-door treatment of the institution.

LAMB AND FLAG RAGGED SCHOOLS, CLERKENWELL.—A general meeting of the friends and supporters of these schools took place on Monday evening, at the school-rooms, Clerkenwell-green. There was a numerous attendance. The report stated that the schools, which are among the most extensive of the class in the metropolis, comprised day, infant, Sunday, and evening schools for adults and young persons engaged during the day. The latter were open on two evenings during the week. The daily attendance at the infant school comprised nearly seventy children, from three years upwards, who evinced the greatest attachment to the school. It was quite a rare thing to see a child come dirty. The plan adopted was merely to separate the clean from the dirty, and those declared such directed to be separated, but not punished, as it tended to avoid it as much as possible. There had been 371 boys and girls on the books of the day school during the past year. Of these, 181 could read well in the Old and New Testament; the rest (190) could all read a little; and thirty could write very well in copy-books; 96 could write very well on slates; 82 understood common arithmetic; 35 girls could sew well; 50 were learning to sew. Upwards of 400 garments had been made in the schools during the past year. The boys excelled in writing; the girls in reading. If the infant-school were three times its size, it could be filled, so anxious were the little things to get to school. The Sunday-school attendance had been as follows: Number on the books, boys, girls, and infants, 295. Of these, 92 could read with various be- [illegible] The number on the [illegible] Of these, 62 could read with various degrees of [illegible] were in the elementary class. They all learned writing and arithmetic; and some of them wrote remarkably well. During the year, there had been a considerable influx of the scholars into the day-school, giving an average attendance of 445; an increase of nearly 150 upon the last return. The clothing fund stood as follows:—Deposits received from 165 depositors since the commencement, £64 10s. 6d.; amount paid to purchase clothing, as directed by the committee, independent of the clothes being made free of cost, £12 4s. 8d. total, £56 14s. 5½d.

WITNESSING OF CHANCERY-LANE.—A meeting of the inhabitants of Chancery-lane and the neighbourhood took place on Tuesday evening, at the Mechanics' Institution, Southampton-buildings, to consider the best means of carrying out the improvements contemplated at the north end of that important thoroughfare. J. R. Taylor having been called on to preside, he stated that he had collected upwards of £150 towards carrying out the object of the meeting, and he believed that £500 or £600 would be easily raised among the legal profession alone. Before entering the room he had been offered £20, making in all upwards of £150. The whole improvement on the east side might be effected for £2000; but if the present opportunity were allowed to pass by, it would, in some of the houses, cost £30,000 or £40,000 more. Mr. Steele, the proprietor of the corner house now re-erecting, had offered to take £1000 for his interest, which was a very reasonable demand. Messrs. Pickford and Co., whose great traffic was seriously impeded by the present confined thoroughfares, were prepared to spend expenditure, would do anything for the object in view. If the public effected the improvement on the east side of the street, no doubt they would have the aid of the Woods and Forests in removing the houses on the west side. But the late member of Gray's-inn, moved the first resolution, viz., "That clearing the necessity and practical convenience of enlarging the northern approach to Chancery-lane. He had that day mentioned the matter to the benchers of Gray's-inn, and received an assurance that it would be favourably considered on their next business day. Several other gentlemen having borne testimony to the necessity of the proposed alteration, Mr. G. H. Hutchinson moved that a committee be appointed to carry out the object. He felt convinced that the interests of Lincoln's-inn were about to take the matter into consideration; but while they delayed, Mr. Steele would proceed with his building, and the cost of the improvement would be more than £2000 or £40,000. A committee was appointed to carry out the object in view, and the thanks of the meeting were voted to the chairman.

LANCASHIRE AND YORKSHIRE RAILWAY.—On Thursday, a meeting of the shareholders was held at the Freemasons' Tavern, Mr. Vance in the chair; when, in consequence of all attempts to come to an arrangement respecting the shares with the directors having failed, it was resolved to take legal proceedings against the company, and to apply to Parliament for a bill clearly to define the rights of the fifth shareholders.

MARYLEBONE BANK FOR SAVINGS.—On the 20th November, 1844, [illegible] he open deposit accounts amounted, respectively, to £1,[illegible] and the sum standing to the credit of the National Debt Commissioners, to £350,089, £311,094, and £291,775.

ROYAL WESTMINSTER OPHTHALMIC HOSPITAL.—On Saturday morning one of the most difficult and hazardous operations in surgery—amputation at the hip-joint—was successfully performed in this institution, by Mr. Charles G. Guthrie, in the presence of a large number of gentlemen eminent for their attainments in medical science. The patient was a young man, aged twenty-four, a lad-engraver, a highly respectable and intelligent youth, residing at a distant part of the country. He came into the hospital about a week since; not with any view to economy, but for the avowed purpose of obtaining the best possible advice for the disease under which he was suffering—an extensive tumefaction extending round the thigh, immediately below the hip-joint. An examination showed that the disease was rapidly spreading, and that the only hope of saving the life of the patient was an immediate operation. There was some objection to this on account of his low condition; but the danger progressing and appearing imminent, and the young man expressing himself most anxious to undergo the operation, it was determined to perform it without delay. [illegible] Mr. Guthrie was placed under the influence of chloroform, and, in a very few moments, became insensible to pain. The operation was then commenced, and in less than two minutes from the first incision having been made the limb was removed immediately below the hip-joint. An examination made on the instant by Mr. Stanley proving the bone above the point of amputation to be healthy, it was not deemed necessary to take out the joint. The operation having been completed, and all the arteries secured, the patient gradually recovered his consciousness; and, in reply to Mr. Guthrie's query as to whether he had suffered any pain, he said, "None whatever;" adding that his impression on awaking was, that the apparatus was not ready. Mr. Charles Guthrie was assisted in the operation by Mr. Hancock, surgeon to the Lock Hospital; Mr. Holt, surgeon to the Westminster Hospital; Mr. Canton, lecturer on anatomy at Charing-cross Hospital; Dr. Beith, R.N., surgeon to Greenwich Hospital; Mr. Barlow, assistant-surgery to Westminster Hospital; Professor Erichsen, Mr. Hogg, and Mr. Kidd. A dissection of the limb after removal proved the disease to have been of a malignant fungoid character—the tumour itself presenting a brain-like appearance. The patient is described as going on satisfactorily. It may not be generally understood how an operation of this character comes to be performed at an ophthalmic hospital; but it should be remembered (and it cannot be too extensively known) that the Royal Westminster Ophthalmic Hospital has accommodation for a large number of general patients, and the only reason the wards are not fully occupied is the very limited funds of which the institution is possessed

WHITTINGTON CLUB AND METROPOLITAN ATHENÆUM.—The great room attached to this institution, which was formerly the meeting-hall of the "Crown and Anchor," was re-opened on Tuesday evening, for the first of a winter series of monthly balls, after having undergone an extensive process of renovation and refitting. The decorations are very elegant, and cost about £600. The inauguration went off with great éclat, a numerous and gay assembly mustering to auspicate the interesting occasion. A quadrille band occupied the orchestra, and the entire arrangements elicited general commendation.

SWEARING-IN SOLICITORS.—On Wednesday, the Right Hon. Lord Langdale, Master of the Rolls, attended at the Rolls Court, Chancery-lane, to swear in solicitors. The number of gentlemen to be sworn exceeded 200. They were introduced to his Lordship in parties of 20.

THE CHAIRMANSHIP OF THE EASTERN COUNTIES RAILWAY COMPANY.—Mr. Betts has definitively resigned the office of chairman to the Eastern Counties Railway Company. That gentleman sent in his resignation consequent on an accident he met with some weeks since, but was subsequently urged by his colleagues in the directory to re-consider the matter. After giving every consideration to the wishes of his colleagues, Mr. Betts continues to adhere to his original intention.

The following colonial appointments have just been decided upon: Mr. Bannerman, late M.P. for Dundee, to be Lieutenant-Governor of Prince Edward Island; and Sir John Athol Macgregor, Bart. (son of Sir E. Macgregor, formerly Governor-in-Chief of Barbadoes and the Windward Islands), to be President administering the government of the Virgin Islands.

NARROW ESCAPE OF PORTMAN CHAPEL.—On Monday morning, shortly after midnight, a fire was discovered to have broken out in the splendid episcopal structure, known as Portman Chapel, situate in Baker street, Portman-square, which, had it not been promptly discovered, would, no doubt, have resulted in the demolition of the sacred edifice. Some of the pulpit and flooring were destroyed in the furnace-room, before the fire was extinguished.

EXTRAORDINARY GOOD FORTUNE.—The following remarkable incident, illustrative of the caprice of fortune, occurred on Saturday last, at Gloucester-place, Kentish-town. A distrained-on furniture was levied on the premises by the landlord, for arrears of rent to the amount of £30, for which sum the whole of the household furniture had been condemned, and placed in two vans, preparatory to removal, with the exception of a chest of drawers, of antique appearance, which had been left to the last from mere accident. On examining more closely into the drawers, a small paper parcel was discovered, which on being opened, was found to contain no less a sum than 114 old guineas, of the reign of George III. It is hardly necessary to add that the claim was soon discharged, and the furniture returned to its former position.

ACCIDENT AT THE WORKS IN HYDE-PARK.—About four o'clock on Tuesday afternoon, a massively scaffold fell in the works in Hyde-park, which has, we regret to state, been attended with fatal consequences. Whilst a palmer was engaged in painting one of the iron girders, at the top of the bal dustrade, the scaffold under the girder gave way under him, falling upon the scaffold underneath, on which several carpenters and labourers were at work. The scaffold was broken through, and one of the carpenters and a labourer fell to the ground, and the painter to the ground. The unfortunate men were immediately conveyed to St. George's Hospital, where, on examination, it was found that the painter was dead, but that the carpenter and labourer were still alive, although most extensively injured

THE JEWEL ROBBERY IN THE STRAND.—At Bow-street police-office, on Wednesday, the prisoners, Gardener, Shaw, Badcock, Chevenau, Bunchers, Clinton, and Kelly (bailed), were brought up on the remanded charge of the robbery of Messrs. Clapham and Williams, jewellers and silversmiths, of the Strand; and, after some further evidence was adduced, Mr. Henry repeated his former reasons for deeming that there was a case against all the prisoners, except Kelly, to go before a jury. He would, therefore, remand the other prisoners to Saturday, and discharge Kelly.

THE GREAT FIRE IN MARK-LANE.—A large number of labourers have been employed for several weeks in extricating from the ruins a vast quantity of goods. Fifty tons of Russian bristles, about ten tons of horsehair, half a ton of sugar, eighty tons of pump, a large quantity of [illegible] hops, [illegible] tools, smiths, of the Strand; and, after some further evidence was adduced, Mr. Henry repeated his former reasons for deeming that there was a case against all the prisoners, except Kelly, to go before a jury. He would, therefore, remand the other prisoners to Saturday, and discharge Kelly.

THE GREAT FIRE IN MARK-LANE.—A large number of labourers have been employed for several weeks in extricating from the ruins a vast quantity of goods. Fifty tons of Russian bristles, about ten tons of horsehair, half a ton of sugar, eighty tons of pump, a large quantity of [illegible] hops, [illegible] tools, and many tons of iron work, such as cranes, chains, scale beams, hydraulic presses, weights, and army accoutrements, a great number of rifles, swords, and other implements of warfare, are amongst the property rescued.

DEATH FROM STARVATION.—An inquest was held on Saturday, at the King's Arms, Limehouse, on the body of Mary Freeman. The deceased was unmarried, and supported herself by slopwork. For eight weeks before her death her earnings amounted to 1s. 6d. per week, and she was not supposed to be able to work constantly. A surgeon who examined the body after death found so much emaciation that he said the process of starvation must have been going on for a twelvemonth. The verdict was "Natural death, caused by want."

BIRTHS AND DEATHS.—Births registered in the week ending Saturday, November 16:—Males, 787; females, 794: total, 1581. Deaths during the same period: Males, 489; females, 506. The last return shows that the mortality of London, which rose, in its weekly sum, considerably above 900 at the end of October, when a sudden fall of temperature was experienced, has again declined, but only to a number above the average of the period, in which the thermometer, as regards the mean va.ue of its indications, has nearly recovered its former position. In the last three weeks the deaths have been successively 945, 921, and 906, the average of which is 924, 49, which corresponded to that ending last Saturday, the average number was 991; and if this be increased in the ratio of probable increase of population, it becomes 1081, compared with which the 908 deaths registered last week show a decrease of 173. In the present return, corrected to 1848, which is rather below the corrected average; more than 100 of these occurred amongst persons between 15 years of age and 60. From all other affections of the respiratory organs (exclusive of hooping-cough) the number registered is 148, which is under the average; but it will be observed, that though pneumonia, which carries off principally young persons, is now less severe than usual, bronchitis, which is spread more equally among all persons, is more severe than its ordinary amount at this season. Amongst contagious diseases, small-pox was fatal in 13 cases, of which two occurred to men above 20; and this disease has lately shown a tendency to increase. There died also 24 children of measles, and 37 of hooping-cough; 35 children and 4 adults died of scarlatina; 22 persons of diarrhœa and dysentery; but no case of cholera was registered in the week. Zymotic forms now predominate in this class of diseases; and it was fatal last week to 36 persons. A death from low fever in John-street, Tottenham-court-road, is directly ascribed by the medical attendant to deficiency of sewerage; and a flagrant example of disease and death, arising from the neglect of cleanliness within doors, and the want of sanitary arrangements without, occurs in Warwick-place, Hoxton, and is recorded by the registrar of the district. Within the last fortnight no fewer than nine persons labouring under typhus, have been brought from Lucas's-row, Hoxton, to Warwick-place. In this place is a small court, consisting of dirty houses, which are ill provided with windows, and almost destitute of drainage, whilst the inhabitants have the greatest difficulty in getting a supply of water from the contractor. It is found, in several instances, that households have lost two or more of their inmates by epidemics. In Hoxton Old Town, the wife, the son, and the daughter of a publican all died of scarlet fever within the space of a few days. Also in Harper-place, St. George's-in-the-East, the two sons of a sawyer died of measles within four days, whilst another child (says the registrar) is not expected to live." In a house in Broad-street, St. Giles, five persons have been attacked by scarlet fever, and in two cases with fatal results. A case of cashiered and low fever in a female, who had illuminated for sale in the workhouse, was registered in Westminster. The deaths of two women are ascribed to intemperance. A woman died in Greenwich at the advanced age of 100 years, of paralysis, and another at the age of 101, in Lambeth.

METEOROLOGICAL OBSERVATIONS.—At the Royal Observatory, Greenwich, the mean reading of the barometer was above 30 in. on Sunday, Thursday, and Friday. The mean of the week was 30 inches. The mean temperature of the week was 46 deg.; on each day it was more than the average of the same week in seven years. On Sunday, Monday, and Tuesday it was from 6 deg. to 8 deg. above the averages of these days. On the next three days the mean temperature was above about 4 deg., and was 4 deg. and 5 deg. below the average; but on Saturday it again rose to 45 deg., which is 2 deg. above it. The wind was for the most part in the south-west, but in the middle of the week it blew from the north.

COUNTY COURTS.—A return moved for by Mr. Granger, in the House of Commons, on the 16th of July last, in continuation of Parliamentary Paper No. 396 of session 1849, has just been issued, from which the following information is extracted as regards the sixty circuit courts established under the act of 9 and 10 Vict., c. 95:—The number of plaints in the several courts for the year 1849, 395,191; number of causes tried, 226,403; tried by juries, 892; of which parties requiring same obtained verdicts, 386; amount for which plaints were entered, £1,148,904 11s. 8½d.; amount, exclusive of costs, for which judgment obtained, £ [illegible] amount of costs, including witnesses' and attorneys' expenses, £170,857 10s.; amount paid into court in satisfaction of debts, £80,448 17s. 9d.; number of executions, 125,019; number that paid without levy, 33,092; number enforced, 80,093; no effects, and not enforced, 8853; number of committments ordered by the court, 32,759, of which were carried into effect, 14,766. Total amount received by treasurer, £ [illegible] amount paid, £422,610 18s.; amount received for general fund, £76,367 12s. 1d.; disbursements, £56,6.5 12s. 1d. Total amount received by treasurer of each court from the commencement of the system, 31,675,187 7s. 7d.; amount paid, £422,610 18s.; amount paid to her Majesty's Treasury, £18,500.

IMPROVEMENTS IN BOULOGNE HARBOUR.—The French Government has voted 70,000f. towards the completion of the stone bridge now in course of construction at Boulogne, and promise a further sum of 80,000f. in the course of next year. The corporation of Boulogne, with this assistance, will be enabled to complete this important work, which, with its powerful sluices and command of backwater, will, it is calculated, have the effect of deepening the harbour three or four feet, and enable the packets of the South-Eastern and Continental Steam-Packet Company to enter the harbour at nearly all states of the tide.

POSTSCRIPT.

THE PAPAL AGGRESSION.

Since our first impression went to press, there has been a great meeting of the Court of Common Council, at which, with the single dissent of Mr. Carr, a Roman Catholic councilman, the usual address expressing unshaken attachment to the Queen, was agreed to. Some severe strictures were passed on the conduct of some portions of the clergy of the Established Church, and on Oxford University.

One of the most numerous and enthusiastic meetings for many years took place at Bristol, on Wednesday. An address to the Queen was unanimously agreed to, expressing indignation at the Pope's bull, and declaring the devoted attachment of the citizens to the Protestant principles of the Reformation. There were upwards of 3000 persons present, including many of the most influential of the clergy and laity of the Church of England, and the leading members and members of the Dissenting bodies. The meeting, before separating, sang the National Anthem.

Archdeacon Wilberforce has declined to attend a meeting of the clergy in his archdeaconry, principally because the civil power has in the Gorham case invaded the rights of the Church.

We cannot mention by name all the meetings that have been held; the principal are at Edinburgh, Leicester, Carlisle, Bolton-le-Moor, Manchester, Scarborough, Cardigan, Weymouth, Evesham, and many others.

THE NEW POET LAUREATE.—The *Gazette* of yesterday (Friday) evening contains the following:—Lord Chamberlain's Office, Nov. 21. The Queen has been pleased to appoint Alfred Tennyson, Esq., to be Poet Laureate in ordinary to her Majesty, in the room of William Wordsworth, Esq., deceased.

The Right Hon. Richard Lalor Shiel, after having had several interviews with the Chancellor of the Exchequer on the subject of the contemplated Mint reforms, left town for Ireland, for the purpose of visiting his property in that country prior to his departure for Tuscany. He is expected to return before the close of next week, and will, in all probability, leave for the scene of his diplomatic services about the 5th of December. We may with some confidence state, that in him, and chiefly owing to his representations, the public will obtain the Mastership of the Mint expire. The public will s so be glad to know that the doom of the moneyers is also on the point of being stayed.—*Globe.*

CONSECRATION OF A CHURCH.—On Thursday, the Bishop of Winchester consecrated the Watcrman's Church, at Penge-heath, in the presence of a very respectable congregation.

EXTENSIVE FIRE IN FINSBURY.—On Thursday night, between eight and nine o'clock, a fire occurred on the premises of Mr. [illegible], chemical light manufacturer, situated in Prince-square, Finsbury. The premises were of great extent, and comprised sundry compartments for the cutting, dipping, and packing business; and, forming two sides of the square, stretched across the entire length of the building. The main body of the fire was in the range next nearly eleven o'clock. By that period that part of the works where the fire began was nearly burnt out, and the adjoining buildings severe.y damaged—more especially the premises of Mr. Mansfield, a basket-maker, in Holloway-place, and the houses numbered respectively 4, 5, 6, 7, and 8, in Tobacco-hole-court. None of the property destroyed was insured.

LOSS OF AN EMIGRANT SHIP.—Intelligence from Kilrush, in the south-west of Ireland, dated Wednesday last, the 20th inst., states that for the two preceding days it had blown a severe gale from W.N.W., and that the *Edmund*, of London, for New York, with emigrants, drove on shore the previous night at Kilbeg, and had gone to pieces. The master and part of the crew and passengers were saved, but many are lost. The beach is strewed with wreck and dead bodies.

DARING ROBBERY AT BLACKWALL RAILWAY.—On Thursday information was received at all the stations of the metropolitan police from the city police, that at the offices of the Blackwall Railway, Fenchurch-street, between half-past five o'clock on Tuesday evening and ten o'clock A.M. on Wednesday, which is the time the offices are closed, a £5 note, with 230 sovereigns, and £30 in silver, were stolen therefrom.

LATEST FOREIGN NEWS.

FRANCE.

The accounts of yesterday (Friday) from Paris are quite devoid of interest, if we except a letter which has formed a prominent topic of conversation in political circles, and which had been addressed by Gen. Cavaignac to the *Moniteur du Soir*, contradicting a statement in that journal, that he had said, that if Louis Napoleon should be elected by the people in 1852 in spite of the Constitution, he would place his sword at his service. General Cavaignac says, he never could place his sword at the service of a man who should accept a candidatcship forbidden by the Constitution which he had sworn to respect.

GERMAN STATES.

There is nothing of a definite character to add to what we have already published from this quarter, on the prospects of peace or war.

With reference to affairs in Schleswig-Holstein, accounts of the 19th state that General Willisen had commenced the attack on the Danish posts, which, however, only ended in a skirmish, in which a few were killed and wounded on either side.

The Statthaltersrath were firm in their determination to oppose any interference of the Bund, and not a single Prussian had left the Schleswig-Holstein army in obedience to the decree of the King of Prussia.

ADULTERATION OF ISINGLASS.—A singular piece of fraudulent ingenuity has just been discovered in the manufacture of isinglass—an article extensively used for fining spirituous liquors, in preparing the food of invalids, and for making jellies, *blanc-mange*, &c. The preparation of isinglass consists of rolling out the raw material into thin sheets, and passing them between rollers, the whole is united together, and the deleterious matter completely hidden by the genuine isinglass: the latter costing about 17s. or 18s. per pound, and gelatine (which is obtained from hoofs, bones, and skins) being worth only 3s. or 4s. per pound.

LEAD MINES.—A very rich lead mine is stated to have been just discovered at Salt Hill, close to the town of Galway; some specimens of the ore of which have been brought to Dublin for examination, and are said to be of a very productive quality.

EXPLOSION ON BOARD A FRENCH MAN-OF-WAR.—A dreadful accident took place on board the *Valmy*, 120-gun ship, one of the vessels which composed the Chcrbourg fleet. The casualties occurred on the 5th inst., when the squadron was proceeding from the English coast to Brest. The master-gunner was preparing between-decks fireworks, to serve in certain cases as night-signals, when by some accident the powder lying about caught fire and exploded, blowing up part of the upper deck, and killing himself and seven other men who were lying close by in their cots. Two other sailors were dangerously wounded, one of whom died soon after, and about a dozen were slightly hurt from the fragments which flew about. After great exertions at the pumps, the fire was got under. The *Valmy*, notwithstanding the shattered state of her decks, was enabled to reach Brest with the rest of the squadron, which hoisted colours half-mast high, in memory of the victims.

WOODCOCK SHOOTING.

The inhabitants of a level cultivated country know little of the Woodcock, except its name. The shooters in such a locality regard the appearance of a woodcock amongst them as an uncommon event; and the killing one is almost an era in their lives. How, however, railways and the power of steam bring the districts where woodcocks resort within easy distance of the denizens of London city itself. There are few lovers of the trigger but are ignorant that the district of the lakes, the mountains of Cumberland, Westmoreland, and Lancashire, the temporary abode during the summer months of beauty and fashion, affords the best woodcock shooting, with the exception of some parts of Wales, that is to be had in southern Britain. The luxuriant woods, the admiration of the tourist, which overhang the lakes Windermere and Coniston, and, indeed, to a certain extent, all the lakes in that mountain country, afford shelter during the months of November and December to great numbers of woodcocks; and it is a fact which it may be gratifying to sportsman generally to know, that the game in most of these extensive woods is not preserved. There is, however, but little to find woodcock cover in, except oats, pole cats, weasels, as well as winged vermin, effectually prevent the increase of that description of game which, to be plentiful, requires the protection of a keeper. Woodcocks being migratory, are, when they arrive in this country, comparatively safe from everything except man. A difference of opinion exists as to the best dog to use for the pursuit of the woodcock. A valued friend, who resided during the last shooting season at Taynish House, by Lochgilphead, in Argyleshire, in one of his letters, writes:—"I think you may keep cocks now in the [illegible] or two steady pointers than with spaniels: with the latter you will find merrybirds; with the former you will have the better diversion." During the season of 1848-49, this gentleman killed with his own upwards of two hundred and fifty cocks. His opinion is entitled to great attention, for a more ardent disciple of the trigger never breathed. There is one thing to be observed, however, if spaniels are used in cover, they are apt to become unruly and wild afterwards on the moors or open grounds. Excellent diversion may be had if you can ascertain the time when fox-hounds draw the covers in your neighborhood. With a good retriever and a marker, you will, on such occasions, have a capital chance of filling a bag. When it is necessary to retrieve the woods without the assistance of a pack of hounds, I am no advocate for many dogs. Such as are used should possess the most exquisite sense of smell, and one at least should have been taught to retrieve. Most spaniels take to retrieving naturally. The same remark will apply to setters; and it is not a difficult matter to teach pointers to do the same; but a pointer or setter suffered to retrieve is apt to break away on the shot a thing of no consequence, whatever, in woodcock shooting, but productive of much mischief in the thepursuit of partridge or grouse. It is generally supposed that the be-:

cock-shooting is obtained at the time the moon is at the full; and every writer whose observations on the subject have fallen under my notice coincides in this opinion. But the idea is altogether erroneous. Whenever there is sufficient light for the woodcock to feed in the twilight, at morning or evening, he will leave the cover, which is his retreat by day, for the open ground in the neighbourhood. During the full moon he remains all night, and frequently all day, on the open moors and commons, and does not return to the woods; but, in the dark moon, as he has not time to satisfy the cravings of appetite whilst there is sufficient light (for some degree of light he must have), he invariably returns to those retreats where he is generally found, and continues feeding for the most part until his hunger is appeased; and at such times he is, like all other game, the most approachable. The woodcock's habits in this respect are well known to the residents in the Fells, who, in some seasons, catch great numbers by means of *springes* set on the exposed parts of the mountains near to the places where these birds resort.

Now, a word or two relative to these springes. Until my residence in the immediate neighbourhood of the Fells, I had treated as almost fabulous the accounts of woodcocks being caught in the manner I am about to describe; and I doubt not that many tourists in the beautiful district between the Lakes Coniston and Windermere will have noticed the numerous straight lines or rows of small stones on the exposed sides and tops of the hills, without having any idea that they were intended for the capture of the (to the sportsman) most interesting bird which visits Great Britain. Such is the case, however: when the woodcock leaves his day retreat and resorts to the mountains, if he find the most trifling obstruction to his course, such as a row of small stones, he will run by the side of them until he finds an opening through which he can pass, although the stones may not rise more than three inches in height above the level turf upon which the bird is running. In this opening, which is just wide enough to admit the passage of a woodcock, a noose of horse-hair is so fixed that the capture of the bird is almost a certainty, should he attempt the road purposely made for him, and which he seldom fails to do.

The diversion presents a greater variety than any other kind of field sport. A woodcock will at times go away with the swiftness of the wind; again he will rise with all the whirring of a partridge; and again will fly with the noiseless wing and sluggish motion of an owl. You never know how to have him; and it is this very uncertainty that gives such uncommon zest to the pursuit. Generally speaking, it may be taken for granted, that a woodcock flushed at the top of a wood will, as soon as he clears the tops of the trees, dart downwards, and present, under any circumstances, a most difficult shot: if the shooter be above him, he is out of sight in an instant; if below, there is nothing for it but to fire at him as he approaches, for if suffered to pass, his rapidity of flight is such that a successful shot, to say the best of it, is a mere chance. If flushed at the lower part of a wood, he will fly along the bottom, and then the business is not so difficult. If flushed in the middle of a wood, he will frequently be too far off for the shooter to reach him, and must be marked and flushed again.

There are two or three varieties of the woodcock; the larg[illegible] kind weigh, on an average, twelve to fourteen ounces, the smallest from nine to ten or eleven, the fatness, or otherwise, of the bird causing a difference of an ounce or two. Considerable variation will likewise be found in their plumage; but this is matter more relevant to the naturalist than the sportsman. Generally speaking, a fat bird is like any other fat animal, lazy; and this applies particularly to the woodcock; but the smaller of this long-billed tribe are invariably swifter on the wing and more difficult to shoot than the larger kind.

The best shot to be used is No. 4; at any rate, the shot should not be smaller than No. 5, for a large shot will cut off a small twig or branch of a tree, and still retain sufficient strength to kill, whilst a small one will expend its force by coming in contact with such an obstruction. It is needless to add, that it will often be necessary to fire at a cock through thick cover, or the chance of a shot will be lost.

As to the best description of gun for cock shooting, it must be borne in mind that a gun is a very different thing in the hand after two or three hours' ramble on a fell-side or amid the tangled brake of a woodcock cover, to what it is in a gun-maker's shop. What feels a trifling weight in the latter place, becomes an almost intolerable burden after some hours' active exercise; and, therefore, a light gun—not to weigh more than 7 or 7½ lb. when loaded—is much to be preferred for this, as well as, in my opinion, for every kind of shooting. A stock which feels short in a gun-maker's shop, will generally be found plenty long enough in the field and a barrel 2 feet 4 inches is the utmost length I would recommend. If shorter than that, the gun becomes, to a man of middle height, inconvenient and dangerous to load; but, with this drawback, a barrel only 2 feet 2 inches is preferable. Any weight in the shooting-jacket pocket—only a pound or two, even—will frequently prevent that free action of the arm necessary to attain true and perfect aim.

SILVER CANDELABRA FOR THE CROWN PRINCE OF SWEDEN.

CANDELABRA FOR THE CROWN PRINCE OF SWEDEN.

These very beautiful specimens of plate, modelled and designed by Freret, and weighing nearly 1000 ounces, are from the manufactory of Mr. C. F. Hancock, of Bruton-street. They were ordered by his Royal Highness the Crown Prince of Sweden, on the occasion of his marriage, and have been just shipped to Stockholm.

In elegance of design, and in the high and correct finish given to the various details, they exhibit admirable examples of the skill of our modern workers in silver.

WOODCOCK SHOOTING.

HERD OF REIN-DEER, IN THE GARDENS OF THE ZOOLOGICAL SOCIETY REGENT'S PARK.

REIN-DEER,

PRESENTED TO THE ZOOLOGICAL SOCIETY, BY W. C. DOMVILE, ESQ.

THE great number and individual value of the gifts which have recently been made to the Zoological Society, are very significant of the good management under which the menagerie is maintained, and of the interest with which its progress is regarded by a most extensive circle of patrons.

It appears, in the present instance, that Mr. Domvile having determined that his summer tour in Norway should afford him an opportunity of adding something to the great collection in the Regent's Park, selected half-a-dozen Rein-deer from a herd of 700, which he found in the mountains, and engaged with the farmer to whom they belonged to convey them to Christiania; whence, in due course of time, they were transmitted by his agent, Mr. Bennett, to Hull, and thence to the Gardens. One female died before they left Norway. Two males and three females reached their destination in safety, and in such fine condition, that there is every prospect of their withstanding the effects of our damp climate, which is so especially adverse to all animals from the northern regions. The invaluable services of the Rein-deer as a domesticated animal among the Laplanders are too well known to require an elaborate notice from us; but that very fact will induce every visitor to regard them with attention, and Mr. Domvile could scarcely have given a more instructive addition to the menagerie than that which will enable every one to observe for himself the characteristic peculiarities of this remarkable animal

Although the Rein-deer is rendered more completely subservient to the wants of man in Lapland than in any other country, its range extends throughout the whole northern regions of Europe, Asia, and America. In America, its southern limit is as low as the parallel of Quebec; and although it is only regarded on that continent as a beast of the chase, it is very highly valued as an article of food, and as producing a hide more capable of repelling the effect of cold than that of any other animal in the fur countries. Some doubt appears to have existed among naturalists as to the identity of the species of North America and of the old continent, mainly on account of the large size to which the former attain, for the endless variation in the form of the horns cannot be taken into consideration at all. The caribou, as the Rein-deer is called in America, has never, we believe, been brought in a living state to Europe; but there is a fine example from York Factory, in the collection at the British Museum, which possibly may have reached the weight mentioned by Sir John Franklin, of 240 lb. The domesticated deer of Norway and Lapland fall very far below this stature, but they retain every other characteristic of the wild migratory herds which roam the arctic regions.

The Rein-deer varies in colour from a dark slaty grey to white, according to the season and the limits of its northern range. Its feet are remarkably extended, and the hoofs of great breadth and roundness; this structure, combined with the great strength of the fetlocks, gives great firmness to its tread upon the yielding snow. The muzzle, instead of being bare, as in the other deer, is almost entirely covered with hair; and horns are produced by the female as well as by the male. These differences of structure are accompanied by an expression which, even to the most unobservant, would indicate an extraordinary variation from the type of the deer family, which is only exceeded by the Elk. The collection of deer at present in the possession of the Society includes at least a dozen species, among which we notice fawns of the Wapiti, Virginian, Hog-deer, and AXIS—an admirable proof of their health, and of the attention that secures it.

WINTER EXHIBITION OF MODERN BRITISH ART,

PALL-MALL EAST.

THIS charming Exhibition differs materially from the old-established spring and summer collections in several points, and advantageously so: for instance, no pictures are admitted and hung up merely to cover the blank top part of the walls; but all accepted works are uniformly mounted, and placed as near as possible to the line of convenient vision. Again, not only finished pictures are admitted, but also the artists' original sketches, and studies from nature for them. The number of works by each artist is limited to three, so that a much greater variety of excellence is presented than when two or three leading men monopolise the best places and most of the space. This variety is still farther enhanced by a large portion of the specimens being selected gems from several collections, and we are happy to find that her Majesty has graciously become a contributor.

Through the tasteful and judicious manner in which the drawings are mounted and framed, they can be enjoyed, individually or collectively for any length of time, without the observer experiencing that painful exhaustion of sight and weariness which the glare of the gilding and mass of paintings at the Academy exhibitions invariably produce. Indeed, as this fairness of hanging is one of the leading objects of the promoters of this Exhibition, it will be, perhaps, best to quote a sentence or two from their brief prospectus, especially for the sake of its concluding remark:—"The chief objects the promoters of this Exhibition had in view were, to bring together some of the best works of modern Artists, in the shape of Drawings and Sketches, placed so that they might be fairly seen, and to give artists another opportunity of coming into immediate communication with purchasers. How far they have succeeded on the present occasion, the public will decide. Seeing, however, what has been done in a very limited space of time, and without any lengthened notice to artists; aided, also, by the suggestions which they have already received from various quarters, the promoters have every reason to expect that they will be able, next year, to bring together such a collection of sketches and drawings as will be worthy the attention of every lover of modern British art."

The original sketches for pictures form a very choice assemblage; several o these are, in some particulars, of higher excellence than even the finished works Thus, in the large oil sketch for the picture "Coming of Age," by Mr. W. F Frith, exhibited two years ago at the Royal Academy, there is a choice harmony and unity of colour and tone in which the great picture is somewhat defective. There are also two or three other beautiful oil sketches by Mr. Frith.

WINTER EXHIBITION OF MODERN BRITISH ART.—PILOT BOAT GOING OUT.—PAINTED BY E. DUNCAN.

There is here the finished oil sketch, by Mr. E. M. Ward, for the picture of "Dr. Johnson perusing the manuscript of the 'Vicar of Wakefield;" so well known from its large print. Another singular oil sketch, in chiaroscuro, by Mr. Cope, for the fine picture of "Lear and Cordelia," seen at last year's Academy exhibition. Another classic gem by Mr. Cope, sketch for a picture of "Pastorella," from "Spenser," painted on a gold ground, is like an embroidered antique fresco.

Near the large picture by Mr. Frith hangs a richly coloured sketch, by J. C. Hook, for the picture we engraved a few months ago; also, a vigorous little sketch by Mr. Egg, for his picture in the Vernon Gallery.

There is a very fine pen and ink sketch, by Mr. Gilbert, for his "Characters from Shakspeare," wherein his taste, decision, and flowing facility of composition shows off to much greater advantage than they did in the finished picture exhibited at the British Institution.

The finished works embrace a great choice and varied range of subject. The "Highland Mother," by Mr. Faed, we think one of his finest works.

Mr. Elmore has one or two of the finest pieces of painting we have ever seen from his hand—"Beatrice" and "Reflection."

Mr. Charles Landseer has two small pictures from Scott's "Woodstock;" the colour and boldness of execution in which give us a far higher idea of his power than his large pictures.

"A Shady Grove," by Mr. J. D. Harding, is rich and admirable in its forms and composition.

Mr. F. Goodall has two well-finished little pictures from Irish life—"The Ejected Family" and "The Health Cart."

Mr. E. A. Goodall has three picturesque and ably-treated rustic interiors.

"Carting the Wheat" is a fine drawing, by Mr. S. Palmer; in it a golden foreground is relieved by a fair expanse of varied middle distance. The near foliage is truly in sunshine.

Mr. George Fripp's "View on the Thames, near Maidenhead," is in bright daylight; clear as crystal, cool and sunny.

Near this is placed a clever composition and effect, by Mr. S. T. G. Evans, "On the Avon."

There are a few very perfect architectural subjects in the Exhibition. On one of the screens there is a first-rate "Front;" hanging by a very fine view of "Venice," by Mr. Holland.

Mr. Mackenzie has two small highly-finished drawings. One, "Christchurch Gate, Canterbury," has all the precision and detail of a fine photograph, with an amenity and beauty of broken colour equal to the finest of Turner's early architectural drawings. "Rivaulx Abbey, Yorkshire," is another equally admirable work, by the same artist.

Mr. Duncan has an excellent picture, "Pilot-boat going out" As we present an Engraving of it, our readers can judge for themselves of its invention and composition. The colour is very rich and beautiful, with at the least gentleness; and the great lapse of mellow sunlight on the foreground contrasts admirably with the gathering and fearful gloom of the stormy distance.

Mr. Duncan's well-known power of conse entious and characteristic detail is well exemplified in his picture, "Entrance to Dover Harbour," a distant portion of coast towards Beachy Head in this drawing is given with great truth.

Messrs. Dodgson, Jutsum, and Jenkins are represented by several excellent productions.

Mr Lance has, in addition to a large picture, two simple groups of golden and purple fruit, which we admire exceedingly, and are delighted to be able to compare them immediately with the marvellous realisations of Mr. Hunt, one of whose most perfect works is "Plums." To an artist who wishes to learn the use of transparent and opaque colour this picture is indeed a lesson.

A great space could be required to notice, ever so briefly, the numerous first-class specimens; but we must not forget Mr. Cattermole's harmonies of characteristic composition, "The Intercepted Letter," and "Presentiment of Ill."

There are three of Turner's finest water-colour drawings, of his best period. Two are small ones—"Venus in Repose," and "Venus in its Glory." The other is certainly the gem of the Exhibition—"Junction of the Tees and the Greta." This magnificent drawing is engraved in Whitaker's "History of Richmondshire," and it has been ably commented on by Mr. Ruskin in his "Modern Painters."

Mr. Roberts, R.A., has contributed a masterly painting, "Roslin Chapel," "The Sammit of Gosfell," by Mr. Ansell, combines the exactness of geological truth with a vast extent of space, which terminates not with the earth, but is carried far away into the distant heavens by a range of mighty cumuli. "Sketches from Nature," by R. Ansell, are of refreshments, and everything is unpretending, and true to Nature.

Mr. Lee's picture, "Hastings Beach," is a most consistent display of sunny light and shade; the other a weathered rock, in rounded lumps; seem ready to tumble into boulders, and sleep on the sunny sward below.

We intend further to illustrate this very interesting Exhibition.

NAVAL AND MILITARY INTELLIGENCE.

CAPTAIN COLLINSON'S BEHRING'S STRAITS ARCTIC EXPEDITION.

Letters from the ships of the expedition under Captain Collinson, C.B., in search of Sir John Franklin, *viâ* Behring's Straits, have reached England, rid Panama. One letter, dated Honolulu, June 30, says—

Here we are after a very tedious passage of 4000 miles from England. We did not see the *Investigator* after 21st of April. We sailed on the 30th (this day) for Behring's Straits we are too late I fear to effect the object of our cruise this season, but we cannot help it, so hope for the best. The *Herald*, Captain Kellett, left here in May for Behring's Straits, where we expect to meet her, as well as the *Plover*, Commander Moore. We have not spared the canvas on our way here. We find the place delightful—refreshments, and everything is most obligingly supplied, on account of the Californian business There are about 50 ships in the harbour, all eager for provisions, and the government has not made any preparations for the departure

Other letters announce the departure of Captain Collinson, and that his last words were that no exertion on the part of the *Plover*, inactive her under his orders, and push for the ice at once, keeping the *Plover* in reserve to fall back upon.

The *Investigator*, Commander M'Clure, has also sailed from Woahu, July 4, but it was expected that the *Enterprise*, Captain Collinson would send her to Valparaiso for provisions and stores.

THE VACANT COLONELCIES.—As, in consequence of the death of Sir Phineas Rall, the colonelcy of the 20th regiment of Foot has become vacant, it is supposed in military circles that the colonelcy of the 20th, so long vacant, and that of the 15th, will be given away at the same time; this will cause a further delay of some days. It is, however, still confidently stated, that the distinguished officer so often named (Major-General Lightfoot, C.B.) will succeed to one of these vacancies.

FRENCH AND ENGLISH ARMAMENTS.—The French Government, notwithstanding the previous reduction of its war budget, have ordered an augmentation of their military force upon the Rhine. We believe we may state that the attention of the English Government to reduce the army by 5000 men, has also been abandoned.

THE SLAVE-TRADE SQUADRON.—When the steamers and men-of-war recently sent out to the coast of Brazil shall have arrived, we shall have the following force there: *Southampton*, 50; *Thetis*, 38; *Tweed*, 18; *Spyder*, 3; steamers—*Plumper*, (screw); *Cowley*, 6 (screw); *Cormorant*, 6; *Geyser*, 6; *Rattenas*, 8 (screw); *Sharpshooter*, 8 (screw); and *Harp*, tender: total, eleven effective men-of war

CHANGES IN THE ORDNANCE DEPARTMENT AND ARTILLERY SCHOOLS.—It is understood that a recent interview between the Master-General of the Ordnance and Lord John Russell was connected with some very important changes in the Ordnance, the Academy at Woolwich, and the Carshalton School.

MEDICAL DEPARTMENTS OF THE ARMY AND ORDNANCE.—These departments are to be consolidated and placed under one uniform system of pay and duties.

EFFECTIVE STRENGTH OF THE HOUSEHOLD BRIGADE.—Total cavalry (three regiments), 95 officers, 132 sergeants, 27 trumpeters, 24 farriers, and 1026 men. Total infantry (three regiments or seven battalions), 205 officers, 297 sergeants, 133 drummers, and 1407 men.

ARMY ESTIMATES FOR 1850.—The Lords of the Treasury have called for these estimates, with instructions that the same are to be prepared with the most rigid economy.

MEDALS FOR EGYPT.—The surviving veterans of the celebrated landing in Egypt, and subsequent actions afloat and ashore from March, 1801, to the 2nd September of that year, will be pleased to hear that the medals granted to those distinguished services have at length been delivered to the authorities by the contractor, and will at once be issued.

HOLYHEAD DOCKYARD.—The town of Holyhead is in a state of great dismay for the fate of the government Dockyard, an event which will seriously affect the commercial prosperity of the thriving town.

It is confidently rumoured, in military services, that the large sum of £16,000 has been offered by the Mayor of a Lancer regiment, recently quartered at Brighton, for the purchase of the Lieutenant-Colonelcy, and refused, after two days' deliberation. The highest sum ever given for the purchase of a step is, we believe, £20,000

ARTILLERY EXPERIMENTS.—Major-General Parker, C.B., Major-General J. J. Lacy, and other officers, assembled on Tuesday in the Woolwich Marshes, to witness experiments with Quartermaster Freeburn's fuses. The trial was made with the view of testing whether the workmen could make fuses equally well as Mr. Freeburn, as he could himself. Fifteen shells were fired during the experiments—ten 32-pounders and five 8-inch or 68-pounders. The result of the experiments showed that the wooden fuses are evidently the best and most economical, as the brass fuses being very expensive, as they must be adjusted and held to the shells by screws. Lieutenant-Colonel Hardinge, of the laboratory department, some time ago fixed several shells with wooden fuses, made without brass, the latter being unable to become unfit for adjusting in the shells when expanded with water, or contracted in dry warm weather. The Lieutenant-Colonel's plan is extremely simple, being merely to make the mouth of the shell concave, and the nose of the fuses convex. In that form two moderate blows with a wooden mallet are sufficient to drive the fuses home at the time they are required for use, and they are safer and less liable to fall out from the shell during its flight than any previously tried. The whole of the wooden fuses fired on Tuesday were on the plan described, and afforded abundant evidence of its superiority and simplicity, under every circumstance, and freedom from danger to the persons firing with them.

The whole of her Majesty's ships in command that are accessible to home will be put out of commission in the course of the next month, and then re-commissioned, in order to bring into operation, on the 1st of January, the new and improved system of provisions, grog, &c.

THE PAPAL AGGRESSION.

MEETINGS.

THE excitement on the subject of the Papal aggression continues and increases, and the steps taken on both sides seem likely to lead to still further agitation.

A numerous body of merchants and bankers have requested the Lord Mayor to call a public meeting of the citizens of London, for the purpose of taking into consideration the last most unparalleled attempt of the Bishop of Rome to establish an unauthorised and unprecedented interference in the affairs of this kingdom, and the meeting is appointed to take place on Monday next, at two o'clock precisely.

On Thursday, the 14th, a great county meeting was held at Shrewsbury, in accordance with a numerously signed requisition to the High Sheriff of the county, headed by the Lord-Lieutenant, Viscount Hill. A great number of noblemen and gentlemen were present, and a large number of the town-council of Shrewsbury, freeholders of the county, and tradesmen of the town. An address was unanimously voted to her Majesty, and the Lord-Lieutenant of the county entrusted with the presentation.

The Society for the Propagation of the Gospel in Foreign Parts held a general meeting on Friday, Nov. 15, the Archbishop of Canterbury in the chair. A memorial and petition to the Queen was moved by the Bishop of London, seconded by the Bishop of Jamaica, and carried unanimously, which represented, amongst other things, that notwithstanding the laudable provision made for the government of the Church of England by her Majesty's Government, the Bishop of Rome has in divers instances, particularly at Sydney, Hobart Town, Adelaide, Toronto, and Newfoundland, intruded into seas erected by her Majesty, that the Society saw, with regret and indignation, the last most wanton and insolent aggression of the Bishop and Court of Rome on the rights of the Church of England, the prerogative of her Majesty, and the liberties of the people. The Society prays her Majesty to denounce, by every constitutional means, the claims and usurpations of the Church of Rome.

On Saturday, the vestries of St. Pancras and Marylebone severally passed resolutions thanking Lord John Russell for his manly declaration against the insidious designs of Popery. Some opposition was exhibited at both vestries, and at Marylebone a Mr. Bacon made some severe observations on Lord John and on the Established Church.

At a meeting of the inhabitants of St. Mary-le-Strand, held on Monday, where strong resolutions were unanimously passed against the recent encroachments of the Papal power, and addressing her Majesty and the Archbishop of Canterbury, the Rev. Dr. Jelf, the Principal of King's College, stated: "Her Majesty had been the first to denounce this invasion by the Pope upon her authority. When she heard of it she at once sent for Sir George Grey, the Home secretary, who, on obeying Ler summons, found her Majesty walking up and down the drawingroom in a state of great excitement. 'Sir George Grey,' said her Majesty, 'I am Queen of England, and I will not bear this.' (Loud cheers.) What the people had to do, therefore, was to support her Majesty, and support her at this critical juncture of affairs." (Cheers.) The men of St. Mary-le-Strand unanimously followed the rev. gentleman's advice.

The parish of Islington held a public meeting on the same day; Lord Portman, the senior churchwarden, in the chair; when an address to her Majesty was adopted, after some opposition, praying that measures be taken effectually to secure her dominions against the aggressive and overreaching policy of the Bishop of Rome

Meetings for similar objects, and ending generally in unanimous resolutions against Popery, were held at the Holy Trinity, Minories; of the Bristol Town Council, at Worcester, Bridport, Deal, Blandford, Halifax, Rochester, and several other places.

On Monday, also, a meeting of Roman Catholics took place at Birmingham, when it was resolved that an address be presented to "the Lord Bishop (Roman Catholic) of Birmingham." In his answer, the Bishop alluded to the unusual excitement, and said the whole error engrafted in the popular mind is occasioned by confounding the spiritual supremacy of the Pope with his temporal sovereignty; the mere dividing of the country for spiritual purposes, as every religious community divides it, with a taking of some kind of temporal possession of it. "I am the chief of the Catholic Church, and am appointed as Bishops over our own flocks, just as he has always done in Ireland, and as he has done in the British colonies." He thanked the inhabitants of Birmingham for their moderation and good feeling.

On Tuesday, the Court of Aldermen, on the motion of Sir Peter Laurie, seconded by Alderman Farebrother, unanimously resolved that a dutiful and loyal address be presented to her most gracious Majesty on the late audacious encroachments of the Bishop of Rome on the supremacy of her Majesty, and in defiance of the laws and constitution of this Protestant country.

On the same day, the inhabitants of the united parishes of St. George and St. Andrew's, Holborn, presented an address to the Queen, similar to her Majesty. At the meeting, a gentleman said that her Majesty was surrounded by Papists in her own household, and was bound hand and foot by them; but the Rev. Dr. Worthington, the Chairman, said that there was no ground for alarm in the dimension; and were the case otherwise, by exhibiting a leaning towards Popery, her Majesty would forfeit her title to govern these realms.

At a meeting of the Wesleyan Methodists, held on Wednesday, at which resolutions were unanimously passed condemning the Papal usurpation, and approving of an address to the Queen, the apple of discord was rather unnecessarily thrown among the assembly. The Anglo-Saxon race, it was said, "involved in this subject the question of the true religion, and he did not hesitate to say that the true religion was the Protestant faith," which will probably come against the Romanism that prevailed in the Church of England had arisen from Jesuit influence."

Liverpool, on Wednesday, an important demonstration against the Papal aggression took place. The requisition calling the meeting had 1700 signatures, and the Amphitheatre, the largest building in the town, was crowded to excess The principal speakers were Mr. T. B. Horsfall, the Rev. Mr. Walmsley (a Catholic), the Rev. Dr. M'Neile, &c. The address to her Majesty, expressing feelings of indignation at the insolent attempt made by the Pope of Rome to interfere with her Majesty's undoubted prerogative, and praying for the immediate adoption of such measures as will effectually vindicate the rights of the crown and Protestant faith in this realm, was adopted, as was a resolution giving the cordial thanks of the meeting to Lord John Russell for the expression of his determination to uphold the supremacy of the Crown. At this meeting the Rev Mr. Walmsley obtained a hearing; but his amendment, to the effect that the present contemplated address was unnecessary, was lost by an overwhelming majority.

At a meeting of the Archdeaconry of Stow, Lincoln, on Monday, the Rev. Mr. Aspinall, a somewhat distinguished liberal clergyman, said, he could not imagine such an attack upon the Church as that which had now been made in civil liberty, but must regard it as a most unjustifiable return for the courses of conciliation which those who thought with him had always supported. He would assail no man's right of conscience. But they were met to defend their own, and therefore, on this occasion, they ought all to act with one heart and mind against their common assailant. The usual addresses were agreed to.

There have been meetings, also, of the Orangemen at Newton, Lancashire; of the inhabitants of Croydon, Bolton, Brighton, Leigh, Lynne Regis, Carmarthen, Bath, Hertford, Prescot, Whalley, Ware, Macclesfield, Stepney, Great Yarmouth; of the Court of Burgesses, Westminster, and a number of other places; making this, certainly, one of the most extensive and active agitations that has occurred within our memory.

EVENTS.

Amongst the facts connected with this subject, we may mention that the signatures to the declaration of the clergy of the Archdeaconry of Middlesex amount to 408, or nearly the entire body.

Seven hundred and forty-seven members of the English Bar have signed the address to her Majesty, including three Masters in Chancery, forty-six Queen's Counsel, and nine Serjeants-at-law.

A meeting of the clergy of the Archdeaconry of Worcester was held on Friday, when the meeting was addressed in some able speeches; and memorials to her Majesty and the Bishop of the diocese, against the assumption of ecclesiastical authority in this kingdom by the Pope, were adopted. Archdeacon Hone, said, he thank the fame to come when we ought not merely to be prepared to repel invasion, but to carry on the aggressive against Popery. The priests boast that there are 175,000 Roman Catholics in London, and above 200,000 in Liverpool. In Manchester and other large towns there are also great numbers. Let us thank them for the announcement, and set to work to spread Protestant truth among them."

On Sunday, an event occurred which partakes of the character of violence. At St. Barnabas Church, Pimlico, for the adoption of ceremonies approximating to those of the Catholic Church, a number of strangers were present, a stall greater number congregated outside, the services were interrupted, and such a riot ensued that the police force of whom had been collected in anticipation of a disturbance) were obliged to interfere. One person was, on Monday, carried before the magistrate for Westminster, Mr. Broderip, charged with a breach of the peace, endeavouring to force his way into the church. The magistrate, after hearing the evidence, thought the charge not made out and dismissed it. The decision was received by a burst of applause from a crowded court

On Sunday, the Roman Catholic Cathedral, St. George's, Lambeth, was crowded in expectation that the Cardinal would address the congregation. The rector, the Rev. Dr. Doyle, explained in the course of his sermon, that by the forms of the Church the Cardinal could not address those there until he had been duly inducted into his see. The ceremony would take place as speedily as possible, as it was the anxious desire of the Cardinal to appear personally before those intrusted to his care, clothed with all the insignia of his office, in order that personally he might have the opportunity of explaining his own opinions, and vindicating his acts. The oath paraded in the public newspapers, as taken by the Archbishop on his appointment, they had seen; but the Cardinal repeated to him (that of which personally he required no assurance), that no such oath had ever been taken by him—that it was all a pure invention! He announced it was the intention of the Archbishop of Westminster to give in that church, every evening during the season of Advent, a series of lectures

At all the Catholic Chapels in the metropolis the congregations were invited to sign an address to the Queen, professing unimpaired and unalterable fidelity to her Majesty, and declaring that their Church made no attack on her Majesty's rights, power, authority, or jurisdiction. The congregations were all exhorted also, to be charitable and forbearing, the example of the early Christians being held up for imitation; though there is, we trust, no chance of any man amongst them being personally injured

On Monday, several gentlemen waited upon Sir George Grey with memorials from several parishes to the Queen, upon the subject of the Papal aggression.—Sir George Grey said, in receiving these addresses through a deputation he had made an exception to the ordinary rule, at the request of Mr. Masterman. The applications from persons who wished to present these addresses through the medium of deputations were so numerous, that he had been obliged to decline to receive them. The addresses would be certainly presented to her Majesty if they were sent to him, as if they came through the hands of a deputation.

At the conclusion of the ordinary business of the police-court at Guildhall, on Saturday, a gentleman appeared before Mr. Alderman Challis, to ask his advice—whether the late innovation by the Pope upon the rights of the Sovereign of this country, rendered his emissaries, or those executing his commands, liable to any penalty? An act of Parliament, passed in 1845 (9th and 10th Vict., c. 59), repealed certain acts to enforce pains and penalties upon individuals for holding religious opinions contrary to the forms of the Established Church. One of the clauses, however, though it took away the penalty for "bringing in and putting in execution of bulls, writings, or instruments, and other superstitious things, from the See of Rome," enacted that the same should be considered an offence against the law. Under this act, was the conduct of Cardinal Wiseman, in carrying out the instructions of the Pope, an offence punishable by a common information before a magistrate?—Alderman Challis said that the act alluded to by the party before him certainly took away the penalties imposed by the 5th Eliz., c. 1, and the 13th Eliz., c. 2; but, at the same time, any one might, he thought, constitute himself a prosecutor, and complain of Dr. Wiseman (or any one else, acting in a similar manner, to forward the views of his Holiness) before any magistrate within the limits of the district in which the offence was committed. He had no doubt but that a little imprisonment would do the Cardinal some good, but he would not like to send him to prison.

It is understood that several of the Foreign Ambassadors at present in London have paid their respects to the Cardinal Archbishop. At Seville (in Spain) there have been great rejoicings on his promotion, it being his native city. He was the guest of the Archduke of Tuscany and of the Emperor of Austria on his way from Rome to England.

Mr. P. Howard, a staunch Whig, and supporter of the Government, though a Catholic, has declared, in a letter to the *Chronicle*, that the phrase, in Lord John Russell's letter, "unwarrantable usurpation" can only be looked upon as a deliberate insult to the faith and religious practice of at least one-third of the loyal subjects of the British realm.

In Ireland the feeling of the Catholic is very strong; the Protestants are taking measures to address her Majesty. The Catholics of Limerick declare that the man test to be put to the candidates at the approaching county election will be, that they shall uphold the supremacy of the Pope, and oppose with all their might the "atrocious designs" of Lord John Russell.

Mr. Thomas Fitzgerald, Q.C., in addressing a meeting of the electors of the county of Clare, assured them of his determination to punish Lord John Russell for his insults to the Roman Catholic population "can only be looked upon as a deliberate insult to the faith and religious practice of at least one-third of the loyal subjects of the British realm.

In Dublin

on the subject, addressed to the Holy See. It was stated :—The Catholic Church in England had so much expanded and consolidated itself since the Emancipation Act, and its parts had so matured their mutual relations, that it could not be carried on without a full and explicat code. The Catholics, he says, have been unmercifully treated by every Anglican writer, High-Church or Low-Church, as schismatics, as rebels to the Bishops of England, as having no true Bishops. Nay, again and again they were taunted with this—that the Pope durst not name ordinary Bishops in England, because conscious of not having authority to do so. It was, therefore, a point of no light weight and of no indifferent interest to Catholics to have this sarcasm silenced and this obstacle removed. These were but secondary and corroborative arguments. The ground of the pleading was the absolute necessity of the hierarchy for the due organization and good government. The Holy See kindly listened to the petition. The Vicars-Apostolic were desired to suggest the best divisions for new dioceses, and the best places for the titles. These were adjusted, the brief was drawn up, and even printed. Some difficulties arose about a practical point, and publication was delayed. In 1845, another Bishop, Dr. Ullathorne, was deputed to Rome, to remove them; and the measure was again prepared, when the Papal Revolution suspended the final conclusion till now. All this time there was no concealment: all Catholics knew of the intended measure; the papers announced it: so notorious was it, that the Dean and Chapter of Westminster petitioned Parliament against it; and a friend of the writer's heard the Dean of Westminster say, most openly, 'Well, he may call himself what he pleases; but at least he can never be Dean of Westminster.' In Battersby's 'Irish Directory' for 1849, the writer is named 'Most Rev. N. Wiseman, Archbishop of Westminster:' many letters came to him so addressed. This, then, is no wanton, sudden act—not a measure of a grasping, aggressive character; but one gradually and unusually matured—one based upon the necessities of the Catholic body, its internal regimen, and its healthy organization. The blame (if any) and the responsibility of the measure rests with the writer and his colleagues, and not with his Holiness, the Pope, and here the matter was left.

The Cardinal goes on to say, with reference to the attacks made on him—

"An agitation, perhaps unparalleled in our times, has been raised by the constitution of a Catholic Hierarchy in this island. Its violence has been that of a whirlwind, during which it would have been almost a relief to hear a thunderclap. After the town reached England the measure being completed, a pause of a few days ensued, as if the elements were brewing for the storm. Then it burst out with absolute fury. A few years ago, an excitement somewhat similar was caused by the supposed appointment of the present Master of Trinity College. Political and religious feelings brought parties, otherwise generally discordant, into harmonious opposition to the increase. But the great statesman who then presided over her Majesty's Councils, and whose loss the country has so lately and so cordially deplored, nobly stemmed the tide, carried his increase with calm dignity through the Legislature, and yielded nought to public outcry. Instead of this, the head of her Majesty's Government, on the present occasion, did not stand firm, but all Europe, by a letter which leaves us but little hope that any appeal to the high authority which rules over the empire would be received, to say the least, with favour. But another, and a still graver, power in this land has already itself to blame by the passing blast from the upright and inflexible position which Englishmen have ever considered natural to it. The Lord High Chancellor of England has preferred to deliver his award against us from behind the tables of a Mansion-house banquet, and so elicit the anti-Papish cheers of his civic companions, rather than the honoured approbation of the peerage or the bar. While thus the avenues to public justice seem closed against us, while the press has condemned and raised our death-whoop—while the very highest judicial authority has prejudged and cut off all appeal from us; what resource have we yet left? what hope of justice? One in which, after God's unfailing Providence, we place unbounded confidence. There still remain in the many pure and honest heart of a generous people; that love of honourable dealing and fair play, which, in joke or in earnest, is equally the instinct of an Englishman; that hatred of all mean advantage taken of all base tricks and paltry clap-traps and party cries employed to hunt down even a rival or a foe. To this open-fronted and warm-hearted tribunal I make my appeal, and claim, on behalf of myself and my fellow Catholics, a fair, free, and impartial hearing."

With reference to the Royal supremacy, and Bishops named by the Crown, the Cardinal says:—"A Catholic, before 1829, in the eye of the law, was a person who did not admit the Royal supremacy, and, therefore, was excluded from full enjoyment of civil privileges. A Catholic, after 1829, and therefore in 1850, is a person who still continues not to admit the Royal supremacy, and, nevertheless, is admitted to full enjoyment of those privileges. The Royal supremacy is more admitted by the Scotch Kirk, by Baptists, Methodists, Quakers, Independents, Presbyterians, Unitarians, and other Dissenters, than by the Catholics. None of these, any more than Catholics, recognise, in the Bishops appointed by our gracious Queen, in virtue of her supremacy, any authority to teach them or rule them. When, therefore, the Sovereign appoints a new Bishop to a see, the Catholic, and I suppose the Dissenter, divides the act between two distinct persons. As Sovereign, and as a dispenser of dignities, the King or Queen bestows on the person elected dignity, rank, and wealth. He is made a Lord of Parliament, receives a designation and title, becomes seised of certain properties which entitle him to fines, rents, and fees. To all this they assent But, further, in virtue of the spiritual supremacy, the same Sovereign confers on that person spiritual and ecclesiastical jurisdiction; and this, in fact, is acknowledged only by those who are members of the Church of England. It follows, that a marked distinction exists between the authority possessed by a Bishop and that of any other functionary named by the Queen's excellent Majesty. If she appoint an admiral, or commander-in-chief, or governor of a colony, or judge, every one is bound to obey that person in all that belongs specifically to his office, and any one would be punishable if he refused But, in regard to a Bishop, it is exactly the contrary. Precisely in those very matters which appertain to his office we are not bound to obey him. No one is obliged to seek doctrine from his teaching, sanctification from his ministration, or grace from his blessing. When the Catholic denies the Royal supremacy, it is because he believes another and a true ecclesiastical and spiritual supremacy to reside in the Pope, or Bishop of Rome, and to centre Catholic Church. With him the acts resolve themselves into one; denial of the Royal supremacy and assertion of the Papal supremacy. And as it is perfectly lawful for him to deny the one, so is it equally lawful for him to assert the other. Lord Chancellor Lyndhurst, in the House of Lords, May 11, 1846, confirmed this view."

The Cardinal, referring to the extent of religious toleration granted to Catholics, inquires—"Have they a right to possess Bishops, or a Hierarchy?" and concludes, "that *the law has plainly foreseen, and provided for our having regular Bishops one day, instead of vicars.*" "Then why all the clamour that has been raised? On what ground does the attack made upon us rest? Why have we been denounced? why held up to public hatred? why pointed out to public fury? I have not seen one paper which during the violence of the storm, thought it worth while to look into the question of law, and plainly inquire 'Have the Catholics violated any penal statute, the law of the land?' If not, why should they be thus perseveringly abused?' When, in the Emancipation Act, Catholic Bishops were restrained from taking the very titles held by the Anglican, this restriction was not intended, or supposed, to be a prohibition against the Catholic Church. Even, therefore, our being restrained from adopting its very title, could give no security to the Established Church; so that we may conclude that still less security would be given to it by our being forbidden to assume titles which are not theirs. You cannot make a law that they shall only be governed by Vicars-Apostolic, which would be acknowledging directly the Pope's power in the realm (which the Protestant Bishops could not do); still less can you proceed to forbidding them to have Bishops of any sort, which would put them back in a worse condition than they were during the operation of the penal laws Any step backward is a trenching on the complete toleration granted to us. The endowments of Catholic Hierarchy does not in any way deprive the English Establishment of a single advantage which it now possesses. Its Bishops retain, and, for anything that the new Bishops will do, may retain for ever their titles, their rank, their social position, their pre-eminence, their domestic comforts, their palaces, their lands, their incomes, without diminution or alteration. The outward aspects of the two Churches will be the same. The Catholic episcopacy and the Catholic priesthood will remain, no doubt, poor, unnoticed by the great and by the powerful (so soon as the present commotion shall have subsided), without social rank or pre-eminence. Nor is an attempt made to diminish any of the moral and religious advantages of the Establishment, which will never now measure with such watchful jealousy. Whatever that institution has possessed or does to influence the people, or attach its affections, it will still possess, and may continue to do. The new Bishops will not have occasion to cross the path of a single Bishop of the Anglican establishment in their sphere of duty; they will find plenty to do, besides their official duties, in attending to the wants of their poor spiritual children, especially the multitudes of poor Irish, whose peaceful and truly Catholic conduct, under the whirlwind of contumely which has just assailed them, proves that they have not forgotten the teaching of their Church—not to revile when reviled, and when they suffer, not to threaten. Those who do not greatly sympathize with the Establishment are indignant at the late measure, not because Catholics have obtained a hierarchy, but because its appointment is the work of the Pope. If the Catholics of this country were ever to have a hierarchy at all, it could only be through the Pope. He alone could grant it. This doctrine has long been familiar to our statesmen," which the Cardinal shows by quotations from their speeches.

He sums up—

"1. Catholics are not bound to obey, or to consider as their Bishops, those appointed by the Crown, under the Royal ecclesiastical supremacy, which legally they are not bound to hold.

"2. Catholics belong to a religion, fully tolerated, and enjoying perfect liberty of conscience, which is episcopal, and requires Bishops for its government.

"3. There is no law that forbids them to have such Bishops according to their proper ordinary form.

"4. That form is, with ordinary jurisdiction, local sees, and titles derived from them: that is a hierarchy

"5. They are fully justified in employing the only means in their power to obtain this form of ecclesiastical government; that is, by applying to the Holy See.

6. And they have not acted contrary to any law, by accepting the gracious concession of what they asked."

He then shows that the appointment of a Catholic hierarchy does not trench on the prerogative of the Crown.

He denies, too, that the mode of establishing the hierarchy has been "insidious and insolent;" and says: "I will leave to others to dwell upon many portions of Lord John Russell's letter, upon the closing paragraph in particular, which pronounces a sentence, as awfully unjust as it was uncalled for, on the religion of many millions of her Majesty's subjects, nearly all Ireland, and some of our most flourishing colonies. The charge, uttered in the ear of that island, in which all guarantees for genuine and pure Catholic education will of necessity be considered, in future, as guarantees for 'confining the intellect and enslaving the soul,' all securities for the Catholic religion as securities for the 'mummeries of superstition,' in the mind of their giver—guarantees and securities which can hardly be believed to be heartily offered—the charge thus made, in a voice that has been applauded by the Protestantism of England, produces in the Catholic heart a feeling too sickly and too deadening for indignation; a feeling of fainting disgust, that, where we are opposed, and supported, and followed for years, we may be spurned and cast off, the first moment that popularity demands us as its price, or bigotry as its victim. So little was I, on my part, aware that such feelings as that letter disclosed existed in the heart of our Government, on the subject of this hierarchy, that, having occasion to write to his Lordship on some business, I took the liberty of continuing my letter as follows:

"Vienna, Nov. 3, 1850.

My Lord,—

* * * * * *

I cannot but most deeply regret the erroneous, and even distorted, view which the English papers have presented of what the Holy See has done in regard to the spiritual government of the Catholics of England. But I take the liberty of stating that the measure now promulgated was not only prepared, but printed, three years ago, and a copy of it was shown to Lord Minto by the Pope, on occasion of an audience given to his Lordship by his Holiness.

"I give this letter, because it will show that there was nothing in my mind to prepare me for that warm expression of feeling that was manifested in the Cardinal's letter."

The Cardinal further adds—"It was notorious not only that in Ireland the Catholic Hierarchy had been recognised and even regularly endowed by the same form of ecclesiastical government had been gradually extended to the greater part of our colonies."

The Cardinal quotes the acts constituting those Bishoprics, and mentions that the Pope appointed the Bishops.

"But there has been a more remarkable instance of the exercise of the Papal supremacy in the erection of Bishoprics nearer home. Galway was not an episcopal see till a few years ago. It was governed by a warden, elected periodically by what are called the Tribes of Galway, that is, by families bearing certain names, every member of whom had a vote. Serious inconveniences resulted from this anomalous state of things, and hence it was put an end to by the Holy See, which changed the wardenship into a bishopric, and appointed the Right Rev Dr. Browne, since translated to Elphin, first Bishop of that diocese. Bishop Browne was consecrated October 23, 1831. No remonstrance was made, no outcry raised, as this exercise of Papal power."

After referring to the appointing by the Crown of English Bishops in foreign and Catholic countries, the Cardinal says:—

"In 1841, or 1842, when, for the first time, the Holy See thought of erecting a hierarchy in North America, I was commissioned to ascertain the feelings of Government on the subject. I came up to London for the purpose, and saw the Under-Secretary for the Colonies, of which Lord Stanley was the secretary. I shall not easily forget the urbanity of my reception: 'What does it matter to me what you call yourselves, whether Vicars-Apostolic, or Bishops, or Mufus, or Imaums, so that you do not ask us to do anything for you?' We have no right to prevent you taking any titles among yourselves. We have the right to prevent you taking any titles among yourselves. We have the right to prevent your quit-rent alluded to observed that it was his private opinion, and he desired me to call in a few days after. I did so, and he assured me that, having laid the matter before the head of the department, the answer was the same as it had been before given me. I wrote it to Rome, and I have no doubt, as the basis of the nomination of Bishops in ordinary in North America."

He then refers to the support Lord John Russell, then in opposition, gave to the Catholic Relief Bill in 1845 and 1846, and continues—

"I would appear, therefore, that whatever hesitation Lord John Russell had about repealing other clauses in the Emancipation Act, his mind was made up about the restriction from Catholics assuming the very titles of sees held by Anglican Bishops. Had he obtained his wishes in 1846, the law would now have permitted us to call ourselves Bishops of London or Chester, and Archbishop of Canterbury. For if it was puerile in 1846 to continue to prevent Catholics even taking the prohibited titles, and no good reason existed for the continuance of even that restriction, it certainly in 1850 to denounce as 'insolent and insidious' the assumption of titles different from those accorded to us by the authority which Lord John Russell acknowledges can alone give any efficacy upon us. I trust, therefore, that I have succeeded to prove that Catholics have not acted in an unbecoming manner, in claiming for themselves the same right of possessing a hierarchy, as had been allowed to the colonies, and clearly acknowledged, as no less applicable to them."

The selection of the title of Westminster for the metropolitan see, he explains, was little less than necessity. "According to the discipline of the Catholic Church, a Bishop's title must be from a town or city. Original titles were only village or small town had the Bishop, as appears from the history of the African Church. But from a town or city a Bishopric must still be; a 'territorial' title is never given. This being the principle or basis of every hierarchy, how was it to be acted on here? It was a question to be settled by law Southwark was to form a separate see. To take then the title of a subordinate portion of what forms the great conglomerate of London, as Finsbury or Islington, would have been to cast reproach, and upon the see and upon the new Episcopate. Besides, none of these are towns or cities. Westminster naturally suggested itself, as a city unoccupied by any Anglican see, and giving an honourable and well-known metropolitan title. It was consequently selected contrary to law? And if not, why are we to be blamed?" Kensington, indeed, of Westminster embraces a large district, but Westminster proper consists of two very different parts. One comprises the stately Abbey, with its adjacent Palace, and its Royal Parks. One comprises the stately Abbey, with its adjacent Palace, and its Royal Parks. To this portion the duties and occupation of the Dean and Chapter are mainly confined; and they shall range there undisturbed. To the venerable old church I may repair, as I have been wont to do. But perhaps the Dean and Chapter are not aware that were I disposed to claim admission from the depths to tread the Catholic pavement of that noble building, and breathe its air of ancient consecration, another might step in with a prior claim. For successive generations there has existed ever, in the Benedictine Abbey of Westminster, a community, and multitudes hourly worshipped without a thought. But in ancient times, the existence of an abbey on any spot, with a large staff of clergy and ample revenues, would have sufficed to create around it a little paradise of comfort, cheerfulness, and ease. This, however, is not now the case. Since under the Tudors Westminster became the consecrated labyrinth of courts and courts, and alleys and slums, nests of ignorance, vice, depravity, and crime, as well as of squalor, wretchedness, and disease; whose atmosphere is typhus, whose ventilation is cholera; in which a dispersed and almost destitute population, in great measure, nominally at least, Catholic; haunts of filth, which no sewage commixes can reach dark corners, which no lighting-board can brighten. This is the part of Westminster which alone I can covet, and which I would be glad to claim and to visit, as a bounden duty, as the sphere of holy Church are to be tended, in which a Bishop's godly work has to be done, of consoling, converting, and preserving. If the wealth of the Abbey be considered, as I believe and trust it will be considered, as a special dedication from the depths in which it is sunk, let there be no jealousy of any one who, by whatever name, is ready to make the latter his care, without interfering with the former."

The Cardinal thus concludes:—

"Thanks to you, brave, and generous, and noble-hearted people of England! who would not be stirred up by those whose duty it is to teach you gentleness, meekness, and forbearance, to support what they call a religious cause by irreligious means; and who, under the cloak of religion, pour, unoffending fellow-citizens, to the hollow cry of 'No Popery,' and on the pretence of a fabled aggression. Thanks to you, docile and obedient children of the Catholic faith, who have met with patience and resignation the clouded injustice which seeks to many of you I know by name fervid, but by religion mildened, who have fed, indeed, when could help?—the indignities that have been cast upon your religion, your pastors, and your highest chief, but have borne them in the spirit of the great Head of your Church, in silence and unretorting forbearance. Let your loyalty be unimpeachable, and your faithfulness to social duties above reproach."

FEMALE EMIGRATION TO AUSTRALIA.—Intelligence has been this week received by the overland mail of the safe arrival in Australia of the two ships first despatched with emigrants under the auspices of Mr. Sidney Herbert's fund. The *Calloden* arrived at Port Phillip on the 6th of July, and the emigrants were most favourably received by the colonists; the ladies' committee that undertook to provide for their reception expressing the utmost satisfaction at the arrival of a party so well selected and so admirably suited for a colonial career. The girls, thirty-eight in number, were landed at Melbourne on the 8th of July; and the *Melbourne Argus*, of July 11, states that thirty-one of them had been engaged, at wages varying from £12 to £20 a year. Subsequent advices state that every one of the girls had obtained excellent situations, and that if 200 of them had been sent out they would all have had good places. The ship *Duke of Portland*, which sailed on the 8th of April, arrived at Adelaide, all well, on the 2d day of August. The female emigrants, 70 in number, had conducted themselves with great propriety throughout the voyage. All who were destined for Adelaide were landed safely and well, and every one of them obtained eligible situations within six days. Their economy and healthy appearance seems to have impressed the colonists very greatly in their favour; indeed, both at Port Phillip and Adelaide the demand for emigrants appears to have given the greatest satisfaction. The *Melbourne Argus* says: "The girls appear to belong to a class of immigrants peculiarly adapted to this colony, being young, healthy, and of intelligence sufficient to ensure the due discharge of mind, and the very determination of purpose, which will enable them to act well their part in any of the many situations of usefulness which he to invitingly before them."

SPORT AT LIMERICK.—A terrific storm raged on Monday night. There was a spring-tide in the Shannon, and the wind came N.W. The water rose to an unprecedented height, broke down the banks, and flooded all the lower parts of the city and the surrounding country. The list of casualties is most distressing. A poor woman was drowned by the inundation, and several persons are missing. The shipping in the river suffered much damage; several small vessels were sunk. Many houses in the best parts of the city were nearly stripped, and chimneys blown down; while, in the humbler parts, the damage done by the storm was most serious

CHESS.

TO CORRESPONDENTS

SERBO.—I. You will find a concise disquisition on the "Men in Pawnless's" Amusements in Chess," published by Parker, of West Strand. ? We know of no such place

V. ANT READER.—B must move his King

SCHOOLBOY.—If your adversary takes all your pieces, leaving you but your King, instead of having the cest of the game, we should consider you had very much the worst of it. How, in such a case, would you avoid checkmate?

R D M We are much concerned at hearing so melancholy an account of your friend's health. He should rigorously abstain from Chess at present.

AN OLD SUBSCRIBER.—You have copied the fine Enigma No 666 inaccurately The Rook is at White's Q sq, and the Black Pawn at his K 3d

5. P to Q B 3d	K B to Q Kt 3d	17. Q to R Kt 3d	Kt to K 4th
6. P to Q 4th	P takes P	18. B to Q Kt 3d	P to K Kt 4th
7. P takes P	K Kt to B 3d	19. Q R to Q B sq	Q R to Q B sq
8. Q Kt to B 3d	Castles *(a)*	20. Kt to Q Kt 5th	B to K 7th *(b)*
9. B to K Kt 5th	P to K R 3d	21. B to Q sq	B takes B
10. B takes K Kt	Q takes B	22. K R takes B	P to K B 4th *(c)*
11. P takes B	P to K Kt 3d	23. P takes B	And White resigns.
12. Q Kt takes B	Q R P takes Kt		

Notes by Mr Cochrane.

(a) The second player should not have adopted the adverse Bishop to "pin" his Kt. Afterwards he can move the Kt to Q 5th, and then to K B 7th, &c.

(b) Threatening not only the Kt, but the dangerous move of Kt to Q 8th. [Ed of L. N.]

(c) This was a palpable mistake; but play as White could, the first player has the best of the game ere he has conducted so well.

(Cunningham Gambit.)

Mr. Cochrane gives the Queen's Kt to Isseachunder, a Native Player of India.

(Remove White's Q Kt from the board.)

WHITE (Mr Cochrane).	BLACK. (Isseachunder).	WHITE (Mr. Cochrane).	BLACK. (Isseachunder).
1. P to K 4th	P to K 4th	11. Q to K R 5th (ch)	P to K Kt 3d
2. P to K B 4th	P takes P	12. Kt takes Kt P	K Kt to K B 3d
3. K Kt to B 3d	K B to K 2d	13. R takes Kt	B takes R
4. K B to Q B 4th	K B to K Kt 5th (ch)	14. Kt to K 5th (discovering ch)	K to his 2d
5. P to K Kt 3d	P takes P	15. Q to R B 7th (ch)	K to Q 3d
6. Castles	P takes P (ch)	16. Kt to Q 4th (ch)	K to Q B 4th
7. K to R sq	B to K 2d	17. P to Q Kt 4th (ch)	K to Kt 4th
8. Kt to K 5th	P to Q 4th	18. P to Q Kt 4th (ch)	K takes Kt
9. P to K B 3d	Q R to K 3d	19. Q takes R P (ch)	K takes Q Kt P
10. B takes B	P takes B	20. Kt to Q Kt sq (ch)	K to R 4th

And White gave mate in two moves.

CHESS ENIGMAS.

No. 623.—By E. H. C.

White. K at Q R 5th, R at Q Kt 3d, B at Q Kt 4th, P at Q B 2nd.
Black K at Q R 5th, P8 at Q B 6th, Q Kt 4th, and Q R 3d.
White, playing first, mates in three moves.

No. 624.—By W. G.

White K at his B 2d, Q at K Kt 2d, R at K R sq, Kt at Q B 2d, P at K 5th.
Black. K at Q B 8th; P8 at K 3d, Q 7th, and Q B 6th.
White to play, and mate in four moves.

No. 625.—By Von Salpius.

White: K at Q 2d, R at Q 5th, Kt at Q 7th; P8 at K 4th, Q B 3d, Q Kt 2d, and Q R 4th.
Black: K at Q B 5th, R at Q R sq, B at Q B 3d, P8 at K B 4th and Q R 4th.
White to play, and mate in four moves.

DEATH OF THE VETERAN ALEXANDRE.

The amateur of Chess, both here and abroad, will hear with regret that this relict of the famous old French school, in which at one period he occupied a proud position, has at length succumbed to the universal conqueror

M Alexandre expired somewhat suddenly on Saturday last, having attained the unusual age of fourscore years. As a player, he must long be remembered for the elegance and occasional brilliancy of his style; and as a writer, will always be entitled to distinction in having added, by his well-known *Encyclopédie des Echecs*, and his stupendous collection of Problems, two standard works to the literature of that game to which he devoted the leisure of a long life.

RUINS OF THE GREAT FIRE AT BERMONDSEY.

DESTRUCTIVE FIRE IN BERMONDSEY.

SHORTLY before daybreak on Saturday morning, the neighbourhood of the Grange and Spa-roads, Bermondsey, was the scene of a very extensive conflagration, probably the largest that has occurred in the district for years. The premises on which the fire happened were those of Messrs. H. N. and H. Eason, tanners and leather-dressers. The property was of vast extent, possibly the largest of the kind near the metropolis. It was entered by a covered archway from the Grange-road, and the dressing-houses, engine and boiler-house, bark-barns, &c., ran some 500 or 600 feet at the rear, in what is called the "Grange," the whole being situate in the angle or corner of the Grange and Spa-roads, other excensive yards almost immediately adjoining.

About a quarter past four o'clock, the police constable, 203 M, on duty in front of the premises, saw smoke issuing from either the engine-room or the upper part of what is called the beam-room; and before the officer had time to raise an alarm in the neighbourhood, the fire apparently had penetrated the main buildings of the property. The engine-house stood in about the middle of the principal range, a large lofty barn, in which were 300 loads of bark, of the value of more than £5000, being to the right or north side, and the leather warehouse and another bark store on the left or south side. Almost immediately on the discovery flames were seen travelling into the bark barn and leather warehouse. What brigademen were left at the neighbouring fire hastened round to render assistance at this fresh outbreak. From the want of engines, however, their services were of little avail. The flames, therefore, progressed with fearful rapidity, and the entire range facing the Grange speedily presented one blazing mass. The engines stationed on the Southwark side of the water and in the City now arrived.

Immediately on the north and west side of the premises stood the tan-yard and leather-factory of Mr. Hacker, the bark-barn, and other buildings belonging to Smith, Patience, and Smith, and those of Mr Hooper, tanner. Before the brigade engines could be got to work, the front of a barn, tenanted by Smith, Patience, and Co., had ignited. The huge heap of bark was one burning mass, while the flakes of fire kept falling in torrents. During the operations in this quarter, another section of the brigade were actively employed at another point of the conflagration. Owing partly to the wind, and the circumstance that a quantity of bark was stored in the end of the range of the warehouses which adjoined the front and principal one, this, with a lofty building of some four or five floors facing the Spa-road, used as a dry-house, had escaped ignition. Mr. Braidwood, the superintendent of the brigade, now had a strong body of his force brought to bear on this part of the property, and with complete success. The efforts, however, were not so successful in the other direction of the fire. Notwithstanding an immense body of water was thrown on all points of the flaming buildings, it was of little avail. To add to the dismay of all around, the gable end of the barn in which the bark was stored gave way, as if from the force of an explosion; and it was with some difficulty that the firemen and the auxiliaries who were employed to assist escaped being buried in the huge burning heap. The roofs of the different buildings having given way, the firemen obtained a greater advantage over the flames; and a more copious supply of water being procured, the progress of the conflagration was checked; but it was not until nine o'clock that it could be said to have been suppressed. Throughout the whole day a vast quantity of fire was raging in the ruins. On Sunday night, as late as nine o'clock, a vast body of fire still remained in Mr. Eason's premises. The cause of the fire has not yet been ascertained.

The official report of the damage describes the loss on Mr. Eason's premises as follows:—"Two large bark stores, leather warehouse, mills, workshops, drying-houses, beam and engine-house, consumed. The bark insured in the Atlas, for £4000. building in County, for £3300; and stock of leather for £5000, in Sun."

Mr. Eason's loss will far exceed the amount of insurance effected upon his premises. In addition to his heavy stock of bark, there were not fewer than 3000 butts of leather, of the value of £9 each butt, in the warehouse, besides a numerous stock of skins undergoing the process of tanning; forming a loss of from £20,000 to £30,000.

It is somewhat remarkable that the same premises were burned down on the morning of Saturday, the 3rd of September, 1844, and that the buildings which escaped destruction on that occasion were preserved in this instance.

Another fire happened shortly before midnight, on the premises of Mr. J. Harrison, a leather-dresser, No. 17, Crimscott-street, Bermondsey. The building was about 120 feet long, and was also occupied by Mr. A. Wilcoxson, a paper-stainer, and Mr. R. Spiller, a chemist. The flames continued to rage for hours, and were not extinguished until a vast deal of damage was done.

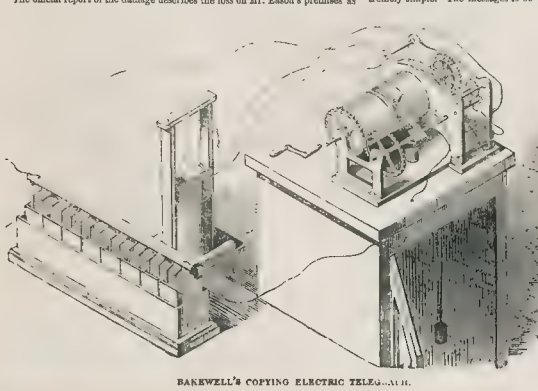
INGENIOUS VOTING MACHINE.—A newly-invented machine for taking the votes of the French Legislative Assembly, and for which a credit of 30,000f. has been voted, was exhibited last week in a room adjoining the Chamber. It affords the advantages of undoubted correctness and great rapidity. Each representative will be provided with a small box, on which his name will be inscribed in gold letters. This box will contain ten bulletins for voting—five white (for), and five blue (against). These bulletins consist of small oblong pieces of polished or blue steel, bearing on each face the name of the representative. The urns, which are *chefs d'œuvre* of mechanism, have two distinct compartments, blue and white, arranged in such a manner that the bulletin of white steel cannot enter into the blue compartment, nor the blue bulletins into the white one. Any error in the vote, therefore, becomes impossible. The pieces of steel, in falling into the urn, do not lie across each other in disorder, but are piled up regularly, one on the other, round a copper cord, with numbers inscribed on it, so that a single glance is sufficient to tell how many votes for or against are contained in each urn. When all the votes are collected, the ushers will withdraw the rod from each urn, and place it in a piece of machinery on the tribune, and which will immediately indicate the number of votes for or against. The secretaries have only to add them up, and when the addition is made, they have only to touch a lever, and the bulletins turn, so that the secretaries who have counted the blue ones may, without moving from their seats, also count the white ones, and so check each other. The result of the vote will be thus known in a positive manner in a few minutes.

On Saturday last, a young man, named Amos, was engaged at a bar-cutting machine in the carriage department in the Royal Arsenal, Woolwich; it was set going by some means, and his clothing having become entangled in it, he was drawn in and severely hurt, one of his arms being broken, and other parts of his body bruised. When extricated he was taken to the hospital, and had his arm amputated above the elbow-joint, and, under the circumstances, is now doing well.

THE COPYING ELECTRIC TELEGRAPH.

THE novel application of the Electric Telegraph, the invention of Mr. F. C. Bakewell, of Hampstead, was noticed in our Journal of last week.

The arrangement, by means of which the copying process is performed, is extremely simple. The messages to be transmitted are written on tinfoil, with sealing-wax varnish, and are then applied to a cylinder on the transmitting instrument. A metal stile connected with the voltaic battery presses lightly on the writing, and, as the cylinder revolves, by the influence of a weight, the metal point is carried by a fine screw, on which it traverses, from the top to the bottom of the lines of writing. By this arrangement the stile passes several times over each bit in different parts of the letters. The receiving instrument resembles the transmitting one; but on the cylinder of that instrument paper moistened with a solution of prussiate of potass and diluted muriatic acid is applied, and the metal stile consists of a piece of fine steel wire. The electric current from the positive pole of the voltaic battery is conducted by a communicating wire to the steel point, and passes through the paper to complete the voltaic circuit. The action of the electricity, when the current is passing, decomposes the muriatic acid, and the steel combining with the chlorine of the acid, a deposition of iron takes place on the paper, which is instantly converted into prussian blue by the prussiate of potass. By this arrangement, therefore, the steel point of the receiving cylinder draws a succession of blue lines spirally over the paper when the electricity is passing through it, but when the electric current is interrupted by the varnish writing, over which the point of the transmitting cylinder is continually passing, the electric current is momentarily interrupted, and the marking ceases. The small intervals caused by the cessation of marking, where the varnish interposes, produces an exact copy of the written message on the paper, the letters appearing nearly white, on a ground composed of blue lines drawn very closely together.

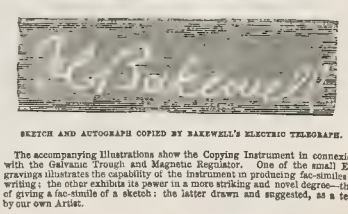


BAKEWELL'S COPYING ELECTRIC TELEGRAPH.

It is essential to the success of the process that the two separate instruments should rotate exactly together, otherwise the receiving paper would present a confusion of marks, instead of legible writing, for the different parts of each letter would be marked irregularly. To produce the synchronous movement, Mr. Bakewell has contrived an electro-magnet regulator, by which means the effect may be produced at whatever distance the instruments may be apart. The electro-magnet regulator may be applied in several ways. The plan that would be adopted in practice is to make and break contact with separate batteries that work the electro-magnets, by means of pendulums actuated by clock-work. Each instrument would have a separate pendulum and electro-magnet; and each time that the electro-magnet is brought into action by the pendulums striking against fine springs, the keepers of the electro-magnets act as detents or projections on one of the wheels, and thus regulate the instruments by retarding them; so that at every beat of the pendulum the instruments are made to correspond. Another mode of applying the electro-magnet regulator is to make and break contact by means of a small wheel on the transmitting instrument, and to employ only one electro-magnet, which retards the receiving instrument by the action of the transmitting one, the former being weighted to rotate rather faster than the latter, when not checked by the retarding magnet. The latter plan of regulating the instruments is best adapted for the temporary adjustment of a lecture-room, and it was this mode by which the instruments were regulated when we witnessed them in action. In order to adjust the instruments when at a distance, so as to know exactly how much weight to apply to each, Mr. Bakewell employs what he terms a guide line, which consists merely of a narrow strip of paper pasted across the cylinder of the transmitting instrument. By this means the distant operator at the receiving instrument can ascertain with the greatest exactness how much it is gaining or losing; and, by adding or taking away weights, he may bring the movements of the two instruments to correspond as closely as clock mechanism, without the use of the electro-magnetic regulator, can do, and with as much facility as if both instruments were together.

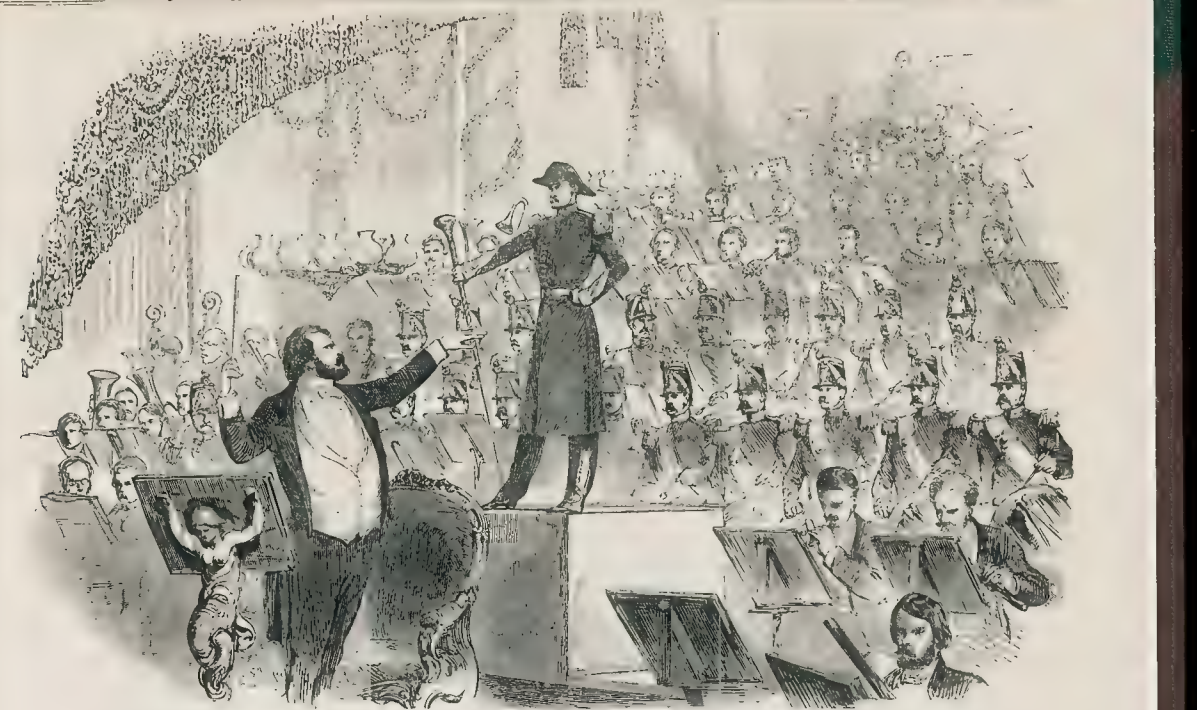
The number of times absolutely requisite for the point to pass over each line of writing to make the copy legible, is six; but when the screw is fine, and the writing large, as in the specimens we have seen copied, the point passes over a greater number of times to bring out the forms of the whole letters. The rapidity with which the copying may be done depends in a great measure on the smallness of the writing. Specimens of round-hand which we saw were taken at the rate of 140 letters per minute, with a single marking point; but Mr. Bakewell states that he has copied 200 letters within the minute, and he expects to be able to do at least 500 with instruments properly adapted for quick writing.

The advantages of this means of telegraphic communication are stated to be, entire freedom from error, as the messages transmitted are fac-similes of the original manuscripts; authentication of the communications by the transmission of copies of the handwriting, so that the signatures may be identified; increased rapidity, to such an extent that a single wire may be as effective as ten with the needle telegraph; and consequent economy in the construction of telegraphic lines. The secrecy of correspondence would also be maintained, as the copying telegraph would afford peculiar facility for transmitting messages in cipher. As an additional means of secrecy, the messages may be transmitted invisibly by moistening the paper with diluted muriatic acid alone, the writing being subsequently rendered visible by application of the prussiate of potass, the most delicate test of the presence of iron. The instantaneous appearance of the writing on an apparently blank piece of paper has a very curious and astonishing effect.



SKETCH AND AUTOGRAPH COPIED BY BAKEWELL'S ELECTRIC TELEGRAPH.

The accompanying Illustrations show the Copying Instrument in connexion with the Galvanic Trough and Magnetic Regulator. One of the small Engravings illustrates the capability of the instrument in producing fac-similes of writing: the other exhibits its power in a more striking and novel degree—that of giving a fac-simile of a sketch: the latter drawn and suggested, as a test, by our own Artist.



M. JULLIEN'S CONCERT AT DRURY-LANE THEATRE.—THE CORPS DE TAMBOURS.

THE THEATRES.

SADLER'S WELLS.

Our readers are aware that the tragedy of "The Duchess of Malfi" has been re-constructed by Mr. R. H. Horne for the stage, and sometime announced for performance at this theatre. In this celebrated drama there are, perhaps, scenes not to be equalled out of Shakspeare; but, in its general conception, it is more like "Titus and Andronicus" than any of Shakspeare's recognised works. The highest merit to which the drama aspires is that of having "moved a horror skilfully:" but then we are to recollect that horror is no proper element of tragedy at all; all beyond terror and pity belongs to a melodramatic school, or a crude art not to be tolerated in an advanced state of the stage. We welcome, however, Mr. Horne's adaptation of the old play, for the sake of the experiment, and that we may have an opportunity of judging of the class fairly, and under the most favourable circumstances—that is, when presented, as now, on the stage in the most tolerable form. Mr. Horne has, indeed, shown, on the whole, great talent and judgment in his alteration; but the action of the fourth act is imprudently prolonged after the death of the *Duchess*. The curtain should fall immediately on her execution. All beyond that not only impairs the situation, but lengthens out horror into disgust. What, indeed, might have become of the scene we know not, but for the truly magnificent acting of Miss Glyn, whose presence on the stage was respected by an impatient audience. The acting of this lady throughout was in the highest style of art, full of discrimination, originality, and genius. The part of the *Duchess* is the only one in the play that excites any interest or sympathy, and Miss Glyn created both by the admirable manner in which she acted the early scenes. Gay, loving, self-willed, she treated her brother's cautions with levity and indifference, and made love to her steward, whom she marries, with all the recklessness of a lady of rank and a widow—of a person both privileged and experienced. It is in such characteristic touches of individuality that Miss Glyn triumphs as an artist. The same delightful bearing she carries on into subsequent scenes, until the awful perils which surround her demonstrate that her liberty, happiness, and life have been staked on her passion, and lost. Then the grandeur of the situation becomes also that of the woman, and she rises into the majesty and intensity of a Pasta or a Siddons. Greater acting is impossible—more thrilling, terrible, and yet pathetic.

The next great part in the play is that of *Bosola*, performed admirably by Mr. G. Bennett—a moralising villain, who is careful to remind his employers of their obligations. The *Duke Ferdinand* ranks third—a villain too, but in whom malice is converted into remorse and madness. The *rôle* was assumed by Mr. Phelps—a somewhat thankless one (the more creditable, therefore, his assumption of it)—and he laboured hard to make it a great one. His early scenes were marked with energy, earnestness, and talent; and his madness, in the latter, was finely interpreted: in his wolvish aspect darkness had settled for ever; no sunshine might ever more visit that blasted countenance. All this was grand and effective. To this actor, also, as stage-manager, must be given the praise for the excellent *mise en scène* with which the text was accompanied. The arrangements of the stage were in all respects excellent, the scenery was beautifully picturesque, and the costumes were exceedingly costly and graceful. All, indeed, from the adapter and principal artistes, down to the lowest subordinate, was in true keeping. An experiment so highly honourable to all parties merits the greatest success. The house was crowded, and the curtain fell to immense applause. Miss Glyn, Mr. Phelps, and Mr. Bennett were called before the curtain, and Mr. Horne had to make his *devoirs* from a private box. Previous to the performance, Mr. Hoskins delivered a prologue, written for the occasion by the author of "Orion," terse, elegant, and forcible, and well calculated to conciliate the audience in favour of the old poet and the old play. To performances like these there should, perhaps, be one theatre devoted, and the local situation of the present readers it peculiarly fit for the purpose.

HAYMARKET.

On Saturday, Mr. Macready performed the part of *Iago*—a character which he invests with great originality both of conception and execution. Mr. Davenport was the *Othello*.

THE NEW DRAMA OF "JESSIE GRAY," AT THE ADELPHI.

A piece, consisting of superior elements, and well constructed, the joint production of Mr. Robert Brough and Mr. Bridgman, was produced on Monday. The materials are for the most part familiar to the dramatic student. *Jessie Gray*, who gives name to the piece (Madame Celeste), is the supposed daughter of an apothecary, who rejoices in the complimentary title of *Dr Gray* (Mr. O'Smith), and who becomes beloved by the nephew of a haughty baronet. The former (Mr. Boyce) courts her in the disguise of an artist; the latter (Mr. Hughes), to wean the boy from *Jessie*, contrives a plot for the ruin of her fame, which is effected after the pattern of *Don John* and *Hero*, in "Much Ado About Nothing." The Baronet succeeds in his object; but, to "make assurance doubly sure," resolves on removing the humble object of his love out of reach. Just at this juncture, however, he discovers that *Jessie* is none other than his own child, and is then, consequently, as eager to unite the lovers as he was previously to separate them. There is, of course, a comic underplot, which consists of scenes between the apothecary's assistant (Mr. Honey) and his sweetheart (Miss Fitzwilliam)—the former a rascal with a conscience which renders him ridiculous. The part was acted with much grotesque humour, and, by his manner of acting it, justified himself in assuming a higher position than he has yet held. The success of the piece was decided; and the two authors had, as usual, to bow from the box to the gratulations of the audience.

Kinkel, the German professor, who was immured in Spandau for the share which he took in the Baden insurrection, and whose escape from prison we noticed last week, passed, a few days ago, through Paris on his way to London.

MUSIC.

M. JULLIEN'S CONCERTS.

THE "Great Exhibition Quadrille," at Drury-Lane Theatre, has proved a great hit, as everybody acquainted with M. Jullien's inventive faculties in such *pièces de circonstance* must have anticipated. In directing huge masses of executants, from whom boisterous effects in broad contrast are to be extracted, in tickling the ears of the miscellaneous public by piquant reiteration of familiar tunes, in happy adaptation of passing events in musical description, M. Jullien has the greatest fertility of conception, and facility of execution. Such compositions, or rather compilations, verging, as they are, on the burlesque, admit of no serious criticism. Every hearer—be he purist or gent-like—must be amused, and even excited, at times. Only conceive Jullien's ordinary orchestra extended and elevated to the very "flies," the rear filled with players in uniform, from three military bands (the Royal Artillery, the Coldstream, and the 2nd Life Guards, with their respective masters, Messrs. Collins, Godfrey, and Gratian Cooke), the centre occupied by the drummers of the French National Guards, with their Tambour Major, M. Barbier, perched with his golden stick on a raised platform, beneath which is the "ruler of the elements," M. Jullien, on his golden throne, and the foreground filled with the stringed instruments! What a general is required to organize these formidable forces, and what a concentration of the *entente cordiale*, to see the French drummers fraternising with our red-coats. And the Tambour-Major, with his cocked hat placed rectangularly on his gallic head, how fierce and yet courteous does he look! With what a graceful jerk does he come down on the concluding rolling chord of the drummers' "beat." And the "two sticks in waiting," at whose gyrations the executants so obediently play *fortissimo* or *pianissimo*—Jullien and Barbier, who, for the Exhibition of 1851, have really made a treaty offensive and defensive, and their united *bâtons* of England and France marshal the orchestra with mighty vigour. Aladdin, who raised a palace in one night, by the aid of his wonderful lamp, and Mr. Paxton, who is raising a Crystal Palace, with his lamp of knowledge, are as nothing compared with Jullien, who dives into futurity and gives you the "March of All Nations to London." "The Great City," exclaims M. Jullien's combined orchestra, "which, for the first time, shelters such wonderful masses from all parts of the known world, is as yet tranquil" (at this portion of the quadrille the drums and brass are going in full force), "when at daybreak" (Koenig's cornet) "the festival is ushered in by the sounding of the chimes of London" (played by Sig. Baldacci on the harmonicon), "echoed far and near from each surrounding belfry: soon the city's in movement" (the stringed instruments), "and the multitudes hasten towards the same goal" (Drury-lane Theatre), "all eager to behold the most stupendous realisation of human industry recorded in the history of the globe. A tremendous shout bursts forth" (the entire orchestra shout hurrah), "and the welcomed nations" (M. Barbier and his 18 drummers), "one and all, join in the glorious cry 'God Save the Queen.'" After this, no wonder Jullien sinks exhausted in his chair of state, and the promenaders encore the anthem.

M. Jullien, to suit the tastes of the various nations, has selected the Russian National Hymn, the Marseillaise, the Song of the Girondins ("Mourir pour la patrie") the Troubadour's air ("Partant pour la Syrie"), the military *pas* of the French (including Auber's "Pas Redoublé"), the Spanish "Zapateado," or clog-dance of *La Mancha*; the "Cachucha" of Andalusia, the Sicilian Serenade, the Neapoleon "Tarantella," the Piedmontese "Monferina," "Rule Britannia," the "Row Polka," Carlotta Grisi's "Trandaise," &c., and all these materials, highly spiced, are served up in an exciting "*potage à la Jullien*." The enthusiasm of the audiences for this quadrille knows no bounds, and the theatre is nightly filled to overflow. The soloists deserve especial praise: M. Sonalle performs on the "corno-muss," one of the new sax inventions, excellently; the tone partakes of the volume and richness of the clarionet and the bassoon. Pratten, Collinet, Delavigne, and Lazarus have the flute, flageolet, oboe, and clarionet variations. Baldacci, as the ringer of the bob-major, and as the castanet player, must be mentioned honourably. Lavey blows in the monster ophecleide, which makes itself heard; but the huge octo-bass, or colossal double-bass, is not audible as yet: perhaps we may be favoured with a duo between it and the gigantic drum. The Ciebras tinkle the guitar, and Streather strikes the harp. Sommer on the euphonicon, and Cioffi on the trombone, display striking skill: and Koenig is, of course, prominent amongst the obligato bits with his cornet. The drummers are especially noticed in their "roulement serré," pas accelerè, "chamade," saint d'honneur, &c.: their souls are evidently in arms, for their beat is full of crispness and precision. M. Jullien has appropriated "the all-absorbing subject of the day" most opportunely; his Quadrille will make a great noise for some time to come.

SKETCH FROM THE NEW DRAMA OF "JESSIE GRAY," AT THE ADELPHI THEATRE.

GRAND NATIONAL CONCERTS

Divers essays have been made by composers to introduce into the concert-room dramatic compositions of a connected nature, dispensing with theatrical adjuncts. Various titles have been given to such works: they have been styled Serenatas, Cantatas, Choral Symphonies and Fantasias, Ode-symphonies, Lyric Sketches, &c. The "Acis and Galatea" and of Alexander's Feast," of Handel, the Choral Symphony and Chora. Pianoforte Fantasia, by Beethoven; the "First Walpurgis Night" and "Lobgesang," of Mendelssohn, the "Desert" and "Christ Iumbus," of Felicien David; the "Romeo and Juliet" and "Faust" of Berlioz; the "Lay of the Bell" of Romberg; the "Song of the Shell," by Severn; and other productions of the concert-room class, may be recollected; but, despite of the infinite talent, and even genius displayed in all these attempts, the feeling has been that they were conducted to do justice to the inspirations of the poet and composer. Nothing daunted by the experience of past days, the directors of the concerts at Her Majesty's Theatre, resolved to afford encouragement to our native composers, as London will learn with shame be it recorded—without a National Opera House, by inviting Messrs. Macfarren and Loder, already known as popular musicians, and Mr. Howard Glover, an untried professor of considerable promise, to compose scenarias for the Grand National Concerts. Whatever may be the degree of ultimate success attending their production, the thanks of the musical public are due to the direction for their spirited experiment, and it is only to be regretted that their time and capital had not been spent in the first instance to the promotion of such a desideratum as an English opera. Mr. Macfarren's serenata, "The Sleeper Awakened," the words by Mr. John Oxenford, produced with such decided success on the 18th inst., would have been more appropriately termed a trifle on the stage; in its actual shape, even curtailed as it has been, since the first performance, it is to be feared there are no elements of permanent popularity. The poem is a complete nonentity, and the music, though full of graceful points if put in action with scenic accessories, even with the aid of the book, the Serenata is dull and heavy, to listen to for hours. The subject of such a work, to fix attention in a concert-room, should be essentially attractive and not incidental like the lively story of "The Sleeper Awakened," derived from the "Arabian Nights Entertainments" Weber selected a portion of Abon Hassan's adventures, with the Caliph Haroun Alraschid, for his comic opera, produced at Darmstadt in 1810; O'Keefe, in the "Dead Alive," in 1781, dramatized the main incidents; and Dimond, in 1825, at Drury-Lane Theatre, with the aid of the late Mr. T. Cooke, and Edward Weber's concerts, which had a run of 31 nights, Mr Paul Bedford being the *Caliph*; the late C. Horn, *Abon Hassan*; Harley, *Zabone*; Browne, *Meroure*; Mrs. Orger, the *Sultana*; Miss Graddon, *Zuleena*; and Mrs. Harlowe, *Nouzamonde*. Mr. Oxenford has, however, not taken the disheartening course followed by *Abon Hassan* and his wife, when reduced to distress, of passing themselves off for dead, but he has fixed upon *Abon Hassan's* first interview with *Haroun*, when the former is conveyed to the palace, and is made to believe that he is the *Caliph*, and, in that capacity *Abon* exercises power and patronage. The adapter's object in this instance, to prove the fidelity of *Abon* to his *cara sposa* and *vice versâ*, is ingenious and well carried out, if his knowledge of the resources of the stage, but as a Serenata, the drollery of the delusion does not affect a concert auditory, notwithstanding Mr. Sims Reeves' comedy as *Abon Hassan*, and Angri's evident enjoyment of her part as the devoted wife.

Mr. Macfarren's music necessarily suffers from the mistake in the form of the poem: he had to carry on a series of rapid incidents in accompanied recitative, or in concerted pieces; and, consequently, the concentration and musical resources of a fine orchestra could not be called into play in descriptive imagery. The result is, therefore, that there is a comic operetta, the solos, duos, trios, and choruses in which would tell infinitely better if heard separately, the connecting link of the *mise en scène* being wanting. Mr. Macfarren's musical abilities always induce the expectation of something clever and effective, even if his works be not stamped with the marked individuality of genius; and, in this instance, he has been felicitous in the management of the voices, which are generally operatic, and his writing more free from those experimental eccentricities which were objected to in his early productions. The spirited overture in E flat, *allegro assai*, is extremely well constructed, and has scarcely been sufficiently appreciated by the public; the passages for the *celli*, and the *pizzicato* for the violins, whilst the brass are employed, are delicious; and the wnole conduct of the accompaniments is eminently learned in the science of the art, and poetical as well as thoroughly musician-like. The introductory concerted piece, which reminds one of a similar situation in Donizetti's "Elisir d'Amore," is animated. The duettino, "Oh, what joy my heart is bloqding," sung by Angri and Reeves, is elegant. The oriental prayer, "Mighty Allah rules the East," is constructed in massive proportions, and would tell powerfully on the stage. The tact with which the voices are employed, first in unison, and afterwards in rich harmonies—the clever employment of the bass voice and drums, and the fine contrapuntal treatment of the whole prayer, the theme of which will strike the ear as that of the "Ouvre toi" in Meyerbeer's "Huguenots," are equally remarkable in this piece of truly Eastern colouring. The following march is also in excellent keeping with the prayer. The two songs of the *Caliph*, "Beautiful light," with its pretty words, and the serenade, "Oh, listen," are very indifferent song by Mr. Bodda. Mr. Bodda, also has two well-written airs, "The Caliph sits in a hall of gold," and a ballad, "She is not here," which he sings admirably; the latter appears to be the favourite, as the last night's performance Madame Angri has an artistic, "Should joy with smiling face," an ear-catching theme; a bravura song, "Come! he's gone," full of brilliancy; a most charming ballad, "Forget it not," quite a gem, from the pen of this gifted young lady. The concerted pieces, the clever canon, "Hush, hush!" the trio and scena, with elegant vocal cadenzas, and the unaccompanied trio, "When heart to heart," must be cited. The chorus, "Hush, hush!" so thoroughly Weberian, and the very Donizetish chorus of rebles, "Oh, may thy hours of sleep," seemed to make the best impression.

The departure of the celebrated Berlin Choir is announced for the end of the month, much to the regret of all those admirers of the perfection of part-singing who have heard their unrivalled performances.

MONTHLY CONCERTS OF ANCIENT AND MODERN MUSIC.—The first of a series of eight musical entertainments was given on Wednesday night, at St. Martin's Hall, under the direction of Mr. Hullah. The weather was anything but auspicious, but there was a very good attendance. The first part opened with Beethoven's Mass in C, the soli sung by Miss Birch, Mrs. Noble, Messrs. Lockey and Bodda. This fine work, although it does not contain the striking originality and colossal grandeur of the subsequent service in D, is full of sublime writing: in a concert-room it suffers in the execution, for the same reason as an opera; in the mass the effect action is required to fill up the intervals between the pieces, which change in key frequently, and, of course, have no connecting link. After the Papal service, the National Anthem was sung. The second portion of the programme was secular, commencing with Handel's first Concerto for stringed instruments, with obligati for first and second violins and violoncel o, played by Messrs. Blagrove, Watkins, and Lindley, and the first part of "L'Allegro ed Il Penseroso," a cantata, concerto, although admirably played, is dull; and nothing but Handel's name could rescue such a work from the musical library. The "Allegro" is also music of a bygone day, interesting only to antiquaries and ancient amateurs, who have a traditional reminiscence of hearing Madame Mara sing the bravura song in it. Certain pieces bear the stamp of the composer's genius, and will always find their way to the modern concert-room: such is the inimitable laughing air and chorus, "Haste thee, Nymph;" the tenor arias, "Come, and trip it," which we admit me of thy crew," with its delicious violin accompaniments; and the soprano song, "Sweet Song," with its flute obligato, for the *tours de force*. Miss Birch sang the latter very cleverly, and Mr. Bodda in the tenor songs showed what he desired in his tenor solos. Mr. Bodda's mirth in the laughing song was quite infectious, and it was encored amidst a sympathetic roar, the chorus taking up the points very ably, without requiring the same encouragement from the audience in case. The *début* of Miss Kearns, a soprano, was one of interest: she is the daughter of the late Mr. Kearns, a viola player, and one of our most skilful musicians. She was very nervous, but she has a voice and style of considerable promise. All to be turned to the best account with experience. There was a large chamber organ, not very good in tone, at which Mr. Hopkins, of the Temple Church, officiated with ability; and Mr. Blagrove led a small but compact orchestra. Mr Hullah conducts carefully and correctly, although a little too nervous. The choral singing was marked with precision in the attacks, but is as yet very deficient in light and shade

MUSICAL EVENTS.—The Liverpool papers record the complete success of Mr. C. E. Horsley's new oratorio of "David," performed by the Philharmonic Society, on the 12th instant. Miss Birch, Miss M. Williams, Messrs. Lockey, Armstrong, and Weiss were the principal singers. Mr. W. T. Best was the organist, and Mr. C. E. Horsley conducted his own works. There were several encores, and the composer was called for at the termination. The local critics recommend considerable curtailments; and, whilst they praise the talents of the young writer, who was both poet and musician on the occasion, recommend more individuality in his style, the Mendelssohn model being too palpable throughout the oratorio. It is to be hoped that an early opportunity will be afforded to the Metropolitan amateurs of hearing the work. The Liverpool Philharmonic Society, by thus introducing Mr. Horsley, and, at a former period, M. Sllas, to the notice of the musical public, deserves the highest praise. The Bath Harmonic Society will also first meeting for the season on the 18th instant; the president, the Marquis of Thomond, in the chair. The noble Lord called for the National Anthem at the beginning, and it was repeated at the end of the concert amidst the greatest enthusiasm. Mr. Bianchi Taylor conducted, and Mr. G. Field was the pianist, glees, trios, madrigals, &c., by Macfarren, Hindle, Sir H. R. Bishop, Knyvett, Willye, Barnett, Stevens, T. Cooke, Braham, Mr. Calcott, Elliott, T. Linley (the Parsee), Mozart, Weber, &c., were included in the scheme.—The Choral Harmonists gave their second concert last Monday night at the London Tavern. André's Mass was in the first part, and Weber's madrigal, "O fons gave me fairest flowers" (1598), and the whole of the music from Weber's "Oberon," formed the second part: the third meeting will be on the 16th of December.——Mr. Henri Laurent, the composer of the opera of "Quentin Durward" and brother of the able conductor, Mr. Laurent, jun., has been nominated musical director at Drury-lane Theatre for the ensuing season, under Mr. Anderson's management.

——A young *pianiste*, ten years of age, Miss E. M. Waugh, of Monmouth, has exhibited such promising talent that it is contemplated to place her in the Royal Academy of Music in London as a pupil, the best resolution that can be adopted by her friends to insure her an excellent musical education on moderate terms.

——Miss Dolby's second subscription *soirée* was given last Tuesday.——The musical and dramatic entertainment of Madame Anna Thillon and Mr. Hudson will be presented next Tuesday for the first time.——After three performances of *Robin* on her return, Mdme. Vardot has appeared, for the first time, at the French Grand Opera, in *Valentine*, in the "Huguenots." Auber's "Enfant Prodigue" will not be produced before December.——Barbière's "Columbus" has been most successfully produced at Hamburgh.——Mercadante's "Schiava Saracena" has been brought out at Naples.——Verdi's "Attila" at Florence, and De Bassini. It was originally produced at Milan, last year.——Lauro Rossi's "Figlia di Figaro" has been revived at the Carcano, in Milan, with marked success.——The Reverend W. W. Cazalet, M.A., has been appointed General Superintendant of the Royal Academy of Music.——On Friday next the Sacred Harmonic Society will commence their annual series of oratorio performances with Handel's "Messiah," conducted by Costa; Misses Birch and Dolby, Messrs. Lockey and Whitworth, being the principal singers

At the sixth of the Holborn National Concerts, last Monday, Mrs. Wilson, the Misses Lolly, Miss Leffler, Smith, Goddard, Ford, &c., were the principal singers. The Misses Jolly, who have both contralto voices, are the daughters of the composer of that name. They sang their father's duet, "Beautiful Summer," in which they were encored, as, indeed, in all their pieces.——The Apollonicon, the well-known instrument, constructed by Flight and Robson, is now daily exhibited at the Adelaide Music-hall.——Mr. and Mdme. Durv have engaged the Berlin Choir for a morning performance at Brighton next Monday

FINE ARTS.

FISHER'S DRAWINGBOOM SCRAP-BOOK. 1851. By CHARLES MACKAY, LL.D. Jackson.

On the gay and golden flush of intellectual gift-books which was wont to cover our drawingroom tables at this season of the year, there belongs to us one of the few survivors. This year it maintains this distinction with a score of portraitures of Beauty in her highest phases and most fascinating forms—from the purest of the pure Sole to the children of the country North, as well as of the distant climes. The artists of this gallery of surpassing loveliness are Miss Fanny Corbeaux and Messrs. Chalon, Farris, Wood, Haytor, and Stephanoff, whose designs have been rendered with exquisite fidelity by the engravers. There are also a few charming pictures of graceful childhood, appealing to our fonder affections and sympathies; and some cleverly-executed landscapes, by Cattermole and Allom, possess a kindred claim upon our admiration. Associated with the saddening realities of the year are the portraits of Sir John Franklin and Sir Robert Peel. There is also a pair of beautiful pictures from sacred story.

As heretofore, the plates are accompanied by poems, the majority from the well-practised pen of Mr. Mackay, but even these have not the false sentiment too often traceable in compositions of this class; nor do they breathe overstrained grief or affected sorrow; but they are characterised by a far healthier tone of thought, with a sparkling occasional vein of imagery and chastened reflection Chivalrous incident has been cleverly wreathed by the poet in a few of his Illustrations. The following lines, of the true lyrical spirit, accompany a picture (by F. Corbeaux) of a page knight and his "ladye," and the accessory amusements of hawk and hound

HAPPY DAYS

Come back—come back—thou youthful time!
When low and tuneful
When life was in its vernal prime,
And rainbow colours were
Come back! and let us roam once more,
Free-hearted through life's pleasant ways,
And gather garlands as of yore.
Come back—come back—ye happy days!

Come back—come back—'twas pleasant then
To cherish Faith in Love and Truth,
For nothing in dispraise of man
Had soured the temper of my youth;

Come back!—and let us still believe
The promises dream comes to-days,
Nor trust the tale that men deceive,
Come back—come back—come back—ye happy days!

Come back, oh freshness of the past!
When every face seemed fair and kind,
When summer's every eye was cast,
And all the shadows fell behind
Come back! I will come true hearts can turn
Their own discomfiture into Mays.
The secret be it ours to learn,
Come back—come back—ye happy days!

The roll of contributors includes Mrs. Edward Thomas, Le Chevalier de Chatelain, the author of "The Patrician's Daughter," Thomas Miller, and Shirley Brooks.

NEW MUSIC.

SHAKSPEARE'S VOICE TO ROME. The PROTESTANT SONG OF THE NATION. Composed by CHARLES CHURCHILL and EDWARD Kent and Stahl.

Advantage has been taken of the present religious excitement, to publish diver national ballads, and amongst these occasional productions the above can be favourably quoted. The words founded on the much-employed quotation from "King John," against the Papal assumed authority, are appropriate and spirited, and the music forcible and melodic, with a vigorous *refrain* for a chorus.

ORIENTAL DIORAMA.

On Thursday evening we visited, at a private view, Mr. Stocqueler's "New Scenes of Life in India," as a sequel to "the Overland Route," of which this gentleman was the author. This new diorama, as it is called, is to be exhibited at Willis's Rooms, King-street, St. James's, and consists of 24 brilliantly coloured pictures, which succeed vertically through a golden frame, and present the spectator with an interesting series of views, commencing with Calcutta, the Hooghly, the planter's bungalow and drawingroom. These are followed by more exciting scenes, descriptive of tiger-hunting; after which the supposed traveller is invited to repose under the banyan-tree. Other wild sports are also depicted, such as hog-hunting in the Deccan, and the charge of the boar. There are likewise a few of the scenes which are of rare merit, such as the Taj, at Agra, and the procession of a native prince through the streets of Bombay and Madras These different illustrations of Oriental places and people are accompanied with explanations by Mr. Stocqueler, who delivers himself in a free and easy manner. It will be perceived that the series is confined to the most familiar Oriental views; and, though the figures might occasionally be improved, the painting is on the whole, respectable in point of art, and constitutes an agreeable means of conveying information.

The *Wigan Times* states that Robert Wright, clerk and traveller to Mr. Morris, of Wigan, spirit-merchant, is in custody, charged with embezzling nearly £1000, the property of his master.

On the 24th ult., two boys quarrelled at Ness, in Cheshire, when one threw a stone, which struck the other behind the ear. He fell, was conveyed home, and, after lingering a few days, died of concussion of the brain. A verdict of "Manslaughter" has been returned against the assailant.

MONETARY TRANSACTIONS FOR THE WEEK.

(From our City Correspondent.)

The prevailing tone of the English Market during the week has been in favour of advancement, arising principally from the absence of any immediate fears of war between Austria and Prussia. Consols quoted 96¾ ⅞, for Money. On Monday last improved to 97 ⅛, and the transactions by the Government broker on Wednesday further strengthened the market, Consols having been done at 97⅛ for Money, a quotation that was not, however, fully maintained until the close of business. Since which increase in the value of money, added to the uncertainty which exists as to the view which the Prussian Parliament may take of the state of German affairs on Thursday (this day), has caused a reaction, and Consols have declined upon this day; Consols ranging between 96⅝ and 97⅛ for Money, and 97 to ⅛ for Account. There is scarcely a fractional variation in the value of Exchequer Bills or India Bonds, nor has much business been done in the bearer stocks. The books of the Bank of England are announced to close on the 12th of December, opening about the middle of January next. At the close of the week the Market was not buoyant, quotations being—For Bank Stock, 212; Reduced, 96⅞; Long Annuities, 15 1-16; India Stock, 264; India Bonds, 97; Exchequer Bills, 97¾, Long Annuities, to expire Jan., 1860, 7 13-16; India Bonds, 89 p; South Sea Stock, Old Annuities, 96⅝; Consols for Account, 97; Exchequer Bills, £1000, June, 98 p; ditto, £500, 98 p; ditto, small, 98 p.

Business in the Foreign house has been limited, but prices were, until Thursday, well maintained. Mexican then became heavy, receding from Tuesday's price of 21⅜ 22, to 21⅛ 21⅜, the transactions having been from 21⅜ to 17⅞. Russian Four-and-a-Half per Cents are also heavier; the Market closing dully at the following rates: Danish Bonds, 1825, Five per Cent., 99⅝; Mexican, Five per Cent., 1846 (Account), 21⅛; Portuguese, Five per Cent., 39; Russian Bonds, 108; Ditto, Four-and-a-Half per Cent., 95¾; Spanish, Five per Cent, 1840, Account, 18; Ditto, Passive, 3⅜; Ditto, Three per Cent., 39⅛; Ditto, Account, 39⅛; Venezuela Bonds, Four-and-a-Quarter per Cents, 31⅛; Dutch Two-and-Half per Cent, 62 Guild., 57; Ditto, Four per Cent., Certificates, 87⅝.

The Railway market closes buoyantly this week, particularly where the traffic receipts keep up. Considerable speculation in the low-priced shares also exists, which makes it the interesting market that neither the dividends or appear ever probable to do so. Prices last quoted are—For Aberdeen, 11⅛ ⅜; Ambergate, Nottingham, Boston, and Eastern Junction, 1⅜; Caledonian, 10⅛ ⅜; Ditto, New, 5⅛; Ditto, Preference, 5⅞; Chester and Holyhead, 15; Ditto, New, 1⅛ ¼; Eastern Counties, 6⅞; Do., Extension, 5 per Cent. No. 2, par; Do., Eastern Union, Scrip, par; Do., Extension, 3½ ¾; Edinburgh and Glasgow, 24½; Great Northern, 14⅜; Ditto, Halves, A, 4½; Ditto, Preference, 12½; Great Southern and Western (Ireland), Eighths, 3; Great Western, 72½; Ditto, New £17, 10½; Lancashire and Yorkshire, 48 ½; Ditto, Ditto, New, 9½; Guaranteed, 12⅜, Leeds and Thirsk, 12; London and Blackwall, 7⅜, London and North-Western, 118⅜; London and South-Western, 69½; Manchester, Buxton, and Matlock, 1; Manchester, Sheffield, and Lincolnshire, 25; Ditto, New, 12; Midland, 42⅜; Ditto, £50 Preference, 13½; Newmarket, 1½; Norfolk, 18½; North British, 7⅜; North Staffordshire, 7⅝; Oxford, Worcester, and Wolverhampton, 18⅜; Shrewsbury and Birmingham, Guaranteed, 10; Shrewsbury and Chester, Preference, 14; Shropshire Union, 2⅜; South Devon, 14; South Staffordshire, 6⅜; South-Eastern, 20⅜; South Wales, 25⅜; West Cornwall, 41; West London, 6⅜; Wilts, Somerset, and Weymouth, 44; York, Newcastle, and Berwick, 17⅜; Ditto, G.N.F., Purchase or Preference, 5⅜; York and North Midland, 23½; Ditto, Preference, 8⅜; Boulogne and Amiens, 8; Central of France, 14⅜; Dutch Rhenish, 9⅜; Luxembourg, 1⅜; Namur and Liege, 8; Northern of France, 14⅜; Paris and Rouen, 24½; Rouen and Havre, 9⅜; Tours and Nantes, 3⅜.

SATURDAY MORNING.—Consols scarcely varied yesterday, quoting ⅞ by for a short period 96⅞ for Money; and closing at 96⅞ ⅞ for Money, and 96⅞ 97 for Time. Shares were neglected. The Foreign Market was very inanimate, with a most limited amount of business.

THE MARKETS.

CORN EXCHANGE (Friday). The total supply of English wheat received up to our market this week coastwise has not exceeded 2680 quarters. The receipts by land carriage and sample fresh up to-day being trifling, the stands were very scantily supplied. For all kinds of wheat of home production the demand ruled tolerably firm, and a good clearance was effected at Monday's improvement in value. The show of foreign wheat was comparatively trifling, the imports not having exceeded 1700 quarters. In some instances Dantzig qualities were held for a shade more money. All other descriptions ruled steady, at full currencies Barley, of home growth, was small, mixed off fresh, and of fully late rates. The supply of malt rendered the trade very seasonably good. All kinds were slow in sale, but not cheaper. Selected samples of new command 56 per quarter, for export. In the way of the middling and inferior kinds no change took place. Beans and peas were a slow sale, but Indian corn and flour were quite as dear as last week.

Wheat—English, wheat, 2680; barley, 2500; malt, 1950; oats, 1270; flour, 300 Irish oats, 1000; flour, 1000 sacks; wheat, 17 0; barley, 36 0; oats, 27 0; flour, 32s0 quarter

English.—Wheat, Essex and Kent, red, 38s to 42s; ditto, white, 40s to 50s; Norfolk and Suffolk, red, 36s to 42s; ditto, white, 38s to 44s; rye, 26s to 26s, grinding barley, 21s to 24s; distilling ditto, 26s to 28s; malting ditto, 36s to 38s; Chevalier and Norfolk malt, 44s to 48s; brown ditto, 42s to 44s; Kingston and Ware, 50s to 52s; Chevalier, 54s to 56s; Yorkshire and Lincolnshire feed oats, 17s to 19s; potato ditto, 19s to 22s; Youghal and Cork, 18s to 19s; ditto, white, 18s to 19s; tick beans, new, 26s to 27s; ditto, old, 28s to 30s; grey peas, 30s to 32s; maple, 30s to 32s, white, 32s to 36s; boilers, 29s to 31s per quarter. Town-made flour, 35s to 38s. Suffolk, 28s to 32s; Stockton and Yorkshire, 26s to 28s per 280 lbs *Foreign:* Dantzig red wheat, 44 to —; white, —s to —; barley, —s to —; oats, —s to —; beans, —s to —; peas, —s to —per quarter. American flour, 26s to 28s per barrel. Canada, 26s to 28s per barrel.

The Seed Market. Canary seed has advanced 1s per quarter, with a steady inquiry. Linseed and rapeseed steady, but all other articles are dull, at late

Linseed, English, sowing, 46s to 48s; Baltic, crushing, 38s to 44s; Mediterranean and Odessa, 42s to 46s; hempseed, 32s to 36s per quarter; coriander, 18s to 21s per cwt; brown mustard-seed, new, 8s to 10s; white ditto, 8s to 9s; tares, 8s to 9s 6d per bushel; English rapeseed, £35 to £37 per last; linseed cakes, English, £8 to £9; foreign ditto, £8 9s to £7 10s per 1000; carraway seed, 24 to 25 per cwt; English, 28 to 30 per quarter; English clover seed, red, —s to —s; extra, —s to —s; white, —s to —s; extra, up to —s. Foreign, red, —s to —s; extra, —s to —s; white, —s to —s; extra, —s to —s per cwt.

Brewers.—The prices of Mild Ales have been from 74 to 72; of household ditto, 62 to 64 per barrel.

Foreign Markets. Prices generally steady. Wheat, 394 114; barley, 14; oats, 73; rye, 24; beans, 28s 9d; peas, 29s 3d

The Potato Market. Average. Wheat, 47s 2d; barley, 24s 2d; oats, 16s 11d; rye, 25s 3d; beans, 29s 1d, peas, 29s 7d.

Oats.—Small, 1s; barley, 1s; oats, 1s; rye, 1s; beans, 1s; peas, 1s.

Teas.—Several public sales have been held this week, at which 5000 chests have sold at full prices. Privately, the demand is steady, and common sound congous is worth 1s 1d per lb

Sugar.—The market is firm, with a moderate business doing in all kinds of raw sugar, and prices have ruled firm. Refined goods the supply of which is increasing—are quoted at full rates.

Coffee.—About 500 bags good ordinary native Ceylons have changed hands, at 54s per cwt; but fine Mocha and Jamaica qualities have ruled firmly.

Provisions.—The arrivals of Irish butter have fully fallen off, there is a better feeling in the market, but fine articles nevertheless prices are not supported. Carlow, Clonmel, and Kilkenny, 74s to 76s; Limerick, 72s to 74s; Cork, 70s to 72s per cwt. English butter is slow in sale, at late rates Fine salt Dorset, 88s to 96s; fine Devon, 68s to 80s per cwt; Fresh, 9s to 10s per dozen pounds. Bacon is in good request. Sale is Waterford, 52s to 54s; heavy, 45s per cwt Irish lard and a downward tendency. Waterford, unaltered, 56s to 58s; Limerick, 54s to 56s.

Tallow.—Owing to [illegible] the demand for [illegible] has been [illegible] P Y C [illegible] 44s 6d; [illegible] 44s; [illegible] 43s 6d; [illegible] 43s; [illegible] 42s 6d; [illegible] 42s; [illegible] 41s 6d; [illegible] 41s; [illegible] 40s 6d; [illegible] 40s; [illegible] 39s 6d; [illegible] 39s; [illegible] 38s 6d; [illegible] 38s; [illegible] 37s 6d; [illegible] 37s; [illegible] 36s 6d; [illegible] 36s; [illegible] 35s 6d; [illegible] 35s; [illegible] 34s 6d; [illegible] 34s; [illegible] 33s 6d; [illegible] 33s; [illegible] 32s 6d; [illegible] 32s; [illegible] 31s 6d; [illegible] 31s; [illegible] 30s 6d; [illegible] 30s; [illegible] 29s 6d; [illegible] 29s; [illegible] 28s 6d; [illegible] 28s; [illegible] 27s 6d; [illegible] 27s; [illegible] 26s 6d; [illegible] 26s; [illegible] 25s 6d; [illegible] 25s; [illegible] 24s 6d; [illegible] 24s; [illegible] 23s 6d; [illegible] 23s; [illegible] 22s 6d; [illegible] 22s; [illegible] 21s 6d; [illegible] 21s; [illegible] 20s 6d; [illegible] 20s; [illegible] 19s 6d; [illegible] 19s; [illegible] 18s 6d; [illegible] 18s; [illegible] 17s 6d; [illegible] 17s; [illegible] 16s 6d; [illegible] 16s; [illegible] 15s 6d; [illegible] 15s; [illegible] 14s 6d; [illegible] 14s; [illegible] 13s 6d; [illegible] 13s; [illegible] 12s 6d; [illegible] 12s; [illegible] 11s 6d; [illegible] 11s; [illegible] 10s 6d; [illegible] 10s; [illegible] 9s 6d; [illegible] 9s; [illegible] 8s 6d; [illegible] 8s; [illegible] 7s 6d; [illegible] 7s; [illegible] 6s 6d; [illegible] 6s; [illegible] 5s 6d; [illegible] 5s; [illegible] 4s 6d; [illegible] 4s; [illegible] 3s 6d; [illegible] 3s; [illegible] 2s 6d; [illegible] 2s; [illegible] 1s 6d; [illegible] 1s; [illegible] 0s 6d; [illegible] 0s; [illegible] 0s 6d; [illegible] 0s; [illegible] 0s 6d; [illegible] 0

A GOLD WATCH and GOLD CHAIN, Manufactured in Diamond case, for £8 8s., at SAML and SONS, 18, Cornhill. The Watch is of the horizontal construction, lowered in four holes, and has a flat dial, finished with exquisitely engraved blue gold dials and cases. The chain is of the best quality. The above elegant presents are sent with perfect security per post to customers in any part of the world. The manufacturer is grateful for the moderate performance of the watch, and a twelve months trial is allowed

SARL'S ARGENTINE SILVER PLATE.—This beautiful metal continues to stand unrivalled amongst all the substitutes for silver. Its intrinsic excellence, combined with its reduced price, effectually defies all competition. It is upwards of ten years since this manufacture was introduced by Sarl and Sons to the public, and, notwithstanding the many spurious and contemptible imitations the present demand exceeds all former precedents, thus giving a convincing proof of its having obtained a firm and permanent use to produce an article possessing the durability and appearance of solid silver at a moderate cost. The numerous plated stock has recently been enriched with many splendid novelties in dinner, tea, and tea-set services, and never possessed so many attractions as at the present time. The Fiddle pattern includes all the various patterns of forms that are manufactured in solid silver, and orders to any extent can be immediately executed. A new and enlarged supplies of each article in this service is just published, and now ready for execution. It may be obtained gratis by applying at the manufactories.—SARL and SONS, 16, Cornhill

CLARK'S PATENT ELONGATING GUTTA PERCHA ALGOSHES will be found unrivalled in their adhesion, in their easy going galosh or over-shoe [illegible] to put on or take off without touching with the hands, and they require no fastening. They are lighter than any other galosh. Their adhesion to the waist makes them very easy in wear; they are not liable to slip on the heel, and persons who are suffering from sprains will find them to confine the perspiration of the foot, and they are perfectly waterproof.
Sold by all respectable Boot and Shoe-makers. Sole wholesale agent for London, Mr. THOMAS, 3, Cornhill, and 4, Regent-street

GLENFIELD STARCH.—The Ladies are respectfully requested to make a trial of the GLENFIELD PATENT POWDER STARCH, which, for Lightness, Purity, and Excellence, surpasses every other. Sold by all Grocers and Oilmen.

EXCAVATION NEAR CITTA VECCHIA, IN THE ISLAND OF MALTA.

ARCHÆOLOGICAL EXPLORATION AT MALTA.

The island of Malta affords a fine field for antiquarian research, of which advantage has been taken during the last three years in a series of explorations of a very interesting character, at about three-quarters of a mile south-east of Citta Vecchia. We gather from a work entitled "A Pilgrimage to the Land of My Fathers," by the Rev. Mr. Margollouth, of Glasnevin, that the discovery consists of a subterranean temple, excavated under the direction of William Winthrop, Esq., American Consul at Malta; and Walter Lock, Esq., an English officer. The cave is hewn out in the solid rock into the side of the descent to a valley which forms part of the garden of the Roman Catholic Bishop of this island. The cavity consists of three large compartments, each penetrating into the other by parallel quadrangular rectangular excavations, a general view of which we have engraved. The masonic symbols were put up by the two gentlemen who cleared the chambers of the *débris* and rubbish with which they were stopped up. The compartment contains an oblong square altar, surrounded by four benches. The centre chamber contains two rows of seats—in the passage leading to the right-hand chamber—one above the other; and the vestiges of a carved human figure, with a long branched wand in his hand, as well as a representation of the moon, all of which can be traced on a column which occupies the left-hand inner chamber. The right-hand chamber contains the vestiges of a human figure, and a fish-tailed goat.

"The chamber A (says M. Margollouth) I consider to have been the place where sacrifices were offered up. The altar (No. 2) seems to have been constructed on the principle Elijah constructed his, when he confronted the prophets of Baal. Probably the idolators thought that there was some peculiar virtue in such a style of altar building, and imitated it.—(1 Kings, xviii. 32—35.)

"There can be no doubt that the trenches were intended for water, for even now there is always some water in them. It, moreover, appears very plainly that there was once a running spring into them, which was, probably, subsequently intercepted by excavating for water in the garden above. A little water still exudes from the left-hand inner corner of the chamber No. 2. The chamber B, I consider to have been an oratory for the people. I have already stated that this chamber contains the vestiges of a human figure, which I consider to represent a priest in the attitude of consecrating the idol Ashayrah to the moon; and the branched wand intended for nothing more or less than the Ashayrah of Scripture, mis-translated 'grove.'

"In the passage from the centre chamber to the right hand, there are two rows of seats, one above the other, both at the end and a part of the sides. The walls are incurvated at the back of the seats, to afford more ease and comfort to the persons for whom the sittings were intended.

GROUND-PLAN OF THE CAVES.

"The chamber C, I consider to have been the one by which the principal officers entered, and for whom, most probably, the seats (No. 9) in the passage were provided. The right-hand wall of this chamber contains the vestiges of a human figure; and close to it, those of the fish-tailed goat, which I take to be some astrological record. The fish-tailed goat was the Capricorn of the Babylonian Zodiac, as may be seen in the representations of the zodiac of Dendera. Taking the above few particulars into account, one must come to the conclusion that the recently-discovered subterranean temple was the workmanship of some of the earliest inhabitants of the island of Malta. It is not at all unlikely that the Egyptians, if not the Phœnicians, worshipped in it. Dr. C. Vassallo, the Government librarian, arrived at the same conclusion, though from different premises."

The latest journals make further mention of the ancient chambers recently discovered near Citta Vecchia, which Dr. Vassallo, the Government librarian, considers, from the squareness of the forms, to be an excavated Egyptian temple of the time of Psamsetichus, about seven centuries B.C.

The writer, in the *Malta Mail*, of the account of these discoveries considers it a pity that the land in front of this triple excavation is not removed for a short distance, in order to bring to our knowledge whether anything was constructed before it, which is highly probable. Indeed, the man who rents the field, states that, once, a massive wall was found near, under ground, and that this attracted attention to the three entrances, then almost entirely covered up.

PRESENTATION OF A DAHOMEAN PRINCESS TO THE QUEEN.—Capt. Forbes, of her Majesty's ship *Bonetta*, lately brought with him to this country a young African Princess, presented to him by the King of Dahomy. Her Majesty, having been informed of the circumstance, graciously signified her intention of taking charge of the child, and, having appointed Saturday last for the presentation of the Princess, Captain Forbes, accompanied by his interesting charge, accordingly attended on that day at Windsor Castle for the purpose, when the young Princess, who is not more than eight years of age, was presented to the Queen and the Prince Consort, in the presence of the Prince of Wales, the Princess Royal, other members of the Royal Family, and several of the Royal household. The circumstances connected with the possession of the black Princess by Captain Forbes are curious. The gallant Captain (who is son of Captain Forbes, of Winkfield-place, near Windsor) had been engaged in negotiating a treaty with the King of Dahomy, having for its object the termination of the export of slaves from that kingdom. This interesting child, considered to be of high rank, had been captured by the King from a neighbouring ruler with whom he had been at war, and had been detained as a close prisoner, not having been disposed of (as is the custom of his Dahomean Majesty with captives of inferior rank) to the Portuguese and Brazilian slave-dealers. She had been closely confined for nearly two years, when she was presented (as a mark of the highest respect and as an especial favour) to Captain Forbes by the King. After the formal presentation of the little Princess to her Majesty at Windsor, she returned with Captain Forbes to Winkfield-place, where she will remain until the necessary arrangements be made for her future education, under the auspices of her Majesty. Since her arrival in this country she has made considerable progress in the study of the English language, and manifests great musical talent and intelligence of no common order. Her hair is short, black, and curling, strongly indicative of her African birth; while her features are pleasing and handsome, and her manners and conduct most mild and affectionate to all about her.

SONGS AND HYMNS OF LIFE.—No. IV. TEARS.

O ye tears! O ye tears! that have long refused to flow,
Ye are welcome to my heart, thawing, thawing, like the snow;
I feel the hard clod soften, and the early snow-drops spring,
And the healing fountains gush, and the wilderneeses sing.

O ye tears! O ye tears! I am thankful that ye run,
Though ye trickle in the darkness, ye shall glisten in the sun.
The rainbow cannot shine, if the drops refuse to fall,
And the eyes that cannot weep are the saddest eyes of all.

O ye tears! O ye tears! till I felt ye on my cheek,
I was selfish in my sorrow; I was stubborn, I was weak.
Ye have giv'n me strength to conquer, and I stand erect and free,
And know that I am human by the light of sympathy.

O ye tears! O ye tears! ye relieve me of my pain;
The barren rock of Pride has been stricken once again:
Like the rock that Moses smote amid Horeb's burning sand,
It yields the flowing water, to make gladness in the land.

There is light upon my path! There is sunshine in my heart!
And the leaf and fruit of life shall not utterly depart.
Ye restore to me the freshness and the bloom of long ago—
O ye tears! ye happy tears! I am thankful that ye flow!

CHARLES MACKAY.

FOREIGN POST-OFFICE MONEY-ORDERS.

(To the Editor of the ILLUSTRATED LONDON NEWS.)

Will you allow me to intrude on your space a proposition which, I think, is of some importance, and not impracticable. It is anticipated that in the "Year of All Nations," 1851, London will be visited by an immense number of foreigners; and it is not unreasonable to presume that most of these visitors will have to pay for what they may eat, drink, or purchase, and will necessarily require frequent remittances of funds of various amounts. Would it not be a great convenience, if Post-office orders, which, I believe, are granted by every Post-master in France, could be made payable at the General Post-office in London. I hope, however, if any arrangement is made between the two Governments, that payments will not be limited to Paris or London, but will apply generally to all parts of both countries. Suppose A., at Nantes, remits a Post Order to B., at Nottingham; payment should be deferred until the postmaster at Nottingham has received advice from the General Office in London. All letters passing between the provincial and General offices of the two countries should go free. Should the Government hesitate to adopt this arrangement, probably the Executive Committee of the Great Exhibition might take the matter in hand, and establish at the Exhibition a *bureau* for the changing or cashing of foreign Post-office orders; or it might be worth while for some of our City money-changers to announce the discounting foreign Post-office Orders, under certain regulations to prevent fraud or forgery.

I am, sir, yours obediently W. L.

CHURCH, UNIVERSITIES, &c.

OXFORD.

MR. HOPE'S MUSEUM.—Mr. Hope's entomological collection will be shown to members of the University, and strangers introduced by them, on Mondays, Wednesdays, and Fridays, from two to three o'clock, during the academical term, till further notice.

A ROMAN CATHOLIC FELLOW OF ALL SOULS' COLLEGE.—It is said that since the election at All Souls' College, the Warden and the Fellows of the College have addressed a strong letter to the Rev. Mr. Wynne, urging the propriety of his resigning his Fellowship at the College, as untenable with his present position as a member of the Church of Rome. By statute 10 George 4, c. 7, s. 16, Roman Catholics are still excluded from holding any office in a College; but there are, it appears, considerable practical difficulties in the way of displacing a fellow once elected.

PREFERMENTS AND APPOINTMENTS.—The Rev. Theyre Townsend Smith, to an Honorary Canonry in the Cathedral Church of Norwich. The Rev. Frederick Edward Tusen, Vicar of Minsty, in the county of Wilts, to be Rural Dean in the Deanery of Malmesbury. *Rectories:* The Rev. H. C. Pigou, to New Alresford, Hants; the Rev G. R. Summer, to Old Alresford, Hants; the Rev. Thomas Nowell Twopeny, to Little Casterton with Tolethorpe, Rutland; the Rev. Henry Lacon Watson, to Sharnford, Leicestershire. *Vicarages:* The Rev. E. Golding, to Brimpton, Berks; the Rev. W. C. Sharpilton, to Malden, with Cheasington, Surrey; the Rev. William Henry Boscawen, to Hanmer, Flintshire; the Rev. Charles Thomas Corrance, to Parham and Hacheston, Suffolk; the Rev. G. T. Hall, to Hempnall, Norfolk.

TESTIMONIALS.—The following clergymen have lately received testimonials of affection and esteem:—The Rev. H. L. Parker, from his late chapelwardens and many of the inhabitants of Wednesfield; the Rev. Roger Buston, late Fellow and Tutor of Emmanuel College, from the graduates and undergraduates; the Rev. Philip Thompson, Perpetual Curate of Droylesden, Manchester, from his congregation, and also from the members of the order of the Odd Fellows; the Rev. Benjamin John Armstrong, Vicar of East Dereham, Norfolk, from his parishioners; the Rev. W. E. Coales, late Curate of St. Luke, Heywood, Lancashire; the Rev. T. R. Medwin, head-master of the Grammar School, Stratford-on-Avon, from the pupils; the Rev. John Woolley, from the pupils at King Edward VI.'s School, Norwich; the Rev. John Short, Curate of Headingley, from the ladies of that parish; the Rev. W. H. Milner, Vicar of Penrith, from the inhabitants

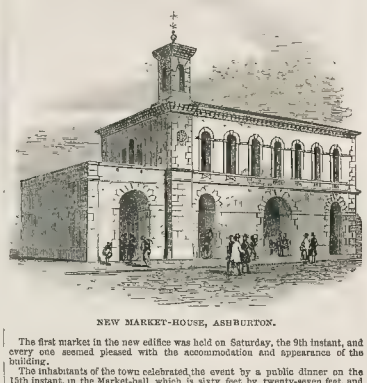
VACANCIES.—*Perpetual Curacy:* Shirebrook, Pleasley, Derbyshire, diocese Lichfield—value, £30, patron, the Rector of Pleasley: Rev T. N. Twopeny, promoted. *The Prebendal Stall of Firle, Chichester Cathedral:* S. J. Tuffnell, deceased. Archdeaconry of Antigua; value, £300; patron, Bishop of Antigua: Venerable R. Holberton, resigned. Hughley R., Salop; diocese Hereford; value, £162, with residence; patron, Earl of Bradford; Rev. B. Howell, deceased. Acton Round P. C., Salop; diocese Hereford; value, £85, patron, Sir T. E. E Acton; Rev. B. Howell, deceased. Llanfechlan R., county of Montgomery; diocese of St. Asaph; void by the death of the Rev. James Price, value, £730, commuted rent charge, with residence and glebe; patron, Bishop of St. Asaph

The election of Lord Rector of Glasgow University took place on Friday week, when, out of the four "nations" into which the students are divided, two voted for Lord Palmerston, and two for Mr. Alison, the historian. Mr. Macaulay, the late Lord Rector, has the casting vote. Mr. Alison has a majority of 30 individual votes.

The funds of the Royal Isle of Wight Infirmary and Casualty Hospital are in progress of being considerably benefited by sermons preached on its behalf throughout the island. The following contributions have recently been made:—St. Helen's parish church, £7 17s. 6d.; ditto, district church, St. John's, £11 14s 6d.; St. Thomas's church, Ryde, £46; Shanklin and Bonchurch, £18; Newport, £15, &c.

NEW MARKET-HOUSE, ASHBURTON.

THIS important addition to the town of Ashburton was incidentally noticed in our Journal of October 26. It has just been completed, from the designs of Mr. A. Norman, architect, of Devonport. It is in the Italian style of architecture having a frontage in North-street of ninety feet in length. The main building is divided into two stories, the lower one consisting of a lofty basement, having one large elliptical and two side circular-arched entrances, which open into the corn-market. The upper story, which rests on a bold granite string-course and panelling, contains seven handsome circular-headed windows, with dressings of granite, which, with a large window at one end, light a spacious and elegant hall, intended to be used for lectures, public meetings, and other general business. The building, being surmounted by a bold cornice, has a very imposing appearance. Over the principal entrance, and elaborately carved in stone, are the arms of Lord Clinton, the Lord of the Manor, and proprietor of the market, at whose expense the building has been erected. At the south corner, and slightly projecting from the main edifice, stands a well-proportioned tower, fifty feet in height, for the clock and bell. The lower basement is composed of massive blocks of rusticated granite; the second and third stories of limestone, with granite quoins, cornices, &c. The building attached to, and corresponding with, the basement of the main front is the Fish-market, which is conveniently situated; a river running close by, from which water can easily be obtained. The whole frontage is of cut limestone, and the mouldings and dressings of granite from the celebrated Haytor quarries. A large open yard, surrounded with butchers' shops, sheds for vegetables, &c., occupies a large space of ground behind the corn-market, and the whole is replete with every accommodation, and well lighted with gas. The builders are Messrs. Marshall, of Plymouth; and the granite work by J. Tickell, of Haytor.



NEW MARKET-HOUSE, ASHBURTON.

The first market in the new edifice was held on Saturday, the 9th instant, and every one seemed pleased with the accommodation and appearance of the building.

The inhabitants of the town celebrated the event by a public dinner on the 13th instant, in the Market-hall, which is sixty feet by twenty-seven feet, and twenty-two feet in height, and was tastefully decorated with flags, evergreens, flowers, &c., on the occasion. Sir B. P. Wrey, Bart., of the Chace, presided.

After the customary loyal toasts, "The health of Lord Clinton" was drunk with enthusiasm.

Amongst a great variety of other toasts drunk during the evening, were "Success to the Market," "Prosperity to Ashburton," &c.

The festivities were kept up until midnight, and the numerous company separated highly pleased with the entertainments and proceedings.

A memorial to Lord Clinton has been drawn up and numerously signed by the inhabitants, thanking him for his liberality in complying with the wishes of the inhabitants, and congratulating his Lordship on the manner in which the arrangements of the Market had been carried out.

The venerable and curious old Market-place, engraved in our Journal of the 26th October, has since been removed, leaving a spacious street approaching the new Market.

NEW CHURCH AT SANDFORD, NEAR ABINGDON.

THE district of Abingdon has long suffered from deficiency of church accommodation, which we are pleased to find will shortly be remedied by the erection of three new churches, one of which is now building at Sandford. The corner-stone was laid on the 15th inst., by the Lord Bishop of the Diocese, assisted by the Rev. N. Dodson, Vicar of Abingdon, and the clergy of the surrounding districts, in the presence of many of the gentry and inhabitants of the neighbourhood.

The service appointed for the occasion was most emphatically delivered, all present joining in the responses; and the Bishop, in a brief and appropriate address, alluded in a feeling and impressive manner to the benefit future generations would derive from the work that day commenced, and urged all present to assist as far as their means would admit, in the carrying out the good work.

On the site selected for the new Church are the remains of an ancient chapel, probably belonging to Abingdon Abbey before its suppression; and from the appearance of the stone amongst the ruins, the chapel was no doubt destroyed by fire.

The new Church, designed by Mr. J. B. Clacy, architect, of Reading, is being built of the native stone, with freestone quoins and dressings.

The style is early English, of the date of the twelfth and thirteenth centuries, and consists of nave and chancel, the latter terminating with an apse groined with stone.

NEW CHURCH AT SANDFORD, NEAR ABINGDON.

The pulpit and prayer desk are to be of stone; the former having a canopy, with entrance from an arch in the chancel wall. The roof of the nave is formed by arched ribs supported on stone corbels. The benches in the nave are of plain but massive and suitable character, and stretched from the walls.

Mr. Thomas, of Abingdon, is the contractor.

The Treasury have issued a special order deciding the duty to be charged upon glass apparatus for chemical purposes on importation; and the officers at the ports have received directions that ground stoppers and caps, and pointy marks, are not to be deemed a cutting within the meaning of the rates in the Act 8 and 9 Victoria, chap. 90; but such articles are to be subject to the duty of 1d. per lb. only, as white flint glass goods, not cut, engraved, or otherwise ornamented.

THE ILLUSTRATED LONDON NEWS

No. 457.—VOL. XVII.] FOR THE WEEK ENDING SATURDAY, NOVEMBER 30, 1850. [SIXPENCE.

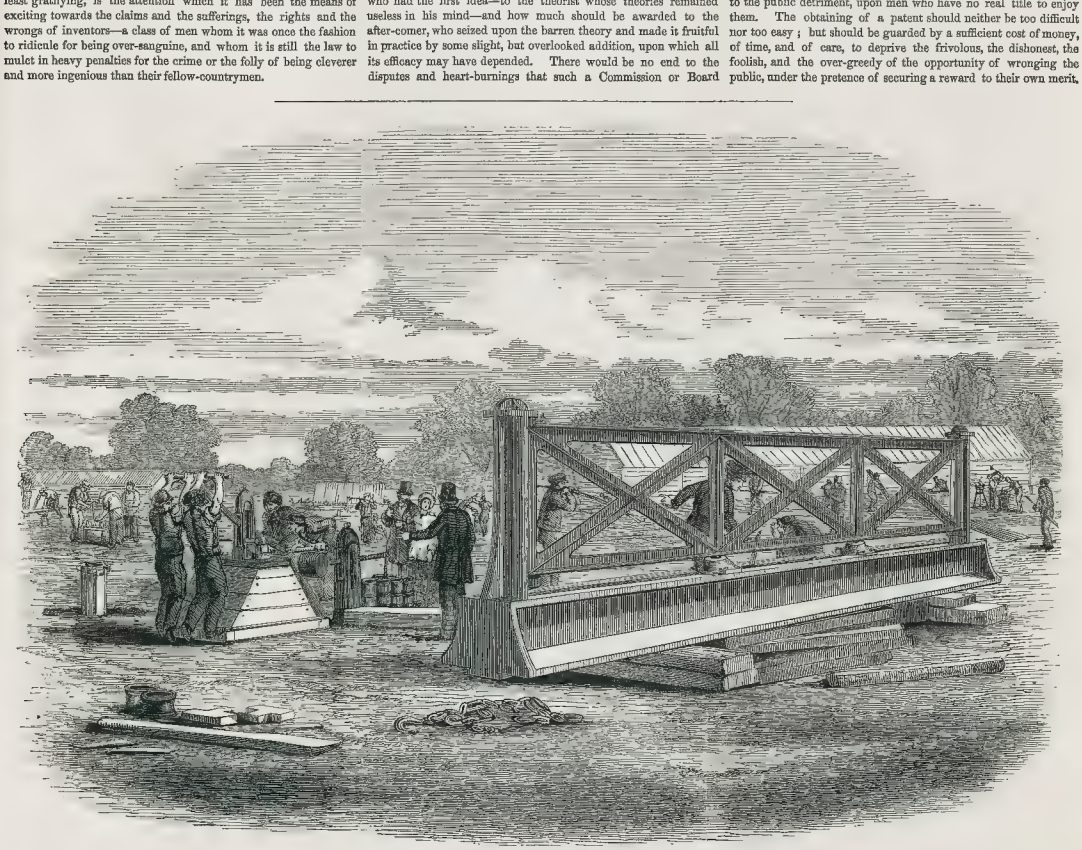
THE PATENT LAWS.

It is the merit of all truly great and well-considered projects of social utility, that they include many advantages besides those which originally entered into the calculation and swayed the judgment of their founders. The originator of the uniform Penny Postage Rate can scarcely have anticipated the numberless benefits that were to flow from the realisation of his project. The inventor of the Electric Telegraph has not, in all probability, so much as dreamed of one tithe of the social blessings that, in the ripeness of time, shall result from the employment of electricity as the messenger of the nations. In like manner, the men who conceived the idea of an Exhibition of Arts and Industry, and a friendly rivalry between the ingenious labourers whose works are the proofs and the results of the civilisation of the world, were not aware of the vast number of collateral advantages that would spring from the original project. Every day some new benefit is shadowed forth, for which we shall have to be grateful to it; and, as the idea develops itself more completely, the people become more and more aware of the poetical grandeur of its conception, and more and more convinced of its practical utility.

Among the many satisfactory results, either near or remote, which have already secured for it the extraordinary popularity which it enjoys, one of the most unexpected, but certainly not the least gratifying, is the attention which it has been the means of exciting towards the claims and the sufferings, the rights and the wrongs of inventors—a class of men whom it was once the fashion to ridicule for being over-sanguine, and whom it is still the law to mulct in heavy penalties for the crime or the folly of being cleverer and more ingenious than their fellow-countrymen.

To have drawn public attention towards, and excited public interest in, the claims of these men, is of itself a gain. The more it is debated, the better it will be for all parties. Yet it must be allowed that the subject is one of very considerable difficulty. At the very threshold of the inquiry as to what can be done for these men, to encourage them in the exercise of that skill and ingenuity which are to benefit them, as well as the nation, we are met by the objection that Patent Laws are altogether wrong in principle; and that, so far from making patents cheap and easily accessible, it would be for the interest of the State to refuse them altogether, and reward inventors by some other agency. It seems sensible enough to suppose that it might be more advantageous for the public to buy the inventor's right, and make his invention free, than to grant him a monopoly of it for any period, long or short. But, on the other hand, it is obvious that a national reward of inventors would lead to endless, and possibly to insurmountable difficulties. To decide what was an invention, and what was an imitation, a piracy, or a re-invention, would require a permanent commission of the wisest heads in the country. Even supposing that these wise men could be appointed, and paid for the purpose, and that the public confidence in their judgment and impartiality might never be shaken by any fault of theirs, it would often defy all the judgment and all the acuteness of such men to fix the money value of an invention; and to say how much should be given to the projector who had the first idea—to the theorist whose theories remained useless in his mind—and how much should be awarded to the after-comer, who seized upon the barren theory and made it fruitful in practice by some slight, but overlooked addition, upon which all its efficacy may have depended. There would be no end to the disputes and heart-burnings that such a Commission or Board would inevitably cause, even with the best possible intentions. Ultimately, the public would have to pay thankless men, if it paid anybody; and it would receive no fair equivalent in the profit of their inventions.

We strongly incline to the belief, that, with all the disadvantages of the legalized monopolies involved in the grant of patents, it is impossible to reward inventors by any other process. The opinions of all practical men seem to unite in demanding two things: first, a classified registry, from which any inventor might ascertain for a small fee whether his invention was new or old—an invention or a re-invention—an idea of his own, or an involuntary piracy of another person's; and, secondly, the payment of a moderate fee—either in one sum or by annual payments during the currency of the patent—for the free enjoyment of the invention and all its advantages; the one fee, or the annual payments, to secure the patent in the three kingdoms. A third *desideratum* is added by some, who have devoted their best attention to the subject: the appointment of a Board or Commission, to decide, in the interest of the public as well as in that of inventors themselves, the patents which ought, and those which ought not, to be granted. There are certain mechanical and chemical forces which are the property of all men; and unless the granting of these monopolies (for such all patents are) were jealously watched, there would be a danger that legal privileges would be bestowed, to the public detriment, upon men who have no real title to enjoy them. The obtaining of a patent should neither be too difficult nor too easy; but should be guarded by a sufficient cost of money, of time, and of care, to deprive the frivolous, the dishonest, the foolish, and the over-greedy of the opportunity of wronging the public, under the pretence of securing a reward to their own merit.



THE GREAT EXHIBITION BUILDING IN HYDE-PARK.—TESTING THE GIRDERS.—(SEE NEXT PAGE.)

The subject is by no means so simple as it appears, but requires the full and honest consideration of practical men before it be finally dealt with. The present system has no friends, unless they are to be found among the few persons who profit by the enormous fees demanded under it. The cost of obtaining a patent for England is £110 ; for Ireland, £135 ; for the whole British Empire and its dependencies, £375 ; being three times more than the cost of a similar privilege in any other country in the world. All this must be remedied ; the process must be simplified ; one patent and one stamp must suffice for England, Scotland, Ireland, and all the dependencies of the Crown ; and the inventor must not, because he is an inventor, be considered as a rogue against whom society must be on its guard, or as a simpleton whom public functionaries may be permitted to rob and to cheat with impunity, and even with applause. The discussions that have taken place have already produced a good effect. They have awakened the careless and preoccupied public to the full importance of the subject, and there seems every likelihood that it will at once receive the attention of the Legislature, and be considered in all its bearings in a wise and liberal spirit, such as befits the country that has produced more mechanical genius, and a greater number of useful inventions, than any other country in the world. It will be strange, indeed, if the years 1851-52 shall have proved us to be superior in arts and industry, but inferior to the rest of the world for the manner in which we encourage and reward those, without whose efforts we should have been unable to compete with credit in that peaceful rivalry which we solicited.

THE GREAT EXHIBITION BUILDING.—DETAILS OF CONSTRUCTION

WE next proceed to illustrate and describe additional details in the construction of the Building, and some of the ingenious machines and contrivances by which so much has already been effected in so short a period of time.

TESTING THE GIRDERS.

Among the various objects of interest which present themselves to the mind of the visitor to the building, one of the most attractive is the method of testing the cast-iron girders (2141 in number, each 24 feet span) which are used throughout the building. This is effected by means of the hydraulic press invented by Mr. Bramah, with apparatus which, doubtless, many readers will remember, avails itself of the peculiar properties of fluids, which being submitted to compression, the whole mass is equally affected, and the compression operates in all directions. A given pressure, for instance, made by a plug forced inwards upon a square inch of the surface of a fluid confined in a vessel, is suddenly communicated to every square inch of the vessel's surface, however large, and to every inch of the mass of any body immersed in the fluid. The apparatus used in the present instance is a modification of Mr. Bramah's invention, and consists of a very strong cylinder, with double pistons of proportionate strength attached to the under side of the frame in which the girder to be tested is fixed, and through openings in which the ends of the pistons pass, so as to apply the pressure upon the exact spots on which the load to be ultimately borne will be placed. Connected with this cylinder is a pipe, leading from the force-pump, below which is placed a tank for the reception of the water. If the area of the bore of the force-pump stands in a certain ratio to the area of that of the testing cylinder, whatever pressure in pounds weight may be brought to bear upon the force-pipe, the same number of pounds weight in testing pistons will be equivalent to as many times that weight as the area of the testing cylinder exceeds that of the force-pump. A valve is attached to the pipe leading to the force-pump, on which a weight, regulated by the proportion of the area to such pressure, is placed ; so that as the pressure upon the testing piston has reached the desired force, the compressed water presses through the force-pipe and raises the weight. If the action of the pump be still continued, the safety-valve in the cylinder of the testing piston is immediately raised, and the surplus water returns to the tank. The amount of pressure used in testing the girders varies according to their strength, and the positions they will occupy in the building : those supporting the galleries are tested at 22 and 15 tons ; and those which bear the roof at 9 tons. Although the weight required to break any of these girders would probably be at least double that to which they are respectively tested, the latter, far exceeds the strain to which the most liberal calculation can imagine they are ever likely to be exposed.

THE GREAT INDUSTRIAL EXHIBITION.

There is no flagging on the part of the contractors, for the steady progress of the building is manifest even to the spectators outside the hoarding. The promise held out, as the Duke of Wellington remarked at his visit last week, by what has been done in seven weeks, shows what may be accomplished in the remaining month. The western extremity has been reached, both the lower and second tiers of columns having been fixed. Some thousand feet of the joists and framework for the flooring have been fitted, and the glazing of the roofs has proceeded uninterrupted by the somewhat severe but very unimportunate attempts to delay their work have arisen with some of the men. Mr Paxton's confidence in the security of the roofing is undiminished ; and during the storm on the 24th, he declared that the rain, which came down in torrents, was a benefit rather than an injury, as it washed off

The general wood-work has been also well progressed with. Some of the louvre or lutter iron plates for ventilation, which we have previously described, have been placed at the top of the inner side of the wood facing, and behind the ornamental "Ellinas."

A good notion of the novel and elegant character of the whole structure may be gathered from the portion of the ground tier opposite the Prince of Wales's gate, which is now completed.

An attempt at an inundation, for a higher rate of wages, by the glaziers, has been promptly suppressed. The progress in their work was deemed insufficient, and it was determined that they should be paid by piece-work. Urged on by some disaffected individuals, a party of the glaziers struck, and sent to replace them were readily found, several relanted, and asked for re-employment, and were informed that their application would be considered when any additional hands were required.

But little damage was done by the tempest of rain and wind. Some planking was loosened, and some few yards of unsecured glass were disturbed. It will be as well here to correct the account of an accident which appeared last week in the morning papers, and which was generally re-copied. No order has given way, or shown signs of weakness The accident occurred entirely from the heedlessness of some workmen, who were using a scaffolding which had been prohibited on the works, and it was at the eastern, and not the western, extremity where the occurrence took place.

The plan adopted for allocating the space, in reply to the demand at large from the United Kingdom of some 4,000 superficial feet, is described in the circular from the Commissioners :—" Upon the averages furnished by *the whole United Kingdom*, and obtained by dividing the total amount of space apportioned to each section by the number of exhibitors in each section, each local committee receives an amount of space in each section proportionately to the number of exhibitors returned by each committee. The proportion of the four sections, as allotted by the Commissioners, is to be observed as nearly as possible. Selection of articles is strongly recommended, so that the special industry of each district may be fairly represented. The distribution of the space is, indeed, an onerous task, and great judgment is more than once impressed as to the issue of the vouchers entitling parties to be admitted. In raw materials and produce prizes will be given according to the value and importance of the article, and to the superior excellence of the particular specimen, as also the particular preparation or process employed. In machinery, novelty of invention, superior execution, increased efficiency, and the particular use of the article will be considered. Articles of manufactures will be rewarded for their increased usefulness, improved combinations of form, strength, &c., quality of the beauty, and the employment of new materials. In sculpture and plastic art, beauty and originality, applications of art to manufactures ; and in models, to their special interest or character."

Vouchers for space will be received up to the 10th of December. Appeal against rejection by the local committee is reserved to the Commissioners

The London committee consists of the metropolitan committees to divide themselves into sectional committees, to reject or admit, with an appeal to the chairman of the committees. One space for London is proposed, and Professor Faraday is to be requested to add their decisions

On Thursday these sections. committees were arranged under their various departments of science and art. Chairmen and vice-chairmen were appointed, and their was a council of appeal, as notified in our last week's Journal.

Vouchers for space in the metropolis duplicate only to be delivered through the sectional committee for the department to which the articles to be exhibited belong

The admission fees are now under consideration [illegible] probably, be issued to admit their holders at all times. During the first month, the charge may range somewhat high ; but it is especially recommended by public men, whose opinion is worth consideration, that every day immediately after the week there should be at least a day in the week when the charge shall be within the means of the working classes ; otherwise it will appear that the "money standard," for which we are already too notorious to foreigners, is to take precedence No "preferential" tickets should be issued, precisely because the would offend the poor but zealous supporters of the great national scheme ; but we do not doubt the discretion of the executive committee will be fully alive to this point.

Advertisements are to be *received only by the printers of the Catalogue*. No personal application will be made for advertisements, which will be received on and after the 20th of January, when due notice of the terms, &c. will be published.

The new Lord Mayor, it is reported, will throw open the Mansion House during the great Exhibition, for occasional public receptions and conversational *soirées*, where all the public celebrities both of our country and of foreign parts may meet. The hospitality of the Mansion House will be amply sustained, as the chief magistrate himself declared at his election ; and the hearty welcome given to the Prince's enterprise by the City of London will be well followed up in the coming year, by the frequent and graceful entertainment of its supporters and visitors, to be inaugurated by the Lord Mayor.

Woo , wheat, hay, roots, British grapes dried, barley, canary-seed, specimens of clay, and ornamental brick are among the productions enumerated by the Colchester authorities.

The staple trades of Nottingham continue their exertions for a full representation of the industry of their town.

Mr. Naismyth has agreed to furnish complete and varied illustrations of the moon, in its various phases

A most complete collection of humming-birds, to display the advances in the art of stuffing, are to be located in one of the cross aisles over. It is affirmed that this illustration will be one of the most unique in the Exhibition.

Wheat and ryegrass seeds, from an enterprising farmer of Elgin, are among the local contributions.

A musical instrument committee has been added to those of the metropolis, consisting of Messrs. Sterndale Bennett, Collard, Professor Taylor, and Sirs H. Bishop, G. Smart, &c

Mr. H. T. Hope, M.P., the owner of some of the most choice specimens of ancient and mediæval jewellery, has been requested to accept the membership of the Westminster local committee, especially presiding over the precious metals, jewellery, &c.

Scotch agriculture is largely represented in the applications from Aberdeen. Barley, oats, ryegrass seeds, turnip seeds, &c. ; grain mills, ploughs, and agricultural implements generally, are preferred. Various mechanical appliances are set down : machine for making fancy biscuits, machine for cutting mortices, a rotatory pump, &c. ; water meters, astronomical and other clocks. There are also land-surveying and philosophical instruments, tailors' measuring apparatus, linen manufactures, knit hosiery, tweeds, and various uses of worsted and yarns; combs in horn, hoof, and shell ; paper, straw-plait, fish oils, naphtha, granite rough and in ornamental use ; models of buildings, a ship of the Victoria Dock, Aberdeen ; model grounds, farm buildings, &c. ; jewellery, pink furniture ; leather snuff-box, in form of a shoe ; gutta percha and leather ornaments ; Scotch pearls ; specimens of the Cairngorm, or Scotch topaz ; granite jewellery ; and a variety of highly interesting and useful miscellaneous productions

Among the proffered contributions from Edinburgh, which are very numerous, appear specimens of cereals, grain, and woods indigenous to Scotland ; machinery of various descriptions used in mills, railways, mines, and agriculture ; hinges, printing presses ; instruments for land surveying, drawing, &c. ; woollen articles, knitted hosiery. Highland accoutrements, jewellery, plate, &c. ; models, stained glass, Scotch pebble mosaics, silver articles, wall decorations, &c.

A model of the town, in porcelain, is promised from Dresden ; which will also despatch numerous specimens of the local ware so widely celebrated.

The transport vessel with the Canadian products will shortly arrive, bearing some 90 or 100 packages, being a first instalment ; to be followed by two others equally remarkable. Mr. Houghton, of Friday-street, is the agent to whom they are consigned

Specimens of carving in deer's horns and ivory, similar to those which have for some time been displayed in Regent-street, are named as likely to arrive from Hamburgh : amongst other articles is an escritoire in deer's horns, &c., which we hear a cost exhibitor upwards of £100

Mr. Wallis has been lecturing the citizens of Cork and Kilkenny to some advantage. Specimens of the local industry are to be prepared in marble, woollens, wood, &c.

A three-ton bacon is promised from Great Dunmow.

The *Glasgow Advertiser* suggests the forwarding of the identical steam-engine fitted by Henry Bell on the first steamer used on the Clyde. It should be fitted in a duplicate of the original vessel (the *Comet*) in which it first acted

The Working-Men's Visiting Associations are spreading rapidly. At Bath, Bristol, Cheltenham, Portsmouth, Liverpool, Poole, Plymouth, Winchester, and various other smaller towns, efforts have been successfully made to establish subscription clubs, some of which include the family of the contributor.

A prospectus for a Mechanics' Home in the Ranelagh-road, near Vauxhall-bridge, on the Middlesex side, has been issued. The advantages embrace well-furnished dormitories, lit with gas, and efficiently watched ; a culinary department, dining-room, news-room, smoking-room, the attendance of a medical man ; and the whole establishment will be subject to the inspection of authorised visitors from the Royal Commission. The charge per night is one shilling ; and provision will be made to accommodate 1000 persons. The executive committee have received the proposal with great satisfaction," and consider it to offer peculiar advantages to the working classes.

SPLENDID METEOR SEEN IN GLOUCESTERSHIRE.

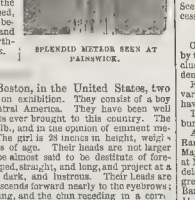
(To the Editor.)

Permit me, through the medium of your widely-circulating paper, to record the appearance of one of those beautiful natural phenomena which are occasionally seen in this climate during serene nights, but seldom observed during stormy weather

The whole of Sunday, November 24, 1850, had passed in continued succession of storms of hail and rain, occasionally driven with a force of wind from the south-east which at times almost amounted to a hurricane ; the mercury in the barometer being very low, and the temperature of the air high, close, and oppressive. About half-past seven P.M. occasionally flashes of light illuminated the dark and stormy sky, while distant thunder added to the roar of elements ; the storm gradually increasing until eight, when an awfully magnificent scene presented itself. An electric cloud, driving before the wind, and from which several flashes of light had proceeded, on passing over the spire of the church, was suddenly and vividly illuminated, and immediately there appeared a brilliant meteorolite of considerable size, emitting a delicately rosy purple light, descending from the cloud to the point of the spire with a noise like the rushing of a rocket on leaving the earth, and which was distinctly heard at a considerable distance above the roaring thunder which accompanied the discharge. On reaching the spire, the ball exploded, scattering its fragments in an arborescent form, which gradually became extinguished as they descended towards the earth. Shortly after this the storm ceased, and in less than half an hour it had become calm, the sky clear of clouds, and a fine auroraborealis appeared in the north-west.

ALFRED LYNE.

Painswick, Gloucestershire, Nov. 26th.



SPLENDID METEOR SEEN AT PAINSWICK.

EXTRAORDINARY DWARFS.—At Boston, in the United States, two extraordinary human curiosities are now on exhibition. They consist of a boy and girl of an almost exhaust race of Central America. They have been well selected as the most likely objects ever brought to this country. The boy is 32 inches in height, and weighs 16lb., and in the opinion of eminent medical authority is about ten years old. The girl is 28 inches in height, weighs 14lbs., and is believed to be about 8 years of age. Their heads are not larger than a new-born infant's, and they may be almost said to be destitute of foreheads, while their noses are finely developed, straight, and long, and project at a well-defined angle from the face. The eyes are full, dark, and lustrous. Their heads are covered with strong dark hair, which descends forward nearly to the eyebrows ; the face very sharp, the upper lip projecting, and the chin receding in a corresponding degree. They are said to belong to the surviving remnant of an ancient order of priesthood, called "Kaanas," which, by constant intermarriage with their own cast, has dwindled down to a few individuals, diminutive in stature and imbecile in intellect. Their heads and faces resemble exactly the figures in the bas-reliefs on the temple ruins described by Stephens's "Central America." These children are lively, playful, and affectionate ; but all attempts to teach them a word of English have hitherto proved unsuccessful. They can only utter a few gibberish sounds. In the course of a visit to their rooms, a medical friend held out his watch to the boy, when he instantly placed his ear in contact with it, as if to listen to its ticking ; and at one time, as he turned affectionately towards a little girl among the visitors, another gentleman told the girl to "kiss him," when he immediately placed himself in an attitude and protruded his face ; the child, however, withdrew frightened, and the gentleman held his mouth to him, when he instantly approached and greeted him with a kiss. They both—but particularly the boy—have a regard for their "keeper," and at all times readily recognise him as he calls them by name. It is not improbable that these children will be carried to England shortly for exhibition

THE FREE PRESS.—On Friday week, a case came before the Court of Assizes of the Seine, Paris, which is a good exemplification of the severity with which the press is treated by the French authorities. A few weeks ago, some articles appeared in the *Corsaire*, under the charge of observator. Everywhere, a very clever article appeared in the *Corsaire*, entitled " L'Ere des Cesars," in which the efforts of Louis Napoleon to impose on the French nation as Emperor, by means of stamps, sous, sausages, and cigars, were ridiculed with considerable effect The article was severe, but certainly not libellous. Having, however, been copied into the *Opinion Publique*, it attracted the notice of the Procureur-General, who raised actions against all concerned. The case came on yesterday, and the result was that M. Courtois, the author of the article, was sentenced to one year's imprisonment and a fine of 3000f. ; and M. Lalouel, the *gerant*, to six months' imprisonment and a fine of 2000f ; while M. Lebeau, the *gerant* of the *Opinion Publique*, was sentenced to three months' imprisonment and a fine of 1000f. The Paris papers are shocked at this excessive injustice and severity, and the few of them which venture to make any remark on the sentence declare that it is not only cruel, but that public opinion is against it.

FOREIGN AND COLONIAL NEWS.

FRANCE.

The most satisfactory news which has been received from Paris for some time past is the intelligence which has been communicated this week, that the French Minister for Foreign Affairs, General de la Hitte, has addressed a note, on behalf of the Government of the Republic, to the Prussian Minister for Foreign Affairs, removing any impression which might have existed in the minds of Prussian statesmen, that Prussia, in the event of a war, would have the moral support of the French Government.

The proceedings in the Legislative Assembly on Wednesday, on the subject of the exclusion of the ex-Royal Family from the French territory, are curiously illustrative of the little regard paid to " privileges of Parliament" by the authorities of the " Great Nation." Shortly before the close of the sitting, M. Creton, referring to his notice of motion on the question, said, " a proposition brought forward by me, relative to abrogating the laws of proscription now in force against the members of the exiled Royal families, was to come on this day for discussion in the regular course of business. I find, however, that it has been removed from the order of the day. I can very well understand that the Government may be inclined to oppose that proposition, but I cannot see why it should prevent its being discussed. I consider the matter important, and have to ask to have the discussion fixed for an early day."

The President of the Assembly replied, that the reason for removing the proposition from the order of the day was that the moment was not opportune for the discussion (1)

M. Creton insisted on his demand, to have an early day fixed for the discussion. The honour of the country demanded that course. (Approbation).

The President : I proceed to consult the Assembly.

The Assembly, being consulted by *assis et levé*, decided that the discussion should take place on Saturday (this day).

It is understood that the Legitimists are opposed to the abrogation of the proscription law, because the Duc de Bordeaux, being resolved not to avail himself of any permission to enter France other than as rightful recognised King, the advantage would accrue solely to the members of the younger branch ; seeing, too, the unwillingness of the Government, as well as of the Bonapartists, to encourage M. Creton's proposal. It is most likely that the motion will be rejected, although by a small majority, perhaps, than on former occasions.

General Grammont's motion, for removing the seat of Government to Versailles, was rejected on the same day in the Assembly by 437 to 184

On Monday evening, General Schramm, the new Minister of War, excited considerable indignation in the Assembly, by affirming, in his objections to Gen. Fabvier's motion for the liberation of Abd-el-Kader, that the convention by which the Arab chief was entrapped into a surrender was perfectly justifiable. General Fabvier's motion was, however, lost by a large majority.

GERMAN STATES.

The Parliament of Prussia was opened by the King in person on the 21st instant, with a Speech from the Throne, in which his Majesty, in reference to the questions which at present agitate Germany, and the actual position of matters in the Confederation, states, that his intention to create a Constitution which shall secure peace to the wants of the German nation has hitherto failed—that, in his hopes of the future, he has clung to the idea which pervaded his endeavours—but that he cannot resume its realization on a new foundation until after the decision respecting the new formation of the German Confederation—that he hopes that the negotiations on this subject will soon come to a prosperous end—that he hopes that the Prussian armaments will suffice to protect their rights—that, if that point can be gained, that armament has no danger for the tranquility of Europe, for his people are not only strong, but also considerate—that he seeks not war, nor to infringe on the rights of anybody, but that his endeavours tend to effect an arrangement of the common father and which shall be suitable to the condition of Prussia.

The Speech has been regarded as being favourable to war ; the Chambers, however, not having yet replied by address to the Speech from the Throne, nothing certain upon the prospect of the future in this respect can be inferred from the proceedings of Parliament. On the general tone of the intelligence, both from Vienna and Berlin, is pacific. Under date the 23rd inst., we learn from the latter capital that a despatch had been received by the Prussian Government from Lord Palmerston, insisting upon the necessity of keeping peace with Austria, leaving the dissensions pending to be settled by the four great powers. Despatches had also arrived from St. Petersburgh, from which it appears that Russia supports the Austrian claims. Strengthened by this support, the Cabinet of Vienna presses on the Prussian Cabinet for an immediate decision on its demands respecting Holstein and Hesse.

Whether war or peace be the result of the pending negociations, the people of Prussia are, at all events, about to pay the price of their military marchings and counter-marchings, in the form of an income-tax of five per cent., which the Cabinet purposes to demand of the Legislature, in order to raise the sum of 60,000,000 dollars

ITALIAN STATES.

The agitation excited in England by the recent introduction of the Papal Bull, re-constituting the Roman Catholic Hierarchy in this country, is regarded with considerable interest in the Papal States and dominions. The *Osservatore di Roma*, of the 16th inst., has a leader on the subject. It tells its readers that the British Government has not given ear to the "furious tempest" raised by the papers against the Catholic hierarchy ; that it has remained calm in the midst of meetings, circulars, and addresses, and that it will not yield to petitions and questions in Parliament. It asserts that the law of the land has been respected—that it dismes the assertion of the Bishop of London, that the brief is a negation of the spiritual power of the Queen. "The English Catholic subjects," it adds, "have never acknowledged that spiritual power, and those who daily embrace Catholicism deny it formally. And yet these subjects, who are now deprived of their rights, are, nevertheless, respected in the eyes of the Government itself. If it be so, and if the English Catholics are to enjoy the same rights as their countrymen, it is clear that the brief has not attacked the spiritual authority of the chief of the State, since the Catholics do not acknowledge it." It further contends that the new territorial division established by the brief, is not contrary to the Emancipation Act, and that the Catholics are protected by that Act, while Methodists and other Dissenters are merely tolerated. It concludes with a hope that Parliament will take no serious notice of the matter, and look upon it as an affair of etiquette.

From Turin we learn that the Sardinian Parliament was opened on the 3rd inst by the King in person. The Royal Speech congratulated the members of the Legislature upon the general tranquillity and increasing prosperity of the country. It stated that the commercial treaties entered into, or about to be entered into, with foreign nations, would extend trade, and benefit the community at large. Pacific relations with other States continued to be maintained ; and, though the difficulties which had occurred between that Court and the Holy See had not been removed, there was every hope that they would in time be successfully overcome. The Speech appears to have given great satisfaction.

UNITED STATES.

Our accounts this week from the States are to the 13th inst. The political news by this arrival chiefly relates to the State elections, many of which had been concluded. The result of these elections, and partition of Wisconsin, the democratic candidates for Congress were elected by large majorities.

Frederick Douglass has been delivering lectures against the fugitive law in various parts of the country, and he is said to have been well attended, and have produced a favourable impression.

The steamer *Telegraph*, while on her passage from Philadelphia to Baltimore, burst her boiler, on the 7th of November, and many persons were killed and wounded. The Isthmus of Panama is the next object on which the Schmatzes Railway. The company for the survey of this route has been organised under Major G J. Barnard, of the United States Engineer Corps, and will concentrate at New Orleans on the 1st of December, whence they will proceed, without delay, to the Isthmus. It will consist of about forty persons, from whose labours great results may be expected in regard to that important enterprise. Major Barnard, accompanied by a part of his assistants, left New York on November 11, in the steamer *Georgia*, for New Orleans

The advices from San Francisco are to the 5th of October. The steamers just arrived from thence bring the specie shipments of 2,193,000 dollars in gold-dust. Upwards of 4,200,000 dollars in gold-dust were waiting at Panama for shipment when the three steamers left.

The President has just issued a proclamation promulgating a commercial treaty with the Sandwich Islands.

ROMAN CATHOLIC CHAPELS AND MISSIONS IN ENGLAND AND WALES.

In the year 1850 there are 34 Roman Catholic chapels and missions in England and Wales, as against 382. There are now 863 ; being an increase of 201 within the past ten years. The number of chapels distributed throughout the English counties, with the increase which has taken place during the past ten years, is given in the following table, which we have from the following statement. Lincolnshire contains 1 chapel, increase 0 ; Berkshire 5, increase 0 ; Buckinghamshire 5, increase 4 ; Cambridgeshire 3, increase 2 ; Cheshire 17, increase 9 ; Cornwall 10, increase 8 ; Cumberland 5, increase 5 ; Derbyshire 12, increase 4 ; Devonshire 9, increase 0 ; Dorsetshire 10, increase 4 ; Durham 19, increase 5 ; Essex 9, increase 3 ; Gloucestershire 14, increase 9 ; Hampshire 11, increase 3 ; Herefordshire 4, increase 3 ; Hertfordshire 4, increase 3 ; Kent 14, increase 8 ; Lancashire 112, increase 27 ; Leicestershire 14, increase 4 ; Lincolnshire 12, increase 1 ; Middlesex 37, increase 17. Monmouthshire 8, increase 3 ; Norfolk 5, increase [illegible] ; Northumberland [illegible] ; Nottinghamshire [illegible] ; Oxfordshire [illegible] ; Shropshire 11, increase 4 ; [illegible] ; Somersetshire [illegible], increase 19 ; Suffolk 6, increase 1 ; Surrey 18, increase 12 ; Sussex 8, increase 2 ; Warwickshire 24, increase 12 ; Westmoreland 2, increase 0 ; Wiltshire 4, increase 1 ; Worcestershire 11, increase 3 ; Yorkshire 61, increase 14 ; Isle of Man 2, increase 1 ; Guernsey 1, increase 0 ; Jersey 2, increase 1 ; in Alderney a new chapel has been erected, the only one in the island. In Wales there are 10 chapels, being an increase of only 4 throughout the principality during the past ten years. In London alone (where there are now 26 chapels) there has been an increase of 12 during the same period. Out of the 87 new chapels in Lancashire 7 have been erected in Liverpool, and 4 in Manchester.

METROPOLITAN NEWS.

ARCHITECTS' BENEVOLENT SOCIETY.—The first meeting of this society, established to afford relief to members of the profession and their families in the hour of affliction, was held at the Freemasons' Tavern, on Wednesday. Mr Sydney Smirke, A.R.A., presided; supported by Mr. C. R. Cockerell, Mr. Tite, Mr. Wyatt, and other gentlemen of eminence in the profession The rules for the government of the society, which is proposed to be entirely self-supporting, were unanimously approved of, and officers for the ensuing year appointed It was stated by Mr. Tite that the society already numbers 120 annual subscribers, and has received upwards of £400.

NATIONAL BENEVOLENT INSTITUTION.—The annual meeting of this society was held on Thursday, at the Freemasons' Tavern—Lord Robt. Grosvenor, M.P., in the chair—when a report was presented, which stated that at Christmas last there were 239 pensioners on the funds of the society—71 males and 220 females—and the amount disbursed in pensions during the year ending the 30th of September last was £4969 12s. The total amount received by the 760 annuitants who had been supported by the institution during the thirty-eight years of its existance was £194,653 11s. 1d. The income of the year had amounted to £9522 10s 8d, and the expenditure to £7708 9s 10d., leaving a balance in hand of £1814 0s. 7d. The report, which also recommended some alterations in the mode of voting, in order to diminish the evils of canvassing, was unanimously adopted, and twenty five new pensioners elected.

NATIONAL INSTITUTE OF MEDICINE.—On Wednesday afternoon, a meeting of the members of the Council of the National Institute of Medicine, Surgery, and Midwifery, and other members of the profession, was held at their rooms in Hanover-square, for the discussion of the medical reform question, and the adoption of measures to ensure the passing into law the bill introduced into the House of Commons at the close of the last session, at the instance of the society, by Mr. Wyld, M.P., for a separate act of incorporation of all the qualified general practitioners of medicine, surgery, and midwifery, in an independent college of their own upon the exclusive principle (free from the control of [illegible] own limits the entire range of medical and surgical science and practice, with the control of the education and examination of all future members. A number of documentary and other communications was laid on the council table, received from all parts of the kingdom as the result of meetings; and the signatures to petitions and memorials to the legislature in favour of the bill demonstrative of the opinion of the profession generally in favour of a charter for the incorporation of the general practitioners, whereby the anomalous position in which the general practitioners of medicine now stand would be improved, were present placed with the public might be changed. Of every hundred practitioners, more than ninety belong to the class which the institute represents, of whom there are about twenty thousand in the metropolis and suburbs alone.

KING'S COLLEGE HOSPITAL.—A meeting of the friends and patrons of this institution took place on Thursday, at the Hospital, Portugal-street, Lincoln's-inn-fields; the Rev. J. Fisk in the chair. It appeared that during the last six months 572 patients had been admitted: that, added to the 159 remaining in the house, made 768. Of these, 572 had been discharged cured: 7 incurable; 9 disorderly; and 75 had died. The number of out-patients for the same period had been 12,781, besides 501 poor married women who had been attended at home during their confinement. The total number of patients since the opening of the hospital amounted to 12,707 in-patients, and 153,857 out-patients, making a total of 166,564. It appeared that the sum of £1,000 had been already collected towards the proposed new building; and as the estimate was £50,000, they would require £17,000 more. They contemplated laying the foundation stone of the new hospital in the month of May of next year. The report was adopted, and a vote of thanks to the chairman concluded the meeting.

METROPOLITAN DISPENSARY AND CHARITABLE FUND.—On Sunday morning, a sermon was preached in aid of the funds of the above valuable charity, at Barbican Chapel, Cripplegate. The Rev. Robert Hamilton, M.A., minister of the chapel, delivered the discourse, and warmly urged the claims of the charity upon the congregation. A collection at the doors afterwards appeared, from the particulars circulated among the congregation, that upwards of 8000 destitute sick individuals participated in the benefits of the dispensary during the past year, the entire number being casual and greatly relieved. On the 21st of the same month a further discourse was delivered, when a second collection was made, making an aggregate of £43.

HOSPITAL FOR CONSUMPTION AND DISEASES OF THE CHEST.—At a full quarterly court held in the board-room on the 21st inst., Otho Hamilton, Esq., in the chair, it was stated that since the last meeting of governors, 91 in-patients had been admitted to the wards of the hospital, of whom 53 had been discharged cured, 5 relieved, 3 incurable, 1 removed, 1 discharged for misconduct, both sexes, and the number of out-patients during the same period amounted to 639. It was announced that the sum of £418 14s. annual subscriptions had been received, and £1,000 by donation. The secretary also reported the receipt of £500 from the late William Theobald, Esq., of Paddington, and of the legacy of £100 from the late Mrs. Ann Goodman, of Liverpool road, London. It was further stated that a larger portion of the legacy of £4000 (left by the late Baroness Von Rosenberg), than had been anticipated would be received by the hospital. Among other efforts being actively made, it is trusted that the Building Evansion Fund will be greatly augmented by the grand and extensive bazaar to be held in the Prince's Concert Room, Hanover-square, Regent's Quadrant, under the patronage of her Majesty and his Royal Highness Prince Albert.

NORTH AND EAST LONDON BENEVOLENT INSTITUTION.—A meeting of this institution was held on Monday, at the Charles Harding, Esq., F.L.S., one of the vice-presidents, occupied the chair. The Rev. Mr. Talbot was appointed honorary secretary. Numerous arrangements having been made for the further progress of the charity, the meeting adjourned.

CHARITABLE ASSOCIATION.—A meeting of this benevolent association was held on Tuesday night, in the theatre of the Mechanics' Institute, Southampton-buildings, Lord Erskine presiding, at which statements, showing, in strong colours, the evils of mendicity were read, and resolutions, to which effect were made, resolutions were carried declaratory of the necessity of a reform in the equity courts of the country, and approving of the course pursued by the association, of organising local associations throughout the country, to extend a knowledge of the objects and proceedings of this association.

GREAT CENTRAL GAS CONSUMERS' COMPANY.—A meeting of the shareholders of this company was held on Wednesday, at the London Tavern, for the purpose of considering the propriety of promoting a bill in Parliament for regulating the company; Mr. Thomas Dakin in the chair. After a few words from the chairman, the report was read. It stated that the period had arrived for considering the expediency of applying for an act of Parliament to confer increased power on their company; and the directors, mindful of their pledge to the Commissioners of Sewers, deemed it desirable to have the power given them to take the necessary steps for that purpose. They had deemed it desirable to address a communication to each of the City gas companies, inquiring if they contemplated any opposition. All the pipes of the company were now laid, and in a very few days all the works would be completed, and they had every reason to believe the estimates given would be realised. The services to the number of 5370 were laid There were 3213 meters connected up to Saturday last, and 22,017 lights now burning. They could not see upon what grounds opposition could be raised. Mr. C Pearson having moved the adoption of the report, a resolution was adopted authorising the directors to apply for and prosecute a bill in Parliament to give additional powers to the company, and requesting them to petition Parliament to withdraw the opposition to the bill. A petition to the Common Council was then read, and signed by the shareholders present; and thanks having been given to the chairman and directors, the meeting terminated.

WIDENING OF THE NORTH END OF CHANCERY-LANE.—On Monday, at a public meeting of the inhabitants and occupiers of premises within the [illegible] Mr. [illegible] moved the following resolution:—"That this meeting has observed with great satisfaction the proposition of the Lord Chancellor and the Commissioners of Woods and Forests for widening the entrance to Chancery-lane at the north end of Chancery-lane, and that this meeting is of opinion affirming the propriety of effecting the improvement having been rejected, an amendment was carried to the effect that it is inexpedient to purchase land for the purpose of widening the north end of Chancery-lane, as it is a metropolitan question, and not a local one; and that it would be unjust to the inhabitants of these united parishes if the commissioners of paving applied any local rates to the purpose, and requesting a meeting of the trustees of the paving board was held in the board-room of the workhouse, Gray's-inn-lane, for the purpose, notwithstanding the decision to the contrary come to at the meeting of the parishioners during the day, of agreeing to the payment of £750 to Mr. Stead for 7 feet by 51 feet of ground, for widening the public way at the Holborn end of Chancery-lane. The meeting, which lasted from seven o'clock until eleven, was attended by a large number of trustees and others connected with the board. After a lengthened discussion, it was finally resolved by a majority of 17 to 13, that the board advance the required sum, £750, Mr. Taylor, the chairman, during the discussion, guaranteeing that £400 additional should be raised by public subscription.

THE DWELLINGS OF THE POOR.—On Wednesday evening, at Crosby Hall, Bishopsgate-street, a lecture was delivered by Dr. Gavin, in connexion with the institution for establishing evening classes for young men, on the subject of the dwellings of the industrious classes, and their influence on the moral and physical condition of the people; the Right Honourable Lord Ashley, M.P., in the chair. Dr Gavin stated and explained the several causes of unhealthiness in houses, which he showed principally from defined drainage and want of ordinary accommodation. The dreadful effects upon the [illegible] and mortality of the people which arose from this want of accommodation, and of the decencies of life, he fully substantiated by reference to statistical tables of known accuracy and trustworthiness, which were prominently held up to the inspection of the meeting; and the lecturer concluded his address with a hope, that, as the great lawgiver of the Jews had given power to the priests to enter such Israelite houses as were supposed to harbour fever or leprosy, and pull them down if they saw fit [Leviticus, c. 34 and 38]; as the Romans had given similar authority to their ædiles; as the Belgians were now doing in their enterprising little country; so in England, he hoped that the legislative authorities would grant power either to prevent houses unfit for habitation to be built, or by some other means to undermine and root out this great source of evil, and misery in the country. (Applause.) Lord Ashley, in a few laudatory words, proposed a vote of thanks to Dr. Gavin for his address. The Rev. Charles M'Kenzie, A.M., seconded the motion, which was carried by acclamation. A vote of thanks to Lord Ashley was then carried, and the meeting dispersed.

CITY COMMISSIONERS OF SEWERS.—On Tuesday, at the usual meeting, Mr. Deputy Peacock in the chair, Mr. Simon, the City officer of health, proceeded to read his report upon the sanatory condition of the City during the last twelve months. When he had read little more than one-fourth, the Court postponed the reading until the next meeting. From what was read it appeared that the deaths during the fifty-two weeks ending the 28th of September, 1850, in the City of London, were 2752, and the rate of mortality was estimated at between 19 and 20 deaths out of every one hundred living persons; while under the ravages of the pestilence of last year, our general death rate had risen to the height of 30 in the thousand. The evidences of a mortality lessened considerably below its habitual average by the sanatory exertions of the Commission aided by other circumstances, are pointed out by Mr. Simon, who stated the result of his inquiries of the surgeons of the several City unions, as to the pressure of epidemic, endemic, and infectious diseases amongst the poorer classes, and whether any novelty which might have taken place were attributable to the changes wrought in the physical conditions of the respective neighbourhoods. The accurate differences existing between the death rates of the various districts of the City are detailed, and the most striking comparisons are drawn into a tabular form. Mr. Simon argues that the main conditions which constitute the unhealthiness of towns are definite, palpable evils, each of which was susceptible of abatement or removal, which would at once be followed by the improvement of the health of the population; and he points to last year's death rate in one of the sub-districts of the City of London as one of rare excellence, and which he wished and hoped to find to be permanently accurate of the average mortality. Mr. Simon enters into a detailed consideration of our sickness and mortality during the last year, and proceeds to show the condition of the soil of those neighbourhoods which were most fatally visited by cholera, and to prove that those neighbourhoods, whether constituted of dense courts and alleys, or of broad and well-ventilated streets, were, from removable causes, liable to attacks of equal virulence from the pestilence.

MEETING OF DELEGATES OF THE METROPOLITAN PARISHES ON THE SEWERS COMMISSION.—On Tuesday evening, a large and influential ad- [illegible] Marylebone, for the purpose of taking the necessary steps for securing from Government the abolition of the present irresponsible Commission of Sewers, and to make such commission a representative body. Mr. Nicholay, of Marylebone, was called to the chair; and the parishes represented were St. Martin's-in-the-Fields, St James's, Westminster, St Pancras, St. Mary Islington; St. Luke's, Middlesex; St. Leonard, Shoreditch; St. Giles's-in-the-Fields; St. Ann's, Soho; Clerkenwell, St. Marylebone, Hackney, &c. Mr. Fowler (St. Pancras) moved a resolution to the effect, "That there should be but one sewers commission under the control of a central board, so as to secure consistency and uniformity of proceeding, with efficiency." Mr. Graham (St. Marylebone) seconded the resolution. Mr. [illegible] opposed it, as he was in favour of the present system, and was not prepared to accede to the proposition of Parliament. Mr. Sanderson (St. Martin's) advocated the prayer of municipal reform, as the only means of settling matters, and saw no reason why Westminster, Marylebone, and other metropolitan boroughs, having double the population of the City of London, should not enjoy equal rights and privileges as they were simply sharers of the expenses of their own affairs. He moved as an amendment, "That a committee be appointed to confer together for the purpose of preparing and laying before the representatives of the metropolitan parishes a plan for controlling the local expenditure of the metropolitan boroughs, especially in reference to the administration of sewers." Mr. Toulmin Smith seconded the amendment. The amendment was ultimately adopted, with the withdrawal of the word "especially," and a committee having been appointed to draw out a plan for carrying out the object, the meeting separated.

METROPOLITAN SEWERS AND WATER IMPROVEMENT ASSOCIATION —A meeting of this association took place on Tuesday evening, at 6 o'clock, Duke-street, Westminster; Mr. Tabbener in the chair. The chairman commenced the proceedings by stating the object of the present association. It was well known that 109 gentlemen had sent in their plans, and that they had been rejected by the Commission, and the projects recommended were apparently plagiarised from the industry of those gentlemen. Another great grievance was the unnecessary and unequal expenditure that had been made in this commission. It was to rectify these abuses that the present association had been formed, and they were determined to see if they could not obtain redress from the Commissioners. Another object of his association was to bring the sewage and waterupply of the metropolis, and to place the sanatory improvements of the City under the control of the ratepayers. The speaker then entered at some length into the present supply of water to the metropolis, and detailed the innumerable inconveniences and annoyances which the present system had engendered. He considered that both the regulation of sewers and water-supply ought to be placed in the hands of local authorities, elected by the ratepayers of the district. Government ought to deal with both as one question, and to have the management of all local administration to those who paid the rates. The association intended to organise themselves, and to divide the metropolis into districts, where they would hold meetings of ratepayers. The meeting was then addressed by several gentlemen, offering various suggestions for carrying out effectually the intentions of the association; and, after a vote of thanks to the chairman, the meeting closed.

BIRKENHEAD DOCK COMPANY.—A general meeting of the shareholders of this company took place on Thursday last, at the London Tavern, Bishopsgate-street, Lord Rous in the chair. It appeared that the meeting was called for the purpose of taking into consideration a memorial addressed to the Dock Company to raise funds for the completion of the works of the Birkenhead Dock Trust, and to resolve and determine whether the directors shall apply to Parliament for powers to carry such proposal into effect. The proposal and remarks from the chairman as to the objects of the meeting, a resolution to the following effect was carried:—That a committee of shareholders be appointed to consider whether it was expedient that this company should give their aid to raise the funds requisite to complete the Birkenhead Docks, and in what manner and upon what terms, and that a committee of six shareholders be appointed for that purpose. A vote of thanks to the chairman concluded the business of the meeting.

BRITISH AMERICAN LAND COMPANY.—On Monday, a special general court of the members of this corporation was held at the offices, New Broadstreet, Mr. A. Gillespie in the chair. The minutes of the last meeting having been read, the chairman stated that the directors had no particular information to communicate; but they had called the shareholders together because opinions had been expressed that the meetings of the company should take places oftener than once a year. He was happy to say that, from the arrangements which had been made since the last meeting, there was every reason to hope that their affairs would soon present a more favourable aspect. The arrangements respecting the advance of money for the railway had been carried out under the best advice, and with every regard to the security of the company. To sell land at Montreal had made good its undertaking, and the corporation of that city had advanced £120,000 in debentures. Under these circumstances, the railway was proceeding with every prospect of success. The opening of 27 additional miles the railway would be carried to Acton, one of the principal stations of the line, and where the present company possessed land to the amount of 70,000 acres. The distance from Montreal to Toronto would be reduced 40 miles, and a way should be completed thus far, the company would be enabled to secure Government aid. With regard to the collections made during the present year, the committee had no doubt they would exceed the amount of last year, which was about £2000. He was happy to say that the settlers were in a thriving condition, and the general aspect of the company was materially improving. The sales upon the shares in this country had been small, but the arrangements which had been made since the last meeting, and which would doubtless lead to the payment of the remainder. Several proprietors expressed their acquiescence in the proceedings of the directors, and a vote of thanks having been passed to those gentlemen, the meeting separated.

THE NEW ORDNANCE-OFFICE, PALL-MALL.—The business connected with the Ordnance department of the public service, now transacted at the Tower, is about to be transferred to Pall-mall, where an table accommodation is to be provided. The present Ordnance office on the south of Pall-mall having been found too cramped for the efficient dispatch of business, the houses No. 85 and 84, originally erected in the reign of Charles II., where they abutted upon the private gardens and "mews," have been pulled down, in order that additional offices may be built on the site. The new building, the front of which is to be towards Pall-mall, is to be of white brick, with stone dressings and cornices, the character being plain Italian. The general style of the appearance will be, as regards design, totally distinct from the present Ordnance-office, but the intention is to raise the wings of the old building, so as to render the whole of one uniform design. The additional accommodation which these alterations will afford will be about sixty rooms.

EXPEDITION OF BUSINESS AT THE STAMP-OFFICE.—The great pressure of business which has existed at this Government department since the new Stamp Act came into operation, is likely to be relieved in a few days, to assume the regular routine. Last week, between 200,000 and 300,000 stamps, deeds, transfers, leases, insurance bonds, &c., under the new act, were issued over the counters of the United Kingdom and Scotland, which will about complete the remaining orders that had been sent from those localities. The number of stamps of various descriptions sent to Ireland has been very considerable, and far exceeds what was at first expected at Somerset House. The agents to for Bristol, Liverpool, Manchester, Birmingham, Leeds, Sheffield, Durham, Carlisle, and the north, Glasgow, Edinburgh, &c. that have been sent off since the commencement of the act by the morning, afternoon, and evening mails, are usually astonished at the too short time allowed for them by the Commissioners, as well as to the *employés*, for the activity they have shown in supplying the public with the required stamps with the least possible delay in town, where the demands were most pressing, as in every country. The quantity of parchment sent into the Stamp-office during the last six weeks or two months has been many tons weight, but now the warehouse is becoming pretty well cleared. The Scotch and English writing-paper with stampers have been at extra work from eight A.M. till eight, and even ten and eleven P.M. daily, (Sundays excepted, with the exception of the first week), and the number of stamps of every description despatched already exceeds 2,000,000, so that no time has been lost in expediting the business

[illegible] GENERAL STEAM NAVIGATION COMPANY AND THE DANISH GOVERNMENT.—The Danish Government having placed 40,000 ordnance muskets at the disposal of the Danish Minister for the use of the army in Schleswig, the General Steam Packet Company have delivered them free of charge to the Danish authorities at Tonningen. For this act of sympathy for the Danish nation, Count Reventlow, the Ambassador of Denmark, has in a very handsome letter conveyed to the secretary of the company his warm acknowledgements

CHAIRMANSHIP OF THE HOUSE OF LORDS.—The Earl of Shaftesbury, it is understood, intends resigning this post next session. Lord Redesdale has intimated his consent to succeed the noble Earl

MR. RICHARD DOYLE, THE ARTIST.—The London Correspondent of the *Tablet* states, that, in consequence of the very indecent attacks upon the Roman Catholic religion that have lately disfigured the pages of *Punch*, Mr. Richard Doyle, the gifted author of the "Manners and Customs of the English," "Brown, Jones, and Robinson," &c., has considered it to be his duty to give up all connexion with that periodical His protested, some time since, against an attack on his religion which found its way into its columns, and was then given to understand by the editor that the offence should not be repeated However, the understanding was not observed, and Mr. Doyle at once resigned his engagement, and a salary of considerable amount.

CITY OF LONDON IMPROVEMENTS.—It is intended by a new act, to be applied for in the ensuing session of Parliament, amongst other purposes, [illegible] with consent of the ecclesiastical authorities, "to lay part of the [illegible] or space in the west front of St. Paul's Cathedral into the public street," and also to compel the consumption of smoke in all furnaces and fire places used for manufacturing or trade purposes, and to remove more effectually other nuisances, encroachments, obstructions, projections, and annoyances. Various additional powers to the Sewers Commission with respect to sewers, slaughter-houses, &c., are also to be applied for

THE SMITHFIELD CATTLE SHOW. On Saturday last, the committee for the management of the Smithfield Cattle-Show issued their circulars for the approaching exhibition, which is to take place on the 10th of December. There is nothing like variation in the rules from those of preceding years, but the notices of motion before the committee are of an important character. The first is, that the committee or management (twenty-four in number) of members of the club be chosen annually at the general meeting, to be held previously to the show; the president, vice-presidents, the stewards of the yard, and judges of the show (who are members of the club) are to be members of the committee's office. Secondly, that the committee have the power of increasing the number during the year, and that the whole of the general business of the club be subjected to the control of the committee. Mr. Hobbs will move "That reporters from the press be admitted with a ticket for the annual dinner." The gates will be closed on Saturday, the 7th of December, against stock; and at three o'clock on the 9th, for implements, roots, seeds, &c. The gates are to be closed against stock punctually to the minute, and no stock will be admitted after ten o'clock

CENSUS OF THE POPULATION.—The Registrar-General has just drawn up the form of the householders' schedule, which will be filled up on Monday, the 31st of March, of the ensuing year. It is divided into eight columns, under the following heads:—Name and surname; relation to head of family; condition (i. e. whether married, single, widow, or widower), sex, age, rank, profession, or occupation, where born, if deaf and dumb or blind. Persons who refuse to give correct information to the penalty of 40s., besides the inconvenience and annoyance of appearing before two justices of the peace, and liable to the penalty of having made a wilful mis-statement of age or of any of the other particulars. The return is required to enable the Secretary of State to complete the census, which is to show the number of the population; their arrangement by ages and families in different ranks, professions, employments, and trades; their distribution over the country in villages, towns, and cities; their increase and progress in the last ten years

RUSSIAN GRAIN.—The importations of grain from Russia are invariably larger, individually, than those from foreign states generally. The vessel *Hardanger*, just arrived from Odessa, has brought 3100 quarter of wheat of Russian produce. The cargo was brought in a vessel belonging to Denmark, and was admissible, by virtue of the relaxed laws of navigation, for home use.

DISADVANTAGES OF FAME.—"HAYNAU'S REFUGE."—At the Insolvent Debtor's Court, on Wednesday, William Benfield, the keeper of the George public-house, Bankside, where General Haynau retreated on being attacked by Barclay and Perkins's draymen, applied under the Protection Act on the interim order. There was no opposition by the creditors to the application. The appearance before the Court was attended by the parties of the George (now known as "Marshal Haynau's Refuge") being totally inadequate to meet the necessary expenses of the business. Strange to say, the insolvency was owing to the large number of visitors to the place, by which the regular customers left the house. Crowds had visited the premises out of curiosity, without partaking of refreshments, and the customers who had lunched and dined at the house deprived its consequence of the visitors. The Court named a day in December for the consideration of the final order

FIRE AT THE GRAND JUNCTION CANAL WHARF.—On Tuesday forenoon, between ten and eleven o'clock, while the workmen were employed at their usual occupations on the wharf of the Grand Junction Canal Company, Clayton-square, were alarmed by the sudden outbreak of flames in the store-room, which is situated near the canal. One of the men went up the steps, when he found a fire raging among a quantity of calico, which was stored in part of the room, and which was filled with tarpaulling, deals, ship stores, &c. After the most persevering exertions, the conflagration was extinguished. The loss is supposed to be about £100

AN EXPLOSION OF GAS, by which two persons were seriously injured, occurred on Saturday, in the house of Mr. Peake, boot-maker, 15, Fore street, Cripplegate. Mr Peake had a gas chandelier lately put up in his drawing-room, and on the latter was accidentally left turned out. The gas escaped into the room, and a servant-maid, smelling the gas, informed her master: he went in with a light, and an immediate explosion took place, which shook the whole house, threw out the windows, forced the iron bars from their fastenings down part of the staircase, and shattered the plate-glass in the shop-windows Mr. Peake and the servant-girl were much burned and otherwise injured, and required surgical assistance.

SHIPWRECK AT LONDON-BRIDGE.—On Monday, during the high wind which prevailed, a large vessel, containing 350 quarters of malt, in endeavouring to pass under London-bridge, struck one of the pier-heads with such violence as to cause the vessel swing round several times. The crew did all they could to get her righted, but, before they could succeed in so doing, she canted, and speedily commenced filling so rapidly with water that the crew had great difficulty in effecting a safe retreat from the vessel. The cargo, by the saltable cargo, however, sank to the bottom of the Thames; but, during Tuesday, a great number of sacks filled with grain were recovered from the river, which, of course, were greatly damaged by the water

BIRTHS AND DEATHS.—Births registered in the week ending Saturday, Nov. 23:—Males, 708; females, 673: total, 1381. The average of five corresponding weeks in 1845-49 was 1320. Deaths during the same period:—Males, 492; females, 524: total, 1016. The present return exhibits a sudden increase in the deaths of London, and a greater mortality than in any week since the beginning of April. The deaths registered in the two previous weeks were 921 and 966, but rose in that while ended last Saturday to 1016; and they now exceed the actual average for the ten corresponding weeks in 1845-54 which is 977, but fall short of the average as corrected for probable increase of population, for which it is raised to 1066. The present increase, as might be expected from the season of the year, is observed to proceed from diseases of the organs of respiration, with the exception of phthisis, or consumption. Pneumonia was fatal in the preceding week in 56 cases, last week in 94, of which 69 were children; but it has not yet attained its average. Bronchitis was fatal in 77 cases; of which nearly two-thirds were among persons of mature age, and continues to exceed the average. On the other hand, consumption, which numbers 111, has declined on the average. Smallpox, and does not show the same disastrous effects on the proportion of the respiratory organs, to be aggravated by atmospheric changes. The disease does not yet quite equal the average, and its comparatively low rate of mortality in this early part of the year may be due, in the middle-aged part of the population, who are most subject to it, having been themselves, or those who also bore most heavily on the same class. The deaths of children by convulsions were last week 167, or nearly twofold the number of the previous week. Amongst those of epidemic diseases, scarlatina and hooping-cough are the most fatal, and destroyed nearly the same number of lives; from the former there were 41 deaths, from the latter, 47. Measles is not now so fatal as usual [illegible] Registrar of St. Paul, in St. George's-in-the-East, mentions a family in Mary[illegible]t, in which two children had died last week from measles, and six [illegible] suffering under it; and he adds, that measles of a malignant form is very prevalent in his district. In a house, 7, Blue-gate-fields, also in St. Paul sub-district, the son of a labourer, aged six months, died of "confluent smallpox (10 days), not vaccinated." It is stated in the same record certificate that the complaint was brought by families from Ireland, and that [illegible] numbers are living in the house in a most filthy and deplorable condition." The births of persons registered compared on the 17th of November, at 33, Cambridge-terrace, Clapham-road; the son of a merchant, aged five [illegible] head of "English cholera."

LAUNCH OF THE "DRAGON-FLY" STEAMER ON LAKE WINDERMERE.

REMAINS OF COCKERMOUTH CHURCH.

In our Journal of last week we briefly recorded the destruction of this Church by fire, on Friday, the 10th inst.

There appears to be no doubt that the conflagration originated in the tower and of the venerable edifice. From the immense quantity of wood in the construction of that portion of the building, the flames spread with frightful rapidity, and burst through every window, whilst portions of the roof, as the fire advanced, fell in. In this way the flames raged until the excellent peal of six bells, the organ, Church clock, chimes, chandeliers, galleries, pulpit, pews, paintings near the altar, marble monuments—everything, in short, but the bare walls, was destroyed; and even these are so much injured the tower being rent from top to bottom—as to preclude the possibility of their being available, save as old materials. The register and other books, surplice, gowns, &c. were saved.

The county histories furnish very little information relative to Cockermouth Church. Hutchinson merely remarks that it "is a chapelry in the parish of Brigham, and appears to have been appropriate to the Collegiate Church of Staindrop, in the county of Durham, together with the mother Church. The Church, dedicated to All Saints, was rebuilt in 1711, and rendered very commodious for the large congregation which resorts to it: it is one hundred feet in length and forty-five broad, and lined with galleries. The income of the curacy was certified at £34 13s. 4d. Lord Lonsdale being impropriator, nominates the curate, and pays him a stipend of £20 13s. 4d., and the fees amount to about £8. The living was, in 1811, augmented by a Parliamentary grant of £1000. His Lordship's ancestor purchased of the Fletchers, of Hutton. A chauntry in this chapel was founded and endowed by Henry Percy, Earl of Northumberland."

The Church was insured in the Imperial Fire-office for £2000.

The estimated expense of building another church is from £6000 to £7000, which it is proposed to raise by voluntary subscription; and as this is a large sum to be collected among about 5000 inhabitants (the population of Cockermouth), it is hoped that they will be assisted in the good work by the Protestant community. Any contributions towards so desirable an object will be thankfully acknowledged, if addressed to either of the Churchwardens, Messrs. Cooper, W. Elliott, J. Richardson, or J. Tyson; or to the Cumberland Union Bank, Cockermouth.

The accompanying View of the Tower and roofless walls is from a Daguerreotype, taken by Mr. Joseph Martin, of Cockermouth.

THE LATE GALES.—LOSS OF LIFE.

A considerable amount of property has been destroyed on the south-east coast, by the violence of the gales which have prevailed during the last week. Several vessels have gone ashore, and it is feared that on the coast of Sussex some lives have been lost. The news from all parts of the coast is most disastrous, particularly in reference to the storm on Saturday and Sunday last.

That part of the Sussex coast between Shoreham and Worthing was the scene of a very distressing event. At daybreak on Monday a heavily laden barque, since ascertained to have been the *Lalla Rookh*, bound to London from the Brazils, was observed riding at anchor, and labouring severely. It being evident that she was in difficulties, having lost her mainmast, a boat with eleven men put off from Worthing to her aid, and, notwithstanding the tremendous surf that was running, the brave fellows made a desperate effort to reach the barque. They had got within a short distance of the vessel, and were about to get the weather side, when a terrific sea caught the boat and immediately capsized her. The fate of the unfortunate fellows who were in it is briefly told. For a moment or so they were seen struggling in the water: the violent lashing of the surf, however, soon overpowered them, and every one perished. Most of them have left large families. Their names were—James Newman, and his two sons, John and James Newman, and his brother Henry Newman, William Hoskins, Stephen Edwards, William Wicks, James Edwards, Henry Slaughter, John Belville, and Henry Bacon. They all lived at Worthing, and their deplorable fate has created much painful excitement. Later in the day another boat's crew succeeded in gaining the barque, and in the course of the afternoon she got up a sail and proceeded up the Channel towards the river. As yet not one of the bodies of the unfortunate men have been recovered. We have engraved the scene of the melancholy occurrence from a sketch by a Brighton artist.

Towards the Cornish coast the gale was more destructive. The accounts speak of its being one of the severest south-westers that has been experienced for some time. An almost incalculable amount of mischief has been done to shipping in the foreign and coasting trade, some having lost masts, spars, sails, &c., while others parted from their anchors and lost them with considerable length of cable. During the storm on Sunday morning, about six o'clock, a vessel laden with raisins, lemons, and other fruit, was driven ashore to the westward of Penzance, on a dangerous part of the beach, known as Gunwallow Cove, between that port and the Lizard. Every soul on board of her perished. The name of the vessel proves to be the *Windrush*, of Falmouth, from Malaga. A few fragments of the wreck have been washed in and sold.

Many disastrous casualties occurred off the Welsh coast; and, from the quantity of wreck that has been sighted in different parts of the Channel, it is feared that the whole extent of the havoc resulting from the storm is not known.

The accounts from the eastern coast also speak of the violent effects of the gale, and the damage done to the coasters. Numerous vessels which had been blown down from near the Downs, put into Lowestoft, Aldborough, Harwich, &c., in nus their anchors, masts, and other spars, which had been carried away by the gale. Their escape from the numerous sands which abound on this coast seems most remarkable.

The French mail brings tidings of the fearful character of the storm on that side of the Channel. In the vicinity of Boulogne it blew almost a perfect hurricane. A fine vessel named the *Brilliant*, last from Quebec, and bound for Rye, was driven ashore near Etaples, and became a total wreck. Fortunately, with the exception of the carpenter, the crew was saved.

LAUNCH OF THE "DRAGON-FLY" STEAMER ON LAKE WINDERMERE.

On Monday, the 18th inst., another vessel, built for the Windermere Iron Steamer Company, was launched at Low Wood, Windermere. Its dimensions are 100 feet in length 14 feet beam, 80 horse-power, and a very light draught of water, not more than 20 inches. The vessel was launched complete in every respect, and *with steam up*; so that the moment she reached the water, the engines being started, she immediately steamed around the beautiful bay of Low Wood, amidst the cheers of the spectators.

This new steamer was built by Messrs. M'Conochie and Claude, engineers, Liverpool, and was christened the *Dragon-fly* by Mrs. Rigg, the lady of the Secretary of the Company. After the launch, a large party sat down to an excellent dinner, at Mr. Logan's, Low Wood Hotel.

Medical Charities in Ireland.—A return, showing the operations of the various medical charities in Ireland, supported wholly, or in part, from county funds, has just been printed, at the instance of Colonel Dunne. It appears that the total number of statute acres, in electoral divisions and unions, is 19,995,263, and that the population of those districts, in 1841, was 8,333,601. The total expenditure, on account of medical charities, including county hospitals, infirmaries, &c., for the year ending the 25th of March, 1850, was £177,039 11s. 9d. Of this sum £23,974 was paid for salaries to medical attendants, and £8939 to nurses and other persons. The total number for which hospital accommodation is provided is 42,072. The average number of patients under treatment each week during the year was 34,714, and the total number admitted during the year was 468,028.

BOAT CATASTROPHE, AND THE "LALLA ROOKH" IN DISTRESS, OFF WORTHING.

PROFESSOR KINKEL.

GOTTFRIED KINKEL, Professor of History in the University of Bonn, was one of the more eminent among the literary men of Germany who mistook the Revolution of 1848 for the beginning of a new social era, threw himself into the political agitation of the time, for which his powers were unfit, and finally joined the insane revolt in Baden, in May, 1849, which ended in the dispersion of the revolutionary army, or rather mob, by the Prussian troops, and the restoration of the legal Government. The insurrection was begun, though, perhaps, unconsciously, by the Frankfort Assembly, which sent commissaires to the

PROFESSOR KINKEL, FROM A LITHOGRAPH PUBLISHED AT BERLIN.

Grand Duchy, to force the Government to accept their new German Constitution; but the movement soon became too strong for those who commenced it. The Grandins of the agitation were soon displaced by the Mountain; the Moderates by the Anarchists. Brentano, the Commissaire, was obliged to fly, and the insurrection was headed by the Pole Mieroslawski and Tritschler: their proclamations and orders were such bloodthirsty and banditti-like productions, that the mass of the people were disgusted; they threatened to cut off the heads of ten thousand of the citizens of Mannheim, and ordered contributions of money and provisions without limit. The folly of their measures was only exceeded by their brutality; for, at the moment they were threatening to decimate cities and confiscate the property of thousands, they were not strong enough to withstand the charge of a regiment; they were defeated at all points by the Prussian troops, and driven into exile in Switzerland, from whence some have fled to America and England. How a man of learning, genius, and refinement, like Kinkel, could mix himself up with such a band of coarse ruffians, using the cant of political regenerators to cover the acts of thieves, is difficult to explain. Perhaps he thought the rough work of destroying the old framework of society must be done by rough instruments, and that he and others might have afterwards the ground free for establishing that of a better time. He was miserably disappointed. He was taken in one of the skirmishes of the campaign with arms in his hands, and, being a Prussian subject, was tried by courts-martial and condemned to death. Intercession was made for him, and literature, poetry, and philosophy pleaded for his life, and it was spared; but he was sentenced to imprisonment for life in a house of correction, with the fare, clothing, and task-work of a felon. He has been removed from prison to prison, and treated with the utmost rigour. It was only recently that he was allowed to copy the accounts of the prison and other formal documents, instead of spinning wool. He received neither wages nor letters, and was wholly cut off from the world. Now and then the papers gave an extract from his poems, or a *feuilleton* contributed by a friend lamenting his fate; but there was an impression that any appeal to the public in his favour tended to make his lot more worse than better, and for some time past he had scarcely been heard of. A fortnight since, it was rumoured he had escaped from Spandau, the last place of his detention. From the mode in which he escaped, it was evident it must have been with the connivance of some of the gaolers: this has since been ascertained to have been the case. Two of the attendants let him through the court into the street by his ordinary entrance, he having changed his convict's dress for the uniform of an officer. He remained one day in Spandau, went on the following morning to Potsdam, where he also staid a day, and then proceeded over Hanover, Minden, and Paris to London. As Spandau is one of the strongest prisons in Prussia, it is generally believed that the Government itself connived at his escape, and planned it: his continued confinement was considered a disgrace to the learned world of Germany; a certain amount of discussion was always kept alive about it; and, in short, he was, from his rank and position, an embarrassing prisoner. Had the Government confined him in a fortress, as usual with political criminals, his case would not have excited so much sympathy; but the dishonouring punishment inflicted for the most infamous crimes, was considered more as a revenge of the Government than a just expiation to the law. In Austria he would undoubtedly have been shot: the Austrian Government is bolder and more bloody in its punishments than that of Prussia; but, in no case where it has spared the life of a man charged with a political offence, has it subjected him to the treatment of a felon. Its fortresses contain many prisoners of the same class as Kinkel, but not the Houses of Correction. It would have been wiser in the Prussian Government either to have detained him in a manner that should not degrade literature and education in his person, and awake sympathy for the man in spite of his offence, or to have pardoned him openly and freely. But the middle course of all, allowing him to escape, is a miserable subterfuge—unhappily, quite in keeping with the small spirit of political trickery and intrigue which within the last two years has pervaded the Prussian Administration.

KNEBWORTH THEATRICALS.

Of all men exercising the power of literature, yet independent of its pecuniary rewards, Sir Edward Bulwer Lytton has ever shown himself foremost of his "order." No man, so placed, more prompt to acknowledge the dignity of letters; no man more zealous and sympathetic in the alleviation of the hard condition too frequently the lot of literary men. We regret that literary men have not always shown themselves thoughtful of this fact; but the truth is, if literature receive not its due recognition by the State and by society, it is to the treason of men of letters themselves that they mainly owe the indifference and neglect. Animated by a true sense of the dignity of their functions, they might command their rightful position as the lay priesthood of the world; but too frequently they seem possessed by the superstition of the Indian, who thinks that if he can only destroy a man of gifted powers, he, the destroyer, must inherit the genius of his victim. No man has been made more obnoxious to this ignorance and injustice than Bulwer; and it is cheering to feel that no man has passed through the ordeal of malignity and injustice with a brighter reputation as a world-known writer. It is to the energy of Bulwer that the English dramatist owes the just reward of his labour; it is to the chivalric championship of the late member for Lincoln that men like Knowles, in their declining life, enjoy the profits of their vested brains—that they are not left to wither out an old age in poverty; while the star actor has his £30 per night for rendering the utterances of the larger-hard, and thousands of Englishmen are taught and elevated by his "so potent art," he the worker in "unregarded corners thrown."

Of a piece with the literary character of Sir Edward Lytton, was the design to bring together, in his beautiful ancestral Hall of Knebworth, the authors and artists whose previous theatrical efforts in the cause of veteran writers had been so heartily and so satisfactorily acknowledged by the country at large. Some four years since, it was a bold venture for writers and artists to step from their privacy to the public stage: but the cause justified the end; whilst the histrionic genius so undoubtedly developed by many of the troop—the Dickens troop—crowned the act of Knebworthood with the triumph of highest art. The same men, with two or three additions—*nde* bill—met on the 18th instant, at Knebworth. The great hall was fitted up as a theatre; and few of those introduced to their places in pit and gallery "to see the play," but must have doubted they whereabout, so perfect was then the theatre that a day or two before was the banqueting-hall.

The pieces selected for the three nights' entertainments were—"Every Man in his Humour," with "Animal Magnetism," the first night; the farce changed for the last two nights for "Turning the Tables." On the first night the audience was composed of many of Sir Edward's tenantry, farmers, with buxom wives and daughters, and the tradespeople from the surrounding towns and villages of Hertfordshire. On the second night, Duchesses, Earls, Countesses, and Hertfordshire gentry abounded. On the third night, nobility also, with a free sprinkling of clergy, law, and medicine. We subjoin the cast of the comedy, from the bill:—

Knowell (an Old Gentleman)	..	..	.. Mr Delmé Radcliffe.
Edward Knowell (his Son) ..	..	..	.. Mr Henry Hawkins.
Brainworm (the Father's Man)	..	..	.. Mr Mark Lemon.
George Downright (a Plain Squire)	..	..	.. Mr Frank Stone.
Wellbred (a Half Brother.	..	..	.. Mr Henry Hale.
Kitely (a Merchant	..	..	.. Mr. John Forster.
Captain Bobadil (a Paul's Man)	..	..	.. Mr Charles Dickens.
Thomas Cash (Kitely's Cashier)	..	..	.. Mr Frederick Dickens.
Master Stephen (a Country Gull)	..	..	.. Mr Douglas Jerrold.
Master Matthew (the Town Gull)	..	..	.. Mr Bob Leach
Oliver Cobb (a Water-bearer)	..	..	.. Mr Augustus Egg.
Justice Clement (an old merry Magistrate)			.. The Hon. Judge Yorke, M.P
Roger Formal (his Clerk)	..	..	.. Mr. Phantom.
Dame Kitely (Kitely's Wife	..	..	.. Miss Vaughan.
Mistress Bridget (his Sister)	..	..	.. Miss Hogarth.
Tib (Cob's Wife	..	..	.. Mrs. Mark Lemon

(who most kindly consented to act, in lieu of Mrs. Charles Dickens, disabled by accident)

The farce on Monday was "Animal Magnetism:" the actors were Charles Dickens, Mark Lemon, John Leach, Augustus Egg, Miss Hogarth, and Miss Ann Romer. On Tuesday and Wednesday, "Turning the Table."—

Mr. Evelyn ..	..	..	.. Mr. Frank Stone.
Jeremiah Pumps	..	..	.. Mr. Charles Dickens.
Edgar de Courcy	..	..	.. Mr. Henry Hawkins.
Thornton ..	..	..	.. Mr. Frederick Dickens.
Jack Humphries	..	..	.. Mr. Mark Lemon.
Miss Robbs ..	..	..	.. Miss Hogarth.
Mrs. Humphries	..	..	.. Mrs. Mark Lemon.
Patty Larkins	..	..	.. Miss Ann Romer.

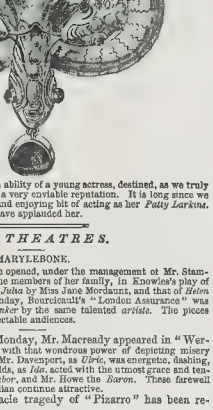
The pieces on each night went off admirably. Never could there be more appreciating audiences. They truly, as the French have it, "assisted at the play." On the last night, introduced by a very pithy and apt loyal compliment to the Queen, whose early act of her reign was the recognition of the claims of the lettered host—a compliment made and uttered by Charles Dickens—all the company sang "God save the Queen;" the noble and gentle audience joining with most significant heartiness in the chorus.

We shall not attempt individual criticism, but shall merely borrow the general terms employed by the writer in the *Herts County Press*:—"We need hardly add, that amateurs of such world-wide celebrity never, perhaps, trod the stage at any period; but we are entitled to say that few professional actors—certainly no company at the present day—could have rendered the flashing wit and scorching satire, the subtle discrimination of character and incident, and the development of passions and follies, intended to be portrayed by the writer, with such skill and acumen, such nice appreciation of the minute shades of feeling and of humour, as the performers whose names are given above."

At the conclusion of the comedy, the following epilogue—written by F. P. Delmé Radcliffe, Esq.—was excellently delivered by the author and Mr. Henry Hale:—

Enter OLD KNOWELL *and* WELLBRED.

Knowell. At last the play is over
Wellbred. Yes and all.
Thank Heaven! has ended with the curtain's fall
Knowell. Be thankful 'tis well over; think how kind
All those in front have been to those behind
Wellbred. Kind, truly, in applause. What will they say,
When they get home? that is the question.
Knowell. Nay.
That is a question we can not decide.
All I can say is—I believe all tried
To do their best
Wellbred. Well! even Don Ferdinando,
Tom Hawtree, can do no more than a man can do!
Knowell. We were, of course, prepared for admiration
Of those bright London stars, that constellation born.
The light of any sphere!
Wellbred. Twere thought, I ween,
A daring dash to eclipse the Queen!
I am not surprised that they have raised a fuss.
But that they condescend to play with us—
With rustics, like myself, and one or two more
Knowell. Why, because Every Man is in his Humour.
In truth, they all have proved themselves right hearty
In their alliance with the "Country Party."
Kitely was great as he had been before.
Wellbred. You must admit Old Knowell was a bore
Knowell. Ay! if he were, Wellbred might let that pass
Wellbred. Softly hem! Shakspeare!—Write me down an ass!"
Knowell. As touching Shakespeare—you know I suppose,
That Knowell's was the part great Shakespeare chose
To set himself! Would that his soul divine
Could whole Athenian influence combine!
Wellbred. A Forstering influence I think you said?
That brings me back to Kitely. On that head,
Kitely says great, beyond my power of speech,
Knowell. And Matthew stuck to Bobadil like a LEECH
Wellbred. By Pharaoh's foot! that oath with the humour chimes—
Perhaps they will be buttered in the *Times*!
Knowell. Talk not to me about the *Times* or the *Herald*,
Give me three pennyworth of DOUGLAS Jerrold,
Amongst that party there *are* pretty pickin s!
But say can newspaper describe CHARLES DICKENS?
Author and actor; manager; the soul
Of all who read or hear him! on the whole,
A very *Household Word*.
Wellbred. That's true. But still,
With scores of sweets, and worlds of wit at will,
They can't do without LEMON.
Knowell. Devil doubt it!
"The play" at Knebworth will long remain a pleasant legend in Herts. Sir Edward acted the host right royally to his five hundred guests. On the morning of the last performance he presented Miss Anne Romer with a very beautiful bracelet which our Artist has rendered; as a graceful memorial of the testimony



of a man of highest genius to the ability of a young actress, destined, as we truly believe, to achieve for herself a very enviable reputation. It is long since we have seen such a pure, fresh, and enjoying bit of acting as her *Patty Larkins*. Poor Mrs. Orger herself would have applauded her.

How do we think they'd make their *Punch* without it?
All act together: none for self alone.
Did you mark *Downright*?
Wellbred. Plainly, out is STONE.
Knowell. A precious stone! But last, not least I beg,
Regard the talents of AUGUSTUS EGG.
Wellbred. Now, how about the Ladies?
Knowell. For my part,
I have got their perfections all by heart
Wellbred. Hush! What will DICKENS say to sunh sweet word?
Knowell. Why, that his lady emulates her level.
A word on her and accident; but quite
Impromptu, not intended for to-night.
Oh, may she soon recover from her sprain,
And treat with us, her friends, those boards again!
Wellbred. That fall sank all our spirits; but in need
He said a friend is found a friend indeed.
Success to friendship has our cares allay'd—
Knowell. Ay! and the case relieved by LEACH.
For Bridget—say, could HOGARTH'S self
Limn woman
In portraiture with this our Thespian fate?
Wellbred. Go back from Hogarth, if you please, to Homer,
You'll find Thalia has become a ROMER.
Knowell. Indeed! Since she brought proper here to room,
It seems to me she finds herself at home!
The three together carry all before 'em;
Their wit applied them, and the men adore 'em!
Wellbred. Bravo! I go with you, and with your whim:
We have all done bravely
Knowell. How we applies swim!"
But let us now no longer jest or joer;
I have a word to earnest for your ear.
Say, that to-night we have not played in vain.
Would it then, another evening, try again?
Wellbred. That depends on circumstance; in fact,
Upon the Play they might propose to act.
Would that I had to choose!
Knowell. What hast thou hit on?
Wellbred. Why on your choice—We swear by BULWER LYTTON!
On this occasion he has cast aside
Productions worthy of parental pride;
Discarded all the offspring of his pen,
And shelved himself to make way for OLD Bibliomaniac.
Knowell. Come, don't get proxy when you shout at funny
Of course, you would like to get up "Money"?
But, let us think no more of that we have not;
We may be satisfied with what we have got.
Congratulate our Host on his success
Try what he will, he can have nothing less
He has gained the object of his aim and ends—
Well pleased his Guests, and entertained his friends.

THE THEATRES.

MARYLEBONE.

On Thursday week this theatre opened, under the management of Mr. Stammers, with Mrs. Nisbett, and some members of her family, in Knowles's play of "The Hunchback"—the part of *Julia* by Miss Jane Mordaunt, and that of *Helen* by Mrs. Nisbett herself. On Monday, Bourcicault's "London Assurance" was performed; with *Lady Gay Spanker* by the same talented *artists*. The pieces have been well received by respectable audiences.

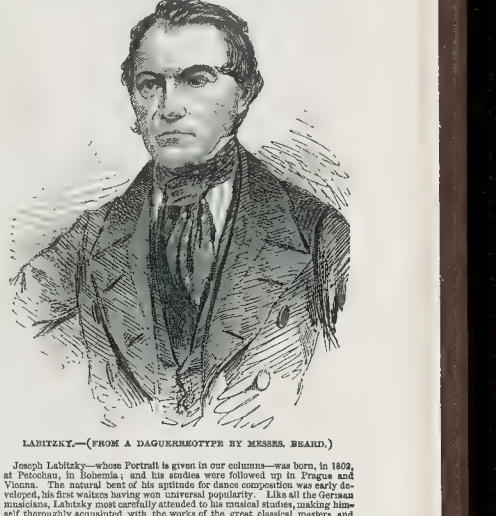
At the HAYMARKET, on Monday, Mr. Macready appeared in "Werner," and realised the character with that wondrous power of depicting misery in which he so greatly excels. Mr. Davenport, as *Gabor*, was energetic, dashing, and pathetic; while Miss Reynolds, as *Ida*, acted with the utmost grace and tenderness. Mr. Stuart was the *Gabor*, and Mr. Howe the *Baron*. These farewell performances of the great tragedian continue attractive.

At the SURREY, the spectacle tragedy of "Pizarro" has been revived with success.

A PRAIRIE ON FIRE.—A letter of a recent date from Kanesville, Mo (United States), states that a tremendous conflagration has occurred in that region, caused by the Omaha Indians, who set on fire the dry grass on the prairie. The wind was very high at the time, and the flames spread with such rapidity, that a great number of the fences, outstanding crops, and some buildings, for miles around, were enveloped in one sheet of fire. The Indians, just previous to the conflagration, were discovered in the act of setting fire to the prairie in a number of different places. The Omahas inhabit a portion of the Missouri territory, some sixty miles above Fort Leavenworth. They are described as one of the most dangerous and treacherous of the Indian tribes, and will be likely to cause the pioneer farmers of the backwoods a good deal of trouble.

JOSEPH LABITZKY.

THE triad of celebrated composers in Germany, who have elevated the style of composition in dance music to the highest degree of skill and refinement, will include the names of Lanner, Strauss, and Labitzky. Lanner was the founder of the school, and Strauss and Labitzky have been its most accomplished exponents.



LABITZKY.—(FROM A DAGUERREOTYPE BY MESSRS. BEARD.)

Joseph Labitzky—whose Portrait is given in our columns—was born, in 1802, at Petschau, in Bohemia; and his studies were followed up in Prague and Vienna. The natural bent of his aptitude for dance composition was early developed, his first waltzes having won universal popularity. Like all the German musicians, Labitzky most carefully attended to his musical studies, making himself thoroughly acquainted with the works of the great classical masters, and with the theory of the art. The students of all classes in Germany seek to improve their artistic acquirements by travel; and Labitzky made tours to Russia, Poland, Switzerland, and every part of Germany. At St. Petersburg he was an especial favourite of, and much patronised by, the Imperial family.

Labitzky is now the Kapelmeister of Carlsbad, and has given to the world some one hundred and eighty works, of which the Aurora, Elfin, Berliner, Toner, Albert, Fatherland, and other celebrated waltzes, form a portion. Labitzky has also written fantasias, varsatons, potpourries, divertissements, &c., for the violin, viola, flute, horn, clarionet, &c. Amongst his writings for the sacred school, are a "Miserere," hymns, &c.

Labitzky is full of fancy and imagination; his light and delicate transitions from thought to thought, his thorough acquaintance with instrumentation, render his waltzes peculiarly fascinating. Amidst all the bustling passages of the scoring, his design is clearly and vigorously treated—as in his "Quadrille of All Nations," in which his combinations are replete with charming variety. He is an admirable conductor; with great nicety of accent, he has the feeling for dramatic co-ouring. If Labitzky's compositions do not appertain to the highest class of music, they manages, by his imaginative temperament, clever contrivance, and ingenious devices, to raise dance music immeasurably above ordinary and vulgar effects by the sentimental expression and melodious imagery interwoven in choreographic movements.

The accompanying Portrait is from a Daguerreotype by Messrs. Beard.

CULTIVATION AND MANAGEMENT OF FLAX.

COMMON FLAX is a very beautiful plant when in flower, and might often be advantageously cultivated as an ornamental plant. Our juvenile readers will feel interested in being informed that the "Sesame" of the East, which was the magic sound wherewith Ali Baba opened the cave of the Forty Thieves, is almost a fac-*simile* of the flax plant, being only a more delicate variety of it. The sesame seeds have occasionally been imported for the purpose of making linseed oil. The fact is mentioned, not only because the circumstance is not generally known, but as being suggestive of melancholy reflections respecting the condition of the labourers in the East, who are thus reduced to live on bread formed of a substance similar to the oil-cake, which in England is given only to cattle.

The cultivation of Flax differs widely from that of every other crop, quality being the desideratum rather than weight. Out of 50,000 tons annually imported from Russia, perhaps not one single ton obtains a higher price than £45; whereas in Holland and Belgium, a few parcels, especially some grown near Courtrai, not unfrequently obtain £150, and sometimes £200 per ton: the former is principally used in making canvass, the latter for the finest lace and cambric. Very rich or highly manured land may consequently produce a less profitable crop to the farmer than if sown on soil in an inferior state of filth. At the present moment, when so much attention is being drawn to the cultivation of this article, it will be well for those intending to make an experiment on its culture, that this circumstance be borne in remembrance; otherwise, a very erroneous opinion may be in some cases arrived at as to its value as a crop. With the exception of the Lake district, the mountainous parts of Wales, Dartmoor, &c., and a few similar localities in Ireland and the borders of Scotland, the climate of Great Britain, south, or even a little north of the Clyde and Forth, with the whole of Ireland, except the parts similar to those already alluded to, are admirably calculated for the growth of Flax. Even in the excepted places soils exist well calculated for the culture of Flax. If it is "*pulled for the whole*." The most profitable crop that can be grown, on breaking upan old lea, is Flax: and it is a fortunate occurrence that Flax is less liable to grow rampant and coarse, when sown on a freshly broken-up but rich lea, than if preceded by a cultivated crop; besides, Flax always leaves the ground in admirable order for either a crop of wheat or other cereal, or even

THE COMMON FLAX. (*Linum usitatissimum.*)

ye[illegible] will grow well without manuring. With the aid of manure, any soil, except stiff clays and marls, can be adapted to the growth of Flax—gravels being the worst of all light soils, stiff soils are wholly inappropriate. The best soil for Flax is, perhaps, for almost all other usually cultivated crops—is a moderately light loam, consisting of an equal admixture of sand, marl, and mould, perfectly drained, either artificially or naturally. The dry loams on the mountain limestone, which occupy such an extensive range through the middle, and on the chalk formation of the north, of Ireland are good examples of the kind of soil best calculated for the growth of Flax. In England, the fine loamy soils in the Vale of York is a further illustration, as well as similar soils in Devon: respecting our Down lands, they are worth a separate notice. To sum up, light turnip land, in fair condition, such as might be planned adequate to produce a fair crop of barley, is the general character of the soil best adapted for Flax. A former statement may appear paradoxical, viz. that even in the Lake and similar districts, Flax may be advantageously grown, notwithstanding the excessive annual rain-fall of eighty inches, and sometimes ninety inches. This is accounted for from the circumstance that Flax may be pulled in one of two stages; that is, either shortly after it...ceed-pod has formed, or when it has been allowed to stand for seed: the former is technically called "pulling it for the white." In a district where the rain-fall is heavy, the practice of pulling for the white is recommended: first, because, if allowed to stand for seed, the weather might be unfavourable for the period of gathering—the seed would never ripen the crop be partially destroyed, or, at all events, very much damaged and discoloured: when pulled for "the white," early in the season, it gives time to boil it, wet it upon the grass, and leaving it exposed to the rain and atmosphere: if laid on a recently-cut field of clover or grass, the benefit to the aftermath is worth from 20s. to 30s. per acre. For dew retting Flax pulled for the white, a moist climate is the best. Another advantage is that the early period of the year at which the Flax is taken off the land, permits a crop of winter turnips or rape to be sown; and, lastly, Flax pulled for the white obtains a higher price per stone, as it possesses a finer fibre, and, if carefully attended to in rotting, has also the finest colour. The weight of crop is less than if pulled at seed-time, and all profit from the seed is sacrificed: but, on the other hand, the exhausting effect of growing Flax, which is often so much complained of, does not occur, or at least...almost unobjectionable: but there is only a single crop grown in the range of British husbandry so little exhausting to the soil as Flax when pulled "for the white."

The mere cultivation of Flax is confined to a few very simple rules. The soil should be well pulverised—the deeper the better, if on an appropriate soil—and should be made pe[illegible] clean. Flax may be advantageously sown after potatoes or turnips, in the place of wheat or barley. The latter should be cleaned effectually: we can aver positively that the practice is a correct one, and we are further countenanced in this opinion by the analogous practice pursued in Belgium. In setting out the ridges for the Flax crop, they should be made narrow and flat, and the furrow, or trench, well opened; six feet width is, perhaps, the most convenient size. Narrow ridges are convenient for weeding. The seed allowed to an acre ranges from two to three bushels: the former quantity for very rich, the latter for poor sandy soils, where a thin...not a heavy crop of Flax is intended to be grown. If sown too thick on rich land, the plant grows long and thin, and consequently so weak that it is beaten down by even a moderate shower, and will scarcely ever recover its position. In this way nearly the entire crop may be destroyed. About 120 lb. of seed may be sown on good Flax land, capable of producing 50 to 60 stones of dressed Flax per acre; 150 or 160 lb. may be sown on poor land to avoid cultivation. Two bushels of seed may be sown on very rich land, and will yield a heavy crop of 70 or 80 stones, besides about 24 bushels of seed; notwithstanding which, it will, perhaps, not yield a greater money return than a crop from inferior land we glibly only 50 stones. As the cultivation of Flax is best understood in Holland and Belgium, we will give a description of the practice pursued in those countries, as described by Mr. Van Aalstreek, who states that the crops which immediately precede Flax in light soils are barley or rye, with turnips after them the same year. In this case, these crops are more highly manured than usual, and the turnips have a double quantity of liquid manure. About Christmas, the turnips being taken off, the land is ploughed into high ridges, and the intervening lands dug out: it remains in that state secure from wet, and exposed to the winter's frost. As soon in spring as the weather permits, the land is again ploughed and well harrowed, to let the seeds of annual weeds vegetate; another deep ploughing and harrowing are then given. Peat ashes are often sown at this stage, at the rate of 30 bushels to the acre. A few days after these are harrowed in, 10 hogsheads of strong liquid manure—the emptyings of privies, mixed with diluted cow's urine, is preferred—is distributed on the land, it is then left for a week or ten days, that the manure may soak in. The seed is then sown, and lightly covered with a bush harrow or the coarse iron instrument used in Scandinavia (or the Low Countries): if covered more than half an inch deep, the seed does not vegetate readily or at all. Cloudy or showery weather is chosen for sowing it, as a very hot or dry air sometimes prevents the crop rising. The seed now used is imported from Riga. The first crop of seed raised from the Riga seed is sometimes used, but it is supposed to degenerate fast, and the home-grown seed is found to produce coarse-branched Flax. In this country guano and salts of ammonia can replace the liquid manure of the Low Countries; all other respects the above remarks apply equally to both countries. American seed produces coarse Flax. Seed brought from Odessa is said to be liable to introduce "the dodder," a parasitical plant which destroys the crop if once attacked by it: from all accounts Riga seed is to be preferred, and for very fine Flax the seed of the previous year is preferred. Further attention is not required on this crop until it is pulled for the white, or allowed to stand for seed. Flax intended for this purpose twice, or oftener if requisite. If carefully weeded when the Flax is young, the crop is so close that the weeds have little chance when the Flax gets strong. The time of sowing ranges from the latter end of March to the middle of April: the time of ripening of the seed sown at the two periods will differ little, other circumstances being equally favourable. The Flax will be ripe when the leaf falls off the lead. Early sowing might always be recommended, were it not that the early sown is more liable to be nipped by the frost, of which the Flax plant is highly susceptible. On this account Flax may be sown with safety a week earlier on the west [illegible] than on the east [illegible] of the island: [illegible] the end of March, and the first week in April for the other, will be found about the best seasons of the year. Sowing after mid-April is to be deprecated. Flax is fit to be pulled for "the white" as soon as the root formed of the seed-pod is fully formed. If a wet season, a little later; if a very dry year, a little earlier: a similar rule should regulate the grower according to the general character of the district, as regards moisture or dryness of climate.

It is better to decide on pulling Flax too early rather than too late, as the loss in weight of seed by the former mode will not amount to so much as the damage that may arise from allowing it to be over-ripe. Flax is invariably pulled, bound into sheaves, and placed in stocks in the ordinary manner.

The Dutch mode of ascertaining the fitness of Flax for pulling is to take a full grown stem, the ripest capable of which is cut horizontally with a sharp knife. If the interior of the seed-pickle is found firm and of a dark green colour, it is considered fit to be pulled. If, from any mismanagement, the nature of the land or other cause, the Flax should grow of different lengths, each length should be pulled separately: this is accomplished by the puller seizing the stems just under the seed-bells, which allows the shorter stems to escape, these being left to at a second pulling. The two lengths must be kept separate in all future operations. Flax may be rippled immediately after pulling, and steeped at once; it may be dried in [illegible] and then rippled and steeped; [illegible] it may be dried, stacked, the seed beaten out, and the Flax steeped in the following spring. The first two are the courses usually followed in this country and Belgium: the last-named practice [illegible] of Courtrai. Whatever mode is practised, the method of steeping is the same. The following is the Flemish process:—Long ponds are constructed, of a depth sufficient for the Flax to stand nearly upright in them without touching the bottom. If this depth cannot be attained, the Flax is placed in a slanting position, the root end lowermost, and the seed end of the plant a little under the surface of the water. It is kept in this position by means of mats spread over it, and poles, with stones placed on them or suitable weight to keep the mats under water. [illegible] In steeping one pond in August, some short being pulled, the fibres will be sufficiently loosened from the woody parts of the stem in the course of a week; but in October it will take a fortnight or three weeks, according to the temperature of the water: the higher the temperature, the sooner the steeping will be completed. The water of the Lys rives, by the soap test, rather more than 17 degrees of hardness, consequently it is not on account of its softness that the waters of the Lys are so well adapted for steeping Flax: the probability is that it is the decaying organic matter found in the Lys [illegible] which causes the water to [illegible] NEARLY Steeping Flax in the Lys is a regular trade, and affords employment to great numbers of people from April to September.

When the Flax is sufficiently steeped, it is frequently examined: if left a few hours too long in the water, the quality is injured; and if it is taken out too soon, the fibre will not be sufficiently detached, and will break in the scutching. As soon as the fibres separate from the outer covering the whole length of the plant, it should immediately be taken out of the water, the bundles untied, and the Flax spread out to dry on a piece of short grass, the place having been well cleared previously. It is allowed to remain on the grass ten or twelve days, and is frequently turned over in that time: it is then bound, and in the course of the winter it is scutched and heckled.

In this country the ordinary course is to ripple the Flax soon after it is pulled, and steep it. Ripp[illegible] is performed by drawing the heads of the Flax through a coarse upright iron comb, by which means the seed capsules are detached.

After the Flax has been steeped and dried, [illegible] may be either stacked or at once subjected to the last operation, ter[illegible] this can be done by either hand labour or machinery. The object is to separate the outside, called boon or shove, from the inside or fibre. Much of the market value of Flax depends on the manner in which this is executed.

One of the most interesting subjects connected with the cultivation of Flax is the profit and loss account to the farmer, which will be about as follows:—

Expense	£ s. d.	Products.	£ s. d.
Ploughing, harrowing, rolling, &c. ...	1 10 0	20 bus.s s of seed, at 5s. ...	5 0 0
Two-and-a-half doses of seed, 2s 6d ...	0 18 9	Value of husks, &c., as feed ...	0 15 0
Weeding, pulling, rippling, and steeping ...	1 10 0		
Taking from steep, spreading, turning, &c. ...	0 10 0		24 10 0
Scutching 50 stones, at 1s 6d ...	3 15 0	Net Profit ...	13 17 3
Cleaning seed and tale to market ...	0 19 0		

THE ILLUSTRATED LONDON NEWS.

Nothing, however, is here set down for manure. If the Flax water is made use of to manure grass-land, and the seed consumed in feeding cattle, the return for manure from the Flax crop will be pretty nearly equal to that which it absorbs. The above calculation is founded on the supposition that the Flax has been grown on good land, had a fair season, and managed well in its subsequent processes. Flax might be grown with great advantage on all our Down lands; many in Sussex, Hampshire, and Surrey are peculiarly well adapted for the growth of Flax.

CALENDAR FOR THE WEEK.

SUNDAY, December 1.—1st Sunday in Advent.
MONDAY, 2.—Emperor of Austria abdicated, 1848.
TUESDAY, 3.—Battle of Hohenlinden, 1800.
WEDNESDAY, 4.—Sun rises 7 h. 49 m., sets 3 h. 51 m.
THURSDAY, 5.—Balbec destroyed by an earthquake, 1759.
FRIDAY, 6.—St. Nicholas.
SATURDAY, 7.—Algernon Sydney beheaded, 1683.

TIMES OF HIGH WATER AT LONDON-BRIDGE,
FOR THE WEEK ENDING DECEMBER 7, 1850.

HER MAJESTY'S THEATRE.—The GRAND NATIONAL CONCERTS.—Mdlle Angri, Miss Poole, Mr. Frank Bodda, and Mr. Sims Reeves, MM. Molique, Sainton, Platti, Anglois, Richardson, Baret, Baumann, Winterbottom, Reimsel, Prosper, Howell, Arbuni, and Miss Goddard. Various novelties are in preparation, which will be produced forthwith.

THEATRE ROYAL, DRURY-LANE. Most positively the LAST EIGHT NIGHTS of M. JULLIEN'S CONCERTS.
The EXHIBITION GALLERIES, the FRENCH DRUMMERS, the THREE MILITARY BANDS, Mdlle. JETTY TREFFZ, EVERY NIGHT.
M. JULLIEN has the honour to announce that his Concerts will most positively terminate on Tuesday, December 10th. During this short period, all the most attractive novelties of the season will be performed, including the new Exhibition Quadrille, with the French Drummers, the three Military Bands, Mdlle. Jetty Treffz, Solos by the different artistes, &c.
The season will terminate with a GRAND BAL MASQUE, to take place on THURSDAY, DECEMBER 12th.

ROYAL PRINCESS' THEATRE.—On MONDAY, DEC. 2, and DURING THE WEEK, will be performed the New Play of the TEMPLAR, in which Mr. Alfred D'Orsay Cecil Kent will appear. After which the New Farce, in One Act, called Mr. Nobody. Attended by Hall, in which Mr. Vining, Mr. Keeley, Miss Murray, and Mrs. Keeley will perform. To conclude with TO PARENTS and GUARDIANS. Characters by Mr. Alfred Wigan, Mr. Keeley, Joseph Cheshire, Mrs. Fitzwilliam, and Miss Kent.

THEATRE ROYAL, MARYLEBONE, and LONDON ENGLISH OPERA.—This Theatre is now Open for the Season, under the Direction of Mr. JOSEPH STANMER. On MONDAY, DECEMBER 2nd, TUESDAY, 3rd, and WEDNESDAY, 4th, will be performed Sheridan Knowles' Play of LOVE. The Countess (first time), Miss Jane Mordaunt; Katharine (first time), Mrs. Nisbett; the Duke, Mr. J. Johnstone; and Hugo, Joseph Cheshire (first time). After which, on THURSDAY, will be celebrated Pantomimic Drama of VALENTINE and ORSON (Orson the Wild Man). Mr. Tom Matthews—Stella, Mr. Bland; Bellenden, Mr. Gallery. Half-price at Nine o'Clock.

ASTLEY'S ROYAL AMPHITHEATRE.—Manager and Sole Proprietor, Mr. W. Batty. First Week of the revival of TURPIN'S RIDE TO YORK.—On MONDAY, DECEMBER 2nd, and during the Week, the grand new Oriental Spectacle of the ENCHANTED LAFFEY; or, Sir Turpin and the Sultan of the Crescent. Together with Batty's Splendid Scenes of the Circle, introducing the Magnificent Steed and Company of Unequalled Artistes. To conclude with the Equestrian Drama of TURPIN'S RIDE to YORK. Boxoffice open from 11 to 5. Stage Manager, Mr. Tom Thompson.

SACRED HARMONIC SOCIETY, EXETER HALL.—Conductor, Mr. COSTA. On FRIDAY NEXT, December 6th, will be repeated Handel's Oratorio, "MESSIAH." Vocalists: Miss Birch, Miss Dolby, Mr. Lockey, and Mr. H. Phillips, with Orchestra (including 80 performers) of 200 performers. Tickets 3s., 5s., and 10s. 6d. each, at the Society's sole Office, No. 6, Exeter Hall, or of Mr. BOWLEY, 38, Charing-cross.

MR. JOHN PARRY'S NEW ENTERTAINMENT. MUSIC HALL, Store-street, Bedford-square.—Mr. JOHN PARRY will give his NOTES VOCAL and INSTRUMENTAL, at the above Hall on two evenings during the season, viz.—On MONDAY the 9th, and TUESDAY the 10th, and on TUESDAY EVENING, JANUARY 7th, 1851. Commencing at half past 8 o'clock. Tickets and Programmes to be had of Messrs C. and R. Offord, 23 and 24, New Bond-street; and at the Hall.

MR. JOHN PARRY'S NEW ENTERTAINMENT.—Mr. JOHN PARRY will give his NOTES, VOCAL and INSTRUMENTAL, on MONDAY NEXT, at Liverpool; on Tuesday, at Birkenhead; Thursday, Liverpool; Friday, Manchester; and on Monday, the 9th, at Macclesfield.

PHILLIPS'S LITERARY, MUSICAL, and SCIENTIFIC ENTERTAINMENT, including a Magnificent DIORAMA of CORK HARBOUR, COVE of COBH, HAMTEY BAY, KINSALE, GONGANE-BARA, CROMWELL'S BRIDGE, INNISFALLEN, GLENGARIFF, and the celebrated BLARNEY CASTLE, is OPEN DAILY at the APOLLONICON ROOMS, St. Martin's-lane, at Two and Eight o'Clock. Admission: In Reserved Seats, 3s.

APOLLONICON. The largest and most perfect piece of MUSICAL MECHANISM in the world, Five Performers at the same time. Daily at Two o'Clock. Second Part of the Performance at Three. The Programme will be varied each Saturday and Monday. Stalls, 3s.—Music Hall, 2s.—Admission, 1s. Opposite Burlington Arcade, Piccadilly.

ROYAL POLYTECHNIC INSTITUTION.—LECTURE on the BALLAD MUSIC of ENGLAND, every [illegible] at half past 3 o'clock. Lecture on the HYDRO-ELECTRIC MACHINE, by Dr. Bachhoffner. Lecture on CHEMISTRY, by J. H. Pepper, Esq. Model of the SUBMERSION PATENT DEEP SEA RAILWAY at work daily. DISSOLVING VIEWS. DIVER and DIVING BELL &c. [illegible] evening (except Saturday), from Seven till Half-past Ten.

LOVE'S POLYPHONIC ENTERTAINMENTS.—These Celebrated Entertainments will be given on Monday, November 25, at the Public Rooms, Reading. On Tuesday, November 26, at the Assembly Rooms, Winchester. On Wednesday, November 27, at the Star Rooms, Oxford. On Thursday, November 28, at the Assembly Rooms, Banbury. On Friday, November 29 (second time), at the Star Rooms, Oxford. On Monday, December 2, at the Corn Exchange, Lincoln. On Tuesday, December 3, and Wednesday, December 4, at the Athenæum, Sheffield. On Thursday, December 5, and Friday, December 6, at the Music Hall, Hull. On Monday, December 9, and Tuesday, December 10, at the Institution, Barnsley. On Wednesday, December 11, at the Assembly Rooms, Boston. On Thursday, December 12, at the Assembly Rooms, Spalding. On Friday, December 13, at the Public Institution, St. Ives. On Tuesday, December 17, at the Literary Institution, Croydon. And on Wednesday, December 18, at the Assembly Rooms, Epsom.—Begin at Eight. Stalls, 4s.; Reserved Seats, 3s.; Tickets, 2s. Books, 6d.

EXHIBITION of MODERN BRITISH ART. This EXHIBITION is NOW OPEN at the GALLERY of the OLD WATER-COLOUR SOCIETY, 5, Pall-Mall East. Open from Ten till Dusk. Admission, One Shilling.
SAMUEL STEPHEN, Sec.

DIORAMA OF THE HOLY LAND.—The Painters of the Panoramas of the NILE beg to announce that they will shortly submit to the public a magnificent picture of DIORAMA of PALESTINE. It has been for some time in preparation, and is now nearly completed. Having a direct reference to Scripture [illegible] and [illegible] to ancient events and recent discoveries. The effects will be varied and imposing, which will present a faithful transcript of the Holy Land, and the Diorama will possess the pleasing feature of fidelity, being wholly from original sketches.

INDIA OVERLAND MAIL DIORAMA.—Gallery of Illustration, No. 14, Regent-street, Waterloo-place. A gigantic MOVING DIORAMA of the ROUTE of the OVERLAND MAIL to INDIA, is NOW OPEN DAILY, at Eleven, Three, and Eight o'clock. Admission, [illegible] Reserved Seats, 3s. Doors open half an hour before each representation.

OVERLAND ROUTE to CALIFORNIA, across the Rocky Mountains.—New Exhibition at the Egyptian Hall, a GRAND MOVING DIORAMA of the [illegible] Quarter to Three Evening, Quarter to Eight. Admission, 1s.; reserved seats, 2s.

THE PORTLAND GALLERY, 316, REGENT-STREET, Langham-place (opposite the Polytechnic Institution), will OPEN on MONDAY, the 9th of DECEMBER, 1850, with a GRAND MOVING DIORAMA of the GANGES, with Calcutta and Dagherunt. The Exhibition at the Egyptian Hall, a GRAND MOVING DIORAMA, with Sketches by J. Ferguson, Esq.; made on the spot during his residence in India. Doors to open at Half-past One and Half-past Seven P.M. The Overture to commence at Three and Eight P.M. Admission to [illegible]

THE HIPPOPOTAMUS, presented to the Zoological Society by the Viceroy of Egypt, is exhibited daily, at their GARDENS in the REGENT'S-PARK, from Eleven o'clock until dusk, when the Gardens are closed to the water, are recommended to go early. Admission, ONE SHILLING: on Mondays, SIXPENCE.

SMITHFIELD CLUB PRIZE CATTLE SHOW, and EXHIBITION of IMPLEMENTS, SEEDS, ROOTS, &c., commences TUESDAY MORNING, and closes FRIDAY EVENING, 10th, 11th, 12th, and 13th DECEMBER.—BARNARD, King-street, Portman-square.
The arrangements this year are upon a more extended scale, and marked by the usual attention to the comfort of visitors; thereby enabling Ladies to view this National Exhibition with feelings

THE BIRMINGHAM CATTLE SHOW will be held in the BINGLEY EXHIBITION HALL, BROAD-STREET, on TUESDAY, WEDNESDAY, THURSDAY, and FRIDAY, the 10th, 11th, 12th, and 13th days of DECEMBER, 1850.

THE SECOND GREAT ANNUAL EXHIBITION of DOMESTIC POULTRY, PIGEONS, RABBITS, &c., will be held at BIRMINGHAM, on TUESDAY, WEDNESDAY, THURSDAY, and FRIDAY, the 10th, 11th, 12th, and 13th days of DECEMBER, 18[illegible]

so acute and learned, that they published the essay, and presented it to the author—an honour never before or since conferred upon any member of the University." Our informant adds, that Mr. Bailey "has since edited Facciolotti's 'Dictionary,' 2 vols. 4to, 'Comic Greek Fragments,' &c. &c.; and that he is considered one of the best critical scholars in England." Another correspondent states, that, in the "elegant preface to his edition of 'Hermesianax,' there are some most satisfactory reasons why a pension should be so disposed of." As we stated last week, in the few remarks we made upon the subject, we have no wish to disparage Mr. Bailey, or deny his claims to the gratitude of the nation. We only desired to know what those claims were, and have done Mr. Bailey no dis-service by thus drawing the attention of his friends to a subject of common remark. Mr. Bailey's light has hitherto shone in the limited sphere of the University of Cambridge, and has not sent its rays out into the wider world that lies beyond the walls of the colleges; and our remarks, with those of our contemporaries, will at least have made his name and claims known to a larger audience which was previously unfamiliar with them. We are sorry, for the sake of a man of erudition, that he should stand in need of such a pension; and we regret that the University of Cambridge should not have spared the Government the necessity of rewarding his talents, by providing him with congenial employment, or bestowing upon him one of the many prizes at its disposal.

COURT AND HAUT TON.

THE COURT AT WINDSOR CASTLE.

Her Majesty the Queen and his Royal Highness Prince Albert, with the youthful Royal family, continue, we rejoice to learn, in the enjoyment of excellent health. Her Majesty and the Royal children take frequent out-door exercise, and the Queen rides almost every morning in the vicinity of Windsor.

There has been a succession of visitors at the Castle during the week, among whom we may mention his Grace the Duke of Wellington, his Excellency the General Radowitz, Lord and Lady Charles Wellesley, Sir George and Lady Grey, the Right Hon. Henry Labouchere, &c.

Her Royal Highness the Duchess of Kent has been a daily guest at the Royal table.

Lord Elphinstone has relieved the Earl of Morley in his duty as Lord in Waiting to the Queen, and Major-General Sir Frederic Stovin has relieved Lieut.-Colonel Hon. A. N. Hood in his duty as Groom in Waiting to Prince Albert.

The Duke and Duchess of Richmond and the Ladies Gordon Lennox arrived at Knowsley Hall on Tuesday last, on a visit to the Earl of Derby, from Eglinton Castle, where their Graces have been visiting the Earl and Countess of Eglinton. The family passed through London on Thursday en *route* for Goodwood

The Duke and Duchess of Somerset gave an elegant entertainment on Monday last to a select circle, including the Marquis and Marchioness of Douglas (*née* Princess Mary of Baden), the Duchess of Inverness, his Excellency M. Van de Weyer, his Excellency M. Isturitz, Lord Glenelg, Count Perponcher, and M. de Botheman Hollweg, *attaché* to the Austrian Legation, &c.

The Duchess Dowager of Argyll has arrived at the St. George's Hotel.

The Marquis of Anglesea arrived at Uxbridge House on Tuesday, from Beaudesert Park, Staffordshire.

Viscount Goderich has returned from a protracted tour on the Continent.

Viscount and Viscountess Castlereagh have arrived in Chesham-place, from a Continental tour

His Excellency Baron Neumann has recently closed his visit to the Duke and Duchess of Beaufort, and left England on his return to Vienna.

The Chancellor of the Exchequer left town on Wednesday, for his seat, Hickleton Hall, Doncaster.

COUNTRY NEWS.

A GIFT.—The following letter has been sent to the Rev. F. Cheadle, senior priest of the Roman Catholic church of St Barnabas, Nottingham, by George Bacon, Esq., of Lancaster House, near Stamford:—Lancaster House, Nov. 22.—Reverend Sir, There is a painting of mine, No. 117, in the Mechanics' Exhibition, of 'Christ in the Outer Court, crowned with thorns,' by Gasper Crayer, which I believe was the altar-piece to the late Dr. Unwin's chapel at Liverpool. I consider it to be a genuine and fine work of the master; and have decided on presenting it to the church of St. Barnabas, if you deem it worthy of a place there. I have no more satisfaction in taking this step at the present moment, when so much stir and vituperation are abroad on the subject of the Catholic hierarchy being established in this country. Being a protestant, I take this gift to convey to you that I am not one of those whose mind is contracted in matters of church despotism as I claim for myself the utmost amount of toleration in worshipping God according to the form most agreeable to my feelings, I would be the last to endeavour to enslave the consciences of others who do not see the matter as myself, or attempt to place a barrier in the way of any church carrying out its polity, and particularly the Catholic, when, by an act of the Legislature, it is enabled, after a lapse of 300 years, to establish a form of church government in the land in unison with its principles and essential to its freedom. I am, reverend sir, yours obediently, George Bacon." The estimated value of the painting is 200 guineas, and the donor belongs to the Independents.

FREEHOLD LAND CONFERENCE.—On Tuesday morning, the grand conference of the friends of the freehold land movement was opened in the Town Hall, Birmingham. The attendance of delegates and others was far greater than at the conference last year. Amongst those present were Richard Cobden, Esq., M.P., J. Bright, Esq., M.P.; William Scholefield, Esq., M.P.; M. T. Bass, Esq., M.P.; Joseph Sturge, &c. The report of the council stated, that, from returns made by various freehold land societies, it appears there are 78 of these institutions in existence, independently of a good number of branches. These societies contain 21,900 members, subscribing for 35,000 shares, and the amount of paid-up contributions can be little short of £160,000. The report having been agreed to, some further business of a routine nature was gone through, and the conference adjourned. At the meeting of the Conference on Wednesday, several resolutions of the committee appointed to consider the subject of finance or premium were presented. The resolutions recommended the payment of interest on advances, and that in repayment of such advances the amount should be so apportioned as that the principal and interest be redeemed within the same time as the ordinary subscription would have taken to complete the shares. The resolutions having been adopted, others relative to the working of the society were agreed to, and the conference adjourned. At a meeting held at the Town-hall on Wednesday night, for the furtherance of the objects of the society, the following resolutions were agreed to:—

That this meeting, impressed with the moral, social, and political advantages of Freehold Land Societies, and with great satisfaction at the success which has been made in their establishment in different parts of the kingdom during the past year

That this meeting calls upon the unenfranchised men of England and Wales to join these societies, and thus obtain for themselves a secure and advantageous investment for their savings, and a voice in the election of members of Parliament.

THE UNPAID HOP DUTY.—The Earl of Chichester has declined to be the medium of presenting the hop-planters' address to the Queen, as his Lordship being of opinion that the subject of the address is not one upon which her Majesty ought to be approached; but, notwithstanding, the planters persevere in their course, and now intend, it is said, to try the Duke of Richmond.

FURTHER DISCOVERIES AT CIRENCESTER.—Fresh remains of the ancient inhabitants of the Roman Corinium are daily being brought to light by the workmen employed in digging the foundations of houses, &c., in various parts of the town. A large quantity of very curious pottery has been found, chiefly of the pseudo-Samian description, together with many interesting articles in bronze, glass beads, coins, &c. A considerable portion of the wall of the ancient town has also been exposed to view. The pottery is, as usual, chiefly fragmentary, but it sufficiently shows the treasures that might be obtained by a well-directed search. Excavations on a large scale are contemplated, and will be undertaken in the course of the ensuing spring.

FISHING EXTRAORDINARY IN THE FENS.—In consequence of the Middle Level Drainage Works, the bed of Whittlesea Mere, Lincolnshire, is now laid dry, with the exception of a few occasional splashes, the mud retaining its softness and depth as it was when covered with water. During the past week, a great number of men might be seen daily catching the eels on the surface, and putting them into nets and baskets. Many hundred stones have been thus caught. To support them on the top of the mud, many schemes are resorted to, the most common being pieces of wood tied to the feet, somewhat resembling snow shoes. With all the precautions used, several have found themselves suddenly up to their middle in the mud.

NEW ROMAN CATHOLIC CHAPELS.—No fewer than three additional chapels, in connexion with the Roman Catholic Church, are in progress of erection in Glasgow. One of these is to be opened on Sunday

On Monday, a special commission was issued for a winter assize of over and terminer and general gaol delivery for the counties of York and Lancaster. The judges appointed to proceed thereunder and hold such assize are V. C. Lord Cranworth and Mr. Baron Martin for the city and county of York, which have appointed Tuesday, the 10th day of December next, for opening the commission for that county at the Castle, at York, and the Right Hon. Mr. Justice Alderson and Mr. Justice Coleridge for the county of Lancaster, who have appointed Saturday, the 7th day of December next, as the day for the opening the commission for that county at Liverpool.

CHURCH, UNIVERSITIES, &c.

OXFORD UNIVERSITY. THE ROYAL COMMISSION.

The Secretary to the Commission of Inquiry has addressed a communication to the University authorities, requesting information from them on the following points:—

1. The possibility of diminishing the ordinary expenses of a University ed ucation, and of restraining extravagant habits.

2. The sufficiency of the powers which the authorities possess to enforce discipline

3 The power of the University to make, repeal, or alter statutes.

4 The mode of appointing the Vice-Chancellor and proctors.

5. The government of the University and its relation to the Colleges, as finally established by the statutes of Archbishop Laud.

6 The means of extending the benefits of the University to a larger number of students. (1.) By the establishment of new halls, whether as independent societies or in connexion with colleges. (2.) By permitting undergraduates to lodge in private houses more generally than at present (3.) By allowing students to become members of the University, and to be educated in Oxford under due superintendence, but subjecting them to the expenses incident to connexion with a college or hall. (4.) By admitting persons to professorial lectures and authorising the professors to grant certificates of attendance without requiring any further connexion with the University.

7. The expediency of an examination previous to matriculation; of diminishing the length of time required for the final degree; of rendering the honour degrees real tests of merit; of so regulating the studies of the University as to render them at some period of the course more directly subservient to the future pursuits of the student.

8. The expediency of combining the professorial with the tutorial system; of rendering the professorial foundations more available for the instruction of undergraduates generally; of increasing the number and endowments of professors, and of providing returning pensions for professors

9. The most eligible mode of appointing professors, and the effect of existing limitations or disqualifications upon the appointment of professors.

10. The effect of the existing limitations in the election to fellowships, and in their tenure

11. The propriety of abolishing the distinctions between commoners and ordinary graduates; between noblemen, gentlemen, commoners, and other students; and also the distinction made with respect to parentage, at matriculation.

12. The means of fully qualifying students in Oxford itself for holy orders, and of obviating the necessity of seeking theological instruction in other places.

13. The capability of colleges and halls, as at present constituted, to furnish adequate instruction in the subjects now studied, and in those introduced by the recent examination statute.

14. The system of private tuition, and its effects both on tutors and pupils.

15. The means of rendering Bodley's Library more generally useful than at present.

16. The propriety of laying periodical statement of the University accounts before convocation.

Her Majesty's Commissioners also request to be furnished with statements under the subjoined heads, and with any further information, or any suggestion, which may occur to the parties addressed:

1. The nature of endowment, and its present annual value, and whether any other sources of income are attached to it

2 Whether any special qualifications are required by statute in the persons appointed.

3. Whether any residence, lecture-room, library, apparatus, collections, &c., are provided for you; if so, if there are any funds for keeping them up.

4. Whether there are any statutes requiring the performance of specific duties; and whether those duties are such as could not profitably be now enforced.

5. The mode of appointment to your office, whether it is held for life or for a term of years, and whether the person holding it is removeable.

6. The nature and number of lectures usually delivered in each year, the average number of pupils attending, and the fee paid for each pupil.

7. The general condition in the University of the branch or study to which your professorship relates, and the means of promoting its advancement.

PRESENTMENTS AND APPOINTMENTS.—*Deanery*: The Rev. J. Howe, to Cloyne, Ireland. *Honorary Canonries*: The Hon. and Rev. G. Neville Grenville, to the Cathedral Church of Peterborough; the Rev. R. M. Master, incumbent of Burnley, to the Cathedral Church of Manchester. *Prebendary*: The Rev. A. Owen, to Penn Parva, in Hereford Cathedral. *Livings*: The Rev. W. S. Dear, to Allbourne, Sussex; the Rev. A. S. Wade, to Gretford-with-Wilsthorpe, Lincolnshire; the Rev. F. Maynard, to Kirk Braunwith, Yorkshire; the Rev. J. W. S. Powell, to Abinger, Surrey; the Rev. F. Silver, to Norton-in-Hales, Salop, the Rev. W. P. Williams, to Blendon, Somerset; the Rev. J. P. Walley, to East and West Wretham, Norfolk; the Ven. J. C. Wigram, to St. Mary, Southampton. *Vicarages*: The Rev. H. Wood, M.A., of Bosgant, to Stretton, in the county of Cornwall, by the Prince of Wales; the Rev. W. B. Evans, to Madley, with the chapelry of Tibberton, Herefordshire, the Rev. A. Jones, to Helmon, with the chapelry of Huntington annexed, Herefordshire; the Rev T. F. Layng, to Marden, Herefordshire.

TESTIMONIALS.—The following clergymen have recently received testimonials of esteem and affection:—The Rev. W. Speke, of Chilcompton, Somerset, from his parishioners. The Rev. D. Halsewood, late of Salesbury, Lancashire, from the parish-oners. The Rev. Mr. Bennett, minister of the Birkenhead District of the Independent Order of Odd Fellows, Manchester Unity. The Rev. H. Fellows, Vicar of Sidbury (a new gown and scarf, his former ones being consumed in the total destruction of the vicarage house by fire), from the parishioners.

DURHAM CATHEDRAL.—The Bishop of Durham, with much liberality, and without any solicitation, has presented the munificent sum of £500 towards the restoration of the dormitory of the ancient monastery attached to the Cathedral of Durham. The Dean and Chapter of Durham, at their General Chapter of Wednesday last, have granted £1000 for the same purpose, in addition to the above an equal sum, which they have appropriated for the expending, on the fabric. The building is believed to be the largest room in the kingdom, except Westminster Hall, and contained within its walls the whole of the spacious residence of Canon Wellesley, upon whose death its extraordinary form and features were discovered. It is at present intended to fit it up as a library, or as a library and museum

THE KING'S Scholarship at the Durham Grammar School has been obtained by Messrs. Halsey, Cayley, Bulmer, Rayson, and Richmond.

NAVAL AND MILITARY INTELLIGENCE.

THE NAVAL MEDALS.—It is understood that no claims for medals granted for war services in the navy will be received at the Admiralty after January 1, 1851; so that officers entitled to them, who are not aware of the rule, and who have not applied, to send in their claims immediately

COLONIAL RELIEFS OF TROOPS.—In consequence of the prevalence of cholera in Jamaica and some of the Mediterranean stations, we understand that the movement of troops on the colonial tour will not take place until some weeks later than the time originally appointed.

DEPARTURE OF THE COMMANDER OF THE FORCES AT BOMBAY.—Lieutenant-General Sir John Grey, the newly appointed general commanding the forces at Bombay, left on Wednesday last, accompanied by Captain Grey, for that presidency, to assume his command, in succession to Lieutenant-General Sir Willoughby Cotton, K.C.B.

RATIONS OF SOLDIERS SERVING IN THE COLONIES.—It is stated that it is intended to reduce the rate of soldiers' rations from 5d. to 3½d. per diem, the effect of which will be to leave to the soldier abroad 8½d., out of which he will have to maintain himself, and other expenses abroad and at home, conducive to his health and his comfort This is an act of justice and of humanity to our gallant expatriated army serving in unhealthy and extreme climates.

MILITARY TESTIMONIAL.—The Lords of the Treasury having had under their consideration a memorial of Major N. Ludlow Beamish, requesting that a silver vase and stand, presented to him by the officers of the German Legion, may be freely delivered to him on being brought to this country from the Continent, their Lordships have intimated to the proper authorities their desire, that, as the plate had been presented to Major Beamish by the officers of the German Legion as a mark of gratitude for a public service, it may be delivered to him as desired.

THE POST-OFFICE LONDON DIRECTORY, 1851.—With this volume, of more than two thousand closely-printed pages, comes the fruit of the experience of fifty-two years, the period of its annual publication. Many of our readers may, however, require to be informed, that the present volume resembles the earlier editions in name only With the accretion of our vast metropolis, the work has grown, not merely in bulk, but in accuracy, classification, and exact arrangement, and this without a proportionate increase of charge; for the proprietor assures us that the 1851 volume "contains about double the quantity of more letter press contained in the closing volume of its predecessor, and is published to its antecedent moderate price." These advantages have been secured by the vast increase of statistical inquiry, the judicious sub-division of the requisite labour, the increased facilities afforded by railway travelling, and, in short, the ready means of obtaining those descriptions of information that conduce to "high convenience." At no period of the existence of the "Post-office London Directory" will its utility have been so extensively tested as it will be in the proximate year 1851, at the great gathering of the Industry of All Nations; and, judging from experience of the completeness of the former publications, we doubt not the volume before us will meet every reasonable requirement. The book itself is a prodigy of completeness in its way, and conveys a better picture of the systematic resources of the metropolis than can be gained by any other means.

HYDROPHOBIA.—A well-attested case of cure of this awful malady is stated by a Correspondent to have been performed by Mr. Blake, surgeon, of Salisbury, on the person of Elijah Locke, of Pitlown, a village near the former place.

TOTAL LOSS OF THE BRIG "GAZELLE."—PORT RAMSGATE.—Intelligence of one of the most painful catastrophes that has occurred during the late gales reached London on Wednesday afternoon, from Ramsgate, off which port, during Monday night, the *Gazelle*, a brig of 242 tons register, homeward bound from Sydney, was lost, and it is feared with all hands.

POSTSCRIPT.

THE PAPAL AGGRESSION.

We have the following additional facts to note:—

MEETING OF THE COUNTY OF BERKS.—A large county meeting was held at Reading, on Thursday, in compliance with a requisition signed by some hundreds of freeholders. Amongst the gentlemen present were Lord Barrington, M.P., Mr. J. Walter, M.P., Mr. S. Palmer, M.P., Mr. Blackstone, M.P., General Welsh, Captain Hall, the Rev. H. Fox, &c. Mr. Palmer, M.P., proposed the address to her Majesty, which referred to the presumptuous assumption of the Bishop of Rome upon the prerogative of the Crown; considered it to be a violation of the law hereby it is declared that her Majesty has the chief power in this realm of England and other of her dominions; and prayed her Majesty to take into consideration the adoption of such legislative measures as may tend to the confirmation of our authority, and the maintenance of the Protestant Reformed national religion. [illegible] repressing practices and [illegible] subjects have been led away from the simplicity of the Gospel to the anti-Christian errors of the Church of Rome. A considerable discussion ensued, in which the Rev. W. Brown, a Baptist minister, objected to the address as at variance with civil and religious liberty, but did not press an amendment; and the address was agreed to without opposition. The meeting lasted several hours, and concluded by hearty cheers for the Queen.

NEWCASTLE-ON-TYNE.—On Wednesday, a public meeting, convened by the Mayor, in compliance with a requisition signed by upwards of three hundred of the leading merchants, bankers, tradesmen, and other inhabitants, was held in Newcastle, for the purpose of memorialising the Queen to take suitable measures for the protection of our civil and religious liberties, threatened by the present Papal aggression." The Guildhall was crowded, and the expectation of some opposition from the Catholics, who have a celebrated orator and leader, a Mr. C. Larkins, the brother of the Roman Catholic Bishop of Hexham; nor was the expectation disappointed. Mr. Ralph Waller moved the adoption of a memorial of the usual character, but deprecated equally the revival of all penal enactments against Roman Catholics, and all contentions or encroachments on the part of the Roman Catholic Church. An amendment was moved by Mr Rayne, repudiating all attempts at interference with the [illegible] of civil rights, and describing the Papal Bull as a mere organisation of the Roman Catholic Church. Another amendment was proposed by a Unitarian Minister, repudiating all help for religion from the secular power. Mr. Larkin then addressed the meeting. Opposition ensued. He spoke of the Cardinal giving the Queen the cold shoulder: upon was the consequence, which aimed for a considerable time At length an explanation was offered, but did not restore quiet, and Mr. Larkin was obliged to desist. The amendments were rejected, and the original motion was carried by an immense majority. Hearty cheers were given for the Queen. The meeting lasted four hours, being in a state of turbulence a great part of the time.

GLASGOW.—On Wednesday evening, a meeting was held in the City-hall Glasgow (the largest in Scotland), which was filled in every part by a most enthusiastic assemblage. The platform was occupied by the most distinguished of the citizens, many of the magistrates, and several county gentlemen. Sir James Campbell was in the chair. The resolutions declared unalterable attachment to the principles of the Reformation, a determination to support Her Majesty in resisting every means of interfering with the rights of conscience, and claiming a corresponding right to freedom of conscience in other countries to that enjoyed by the Roman Catholics in Great Britain.

LUDLOW.—A numerous meeting was held at Ludlow on Wednesday, at which the Bishop of Hereford presided. The right rev. Prelate opened the proceedings by a long address, in which he referred to the charity that exists amongst us as a proof that the Church had life in it. The speakers were the Hon. R. H. Clive, M.P., Earl Powis, Archdeacon Vickers, Mr. H. B. Clive, M.P., Captain Rushout, M.P., Rev. H. M'Laughlan, and others. A loyal address to the Queen, expressive of indignation at the Pope's proceedings, was adopted. The National Anthem was sung at the close of the meeting.

The first county meeting in Scotland was held at Dumfries, on Wednesday; Lord Drumlanrig, M.P., and Lord-Lieutenant of Dumfriesshire, in the chair. The meeting was a very numerous one of 4—classes. An address to the Queen, to use its utmost power to maintain its authority and prevent the Papal intrusion, was agreed to, after some remarks by a Catholic priest.

THE BISHOP AND CHAPTER OF CARLISLE have agreed to addresses to the Queen and the Bishop of Carlisle; and the Bishop of Norwich agrees to the spirit of indignation at the arrogant language of the documents issued by the authorities of the See of Rome, setting at nought the undoubted authority of our gracious Queen.

There have been meetings at Hornsey; Wakefield, where an amendment was moved, disclaiming any desire to interfere with the Catholics, but lost by a large majority, in the Corn-owners' and Candlewick Wards, &c.

Lord Feversham presided at Gloucester, on Wednesday, a large number of persons formed in procession, carrying effigies of the Pope and Cardinal Wiseman, which were publicly burned at the Ham. The procession, which consisted of nearly 2000, was headed by a band of music and men carrying torches

The Wesleyan Body is requested, to be entirely free from excitement on Friday next, and it is believed many converts will then grace his triumphs.

THE ROMAN CATHOLIC BISHOP OF NOTTINGHAM.—The *Nottingham Mercury* says, that Dr. Newman, the most distinguished convert from the Anglican Establishment, will be Roman Catholic Bishop of Nottingham.

The Art-Union of Glasgow have awarded the sum of £50 to Mr. E. M. Ward, R.A., for his picture of James the Second receiving the intelligence of the landing of the Prince of Orange, which was exhibited last year at the Royal Academy.

The Society for promoting Christian Knowledge have received, anonymously, the handsome donation of £500 towards the society's funds

THE BURGLARY AT THE DUBLIN CASTLE, CAMDEN TOWN.—Godwin, the police-constable of the S division, who arrested the prisoner Rouse, who on Sunday evening last pleaded guilty to a charge of burglary, and was transported for life, appeared in the Central Criminal Court yesterday (Friday), and was warmly complimented for the intrepidity and courage he had displayed in capturing his prisoner. Mr. Baron Alderson told him that he had loosed through the depositions taken in the case, certainly it did seem to him that his conduct was worthy of the highest praise. The prisoner, who appeared a desperate young man, had made a violent attack on him, severely stabbing him with a knife in the temple, and by he had succeeded, at great hazard to himself, in retaining possession of his prisoner, and ultimately bringing him to justice. The court, therefore, having ascertained that he bore an excellent character in the force, felt it to be within its province to act as it could to reduce in some measure the punishment to which the prisoner was justly subject, and to compliment him. The country was much indebted to him for what he had done, and to mark the sense of the Court for his intrepidity he had directed a reward of £10 to be paid to him.

BOILER EXPLOSION.—An explosion at the very extensive mills of Messrs. C. Ward and Co. took place on Wednesday evening, at Bradford, in Yorkshire. The effect was terrific and the destruction of property immense, between the engine-house and the boiler, a cast iron, weighing many tons, was torn to pieces, and one portion of it, some tons in weight, was tossed into the yard beneath; and another portion, weighing six tons, was thrown into the air to a distance of 60 or 80 yards. John Ellis, the engine-tender, was found dead beneath the ruins in the neighbourhood of the engine-house; and a married woman, named Nevin (married only a fortnight ago), was killed in an adjoining cooking shed: five other persons were severely scalded. Four hundred persons were pursuing their employment in the works at the time of the explosion. The cause of the sad disaster is unknown. It was feared that several other of the injured persons could not survive above a few hours.

LATEST FOREIGN NEWS.

FRANCE.

Our advices of yesterday (Friday) from Paris show that the severity which the French law authorities exercise against those writers for the public press who happen to fall into their hands continues as vigorous as ever. We find that the author of a libellous article against the Cabinet in the *Vote Universelle*, and the publisher of that journal, who had been found guilty of the charge, have been sentenced to six months' imprisonment and 3000 francs fine.

In the Assembly, on Thursday, M. Bancel complained that the police should allow one class of newspapers to be sold in the streets, whilst another class was strictly prohibited. The Minister of the Interior justified the course pursued; and said that he agreed with other interferences with the sale of those journals that was absolutely necessary for the public safety.

The dispute between the French Government and the *gueuseurs* of the Assembly, which appeared to be put an end to, has been actually arranged in the following way:—The president or *bureau* of the chamber is to choose the Assembly's commissary of police among the commissaries of the city of Paris, who is to receive 6000 francs per annum, and the Assembly, not the city, which pays his salary, should stop the same, the Assembly may charge the pay withheld upon its budget. The special commissary cannot be dismissed without the joint consent of the Government and the President of the Assembly.

The demand for the extraordinary credit for 40,000 men is exciting a good deal of attention; and it is thought not at all unlikely that the Assembly will reject the proposition.

M. Davergier de Hauranne has been returned for Cher

GERMAN STATES.

The latest advices from Berlin are to the 26th inst. They state that the Austrian Ambassador at that Court had received instructions from his Government to insist upon the immediate evacuation of Hesse by the Prussian troops, in non-compliance with which he was to demand his passports.

A report was in circulation that Prussia had concluded a loan of ten millions sterling with the house of Rothschild, in London.

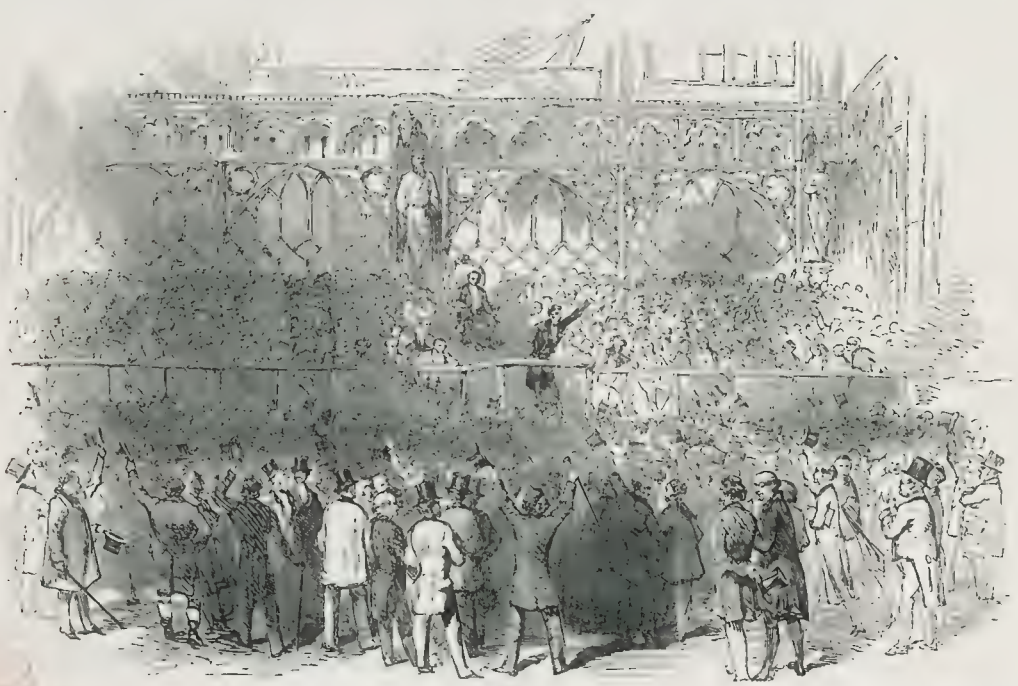
The Berlin *Constitutionelle* (evening edition) had been seized by the police, as it was said, that it would contain some violent remarks against the Government for expelling its editor from Berlin; but upon a close perusal not a word was to be found upon the subject. It was expected that the order would be recalled.

THE GREAT CITY MEETING AT GUILDHALL.—(EXTERIOR.)

THE PAPAL AGGRESSION.

GREAT MEETING IN THE CITY OF LONDON.

On Monday, in pursuance of the requisition we noticed last week, signed by 120 persons, a meeting was held in the Guildhall, which was crowded to excess. There were several ladies in the side galleries. On the platform were—The Right Hon. the Lord Mayor, who presided; Sir James Duke, M.P.; Alderman Thompson, M.P.; John Masterman, Esq., M.P.; Alderman Salomons; Sheriffs Carden and Hodgkinson; Mr. Alderman Sidney, Mr. Alderman Lawrence, Mr. George Frederick Young, Mr. Rosanquet, Mr. D. W. Wire, Mr. Ambrose Hoare, Mr J. J. Cummings, Mr Singer, Mr. D. Powles, &c.—Mr. Masterman moved the first resolution, declaring the recent conduct of the Pope unjustifiable, and an unprecedented interference with her Majesty's supremacy.—Mr Ald. Thompson seconded the resolution, and referred, like other persons, to the conduct of some of our own clergy as having invited the attack.—A gentleman of the name of Singer made an attempt to address the meeting, in order to propose an amendment, but he was not allowed to speak uninterruptedly. He wished the words "unjustifiable attack on the Queen's supremacy" left out of the resolution; but no person seconded the amendment.—Mr. Cummings moved the second resolution, expressing a belief that the nation owed all its greatness, under Divine Providence, to its deliverance from the ecclesiastical dominion of Rome.—Mr. Joshua Walker seconded the motion.—Mr. Laurie moved an addition, expressing indignation and alarm at the introduction of Romish principles and practices into the services of the Established Church by many of the clergymen of that and other dioceses, and that greater danger is to be apprehended from unfaithful teaching within the Church, than from any open hostility from without.—Mr. Ald. Sydney seconded Mr. Laurie, saying, amongst other things, "My belief is, that whatever has been done by Rome, has been done in unison with the laws of the realm. (Cries of 'No, no.') I feel humiliated as a British subject in making such a confession to such an assembly. I believe that the landmarks of our constitution have been infringed upon in secret, quite unknown to ourselves (Hear, hear.) I believe that while we have put faith and confidence in her Majesty's present advisers and in former administrations, we have been greatly cajoled with regard to our religious feeling." (Hear, hear.)—A Mr Scarborough, who vehemently denounced Popery, and the Rev. Pierce Pocock, who wished to address the meeting, were scarcely allowed. Mr. Wire, denouncing the enemies both without and within the Church, supported the resolution and the addition. We quote one passage of his speech:—"I trust that you will not only pass the resolution unanimously, but wherever there is a Puseyite priest, or a person to be found—no matter whether he is covered by the shadow of St Paul's (cheers), or ministers in a humble building—that the people of England will remember the words which the Dean of Bristol used—that the Church is not the Bishops, not the clergy, but the body of the people of England. (Loud cheers.) When you see Romanist practices in the Church, or when you hear Romanist doctrines, become again protesters; walk out; leave he men to preach to empty benches; don't stay to witness their 'histrionics.' (Loud cheers, and cries of 'Turn them out.') I regret that the concoctors of this meeting, when they drew up these resolutions and came down here to ask the intelligent citizens of London to pass them, overlooked the great blot in their own Church, and took no notice of the proceedings of the clergy of that Church—(cheers)—who will assuredly, unless the people of England prevent them, lead them not only to the brink of Rome, but at last into the very bosom of that Church. (Cheers.) It has been well said that we owe our standing as a nation, the privileges we enjoy, the liberty we have and give to others, all that is great in commerce, all that is fine in art, everything that can dignify and adorn our position, to the Protestant faith. Love it, therefore, and take care that it is not corrupted either by Bishops or clergy."—Mr. Ross also supported the resolution, which, with the addition proposed by Mr. Laurie, was carried with loud acclamations, and a very few assentients.—Sir James Duke, Mr. Hoare, banker, Mr. J. D. Powles, and Mr. Matthew Clarke having spoken strongly against the Papal aggression and the corruption of religion; and Mr. Powles having insisted on the continuance of great enthusiasm on the subject, which had been described in the *Economist* as having subsided, and the address having been proposed, Mr. James Wylie wished to propose an amendment; but, not being heard, withdrew it. The meeting, which was enthusiastic throughout, having adopted the resolutions and the address, and given vociferous cheers and thanks to the Lord Mayor, sang "God Save the Queen" in a most animated style, and then separated.



THE GREAT CITY MEETING IN GUILDHALL.

ANTI-PAPAL DEMONSTRATION AT SALISBURY.

ANTI-PAPAL DEMONSTRATION AT SALISBURY.

YESTERDAY week (the 22d inst.), the sober, peaceful, and respectable city of Salisbury was frightened from the propriety of its stagnation by a grand mock procession of the Pope, his English Cardinal, and the twelve Bishops, all of whom were afterwards doomed to the flames in one of the biggest bonfires remembered in the West Country. The expenses of this affair were defrayed by a private subscription, and we believe no member of the Church of England professedly took part in the display. The procession was formed at six o'clock in the evening, and commenced its march through the principal streets preceded by a band of music, and attended by a large number of torch-bearers, many of whom were dressed in frocks and cowls, as friars and "monks of old," and wore large comic masks, such as figure in the preliminary scenes of a pantomime.

The effect of this uncouth pageant, as it passed through some of the old streets of the town, lighting up the ancient gables and old wood-work of the houses—some of which date back earlier than the 15th century—was extremely picturesque, particularly when, in its passage along Minster-street, the black and crumbling stonework of the old Poultry Cross came into the picture, looking more black and weather-worn from its contrast with the white illuminated dresses of the Catholic dignitaries, and their torch-bearing attendants.

When the Guys, as the mob irreverently termed these splendid figures, had passed through the greater part of the town, they were carried to a scaffold erected in the Green-croft, the highest open place in the liberties of the city, and there committed to the flames, with fireworks and the usual accompaniments. The populace, who mustered strongly in spite of the rain, which fell at intervals copiously, behaved most decorously. The streets in which dwell the principal Roman Catholics (as also Exeter-street, where stands the beautiful little Catholic church, lately erected from the designs of Pugin) were avoided; and, we believe, no mischief was done, even to the extent of a pane of glass. Let us hope that all who took part in, or were spectators of, this demonstration, did not construe it into *more* than an expression of their loyalty, and their aversion to be priest-ridden; and that they remembered the words of the apostle of the great essence of forbearance — "And now abideth faith, hope, charity, these three; but the greatest of these is CHARITY."—1 Corinthians xiii. 13.

THE CHURCH OF SANTA PUDENTIANA, AT ROME.

THIS ecclesiastical structure has suddenly emerged from its common-place obscurity into a position of note, with the British public at least, by reason of the saint in the Roman Catholic calendar to whom it is dedicated having been selected by Cardinal Wiseman, on his recent elevation to a seat in the "Sacred College," as the patron whose name he should in future bear as his Cardinal's title.

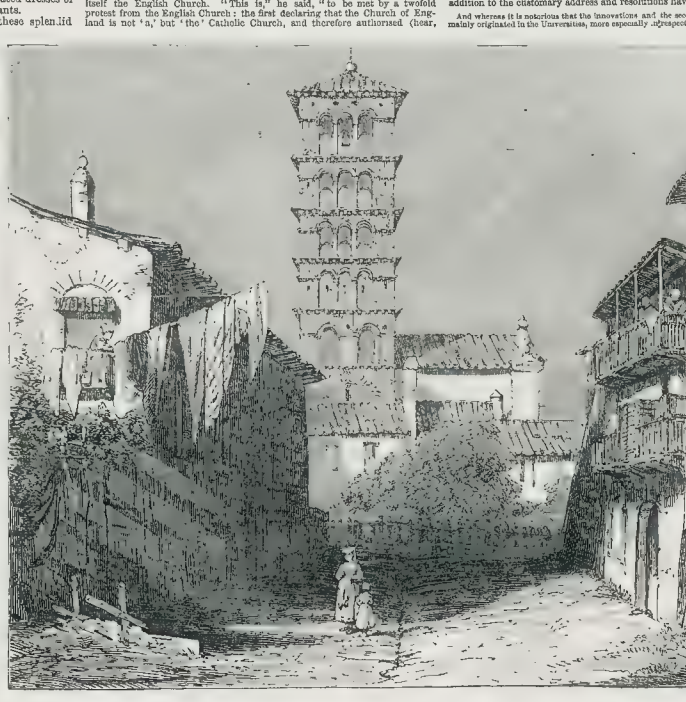
The reason which seems to have weighed with his Eminence in adopting his cognomen, is indicated in his pastoral letter of the 7th of October, where he refers to the Church of St. Pudentiana as one "in which St. Peter is groundedly believed to have enjoyed the hospitality of the noble and partly British family of the Senator Pudens." The allusion in this extract is to a fragmentary portion of history, which peers out amongst the legendary tales and traditions of eighteen centuries, like a broken column amidst the *debris* of ages. Pudentiana was the daughter of the Roman Senator Servilius Pudens, who married Claudia, the daughter of the British chieftain Caractacus, after that celebrated warrior had settled in Rome, and who, with his whole family, embraced the Christian faith shortly after the Gospel was first preached by the Apostles in "the Eternal City," in the beginning of the reign of the Emperor Caligula.

Pudens and Claudia, of both of whom mention is made by St. Paul in his Second Epistle to Timothy, not only opened their house in hospitality to the Apostles, but also appropriated a portion of it as a chapel for the performance of the sacred rites of Christianity; and upon its site was subsequently raised, in the second century, by Pius I., who was then Bishop of Rome, the ancient church dedicated to Saint Pudentiana, which the present comparatively modern structure represents. Nothing whatever is known of the ultimate fate of the original edifice; all that is certain is, that the site was, from the year 150, occupied either by a Christian church, or the ruins of one, bearing the name of Santa Pudentiana.

The Church, in its present state, is the work of the architect Francis Volterra, who restored it at the expense of a Cardinal of the Caetani family. It is situated in one of the most thinly-inhabited outskirts of the city, at the entrances of a little cross street leading out of the Via delle Quatro Fontane, close to the piazza in front of the Basilica of Santa Maria Maggiore. The square bell-tower attached to it is a characteristic erection of the middle ages. In the interior, the nave is divided into three compartments by ancient marble columns, which are said to have belonged to the house of Pudens. Amongst the things to which the attention of the stranger is directed, is a very ancient marble altar in one of the chapels of the nave, at which, tradition says, St. Peter officiated in the house of Pudens. However the visitor may feel disposed as to believing this tradition, he will readily perceive that the altar is certainly a work of remote antiquity. Close to the same chapel, on the wall of the nave, there is fixed a fragment of a sepulchral marble slab, which, with many others of a similar kind now in the Lapidarian Gallery of the Vatican, were taken out of the Catacombs, which were at once the place of refuge and the grave of the early Christians in the time of persecution. It bears an inscription, now scarcely legible, the style and execution of which point it out as the work of the primitive Christians; the words "*Bene Merenti*," and "*Pudentiana*," are, however, easily made out.

Taken as a whole, the Church of Santa Pudentiana is a piece of venerable patchwork, with a mosaic of the eighth century here, a fresco of the fifteenth there, and has very little to attract or interest in its appearance. There is a convent attached to it.

We are indebted to the courtesy of Mr. Richard Ford, the author of the "Handbook of Spain," for the Drawing whence the accompanying Illustration has been engraved. It is sketched from the court-yard of the house of the sculptor Belzi.



THE CHURCH OF SANTA PUDENTIANA, AT ROME.—FROM AN ORIGINAL SKETCH.

PAPAL AGGRESSION.

The meetings and the agitation on this subject still subsist; and we continue our brief account of proceedings that almost every day fill several columns of the morning papers.

MEETINGS.

THE BISHOP OF OXFORD presided over a meeting of the clergy of his diocese, at Oxford, on Friday week. Merton College Hall was too small to hold the persons present, and they adjourned to the Theatre. It was remarked that none of the leading Puseyites were present. The bishop made a very long address, in which he adverted to the Church of Rome claiming a right to use violence in order to make all schismatics—that is, all persons who have received baptism conform to Rome, by which those who did not are exposed to spiritual censure. He admitted that our Saxon ancestors owed the Church of Rome a deep debt of gratitude; but he spoke of the present movement as aggressive—as a denial of the very existence of the Church of England, constituting the formalities of the Church Universal under the Pope, instead of that which has hitherto called itself the English Church. "This is," he said, "to be met by a twofold protest from the English Church: the first declaring that the Church of England is not 'a,' but 'the' Catholic Church, and therefore authorised (hear, hear), and does not admit the intrusion of any other; and, secondly, the protest must, in my judgment, and as I have endeavoured to word it, side by side with the claim of our being 'the' Catholic Church of England (hear, hear), contain also a distinct protest against the corrupt doctrines of the Church of Rome. (Vehement cheering.) Thus should we make, as I think, a successful resistance—and I mean by that, showing in the face of Christendom that we really are what we claim to be—showing to doubting souls that we are what we assert ourselves to be—that we have Christ's sacraments amongst us in their truth Christ's Church in its divinely appointed organisation, and Christ's truth in its primitive simplicity." (Hear, hear.) The right rev. Prelate, in conclusion, submitted a protest to the meeting, which, being remarkable both in form and substance, we partly copy:—

> In the name of God, Amen
>
> We, Samuel, by divine permission Lord Bishop of the diocese of Oxford with the archdeacon, priests and deacons being assembled under the protection of Almighty God, in our cathedral city of Oxford, on the 2d day of November, in the year of our Lord 1850, do hereby, in presence of God the Father the Son, and the Holy Ghost, and before the whole Church, make this our solemn protest and declaration

It then referred to the Pope's bull and continued:—

> Now we, the said bishop, priests, and deacons, whose names are hereunto subscribed, do utterly protest against any such invasion of this Church and realm; and we do declare that the Church, recognised by law in this land, is the ancient Apostolic Church thereof, possessing the ancient faith, true sacraments, and a lawful ministry; and that her bishops and clergy are the bishops and clergy thereof by valid succession from the Holy Apostles, &c. And we do declare that we believe that this our protest would be approved, and the schismatic acts, and corrupt doctrines, and idolatrous practices maintained by the Bishop of Rome would be condemned by the judgment of the Universal Church, if it were possible that such judgment should be now by any means collected.

The protest concluded by warning the people not to yield obedience to Romanism, and by pledging the clergy to discourage the propagation of principles and practices which tend towards Roman opinions. A good deal of discussion ensued, tinctured with anger. The right rev. prelate was more than once rather rudely interrupted by interjections; some amendments were proposed, condemning innovations and unfaithful teaching in our own Church; but in the end the Bishop's protest was adopted.

A GREAT MEETING OF THE LAITY OF THE COUNTY OF YORK, called by the High Sheriff, in consequence of a requisition, very numerously signed, was held, on Friday week. Earl Fitzwilliam, after making a long speech, in which he stoutly protested against infringing, in any manner, the civil rights of the Catholics, for which he and his family had always contended, declaring that it was in defence of the principles of the Protestant religion attacked by the Pope that he stood forward, moved an address, of which these are the principal passages:—

> We disclaim all desire to deprive any of your Majesty's subjects of any civil rights or of any privilege essential to the free exercise of their religion; but we are moved with indignation that a foreign Power should have assumed the right to make a regular distribution of this kingdom into new dioceses in connexion with the See of Rome, and should have appointed a metropolitan and Bishops therein, claiming to govern them by exclusive jurisdiction. We are, moreover, astonished that the same Power should have presumed to grant titles and dignities of which your Majesty is the only rightful source and fountain within this realm. We impute no intention of insulting your Majesty to the Potentate by whom these titles and powers are pretended to be granted; but we feel called upon by such proceedings to assure your Majesty of our unshaken loyalty to your crown and person, and of our firm and devoted attachment to the principles of the Reformation. To these principles we cling with fondness and with gratitude, and are determined to repudiate whatever may have a tendency to draw us again under the spiritual domination of a Power by which we believe that the true spirit of Christianity has been disguised and corrupted. We now, therefore, desire to declare in the face of the world our determination to uphold your Majesty's rights and prerogatives, and to preserve, as far as in us lies, the purity of the Reformed Church. It is by a rigid adherence to the principles of the Reformation that we can alone hope to secure and perpetuate that freedom of thought which is as essential to vital religion as it is to the maintenance of civil liberty. We therefore pray that your Majesty will maintain and preserve inviolate your supreme authority as by law established in these realms; and we beg to express our reliance upon your Majesty for the adoption of any measures that may be necessary for that purpose.

The Earl of Harwood, a nobleman of totally opposite politics from Earl Fitzwilliam, seconded the motion, and the speeches of both noblemen were received with much approbation. The hon. Mr. Langdale, a Roman Catholic, of whom there are considerable numbers in Yorkshire, moved an amendment deprecating any interference with the doctrine or discipline of the religion, or the religious opinions of any of her Majesty's subjects, as a violation of the rights of conscience. He was not heard with the same favour as the two noble Lords, but he was allowed to address the meeting. After some other speakers of less importance had been heard, the question was put. For the amendment about 200 hands were held up, but several thousand were in favour of the address, which the High Sheriff was deputed to present. The proceedings were animated, but orderly.

THE CITIZENS OF EXETER have held a meeting, remarkable for the following addition to the customary address and resolutions having been agreed to:—

> And whereas it is notorious that the innovations and the accessions from our Church have mainly originated in the Universities, more especially as respect of the teaching of certain pro-

Professors of Oxford, we humbly pray of his Majesty to direct the attention of the University Commission now sitting, to search into the causes of the same, and to adopt such measures as shall cure those venerable institutions against all illegal, and schismatical, and anti-Protestant innovation for the future.

THE PROTESTANT ASSOCIATION held a meeting in St. Martin's Hall, Long-acre, on Monday; Mr. John Dean Paul in the chair. Upon the platform were G. Clarke, Esq.; Colonel Griffin, Captain Farrer, Colonel Addy, G. B. Postan, Esq.; L. H. V. Tomlin, Esq.; John Lord, Esq.; Atkinson, Esq.; H. Wilde, Esq.; William Leach, Esq.; — Seeley, Esq.; Rev. Dr. Croly, Rev. Dr. Dibdin, Rev. A. S. Thelwall, Rev. T. Nolan, Rev. P. B. Power, Rev. — Keene, Rev. William Cadman. The body of the hall was full. The meeting was opened with prayer by the Rev. Mr. Thelwall. The Chairman, in his opening address, said, speaking of Lord John Russell's letter:—But I would respectfully say, "Brave as those words are, this is language that ought to have been provoked from your Lordship years ago by the acts of the parties to whom you refer, rather than by this aggression of an Italian priest, who may just as well be charged with the inconsistency of paying with one hand and protesting with the other." (Laughter, cheers, and cries of "Turn him (Lord J Russell) out"). I would also remind his Lordship that the day may come—may, it has come—when British Protestants look for deeds, not for words. (Cheers.) But is there no other person in high station among us, and in authority, to share the responsibility? What has our metropolitan diocesan been about? Great changings.) What has he done with the Ridleys and the Bennets, *cum multis aliis*, all this time. Then quoting the right rev. Prelate's late charge, he said "Brave words these, my Lord Bishop, but do they not picture a very pretty specimen of the practices of these people for years past as well, as at present? (Cheers.) But, as his Lordship very justly observed, 'it is a minor mutation of the original article.' (Cheers.) He would here again respectfully ask his Lordship one question—Who first introduced the surplice agitation? (Cheers.) Who not only sanctioned and countenanced by his presence, but actually took part in the mummeries at the consecration of *St. Barnabas?* (Cheers and laughter.) He begged pardon, he meant St. Barnabas. (Renewed cheers and laughter.) He adjured them once more to rally round the tried and reliable banner of the Reformation, inscribed with "Fidelity to the Church and loyalty to the Queen."—Dr. Croly proposed the first resolution, condemning "the daring interference of the Pope with the rights of the British Crown." The hon. gentleman recommended the meeting to advise her Majesty to assemble Parliament, and to call on the Bishops to issue a strong, unanimous, and effective "declaration of their retaining the principles of the Protestant religion, and of your determination to put down all that bears the badge of Popery under the guise of Protestantism." Dr. Croly referred to many of the Whig measures and Whig appointments, and traced to the encouragement of the Government the arrogance of the Pope. "It was a most extraordinary and curious circumstance," he said, "that the diocese chosen by Dr. Wiseman was, by his own acknowledgment, chosen by him as one of the most important portions of England. Within that diocese, not merely the metropolis, but almost every strong place in Great Britain—from London down to the sea-shore. In that diocese was comprehended, not merely the Tower of London, the naval dockyards, and Chatham and Dover, but the great arsenals of Portsmouth (Hear, hear!) Now this might be a trifling consideration in itself, but it was [illegible] Rome its emissaries into holes and corners, where men of manly feelings would never dream of thrusting themselves—in short, to accomplish by witness what they could never hope to achieve by honesty. (Hear.) And recollect, said the rev. speaker, what is Rome at this moment? A French possession. (Cheers.) The Pope is a French vassal; and shall we suffer the vassal of that vassal to obtain possession of the prominent points of defence in this country? (Cheers.) He (the Rev. Dr. C.) maintained that this was a portion of a plan long concerted—a plan keenly constructed—and a plan carried on to the disgrace of the honour and the detriment of the prosperity of the people of this country." The hon. gentleman's eloquent speech was much applauded; and the Rev. R. Dibdin having seconded the resolution, it was unanimously carried. The Rev. Thomas Nolan moved the second resolution:—

That it is the bounden duty of all true and loyal Protestant subjects to rally round the standard of Protestantism; to protest against and to resist the encroachments of Popery, [illegible] to be enacted or enforced, as may, under the blessing of God, protect the religion, the throne, the government, and the people of this country from the usurpation and tyranny of Rome.

The rev gentleman enforced the resolution at great length; which, having been seconded by Mr. G. Rochfort Clark, was unanimously carried.—An address to [illegible] ringing the Doxology, and thanking his Holiness, that they and ministry and harmoniously.

THE CLERGY OF SOUTHWARK held a meeting on Tuesday at which a protest against [illegible] Diocese, for his kind admonition and exhortation, in reply to the address from the rural deanery after their assembling on the night of the Rev. Mr. Oakeley. [illegible] adopted.

THE WESLEYANS OF LAMBETH, on Monday, met to the number of 1500, and passed resolutions expressing their abhorrence of the recent conduct of the Pope, and [illegible] rights so dearly purchased by the martyrs of former times. A corresponding address to the Queen was adopted unanimously; and "God save the Queen" was most loyally sung.

AT SEVENOAKS, on Monday, there was a numerous meeting of the inhabitants; the Rev. Thomas Curtis, rector, in the chair. The Earl of Amherst moved an address to the Crown, expressive of the sentiments of the meeting at the late audacious aggression of the Papal Government, and praying her Majesty to take such steps, either by the enforcement of the present laws, or causing other laws to be presented to Parliament as would prevent any assumption of power in this country by the Roman Catholic Popes, Archbishops, or Bishops. The noble lord referred to the opposition recently made by the Roman Catholic Bishops to the [illegible] education. [illegible] Colonel Addy, C.B., M.P., seconded the motion, and [illegible] the standard of Protestant Ascendency—let them all rally under it—and as long as we existed he pledged himself to serve faithfully and manfully in upholding it. The Right Hon. J. G. Herries, M.P., in seconding the motion, said the Pope claimed the people as his subjects, and claimed to divide the country into districts. It was the duty of every man honestly to help Lord John Russell in resisting the aggression. He would not interfere any more than any of the Roman Catholics following or teaching their own doctrines or tenets in their own way, but he must say that he could not receive the bull as merely a spiritual institution.—(Cheers)—but must look upon it as an insolent and audacious attempt upon the religious liberties of the people of England by the Pope of Rome. If this country should ever come to be governed by the laws, decrees, or bulls of the Pope of Rome, a control would be exercised over every man's conscience, and the liberties of the country would be gone for ever. Step by step, as concessions had been made to them, the Roman Catholics had endeavored to take advantage of them, showing that they had not heated one jot of that spirit which had ever led them to grasp at universal supremacy. (Cheers.) He believed that, able a man as Dr. Wiseman was, he had overstepped the mark, and that he and the Pope had pursued a course which brought their proceedings within the reach of the law. By the act of the 13th of [illegible] it was forbidden to introduce into this country any bull, which was explained to mean any communication, edict, or rescript whatever, and especially one inviting Protestants to join the Church of Rome, pronouncing sentence of deposition from their oaths, under the pains and penalties of high treason. In 1844 or 1845, while Sir Robert Peel was Premier, an Act of Parliament was passed repealing the penalties, but leaving the prohibition as they defined the offence, still in force. That he believed to be now the state of the law, said Mr. Herries, and all those who had assisted in the circulation of the recent bull of the Pope, had subjected themselves to action for misdemeanour, or, in other words, for a violation of the law of the land. (Cheers.) Dr Wiseman told them that the measure which had just been promulgated had been three years under the consideration of himself and the Pontiff, and yet all this time there did not appear to have been one communication on the subject made to the Ministers of the Crown, whom Dr. Wiseman represented to be so friendly to all the changes which had taken place in the Roman Catholic policy. (Hear, hear.) If it was not insidious and insolent how was it that Dr. Wiseman was not found confessioning the subject to Lord John Russell or Sir George Grey, who were so friendly to him, and who ought to have been consulted respecting it? No, though he was three years in communication with the Pope on the subject, he never once mentioned the subject to any of her Majesty's Ministers, who knew nothing at all about it until the whole of her people were made acquainted with it at the same time through the columns of the press. (Hear, hear.) He ought, perhaps, to make one exception one marvellous exception. Wiseman told them that the Pope allowed one of her Majesty's Ministers, Lord Minto, the bull in print three years ago. (Hear, hear.) He suspected that that statement would turn out to be a most audacious assertion." He (the honourable gentleman concluded a long and able speech, of which we only preserve a few sentences, by declaring that if the Ministers did their duty, no difference of political views should prevent him from giving a cordial support to measures for Papal aggressor and maintaining her Majesty's supremacy. The address was unanimously adopted.

AT DUCKMANTON, on Monday, resolutions against the Pope's arrogance, and a memorial to the Queen, were adopted, after some opposition from a gent eman of the name of Lockhart. Amongst those present were—His Grace the Duke of Buckingham, Earl Fitzhardinge, Lord Barl, M.P., Hon. Henry Cavendish, Colonel Hall, M.P.; Mr F. Calvert, Q.C.; Rev. W. H. Freemantle, Rev. Alexander Cocto, Rev. Thomas Silvester, Rev George Cole, Rev. T. C. Whitehead, Rev. W. Andrews, Rev. R. Bayne, Rev. C. Bowden, Rev. H. Bellairs, Rev. Dr. Wilkins, Rev. J. E. Sabin, Rev G. Coleman, Rev. A. Baynes, Rev. W. Perkins, Rev. R. B. Seeley, Mr. W. Stowe (of London), Mr. H. Humphreys, Mr E. Parrott, Mr. C. Perkins, Mr G King, Mr. D. P. King, Mr. R. Chandler, Mr. P. Bacon, Mr. Alderman Harrison., Messrs. Bradford, Beards, &c. -The Duke of Buckingham moved the memorial. The meeting was closed, like many others, by singing the National Anthem.

GLOUCESTER COUNTY MEETING.—On Tuesday an important meeting took place at the Shire-hall, Gloucester. It was convened by the High Sheriff, Mr. Parry, of Highnam-court, in consequence with a requisition signed by Earl Fitzhardinge (Lord-Lieutenant of Gloucestershire), Earl Ducie, Lord Sherborne, Lord Redesdale, the Earl of Morton, Sir Michael B. Beach, Bart., Sir C. W. C. Codrington, Bart, M.P., Sir John Wright Guise, Sir Charles Hyde Crawley Hoskyns, Bart, Mr. Hale, M.P., Mr. Stanton, M.P., &c., desiring publicly to deprecate the late Papal aggressions upon the legitimate supremacy of the Queen, the rights of the Church, and the liberties of the people of this country. The

interest excited was very great, and there was an immense attendance. Earl Ducie issued the following letter:—

TO THE PROTESTANTS OF THE COUNTY OF GLOUCESTER

Gentlemen,—You are doubtless aware that a county meeting is convened for [illegible] instant, to address her Queen on the subject of the late Papal aggression. I have reason to believe that an attempt will be made to confine that address to the one point of the Queen's supremacy, thus adjourning entirely to the present age of the Pope, and not to the pernicious era of Popery, thus objecting to men and names, and not to or peoples and doctrine. I hope, therefore, that every true Protestant will make a point of attending this meeting, and even may this unite the adoption of such an address to her Majesty as may be worthy of the occasion, and of a county which contains the birthplace of Tyndale, and the grave of a Hooper.—Yours, &c.

DUCIE.

Mr. Parry, the High Sheriff, presided. Earl Fitzhardinge, Earl Ducie, Lord Redesdale, Mr. Hale, M.P., Mr. Grantley Berkeley, M.P., Mr. Stanton, M.P., Mr. Grenville Berkeley, M.P., Sir John Guise, Bart., Sir Michael B. Beach, Bart., Sir J. D. Paul, Bart., Mr. Parnell, county magistrate, and a large number of the magistracy and clergy of the county were present. The High Sheriff opened the proceedings in a few words, in the course of which he alluded to the disturbances which had taken place in Cheltenham, and said, if they were to yield to the present demand of the Roman Catholics upon their privileges, the [illegible] of [illegible] their constitution would be verified, and the Protestant succession to the throne be next disputed. Earl Fitzhardinge moved the first resolution, and declared his sincere attachment to the Church of England. The noble lord, in a speech of great length, said, loyalty was due to the Roman Catholics all civil rights, tolerate the insult offered to the Queen, the nation, and the Church. The Papal aggression was insulting; but it had been brought on by the abandonment of Protestantism by a part of our clergy. What he proposed was, that the meeting should express its unqualified attachment to the principles of the Protestant religion.—Sir M. H. C. Boevey seconded the motion. The other principal speakers were Earl Ducie, Lord Redesdale, Mr. Parnell, Grantley Berkeley, M.P., Sir John Guise, M.P., the Rev. F. Close, and Sir J. Guise. The following address was adopted:—

TO THE QUEEN'S MOST EXCELLENT MAJESTY.

The Address of the [illegible] of the county of Gloucester, in county-hall assembled

We, your Majesty's faithful subjects, are humbly to approach your Majesty with heartfelt assurance of unwavering loyalty to your crown and of sincere attachment to your person. We desire at our entry to declare to your Majesty that we regard with feelings of indignation the insolent attempt made by the Pope of Rome to interfere with your Majesty's undoubted prerogatives. We therefore venture humbly to pray that your Majesty will maintain inviolate your supremacy as established by the immutable judgment of such measures as shall be most effectual for that purpose, and for reaching the Protestant Church from the danger to which she has been exposed by the assurance of that arrogant pretender of Romish doctrine and practice, which we believe to have been the main promoting cause of the late proceedings of the Pope, assuring to your Majesty to discourage the propagation of all principles and practices leading to establish Romish opinions in our respective spheres.

A counter-address was proposed, but withdrawn.

CLAPHAM.—A crowded meeting was held on Tuesday at the parochial boys' schoolroom, Clapham-common; Mr. J. Thornton, a magistrate, in the chair. The Rev. Mr. Bowyer, the Rector of Clapham, proposed the first resolution. He believed that it would be found that the insolent aggression was one of the kindest acts the Church of Rome had ever done for the Protestant faith, because it had roused the people; and he hoped they would never rest until they [illegible] understand that they would not suffer the aggressions of the Bishop of Rome. (Loud cheers.) They must have that clearly understood. He believed that one cause of all this had been the unfaithfulness of a certain body of the English clergy.—The Rev. Dr. Cumming, of Quarter-deck, seconded the resolution.—Mr. Cummings believed he was the only Catholic present. (Loud cries of "No!") He stood before them as a Catholic. (Cries of "A Roman Catholic!") We had been continued, been governed by Bishops in spite of penal laws which would have been worthy of a Nero, and we shall be governed by Bishops still. (Uproar.) I see there is no chance of a fair hearing, but I will [illegible] that we will [illegible] our Bishops in spite of you. He moved,

That this meeting has nothing whatever to do with the internal rule or government of a church to which the persons who compose the meeting do not belong.

The amendment was not seconded. The resolutions against the aggression were carried, and the meeting broke up.

THE WESLEYAN METHODISTS.—At a special meeting held at the Wesleyan [illegible] on Monday, the 18th inst., the Rev. Jabez Bunting, D.D., in the chair, numerously attended by members of the committee from various parts of England; the Rev. Dr. Beecham in the chair on the motion of the Rev. Robert Ousely, it was resolved, the Rev. Messrs. Dr. Hannah, Newton Ray, and Barry supported by Mr. Thomas Farmer, of London; and by the Rev. Dr. Hannah, Secretary of the Conference; resolutions were unanimously adopted, declaring—

[illegible] the Romish ecclesiastical polity in England. That, in the judgment of this committee, the document from Rome, in which the change is promulgated and enjoined, obviously violates a [illegible] of the Sovereign in her own dominions, and to guard the [illegible] against the [illegible] present and all future encroachments. This hope, the committee is greatly encouraged to entertain by the manly and truly Protestant sentiments recently avowed by the First Lord of the Treasury.

[illegible] have been meetings at Bath, Devonport, Colchester, Kingston-on-Thames, Ashby-de-la-Zouch, Great Yarmouth, Hayes, Portsmouth, Cheltenham, [illegible], Chesterton, Cambridge, the Home Missionary Society, Great Queen-street, Mitchell's, Chester-square, the ward of Cheap; St. Peter's, Cornhill; Lichfield, Walsall, Gloucester, Wolverhampton, Stourbridge, South Shields, the Professors and others of Queen's College, Birmingham.

The clergy have met in almost all places where they are authorised or accustomed to meet.

LEICESTER COUNTY MEETING. This took place at Leicester on Wednesday. The meeting was convened by the High Sheriff, in compliance with a requisition, signed by 340 gentlemen, to express their opinion upon the recent monstrous assumption of power by the Bishop of Rome whereby the Protestant religion of [illegible] GOWN have been insulted. The meeting was held at the Castle of Leicester, in the court usually appropriated for the Nisi Prius proceedings at the county assizes, which was inadequate to afford accommodation for the numbers desirous to be present. The proceedings excited great interest, and drew together a large number of the leading gentry and inhabitants of the neighbourhood. A group of ladies occupied the gallery. Among the persons present were Sir Henry Halford, M.P., Mr. G. W. Packe, M.P., Sir F. Fowke, Bart., the Hon. H. Dixon, Mr. R. Gough, of Misterton Hall, Mr. H. Green, of Rowleston Hall; Mr. Gardiner, Mr. W. Parsons, Mr. Thomas Cradock, Mr. Charles Jackson, Mr. W. Cooke, Mr. T. Ingram, Mr. T. Macaulay, Mr. T. Moxon, several reverend gentlemen, and Mr. J. P. Mursell, Prot. Diss. A letter was read from the Duke of Rutland (Lord-Lieutenant of the county), in which he expressed his regret that he was unable to attend the meeting, and declared that—

Among the numbers who will be present, there will not be one individual who will be more concerned in the object of the meeting, or more desirous of expressing his sentiments upon it, than myself. I fervently believe that had the measure against which it is intended to protest been previously received by the country, it would never have seen the light. Which has been excited through the length and breadth of the land, would have spared [illegible] of any sane either strike of aggressive policy from the same quarter. And here I desire to say my conviction is, for or against the Roman Catholics, that the Roman Catholic Bishops, who, I am confident, have felt satisfied with the complete and perfect and harmonious toleration, permitted to the exercise of their religion.

A letter was also read from Lord Howe, expressing his mortification at giving up all hope of attending, from a sudden attack of influenza. He hoped that the town of Leicester would be boldly and firmly express their opinion that they would not allow their Sovereign and religion to be insulted or interfered with in that country partitioned out among Popish Bishops. The High Sheriff (Mr. Stokes, of New Parks) then addressed the meeting, saying this was not the time for the recension of Papal doctrines in this country. There were, he thought, many worthy successors of our noble forefathers who struggled so manfully for liberty, and, above all, for liberty of conscience. (Cheers.) They freed us from the Papal dominion, from the degrading tyrannical power which the country had long laboured, and from [illegible] priestly domination. (Hear, hear.) They procured for every man in the country the right of private judgment in matters of religion; and surely now it was the time for giving up this country had long enjoyed, and the infallibility of the Roman Pontiff. (Cheers.) The Catholics enjoy in this country, in common with us all, freedom of conscience, and all civil and religious privileges of which they were deprived. It was, therefore, never well to continue to them all those rights which they possess conjointly with ourselves. (Cheers.)—The Hon. H. Wilson moved the first resolution, setting forth—

That the meeting views with deep feelings of indignation the recent monstrous assumption of power by the Bishop of Rome, whereby the Protestant religion of this country has been insulted, and the sovereignty and prerogatives of the Crown have been assailed.

Though, the hon. gentleman said, the Roman Catholics of this country had issued a letter which has caused universal feelings of approbation, yet he thanked the Government for the encouragement it had given to the Popish religion, and adverted to the approaching visit of Mr. Shiel and other Roman Catholics as injurious to Protestantism. What the hon. gentleman chiefly dreaded was, that they should express their decided, their strong, their firm determination, to uphold the supremacy of the Sovereign, and maintain the Protestant principles which passed her Majesty on the throne. The resolution moved by Dr. Stokes was unanimously agreed to. Sir Henry Halford moved the next resolution, acknowledging her Majesty as the sole fountain of honour in these realms and expressing a firm determination to resist every encroachment upon her supremacy, to uphold her just prerogatives, to preserve inviolate the Protestant faith, to repel any violation of the spirit of our glorious Constitution, and to maintain those Protestant principles which placed her Majesty's Illustrious House on the British throne. It was his belief that concession had been carried too far. The recent Papal aggression had been encouraged by the recent policy of the State, and by the [illegible] of the Queen's Ministers. [illegible] to the Church of Rome. (Hear, murmurs, followed by renewed cheering.) The resolution, seconded by Mr. C. C. Macaulay, who, as a Protestant layman, was delighted in being permitted to evince the spirit which the laity felt, and he trusted would ever feel, was carried by the wanton insult and aggression was perpetrated at once on the rights of their Sovereign and the pure Protestant faith of the nation, was put, manfully agreed to. Mr. Packe, M.P., moved the address to her Majesty's Government, whatever they might write, had been in the main the cause of the aggression (Loud cheers.) Much had been said about the power and the proceedings given by the Government to Popish bishops. But a stalwart sentiment had just expressed than even those things conveyed by a noble Lord, who now filled the office (one of her Majesty's principa. Secretaries of State, in the House of Lords. That noble Lord was reported to have said that he wished to see the day come when one-half of the Episcopal Bench in the House of Lords should be composed of Popish Prelates. (Loud cries of "Hear, hear.") Now, what had the Pope done? The Bishops now in the House of Lords were in number 26. Well, as if to follow out the sentiment of the noble Lord, in the branch of the Legislature adverted to, the Pope has given us the exact number of new Bishops which the noble Secretary of State for the Colonial Department said he wished to see occupying the Episcopal bench—namely, 13. (Hear.) Don't tell him! Reading colonists—believe was not significant. They might differ with him (Mr. Packe) as to the conduct of the Government, but it was his duty as a public man to declare his belief that a great deal of [illegible] for this aggression on the part of the Pope had been laid by her Majesty's Government. (Cheers.) The [illegible] was seconded by [illegible] and carried.

Before the meeting separated, Mr. Gardiner said: He had seen the Catholic worship celebrated at Rome; it was just like the performance of a gaudy play, and he was sure our clergy were not likely to be seduced by such a farrago of nonsense, superstition, and mummery. (Cheers and laughter.) He saw 29 Cardinals and 30 or 40 Bishops, in purple and crimson, fall down at the feet of Pio Nono, in the act of worship. The people of Rome were in ignorance and darkness, and no wonder they were captivated by the thousands of candles, the burning of incense, the gorgeous dresses of priests, studded with precious stones, and the images, pictures, and relics—all these were enough to turn them mad. (Renewed laughter.) Did they think that such stuff as that would ever sap the understandings of the people of this country? "Oh (exclaimed the speaker), it is perfectly ridiculous altogether! Don't you go away alarmed, gentlemen. (Renewed laughter.) While knowledge diffuses itself, and railroads and telegraphs are spreading over the world, this bare-faced imposture will be driven out of society as the greatest cheat that was ever practised. (Loud cheers.)

BISHOPSGATE WARD.—At the meeting in this ward, on Wednesday, Mr. Metcalfe Hoppood moved the first resolution, recommending the adoption of a loyal address to her Majesty upon the subject of the late insolent aggression, and expressed regret at what had taken place in our Church, and sorrow that the Bishop of London had not spoken out sooner. Mr. Charles Gilpin moved an amendment, declaring the present excitement as likely to raise hostile feelings between different classes of the community, and to foster an overbearing and persecuting spirit, opposed to the pure principles of the Gospel of Christ." This amendment was supported by several speakers, but the show of hands was largely in favour of the original motion.

IPSWICH.—A public meeting of the town, convened by a requisition to the Mayor, was held on Friday week, in the Corn-Exchange. The Mayor, P. P. Bridge, Esq., in the chair, and the room was crowded in about 1000 persons. Mr. J. Silver Cobbold, M.P., amid loud cheers, moved the first resolution, expressing "attachment to the person and government of her Majesty the Queen, and firm and unalterable adherence to the Protestant principles which placed her Majesty's ancestors on the throne of these realms." This resolution was unanimously carried On the second resolution being proposed, which expressed surprise and indignation at the insolent claim of the See of Rome to [illegible] possible protested against that claim, Mr. Rushbrook proposed an amendment [illegible] was no less illegitimate, and similar claims and pretensions made by any other party, from whatever quarter they may profess to derive their authority. It was no matter whether we had the Pope of Rome or the Prelate of Exeter. A considerable deal of discussion ensued, and the amendment was negatived by a considerable majority.

LEEDS.—On Wednesday a large and respectable meeting of the clergy of this Archdeaconry took place in the Music Room of the Stock Exchange, Leeds. Archdeacon Musgrave presided. The Rev. Dr. Hook proposed the first resolution, which was as follows

That we view with the strongest indignation the Papal bull of the 29th of [illegible] which the Bishop of Rome, in his arrogance, has parcelled out the [illegible] into districts, and has appointed over the Queen's Majesty, ignoring the very existence of the Church, and sowing the seeds of strife throughout the land. (Applause.)

Dr. Hook said that the Popish bull was nothing less than an attempt to revive antiquated claims, among which was the claim of a right to depose our Sovereign [illegible] should be sufficient to call up every man to oppose it with all his might. (Applause.) He proceeded to urge the Churchmen present to unite together, and [illegible] Established Church itself. (Cheers.) He charged the Church of Rome with alliance with infidels; probably she would declare her apostacy, and soon did so [illegible] Another subject connected with the See of Rome was [illegible] cumbent of Shadwell, near Leeds, objected to the resolution, which [illegible] Dr. Hook read a letter, addressed by Mr. Hathaway to [illegible] especially the Unitarian, were the speeches of the first two speakers. (Disapprobation.) Dr Hook read a letter, addressed by Mr. Hathaway to [illegible] which

the Christian duty of viewing in a charitable light the differences of opinion amongst ourselves. I determined not to employ my own words or arguments in speaking to you on this subject of lights on the altar, but I will use the words of one who, whatever may have been his opinions at a former period, cannot be supposed to be now a favourer of those views and practices which you regard with suspicion. I mean Dr. Hook, the vicar of Leeds. Dr. Hook has published a work, entitled 'A Dictionary of the Church of England;' and under the head of 'Lights' he speaks thus:—"This custom of having lights upon the altar of the church is enjoined by the laws and sanctioned by the use of the Church of England. The Church has upon the altar certain lights to symbolise to the people that Christ in his twofold nature is the true light of the world." Now, mark what Dr. Hook at much length, the rev. gentleman continued:—" The Bishop of London came to this church on St. Barnabas Day, the 11th of June last. He entered this house of God, and examined with a critical eye every portion of it. Everything was pointed out to him by me; nothing was omitted. He came on a grand festival of the Church; he consecrated this house of God; he gave us his blessing, and went away leaving us his benediction and deed of consecration. Now, what difference can there be between June the 11th and November the 24th? We have built and ornamented this holy sanctuary to the honour of God. It has cost much time, much money, and much labour; our whole heart has been set upon it, and all that has been done, not for the great, the rich, and the powerful, but for the use of the poor; we have opened wide our doors to the Christian poor of the parish. Is it fair to come down upon us and the church in worship, without considering what you have to say in justification of your so acting, and without reflecting why all this care and trouble has been taken? At the conclusion the Offertory was read, and the congregation slowly dispersed. A few persons attempted to hiss the performance of a piece of sacred music on the organ while the congregation were leaving the church, but the interruption was soon put an end to. A large crowd was assembled outside the church, where a body of the B division of police preserved order.

MR. HUME, M.P., has written a letter to the editor of the *Hull Advertiser*, in which he characterises Lord John Russell's letter as "a tub thrown out to the whale, and accuses the noble Lord of wishing to raise religious animosities in order to stifle the demands for reform, and stop the progress of political improvement.

FROM IRELAND, Dr. Murray, in forwarding to the "most Eminent and most Honourable Lord Cardinal Wiseman" the address of the Catholic Association of last week, spoke of it as a proof of the perfect union of heart and mind which subsists between the Catholic clergy of Dublin and their fellow Catholics. Cardinal Wiseman, in his reply to his "dear Lord and Brother in Christ," spoke of the sympathy of the clergy of Dublin at "that cheering while we are suffering from the extraordinary commotion around us;" and expressed an assurance "that the good sense of our fellow-countrymen will soon bring them to see the establishment of our hierarchy in its true light, and that ample justice will be rendered, both to our acts and to our motives, by the public here."

IN SCOTLAND there have been meetings, principally of the clergy, in Edinburgh, Glasgow, and Aberdeen, at all of which memorials to the Premier and the Queen have been adopted, though at most of them with objections, dissent, and remarks on the Catholicism within the Church of England. The Free Church has passed a series of resolutions, declaring that the Church of Rome is not of the Church, that the Pope of Rome is anti-Christ, the man of sin, that his pretensions are irreconcileable with the independence of nations, &c.

AFFRAY AT BERKENHEAD.—On Saturday last, a number of the ratepayers of Birkenhead was called by the magistrates, to present an address to the Queen on the Papal aggression. The meeting was fixed for one o'clock; but shortly after ten, a large body of dock labourers assembled at the door of the Town-hall, and took possession of the entrance. Driven away by the police, they collected in great numbers, and were armed with bludgeons. The Rev. E. B. Brown, Roman Catholic priest; another priest, Mr. Aspinall, barrister, and others, met at the office of Mr. Brotherton, solicitor, in Market-street, and were on their way to the meeting, and Mr. Brown insisted on the mob giving up their bludgeons to him. They did so, and the bludgeons were laid on the ground; but no sooner had he entered the Town-hall, than the bludgeons were again seized, and a regular attack made upon the magistrates'-rooms, the windows being smashed, and an assault made upon the police. The windows of the Bridewell and Police Office were also smashed. About a dozen of the police, chiefly from Liverpool, were wounded, and two are not expected to recover. The magistrates came to a resolution not to endanger the public peace, and adjourned the meeting.

CARDINAL WISEMAN AND THE REV. DR. CUMMING.—The following has written to the *Times* to say that he had received a letter from Cardinal Wiseman's Secretary, enclosing the following communication from the Cardinal:—

St. George's Southwark, Nov. 1.

"Dr. Cumming gives an extract from the oath taken by Bishops and Archbishops, copied from the *Pontifical*, printed at Antwerp in 1677, and states, 'I presume that Cardinal Wiseman, on receiving the *pallium*, took that oath.' To prevent further misrepresentation, I, the Cardinal's permission to state to you, that by a rescript of Pope Pius VII. dated April 18, 1818, etc. etc. quoted by the rev. doctor, such oaths as he has mentioned are not admitted by all Bishops and Archbishops who are subject to the British Crown. The archbishop elect receives the *pallium* before he takes the oath of Fidelity. Formæ juramenti pro episcopis et Vicariis Apostolicis Episcopal-Imperiis praditis qui in locis Magnæ Britanniæ subjectis versantur, prescripta a Sd. Pio P. VII. die 13 Aprilis, 1818." In the copy of the Pontifical published in Rome-square, the oath to be taken by Archbishops receiving the *pallium* in consecration of Bishops in England, the sentence is cancelled. Dr. Cumming is at liberty to expose, if he can, the fraud which has been committed.

"My allegation," Dr. Cumming continues, "was, that every Romish Bishop, on receiving the *pallium*, without which he cannot assume the title of Archbishop, does consecrate and solemnly swear to maintain the Papal supremacy in the province being appointed Archbishop of Westminster—is required in the *Pontificale Romanum* to swear, among other things, 'I will persecute and attack heretics, schismatics, and rebels to the Pope.' Dr. Wiseman says he has seen the oath by his secretary just before I began my lecture, informing me that the said persecuting clause is omitted in the oath taken by all Bishops and Archbishops subject to Her British Crown." I accepted the invitation, and this day (Monday), in company with Sir J. Herschel, Admiral Admiral Vernon and Admiral Fitzroy, I inspected the Cardinal's *Pontifical* submitted to me at 'the Episcopal residence, Golden-square.' In the *Pontifical* thus laid before me I found in the 89th page the very words I quoted, and in the 91st page the very words of my lecture, black ink drawn over the passage, with a pen apparently very recently used, leaving the words disclaimed by the Cardinal sufficiently legible, but without any fair ground for verification of the charge. I found that the 91st page is the body of the book I found the same oath in MS., without the persecuting clause, and without initials or other verification, and apparently very recently written in the room. On referring to the oath required to be taken by a Bishop elect by an Archbishop—(Dr. Wiseman having been received made one)—on receiving the *pallium*, as given at page 88 (Paris edition, 1664) of the *Pontifical* published by order of the Cardinal, I found the persecuting clause—"Hæreticos, schismaticos et rebelles Domino meo Papæ vel successoribus prædictis, pro posse persequar et impugnabo,' printed in a bold type, without any alteration, emendation, or correction whatever, constituting in the Archbishop's oath and own *Pontifical* part and parcel of the oath which every Archbishop on receiving the *pallium*, as I have already stated, must take."

AN ADDRESS TO THE QUEEN FROM THE WOMEN OF LIVERPOOL against the Papal aggression is in course of signature in that town. "The practice of private auricular confession" seems to shock the ladies more than all the other terrors of Popery.

DOCUMENTS.

THE ARCHBISHOP OF CANTERBURY, in a reply to the clergymen of Plymouth, has assured them that they may rely upon the best efforts of the Bishops to counteract the machinations of Popery, and avert, under the blessing of God, the mischiefs which seem to threaten us from the late act of aggression upon the Church. His Grace, in a more elaborate reply to the Archdeacons and Clergy of the Diocese of Canterbury, dated Lambeth, Nov. 21, 1850, says:—"I am much gratified by receiving an address of the kind which the clergy of my diocese of Canterbury, 'protesting against the act of aggression upon our Church recently committed by the Papal see.' You justly observe that the appointment of Bishops in this country, and the consequent creation of titles and sees, is wholly in direct opposition to the statutes of a country, which affirm that no foreign prelate or potentate hath, or ought to have, any jurisdiction or authority within this realm, while the Queen's Majesty, under God, is the sole supreme governor. 'When a foreign potentate assigns particular districts of England, he must be in a certain sense aggressive if it is sincere; and it is the known characteristic of the Roman Catholic religion to be not merely aggressive, but unresting and to rest satisfied with nothing short of obscure dominion. We shall therefore act wisely if we look around us and inquire whether any peculiar circumstances amongst ourselves may have caused the present time to appear to the courts of Rome a favourable opportunity for the movement of which we complain. Ten years have elapsed since I thought it necessary to warn the clergy of another decree against the dangerous principles which, when carried out, tend naturally to those Romish errors against which our forefathers protested, and which were renounced by the Anglican Church. The result has proved that the judgment then formed was in no wavering manner, on the contrary, certain of our clergy, professing to follow my those principles have proceeded onward from one Romish tenet and one Romish practice to another, and in some congregations all that is distinctive in Protestant doctrine or Protestant worship has disappeared. Other instances might be mentioned, such, for instance, as the titles and grace conferred upon the Roman Catholic dignitaries in Ireland and our colonies, which have afforded some colour to the belief that a change had come over the spirit of our rulers, and that the Reformation principles might be ventured without risk of serious notice or national opposition. Our first duty, therefore, in the present crisis, is to retrace our steps wherever they have tended towards Romish doctrine or Romish superstition; and, while we appeal to the Legislature to protect our Churches from foreign invasion, to be especially careful that we are not betrayed by enemies within. But another duty is incumbent on us, of still greater urgency. The corruptions of the Romish Church are very congenial to the human mind, and especially to the natural bent of the Irish mind. It becomes doubly necessary for the clergy to guard their people against this danger. The laity must lend their aid and supply the means of adding to the number of clergy, together with a provision for those bold visitors and Scripture readers, without which it is impossible to make head against the ignorance and apathy of an untaught multitude. The enemy has shown that he considers we have a weak point. It is our business to strengthen that point, and guard it from attack; and not to allow the ignorance of any part of our population to betray them into the hands of Rome. The clergy may depend upon my using whatever influence belongs to the high and responsible station in which I have been called, to maintain her Majesty's 'Royal prerogative and title, and to assert the rightful claims of the Church of England.' And I have full confidence that they, on their part, will never be wanting in their endeavours to render his unassisting attempt which may be made to weaken or subvert the Protestant claim, of which they are the appointed guardians."

THE BISHOP OF CHICHESTER, in reply to the clergy of Cowfold, speaks of the audacious aggression, and says, "Christendom, deadened of the errors which now bind in large numbers of it in slavery to man, will live, not in pilgrimages to imaginary relics, nor in a vain terror of a purgatory unknown to Scripture and antiquity, but in the light of a free access to God for pardon for sin through his blessed Son, and through Him only who ever liveth to make intercession for us."

THE BISHOP OF OXFORD, in a reply to the clergy of Woodstock, says, that it "The insult offered to our Queen and nation has, I fear, been invited by a policy which in Ireland and in our colonies has acknowledged similar appointments. But we may hope, from the professions we have recently read, that such claims will now be firmly resisted by her Majesty's Government."

THE BISHOP OF ST. ASAPH indicates his lesson on his clergy on the occasion: "Whenever men, guided by worldly policy, and forgetful of the rules of charity and apostolical regulations, attempt to invade, systematically, the rights of others, they will soon find themselves deserted in their calculations, and blindly hurried into steps which can only end in overthrowing their own projects."

THE BISHOP OF BANGOR says of the Pope:—"Hitherto that prelate has been contented to superintend his adherents in this country through the agency of his vicars or vicegerents. He has now taken on himself to parcel out this kingdom into territorial divisions or dioceses, erecting into sees certain cities and towns within her Majesty's dominions, and giving charge over them to men of his own nomination, bound to him by an oath of fealty, assigning to them titles of distinction, and the exercise in his behalf of a jurisdiction which no foreign prince, prelate, or potentate has ever had any right to exercise within this realm."

THE BISHOP OF MANCHESTER, in a second reply, has entered into the question of appointing Romish Bishops in other countries, and says, that, "according to a long-established and customary usage, many Bishops appointed by the Emperor and confirmed by the Pope; though, in Hungary, they exercise jurisdiction immediately on appointment, without such confirmation. In Italy, the Archbishop of Milan, the Patriarch of Venice, and the Archbishop of Udine, are nominated by the Emperor of Austria; the Patriarchs of Venice and Aquileia, by the Venetian Senate. All Bishops, holders of benefices endowed by the King, and many of their benefices during the vacancy of any See, in Sicily, by the King of Naples. All Bishops, Archbishops, and Bishops of great church dignities were, according to several concordats, named in Sardinia, Piedmont, and Savoy by the King. In Tuscany, the Pope selected out of four candidates presented to him by the Grand Duke. In France, Spain, and Portugal, the King of each is stated to appoint all Bishops, and, in France, all Prelates. In Spain, the fifty benefices reserved to the See of Rome can only be held by persons born in the country."

THE BISHOP OF DURHAM, replying to the clergy and laity of Sunderland, says:—"As an Englishman, I am not disposed to regard this aggression merely as the flight of a content boy-bishop. Whatever may be the religious views of the independence of a nation, always renowned for its love of freedom, and for its power to secure it. I therefore do not inquire whether such a proceeding be unfriendly or unlawful; or whether it is more in accordance with the spirit of that church, or the decrees of this or that council; but whether it be not a direct attempt on the part of a foreign prince to usurp spiritual authority. There can be no doubt that it is an unwise, but not the less daring, attack upon the supremacy of the Sovereign, and consequently upon the privileges of our Church." The Bishop also adverts to the dissensions among ourselves, and looks on the attack as a solemn warning against dissension; to the melancholy spectacle of a few unhappy and misguided men among us who make what has taken refuge at Rome; and to the spirit of Papacy being ever aggressive.

THE BISHOP OF ROCHESTER, in his reply to the clergy of that diocese, goes further, and is more specific than most of his brethren. "Arguments (he says), however, and declamation against an artful, impudent, and daily encroaching enemy are not alone sufficient: we must act as well as speak, and we cannot but express our hope that her Majesty's Ministers will now perceive the danger of the erroneous policy they have hitherto adopted towards the Church of Rome: and as it has been arrogantly asserted that the Pope cannot and will not recede from the step he has taken, that he will remain where he is, though the advice of the Privy Council, to issue an order more effective than the Pope's Bull, commanding the intrusive Roman ecclesiastic to leave the kingdom until they shall renounce the pretensions and titles they have assumed, and revert to those by which they have hitherto been allowed to designate themselves in administering the offices of religion to her Majesty's Roman Catholic subjects."

THE BISHOP OF ST. DAVID'S finds it both startling and affecting that even a single individual by the audacity of his pretensions should have made England has now become ripe for the re-establishment of that foreign dominion it cast off at the Reformation." He hopes that no person will breathe a wish for the infringement of the principles of toleration which the Church has ever asserted, the removal of the disabilities under which the Roman Catholics formerly laboured. He does not, therefore, countenance submission to the indignity of the Pope's Bull, which treats England as if it were a heathen country, and its reigning over it. The Right Rev. prelate called on his clergy diligently to resist the progress of Romish error amongst their flocks.

THE BISHOP OF LINCOLN, in a weaning reply to some of his clergy, stigmatises the Pope's act as a gratuitous insult, because not necessary for the Catholics, and he advises his clergy to represent to the Legislature the violence done to their consciences who are obliged to take the oath of supremacy, by this act of the Pope, and to controvert the doctrines of the Roman Catholic Church. "Be pulpits, praying to the Almighty to awaken them to a just sense of their danger from internal dissensions.

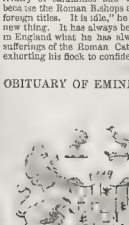
THE NATIONAL SCHOOLMASTERS.—A deputation from this important body waited by appointment upon the Bishop of London, to present him with an address to his Lordship, as their patron, upon the subject of the recent aggression by the Pope of Rome. The Rev. W. Short, M.A., Rector of St. Botolph, Bishopsgate-street, at the request of his Lordship, read the address, which stated that they have seen, with great regret and indignation, the increasing invasion made by the Romanists upon the rights and privileges of the reformed Church of England, which was established in these realms, and particularly the recent attempt of the Bishop of Rome to assume a power which is the sole prerogative of our beloved Sovereign; and while the memorialists begged to declare their attachment to the Church, and to his Lordship, they assured his Lordship of their determination, with God's help, to uphold the Church, her rights, her liturgy, her articles, and her homilies, against all the attacks of Romish aggression. His Lordship replied:—"You are the coadjutors and assistants of the ministers of our Church. It is yours to sow the seed of good principles, and to infuse the elements of sound religious knowledge into the tender minds of the children of the poor. It is, therefore, of the greatest importance that you should be yourselves well instructed in the principles of sound religion, and that you should have chosen the Reformed faith and discipline of our Church, from a conviction that they are calculated to diffuse the pure light of Christianity in this country, and to preserve its inhabitants, on the one hand, from the errors of superstition, on the other from those of infidelity and latitudinarianism. I therefore say that it is with great pleasure that I receive you the assurance of your firm attachment to the principles of our Protestant Church. I ventured to say, when I first heard of this measure on the part of the Pope, that as in many cases, under the over-ruling providence and good counsel of evil, so in the present instance, I felt assured that one happy result would follow, that it would awaken the people of this country to a sense of the inestimable privilege which they possess in the existence of a scriptural branch of Christ's Holy Catholic Church, and lead, I trust, to a more general and lively feeling of attachment to our Church which I am sure pervades the great bulk of the community, but that it would lead them to look rather more closely to the foundation and reason for that attachment, and that the result would be, as I believed we had, the truth upon our side, an increased degree of respect and veneration for that Church. I cannot help remarking that we have much to encourage us in the earnest desire which have been evinced in all parts of the land to participate in the blessings of education among all classes of the community, especially the poorest class. And when I say 'education,' I mean that scriptural Christian education which trains up the children in the nurture and admonition of the Lord, and qualifies them to discharge their duty to God and to their neighbour in those walks of life in which it may please Providence to place them. For such an education you are called to train up the children in the service of the Church of Rome. I do not mean to say that she makes no provision for her poor children; but I say that she trains them in all her errors and superstitions, and teaches them as little as they can possibly be taught of the pure unadulterated word of God."

THE BISHOP OF LONDON and Dr. Hook discuss the question, in consequence of some expressions of this right rev. prelate on the subject of auricular confession, growing out of this dispute, three of his clergy thought it necessary to ask his diocesan opinion, as his letter admitted that some sort of auricular confession (the practice of the Romish Church) was desirable. In his reply, the Bishop said:—"I thank you for having called my attention to what you consider to be my expression in my answer to a letter which I received from the Rev. T. Bolton, which letter I have not published nor intended to publish. What I intended to say was, that by the words 'auricular confession,' I supposed that every one would understand me to mean the Roman practice of confession, and not what I take to be confession with a reasonable privacy and secrecy, but in against the true Christian liberty that any man should be bound to the membering of his sins, as it hath been used heretofore in the time of blindness and superstition." The right rev. Prelate further entered into the argument of the Church against auricular confession, quoting the same arguments as those at present concluded thus: "I need hardly add, that private confession, even as allowed by our Reformed Church, requires the greatest discretion and carefulness on the part of those clergymen who encourage or permit it, to prevent its assuming the character of 'auricular confession.'"

THE ROMAN CATHOLIC BISHOP OF BIRMINGHAM has addressed a pastoral letter to his flock, in which he says, "We have seen the Vicar of God and the Chief Pastor of Christendom held up to burlesque and mockery; the holiest, most devout, and most saving truths and mysteries blasphemed: we have heard the Prime Minister pour out such contemptuous as frail mortal can against the most holy and sanctifying gifts of our dear Saviour; and the clergy of the Church of England, urged on by a high example, contending, in a heated rivalry of calumnies and insults, against the truths we profess; and all this because the Roman Bishops are now called by their English instead of their foreign titles. It is idle," he says, "to talk of the division of the country as a new thing. It has always been divided by us; and the Pope has now only done in England what he has always done in Ireland." He compares the present sufferings of the Roman Catholics to those of the Redeemer, but concludes by exhorting his flock to confide in God, and stand firm and united.

OBITUARY OF EMINENT PERSONS RECENTLY DECEASED.

LORD NUGENT.

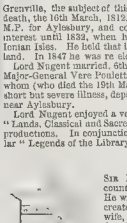


GEORGE GRENVILLE, BARON NUGENT, of Carlanstown, in the county of Westmeath, in the peerage of Ireland, a Knight Grand Cross of St. Michael and St. George, and of the Greek Order of the Saviour, was born on the 31st December, 1789. He was the second son of George, the Marquis of Buckingham, by his wife Mary Elizabeth, only daughter and heiress of Robert Earl Nugent. The Irish Barony of Nugent was conferred upon this lady the 29th December, 1800, with remainder to her second son, Lord George Grenville, the subject of this notice. He inherited the Barony at her Ladyship's death, the 16th March, 1812. Lord Nugent was, during the same year, elected M.P. for Aylesbury, and continued to represent that borough in the Liberal interest until 1832, when he was appointed Lord High Commissioner of the Ionian Isles. He held that important office till 1835, when he returned to England. In 1847 he was re-elected for Aylesbury.

Lord Nugent married, 6th Sept., 1813, Anne Lucy, second daughter of the late Major-General Vere Poulett, and grand-daughter of the third Earl Poulett, by whom she died the 19th May, 1846; he had no issue. His Lordship, after a short but severe illness, departed this life on the 26th inst., at his seat, Lillies, near Aylesbury.

Lord Nugent enjoyed a very fair literary reputation. He was the author of "Lands Classical and Sacred," "Memorials of Hampden," and other interesting productions. In conjunction with Lady Nugent, he also brought out the popular "Legends of the Library at Lillies."

SIR RICHARD NAGLE, BART.



SIR RICHARD NAGLE, of James's-town House, in the county of Westmeath, was born the 12th August, 1800. He was the elder son of Richard Nagle, Esq. M.P., who was created a Baronet the 4th January, 1813), by his second wife, Mary Bridget, daughter and sole heiress of Owen Groghegan, Esq., of Rosemount. Sir Richard, the subject of this notice, succeeded to the baronetcy, as second Baronet, at the decease of his father, in 1827. A few years since, he was one of the representatives in Parliament for the county of Westmeath. As he never married, and had no surviving brother, the baronetcy become extinct by his demise, which occurred recently in GRENVILLE-street, Dublin.

LIEUTENANT-GENERAL SEBRIGHT MAWBY.

This gallant officer, who died a few days since, at an advanced age, entered the army in 1787, and became a Lieut.-General in 1837. During his career, he saw much rough and laborious service. He was at the siege of Toulon; and he acted with distinction in Corsica and India. In 1812, he commanded the British troops at the storming of Callinger.

SIR FRANCIS HAMMOND, G.C.H.

GENERAL SIR FRANCIS THOMAS HAMMOND was the son of Francis Hammond, Esq., by his wife, the daughter of William Woodgate, Esq., of Wrotham, in Kent; he was born in 1767. Having entered the British Army, he was actively engaged during the early part of the late War; and after rising through the different grades, he became a General in 1837. He had been Chief Equerry and Clerk Marshal to George IV, in whose household he continued for forty years, and by whom he was knighted, on the 5th of September, 1820, as G.C.H. in 1827, and was appointed Lieutenant-Governor of Edinburgh Castle in 1841. He was also a Deputy-Lieutenant of Suffolk.

He married, in 1803, Louisa, second daughter of Admiral Sir Richard King, who was created a Baronet the 18th July, 1792. Sir Francis Hammond died on the 26th inst., at his house in Dean-street, Park-lane: he was in the 83th year of his age.

COLONEL KEATE.

This officer entered the British army in 1800, and became a Colonel in 1825. He was actively engaged in the Peninsula from the early part of the war to 1813, and was at the passage of the Douro, the battle of Salamanca and Busaco, the battle of Vittoria, the siege of Pampeluna, and the battles of Nivelle and Nive. He latterly served in the Scots Fusileers. Colonel Keate was for many years Equerry to the late Duke of Cambridge. The gallant Colonel died on the 23rd inst., in Half Moon-street, Piccadilly.

VICE-ADMIRAL SIR CHARLES RICHARDSON, K.C.B.

SIR CHARLES RICHARDSON, one of the heroes of Camperdown, was born in 1769. He entered the British navy in 1787, and in it passed a glorious career. During the early part of the war, on the 1st of June, 1794, he was slightly wounded; and he was in both battles of Jervis. He had him senior Lieutenant of the at *Cirus* Camperdown; then commanding a detachment of seamen in the Holder; then fighting in Egypt, and afterwards at the reduction of the Dutch West India Islands. He was Captain of the *Cæsar*, when he aided in the destruction of three frigates off Sables d'Olonne, and when the French squadron was attacked in the Aix Roads. He was also at Walcheren, in India, and in China, and he never failed to achieve distinction wherever he served. In 1841 he became Rear Admiral of the White, and was made a K.C.B. Sir Charles died on the 17th instant, at his seat, Painsthorpe Hall, near Pocklington, Yorkshire, full of years, respect, and honours. He was never married.

WILLS OF EMINENT PERSONS RECENTLY DECEASED.

WILL OF HIS MAJESTY LOUIS PHILIPPE, LATE KING OF THE FRENCH.

THIS will has just been brought into and proved in the Prerogative Court of Canterbury.

BY his will, which commences with these words, "I, his Majesty Louis Philippe, King of the French, now residing at Claremont, in England, under the title of Count de Neuilly," he bequeaths to her Majesty (his relict) all his money and securities for money, plate, jewels, household furniture, wines, all plate, books, and furniture; and after her decease, then among all his sons and daughters and grandchildren, whose names and titles are given in the will, with power to her said Majesty to give, will or otherwise, to appoint amongst them. All money at Claremont and at the bankers of his house to her said Majesty to be appanels resiliary legatee and sole executrix for life; and, at her demise, has appointed Sir E. Majorbanks, Sir E. Antrobus, W. M. Coulthurst, and John Cazenove executors.

The will was made at Claremont, and is written in English; dated 16th Oct., 1846; signed "Louis Philippe," witnessed by F. C. Jarrett, Lincoln's-inn-fields, and by Pierre Alexandre Napoleon, knight of the Legion of Honour, sergeant of Grenadiers 99th Regiment of the line, on watch about the person of King Louis Philippe.

There is a codicil, dated 19th December, 1848, leaving his castle and estate at Eu, and his estates at Treport, to his son Louis Charles d'Orleans, Duke of Nemours.

The probate is granted to her Majesty Marie Amelie (his widow), the sole executrix for life, and is limited to all his late Majesty's personal estate and effects in Great Britain, Sicily, and America; and also to such of his personal estate as may be in England, and out of France, and which belonged to his late Majesty within the province of Canterbury when he died, subject to the Lower Saxe, in France, and in his houses and buildings at Treport, in the same department; but no further or otherwise.

His property within the province of Canterbury was valued, for probate duty, at £100,000. Stamp, £1350. There is no legacy duty payable during the lifetime of the ex-Queen.

DEATH OF MRS. GORE BELL MARTIN.—The American journals announce the demise of this lady which took place in New York shortly after landing from a voyage across the Atlantic. Mrs. Martin had been prematurely confined at sea, and from that moment gradually sank. Mrs. Bell Martin was the daughter of the late Mr. Martin, M.P. for the county of Galway, the proprietor of the extensive estates at Connemara. In 1847 she married Mr. Gore Bell, the nephew maternally of the late Mr. Dillon Browne, M.P. The deceased lady was the author of several valuable literary productions, and had proceeded to America on a literary tour.

KOSSUTH.—Advices from Constantinople of the 7th state that Kossuth was confined to his bed from a severe attack of fever. The report of the assassination of the Sultan was contradicted, but a wide-spread conspiracy had been discovered, which led to many arrests.

The Boston (United States) papers give the following as the ultimatum of the spirit of opposition in the north to the Fugitive Slave bill:—"In other day a couple of "slave-catchers" arrived at Chicago, in pursuit of two female fugitives, who had, however, left a few hours in advance. The next pursuit of my journey to Detroit, where they expected to meet their victims; but the telegraph was immediately at work, and, long before the arrival of the first train from the south, a steamer had been chartered, and started out to meet the steamer having the fugitives on board, and the latter passed off and conveyed to the Canada shore in safety.

THE WINTER EXHIBITION.

We have selected Mr. Dodgson's picture, "Happy Hours," for Illustration this week. It is unquestionably one of the most successful of the Artist's fancy pictures—in that style which he has made his own; and in which he so admirably combines sparkling fountains, tall elegant trees, and palatial architecture; whilst numerous Watteau-like groups of figures, and sunny gleams of chequered light, diversify the cool sequestered shades.

In resuming our brief notice of the Exhibition, we would especially mention that charming piece of sweet and arch expression, beautifully painted by Mr. Solomon, 290. "The Secret."

Immediately adjoining the entrance to the Gallery, hangs, we think, one of the best drawings in the room, 319. "Ben Norris—Haymakers Resting," by T. M. Richardson. It is very delicately coloured, and the atmospheric tones are very tender and refined; whilst the tasteful manner in which the foreground figures are composed and introduced is deserving of the highest praise.

189. "Make Hay while the Sun shines," by C. Davidson, is well worthy of minute attention. It is full of daylight; and in it rich masses of cool-toned and rustling foliage are opposed to a bright sky, filled with a multitude of shattered and swiftly-moving cloud forms.

Mr. Gastineau has managed to invest his view of the "Port of Fleetwood" with a moonlight effect that is very fine, and almost poetical.

We greatly admire Mr. Ansdell's small picture (297), "Sportsman and Dogs." It is unaffected, refined, and delicately true in its execution; and we admire it all the more, because we trace in it no imitation of Sir Edwin Landseer's works.

Close by this is placed a little, slightly painted bit from Nature, by Creswick—a dark and purple mountain, relieved by a bright fragment of sky; solemn, but very beautiful.

116. From "Tooting Common," by Mr. Bennett, is another small picture, in which a simple passage of natural truth is rendered with excellent feeling and taste.

Mr. Boddington's paintings (129 and 104) are remarkable for the great amount of varied detail and observation which they exhibit.

We must not forget Mr. Corbould's drawing, 312. "The Swing"—is a novel incident, very happily treated; or, Mr. Penley's light and exceedingly pretty picture, 208. "The Ballad, Hours of Sunshine;" or, Mr. Le Jeune's "Study of a Female Head," 246—so broad and simple in its light and shade, worthy of Giorgione, or, Mr. Linton's "St. Giorgio at Venice," 142 a little superior Canaletti, of subdued colour, and full of melancholy light; or, 187. "The Harvest Field, Kent," by Mr. Jutsum—a very rich and first-rate drawing; or, 266. "Ehrenbreitstein," by J. B. Pyne—very broad and brilliant, and even magical in its effect, from the simplicity of the means employed; or, the spirited and vigorous sketch by Mr. Pickersgill, of "A Citizen of London defending his house during the riots in the reign of Henry II.;" or, lastly, Mr. Frith's excellent little picture, 245. "Lord Foppington describing his way of passing the four-and-twenty hours," in which his Lordship figures in the most approved of snuff-taking attitudes, like a half-dried mummy decked in cerulean and golden vestures.

THE OVERLAND ROUTE TO CALIFORNIA.—The most disastrous intelligence (says the *New York Weekly Herald*) comes from the overland emigrations. The only wonder is, that the loss of life has not been greater. From the Missouri frontiers, up the great Plate river to its sources near the South Pass, it is a holiday journey, over the most beautiful prairies, abounding in game, grass, and water. A hard service of several hundred miles then follows, through the defiles and canons of the Rocky Mountains, to the Great Salt Lake. This is the half-way house, the happy valley of the Mormons, whose industrious cultivation of their narrow dominions has saved thousands of emigrants from absolute starvation. But it is after leaving the Mormon Valley that the real troubles of the emigrants begin. A desert has to be crossed to reach Humboldt's river; and the valley of the river itself, for over three hundred miles, is but a scanty ribbon of grass through a continuous desert. During the past season this valley appears to have been flooded from the snows of the mountains, adding immensely to the sufferings of the emigrants. The river sunks in the sands some eighty miles on this side of the Sierra Nevada, and this interval is a blank volcanic desert, without grass or water, save a few boiling volcanic springs. Over this interval the exhausted animals and waggons of the emigrants are strewn by thousands. And, to add to their calamities, the cholera, which seems to have hung upon their rear from Missouri, had here commenced its work of destruction upon the famishing multitude. The most liberal and praiseworthy efforts, however, were being made by the people of California, to send over the mountains provisions and annuals for the relief of the perishing adventurers. It is to be hoped that the great range of the snow-covered Sierra Nevada will act as a barrier against the passage of the cholera into the mining country on the Pacific side, or otherwise a fearful havoc may be apprehended among the miners, should the pestilence be introduced among them in their exposed condition.

On Monday night a desperate affray took place on the grounds of Lord Guernsey, M.P., near Leamington, between two of his Lordship's keepers and seven poachers: there was firing on both sides, but such was the desperate onslaught made by the poachers, that both the keepers received frightful injuries.

THE "CÆSAREA" AND "SARNIA" SCREW STEAMERS

THE Channel Islands have always been noted for their beautiful climate, their fruits, flowers, and vegetables, their enterprising but hospitable and urbane inhabitants; and they are still the resort of the delicate in health, as well as of many respectable English families, whose limited means fail to give that amount of social comfort in expensive England which these beautiful Islands offer. Since the alteration in the import duties of the mother country, the Jersey and Guernsey farmers have been placed on a level, and have had to compete with foreign rivals in the supply of produce and provisions to this country, for which, however, they are prepared; and no better proof of the spirit of the inhabitants and growing importance of these Islands need be sought, than the demand for additional steam-power in their trade. For this purpose two beautiful steam-vessels, on the screw principle, were lately launched from the building-yard of Messrs. T. and W. Pim, of Hull, the first practical engineers and iron ship-builders who adapted the screw as an auxiliary power to merchant-vessels, the last being their twelfth steamer on this construction. The *Cæsarea* and *Sarnia* (the ancient names of Jersey and Guernsey) have been built solely for the line between London and these islands; and everything requisite for the comfort of passengers, as well as convenience for stowage of cargo, has been well and carefully considered and adopted. The cabins are on the poop deck, and can accommodate sixty passengers with bed-berths. The burthen of each vessel (for they are sister ships, being in every respect built and fitted up in the same manner) is 265 tons; length aloft, 133½ feet; breadth of beam, 20 feet; and depth of hold, 13 feet. Their engines are 40 horse-power, and the boilers upon the principle lately patented by the Messrs. Pim, which at the same time saves both space and coals, an important *desideratum* in steaming.

THE SCREW STEAMER "CÆSAREA."

In conclusion, we congratulate the London, Jersey, and Guernsey Screw Steam Navigation Company on the spirit they have shewn in providing the trade with a line of vessels so long required in it, and so well adapted to it; and we entertain no doubt but that the liberal plans they have formed will be productive of a handsome remuneration to themselves, and a great boon to all concerned in the trade.

We should add that the principle of Pim's Patent Boiler, used in the *Cæsarea* and *Sarnia*, consists in giving a double circulation to the flame and heated gases generated in the furnaces through the tubes, thus keeping their heating influence longer in contact with the water in the boiler, thereby absorbing that heat which usually and uselessly escapes up the chimney, causing its rapid wear, as well as extravagant consumption of fuel—evils which are now remedied by the application of these Boilers.

WINTER EXHIBITION OF MODERN BRITISH ART.—"HAPPY HOURS."—PAINTED BY G. DODGSON.

FRAGMENT OF THE PARTHENON FRIEZE.

We have been favoured by Mr George Scharf, jun., with a copy of his Sketch, made at Marbury Hall, of the Fragment of the Parthenon Frieze which he discovered, last month, in the collection of J. Smith Barry, Esq.

The Fragment is now restored to the original slab in the British Museum—No. 38 Black, 36 Red—and may be easily distinguished by the striking contrast of colour. The recent acquisition has retained its freshness and purity of tint, and affords a serious proof of the injurious effect of our atmosphere upon these Phidian treasures since their deposit in the British Museum.

Marbury Hall, near Northwich, in Cheshire, deserves to rank high among the private collections of works of art, both in painting and statuary, in this country. It rivals the famous collection at Ince Blundell, near Liverpool, and contains more celebrated works of ancient art than that known formerly as the Museum Worsleyanum. The mansion stands away from the usual track of sight-seers, and has, moreover, always been difficult of access: the present discovery is, therefore, mainly owing to the privilege of admission as a visitor. Dallaway, in his "Anecdotes," p. 364, enumerates several of the important statues treasured here, but much has been added since his time. The collection was begun in 1771, at Rome, by the Hon. J. Smith Barry, at the same time that Messrs. Townely and Blundel, with the assistance of Jenkins, the English banker, were enriching their galleries from the excavations of Gavin Hamilton; and, among the statues and reliefs, are to be recognised several valuable works, known by former Italian publications, but which were since lamented as lost. The present owner is about to construct new galleries, more favourable for their display, but this must necessarily be a work of considerable time.

The Parthenon Fragment was found neglected in a corner, together with another admirable torso of a youth in spirited action; but no traces can be discovered of records of the time when they came into the collection, or through whose hands. So portable a fragment might easily have been brought to the Piræus, and shipped to Italy, where dealers were in all parts anxious to satisfy the demands of the market in Rome. Valued as the other works were, Mr. Barry had no idea that his roof sheltered a portion of the most celebrated Temple erected by the Athenians; but his surprise soon gave way to a more liberal sentiment, that of renouncing the possession in restoring the sculpture to its original place, and making national property complete in the most important part of the composition. Steps were instantly taken to identify the gap to which it belonged, and no time was lost in transmitting the treasure to the hands of the trustees of our National Museum.

FRAGMENT OF THE PARTHENON FRIEZE, FOUND AT MARBURY HALL.

FINE ARTS.

THE ROUTE OF THE OVERLAND MAIL TO INDIA. Atchley and Co.

The great and deserved success of the Dioramic Pictures exhibited at the Gallery of Illustration, in Regent-street, has led to the publication of the present work, an artistic commemoration for our library and drawingroom tables. It comprises the thirty-two scenes from the Exhibition Pictures, engraved of a large size, upon wood, from drawings by Messrs. Grieve, Telbin, Absolon, Herring, sen., D. Roberts, R.A., H. Warr, and other eminent artists. The execution of the engravings is of various degrees of merit—the night scenes being the most effective, and all having the advantage of printing in tint. The several pictures are highly attractive; and the preponderance of marine scenery and characteristic incident especially fit them for "moving" exhibition: mere land localities would be less fitted for this plan of representation. We start with the Oriental peninsula: next are the Southampton Docks, with the steamer and its passengers, the lovely Isle of Wight and Osborne; the Needles, by moonlight; the Berlingas, and the sleepless Bay of Biscay: Cintra, and its curious craft; the busy Tagus; Cape Trafalgar, a famed historic site; Tarifa, and its interesting coast scenery; Gibraltar, in frowning grandeur; the coast of Algiers, and its triangular city; Pantelaria and Galeita, and Mediterranean craft; sunny Malta; Alexandria, and the steamer by moonlight, the halt by the Mahmoudie Canal, Boulac, where omnibuses have almost superseded donkey-boys, dragomans, and porters; Cairo, by night; the Mussulman Cemetery, and its ceremonies; the Dead Camel in the Desert; the Central Station, as unpicturesque as any railway terminus; another scene in the Desert, followed by a night encampment; Women drawing Water, a picturesque custom; Joseph's Well, and halt of travellers; Suez, and its stirring harbour; the Red Sea, a sombre spectacle scene; the Port of Jeddah at sun-rise; Mocha, and its whitened buildings; Aden, "the Gibraltar of the Red Sea;" Ceylon, and its luxuriant vegetation.

SONGS AND HYMNS OF LIFE.—No. V.—THE LOST DAY.

Farewell, O day mis-spent!
Thy fleeting hours were lent
In vain to my endeavour.
In shade and sun
Thy race is run
For ever! oh, for ever!
The leaf drops from the tree,
The sand falls in the glass,
And to the dread Eternity
The dying minutes pass.

It was not till thine end
I knew thou wert my friend.
But now, thy worth recalling,
My grief is strong—
I did thee wrong,
And scorn'd thy treasures falling.
But sorrow comes too late;
Another day is born.
Pass, minutes, pass; may better fate
Attend to-morrow morn.

Oh birth, oh death of time!
Oh mystery sublime!
Ever the rippling ocean
Brings forth the wave
To smile or rave,
And die of its own motion.
A little wave to strike
The sad responsive shore,
And be succeeded by its like
Ever and evermore.

A change from same to same—
A quenched, yet burning flame—
A new birth, born of dying—
A transient ray,
A speck of day,
Approaching, and yet flying—
Pass to Eternity.
O day, that came in vain!
A new wave surges on the sea—
The world grows young again.

Come in, To-Day, come in!
I have confess'd my sin
To thee, young promise-bearer!
New Lord of Earth!
I hail thy birth—
The crown awaits the wearer.
Child of the ages past!
Sire of a mightier line!
On the same deeps our lot is cast:
The world is thine—and mine!

Charles Mackay.

THE ORTOLAN.

(To the Editor.)

In the interesting account of the Ortolan, in the Illustrated London News of the 9th inst., you say that in Italy, where the bird is kept for gastronomic purposes, it is *fed* in a *dark* room. This is true only to a certain extent, and is apt to mislead many of your readers. The fact is that the Ortolan has a peculiar habit of feeding, which is opposed to its rapid fattening; it feeds only at the rising of the sun. To surmount this peculiarity, those who pander to the taste of Italian gourmands place the ortolans in a warm chamber, perfectly dark, with only one aperture in the wall. Their food is scattered over the floor of the chamber. In the morning the keeper of the birds places a lantern in the orifice of the wall; by the light thus thrown in, the Ortolans, thinking the sun is about to rise, greedily consume the food upon the floor. More food is scattered about, and the lantern withdrawn. The Ortolans soon fall asleep. In about two hours the whole process is repeated, and so on four or five times every day. The Ortolans thus treated, become like little balls of fat in a few days. This arises from the absence of waste by motion, in the extra sleep which the birds get, absence of the usual chemical changes from the influence of light, an unusual supply of food from their taking four or five meals a day instead of one, and great facilities for digesting that food in being removed from the view of external objects, which produce anxieties, and hamper the digestion.

T. H.

Legal Appointment.—The Hon. David Plunkett, son of Lord Plunkett, ex-Chancellor of Ireland, has resigned the office of Master of the Court of Common Pleas, in consequence of serious ill health. The salary of this office is £1000 per annum. The retiring allowance of the hon. gentleman is to be fixed by the Treasury.

Poisoning by Confectionery.—Doctor Letheby, of the London Hospital, narrates (*Med. Tim.*, June) several cases of poisoning occasioned by eating coloured sweetmeats, jellies, &c. The ornamental kinds of confectionery are frequently tinted with poisonous pigments; the greens, for example, are commonly produced by means of arsenite of copper (Scheele's green), verdigris, or a mixture of crome and prussian blue; the yellows, by chromate of lead; the reds by vermillion (bisulphuret of mercury) or oxide of iron; and the whites by carbonate of lead, oxide or carbonate of zinc, chalk, or sulphate of baryta; and, frequently, the fine frosting which covers the commoner kinds of twelfth-cakes and the hard white sugar of comfits contain from 10 to 30 per cent. of plaster of Paris, or of whiting.—*Medical Recorder.*

Fatal Accident from a Pea.—A youth, the son of Mr. Richard Bolton, of Great Horton, Yorkshire, was playing a few days since with a juvenile companion, who was pretending to place a pea in his ear and to make it come out of his mouth. Bolton, believing the feat to have been really performed, was induced to make the attempt himself, and thrust the pea so far into his ear that it could not be got out. In a vain endeavour to extract it made by a medical man, it was sent further in, and the poor boy died four days afterwards from the effects.

MIDDLE TEMPLE HALL.—MR. SERJEANT MILLER'S FAREWELL.

MR. SERJEANT MILLER'S FAREWELL TO THE MIDDLE TEMPLE.

On Thursday week, an interesting ceremony took place in the Middle Temple Hall, consisting of the taking leave of one of their members (Mr. Miller), who has just been elevated to the degree of Serjeant-at-Law. A short time before the dinner hour, the newly-made Serjeant, attired in full Court dress, having entered the Hall, was addressed by the representative officer of the Bench, who first read Mr. Miller's patent of office, and then congratulated him on his elevation; at the same time presenting him with a purse of crown pieces, in accordance with the ancient usage, which is to be considered as a retaining fee for services he may at any future time be requested to perform on behalf of his Inn. The learned Serjeant having made a few remarks in reply, the Bench and other members of the Inn escorted him to the door of the Hall, where each shook hands with him, and he retired to Serjeants' Inn.

The Serjeants, it may be observed, form a distinct brotherhood or society of themselves at Serjeants' Inn. The judges of the three superior courts of common law are invariably made members of this brotherhood prior to their elevation; and it is for this reason that in court they always address a Serjeant by the term Brother, as "Brother Shee," "Brother Wilkins," &c., according to the party's name. This appellation is applied to no other barrister, not even a Queen's counsel.

PARIS FASHIONS FOR DECEMBER.

Although the Italian Opera has already been opened some time in Paris, we have not remarked any of those brilliant *toilettes* which are to be met with at a more advanced stage of the season.

The new stuffs most worthy of notice are *drugget*, *antique watered silk*, *mandarin damask*, and *lampas*, all of lively and gay patterns: the shades are fresh and delicate, rising from a dark ground. The stuffs present all the richness of the time of Louis XV.; to which they add the perfection of the manufacture of the present day. Other stuffs less gorgeous are *satins*, taffeta silks

SATIN DRESS.—BODDICE LOUIS XV.

worked or plain *silk plaids*, *alcvan*, popelines; *woollen plaids*, plain or embroidered; *reps* worked, &c. These last are for walking dresses, while the first are specially set apart for theatres, balls, and concerts. There are also many cloth dresses, worn with cloaks of the same.

A new and fashionable colour, the *Chambord green*, should be mentioned; it is somewhat blue, and slightly resembles two shades already very much in fashion—*sea green* and *lilac green*.

Bonnets and capotes are almost entirely covered with ornaments, from top to crown. Capotes are made greatly falling off behind; the ground is puffed lengthways, each puff separated by a *ruche*, and the whole disappears in the curtain. On the left, an ostrich feather is twisted into a *rosace*.

The Bonnets are not of so falling a shape as the capotes; the tops are simple, being ornamented with a velvet flower and satin leaves of the same colour as the bonnet. The colours most in quest for both bonnets and capotes are *dove pink*, *white*, *Chambord green*, *deep purple*, *red*, and *tilleul*.

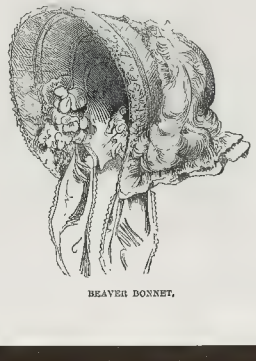
Fashion has not yet decided whether flowers should be worn in bunches or branches; the latter, however, have the best chance; they are more graceful and better adapted for hair-dressing. Long *traines* of foliage, to which are sometimes added flowers, but few and far between, are intertwined with the hair; or two branches fall on each side behind the neck, reaching the shoulders; or the branch makes several turns, and is terminated on one side only, being fastened behind the front band of hair.

The ornaments of the skirts are also formed of bouquets, which seem to detach themselves at hazard, though fastened to the dress.

We should not omit mentioning, as a requisite for an elegant *toilette*, the *Coras*, of richly painted feathers, mounted on mother of pearl, and decorated with marabouts. This novelty is from the house of Duvilleroy, 167, Regent-street.

VELVET CAPOTE.

CORA FAN.



BEAVER BONNET.

THE ILLUSTRATIONS.

Dress of worked satin; boddice Louis XV., trimmed with velvet; the skirt likewise trimmed down the front with four velvet ribbons, alternated with two of

MANDARIN DAMASK DRESS.

double the width; the sleeves are wide, and a little longer than those worn in summer; the bosom and front of the bodice are embroidered and trimmed with Alencon point.

Head-dress, of black embroidered velvet, with velvet knot and ribbons; back, of Malines lace, the extremity of which is fixed to the knot between the front ribbons, which are very long.

Dress, surtout-shaped, of mandarin damask, with the pattern so disposed as to trim the front of the boddice, skirt, and end of sleeves. The remainder is trimmed with small bouquets, rising on a plain ground, and similar in design to the larger ones which ornament the front of the dress.

Capote, of dove-coloured velvet, trimmed with black woollen lace: the crown is flexible, and disappears in the curtain; trimmed with a marabout feather, with small black plumes at the extremity.

Bonnet, of beaver, with three rows of lace put on flat; an ostrich feather; the curtain trimmed with lace, velvet flowers, and satin leaves of the same shade as the beaver.

MUSIC.

GRAND NATIONAL CONCERTS.

The first perfor mce in this country of Spohr's ninth symphony, "Die Jahreszeiten" (the Seasons), took place on Monday night, at Her Majesty's Theatre, the directors having been sufficiently spirited to secure the score specially for the Grand National Concerts, affording another instance of the zeal for art displayed by the executive committee. The new work is entitled "A Descriptive Symphony." Part 1st. "Winter; introduction to Spring; Spring." Part 2nd "Summer; transition to Autumn; Winter." No further key to the design of the composer is given in the programme, and we are not aware whether the work, like Spohr's third symphony, "Die Weihe der Töne" (the Consecration of Sound), when played in Germany, was accompanied with an explanatory poem, as a key to the composer's intentions. Be this as it may, something must be left to the imagination for the amateur to decide, if the short synopsis given above of the Seasons be realised by Spohr. In Carl Pfeiffer's poem ("Die Weihe der Töne"), he undertakes to describe, with his full orchestra, sound before its creation

Keine Töne sind die Liebe,
Keine Sprache die Natur,

and, if the musical amateur will reconcile this fanciful idea with his sense of hearing, there will be no difficulty in imagining the march of the Seasons from this new symphony, the musical divisions in which consist of three movements—an allegro maestoso in B minor, a largo in B major, and an allegro vivace in B minor and major. Any new composition from the author of such oratorios as "The Last Judgment," "Calvary," "The Fall of Babylon," &c., of the operas of "Der Berggeist," "Faust," "Jessonda," "Azor and Zamira," "Der Alchymist," "Pietro d'Albano," &c.; and of the founder of a great violin school in Germany, must be listened to with interest and curiosity. If he be not a master-spirit of his age, Spohr's works are replete with original forms; and his characteristics, such as richness and completeness in harmony, terse and symmetrical, yet artificial and cloying style of melody, monotonous colouring, and superabundance of modulation, are unmistakeable. Mannerism is Spohr's besetting sin, and hence it is that his symphonies generally are somewhat dull and strong, the learning being more striking than the display of vivid fancy and acute sensibility. The symphony of the "Seasons" has all the beauties and defects of Spohr's school to overflow; there is nothing prodigious or electrifying, no theme that "wears a channel in the heart" but there is an accumulative development of the whole powers of science in many portions calculated to present to the mind the changes of the seasons the performers sought to depict. The movement indicative of Spring is full of "dim and dream-like melody." In the war of elements Spohr seems to have been less successful, although he never fails to show his thorough mastery of the instrument in his orchestration. The symphony as yet has been but most imperfectly executed; and, with an improved reading, the "star-like serenity of the spring" will stand forth more delicately, and many other passages will become clearer and brighter. At present, our impression is that the work conveys no distinct impression, and is somewhat modern, and that the marked and peculiar attributes of Spohr's style are not accompanied with any outbreak of those flashes of genius without which a long symphony can never be rendered endurable for the masses, however gratifying the mechanism may be to the professed purist

The Diatins have appeared with their Saxe-horns, playing fantasias and [illegible] "Lucia" and "Lucrezia Borgia;" Cavaliere Lanza as Duke, with their well-known shrill and facile M. Arcos his only blade on the contra-basso. Nezri's clever arrangement of the sad airs from Haydn's "Tempest" has been a pleasant addition to the programme; as also Bell's sparkling trio from "Fabiati, executed on three concertinas by Allan, Davies, and Zess

Mr Lodge's Serenata will be produced next week. Mr. Howard Glover's operatic selection is announced for next Monday. The engagement of the Berlin Chair will terminate this evening (Saturday), after singing in the morning at the Hanover Rooms, where they gave a concert on Thursday.

M. JULLIEN'S CONCERTS.

The "Great Exhibition Quadrille," with the French drummers and three military bands, in addition to the orchestra, the crystal curtain, and Mdlle. Jetty Treffz, are prominent features of attraction. A quintet of violoncellists, Demunck, Pilet, C. Sainton, Montigny, and Paque, has been one of the instrumental novelties The series of concerts will speedily terminate. M. Jullien has announced his *Bal Masqué* for the 12th of December, after which the dramatic season, under Mr Anderson's management, will commence.

WILLIS'S ROOMS.

On Tuesday night, a combined musical entertainment was presented by Madame Thillon, so long the fascinating *prima donna* of the Opéra Comique in Paris; and by Mr. Hudson, the celebrated Irish comedian. The object of the production is from the pens of Albert Smith and Mr. Selby, and Mr. Edward Loder composed, arranged, and accompanied the songs. The monologue and dialogue have no connected forms; the authors have merely endeavoured to present the peculiar talents of the two *artistes* in their most attractive light, without seeking, apparently, for novelty of ideas and coherency of arrangement. The first part mainly falls on Mr. Hudson, who, as *Jeremy Duke*, a rattling Irishman, gives what is styled "A Crayon Sketch of Men and Manners," as exhibited at Mrs. Colonel Fitzsmythe's *Bal Costumé*;" and the second part, principally allotted to Madame Thillon, and entitled "Coming Events in the Four Quarters of the Globe," introduces divers characters in costume. With judicious curtailment, and the excision of some antique jokes and conundrums, the charming vocalisation of Madame Thillon, and the unctuous comedy of Mr. Hudson, will render the entertainment attractive. Madame Thillon was received in the French romance, "Brune et Blonde," which she gave with piquant effect; and in the finale of a descriptive scene, in which she imitates Jenny Lind in "La Figlia," and the "Song of *Norma*," the Prima, in "Can this country be your own?" Mr. Hudson, in the ballad, "Norah, dear," and a song, "I could if I would, but I won't," in the dress of a *Mrs. Candour*, and a "Lazy Looney," pleased the numerous audience by his tact, and humour. His *Lord Fitzsappy* sketch, in search of the pet puppy-dog, although too lengthy, was clever and spirited. Considerable expense must have been incurred for this entertainment, the costumes of Madame Thillon are very rich, varied, and picturesque—the Chinese, American, African, and fancy dresses particularly so. Mr Hudson's comic chaunt, in which he made hits at the topics of the day, the Pope's bull, of course, being foremost, caused great hilarity, and was encored.

MUSICAL EVENTS.—Miss Dolby gave her second *soirée musicale* last Tuesday, assisted by Miss Birch, Mr. Swift, and M. Stockhausen, the accompanyist being M. Benedict. In the programme there was a trio by Sachs for the pianoforte (Lindsay Sloper), violin (Seligmann), and violoncello (Lucas), and a MS. cantata ("Enone,") sung by Miss Dolby, composed by Miss Laura Barker, a most accomplished writer. The third and last *soirée* will be on the 16th of December.——The season of the Sacred Harmonic Society commenced last night (Friday) at Exeter Hall, with "Handel's Messiah," conducted by Costa. Advance of the performance, and of the alterations in the Hall, will appear in our next Number.——The instrumental power of the Royal Italian Music Hall, Adelaide-street, will doubtless attract the attention of musical amateurs. [illegible] are six distinct sets of keys to the great organ, placed in [illegible] and the effect is fine, as the sound [illegible] which [illegible] Handel, when [illegible] ordinary [illegible] Some of the stops—of which there are 57, and 2000 pipes are of beautiful quality. After the organ is usual playing, the great mechanical power of the instrument are exhibited.——Miss Catherine Hayes, after a brilliant tour in Ireland, will leave London this day for Rome, where she is engaged as *prima donna*.——Madame Viardot's triumph in *Valentine*, in the "Huguenots," has been immense: the Grand Opéra in Paris has been filled to bursting to see her in the character in this (for Paris) her new creation. She is now studying "Sappho," Gounod's new opera, which will be put in rehearsal as soon as Auber's "Enfant Prodige" is produced in the course of the ensuing week.——Adolphe Adam's new Mass, composed for the benefit of the Association of Musicians, was performed at St. Cecilia's Day (Nov. 22), at the Church Saint Eustache in Paris. The wedding band of 150 players, and M. Girard directing the chorus of 200 voices; Mdlle. Grimm, Madame Paton, MM. Chapuy, and Bauvais singing the solos ——Berlioz's "Symphonie Fantastique" has created a great sensation at the Philharmonic Concerts.——Félicien David directed the first concert of the Union Musicale, at which Mendelssohn's "Walpurgis" overture was played.——Madame Castellan has made a great hit at the Italian Opera in Berlin, on her début in "Lucrezia Borgia and Halévy's new opera "The Queen of Spades," will be produced at the Parisian Opéra Comique about the middle of December.——Dupres and his daughter have been playing at Stuttgardt in "La Juive" and "Lucia," with success.——Meyerbeer's "Prophète" has obtained a prodigious success at Munich, with Madame Mittermayer as *Fides*, and Fuertinger as *Jean of Leyden*.——Flotow's new opera, "The Grand Duchess," has had the most brilliant reception at the Berlin Grand Opera.——Herr Schuster, the original *Max* (the Seventh) in "Der Freischütz," has died recently, in Dresden. He studied the part under the composer's direction.——Prince Ricnard of Metternich has just published a musical composition, "Reverie," in Vienna

Rachel Edward Plunket Baron Dunsany has been elected a representative peer for Ireland, in the room of Wyndham Earl of Dunraven deceased.

CARDINAL.—"NEVER DID CARDINAL BRING GOOD TO ENGLAND."—We read in Dr. Lingard's History (vol. iv. p. 527), on the authority of Cavendish, that when the Cardinals Campeggio and Wolsey adjourned the inquiry into the legality of Henry VIII.'s marriage with Catherine of Aragon, "the Duke of Suffolk, striking the table, exclaimed with vehemence, that he 'old saw' was now verified—'Never did Cardinal bring good to England.'" I should be glad to know if this saying is to be met with elsewhere, and what gave rise to it?—*From "Notes and Queries"*

More than 5000 Roman silver medals have just been discovered by a poor wine grower in the neighbourhood of Nimes, in a field he ongng to him. They were enclosed in an earthen urn. Another small urn was near it, containing 162 medals of pure gold. The latter, which weighed 867 grammes, were sold to the town of Nimes, and to some amateurs, at the rate of 115f. per ounce. They consist of 2 of Julius Cæsar, 14 of Trajan, 26 Vespasian, 5 Nero, 17 Antoninus, 16 Domitian, 11 Adrian, 3 Commodus, 5 Lucius Verus, 10 Faustinus, 1 Faustina, 2 Septimus Severus, 1 Plotinus, 1 Lucilla (the wife of Antoninus), 1 Nerva, 1 Sabinus, 1 Didius Julianus, 1 Pertinax, and 2 of Aurelian Out of the silver medals, only 1800 have been saved; the others were melted down by a silversmith, to whom they had been sold.

CHESS.

TO CORRESPONDENTS.

J. R. (of Artillery Ingenuous, although not very difficult; it shall appear among the enigmas shortly

Y. L.—We are obliged by our correspondent's concise plan of giving the Knight's moves over the board; but we cannot always even recognise a problem to publish it at this moment

A PRACTISED PAWN.—In playing a game by correspondence, it is quite permissable for each party to obtain information from books, although it is not allowable to call in the aid of other players

A YOUNG PLAYER, Bath.—You may get the "Staunton Chess-Men of Levy and Co, College Green, Bristol—and of Salmon Mason-street, Bath

E. H. and P. S. of Guildford.—Too simple even for a tyro

BATH DOG.—They shall be reported on next week

G. S. Shanghae China.—Duly received, and welcomed. A reply shall be dispatched by the next Overland Mail

M. J. Eglinton, W. Trinity College, Cambridge.—The subscriptions to Messrs. King and Horwitz's forthcoming work on "Chess-openings" are payable to the Publisher, Mr. R. Kipg Wellington-street, Strand

E. H. Tarporley.—We are obliged by the games, although they are not sufficiently interesting for publication

R. P. D, and other Correspondents, will save us considerable trouble if on their future communications they will adopt our system of notation, which is uniform both for pieces and Pawns, and by which the moves of either are plainly denoted by the mention of the square they are played to. The old systems are made which denote the move of a Pawn by the position (the number of steps it makes), and the move of a piece by another (the square to which it is played) is becoming quite obsolete

HON SEC—Any Member of Londesham-street, a visit, and see his magnificent display of Chessmen and Tables, before you decide. 2 The best Leather board is that of Lenkins

LIND JEKE, F R D M, and others—Problem No. 367 cannot be solved in the easy way you suppose. TRY AGAIN

A BEGINNER. Lonn and [illegible] the notice to "J. P."

LUDUS LATRUNCULORUM.—Your suggestion is a good one. With regard to the solutions, you are mistaken in both cases

North Gresham, H M.—See the notice to "J. P." Such simple rules should be learned from some rudimentary treatise

A CHESS-PLAYER.—In such a situation, unless your opponent could check you, of course the game would be drawn. See the remarks on a drawn game at page 21 of the "Handbook."

AGNES.—We acknowledge every communication that reaches us; but among the many hundreds sent us occasionally miscarry

CAPE TOWN.—The key move of Enigma No 361 is—1. K to Q B 4th; if No. 622—1. Kt to K B 3d (ch)

SCRUPULUS.—Upon again looking at the Enigma No. 614, we find that the key is 1 R to K B 4th (discovering check). 2. R to Q 4th, &c

QUILL, Sandhurst.—You may obtain a Pocket ch se-board, of the dimensions specified, of Lenthers, 38, Cornhill, or of R to Q 4, Leadenhall-street, London

P. P. Clapham.—Any piece which reaches the 8th square may be exchanged for a Queen, although the original Queen be yet on the board

MENTOR, Post-Captain.—In next week's [illegible] of the problems and gentlemen will oppose the solutions [illegible] of the problems, [illegible] correspondent

[illegible] Chess Club.—Your solutions are correct. All others are wrong

E. H. H, Exeter.—All others are wrong

SOLUTIONS of Problem No. 367, by MEMOTTH DUO, W S T, J B, of Worcester, DERWYN, W B W, AGNES, JUVENIS, F G R, BELLAMY, J P, of Hythe, ST. EDMUND, H A T, J L L, [illegible] are wrong

SOLUTIONS of Problem No. 366, by [illegible] SIGMA, AGNES, T F L, F G R, T H [illegible] JUVENIS, SIGMA, AGNES, F G R, BELLAMY, T E F, Jun., H W S, R D M, are correct. All others are wrong

J. L. C.—Thanks for the corrections

NELLY.—It is not known

R T C.—Let us see the game

R B W.—Next week it shall be reported on

P P C.—The best shall appear very shortly

E M.—Your Problems are both defective

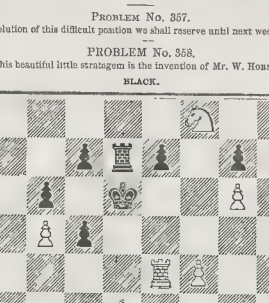
PROBLEM No. 357.

The solution of this difficult position we shall reserve until next week.

PROBLEM No. 358.

This beautiful little stratagem is the invention of Mr. W. HORNER.

BLACK.



WHITE.

White to play, and give mate in four moves.

CHESS IN THE PROVINCES.

Game played between R. B. BRIEN, of the Oxford Hermes Club, and C. H. WAYTE, of the Cambridge Club. *(Ruy Lopez' Kt's Game.)*

WHITE (R. B. B.)	BLACK (C. H. W.)	WHITE (R. B. B.)	BLACK (C. H. W.)
1. P to K 4th	P to K 4th	14. Q to K B 2d	B to Q R 3d
2. K Kt to K B 3d	Q Kt to Q B 3d	15. K R to K R 4th	Q Kt to K 2d
3. K B to Q Kt 5th	P to Q R 3d	16. Q to K Kt 3d	K to R 2d
4. K B to Q R 4th	K Kt to K B 3d	17. K R to K B 2d	Q Kt to K Kt 3d
5. Q to K 2d	P to Q Kt 4th	18. K Kt to K B 5th	B to his sq
6. K B to Q Kt 3d	K B to Q B 4th	19. Q R to K B sq	B takes Kt
7. P to Q R 4th	Q R to Q Kt sq	20. K takes B	Q to K 2d
8. P to Q 3d	P to Q 3d	21. Kt to K B 3d	K R to his sq
9. P to K R 3d	P to K R 3d	22. P to K R 4th	Q Kt to K B sq
10. P to K 3d	B takes B	23. Kt to K R 2d (a)	Q Kt to K 3d
11. P takes B	Castles	24. Kt to K Kt 4th	Kt takes Kt
12. Q Kt to Q 2d	P to Q Kt 5th	25. Kt takes K B P	Q to K sq
13. Castles on K R's side	P to Q R 4th	26. Q takes Kt, and wins.	

(a) Kt to K Kt 5th (ch) would have been more to the purpose, we believe, but White finishes the game satisfactorily enough

CHESS IN THE METROPOLIS

Well-played Game between Lord C——e and Captain KENNEDY, at the St. George's Club.

(Sicilian Opening.)

WHITE (Lord C.)	BLACK (Capt. K.)	WHITE (Lord C.)	BLACK (Capt. K.)
1. P to K 4th	P to Q B 4th	19. Kt takes Kt	P takes Kt
2. K Kt to B 3d	Q Kt to B 3d	20. Kt to Q B 5th	P to K 4th
3. P to Q B 3d	P to Q 3d	21. P to K 5th	Kt to Q 5th (ch)
4. P to Q 4th	P to Q 4th	22. K to Q 2d (b)	B takes Kt
5. P to K 5th	Q to Q Kt 3d	23. P takes B	Kt to Q Kt 6th (check)
6. P to Q Kt 3d	P takes P		
7. P takes P	K B checks	24. K to Q B 3d	Kt takes R
8. K to Q 2d (a)	K Kt to K 2d	25. K B takes P	K to K Kt 2d
9. P to Q R 3d	Q to Q R 3d (ch)	26. B takes Kt	B to K B 4th
10. Q to Q 3d	Q takes Q (ch)	27. P to K B 3d	K to Q B sq
11. K takes Q	K B to Q R 4th	28. P to K Kt 4th	K R takes P
12. P to Q Kt 4th	B to Q Kt 3d	29. P takes B (c)	Q R to Q B sq
13. Q B to Q Kt 2d	Castles	30. K to K t sq (ch)	K B to Q 3d
14. Q Kt to Q 2d	P to K B 3d	31. R to K 4th	P to Q Kt 4th
15. P takes P	P takes P	32. P to Q 6th (dis. check)	R takes B (ch)
16. K to K 2d	K Kt to K B 4th	33. K to Q 3d	R takes R
17. Q Kt to Q Kt 3d	K Kt to Q 3d	34. P takes R	R to Q sq
18. K Kt to Q 3d	K Kt to Q B 5th	And White lost the game.	

(a) White may play K to avoid the loss of his Q P, which would have occurred had he interposed the Bishop

(b) If K to Q square, he must lose at least a good Pawn; as

27. K t Q sq — 27. P to Q B 3d — Kt takes P, &c

(c) It is temporary sacrifice. Black double [illegible] opponent's Pawns besides gaining [illegible]

CHESS ENIGMAS.

No 696.—*(La Régence.)*

White: K at K t 4th, R at K 8th, Kt at K B 3d, P at K B 6th.
Black: K at his K 3d, R at K Kt sq and Q B 8th, Ps at K Kt 3d and K B 2d.

White plays first, and gives mate in five moves.

No. 697.—By R. B. W., of Oxford.

White K at his K 6th, Q at her Il 3d, R at K B 4th, Kt at K Kt 2nd, P at K R 2nd
Black: K at his 4th, Kt at his K 2d, P at K 3d.

White to play, and mate in three moves.

No 698.—*(La Régence.)*

White K at Q R 4th, Q at K sq, R at Q R 8th, B at K B 7th, Kt at K 2nd, P at Q B 2nd.
Black: K at Q B 5th, Q at K 3d, R at Q B 3d, B at Q R 4th, Kt at K B 4; Ps at K 2nd, Q 8th, Q B 6th, and Q Kt 5th.

White to play, and mate in five moves.

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

At Bow-street, on Saturday, Daniel Shaw, James Badcock, John Gardiner, Mary Anne Cheruneau (*alias* Leonard), George Buncher, Mary Anne Buncher his wife, and Charles Clinton, an errand-boy, were again brought up before Mr. Henry, for re-examination, for being concerned in stealing plate and jewellery, value near £2000, from the premises of Messrs Williams and Clapham, Jermyn-street, Nos. 13 and 14, Strand. After a short hearing the prisoners were remanded for another week, to give the police time to discover the most guilty of the gang.

Mr. Disraeli is writing the life of Lord George Bentinck. He has undertaken his literary task at the request of the Duke of Portland.

Amongst the passengers by the Peninsular and Oriental Company's steamer, *Ripon*, which arrived at Southampton on Monday afternoon with the overland mail, was Lord Torrington, late Governor of Ceylon.

It is understood that Sir John Herschel will succeed Mr. Shell as Master of the Mint. This appointment will no longer be held by a member of Parliament, and the salary will be reduced to £1500 a year.

The Worshipful Company of Grocers of London have learnt that Mr. Hume, M.P., intends visiting their town on the 2d of December, to take leave of his son, who is going out in the West India packet to Trinidad, have made arrangements to invite the honourable gentleman to dine with them in the Southampton Ancient Assembly-Rooms for the evening of that day. After Mr. Hume will enjoy the hospitality of the Mayor of Southampton for a short period.

It is understood that in the delicate question of the Lord Rectorship of the University of Aberdeen, Mr. Macaulay is altogether indisposed to accept the invidious office of deciding either against Sheriff Alison or against Lord Palmerston. He has, therefore, decided not to come down. The nomination consequently rests in Colonel Mure, who, however, at the present time, is sojourning in Italy: he returns by the end of the month, and it is generally declared that his vote will be given to the historian of Europe.

Mr. George Thompson, M.P., who has gone to New York on a visit, is announced to address the American people on the approaching "reception" on the evening of the 15th inst. at Faneuil Hall. It was to be "a Gathering of the Friends of Reform, International Amity, and Universal Emancipation." The Hall, however, is the property of the Massachusetts Anti-Slavery Society," by a committee of five of its leading members. Mr. Thompson had issued a notice for a course of five lectures on "British India."

The 16th annual report of the Commissioners in Lunacy, dated the 30th of June last, has been presented to Parliament. It appears that the total number of lunatics in England and Wales, in public asylums and licensed houses, on the 1st of January, 1850, was 16,079; viz 7074 males, 7925 females. Of these, 238 were found to be criminal lunatics, 67 males and 171 females. Of the whole number, 1036 were chargeable on boroughs. The private lunatics were 3774, and the pauper 11,305. The total number is thus apportioned: in asylums, 7,40; in hospitals, 1,095; in metropolitan licensed houses, 2945; in provincial licensed houses, 15,079.

The eldest Bishop of the English Church is the Bishop of Durham, who is now in his 80th year. The Bishop of Down, aged 42, is the youngest.

The various institutions for the insane throughout the country, according to a report of the Lunacy Commissioners, are in an improved state, and the management of lunatic establishments is, for the most part, humane and judicious. In several instances, the visiting commissioners and justices found it necessary to animadvert upon the unnecessary use of mechanical restraint, neglect of cleanliness, inadequate ventilation, want of sufficient attendants, improper or deficient diet, &c. In seventy cases these defects were brought under the notice of the board, and were wholly or partially remedied.

On the London and North-Western line, near the second bridge above the Cheddington station, at about 11.30 P M., on Tuesday last, four planks, two inches thick, a 16-foot railway rail, and a dozen iron chairs (which are used to fasten the rails to the sleepers) were placed upon and across the up-line. The express train came in contact with the obstruction, which it providentially swept away without sustaining any other injury than that of breaking the safeguard of the engine.

According to the last return of the beet-root sugar trade in France, there were at the end of October 263 manufactories at work, which had made about 8,000,000 kilogrammes of sugar, which was rather more than at the same period last year. The quantity delivered for consumption was 3,700,000 kilogrammes, or nearly 700,000 kilogrammes less than last year.

Mr. Thomas Biggin, of Dronfield Woodhouse, Derbyshire, killed last week an ever being sheep, which weighed when cut up 104lb. This animal attained to that extraordinary fatness with only common food and attention, never having had either corn or cake. She had in three years six fine lambs.

The New Zealand journal of 24 May last report the capture of three sperm whales at the station at the Mount Rhodes, Kodaki, the first instance of sperm whales having been caught by a shore party from the middle island. It is added that several of them have repeatedly been fallen in with between East Cape and Port Nicholson.

In the New Zealand *Independant* of the 20th of May, we find a remon strance against a flagrant abuse which is alleged to have crept in the trade "cheap passages" [illegible] the United States. Cards, [illegible] of which are left free to the captains [illegible] Liverpool, are [illegible] to the wives to sea-passengers as wish to have them, several have been literally transformed into floating grog-shops, and that many young men have thus been brought to incur debts and contract habits of drunkenness

According to advices from Jamaica to the 31st ult., the cholera continued raging with great virulence. The Kingston returns for the 28th report 50 new cases, 15 recoveries, and 35 deaths—remaining 84; at Port Royal 21 new cases, 3 recoveries, and 11 deaths—remaining 34. Sanitary measures were being actively carried into effect

Six years ago there were but two vessels of any kind on Lake Superior (United States), and not more than seven white families could be found within 400 miles from the Sault to La Pointe. Now there are three large propellers, and six or seven sailing vessels. Four lighthouses have been erected by the government, and several thousand immigrants are scattered along the coast.

The Lords of the Admiralty have sanctioned a slight alteration in the new West India mail route scheme. The mail packet is to leave Honduras in future on the 18th of the month, instead of on the 20th, by which she will have a day longer at Havannah for shipping cargo.

On Sunday night, about a quarter to twelve o'clock, as one of the Royal gamekeepers, named Foster, with his helper, named Parker, was out in the Great Park (Windsor), near Cranbourne-lodge, they were attacked and overpowered by a party of poachers. The gun of Foster was wrenched from him, and was most brutally beaten about the head with the barrel of the piece, and he now lies at his residence, High-standing-hill, suffering severely from concussion of the brain.

On Saturday, Master Dowdeswall, senior master, resigned the office of Head Master, which he held for 30 years. It is understood that he is succeeded by Dr. Humphrey, of the Charterhouse. Mr W. James was a candidate for the appointment, which is in the presentation of the Lord Chancellor.

The French *chasse-marée*, *Emile Marie*, of barzeaud, Pierre Carhoulent master, coal laden, from Liverpool to Rochefort, went ashore on Monday night, about one league westward of Constantine Bay, Cornwall. She was of Padstow, Cornwall, and became a total wreck. Four of the crew, including the master, perished. The two survivors state that they mistook the Trevose Headlight for Lundy, entered the bay of which they considered it to be shelter.

Accounts from Rio Janeiro to the 11th of October bring the important news of the Buenos Ayrean Minister having demanded his passports, and of the united Brazilian troops to the southward. A declaration of war between those countries was daily expected to ensue.

A rat catcher says "one pair of rats, with their progeny, will produce in three years no less a number than 646,808 rats, which will consume daily (say) as much food as would support 1,691 men, or 1,691 persons." The total receipts of all the boroughs in England and Wales, during the year ending the 31st of August, 1849 was £1,244,656, viz. £1,026,— borough rates, and £207,317 from other sources. The expenditure within the same period was £1,170,019; the balance in the treasurers' hands was £79,559, and the balance due to treasurers £71,232

Reading Gaol is so full, that the visiting justices have issued directions to the clerks of the peace to adjourn the sessional divisions throughout the county that all prisoners for trial are to be committed to the London Gaol

The original MS. of "Waverley," wholly in the handwriting of Sir Walter Scott, the same MS. which was sold at Evans's in 1831, with the other MSS. of the noble series of novels and romances which has just been presented to the Advocates' Library at Edinburgh, by Mr. James Hall, brother of the late Captain Basil Hall. At the sale alluded to, the MS was bought by Mr. Wilks, M.P., for seventeen guineas; after which it was sold to a gentleman the next week to Mr. Hall, at Mr. Hall's price of 40 guineas. It is a well-known fact to all readers of Scott, that the novel of "Waverley" was commenced about the year 1809, and laid aside in an old cabinet till 1813, when it was again taken up, completed and published, we need hardly add with success.

The Marylebone vestry was occupied at the usual meeting on Saturday with a long and stormy discussion on the salaries of the collectors, which appear to be the members' favourite hobby-horse. Ultimately the salaries of £200 a year for each were retained, and the vestry adjourned

The *Exeter Gazette* reports that the present Earl of Portsmouth is in very precarious state. In the event of his demise, the title and the immense estates both in this country and Ireland will fall to the noble owner of Eggesford, the Hon. Newton Fellowes, who is respected by all who know him

Mr. Irwin's race-horse, Ballinafad, by Harkaway, was accidentally killed a few days since on board the Queen *Victoria* steamer, while *en route* from Liverpool to Dublin. Ballinafad won the Derby Stakes at Newmarket Handicap in the spring of the present year. In 1848 he won the Granby Handicap, and has at various periods won large stakes. The accident was the result of a very violent gale of wind

The *Kilkenny Moderator* says that two women who had been transported eighteen years ago have returned to that city, their term having expired, from Australia, with a large sum of money and quantities of rich wearing apparel, which they had earned in that country under the colonists. In opposition to the general prejudice entertained by the Council of Commissioners appointed for the purpose by the Government

FRED HOLDERSWORTH; OR, LOVE AND PRIDE.

BY THOMAS MILLER.

CHAPTER VI.

FREDERICK HOLDERSWORTH had been too much in love from the first hour he set eyes on Matilda, to think seriously of anything else except business; but after his marriage he began to consider what he had done, and whether his having turned one-and-twenty was a sufficient reason for marrying without acquainting his uncle. He also recalled the excuses he had made for not accepting the invitation from Margate, and, on again looking over the letters, his heart reproached him with ingratitude for not going thither, after the urgent manner in which the old officer had written. In short, he felt that he was guilty of having uttered falsehoods, for the simple fact did his evasive replies present it, among themselves. These thoughts struck Fred very forcibly, about a month after his marriage, as he had on that morning again heard from the wine-merchant, in a short sharp letter which came to the point at once, and stated that if they did not see him on Saturday, they should imagine something was going on wrong, and that he (the uncle) should not fail to visit London on Monday, fine as the weather was, and ascertain the cause of the sea-side breezes. Fred was compelled to write back, and state that he should come.

When he reached home that evening, as beautiful wife put on the pretty little cap she had been making (for her husband did his evasive work), and never said that all married women ought to wear caps), and asked him how he liked it. It was really one of the prettiest little excuses for a cap you ever saw, it sat so jauntily on the back of her head, without concealing a single tress of her chastely-arranged hair; and she looked at him so lovingly from under her head-dress, with a cap-string in each hand, that anybody would have admired her. Fred did in his heart; but his mind was too much occupied with the tidings he had to communicate to say anything more than "Very much," and he knew that three days and two nights must elapse before he again saw her, and they had but been married a few weeks, and he really loved her. Then the communication was so sudden, for he had not given her as much as a hint about his going to Margate, for he knew how uneasy she felt when he went before he was married.

The eyes of true affection are keen and watchful, and soon discover when anything is wrong; such a countenance stamped with open sincerity—soon see when the play of light and love, which seems to smile and look out fondly and tenderly, is clouded, instead of giving back glance for glance in that silent language which, unlike the spoken, cannot deceive—for the eyes are generally true tell tales. Matilda saw in a moment that something was wrong; and, throwing the pretty cap aside without bestowing a further thought on it, she came up to Fred, and slipping down, she placed one hand on each shoulder, looked fixedly in his face, and said, "What is the matter?"

Nothing particular," replied he; "only I must leave town to-morrow, and cannot return before Monday."

"And I shall go with you," she said, "shall I not?" It was the look which accompanied the last three words, that caused Fred to cast down his eyes. It seemed to say, "So young, and so short a time married, and such an affectionate little heart as I have got. I know you could not leave me for so long a time, and —I know you would not." And yet, after all, it was but a look, though the hands pressed heavier on a shoulders, and the sweet face approached nearer, and the expectant lips were slightly apart, while a smile played around them; but it was such a look as went to Fred's heart and reproached him for what he had done, for he felt that he dare not take her with him and introduce her to the working wine-merchant as his wife. Familiar as he had ever been with his uncle, he felt that he dare not do this, neither could he refuse to go. It was not until he married Matilda that he felt how obedient he had always been, and dreaded what he never seemed to have thought of before—his uncle's anger. Fred was at first startled when these thoughts and feelings presented themselves; but there they were—and they no sooner came than he knew that he had done wrong. Even then, while his pretty wife leant upon his shoulder, he had not the courage to speak the truth he had not the heart to pain her all at once; so answered, "I will see."

"But you have not told me where you are going," said the young wife, "nor how you travel."

Fred told her he was going to Margate, and that part of his voyage would be on the sea.

"How nice!" exclaimed the pretty wife, clasping her hands and shaking into curls. "Oh! you may be lost, and then I shall never see you again." All Matilda knew of the sea was through reading a volume on shipwrecks she had never looked on the ocean, and the waves and the storms were ever rolling mountains high; that those who sailed in vessels were liable to all sorts of unimaginable things by ropes, and were either constantly sea-sick or incessantly shaking themselves like water-spaniels, and getting rid of the spray of one tremendous billow in the brief breathing-space that was allowed before another came.

"The sea!" echoed her mother, raising her eyes from her work, and leaving the hot iron, for the pants on a shirt-front, and gazing at her daughter with a yellowy yellow tinge which made it look as if that portion had been washed in Gunnell stout; "those who get married never ought to risk their lives on the sea, nor venture on it at all, nor go outside of omnibuses, nor get into cabs unless they are sure the horses will not run away. It is all very well for you, Fred, single, and they care for nobody, and nobody cares for them. If they do go, and run no danger, they ought to go together: then, if anything happens, there will sure to be one by the side of the other to help them out of trouble or anything of that sort, though I believe you have to run a long way when once you get out to sea, where they say there's no land, nor no bottom, so that if a person or so must drown, why I suppose it's as well to be at once over with it; they happen to sink down two or three hundred miles. I am sure, if you love your lawful wife as you ought to do (and she refused a many excellent offers), you'd never think of going without her, because you did happen to get drowned, it would be some comfort to her to see the last of you."

While her mother was drawing the picture of the perils of the "great deep," her pretty daughter was sobbing as if her heart would break, sobbing like a child, and fancying she saw her dear Fred doubled up like a jack-knife and about to be lanched upon by a shark, or plunging head-foremost into one of those seas we had just overthrown, or stopping somewhere among those rocks of which Tennyson discoursed so eloquently, and, for aught she knew, Fred is landed there save, marrying a mermaid.

What with the mother's tongue and the daughter's tears, poor Fred almost wished that old Harry had gone.

"How can you go and leave me, and so soon?" sobbed Matilda.

"Married men have no business to go anywhere without their wives," said the mother-in-law: "when they do, I believe they're about no good."

"It's a journey of business," said Fred, "and I must go. I'm sure I would rather remain here, if I could: she knows I would.

It was wonderful how short Fred's sentences had suddenly become, since he struck out the angels, nymphs, and goddesses. He hit his mean-man and went into the garden

When Matilda found that she could not accompany her husband, she became resigned; and now all her study was to make him as comfortable as she could during his absence. She proposed that he should take almost as many things with him as he would have needed for a passage to America. She tried to stuff her sighs in, and, at the sound a tear lingering in her eye, turned away her head. "It is but for so many hours," she said; and she had numbered them over and over again.

The parting was not so difficult to get over as Fred had imagined it would have been. There were a few "natural tears" shed on both sides, but she was to meet him on Monday at London-bridge, when the packet came in, and Monday came, and so—they kissed, separated, and parted. Fred carrying with him a heavy load in his heart. The young wife would not have had so much had not the following day been Sunday—the only day in the week she had his society to dinner—when, after church, she took her out for a walk, accompanied her to church, took tea with her in the house arbour in company of the canaries (before Fred stuffed them), the parrot, and the monkey. But we must leave her to her thoughts and her household duties, and follow her husband.

There is something about a man, when all is not as it should be, which causes him to over-act, at times, the part he is playing. This is easily accounted for, for Where there is anything to disguise, the mind is constantly reverting to it. Keeping watch, as it were, over the thoughts, lest they should escape, and command him. Thus, where the mind is pre-occupied, having something to conceal, the thoughts are betters; they flow not naturally, as there is a hold within over drawing them back to what they wish to conceal. Such was the state of Fred's mind when he landed on the pier at Margate, where his uncles, aunt, and cousin stood ready to receive him. Fred felt sure he could not look at them in that frank, open manner which was natural to him, nor could he reply to their inquiries in that straightforward way to which he had been accustomed, for there was ever something transpiring to remind him of the change that had taken place since he last saw his relations.

When asked how the partners and decorators were getting on in the house? he scarcely knew. How matters were progressing at the Literary Institution? —he had not been there for a week. Where he went to on the day he left holiday?—only a little way in the country. How he liked his new apartments, and what kind of people they were?—he liked them very well, and the people seemed very respectable. Simple as these answers were, they were not made in his usual manner, for there is something in the way persons reply to you whom you are used to, that enables you to detect any change in a moment, either in the voice or the manner of the speaker.

If Fred had been settled by his uncle and aunt during their stay at Margate, that Fred should marry his cousin Mary and become a partner in the concern, and it was further decided that the sooner he was made acquainted with this resolution, the better. The scene in the lodging-house in London, when the aunt happened to witness, convinced her that this decision would make her nephew one of the happiest men in the world, and she had plenty to herself how delighted he would be to hear the tidings.

Our readers only know how greatly the worthy lady was deceived on that occasion, although she had said to her husband, "Trust a woman for finding out a secret, when there is a love affair on hand."

To be continued.

The (French) *Journal de Montoiseon* states that there is, in the commune of saint Jean-Sole-y-Mieux, a male child which was born on the 18th inst. without arms or legs, but which has on each shoulder a hand, the fingers of which move like those of other children, and a kind of cue for the hips.

NATIONAL SPORTS.

For the next three or four weeks, the lovers of racing and steeple-chasing will have an opportunity of reposing after the fatigues and excitement of a long campaign, the only fixtures between "this present writing" and Christmas, being a fat and "warm the country" gathering at Worcester, on Tuesday and Wednesday next, and steeple-chase meetings on the 10th Dec., at Wolverhampton; and on the 20th, at Newby Bridge. The "long tails," on the other hand, have plenty of work cut out for them, the appointments for the ensuing week embracing the Deptford Club meeting on Monday; Wimmersleigh and Southminster on Tuesday, Otterburn and Hornby Park on Wednesday; and the Ridgway and Alcester Clubs on Thursday. The Calendar for this popular sport is unusually full for the next four months

TATTERSALL'S.

MONDAY.—A fair amount of business was transacted this afternoon, at the undermentioned prices

CHESTER CUP.

NEWMARKET CHAMPION COURSING MEETING.—TUESDAY.

THE PUPPY STAKES.—Sir St. George Gore's Cobra beat Mr. Gurney's Aquila
Mr R. Bagge's Trimbia beat Mr Etwall's Lobster. Mr. Vipan's Verity beat
W. B. Smyth's Stroughow. Mr. Rogers's Hamilton beat Mr Gurney's Asp
Fickle. Mr. Dobede's Dora beat Sir St. George Gore's Lion-Heart. Mr
Hodgson's Money (late Remnant) beat Mr King's Royalist. Mr. Buckworth's
Bertha beat Lord Stradbroke's Rhoda. Mr. R. Bagge's Tryste beat Sir W. B.
Smyth's Saddle. Mr. Gillett's Gallantry beat Mr. Hill's Medea (late Una). Mr
Fyson's Factotum beat Mr. Parkinson's Swan. Mr. Dobede's Dot beat Mr.
Gill's Model Lady. Mr. Dobede's Dunkeld beat Mr. Holmes's Memorandum
(late Dart).

THE ALL-AGED STAKES Mr. Holmes's Mocking-Bird beat Mr. Dobede's Diamond. Mr Holmes's Elias (late Syrian) beat Mr. Goodyer's Fiend-Maniac. Mr. Buckworth's Boeswing beat Mr. Etwall's Ebb. Mr. Vipan's Verity beat Mr. Dobede's Desperate. Mr. Gurney's Asp beat Mr. Gillett's Go-along (late Faithful). Mr. Hill's Mercury beat Sir St. George Gore's Caradoc. Sir St. George Gore's Magician beat Mr Vipan's Vanity. Mr. Rogers's Hamilton beat Mr. Hill's Mary. Lord Stradbroke's Merchant beat Mr. Brook's Black Eagle. Captain Archdall's —— beat Mr. Fyson's Forerunner.

ACCELERATION OF THE OVERLAND MAIL TO INDIA.—The Peninsular and Oriental Steam Navigation Company are now contracting to build two paddle-box steamers, each of 2500 tons burden and 800 horse power, to convey the Indian mail between Southampton and Alexandria. These vessels will be as swift as the mail-packets that run between Liverpool and America, and the passage between Southampton and Alexandria will be reduced from 16 to 10 or 11 days, including stoppages at Malta and Gibraltar, a communication will then be effected with Gibraltar in 4½ days, and with Malta in 7. Letters from India, which now reach Southampton about the 25th and 26th of the month, will then arrive at one to be answered by the Indian mail that leaves London by way of Marseilles on the 24th of the month.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

A fluctuation to the extent of about ⅛ per cent. in Consols has occurred during the past week. The opening and closing price of Monday was 96⅞, 97 having been reached during the day. Lower prices than these quotations, limited intelligence from the German States, in consequence of the stormy weather, caused a reaction of ⅛ per cent. on Tuesday, prices ranging from 96⅞ ⅜ to 96⅝ ⅜. On Wednesday, however, a rally occurred, Consols for Money advancing to 96⅝, and declining definitively to 96⅜ ⅜. Business was limited on Thursday, the market day, 96⅝ ⅜, and touching 97. Exchequer Bills have receded a few shillings, in consequence of the improved demand for money, and a probability that the Bank of England may at an early period reduce the rate of interest for loans during the shutting of the books for the transfer of stock. India Bonds are also a shade lower, the period for a further reduction in the rate of interest test approaching. Bank Stock, 211; Reduced, 96⅝; Consols, 96⅝; New Three-and-a-Quarter per Cent. Annuities, 97⅛; Long Annuities to expire Jan. 1860, 7⅞; Ditto, 30 years, 18 9-16; India Bonds, £1000, 35 p; Ditto, under £1000, 86 p; South Sea Stock, Old Annuities, 96⅝; Consols for Account, 96⅛; Exchequer Bills, £1000, June, 68 p; Small, June, 68 p.

The prices in the Foreign Market at the beginning of the week were generally depressed, Portuguese excepted. As the arrangement of the Account, however, progressed, Mexican bonds became more animated, the Account showing some *bearing*. Russian Stock appears newly distributed, partaking of the bull as well as *bearing* doubtless from *bond fide* sales on behalf of those original lenders that it prudent to realise present profits and past interest rather than hold any longer. Dutch Two-and-a-Half per Cents are flatter. At the close of the week prices were, for Brazilian Bonds, 86; Danish Bonds, 1823, 3 per cent., 76; Ditto, 5 per cent., 99½; Equador Bonds, [illegible]; Ditto, [illegible]; Dutch [illegible]; Ditto, [illegible]; French [illegible]; Ditto, [illegible]; Mexican [illegible]; Ditto, [illegible]; Portuguese [illegible]; Ditto, [illegible]; Prussian [illegible]; Russian [illegible]; Spanish [illegible]; Ditto, [illegible]; Sweden [illegible]; Ditto, [illegible]; Turkish [illegible]; Ditto, [illegible]; Venezuela [illegible]; Ditto, [illegible]; Railway Shares [illegible]; Ditto, [illegible]; Caledonian, 10½; Ditto, £10 Preference, 5⅝; Chester and Holyhead, 15⅞; Eastern Counties, 2½; East Anglian (£20, L. & E. and L. & D.), 3⅝; Ditto (£15, E. & H.), 2; Eastern Counties, 5 per Cent. Preference, 12½ per Cent., 11⅝, Eastern Union, Class A, Scrip, Guaranteed 6 per Cent., 19½; East Lancashire, 9⅜; Great Northern, 15; Ditto, Havres, A, Preferred, 14½; Ditto, B, Preferred, 10⅝; Ditto, C, Preferred, 10⅝; Ditto, 3; Great Southern and Western (Ireland), 37⅜; Great Western, 72½; Lancashire and Yorkshire, 49; Ditto, Quarter Shares, 10½; Leeds and Bradford, 94½, Leeds and Thirsk, 12½; London and Blackwall, 7½; London, Brighton, and South Coast, 84⅜; London and North-Western, 119⅛; Ditto, ditto, New Quarters, 19⅛; Ditto, Fifths, 19½; London and South-Western, 69⅜; Manchester, Sheffield, and Lincolnshire, 52½; Ditto, New, £10 Preference, 11½; Ditto, ditto, £50 Shares, 19½; Ditto, Birmingham and Derby, 23; Ditto, Consolidated, 43; Ditto, Birmingham, 5 per cent., 126; Norfolk, 21; North British, 7⅞; Ditto, Preference, 4⅞; North Staffordshire, 9⅜; Oxford, Worcester, and Wolverhampton, 18⅛; Scottish Central, 12; Shrewsbury and Birmingham, Class A, 9 ⅜; Ditto, Class B, 5⅜ ⅜; South Devon, Preference, 11⅛; South Staffordshire, 9⅜; South-Eastern, 20⅜; South Wales, 9⅜; York, Newcastle, and Berwick, 17½; Ditto, Newcastle Extension, 12; Ditto, G.N.E., Purchase or Preference, 5½; York and North Midland, 23; Boulogne and Amien, 8; East Indian, 9⅜; Luxembourg, 1⅜; Paris and Rouen, 23¾; Paris and Strasbourg, 8⅜; Rouen and Havre, 9⅜.

SATURDAY MORNING.—Under the influence of the foreign news the Market opened lately yesterday. Consols quoted the reduced value of 96⅜ ⅜, but after wards rallied to 96⅝ ⅜ for Money and Account. In the Foreign Market, Russian Four-and-a-Half per Cents declined one per cent. Shares were not materially affected.

THE MARKETS.

CORN-EXCHANGE (Friday).—Since Monday an increase has taken place in the arrivals of English wheat up to our markets, coastwise, but by land carriage they have been comparatively small. The show of samples of both red and white this morning was tolerably extensive, the demand for all descriptions, owing to the continuous [illegible] foreign flour, ruled heavy. However, most kinds were sold at a stationary price. Barley, beans, and peas, of what have come fresh to hand, and which have been mostly shaded in grocery. Selected samples were in moderate request at full currencies, but all other qualities were a dull sale. There was less doing in barley, but we have no actual fall to notice in its value. Oats, of fine and fresh corn, and the factors succeeded in obtaining full rates in every instance. We were very moderately supplied with both English and foreign rice, for which the trade was steady at full prices. Beans and peas continued very little attended, but Indian corn was the turn dearer. The supply of flour was extensive, yet a fair business was done at Monday's currency.

English wheat, 28[illegible]—350, malt, 1720; oats, 36[illegible] flour, 2080. Irish—Foreign wheat, 6970; oats [illegible]; flour [illegible].

Wheat, Essex and Kent, [illegible] to [illegible]; Ditto, Suffolk, red, 38s to 40s; ditto, white, 38s to 44s; rye, 30s to 32s; grinding barley, 2[illegible] to [illegible]; malting ditto, 29s to 30s; Norfolk and Lincoln malt, [illegible] to [illegible]; Kingston and Ware, ditto, [illegible] to [illegible]; Chevalier, [illegible] to [illegible]; potato ditto, 26s to 32s; Lincoln and Cork, [illegible] to [illegible]; Dublin and Waterford, [illegible] to [illegible]; Scotch, [illegible] to [illegible]; Youghal and Cork, [illegible] to [illegible]; Limerick, [illegible] to [illegible]; Sligo, [illegible] to [illegible]; Galway, [illegible] to [illegible]; maple, 30s to 32s; white, 29s to 30s; Indian, 29s to 31s per quarter. Town-made flour, 39s to 40s; Suffolk, 36s to 38s; Stockton and Yarm, 36s to 38s per 280 lbs. Foreign—Barley, [illegible] to [illegible]; wheat, [illegible] to [illegible]; white, [illegible] to [illegible]; oats, [illegible] to [illegible]; peas, [illegible] to [illegible] per quarter. Flour, American, 20s to 22s per barrel.

The Seed Markets.—Linseed and rapeseed are in moderate request, at full prices. In all other articles there is nothing doing.

Linseed, English, sowing, 52s to 56s; Baltic crushing, 39s to 44s. Mediterranean and [illegible], 48s to 49s; bengaled, 52s to 53s per quarter. Coriander, 16s to 24s per cwt. Brown mustard seed now, 8s to 10s., white ditto, 6s 5d to 7s. Tares, 5s to 5s 6d per bushel. English [illegible], new, 42s to 47s per last of 10 quarters. Linseed cakes, English, 5l 5s to 5l 5s, foreign, 4l 5s to 4l 10s per 1000. Rapeseed cakes, 5l 5s to 5l 5s per ton. Canary, 3s 4s to 38s per quarter. English clover-seed, red, —s to —s; extra, —s to —s, white, —s to —s; extra, up to —s. Foreign, red, —s to —s; extra, —s; white, —s to —s; extra, —s per cwt.

Bread.—The prices of wheaten bread in the metropolis are from 7d to 7½d; of household ditto, 5d to 5½d per 4lb loaf.

Imperial Gazette Average.—Wheat, 39s 11d; barley, 24s 1l; oats, 17s 1d; rye, 29s 10d; beans, 29s 9d; peas, 29s 4d.

The Six Weeks' Average.—Wheat, 40s 0d; barley, [illegible]; oats, 17s 0d, rye, 29s 10d; beans, 29s 9d; peas, 29s 7.

Mincing-Lane.—Wheat, is, barley, 1s; oats, 1s; rye, 1s; beans, 1s; peas, 1s.

Tea.—Common sound congou is in steady request, at is 6½d to 8d per lb. In the medium kinds, as well as in fine green qualities, a good business is doing, at extreme quotations

Sugar.—The supply of foreign offer this week has not been large, and a fair demand has existed for most kinds, at fully previous rates. Refined goods dull, as 49s 6d to 50s per cwt. for brown lumps.

Coffee.—About 1000 bags good ordinary native Ceylon have been disposed of, at 50s to 54s per cwt. All plantation kinds more off sowzy, at barely previous currencies. Foreign coffee dull

Rice.—The general demand is in a very inactive state, and the quotations are a shade lower.

Provisions.—The stock of Irish butter being on the decrease, the demand [illegible] at an advance in the quotations of from 1s to 2s per cwt. Carlow, Clonmel, and Kilkenny, landed, 82s to 84s; Waterford, 70s to 78s; Cork, 76s; Limerick, 68s to 72s per cwt. English butter has improved in value 2s per cwt., with a fair inquiry. Fine weekly Dorset, 96s to 98s; Devon, 70s to 78s per cwt.; fresh, 2s to 3s per dozen pounds. Dutch butter, the quality of which is improving, has risen 5s to 10s per cwt. Fine Friesland is worth 90s. Bacon is in better request, and is to 2s dearer. Sizeable Waterford, landed, 52s to 54s, heavy, 46s; Limerick, sizeable, 52s; heavy, 48s per cwt. Lard steady, at 52s to 54s for Waterford landed, and 42s to 44s for thick and Kegs.

Tallow.—Owing to the large stock on hand—upwards of 50,000 casks—the pretty little activity expressed state in prices have further receded 6d per cwt. P Y C on the spot is selling at 37s to 37s 3d per cwt. Town tallow, 37s per cwt, not cash.

Oils.—The trade is speaking the demand is active, at fully the late improvement in value.

Spirits.—East India rum moved off firmly at 1s 4d to 1s 6d per gallon proof West India ditto, and quite as dear. In brandy, the quotations have been to a fair extent, and Cognac, of the vintage of 1842, is worth 8s 6d to 8s 10d per gallon.

Hay and Straw.—Meadow hay, 2l 8s to 3l 12s; clover ditto, 4l 5s to 4l 4s; and straw, 1l 1s to 1l 8s per load. Supply good, and trade dull.

Wool.—The public sales—at which about 20,000 bales will be offered—are progressing favourably, and prices have risen from 2d to 3d per lb.

Potatoes.—The best qualities are in demand, at from 70s to 90s per ton. All other kinds support late rates.

Coals.—Bewicks and Co., 14s 3d; Hasewell, 16s; Richmond, 14s 9d; Whitworth, 15s; Adelaide Tees, 14s; Seaham Tees, 14s per ton.

Hops, Pockets.—The supply of all kinds of new hops being considerably in excess of the wants of the dealers, the demand was in a very sluggish state. Fine qualities are, however, held at full prices; but low and inferior parcels are nominally cheaper.

Country Markets.—Reading, Saturday.—New East Kent pockets, £3 3s to £7 7s; New Weald of Kent ditto, £3 3s to £6 6s; New Mid Kent ditto, £3 10s to £6 10s; New East Kent ditto, £2 12s to £3 15s; New Farnhams, £4 4s to £7 7s per cwt.

Smithfield.—Monday.—On the Monday a fair average quantity of each description of fat stock here to-day as to number, but its general quality was inferior. The receipts from the down in a dull state, and at Monday's decline in the quotations, the highest figure for the best Scots being 3s 10d per 8lbs. Prime Downs sheep were scarce, and quite as dear, whereas the middling trade was heavy. Nearly 500 foreign sheep were landed from the steamers this morning. We had a limited inquiry for calves, the supply of which was good, at barely steady prices. Pigs were slow in sale, but not cheaper. Milch cows were selling at from £4 to £18 each, including short sets.

Per 8 lbs to sink the offals:—Coarse and inferior beasts, 2s 6d to 2s 8d; second quality ditto, 2s 10d to 3s 2d; prime large oxen, 3s 4d to 3s 6d; prime Scots, 3s 8d to 3s 10d; coarse and inferior sheep 2s 10d to 3s 2d; second quality ditto, 3s 4d to 3s 6d; prime coarse-woolled ditto, 3s 8d to 3s 10d; prime Southdown, 4s 0d to 4s 2d; large coarse calves, 3s 4d to 3s 8d; prime small ditto, 3s 8d to 3s 10d; large hogs, 2s 6d to 2s 8d; neat small porkers, 3s 10d to 4s 0d; suckling calves, 18s to 28s; and quarter-old store pigs, 18s to 21s each. Total supplies: beasts, 841; sows, 98; sheep, 4000; calves, 300; pigs, 330. Foreign: beasts, 796; sheep, 1100.

Newgate and Leadenhall (Friday).—Although the supplies on the leading days were extensive, a good business was doing, as follows:—

Per 8 lbs by the carcass:—[illegible] to 2s 2d; middling ditto, 2s 6d to 2s 8d; prime large ditto [illegible] to [illegible]; small ditto, 3s 4d to 3s 6d; large pork, 2s 8d to 3s 0d; middling ditto, 2s 6d to 2s 10d; prime ditto 3s 8d to 3s 10d; small pork [illegible] to 3s 10d; inferior calves, 3s 0d to 3s 6d; prime ditto 3s 8d to 3s 10d; small pork [illegible] to 4s 0d.

UNATTACHED Lieut J Ross to be Captain.

COMMISSIONS SIGNED BY LORDS-LIEUTENANT.

[illegible] Thomas Shelley, Esq (late 3rd Dragoon Guards, younger, Esq) as stated in [illegible] to be Captain, and to be Deputy-Lieut

[illegible] Robert Rhenet Bignell of West Riding Yeomanry Cavalry, Lieut J D [illegible] Edward, Cornet C Raynard to be Lieutenant, vice Hutchinson

GOODALL, Lieut 2nd Norfolk Regiment of Militia, Gentleman, to be Lieutenant, vice [illegible] Second Lieut E Carthew to be Lieutenant, vice Hatchcroft; F Archer to be Second Lieutenant, vice Bennett

BANKRUPT.

M P EDWARDS, Circle, Tredegar, Monmouthshire [illegible] draper. ANN GRAVES, Snaith, Yorkshire, innkeeper. J. PILE, East Winch, Norfolk, grocer. T. DYSON, Bradford, Yorkshire, linendraper. N J WALLIS, Loughborough, [illegible] Middlesex, bookseller. T WARR, Yorkshire, saddler. W HANNETT, Larkhall-lane, Clapham, and Lee [illegible], Wandsworth road, builder.

BIRTHS.

At Bexley Heath, Kent, the wife of the Rev George Augustus Langford, of a son.—At Peartermouth, Hants, the wife of Captain R B Watson, C B, of a daughter.—At Stonehouse, Devon, the lady of Archdeacon Nelson Darby, of a son.—At Trant, Paddington, the wife of the Rev A Pettigrew, of Alfred-place, Brompton, of a daughter.—At Southampton, Devon, the lady of Archdeacon Nelson Darby, of a son.—At Northampton, the wife of the Rev Thomas Hatton, of a son.

MARRIAGES.

At the parish church, Malahide, near Dublin, Robert Jocelyn, eldest son of Richard Gosling, Esq, of Lowndes-square, to Mary Shuldham, second daughter of the Rev Dr Henry Drummond, of Queen's College, Cambridge.—At Tenbridge, James Linnington, eldest son of James Rickford Wildman, Esq, of Chilham Castle, Kent, and Newark, formerly to his Excellency the Lord Viscount Harris, to Charlotte Anne, only daughter of the late Robert Burke, Esq, of Dublin

DEATH.

At his residence, 76, Baker-street, Portman-square, in the 81st year of his age Lieut-Colonel Charles Lewis, Esq, late Deputy-Assistant-Adjutant-General to the Royal Forces, and Equerry to his late Royal Highness the Duke of Cumberland. [illegible] At Wansdown, the Rev Edward Alexander Hawkins, Rector of Sallynasaken, in the county of Limerick, and Prebendary of Tullow, in the county of Carlow.—At Upper Berkeley-street, Portman-square, Lieut-Colonel Wilde Augustus Bunbury, aged 70.—At Upper Brook-street, Portman-square, the Hon Mrs Eyre, relict of the late Henry Eyre, Esq, of Rockingham-castle, Rents, and daughter of George, 13th Viscount Hereford.

RARE BRITISH OWL.

(To the Editor of the ILLUSTRATED LONDON NEWS.*)*

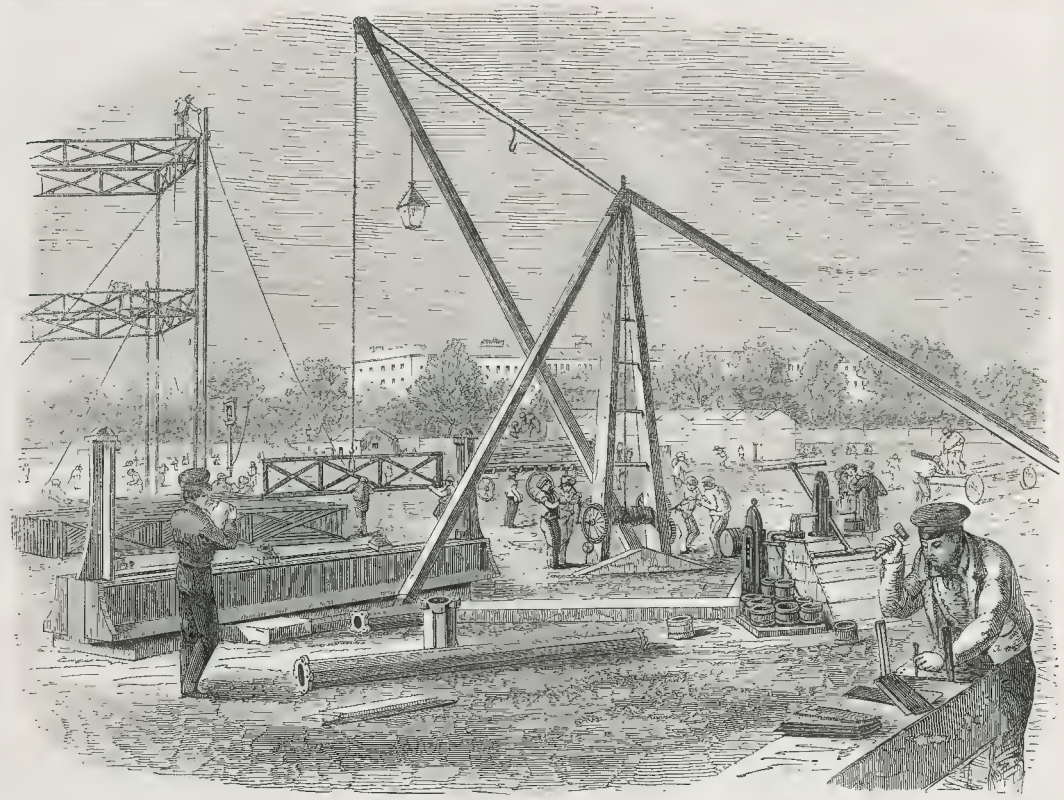
SIR,—Having in my possession a very interesting British owl, and one whose habits, at least in a state of captivity, are not very generally known, I take the liberty of sending you a few remarks which may not be without interest to some of your readers.

One evening, about the end of last month, I was by the river-side with my sons watching the immense flights of sand-martins that collected this autumn about the banks of the Thames in our neighbourhood in unprecedented multitudes, when my attention was attracted by an unusual commotion which arose among a large company of those birds that had apparently settled for the night in an osier plantation On looking up, we observed a large bird skimming with its accustomed flight over the osier bed, and carrying out before it multitudes of sand-martins, bank-buntings, and other small birds; on the instant I fired and brought it to the ground. On approaching the spot where it fell, I found a fine barn owl, (*Strix flammea*,) standing up in bold defiance opposite my dog —a large water-spaniel. Finding it was dead, I gave it to my servant to shoulder and took him home, where he was placed in a large cage and covered up, in order to be quiet as soon as possible. The following morning, finding him still alive, we bound up his wounded leg, and intended him to swallow some pieces of raw meat. For some days after his capture he appeared angry, rather than alarmed, when any one approached him, ruffling up his beautiful feathers, hissing, and snapping at the hand; he also took great notice of the animals before mentioned, and especially of a large black-and-white cat, if it approached his cage, by setting up every feather of his body erect, like the quills of a porcupine.

After a few days he became quite tame, and would eat very tame, and takes in food readily from our hands; he eats raw meat, fresh-killed birds, and mice.

The owl appears to have no objection to the light of day, although his brilliant golden eyes open wide to the greatest sunshine. We have also observed, contrary to the powers of most other owls, he can distinguish small objects in the broadest light; and have seen him continue to watch the motions of a crow that was sailing over head, even after it had approached so near the sun's position that we were compelled to withdraw our own eyes from the object.

His owl does not throw itself into positions so grotesque as the yellow, or barn owl, being more sedate in its manner. It exhibits, however, much variety in its appearance at different times, sitting, when quite at rest or asleep with the feathers of its face drawn together, and its short horns erect; at other



THE GREAT EXHIBITION BUILDING IN HYDE-PARK.—UNLOADING GIRDERS

times, especially when excited by the sudden appearance of any new object, it expands its feathers and enlarges the disk of its face to its full extent. We frequently, also, observe it sitting in the position represented in the accompanying Illustration.

I remain, &c.,
Chertsey, Nov. 25th, 1850. H. L. MEYER.

HAWK OWL. (*Otus brachyotus.*)

THE GREAT EXHIBITION BUILDING.—CONSTRUCTIVE DETAILS

UNLOADING GIRDERS.

In the *General View of Works* the most prominent feature is the large crane, by which the cast-iron girders are unloaded from the waggon—one of Pickford's in the present instance. A girder is seen, suspended by the chain, in the act of being moved round to be placed between the jaws of the hydraulic testing machine. In order that the progress of the works might not be impeded, at their commencement it was found absolutely necessary to test the girders by night as well as by day, for which purpose artificial light was required, and the manner in which this is accomplished is shewn in the view:—A lamp, with flexible tube, by which the gas is conveyed from the main, is suspended from the jib of the crane, with which it can therefore be moved round in any required direction, and also be raised or lowered according to circumstances. In the foreground is one of the sappers and miners men waiting to test the strength of the girder. We have only to stand by a little while, in order to discover the vigilance exercised by this person in performing his duty; so that, in addition to the respectability and constant supervision of the contractors, the public have this further assurance of safety from accidents which have, unfortunately, so frequently happened from imperfect castings and other defects, in so many instances in which iron has been the chief material.

PAINTING APPARATUS.

We are not acquainted with any building in which so many substitutes for manual labour have been successfully adopted in its construction, as in that the details of which we are now describing. The *sash-bar painting apparatus*, a View of which we have introduced, together with a *section* of the *brushes*, is among the number. One of the sash-bars is occasionally passed between the brushes, to keep them clean. After being primed, it is placed in a wooden tank, containing paint of the consistence suitable for the first coat, and subsequently taken out and passed through the brushes, to remove the superfluous paint, which runs off into a wooden shute placed in an inclined position. Any of our readers who have watched the tedious process of hand-painting sash-bars, will be able to estimate the advantage of this simple yet effectual contrivance.

It may be as well here to mention, that Mr. Owen Jones, the architect, is already making experiments with regard to the most appropriate colours for the columns and other internal decorations.

We shall resume our Illustrations next week.

THE ILLUSTRATED LONDON NEWS

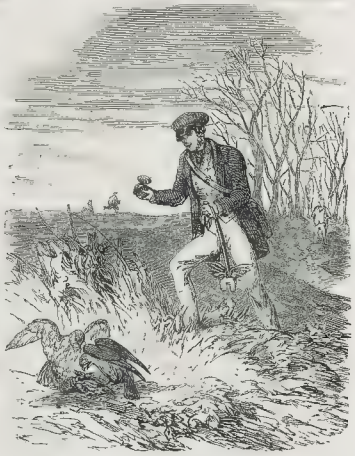
No. 458.—VOL. XVII.] FOR THE WEEK ENDING SATURDAY, DECEMBER 7, 1850. [SIXPENCE.

THE UNITY AND DISUNITY OF GERMANY.

AFTER a long period of alarm, suspense, and peril, there seems a glimmer of hope that Germans will be prevented from engaging in sanguinary warfare with Germans, and from asserting their love of union "*more Hibernice*" by the slaughter of their brethren. The conference of M. de Manteuffel on the part of the King of Prussia, and of the Prince de Schwartzenberg on the part of the Emperor of Austria, appears to have had a favourable result; and there is reason to believe, that, for the present at least, or until new differences shall arise, the mighty armaments of the rivals will be engaged in no more desperate work than in increasing the public debt of the powers that called them into being.

We cannot, however, indulge in the hope that the difficulties of Prussia and Austria are at an end, and that circumstances may not, from day to day, arise which shall once more overthrow all pre-existing arrangements, and bring the antagonists a second time face to face. Notwithstanding the halcyon days that have dawned within the week, the King of Prussia is in the unfortunate position of a man who can neither recede, stand still, nor advance with honour or with safety. The unity of Germany is an idea that has taken too deep a root in the minds of the Prussians, to justify any expectation that it will be hastily abandoned; while the disunity of Germany, or the *status quo*, is so clearly the interest of Austria, the present head of the Confederation, and so agreeable to the ideas and principles of the Conservative party throughout Europe, that we must expect all the moral and physical force of Austria and her allies to be exerted in its defence. The King of Prussia, though he may avoid war at present, cannot recede, unless he wish to turn his *Landwehr* into revolutionists. He cannot stand still, without covering himself with ridicule and disgrace in the eyes of his own people—a result which might lead to his deposition; and he cannot advance, without kindling a war in Europe, of which the end might be, not the aggrandisement, but the humiliation, of Prussia, accompanied, in all probability, by a loss, not simply of territory, but of influence.

HAWKING.—THE LURE.



FALCONER ABOUT TO DISENGAGE FALCONS FROM QUARRY.

A glance at the position of the Prussian people, and of the Prussian King, prior and subsequent to the French Revolution of

HAWKING ON THE DOWNS, NEAR WALLINGFORD.—(SEE NEXT PAGE.)

1848, will show how they stand towards each other, and towards the rest of Europe at the present time. Upwards of forty years ago, the late King of Prussia—a Monarch of the old school, claiming to govern by Divine right—promised his subjects a free constitution. This was reversing the usual course of politics; but his subjects, being a peaceable as well as enlightened people, were contented to have a constitution after that fashion, rather than not to have it at all, or to have it at the heavy price of a violent revolution. The King proffered, and procrastinated, and died without performing his promise. The present King—a man of liberal tendencies, of great ambition, but of no talent—granted the long-promised and long-withheld charter; and gave the Prussians a constitution that would not work, and in which he reserved to himself rights, privileges, and duties, utterly inconsistent with a representative form of Government. The French Revolution broke out—the Germans, like the rest of the Continental nations, went mad—and one great, united, and free Empire, or perhaps Republic, of Germany was the dream of the Prussians, the Saxons, the Hessians, and some other branches of the Teutonic family. The King of Prussia caught the contagion, and losing all prudence and self-control, shouted as lustily as a Red Republican for a re-arrangement of the German polity, and endeavoured to abolish the very name of Prussia, which, for the future, he said, was to be lost in that of Germany. He soon found, however, that he was playing a dangerous game, and that his revolutionary colleagues, the professors, the students, and the people, had an idea that Germany would be most comfortably and securely united if there were no Kings, Dukes, or Electors within its boundaries. This did not suit the purposes of his ambition; his subjects were going far too fast towards republicanism to please him, and he turned suddenly round upon them, and told them—if not in words, by deeds—that the unity of Germany, without the King of Prussia as Emperor thereof, was not the unity he had imagined, and that for the future he would combat his old friends of the democracy, and crush them beneath the weight of his armies. He did so; Prussia was transformed into a vast camp, with the double object of coercing his own subjects, and of overawing the Austrians and all other members of the German Confederation, who were not willing either to be swallowed up entirely, or to lose their position, or any portion of their territory, for the sake of Prussia. Still keeping his own ends in view, he fomented the civil war between the Danes and the Schleswig-Holsteiners, desiring to round off his new empire by that maritime province. He procured the convocation of an Assembly, or Parliament, to supersede the old Diet, and to debate on the future relations of Germany. That Assembly broke up, having done nothing during its existence but to complicate existing difficulties, to exasperate mutual distrusts, to acerbate previous ill feeling, and to render "confusion worse confounded." Austria being menaced with the loss of the flower of her dominions—Austria Proper—and with being converted into a Sclavonian instead of a German Empire, naturally endeavoured to prevent the consummation, and to defend her integrity at the point of the sword. Sorely pressed by the Hungarians and the Lombards, she struggled for existence; while Prussia, *de facto* an absolute and despotic power, and engaged in a conflict with revolution in her own territory, gave all the aid she could to the revolutionary parties in those two kingdoms—caring nothing for principle, for consistency, or for justice, if Austria could only be weakened *per fas aut nefas*. The Emperor of Russia came to the aid of his ally, and Austria was saved from destruction, and enabled to cope with Prussia hand to hand. The Parliament of Erfurt was next convoked by Prussia, without the consent of the head of the actual Confederation, and was as powerless for good, and as apt for evil, as its predecessor. The Hessian difficulty then arose. The Elector, unable to rule his subjects, or to secure the allegiance of his army, demanded, as he was entitled to do by the Federal pact, the support of the Federal army. Austria, the legal head of the Confederation, and acting in strict accordance with her right, and with the treaties by which Europe was bound after the pacification of Waterloo, dispatched an army of occupation into Hesse-Cassel. Prussia, without a shadow of right to interfere, except under the orders of the Confederation, occupied Hesse with another army, flattering the revolutionary party in Germany with the idea that she was supporting the Liberals of Hesse against their foolish Sovereign; but having no other object in view than the old scheme of Prussian aggrandisement, and the unity of Germany under Prussian auspices. As it now appears, the final struggle for supremacy should now be fought, and that the Electorate of Hesse-Cassel should be the battle-field, the King of Prussia called out the *Landwehr*, by which his available force was increased to upwards of 500,000 men. For the last few weeks the armies of Austria and Prussia have been in sight of each other, eager to strike; and the democratic Prussians, forgetful of all the wrongs they have endured at the hands of their ambitious and arbitrary, but weak Sovereign, have been smitten with the love of conquest, have considered the honour of their country to be at stake, and have desired nothing better than an unnecessary and most wicked war with their Austrian brethren. The King of Prussia, however, was scared at his own work, and "recoiled at the sound himself had made." Austria, acting in strict accordance with law and right, could not draw back even one inch (however loth she might be to engage in the conflict), without losing her own self-respect and sinking in the estimation of Europe. On the other hand, the King of Prussia having taken the step, could not retrace it without stultifying himself—a fatal result to a man in his position. In this state of affairs, the conference between M. Manteuffel and M. de Schwartzenberg was held at Olmutz; and, the Elector of Hesse coming to the rescue, offered to manage his subjects himself, and to withdraw his demand for the aid of the Federal army. By this compromise, Austria may now retire without either compromise of right or dignity, and Prussia may withdraw without humiliation.

So the affair at present stands, and there is a truce between the high belligerents. Whether the truce shall expand into a peace, is impossible to foresee. The elements of mischief are too many to justify the hope that the troubles of Germany are concluded. There is but one great and obvious chance of an amicable settlement—the abdication of the King of Prussia, and the installation of another Monarch less fettered by the past, and who will be able to maintain his own rights without attacking those of his neighbours. Revolutionary Kings never do any good for themselves; and men who take the colour of their character from circumstances, and who are always of the opinion which happens to be in the ascendant, are not to be entrusted with the chief authority in times of revolutionary excitement. The King of Prussia bids fair to be a new example of this old truth. His abdication at the present time would be a blessing to Europe, and possibly to himself. His successor might have a difficult, but it would not be a hopeless task.

HAWKING IN BERKSHIRE.

Several attempts have been made of late to revive the ancient sport of Falconry, and we are happy to learn, with considerable success. A fine exhibition came off on the 26th ult., on the Downs, at about a mile and a half from the Wallingford station of the Great Western Railway. A quarry of seven blue rock pigeons, the swiftest that could be got, was flown. Five were killed, one escaping entirely, the other taking refuge in a stack of faggots, where it probably died, as it was much injured.

One flight was most beautiful: the hawk was flown, and immediately soared an immense height, following the falconer for more than half a mile, and pounced upon the quarry with almost inconceivable rapidity, in fact like a stone; the pigeon was struck to the ground, and rebounded with the blow.

Mr. Barr, the falconer, had six peregrins with him, though four only were flown, all of which perfectly understood their work.

There was also a noble exhibition of the sport on Epsom Downs, on the 19th ult. The falconer is a fine Quentin Durward-looking Scotch addle, named Barr, from Arrochar, near Glasgow. His father is gamekeeper to W. Hamilton, Esq., of that ilk, and father and son have devoted much of their time to the practice of Falconry.

The quarry hunted on the 19th were fleet and powerful pigeons—the strongest and fastest that could be procured. The falcons that were flown were peregrins, three females and one male, technically named tiercel, tercel, or tassel. They were taken from the nest in June last. Thirteen pigeons were slipped, and nine were killed. This is deemed very good work, considering that the day was very windy, and that in consequence it frequently happened that the strength of the wind interfered with the accuracy of the falcon's sweep, causing him designedly to miss his pigeon, out of the line of his descent.

Mr Barr, unless when his falcons become tired, does not fly them from the fist—*de poing*, as the French say. He unhoods his falcon, and lets it go. The bird immediately soars high in the air, watching the movements of the falconer, who at the fitting moment slips his pigeon. The falcon gives little law to his quarry, almost instantaneously gives chase, and frequently as promptly makes his swoop. He does so the moment an opportunity occurs, "coming down," to use the language of Mr. Macgillivray, "upon his prey either in a curved sweep, or like a stone falling from the air." If he misses his quarry, a rapid ascending motion takes place, and he flies high up into the air again, and enabling him in many instances to repeat his swoop with scarcely any delay. He has, however, when his quarry is of pinions equally agile with his own, to make a race for it, and sometimes, from unavoidable casualties, the race is neither to the strong nor the swift. When the falcon strikes his bird down, he immediately places one talon on the shoulder of his prey, and the other on the neck, and he proceeds with his beak to open the jugular vein, lapping with a smacking sound from the mouth and palate the blood as it flows. Whilst engaged in this operation, the falconer hurries towards him, and lifts him, disengaging him from his quarry by a method requiring for its performance care and cousage.

FOREIGN AND COLONIAL INTELLIGENCE

FRANCE.

The attitude of neutrality assumed by the French Government with respect to the pending disputes between the German Powers, which indicated its desire to avoid an European war, has been confirmed by the National Assembly, which has received with expressions of satisfaction and approval the report of the committee on the bill of the Minister of War opening a credit of ten millions of francs, for covering the expenses of the levy of 40,000 men. The report, which concluded in favour of the adoption of the bill, urged various cogent arguments in favour of the observance of strict neutrality. A war should break out, France, it insisted, ought to regard the belligerent parties with complete impartiality. A single cannon-shot might disturb the balance of Europe and the repose of the whole world, and become the signal for a social war. The committee accordingly unanimously that the Chamber should adopt the following resolution: "The National Assembly, convinced that the policy of neutrality, such as expressed in the Message of the President of the Republic of the 12th of November, is the only policy suitable to France, passes to the discussion of the articles of the bill."

The debate on the question was fixed for Thursday, and has not yet been concluded, but there is no doubt that, while the sentiments of the report of the committee are re-echoed from the tribunal, the bill of the Minister of War will be adopted as a measure of precaution.

A strong effort is about to be made by the objectors to the press law, to have it so modified that the principal responsibility of libels shall rest upon their authors, and not upon the editors or proprietors of the journals giving them publicity.

A decree of the Government, putting an end to the meetings of the stock-jobbers, and gamblers in the funds, after business hours (three o'clock), in the Passage de l'Opéra, was put in force on Monday. The new regulation arose out of false or erroneous reports respecting the funds at Bourse, being published by the *Patrie*. In consequence of the great injury done to commercial affairs generally by loose and similar false rumours so often given as news by some of the journals, complaints were addressed to the authorities, with the view of remedying, as much as possible, the evil, and they accordingly resolved to suppress those irregular meetings altogether. The measure was put into execution, not without some trouble, the habitual speculators, as soon as they were dispersed by the police in one place, reuniting in another. The assemblies at the Bourse, after the official hour of closing, have also been stopped.

Viscount d'Arlincourt has been mulcted in 300f. and costs for a libel on the Prince de Canino, the ex-President of the Roman Republic.

The *Ordre* says, that the Roman Cabinet is complaining of the heavy expenses attendant upon the number of Austrian troops in the States of the Church. The force is 20,000, and the Papal Minister wish to reduce it to 12,000. Should the Court of Vienna not consent to this request, France is to be appealed to for its friendly mediation.

GERMAN STATES.

The news from this quarter is to the 2nd inst. It is, however, indistinct, and leaves matters in quite as much uncertainty as they were last week.

We learn, in the first place, that the Elector of Hesse, having found the military aid of his Federal friends and allies, Austria, Bavaria, and Wirtemberg, more expensive than he had expected, has resolved to return to his dominions, and resume their administration on the condition that the Diet shall guarantee that the latter having assented to his proposition, the question of Hesse presented no difficulty at the recent Conference held at Olmütz, in Moravia, between the Prime Minister of Austria, Prince Schwartzenberg, and M. Manteuffel, the Prime Minister of Prussia, at which the Schleswig-Holstein contest, the great German dispute, the Free Conferences, and the "parity" of Prussia with Austria in them, were the main topics of discussion.

In the next place, we find that on most of these points satisfactory arrangements were come to; that during the Free Conferences, which are to be held at Dresden, the sittings of the Frankfort Diet of the Confederation will be suspended, though that body will not be actually adjourned; that the Governments have agreed to refuse all be. The reply will have to be reported to the Powers in the Free Conferences, and if a settlement is impossible in any other way, it will be accomplished at last by a corps of the Confederation—this time with the assent of Prussia; but, for the present, the question as to the march of Austrian troops through the north of Germany, to which Prussia has so strongly objected, is set aside.

As to the "parity" of Prussia and Austria in the Conferences, it would have been conceded, but the allies of Austria, Bavaria, Wirtemberg, Hanover, and Saxony. Prince Schwartzenberg could not decide the question for them, but promised to use his influence with those states to remove their scruples of dignity, the secondary Powers being more sensitive on the matter than the principal. With the reserve of their consent also, the sharing of the future executive power between Austria and Prussia is also agreed on, but the question as to what provinces Austria is to bring into the German Band, is, it is apprehended, still unsettled.

Baron Manteuffel, on his return to Berlin, had not only obtained the consent of the Prussian Cabinet, but also the sanction of the King, to those arrangements, and so far a solution of those troublesome disputes and negotiations seemed at hand; but contemporaneously with our last advices, viz. those of the 2nd inst., a Berlin ministerial organ announces the arrival of alarming despatches from Vienna, which were written after the Olmütz arrangements had been notified, and that immediately after their arrival at Berlin instructions were issued to expedite the armaments, and purchases of horses were effected at very high prices.

Such is the present unsettled aspect of matters. Meanwhile, from Hesse we learn that there was as yet no change made there with respect to the position of the allied troops, which, however, was becoming every day more untenable from the want of supplies, nor was anything definite known as to the Elector's intention to return.

TURKEY.

Recent accounts from Aleppo inform us that a dreadful chastisement has been inflicted on the rebels of Aleppo. On the evening of the 7th of November Kerim Pasha invited the chiefs of the insurgents to a conference. They, confident in the terror which they had inspired, gave him the snare, and were taken prisoners. The 4000 troops under the command of Kerim Pasha then invested the quarters of the city where the insurgents had taken refuge, and commenced a merciless massacre, the victims of which are numbered at 1800. This frightful carnage lasted twenty-four hours. The quarters of the city where it took place were sacked and destroyed by fire. It is said that no Christians suffered. The rebels who fled were pursued by the cavalry.

UNITED STATES

Intelligence to the 20th ult. has been received from New York.

The majority for Washington Hunt (Whig—*Anglice*, Conservative), Governor of the state of New York, was very trifling, and has led to grave doubts as to the possibility of the Whigs maintaining their ground in the empire state. The agitation for a repeal of the school system in the state of New York had met with a most unsuccessful result, the majority against a repeal amounting to above 20,000 votes.

With respect to the Fugitive Slave Bill, President Fillmore, in a reply to a letter addressed to him by the owner of the two slaves named Craft (who late.) escaped from Boston after several unsuccessful attempts at apprehension), intimated his determination, in all cases where sufficient legal proof of proprietorship is submitted, to enforce the recently-enacted laws; but adds, that, in the special case referred to, he can give no remedy, as the complaints made against the civil power are founded solely on newspaper rumour.

The Nashville Convention adjourned on the 18th ult. The report of the Convention, after receiving various amendments on the or ginal draft, embodied a series of resolutions expressing attachment to the constitutional union, declaring the doctrine of state sovereignty with power to reserve and delegate authority, and recommending the south not to go into National Convention, but to elect candidates for Congress with a view to the preservation of southern rights.

Midle. Jenny Lind was to have given her last concert at New York on the 22nd ult. She has made a present of a silver salver, &c., to Captain West, of the *Atlantic*. Barnum has presented the Temperance Society with a donation of 200 dollars. Life membership of the Temperance Society have been conferred on Midle. Jenny Lind, General Cass, the President of the United States, Henry Clay, ex-Secretary Clayton, Governor Seward, &c.

Fires of a serious nature had broken out at Buffalo (loss, 100,000 dols.), and at Charleston (loss, 40,000 dols.)

The cholera had again made its appearance at Indianopols, where two members of the Reform Convention had died of it.

General Scott and General Houston (the latter ex-President of Texas) are announced as among the candidates for the next Presidency.

A great tumult took place in Boston on the evening of the 15th ult., in consequence of the calling of a public meeting "to welcome Mr. George Thompson, M.P., to the United States, and to hear a speech from him on the subject of slavery." The audience refused to listen to the hon. gentleman, who was obliged to retire amid jeers, hisses, and laughter.

The Hon. R. M. Johnson, distinguished for a long life in the public service, and Vice-President of the Republic under Martin Van Buren, died on the 19th ult.

INDIA.

Advices, in anticipation of the Overland Mail, of Nov. 2 from Bombay, and Oct. 24 from Calcutta, have been received in town during the week.

The news transmitted is not of much importance, although in many respects it is far-reaching. Fears had been suddenly entertained along the Punjaub frontier, from Kohat southward, that our troops would have to suppress a serious disturbance which had broken out at the Bahadur Khel Salt-mine. Lieutenant Pollock was therefore hurriedly despatched at the head of a portion of the Kohat force to quell the anticipated insurrection, and to arrest the malcontents. The troops, however, were scarcely in motion before intelligence arrived that the riot had come to an end, and all apprehensions for the future were dispelled.

A severe epidemic, occasioned, as is supposed, by the drought and heat of September and October, to lowering the excessive falls of rain in June and July, prevails at Lahore. Out of a force consisting of 415 officers and 7550 men, 1889 of the latter, and 23 of the former, are in hospital. Arrangements have been made at Lahore, under the auspices of Sir H. Lawrence, for providing occupation and amusement for the European troops. The soldiers' gardens, last year brought into existence, have been improved and extended; so have the library and reading-rooms. Workshops, formerly provided, are being fitted with all sorts of tools, to enable tradesmen to employ either for their own amusement or requital. Implements for the playing of cricket, battledor and shuttlecock, rackets, archery, and other sports, have been provided, while coffee and tea are supplied in the gardens and rooms at all hours, and that under prime cost. The arrangement is not more benevolent than wise: a soldier's life in the field is one of incessant and extreme excitement, and if we fail to meet the idleness and lassitude the confinement by occupation or amusement, we may depend on unlimited crops of insubordination and crime.

Lord Falkland, the Governor of Bombay, had entirely recovered from his indisposition. Sir Charles Napier was making preparations to leave India for England, by way of Scinde and Bombay.

CAPE OF GOOD HOPE.

Accounts to the 6th of October inform us that disturbances had again broken out on the Kaffir frontier of the Cape of Good Hope, the native tribes being the aggressors. It does not seem that the movements were very formidable in numbers; but still appearances were sufficiently menacing to induce his Excellency the Governor-General (Sir H. Smith) to repair without delay to the scene of strife, in order to ascertain the cause and extent of the outbreak, and to adopt such measures as he might deem necessary for its speedy suppression.

CHURCH, UNIVERSITIES, &c.

CAMBRIDGE.

The Master and Fellows of Trinity College, Cambridge, have decided on inviting the old graduates of the college to dinner on December 23, to commemorate the five hundredth anniversary of the foundation of the College.

OXFORD.

Balliol College.—The annual election of Fellows and Scholars has terminated in Mr. T. Walrond, B.A., Under-Master of Rugby School, and Mr Henry John Stephen Smith, scholars of that society, being elected Fellows; as also Mr. Charles Smart Bayly, commoner, recently of Harrow School, and Mr. Hamilton Thompson, of Cheltenham College, Hulmeian Exhibitioner.

Brasenose.—Mr. Isaac Gregory Smith, B.A., scholar of Trinity College, has been elected a Fellow.

Eton College.—The Christmas Vacation commences on Tuesday, the 10th inst., on which day the fifth and sixth forms leave; and, on the following Thursday, the lower boys and collegers take their departure. The school opens on Monday, the 13th of January, and the lower boys return by Saturday, the 18th; and, in the course of the following week, the whole of the school will have assembled.

Birmingham, near Leeds.—A splendid east window has been recently placed in Drighlington Church, the pious offering of John and Thomas Hague, Esqs., in memory of their deceased aunt, the late Mrs. Margitroyd The window, which is of romanesque design, consists of a large centre, and two narrow side lights: the former contains exquisite representations of the baptism of our Saviour, the Last Supper, emblems of the four Evangelists, and the Agnus Dei, relieved on a splendid mosaic ground composed of monograms and crosses, intersected by bands of yellow glass and surmounted by a beautiful border of the most gorgeous tints. The side lights, arranged in geometrical patterns, are of subordinate character, but in perfect harmony with the centre light, the effect of which they greatly enhance. The following is the following inscription:—

To the glory of God, and in memory of Anne Margitroyd, who deceased on the 27th of May, 1850, aged 84, this window is erected by her nephews, John and Thomas Hague, Esqrs. Rev. John Hague, Incumbent of St. Barnabas, York, 1850."

Testimonials.—The following clergymen have recently received testimonials of esteem and affection:—The Rev. J. Meridyth, of Stockport, from his congregation; the Rev. Samuel Rogers, curate of Balwell, Notts, from his parishioners; the Rev. P. Duff, head master of the Grange School, from a few of the parishioners of Bishop's-carmouth.

Preferments and Appointments.—Rev. H. Bell, to be Chaplain *pro tempore* of the Nottingham General Hospital. Rev. R. M. Master (P.C. of Burnley, Lancashire), to an Honorary Canonry in Manchester Cathedral. *Curacies*:—Rev. H. Powell, to Bispham, Lancashire; value, £275, with residence; patron, Rev. C. Hesketh. Rev. W. N. Tanner, to St. Mark, Antrobus, Cheshire; patron, Vicar of Great Budworth. Rev. C. Carr, to Witton-Gilbert, w. Kimbleworth R., Durham; value, £303, with residence; patrons, Dean and Chapter of Durham. Rev. J. D. Otter, to Bramley, Leeds; value, £239; patron, Vicar of Leeds. Rev. J. Hatherley, Wilberforce-due-Quay, Cambridge. Rev. W. Lowe, to Bickerton, Cheshire. Rev R. H. Whitworth, to Standish, Lancashire. Rev. G. Cole, to Urnham, Kent. *Vicarages*:—Rev J. A. Cook, to South Bradley, Som.; value, £292, with residence; patron, Dean and Chapter of Westminster. Rev. H. Wood, to Stratton, Cornwall; value, £201, with residence; patron, his Royal Highness the Prince of Wales.

Vacancies.—Lytchett Matravers rectory, Dorset, diocese Salisbury; value, £396, with residence; patron, J. Howell, Esq.; Rev. H. James, deceased. Leeds, St. Luke, Shepscar curacy, diocese Ripon; patron, Vicar of Leeds; Rev. J. D. Dixon, promoted. Alne vicarage, county and archdiocese York; value, £300; patron, Sir C. Chaloner. Rev. J. Chandler, deceased. Archdeaconry of Chichester: value, £24, patron, Bishop of Chichester; Venerable H. E. Manning, resigned. Vicarage of Lastringham, county and archdiocese York: value, £215, with residence; patron, Lord Chancellor; Rev. R. Harrison, deceased.

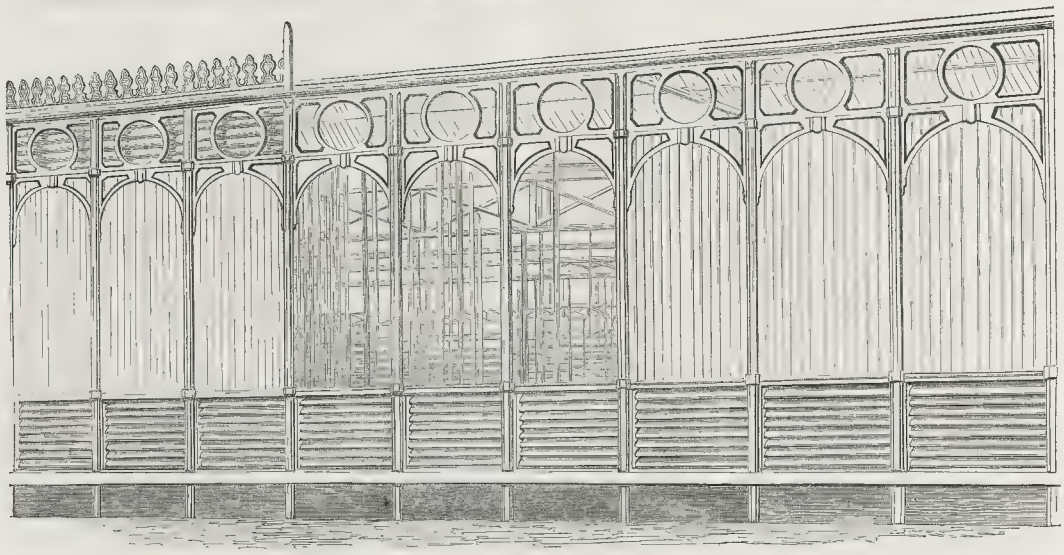
Interesting Discovery near Alnwick.—A few days ago, as some countrymen were ploughing a field at Hawkhill, the ploughshare struck upon a large flat stone, which, on being removed, turned out to be the covering of a rude stone coffin, formed by unhewn slabs of stone set on end. An urn was found within, imbedded in the soil, which had penetrated into the original cavity in the lapse of centuries. Five coffins have been laid open, in one of which another urn of smaller dimensions and rude construction was found. In the coffins were urns were found in two cases; but the others were filled with bones mixed with soil. The largest coffin measures about five feet six inches in length, three feet in breadth, and three feet and a half in depth. The bottom stone is jagged, and the top covered with a huge flat stone near six feet square, which seems to have been brought from the seashore. The smallest coffin is not more than 18 inches by 12. They are of various sizes and laid in no uniform direction. The urns are made of baked clay; the larger one seemingly of "turning" tool, and the smaller rudely hewn-hand with a sort of chisel. His Grace the Duke of Northumberland and Sir Gardener Wilkinson (who has been on a visit to his Grace at Alnwick Castle) examined the place a day or two ago, as well as several other individuals. Mr. Crisp, the able and hospitable gentleman on whose farm these interesting relics of ancient times have been discovered, has afforded every facility for inspecting them, and spared no trouble to gratify the intelligent curiosity of his neighbours and others. They are placed on the highest part of a ridge of land called the Shed Laws, immediately in front of the Lesbury station of the York, Newcastle, and Berwick Railway, and a few yards from it. An urn, similar in appearance to those mentioned above, was lately found when making the excavations for the Alnwick branch, and a cart head which some have imagined to be a *status*; but this can scarcely be, as the *status* was an instrument resembling a pencil in size and shape, one end being sharpened to a point, and the other flat and circular.

The barque *Emerald*, of London, arrived in the Downs on Monday last, having on board a sailor who was picked up at sea, floating on a piece of deck, off Cape Finisterre. It appears the sailor, along with two others, had been swept overboard from the deck of a Portuguese schooner in a storm. The other two were drowned; but the survivor got hold of a sheet of cork (which was washed from the deck of his vessel at the same time), to which he clung for nearly two days.

The Mayor of Newcastle has been memorialised to call a public meeting of the merchants, coalowners, shipowners, and others interested in the trade of that port, to take into consideration the duties now levied by the French Government upon the importation of British coals into France, and to adopt such measures as to the meeting may appear expedient.

METROPOLITAN NEWS.

CAMBRIDGE MONUMENT.—A meeting of the subscribers to the proposed memorial of the late Duke of Cambridge was held at the Freemasons' Tavern, Great Queen-street, on Tuesday, to determine, in the first place, whether the monument should be a statue or a charitable institution; and, secondly, if the latter, of what description the same should be. Lord R. Grosvenor, M.P., who presided, stated that, out of a variety of suggestions offered to them, the committee had adopted one recommending, as the fittest memorial of the late Duke, almshouses for widows of non-commissioned officers and privates of her Majesty's forces, to be called the "Cambridge Asylum," and to be established, if possible, at Kew, or in the neighbourhood. It was thought that such a plan would engage the sympathies of a vast number who had not yet contributed to the funds. To it, therefore, the committee had unanimously assented. Having strongly urged the necessity for such a charity, and the probability of its being one of which the lamented Duke would, could he have expressed an opinion, have peculiarly approved, the chairman concluded by stating his very deep regret that some of the influential gentlemen on the committee had thought proper to endeavour to prevent people from subscribing to the object they had in view. Mr. Twining moved the first resolution, which was seconded by Colonel Rowland, and was to the effect that the proposed monument should be a charitable institution, and not a statue. This was carried. Mr. Chandler then moved, and Colonel Rowland seconded, the above-mentioned proposition recommended by the committee. Admiral Sir George Seymour proposed, and Mr. Halswell seconded, an amendment, suggesting the extension of the benefit of the asylum to marines. Mr. John Mackenzie next moved, as an additional amendment, "That the proposed institution should be a 'Cambridge Samaritan Society,' for preventing destitution and mendicity in the metropolis, by means of an adequate number of institutions, each comprising a gratuitous soup-kitchen, an asylum for the boarding the houseless, a free registry for servants and tradesmen, and a loan inventory, &c. for the poor." This proposition was seconded by Mr. Witt, and supported by some gentlemen in the meeting, and by a variety of others who, by means of letters or proxies, testified their approval of it. The number of parties indeed, was sufficient to have successfully carried the motion. It was objected, however, by Colonel Rowland, &c., that the parties giving proxies, though approving generally of Mr. Mackenzie's scheme, were ignorant of the proposed, which, had they known them, might have enjoyed still more of their favour. A very long and warm discussion had thought proper to endeavour to prevent people from subscribing to the object they had in view. Mr. Twining moved the first resolution, which was seconded by Colonel Rowland, and was to the effect that the proposed monument should be a charitable institution, and not a statue. This was carried. Mr. Chandler then moved, and Colonel Rowland seconded, the above-mentioned proposition recommended by the committee. Admiral Sir George Seymour proposed, and Mr. Halswell seconded, an amendment, suggesting the extension of the benefit of the asylum to marines. Mr. John Mackenzie next moved, as an additional amendment, "That the proposed



THE GREAT EXHIBITION BUILDING IN HYDE-PARK.—PORTION OF THE SOUTH FRONT.

THE GREAT EXHIBITION BUILDING.—DETAILS OF CONSTRUCTION.

(*Continued from page 428.*)

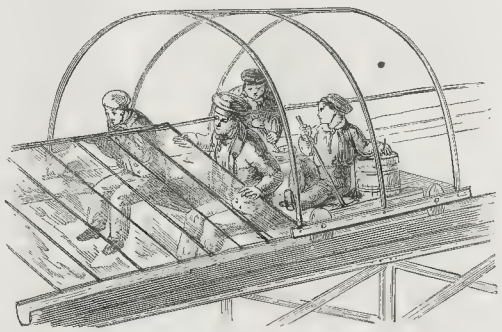
THE SOUTH FRONT.

The South Front of the "Industrial Palace," towards the Kensington-road, a *View of part of which* we here present to our readers, when completed, will present upon the whole rather a pleasing elevation, although unbroken throughout by any material projection, either in *plan* or *section*. The whole surface, however, being subdivided into panels, and surmounted by open fanlights, and crowned with an ornamental frieze, relieves the eye of all monotonous appearance.

The intended "grassy" slope, inclining from the level of the floor towards the carriage drive, will add apparent height to the south elevation.

The principal entrance, nearly opposite to the "Prince of Wales's Gate," will open at once into the large and beautiful transept, which, on account of the situation of the stately trees, which it is intended to protect, is not placed centrally between the east and the west end of the building, being *forty-eight feet* nearer to the *western* than to the *eastern elevation*. In the whole length of the South Front there are altogether seventy-eight cast-iron columns, placed, as in the interior of the building, at intervals of *twenty-four feet* from centre to centre. Each of these columns stands on an extended base of the same material, three feet in length, and *one foot six inches* in width, but tapering in plan towards either extremity, and the whole being strengthened by two vertical flanges. The bases all rest on concrete foundations, as mentioned in a former description, the thickness of such artificial support depending on the depth at which the gravel is found.

From the level of the floor to the line of the top of the columns, the general height is 22 feet 2 inches; whereas, from the level of the floor to the surface of the ground beneath, the vertical dimensions vary with the inclination of the ground, which has a general fall of one in 280 feet from west to east. Between every external iron column there are two intermediate framed deal semi-columns, corresponding externally with the form of those of iron, but internally being faced up with $\frac{3}{4}$-*inch* deal. At the level of the floor, a fir sill 9 inches in width by 3 inches in thickness, *weathered* externally, to throw off the rain, runs longitudinally all round the building, into which are framed the intermediate wooden semi-columns. It is proper to observe that these intermediate columns, having no weight to carry, are more for ornament than use. The supports of the intermediate semi-columns consist of deal struts 13 *inches*, in width by 3 *inches* in thickness, the whole being properly wedged up from the ground.



GLAZING WAGGON.

At a height of *four feet three inches* from the top of the sill is another piece of timber, which may, perhaps, be termed a head-plate to the lower tier of ventilators: this plate is *nine inches* in width and *four inches* in thickness, and weathered externally, as the sill. When the glass building was first talked of, it was intended that the whole of the exterior should be filled in with glass between the columns; but, on a little consideration, the Commissioners found out, that, besides *counter space*, they would also require *wall space* for the exhibition of a great variety of articles which can only be seen to advantage in an upright position, as draperies, cloths, carpets, maps, charts, paper-hangings, &c.; and it is now discovered that this wall space will be made available for many articles intended for the floor or counters, as the space applied for for the latter is more than double that which has been provided. Instead of glass, therefore, the ground-floor will be entirely enclosed with matched and beaded vertical deal boarding, ploughed and tongued, to keep it air and water tight. The lower ends of the boarding rest on the *top plate* of the lower tier of ventilators, being secured to a horizontal splayed fillet of deal, which extends throughout between the columns, and with the inside of which it is flush.

At top, the boarding is properly secured to a head-plate, and intermediately by three lines of bevelled ledges, running horizontally between the columns; these ledges are $6\frac{3}{4}$ *inches* in width; the whole being completely united by screw-bolts, with iron plates in front of the ledges.

GLAZING WAGGON.

But few words are required, in addition to the *view of the glazing waggon*, to make our readers acquainted with the simplicity of this contrivance. Taking advantage of the continuous lines of longitudinal gutters, covered waggons have been constructed for the use of the glaziers in bad weather, each mounted on four wooden wheels, which run on the bottom of the gutters as the wheels of the old coal-waggons in the North of England run on the wooden or iron trams before the introduction of the edge-rail; on either side of the platform of the waggon is a box for the glass—being *eight* feet wide, there is sufficient space on the platform for two or three men to work at the same time. In the View, the tarpaulin or canvas covering is not shown.

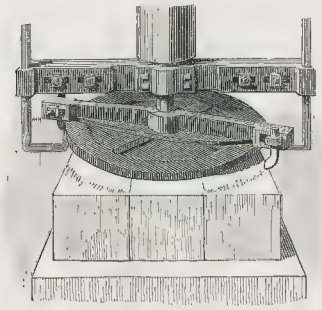
THE SASH-BAR FINISHING MACHINE.

MACHINERY FOR FINISHING SASH-BARS, RIDGE-PIECES, AND GUTTERS.

We have already (at page 401) described the machinery by which the sash-bars, skylight-bars, and ridge-pieces for the skylights are cut out of *nine-inch* planks, by machinery, at the Phœnix Saw-Mills, near the Regent's Park. We now proceed to show the further progress of a sash-bar to its completion, which is effected at the works of the Great Exhibition, a representation of which is given on the present page. In order, however, to present our readers with a clear view of the interesting machinery employed for the purpose, we must first mention the power employed to give motion to such machinery. As in every other part of the works the utmost skill is displayed with regard to economising power, so in the disposition of the machinery in connexion with the steam-power employed, and which we are about to describe, considerable ingenuity is visible throughout. The engine, calculated at *eight horse*-power (equal to the collective force of *forty-four men*), is on the locomotive principle, working with steam at a pressure of 60 lb. to the square inch. The boiler (placed *east* and *west*) is furnished with twenty-seven 2-inch copper tubes, placed horizontally, coke being the fuel chiefly used. Two horizontal cylinders of six inches diameter, with pistons moving twelve inches forward and backward, and which is called *the stroke*, and having proper cranks and connections, give motion to two vertical fly-wheels, each of four feet diameter, and placed one on either side of the chimney end of the boiler. From the fly-wheel on the *north* side of the engine a gutta-percha band of two inches in width passes round the driving-pulley of a circular saw of ten inches diameter, which projects sufficiently above the level of the bench, in a slot of which it is fixed in proper bearings, to cut out wooden fillets and other portions of wood-work, either from planks or scantling timber, as may, from time to time, be required. Three men are required for this particular service: the first is the carrier of the materials to and from the bench or table; the second places and adjusts them on the bench close to the saw, and also attends to the bands, &c.; and the third removes them from the table when cut. Another gutta-percha band, of the same size as that already mentioned, passes from the *twin* fly-wheel on the south side of the engine to the *first* of a *series of pulleys* which rotate on the principal shaft. This shaft is placed horizontally, and at right angles to the direction of the engine. A third gutta-percha band passes from the first of the series of pulleys which alter the direction of the power, to the driving-pulley of a circular saw of twenty inches diameter, forming part of a compound piece of machinery by which three distinct operations are performed; viz. cutting the ridge-pieces

THE GUTTER-CUTTING MACHINE.

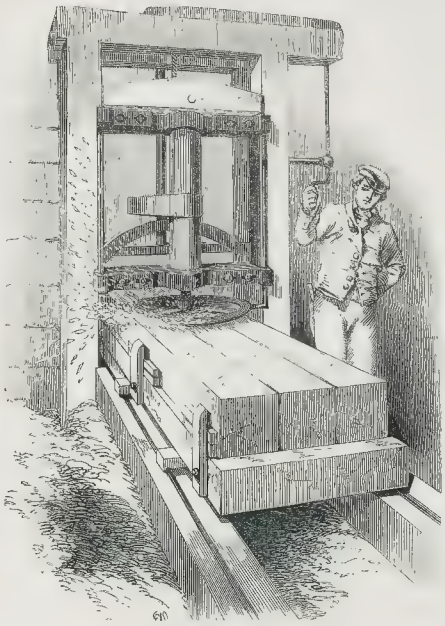
and gutters to their proper length, cutting out semicircular pieces at ends of gutters to receive the rain-water heads, and drilling holes in the ends of gutter-pieces to receive the dowells. The first of these operations is performed by the circular saw, which is moveable in a vertical plane by means of a sliding plate, properly balanced by a counter weight attached to a chain passing over an iron pulley, which is fixed at the top of a strong frame of wood. By means of a hand lever the saw is either brought down to a proper position for cutting off the ends of the ridge-pieces or gutters, or for performing the second operation already alluded to, viz. cutting out semicircular pieces from the ends of the gutters. This second operation is effected by means of two short blades or cutters, attached to the front face of the circular saw, and projecting one inch and a half from



CIRCULAR PLANE.—SHOWING CUTTER.

its face. In order that the gutters and ridge-pieces may be cut off to their proper length, they are placed on the top of a long trussed supporting frame, by means of a jointed hold-fast of iron at that end of the supporting frame opposite to the saw, the ridge-piece or gutter to be cut is firmly secured; and by a hinged gauge-plate, also of iron, the timbers are cut off to their exact length; and as soon as one end has been cut off the other is easily brought round to undergo a similar operation, as the timber rests, mid-way, on a horizontal swivel plate, having two upright cheeks, between which it is moved round.

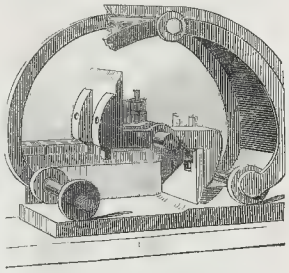
When the *third* operation, viz. that of drilling, is to be performed, the saw is moved upwards, so that the ends of the ridge-pieces or gutters to be perforated may be brought close to



CIRCULAR PLANING MACHINE.

the drills, which are placed one above the other at the proper interval: a man at the *other* end of the timber pushes it forward against the two drills, which rotate at the same time. Motion is communicated to the drills by means of a band from the principal pulley shaft, which passes round the driving pulley of the upper drill. The lower drill is made to revolve by means of a pinion on the stock of the upper drill: thus the two double holes are made simultaneously at one end of the ridge or gutter pieces; and immediately afterwards, those at the other end are formed.

We now come to the process of finishing off the skylight bars, which are delivered at the works from the



THE ADZE.

Phœnix Saw-Mills with each end cut off square. The first thing on their arrival at the works is to cause them to undergo a thorough examination as to their freedom from sap, shakes, and other defects.

On a saw-table, conveniently placed with respect to the communication of power, to give motion to the saws, are placed together *thirty* common sash-bars, which rest on a horizontal moveable traversing frame, to which they are properly secured by an adjustable bar. This frame is moved forward towards the saws by a man standing at the *west* end of the table, the saws being so placed that both ends of the *series* of *bars* may be cut off simultaneously. Two leathern straps passing from pulleys on the main shaft already mentioned, and passing round the driving-pulleys of the saws, give motion thereto, that on the *north* side of the table, to an inclined circular saw of fourteen inches diameter, by

ADZING AND PLANING MACHINERY.

which the *bevelled* ends of the bars are formed; and that on the *south* side, to two vertical circular saws, the exterior being of fourteen inches diameter, and cutting the bars off to their proper length; and the interior one, of eleven inches diameter, making a cut half across the bar, but still leaving a *longitudinal cut* to be made in order to form the shoulder.

The bars are next carried to a bench, removed a little to the east of the saw-table, when, by a simple but ingenious contrivance (the invention of Mr. Wilson, one of the superintendents of the works), the shoulder, with the requisite bevel of that end of the bar which abuts against the gutter, is performed at one operation. This little machine, which is constructed of iron, consists of a rounded handle, which the workman holds in his left hand. The handle is two inches and three-quarters in length, from which project two jaws, nine-sixteenths of an inch apart, made to fit into the ends of the grooves intended to receive the glass; between these jaws is a knife, which, by the pressure of the workman's hand, cuts off the square piece, the cross-cut for which is previously made by the smaller of the vertical saws above described. On the right-hand side of this machine is a second but moveable knife, which, including its handle, is five inches and a half in length. This knife, or blade, moves on a small pivot, fixed at the top end of the machine, and is placed at the proper angle for removing the bevelled piece to complete the gutter end of the bar. Two men attend to this operation: one to place the bars on the bench, ready for the operation, and to remove them when finished; and the other, to attend to the operation itself.

We now come to the last stage in the progress of a skylight bar previously to its being painted.

On a horizontal bench, placed at right angles to the main pulley-shaft—already frequently mentioned in this description—are placed, in front thereof, a series of *four-inch* driving pulleys, with as many horizontal pulleys turning in proper brass bearings: these pulleys are made to rotate by means of a leather strap, or band, from a pulley on the main pulley-shaft, as above. The use of these drills is to make the nail-holes at either end of the bars. Four boys and one man were engaged at this branch of the operations when we examined their work: the man superintends the whole, and keeps the machinery in order; while the boys place the bars in their proper position for the additional drills on this and another bench, if required by a great press of work. Opposite to each of the *operators* is a wooden traversing plate, working in the direction of its corresponding drill: the lower end of the bar, resting on this traversing plate, is pushed forward with it against the drill, until the requisite perforation is completely effected. While one end of the bar is being bored, the other end rests in an inclined position against a wooden rail placed longitudinally above the pulleys, having as many sinkings thereon as there are drills. The wooden rail, to which it is secured by a fillet, projects from an inclined frame of the same material firmly secured to the bench. At the outer end of one of the driving-pulleys is a *cutting cup*, also the invention of Mr. Wilson, by which the ends of the wooden dowels, three inches in length, are rounded off, merely by being held therein by a workman or boy during the revolutions of the pulley.

MACHINERY FOR CUTTING OUT GUTTERS, &c.

It would be exceedingly curious and highly interesting, to ascertain precisely the aggregate of power employed in the preparation for, and construction of, the Great Industrial Museum in Hyde Park. This could be accomplished by obtaining returns of the numbers of men, horses, and steam-engines, from the various foundries, mills, and workshops engaged in the execution of any of the works, in addition to those employed in Hyde Park. One of the busy workshops alluded to above, and which we have already witnessed, is situate near to the Thames, at Chelsea, and is known as the Chelsea Wharf Saw Mills, which have been taken by Messrs. Fox, Henderson, and Co., chiefly for the construction of what have been called the "Paxton Gutters." A section of a similar gutter is shown at page 386.

We desire in these descriptions to give our readers a clear insight into every piece of machinery, and every ingenious contrivance worthy of notice, in order that they may be enabled readily to estimate the very great amount of skill which is brought to bear in furtherance of the great international design.

The power employed at the Chelsea Saw Mills to give motion to the various machines chiefly used in preparing the timber for, and in cutting out the three-way or Paxton gutters, is that of an oscillating high-pressure engine, estimated to do the work of 30 men; in addition to which, there are 40 men engaged at this establishment, 20 of them working by day, and the rest by night, so that the machinery is kept almost constantly in motion.

The engine and boiler are placed in the basement. The cylinder is 20 inches diameter; the length of stroke being 30 inches, and the pressure of steam 45 [illegible]. The conversion of reciprocating into circular motion is effected by means of [illegible] which, by the aid of [illegible], cause the fly wheel of 12 feet diameter, and a pinion of 20 inches diameter. From the fly-wheel, motion is communicated to the main pulley-shaft on the first-floor by means of a strong leather strap, of 7 inches in width, which passes through the floor, and over a friction-roller, to the driving-pulley of the main shaft from which power is given off to a circular planing machine, and also to the gutter machines on the first-floor; what few circular saws, and drills, are required, and a second planing and edging machine on the first-floor, are set in motion from the main shaft on a second shaft in the basement. We shall endeavour, in the first place, to trace the working through this second shaft, which is caused to revolve by means of a pinion of 35 inches diameter, worked into by a pinion of 3 inches diameter, at the end of the engine crank shaft already mentioned; thus, the speed of the second shaft is nearly doubled. On this second shaft are two driving pulleys, each of 14 inches diameter, from which two bands pass in the direction of the length of the building, and at right angles to the two shafts in the basement, to two pulleys, each of 24 inches diameter, which, in connexion with cranks, re-convert the circular into reciprocating motion for the purpose of moving the two vertical saws, which saws are used for cutting deals into planks [illegible] inches and other parts of the great building.

By the two vertical saws, 40 cuts, each of 21 feet in length, and 11 inches in depth, are effected in 10 hours, which gives a total length of 1680 feet in the 20 working hours.

At the end of the *second* shaft, in the basement, is a third pulley of 54 inches diameter, by which motion is communicated to the "planing and adzing machine," on the first-floor, by means of a band passing round a 48-inch pulley on the upper shaft, from a 24-inch pulley, which, a little removed from the 48-inch pulley, a strap passes through two to a ground floor, in order to turn, by means of a 12-inch pulley, a large circular saw, placed vertically in front of a [illegible] deal bench. By this saw the half-builths of timber (13½ inches by 4½ inches), as delivered at the mills, are cut nearly to the size of the timbers intended to be formed into lengths of solid "three-way gutters." Although this is the principal work executed at the saw-bench, other saws of various diameters are substituted for the large circular saw already mentioned, when required for various other works.

PLANING AND ADZING MACHINERY.

A View of the "Planing and Adzing Machinery" is represented at page 433. We have also inserted a representation of the solid stock with the two adzes. The machinery requisite for this twofold operation is fixed on a long deal bench, breast-high from the floor, supported on square deal legs and cross-bearers, the whole standing about 24 feet long. At the back of the bench is a horizontal rail of deal, adjustable by vertical iron guides or fences, by which the boards, planks, or battens are kept in their proper position on the bench, while passing forward to undergo the process of planing and *thicknessing*. One of the attendants, who places the planks on the bench, also presses his hand against the outer edge, so as to keep the other edge close to the fence. One plank follows close to another, until a given number are completed. The plank is pulled forward towards the planes by means of an endless chain composed of 6-inch open links. This chain passes, at one end of the bench, over a 9-inch vertical pulley running in proper bearings placed in an upright frame of wood: and, at the other end, the links fit into eight tappets, which project from a solid circular wheel of the same diameter as that of the pulley; by means of *dogs*, or claws, the planks are connected with the chain. When the first piece is to be planed reaches the roller-carriage, which is above the planes, it passes under six pressure-rollers, each of 3½ inches diameter, the whole being adjusted by a lever and weight. Beneath the roller-carriage are set the bench irons, each at an angle of 45 degrees, by which the under surface of the plank or batten is thoroughly planed. The plank is then carried forward to [illegible] (if required) to its proper width, by means of two vertical saws, one on either side of the bench, and adjusted to the required gauge. A little beyond a solid circular wheel of the same diameter as that of the pulley; by means of *dogs*, or claws, the planks are connected with the chain. When the first piece is to be planed reaches the roller-carriage, which is above the planes, it passes under six pressure-rollers, each of 3½ inches diameter, the whole being adjusted by a lever and weight. Beneath the roller-carriage are set the bench irons, each at an angle of 45 degrees, by which the under surface of the plank or batten is thoroughly planed. The plank is then carried forward to [illegible] (if required) to its proper width, by means of two vertical saws, one on either side of the bench, and adjusted to the required gauge. A little beyond the saws is a solid two-armed stout iron stock (as seen in the separate View), to the end of each arm is attached an adze, 10½ inches long, and 4½ inches wide. These two adzes rotate so as to remove the uneven parts of the upper surface of the plank or batten; this plank is kept down to this part of the bench by two pressure-rollers.

We have now only to show how this twofold machine is set in motion. From the 48-inch pulley at the end of the shaft on the first floor, a band passes upwards to a pulley of 24 inches diameter, running in proper bearings near to the roof: on the shaft of this pulley is a wooden drum of 34 inches diameter and 12 inches long. From this drum a band runs in an inclined direction downwards to a 9½-inch pulley, which gives a circular motion to the saws. From a 9-inch pulley on the axle of the drum, motion is communicated to the adzes—first by a band to a pulley of 24 inches diameter on the thence, by another, working into a spur wheel of 24 [illegible] [illegible] d on, which [illegible] solid stock of the adzes [illegible] [illegible] and [illegible] attends to [illegible] part of the machinery.

CIRCULAR PLANING MACHINE.

Here is another instance of the contractors availing themselves of every useful [illegible] to facilitate their operations, notwithstanding the novelty of the ingenious invention. In very many instances, novelty is made the excuse for not using some of the most important and valuable inventions of the present day. We were informed that this, as represented at page 433, is only the second machine of the kind which has been put up. It is patented by W. Furness, of Liverpool. When in action, it requires the attendance of two men and one boy. The planes, or cutters (a separate View of which is given at page 433), rotate with considerable velocity; and place at one time one side of three "quarter banks;" the cutters are attached to a cross-arm between the uprights [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] The height of this frame above the [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] inches; the arm being 24 inches in length. Each cutter is in the 24 inches from the top to the edge of its blade, and ⅛ of an inch wide. On the spindle is a [illegible] pulley 23 inches long and 6 inches in diameter, placed centrally between the upright frames of the frame, is carried the cross-arm to which the cutters are attached. At the bottom of the vertical 6-inch pulley, and in the same spindle, is a horizontal circular solid disc plate, 22 inches in diameter, by which the timbers to be planed are kept down close to the traversing frame, while subjected to the operation of planing. The vertical pulley and disc are adjusted by means of a screw working vertically into a fixed nut: this screw is moved through the medium of a 12-inch horizontal pulley, placed on the top of its spindle. From the 12-inch pulley a band passes horizontally to a second pulley of 6 inches diameter, which is fixed above the level of the cross-head of the frame of the machine. Motion is given to the whole by a handle at the bottom of a vertical spindle, which works in proper bearings fixed to one of the uprights of the frame. The vertical 6-inch pulley which rotates with the disc is moved by a band passing round a 17-inch pulley on the spindle which has a 12-inch pulley; this latter being in communication with a 32-inch pulley, fixed as the end of the principal shaft on the first-floor.

The timbers to be planed by the machine are placed on the top of a traversing stage which is moved in either direction by a rack and pinion, the rack being fixed under the whole length of the stage; iron slides, 2 feet apart, are placed on the two longitudinal bearers of the supporting frame, on which the traversing stage moves in either direction. When the traversing stage is to be set in motion, an apparatus, consisting of two levers, a connecting-rod, and a clutch, is brought into play; by the movement of the first lever either to the right hand or to the left, motion is given to the pinion by which it is required to be moved. When *out of gear*, the first lever remains in a vertical position.

GUTTER-CUTTING MACHINE.

When the quarter-banks have been brought to an even surface on all sides by means of the circular planing machine already described, and a View of which is represented at page 433, as also a View of the machinery about to be described—they are conveyed towards the *feed* end of the gutter-cutting machine, which is a duplicate machine in readiness, in case of accidents to the first, or in case the work could not be prosecuted sufficiently fast. Hitherto, however, the one machine has been found sufficient. It must be borne in mind, that, besides the rainwater gutter in the top of the timber, there are two inclined gutters cut in the sides of the gutter timber, the purpose of wh ch, as already stated at page 386, is for receiving and carrying off the condensed water from the inside of the glass in

SCENE OF THE LATE BOILER EXPLOSION, LILY-LANE MILL, HALIFAX.

in the afternoon before the boiler burst, but that the master would have them go on. This threat shows how common was the belief that an accident would happen to the boiler; and when the shock was heard by Ann Swift, she exclaimed, "The boiler is going to burst—let us run away." They did run away, and fortunately were saved. Jonas Swift, her brother, was also saved by her timely warning; but Job Swift, another brother, was killed. For a long time it was supposed that Job was alive among the ruins; but his corpse was subsequently discovered at the Blucher Inn, having been conveyed thither by some men who extricated it from the ruins.

Almost immediately after the accident an immense crowd was upon the spot, and digging was commenced among the ruins. The fire-brigade, with one of the engines, were also on the spot, and rendered valuable aid, both in extricating the sufferers and in keeping down the burning of the fallen materials. The sides of the railway, and every available spot, were crowded with spectators, who frequently cheered on the men, who gallantly lent their services in extricating the dead and wounded, who were at once conveyed with every possible care to the Infirmary.

At the time of the explosion, there were from 33 to 35 persons in the rooms above the boiler-house. The principal part of the bodies were discovered by five o'clock, at which hour all the streets in the immediate proximity of the mill were densely crowded with spectators.

As evening approached, the exertions both of soldiers and civilians were redoubled to clear away the *débris* if possible; but, owing to the vast mass of iron and wood-work that had to be removed, this was found to be impossible. At night the search was continued by the light of naphtha lamps and flambeaux. At about half past five o'clock, a human voice was heard beneath the rubbish; and, after two hours and a half of agonizing suspense, the sufferer, a young girl, was got out alive. Soon after, the mill took fire, but the flames were speedily extinguished. The search was continued throughout the night and next morning, and the total number of persons whose lives have been sacrificed by this terrible accident amounts to ten.

The Engraving, from a Sketch by an Artist resident at Halifax shows the ruins as they appeared at eight o'clock on the Friday evening.

WRECK OF THE "EDMUND."

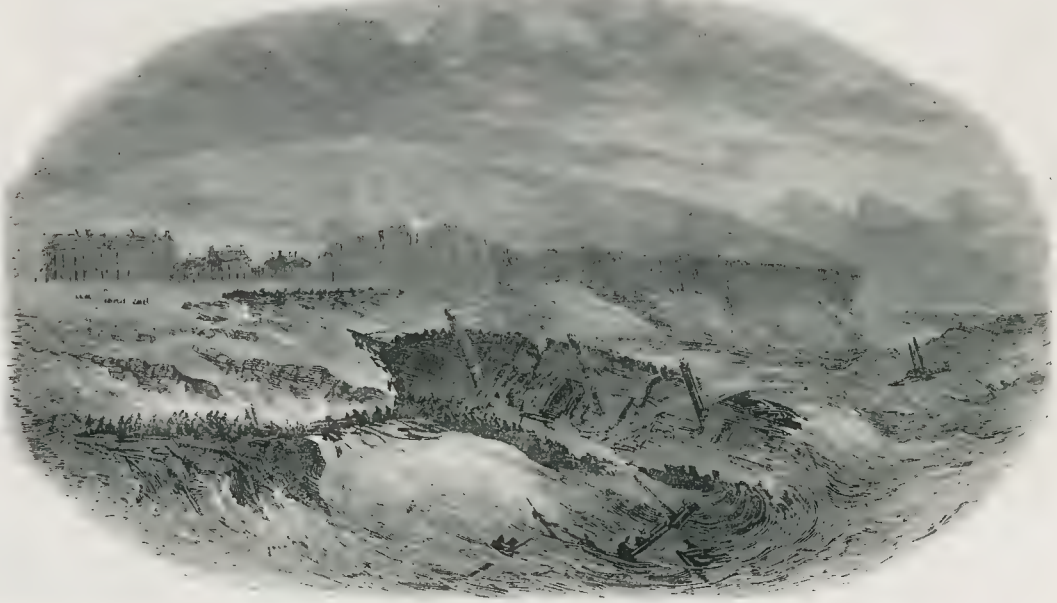
THE following narrative of the frightful wreck of the barque *Edmund*," at Kilkee, with the loss of ninety-six souls, is by an eye-witness:—"But four days ago," he says, writing on the 22nd ult., "the noble barque sat proudly on the smooth waters of the Shannon, with 207 souls bound for the land of stars and freedom; to-day she has not a plank together to tell her name or destiny. She is torn, mangled, shivered asunder in splintered shreds—the completest wreck that writer ever described, or eye ever witnessed. She left the roadstead of Carrigaholt on the evening of Sunday, the 18th, and made considerable way throughout that night and the following day. The wind blowing a hard gale W.N.W., tossed her wildly, until every thread of canvass was rent to atoms, and two of her masts carried away; she became perfectly unmanageable, and drifted along at the mercy of the waves. By eleven o'clock on Tuesday night she struck on the Duggerna Rocks, off the Bay of Kilkee, where she hung for some time, until, washed off by a furious sea, she came to cast anchor immediately beneath Sikes' Lodge, at the entrance of the Bay. Holding to for some time, the waves rolling over her hull and spars, she dashed in a perfect broadside against the rock, breaking her back right through the centre, and plunging her only remaining mast clear on the shore. By the aid of this mast, the hands and several of the passengers were enabled to crawl to the rock, where they clung with the grasp of the drowning until rescued from their perilous position by some tender-hearted natives. The stern, half torn from the prow, bounded off to sea, carrying with it pieces of spars, cords, and sheathing, together with several of the wretched passengers, whose piercing cries used sometimes to be heard above the roar of the waves and howling storm; while the prow half, held fast to the anchor, came with the crushing power of thunder against the pointed rock, until it was ground to fragments, which the waves and the storm hurled into the air.

"The brave captain clung to the wreck while there was a stave to stand upon or a life to be saved; and, when the last plank was shivered from his feet, he took an aged woman, who still clung to the plank, and, flinging her on his back, plunged into the sea, and succeeded in reaching shore. All glory to the brave fellow! He is English by birth, and Wilson by name.

"The first man on the shore and the last to leave it was Richard Russell, Esq., of Limerick. With the aid of two other men, M'Carthy, a coast-guard, and Curtin, a Kilkee shoemaker, he stood upon the rock throughout that terrible night, drenched by the sea, and almost exhausted from his superhuman labours, bearing in his arms the half-dead creatures who had crawled to the rocks, and rescuing many of them from certain death.

"When the roll was called on Wednesday, at three o'clock, the individuals missing were 100, since reduced to 96.

"The aspect of the entire coast is appalling; from Jonas Studdert's Gate to Sikes' Lodge are to be seen heaps of scattered fragments, planks, boards, and bolts, staves, shrouds and canvass, boxes, trunks, and scraps of wearing-apparel, twisted, bent, and literally ground to pieces."



WRECK OF THE BARQUE "EDMUND," ON THE DUGGERNA ROCKS, BAY OF KILKEE COUNTY OF CLARE.

FINE ARTS.

THE "SLEEPING BEAUTY IN THE WOOD."—BY NEUREUTHER

What stores of innocent enjoyment would be lost to the world, if some barbarous imitator of that worst of all savages who ever lived the Caliph Omar—could destroy all our books of fiction—all our fairy tales, and records of marvellous adventures! What a blank there would be, if he could abolish all trace and memory of Jack the Giant-Killer—of Jack and the Bean-Stalk—of the Arabian Nights—of Gil Blas—of Don Quixote—of Cinderella—of the Fair One with the Golden Locks—of Puss in Boots—of the Sleeping Beauty in the Wood—and—horrible thought!—of Chaucer, Boccaccio, Spenser, Shakspeare, Milton, and Walter Scott! But, thanks to the progress of art and science, and the invention of printing, we are safe from all peril of such an infliction. Even if the French should fulfil the somewhat alarming predictions with [illegible] the old women of England [illegible] London fine morning, to sack and d[illegible] in our ho[illegible] and, as Sir Francis hints, to kiss o[illegible] and then cut the throats of all the Londoners as an in[illegible] venge for Waterloo we might defy their utmost vengeance to bring

upon the survivors and upon posterity such a calamity as the cruel Caliph inflicted upon the city of Alexandria and upon the modern world. They might destroy a larger library than the Alexandrian by burning down the British Museum and its treasures, but they could not destroy the works of our story tellers and poets, our fairy tales and romances, our songs and ballads. Nothing less than the submersion of all Europe and America, ay and of all India and Australia, could now rob the world of its literature.

Science is falsely asserted to have killed poetry, and to have snuffed the fairy tale out of existence. It is not so; the delightful fictions that have come down to us from remote ages, are ours for ever. Even the little boys that know all about acids and alkalis, oxygen and hydrogen, geology and astronomy, and who are as familiar with the principles of the steam-engine as the boys of a past age were with the composition of a plum-cake, have gone through a course of fairy reading, either openly or on the sly; and miss in her teens has wept or smiled for the sorrows or joys of Little Red Riding Hood, of Cinderella, and of the Sleeping Beauty, although she may have her head full of pianoforte and singing lessons, and of French, Italian, and German grammar.

"Useful" knowledge may include other things than arithmetic for boys and cookery for girls, valuable as these are to them; and the education of the heart and the fancy, the morals and the life, is not so wholly neglected for the cultivation of the mere intellect as the ultra pedagogues and pedants would have us believe. The fairies, and their malevolent or benevolent doings upon the human race, have an especial charm even in an age of Electric Telegraphs. Tales of ogres, monsters, and giants, in which terror and wonder are the predominant sensations to be excited, are more easily understood by the very young; but the fairy tale appeals to a higher development of mind. It does not please the infant, but it is irresistibly attractive to the child and the youth, and never entirely loses its charm even in manhood and womanhood. The origin of most of our popular fairy tales has long excited the research and curiosity of the learned. It is sometimes to be found in the religious allegories of early ages; and of some, neither the spiritual meaning which exists, nor the corporeal clothing in which they are enveloped, is traceable to any known source. All nations possess them; but the garden whence these beautiful, but not evanescent flowers of fancy were first transplanted, is, undoubtedly, the East. In ages before the time of Homer sang, the fertile imagination of the Oriental poets and romancists constructed these tales upon traditions, or remnants of traditions, handed down from the early worship of the aboriginal inhabitants, or from the Pantheism which in some of its multifarious forms was the religion of men in ages anterior to the sculptures of Nimroud, or to the composition of the Sanscrit Vedas. Appealing to the faculty of Wonder, which is akin to that of Veneration, and tends so largely to spiritualize the character, these romances have exercised no small influence upon the western nations of Europe, and have imparted to it much of that appreciation of the poetical sentiment which adds such charm to daily life, and so many graces to the social and domestic circle. Among these tales, the Sleeping Beauty in the Wood, or "La Belle au Bois dormant," has long been an eminent favourite. Though in its present shape it appears to have come to us from the French, and to be due to that fairy of the court of Louis Quatorze to whom we are indebted for the "Fair One with the Golden Locks" and other similar legends, it probably took its rise in the prolific East. To be able to go to sleep for a century, and to awaken to see how the world had got on in the interval, is an old fancy of the Oriental poets and sages. The idea is a beautiful one for the purposes of fiction; and is equally attractive when wrought into a child's story, or into a more fanciful and elaborate shape for the gratification of more critical and mature minds. The new Poet Laureate, in one of his early poems, has versified the legend, and superadded to its ancient simplicity many graces in the mode of telling it. The following passage depicts in words the scene which has been so well rendered by the kindred arts of the painter and the engraver. We shall not criticise it further than to say, that such a description should not have been marred by a line like that which concludes the third stanza:—

Soft lustre bathes the range of urns
On every slanting terrace lawn.
The fountain to his place returns
Deep in the garden lake withdrawn.
Here droops the banner on the tower,
On the hall beam'n the fresh breeze.
The peacock in his laurel bower,
The parrot in his gilded wires.

Here sits the butler, with a flask
Between his knees, half-drain'd; and there
The wrinkled steward at his task.
The maid of honour, blooming fair—

The page has caught her hand in his;
Her lips are sever'd as to speak;
His own are pouted for a kiss;
The blush is fix'd upon her cheek.

Till all the hundred summers pass,
The beams that through the oriel shine,
Make prisms in every carven glass,
And beaker, brimm'd with noble wine.
Each Baron at the banquet sleeps,
Grave faces gather in a ring.
His state the King reposed keeps—
He must have been a jolly King!

The Prince who is destined to break the charm at length arrives; and the poet very happily describes his coming, and the feelings that arose in his breast at the strange spectacle that presented itself.

The following beautiful and animated passage describes the scene that entered immediately after the lips of the Prince had met those of the Sleeping Beauty, as depicted in the Engraving:—

A touch, a kiss! the charm was snapt,
There rose a noise of striking clocks,
And feet that ran, and doors that clapt,
And barking dogs, and crowing cocks,
A fuller light illumined all;
A breeze through all the garden swept;
A sudden bubbub shook the hall,
And sixty feet the fountain leapt.

The hedge broke in, the banner blew,
The butler drank, the steward scrawl'd,
The fire shot up, the martin flew,
The parrot scream'd, the peacock squall'd,

The maid and page renewed their strife,
The palace bang'd, and buzz'd, and crack'd,
And all the long-pent stream of life
Dash'd downward in a cataract.

And last of all the King awoke,
And in his chair himself uprear'd,
And yawn'd, and rubb'd his face, and spoke,
"By holy rood, a Royal beard!
How say you, we have slept, my Lords?
My beard has grown into my lap!"
The Barons swore, with promptest words,
'Twas but an after-dinner's nap.

The awakened Beauty at last takes her departure with her happy lover:—

"O eyes long laid in happy sleep!"
"O happy sleep, that lightly fled!"
"O happy kiss, that woke thy sleep!"
"O love, thy kiss would wake the dead!"
And o'er them many a flowing range
Of vapour buoy'd the crescent-bark,
And, rapt thro' many a rosy change,
The twilight died into the dark.

"A hundred summers! Can it be?
And whither goest thou, tell me where?"
"Oh seek my father's court with me,
For there are greater wonders there"
And o'er the hills, and far away
Beyond their utmost purple rim,
Beyond the night, across the day,
Thro' all the world she follow'd him.

It is, perhaps, too much to ask that every fairy legend should have its obvious and palpable moral; but in this there is an inner meaning, to be discovered by those who will earnestly and faithfully seek it. Those who can see none in so fanciful a story may be forgiven if they are children, and have read for amusement only; but, if they are older than children, and see no meanings in it that are worthy of extraction, they have read it in vain.

CATTLE SHOW.—Very extensive arrangements have been made at the Baker-street Bazaar for the show of cattle and agricultura. implements, which will open next week. Further additions to these premises, two very extensive apartments have been added, under the superintendence of Mr. Boulnois, the architect, who, at these buildings are designed to be both permanent and secure, very judiciously, we think, has adopted the now well-known Scrpropof system of Messrs. Fox and Barrett, of London, which would appear to be not only more economical in the first cost of the erection of edifices, but to the important guarantee it affords against fire superadds an annual saving by the reduction of insurance By these arrangements ample space has been secured for the purpose of the exhibition, and crowding and want of efficient ventilation, it is expected, have been remedied. It is obvious, therefore, that ladies, and those of a delicate frame, who cannot stand the jostling of large bodies of persons, will find that their comfort has thus been cared for, while the expense consequent upon such change must be fully returned by the opportunity which the increased area will provide for remunerative attraction during the ensuing year of '51. Next week we shall illustrate the most attractive points of "the Show."

A returned emigrant from the California trail on the [illegible] St. Louis [illegible] and [illegible] this year. [illegible] 1,750 dead oxen. Let the hope and lust of gold still control [illegible] tempt now thousands upon thousands to brave all the fearful privation, suffering, and death of an overland route to California.

PAPAL AGGRESSION.

MEETINGS.

A SOMERSET COUNTY MEETING was held on Thursday week, at Taunton. The requisition was signed by upwards of 600 persons, including the following:—The Earl of Cork, the Earl of Cavan, Earl Poulett, Lord Bridport, Lord Hinton, the Hon. R. Boyle, the Hon. A. Poulett, Sir W. C. Medlycott, Sir A. Hood, Sir P. F. P. Acland, Generals the Archdeacon Hussey, Messrs. E. A. Sanford, W. A. Sanford, G. W. Blathwayt, &c. The large Hall was completely crowded.—Edward Ayshford Sanford, Esq., moved the first resolution

That this meeting views with feelings of indignation the attack made by the Pope of Rome against the undoubted prerogative of her Majesty, by assuming to divide these kingdoms into dioceses

Mr. W. Miles seconded. He disclaimed any desire to interfere with the civil and religious rights of the Roman Catholics, and quoted the letter of Lord Beaumont, containing an avowal of the Queen's supremacy, to justify them in the course they were then taking. Mr. T. D. Acland defended the Tractarian party, admitting that some instances might be found in which zeal for the Church had been carried to excess. The concessions made to Roman Catholics during the last twenty years, he argued, rendered it impossible now to use repression by force, to prevent the present act of the Pope from being carried into effect. He announced that the author of the letter in the *Times*, which had so exposed the ignorance of Cardinal Wiseman in reference to the "slums" of Westminster, was Mr. William Page Wood. A good deal of discussion on squabbling took place about the tolerance of some, and the persecuting spirit of others—about the influence of the Tractarians, and the mischief they had done; but the resolution was unanimously adopted, as well as another, declaring—

That this meeting is utterly opposed to the corruptions of the Romish Church, whether promoted by her open emissaries, or by any party among ourselves

and an address to the Queen corresponding with the resolutions. The meeting terminated by hearty cheers for the Queen.

AT SWANSEA, where the inhabitants held a meeting on Thursday (last week), an opposition by the Dissenters was successful. Mr. H. H. Vivian having moved

That this meeting views with indignation the late insidious attempts of the Papal See to establish its spiritual dominion in this country, and considers it a daring infringement of her Majesty's prerogative and the rights and liberties of her Protestant subjects, &c.,

Mr. W. H. Michael moved, as an amendment—

That this meeting, in expressing its hearty and unwavering attachment to the Protestant religion, and its deep regret at the advances of the Roman Catholic Church in this country, wishes to record its attachment to the liberty of conscience, and religious equality secured under our present Constitution, and deprecates any attempt to repress the perfect and proper exercise of the spiritual power of the Roman Catholic Church, as injurious to liberty of conscience, and the progress of religious truth.

After many speeches on both sides, the amendment was carried by a large majority. Other resolutions intended to be moved by those who called the meeting were abandoned.

HEREFORD COUNTY MEETING.—On Friday week, in consequence of a requisition, numerously signed, a meeting took place at Derby, in the County Hall, which was crowded to excess. Amongst those present were the High Sheriff (Robert Arkwright, Esq.), in the chair; Lord Waterpark, Sir H. S. Wilmot, Bart.; Sir H. Wilmot, Bart.; Sir Thomas Fletcher, Bart.; Sir Matthew Blakiston, Bart.; Sir Francis Darwin, William Mundy, Esq., M.P.; Hon. G. H. Cavendish, M.P.; William Evans, Esq., M.P.; C. R. Colville, Esq., M.P.; George Arkwright, Esq., M.P.; E. S. Chandos Pole, Esq.; Godfrey Osborne, Esq.; Thomas Osborne, Esq., G. Meynell, Esq.; Charles Arkwright, Esq.; J. Meynell, Esq.; John Strutt, Esq.; Jedediah Strutt, Esq.; Drury Lowe, Esq.; A. Mundy, Esq.; G. Crampton, Esq.; F. Hurt, Esq.; J. Yarde Buller, Esq., &c. The Hon. G. H. Cavendish, M.P., proposed the address to the Queen, and apologised for the unavoidable absence of the Duke of Devonshire, detained in Ireland (and it been in his power to prevent it, he would have found him now ready to stand forward in defence of the principles for which his ancestors fought. Mr. Mundy, M.P., seconded the address, which, relying on her Majesty's constitutional authority, ardently desired that her Majesty might continue to reign in the hearts of her people, the defender, by God's grace, of our Protestant principles, against the machinations of foreign interference from without, or the subtle and deforming influence of Romanising principles from within. It was unanimously agreed to, and the meeting gave three hearty cheers for the Queen.

AT WOLVERHAMPTON, on Tuesday, there was a numerous meeting to address her most gracious sovereign on the present aggression of the Pope of Rome in the promotion of a Papal hierarchy for this country, and further to take such steps as the present crisis may require. Ladies were present. A considerable number of Catholics were present, and several of the clergy and gentry addressed and opposed by the Rev. Mr. O'Sullivan and the Rev. Mr. Longman, Catholic priests. The discussion took a theological turn, and referred chiefly to the merits of the two churches. There was some disturbance, but, on the whole, the Catholics were heard. Mr. O'Sullivan moved an amendment; but the original motion was carried, amidst much cheering, by a vast majority. The Rev. J. Dalton, the Rural Dean, and the Rev. Dr. Bryson were the principal speakers on the part of the Church. "God save the Queen!" was sung with enthusiasm, and closed the meeting.

THE COUNTY of DORSET held a meeting on Friday week. The county hall was crowded to excess. Mr. R. Ker Seymer moved the first resolution.

Roman Catholics, as such, he said, had no right to speak of religious liberty, for they granted it not. The aggression was insolent, but not insidious; he threw doubts on the assertion that the perverts to the creed of the members of the Cardinal had led to the aggression. The Rev. W. Casey, a Catholic priest, moved an amendment, expressing loyalty to the Queen, but declaring against interference with the consciences and discipline of any of her Majesty's subjects. Mr. Cooper, a Unitarian minister, seconded the amendment, which found only two supporters; and the resolution, with a corresponding address to the Queen, was carried.

THE INCORPORATED LAW SOCIETY, on Tuesday, carried away by the prevailing spirit, held a meeting in their hall, and, in spite of a protest from some part of the corporation that the object of the meeting did not concern the corporate body, to which it was argued that it merely lent the hall to its members; it agreed, by an amendment in the sense of the protest, the meeting persisted in proceeding, and adopted an address to the Queen, and petitions to the two Houses of Parliament, praying that measures be taken to guard against the re-establishment of the Papal power in England.

A MEETING of the COUNTY of DOWN was held at Chelmsford on Tuesday, convened by the High Sheriff, T. Barrett-Weston, Esq., of Hylands, near Chelmsford. The requisition signed by a thousand and fifty names, comprising persons of all ranks, of every political opinion, and of every Protestant sect. Among them were Lord Braybrooke, Lord Rayleigh, Sir J. Y. Tyrrell, M.P.; Sir E. N. Buxton, M.P.; Sir G. H. Smyth (late M.P. for Colchester); Sir W. Bowyer Smijth, Sir T. N. Abdy, the Rev. J. Page Wood, Sir J. H. Pelly, Sir Francis Simpkinson Brampston, M.P.; Mr. W. Beresford, M.P.; Mr. Leonard, M.P.; the Hon. and Rev. W. Bertie, &c. From 1600 to 2000 persons were assembled. Sir W. B. Smith moved "That an address be presented to her Majesty on the recent aggression by the Pope." Mr. King, a surgeon, of Chelmsford, seconded the motion, which was carried.—Mr. G. G. Bound moved an address, which expressed the strongest feelings of indignation at the Pope of Rome arrogating to himself the title of universal Bishop, and having presumed to appoint persons as bishops, who are to take their titles from cities and towns in her Majesty's dominions; and also in particular to appoint a Cardinal Prince, and to add to his Italian title that of Archbishop of Westminster the city famous in the history of our country as the seat of Royalty and Government, and the place where the Sovereign is crowned. This was moved as an amendment to the address, which was carried by a large majority.

A MEETING of the COUNTY of LEITRIM was held at Chelmsford on Tuesday, convened by the High Sheriff, T. Barrett-Weston, Esq., of Hylands, near Chelmsford. The requisition signed by a thousand and fifty names, comprising persons of all ranks, of every political opinion, and of every Protestant sect. Among them were Lord Braybrooke, Lord Rayleigh, Sir J. Y. Tyrrell, M.P.; Sir E. N. Buxton, M.P.; Sir G. H. Smyth (late M.P. for Colchester); Sir W. Bowyer Smijth, Sir T. N. Abdy, the Rev. J. Page Wood, Sir J. H. Pelly, Sir Francis Simpkinson Brampston, M.P.; Mr. W. Beresford, M.P.; Mr. Leonard, M.P.; the Hon. and Rev. W. Bertie, &c. From 1600 to 2000 persons were assembled. Sir W. B. Smith moved "That an address be presented to her Majesty on the recent aggression by the Pope." Mr. King, a surgeon, of Chelmsford, seconded the motion, which was carried.—Mr. G. G. Bound moved an address, which expressed the strongest feelings of indignation at the Pope of Rome arrogating to himself the title of universal Bishop, and having presumed to appoint persons as bishops, who are to take their titles from cities and towns in her Majesty's dominions; and also in particular to appoint a Cardinal Prince, and to add to his Italian title that of Archbishop of Westminster the city famous in the history of our country as the seat of Royalty and Government, and the place where the Sovereign is crowned. This was moved as an amendment to the address, which was carried by a large majority.

A MEETING of the COUNTY of [illegible]

to the *Times* (noticed in the last Number of the ILLUSTRATED LONDON NEWS), he merely stated what he saw at the Archbishop's residence. –Mr. Bowyer has again replied to Dr. Cumming; but we must refer our readers who wish to follow the controversy, to the columns of the *Times*.

DR. CUMMING addressed a large meeting of the Reformation Society at Bristol, on Monday. The room was crowded to excess to hear the learned Doctor, who spoke strongly against the Catholics, and in favour of the press, parties of which the *Times* and was received with enthusiastic applause. The meeting at the close sang the National Anthem.

SIR BENJAMIN HALL has taken the opportunity of the religious discussion to publish a long letter to the Archbishop of Canterbury, in which he enters at length into the abuses of the Church, and calls on the most rev. Prelate to exert himself to correct them.

MR. ROBERT OWEN has entered the field of controversy, and, in a letter addressed to Lord John Russell, endeavours to show that the noble Lord's conduct has been inconsistent and impolitic. He finds, he says, "the public mind of England stirred from one end of the kingdom to the other. I hear fierce denunciations hurled against the Church of our Christian brethren; I see politicians of nearly all classes bending beneath the storm, and joining in the cry against Papists and the Pope. Simple, downright intolerance is at the bottom of it. No real danger exists. You," he says (addressing Lord John), "have given dignity and importance to an antipathy which you ought carefully to have allayed; and, by your ill-timed support, you have done your utmost to keep alive for years a distressing, harassing, and, in many cases, a ruinous yoke to be thoroughly ashamed." Mr Roebuck treats the Pope's claims as ridiculous, and characterises Lord John Russell's letter as unstatesmanlike, and as having served as a "trumpet to call into action the worst, the fiercest, the most dangerous passions that darken the human heart and harden the human heart." "The work of years," he says, "has in a moment been destroyed; and the task of governing Ireland, uniting the Catholics and Protestants of that empire in one common bond—just as it was accomplished, has been undone, by Lord John rousing up the spirit of strife, and quickening into active life the demon of persecution."

THE NATIONAL CLUB has recommended the lay members of the Church of England to address the Archbishops and Bishops to discountenance innovations in the Church, and to address the Queen to *enforce* the uniform observance of the customary services in the Church.

ARCHDEACON MANNING has resigned his office, in consequence of the strong expression of opinion against the Tractarians.

THE ARGYLL, presiding at the annual meeting of the Edinburgh Bible Society, on Tuesday, made a long and an instructive speech on the subject. He declared that the present was a battle of principle; that the Tractarian movement on the Romish Catholic dogma, that the word of God must be interpreted by the Church, and was, therefore, hostile to the great Protestant doctrine of the exclusive authority of the word of God. He contended, therefore, that the Tractarians and the Roman Catholics were identical in principle. His Grace observed that the opposition in England to the Papal claims was founded chiefly on their being a violation of the Queen's supremacy; but her supremacy was considered more as a political than a religious idea. It was a vindication of every man to determine his own faith was to be upheld, as it involves the right of every individual to perfect freedom of conscience. His Grace repudiated the Bishop of London's doctrine, that the Protestant of the Church of Rome should be resisted because there should be one set of clergy to a geographical district, that making the Church of Christ rest on a body of clergymen, and putting a stop to all missionary proceedings for the improvement of rival faiths. His Grace thought the Bishop of London had rather betrayed the cause of the Church, by advising the people not to listen to the Oratorians implying that the foundations of the faith of the English Church were insecure. He concluded a speech that will probably have some influence on the question, by referring to Dr. Wiseman; and declaring, in the name of the Protestantism of Scotland, that he was as confident of victory as the Doctor.

THE SHERIFFS OF LONDON AND MIDDLESEX, on Tuesday last, accompanied by the City Remembrancer, had an audience of the Queen, at Windsor Castle, to receive her Majesty's pleasure relative to the day for the procession by her Majesty of the address from the Corporation of the City of London on the Papal Aggression. Alderman Salomons, and some of the members of the Court of Lieutenancy of the City of London, also attended to receive her Majesty's pleasure on the same subject.

The *Legal Observer* states that proceedings have been taken by a wealthy individual for instituting a prosecution against one of the Popish Bishops for a misdemeanour. The question is one that is likely to have a legal solution.

DOCUMENTS.

The Prelates of the Church of England, with the exception of the Bishops of Exeter and St. Davids, have signed the following address:—

TO THE QUEEN'S MOST EXCELLENT MAJESTY.

THE HUMBLE ADDRESS OF THE ARCHBISHOPS AND BISHOPS OF THE CHURCH OF ENGLAND.

May it please your Majesty,

We, the Archbishops and undersigned Bishops of the Church of England, approach your Majesty with sentiments of veneration and loyalty, at a time when an unwarrantable assault has been offered to the Church and to your Majesty, to whom appertains the chief government of the realm in matters of ecclesiastical duty. Fain our country, whose [illegible] Christendom. The [illegible] Church, in which the pure Word of God is preached, and the Sacraments duly administered according to Christ's ordinances, is by the Bishops' Sees [illegible] Bishops of Northern land, and is consecrated on the principle of the [illegible] Christendom.

The [illegible] Church of England [illegible] Bishops of Rome, [illegible] Christendom.

THE FOURTH GREAT FIRE AT SAN FRANCISCO.

The "Climax," on the corner of Kearny and Pacific streets, was torn down, which, together with the energy displayed by those who battled for the Courthouse, had the effect of saving that building, although it was very much scorched, and the blankets and carpets that covered its front were burned to cinders. The only houses saved of the entire square, bounded by Jackson, Kearny, Pacific, and Dupont streets, were on the north-west corner, the Folks, and three or four other buildings

Crossing Jackson-street, the fire swept everything up to Portsmouth-square and to Kearny-street, leaving only between the latter and Dupont the *Alta Californa* newspaper office, the California, Lafayette, and Excellent *restaurants*, and two dwelling-houses Besides the Excellent, which stands on the corner of Washington and Dupont, only four buildings on Dupont were saved between Washington and Pacific streets. The back wooden buildings belonging to this office were laid in ashes The Rendezvous and Bella Union, together with all the other buildings extending to the walls of the *Alta Californa* were burned to the ground.

From the Washington Market, the fire crossed Kearny-street, and soon the *Pacific News* building was in flames, and entirely consumed.

With the exception of the "Verandah" corner of Washington and Kearny, and an unfinished building called Kearny and Pacific, the whole row on the east side of Kearny, between Washington and Pacific streets, was destroyed. On Washington, below the Verandah, four more buildings were burned, when the fire was stayed by pulling down a wooden house.

The entire loss cannot be stated with any degree of certainty. It is far less, in proportion to the space burned over, than any of the previous fires. The buildings were, many of them, of one story and small. Perhaps about one hundred and twenty-five were destroyed. The total loss has been estimated at amounts varying from two hundred and fifty thousand to a million of dollars! In the *Alta Californa*, the estimate is three hundred thousand dollars. This estimate is based upon the fact that so many of the buildings were mere shanties, and also from the particular estimates of the sufferers themselves. The merchants and authorities of the town, including the Mayor, Recorder, and Judges, exerted themselves nobly to check the ravages of the flames. The Court House was saved by great efforts on the part of the various city and county officers and other citizens

"When at length our dwellings were in the dust, and smoking embers and ashes and occasional jets of not yet glutted flame alone told the site of recent homes and busy marts, it was painful to see the ejected sufferers, men, women, and children, sad and tearful, clinging to the few relicts of late fortunes and firesides. The Public Square was literally crowded with whatever could be snatched from the hungry fire. Up to a late hour last night many persons were still there, with the few remnants left of their former property and comforts."

We are indebted for the accompanying Sketch to Mr. F. Marryat, only surviving son of the late Captain Marryat, R.N., and author of "Sketches of Borneo," who is now in California, with a view to the publication of the experiences of his enterprise.

THE WHITTINGTON CLUB.—NEW DECORATION OF THE BALL-ROOM.

THE LATE MR. WOMBWELL.

This very active provider of amusement—who, perhaps, occupied a more prominent position before the existence of Zoological Societies—expired on the 16th ult., in his caravan, at Richmond, in Yorkshire, at the advanced age of 73.

Mr. Jeremiah Wombwell, or, as he was termed in the "fair" *patois*, "Old Jerry Wombwell," had not only amassed a handsome independence, but left a vast inheritance, in the shape of three travelling menageries, with a collection of birds and wild animals of the rarest and most valuable description—perhaps unequalled in Europe, at least as the property of an individual. Mr. Wombwell has left a widow (who for a number of years managed the No. 1 exhibition) and a daughter, Mrs. Bramston, the wife of the large army accoutrement maker. Mr. and Mrs. Edmonds (a niece) managed No. 2 menagerie, and No. 3 caravan was under the direction of a nephew, Mr. George Wombwell.

The substance of the following details of Mr. Wombwell's itinerant life was communicated by him, some years since, to Mr. M'Diarmid, Editor of the *Dumfries Courier*, who introduces the narrative with this trait of the showman's humility after he had grown rich: "We were not a little astonished (says Mr. M'Diarmid), considering Mr. Wombwell's capital and the extent of his concerns, to find him dressed in a smockfrock, and cleaning and scrubbing as anxiously as the meanest servant he has. In this he is a true Englishman; and, so far from sparing or giving himself airs, sets an example of untiring industry to the whole establishment. Mrs. Wombwell, he admits, is sick of itinerating, and often wishes him to retire into private life, to enjoy quietly the fruits of his exertions; but, after the truly active life he has led for the last twenty years, he doubts whether rustication would add to his happiness; and objects further, on the ground that it would be difficult to find a suitable customer for his large and valuable collection of wild animals."

THE LATE MR. WOMBWELL.

Mr. Wombwell, when a boy, devoted much of his time to the breeding and rearing of birds, pigeons, rabbits, dogs, and other domestic animals, and beyond this had no idea of becoming the proprietor of a menagerie. In fact, he became one by force of accident, rather than of circumstances. At the London Docks he saw some of the first boa constrictors imported into England. Most of the "show folks" were afraid of and ignorant of managing them, and from this cause prices gave way a little, and Mr. Wombwell at length ventured to offer £5 for a pair. They were sold to him, and in the course of three weeks he realised considerably more than that sum by their exhibition—a circumstance which he always confessed made him partial to the serpent species, as it was his first introduction to the "profession." From this time he became a regular "showman." At about this period, Mr. Wombwell, who was by trade a cordwainer, kept a bird and shoemaker's shop in Compton-street, Soho, and subsequently exhibited with great success his boa constrictors in Piccadilly, near to St. James's Church.

Wombwell, of late years, had been very successful in breeding, and possessed at the time of his death more than twenty lions and five elephants, in addition to an unrivalled collection of other wild animals. Some time since, and it is the only instance on record, one of his lionesses had a litter of two white cubs.

The proprietors of menageries experience a great loss from disease, mortality, and accident; and Wombwell calculated that he had lost, from first to last, a fortune of at least from £12,000 to £15,000 by mortality among his wild beasts, birds, and animals. Not many years since, a fine ostrich, worth £200, which could have picked crumbs from a ceiling twelve feet high, thrust his bill between the bars of his cage, gave it an unlucky twist, and in attempting to withdraw it literally broke his neck. Monkeys become exceedingly delicate when imported into England. They are soon affected by cold, and when they begin to cough very generally fall into consumption, and exhibit all the symptoms of human beings labouring under the same complaint.

The value of wild animals, like everything else, varies according to supply and demand. Tigers have been sold as high as £300, but at other times they can be had for £100. A good panther is worth £100; hyenas, from £30 to £40; zebras from £150 to £200. The rarer kinds of monkeys are very valuable; and lamas and gnu always exceedingly high Upon lions, lionesses, and elephants it is impossible to fix any price. Two cubs is the usual litter of the lioness, but Wombwell formerly had an old one which repeatedly dropped four. In these cases she nursed two and neglected the others; but Mr. Wombwell had a beautiful pointer bitch, which in her lifetime suckled four lions.

The cost of Mr. Wombwell's three establishments was enormous—on an average, at least £30 a day each. His caravans amounted to upwards of forty, and his stud—the finest breed of draught horses—varied from about 110 to 120. The expenses of his hands were estimated at £40 per week; while the amount he paid for turnpike tolls in the course of a year formed a prominent item in his expenditure. Even the ale of one of his elephants came to something throughout the twelve months, to say nothing of loaves (the best bread), grass, hay; and the capacious maw consumed the latter article at the rate of 168 lb. per diem.

Mr. Wombwell, from being a planet, had always satellites revolving around him in the shape of minor shows. With these he would have very willingly dispensed; but, though potent in inclination, lacked the necessary power. Go where he might, they watched his motions, and profited by the fair the menagerie created. To a certain extent his own idea of the matter was, "that *he* beat the bush, and *they* caught the bird."

WHITTINGTON CLUB.

FIRST ASSEMBLY OF THE SEASON.

The splendid ball-room of this Institution has been re-decorated and refitted with great splendour, at a cost of £600, the entire amount having been subscribed by the members previous to the commencement of the works. This may be taken as an evidence of the spirit which animates the Club. In addition to the decorations, a new orchestra has been erected, which, supported by two graceful and appropriate fluted columns, is cleverly blended with the general character and style of the room, and forms a useful as well as a decorative feature. We have engraved this novelty.

On Tuesday, the first monthly assembly of the season was held, Mr. Putnam's quadrille band occupying the orchestra; and the evening was spent in a manner highly satisfactory to those present.

THE THEATRES.

HAYMARKET.

The great theatrics levent of the week has been the production, on Monday, of Shakspeare's historical play of "Richard the Second." The least dramatic of Shakspeare's plays, it is one of the most poetic. Sentiment and diction are called in as substitutes for character and action. The scenes throughout want the element of tragedy—they are inspired with Pity, but not with Terror. The experiment is powerfully made, but serves only the more to establish the conclusion, that Pity alone is insufficient to support an effective drama. Notwithstanding the delinquency of the hero, the passion of Pity was never more strongly excited. The sudden fall of the King from power to dependence is an incident so skilfully managed by the poet, that it smites and pierces the heart strongly and deeply. As acted by Macready, it afflicted us with a distress poignant to the utmost point of endurance. If in this scene the poet was marvellous, the actor was admirable.

The play has been placed upon the stage with appropriate appointments, and, in order to its fitting performance, some additional actors have been engaged. A Mr. Harrington, in the *Duke of Norfolk*, made here his first appearance, and delivered the text with a manly style of elocution that deserved the applause it secured. Mr. Davenport made an excellent *Bolingbroke*, acting throughout with ease and an air of duplicity quite characteristic. We cannot bestow the highest praise on Mr. Stuart's *John of Gaunt*; it was one of those good intentions with which the place of ambitious failure is proverbially paved. It had not the good sense of Mr. Cooper's *Duke of York*, which was one of the best pieces of acting in the play. Next to Mr. Macready's impersonation, the small part of the *Duchess of York*, by Mrs. Warner, must take rank; her maternal solicitude was earnest to intensity. Miss Reynolds, too, as the *Queen*, commanded, by her pathetic tones, the sympathy of the audience.

Since the days of Edmund Kean, the tragedy of "Richard II." has not been witnessed in London; and Mr. Macready appears in it to us for the first time, though he has, we believe, frequently performed it in the provinces. Wanting in interest as the drama itself is, we are grateful for the opportunity of seeing Mr. Macready in the part; it is one remarkably well suited to his genius and style. The recklessness and arrogance of the spendthrift and unscrupulous Monarch his boundless confidence in the divine prerogative—his right royal method of thinking on all occasions, even when acting wrongfully—his filial love and reverence for his native soil—his exultation on returning to it—his pride, his dejection, his humiliation—his grief, and wrath, and utter destitution—all these phases of character were alternately depicted by Mr. Macready with wonderful force and precision. Clear it was that he had given to the character the most profound study, and exhausted on it all the resources of his histrionic talent. We should much regret if the want of theatrical elements in the action of the tragedy should abridge its run; the *one* character, acted as it is, ought to command the town for many representations.

One of Mr. Macready's great efforts has deservedly received illustration by our Artist—the scene of the Monarch's deposition, and particularly that beautiful part of it where the poet, giving the rein to his fancy, represents the fallen and disconsolate King as contemplating his countenance in the mirror. The reader will thank us for the passage in full: –

Northumberland. My Lord, despatch; read o'er these articles.
King Richard. Mine eyes are full of tears, I cannot see;
And yet salt water blinds them not so much,
But they can see a sort of traitors here.
Nay, if I turn mine eyes upon myself,
I find myself a traitor with the rest
For I have given here my soul's consent
To undeck the pompous body of a King;
Make glory base, and sovereignty a slave;
Proud majesty, a subject; state, a peasant.
Nor. My Lord—
K. Rich. No lord of thine, thou haught, insulting man,
Nor no man's lord: I have no name, no title—
No, not that name was given me at the font—
But 'tis usurp'd. Alack the heavy day,
That I have worn so many winters out,
And know not what name to call myself!
Oh, that I were a mockery king of snow,
Standing before the sun of Bolingbroke,
To melt myself away in water-drops!
Good King: great King—(and yet not greatly good)—
An if my word be sterling yet in England,
Let it command a mirror hither straight,
That it may show me what a face I have,
Since it is bankrupt of his Majesty.
Northumberland. Go some of you, and fetch a mirror hither.
Nor. Read o'er this paper, while the glass doth come.
K. Rich. Fiend! thou torment'st me ere I come to hell.
Bol. Urge it no more, my Lord Northumberland.

On the whole, the performance was well received, though the audience was not so numerous as might have been expected.

A new farce, announced as an "entirely new and *original* review," by Mr. Bourcicault, and entitled "A Radical Cure," has proved moderately successful. Its tendency is political, being in fact a sort of adaptation from a French piece in ridicule of socialist doctrines. The "weight" of the piece rests on the shoulders of Mr. Buckstone and Mrs. Fitzwilliam, who make "light" of the burden they support; lastly the latter, who enacted three characters and "made nothing of them." The part of a persevering dentist, who insists on the liberty of exercising his vocation on the jaws of everybody he meets with, was amusing. But pieces of this occasional kind, with so direct a purpose, are seldom eminently attractive.

LYCEUM.

A translation, by M. Planché, of the "Enfant de Paris," was produced on Wednesday, under the title of "The Day of Reckoning." One scene in it is symbolic of the whole, at the "Tapis Franc," described in Eugène Sue's "Mysières de Paris." A titled *roué* visits this haunt of roguery, and is there exposed by the son of an old usherer, whom he has ruined by refusal to pay a debt barred by the French statute of limitations; but in vain, for the thieves are easily bribed by drink-money to permit the escape of the noble delinquent. A gambler impersonated by Mr. Vining, is then wrought upon by an old rascally companion (Mr. F. Matthews), to attempt the robbery of the nobleman's house, and thereby repay himself with certain diamonds known to be there. He does this, and thereby is brought into contact with the Countess d'Arental (Madame Vestris), by whom her husband had been enabled to pay the debt, but who had otherwise viciously applied the money. In the third act, the heartless nobleman (Mr. Charles Matthews), being compelled to submit to a divorce from his injured wife, determines to cut short with her presumed lover, *M. de Barmile* (Mr. H. Butler), and finds himself opposed instead to *Claude Morcant*, the upholsterer's son, who calls him to account upon the spot. This is the "day of reckoning" to both, for both are mortally wounded in the encounter, thus leaving the good and charitable Countess free to a second marriage.

This plot is helped on by some small incidents, skilfully thrown in, though too obvious to detail; and, in construction and writing, the piece is far above the ordinary mark. It aims, indeed, at the rank of a regular drama with a stagey story, and in this respect has a theatrical significance touching the future designs of the management. We welcome whatever indicates a laudable ambition, and are pleased to record the success of the new drama.

MARYLEBONE.

On Monday, Mr. Knowles's play of "Love" was revived. The part of *Catherine*, as performed by Mrs. Nisbett, acquired unusual importance, and was enacted by her with great spirit. Miss Jane Mordaunt, as the Count, played with care; and, in the more difficult scenes, though not quite equal to the situations, was, nevertheless, true to the passion, and may hereafter attain to its full expression.

PRINCESS'.

Mr. Tom Taylor's farce of "Parents and Guardians" has been revived, in which Mr. and Mrs. Keeley and Mr. Wigan support their original *rôles*, with, if possible, increased unction.

OLYMPIC.

A new farce, by Mr. H. T. Craven, entitled "Mind your Stops," was produced on Monday. Mr. Compton is the hero, a hairdresser of Marseilles, puffed up with the imagination of having obtained a prize in the lottery. The actor made the most of the situation.

On Tuesday the "Lady of Lyons" was revived, with Miss Faucit in *Pauline*, and Mr. Brooke in *Claude Melnotte*. The latter was in good voice, and played with great propriety.

MUSIC.

SACRED HARMONIC SOCIETY.

Exeter Hall, principally through the exertions of H. Fownall, Esq., was built in 1829, from designs by Mr. Gandy Dearing, for religious and charitable meetings. It was not intended for a music-room. In 1835 the Sacred Harmonic Society commenced their public concerts, and every year their performances have increased in interest and importance. In proportion as the members were identifying themselves with art-progress in this country were the defects of the Hall for musical purposes felt, until the evil became intolerable. Costa's nomination as conductor, in 1848, had been attended with the most advantageous results in an improved execution of the great sacred works; but his exertions were much impeded by having to direct an orchestra so many occupants of which could not see his *bâton*, whilst the choral singers, near the ceiling, were almost suffocated, from the excessive heat. The ceiling itself, handsome as it was, absorbed and impeded the sound, and but a small portion of the tenants of the gallery, at the west end of the edifice, could command a view of the executants; whilst the huge and unsightly pillars supporting this gallery were not only an eye-sore, but caused, when there was a full hall, much discontent and discomfort to the visitors. It when there was but one opinion, that, imposing as the hall, from its capacious size, looked, for a concert it could not be more wofully adapted, for large music meeting either building in London better calculated, bad as it was, for large music meetings. The Sacred Harmonic Society, feeling that the time had arrived either to construct a room for themselves or to convince the Exeter Hall proprietors of the absolute necessity to make alterations, exerted themselves strenuously at the end of last season, and now, through the zeal and tact of Mr. Bowley, their

MR. MACREADY, AS RICHARD II., AT THE HAYMARKET THEATRE.

librarian, who is an auditor of the Exeter Hall proprietary, such improvements have been effected that the edifice may be cited as unrivalled in the kingdom. Mr. Dawkes, the architect of the Colney Hatch Lunatic Asylum, engaged to remove the flat ceiling and to insert an arched one without disturbing the roof, and, under his superintendence, his plan was thus boldly carried into effect:—

To the principals of the roof, wrought-iron girders (of a circular form on the under side) have been attached, composed of plates of the best boiler iron, varying in thickness from one-half to one-quarter of an inch, + in angle-iron at the top and bottom, and stiffeners of the same, to cover the various joints. These girders were raised into the roof in 7 iron, and strips to cover the various joints. These girders were raised into the roof in pieces, and supported in their places from the tie-beams, till they were riveted together and bolted. Over the red Lorraine, a furnace for that purpose having been erected in the roof. There are in the whole work upwards of 25,000 rivets. Each girder, when it had been placed on the walls, and completely put together, was weighted with seven tons of pig-iron distributed over its entire length, and while thus loaded was bolted to the timber principal. The deflection from this process was ¼ of an inch only. The ends of the girders were supported upon sliding plates of smooth and greased iron affixed to the wall-plate, which allowed of the spread corresponding to the deflection of the arched iron without affecting the walls; the extent of the spread was one-half of an inch at each end. By this means the effect of any thrust upon the walls was obviated previous to the iron-work being bolted to the timber. Besides the ten girders which obviated previous to the iron-work being bolted to the timber. Besides the ten girders which were thus secured to the timber principals, there are two independent iron girders of a much stronger construction, weighing about nine tons each, and nine smaller ones, all of these were tested with corresponding weights. Nearly eighty tons of iron were introduced into the roof, a weight which, although apparently large, is considerably less than the old massive timber and plaster ceiling. It was estimated that the girders would have to bear a weight of sixty-four pounds per square foot, and upon this calculation they were constructed; whereas the actual weight they have to support is found to be only forty-five pounds per square foot. The breaking weight being estimated at more than two hundred and twenty pounds. When the whole of the iron-work had been fixed to the wooden principals, the tie-beams, and other timbers originally supporting the principals, and which had formed an excellent scaffolding for the furnace and riveters, were cut away to the edge of the carved iron girders. The ceiling-joists and boarding were then attached to the iron flanges.

It is gratifying to record the complete success of the above original conception. Nothing can be finer than the appearance of the Hall, now that the organ has been thrown back eighteen feet, and the ceiling has gained fifteen feet in elevation at the east and west ends, and twelve feet in the centre, whilst light iron columns now support the west gallery, instead of the ponderous square pillars. The Hall looks double the size, whilst the sound has wonderfully improved, as well as the ventilation. This has been fully proved by the two performances of Handel's "Messiah" given on the 25th ult. (the opening night) and last night (the 6th). Every member of the orchestra has a view of the conductor; the keys of the organ have been brought forward, the player of which sees the *bâton* in a *glass*; and more space has been gained for the plan[illegible] of instrumentalists, amongst whom are 16 double basses, 16 violoncellos, 8 first and second violins and violas, besides the wood and brass bands, and Chipp's colossal drums in the centre. The patriarch Lindley was again seen in his old place, by the side of Howell, the chief contra-bass. The reception of the conductor was most rapturous, and the National Anthem very appropriately inaugurated the opening night.

The "Messiah" has now been performed by the society fifty-six times, and its popularity remains unaffected by time, unless, indeed, in the way of increased interest as the execution becomes more perfect under Costa's direction. Certain it is, that the general interpretation never has exhibited greater vigour and precision. Miss Birch, Miss Dolby, Messrs. Lockey, Wilkinson, and Whitehouse sang the solos on the opening night. The great merits of the three first-named *artistes* in this oratorio are well known and appreciated. Mr. Whitworth sang for the first time, and the impression he produced was very favourable. He gave the air, "But who may abide," and "Why do the nations." His voice is superb, and he is acquiring more certainty in his intonation. Mr. Whitehouse is from the Chapel Royal, Windsor, and his *début* was most successful. He sang the recitative "For behold darkness," and "The trumpet shall sound." If he will cultivate and improve his style, art will give a finish to what nature has been so bountiful with—his fine organ. Last night Mr. Phillips sang all the bass solos.

To afford a notion of the superior capability of Exeter Hall to display a more extended orchestra than any other building in the country, it is only necessary to mention the comparative clear width of various public [illegible]. Exeter Hall is 131 feet 6 inches long, and 76 feet 9 inches wide; [illegible]gham Town Hall, 68 feet; Liverpool [illegible] feet; St. Martin's Hall (Long [illegible]; 45 feet; [illegible] year; but it is to be hoped that the boarded ceiling, now painted a sky blue, will not be meddled with; nothing can be more simple, refreshing, and effective than its present aspect. The system of [illegible] adopted for the admission of the public when fashions for egress and ingress at the north and east sides are afforded at present the entrances being confined to the Strand and Exeter-street—nothing will be left to render the building complete.

The Sacred Harmonic Society has done much to improve the taste and intelligence of the musical masses in London; its performances have entirely superseded the Lenten oratorios at the theatres, and from a private humble association in its origin, the objects of the society have become national. It has acquired a rich and varied *repertoire*; but there are still many grand compositions which are as yet a sealed book to the amateurs; and the policy of introducing new works by living composers ought seriously to occupy the attention of the executive committee.

FOREIGN MUSICAL NEWS.

Madame Sontag has pleased the Parisian amateurs infinitely more in *Marie*, in Donizetti's "Figlia del Reggimento," than in *Amina*. The French critics announce come opera to be her speciality. Calzolari was the *Tonio*, and Ferranti the *Sergeant*.

A new one-act opera, "La Chanteuse Voilée," the drama by Scribe and Leuven, the music by M. Victor Massé, his first effort, has been successfully produced at the Opéra Comique; Mdlle. Lefevre plays the "veiled singer," who mystifies *Velasques* (M. Audran), the famed painter; and M. Bussine is the *Alguazil of Seville*.

In our next Number we shall be able to report on the first representation of Auber's "Enfant Prodigue," at the Grand Opera, with Roger as the *Prodigal Son*, and Madame Laborde, Mdlle. Dameron, MM. Massol and Obin, and Mdlle Plunkett (*danseuse*), in the other parts.

Madame Viardot's *Valentine*, in the "Huguenots," has taken Paris by storm, the house being filled to overflow on each representation, and the enthusiasm of the audience in her duos with *Marcel* and *Raoul* being prodigious.

The new opera by Rosenhain, the pianist and composer, "Le Demon de la Nuit," is to be followed by a novel ballet, for Cerito; after which, Gounod's "Sappho," the drama by Emile Augier, for Viardot, will be produced; and then, in the spring, Auber's "Corbeille d'Oranges," for the return of Alboni. This great actress at the Paris Grand Opera will be completed by Mario appearing for a few nights in the "Prophète" and the "Huguenots," on his return from St. Petersburgh, prior to his joining the Covent Garden Royal Italian Opera in 1851.

Mdlle. Nau has re-appeared at the French Opera, in *Lucia*, with Gueymard as *Edgardo*, and M. Laurent, a new baryton, as *Ashton*.

Letters from the Russian capital mention the triumphant reception of Madame Persiani as *Amina*, and Mario as *Rivino*, in Bellini's "Somnambula," Tamburini being the *Count*.

Berlin advices confirm the success of Madame Castellan. Her second part, after *Lucia*, was *Desdemona*. She was recalled several times.

Verdi's new opera, "Stiffelio," produced at Trieste, at the Teatro Grand, had not caused any great sensation, being regarded inferior to his "Luisa Miller," his preceding work.

Alboni, Gardoni, Barroilhet, and Formes have been quite successful at L'Orient, in Madrid, in Donizetti's "Favorita." Ronconi was to make his *début* as *Gurgno*, in Bellini's "Puritani."

A German *prima donna*, of great celebrity in her time, M[illegible]

M. Zimmerman has been charged by the Paris committee of musicians to compose a mass for the benefit of the association.

According to the latest New York papers, the enthusiasm of the American public was equally divided between Jenny Lind, Mdme. Bishop, and Mdlle. Parodi, a trio of artistes, about whom, at all events in London, there could be no division of popularity. To compare Mdme. Bishop with Lind, and to state that the *Norma* and *Lucrezia Borgia* of Parodi are the *ne plus ultra* of lyric perfection, as do the New York critics, must lead to the conclusion that musical taste and knowledge are at a very low ebb amongst the American *dilettanti*.

Mdme. Grisi, who was prevented from visiting Russia this winter, is now quite well, and will make a tour in the provinces, next month, under Mr Beale's direction.

MUSICAL EVENTS.

Madame Thillon and Mr. Hudson gave their combined musical entertainment, for the fourth time, last night, at Willis's Rooms; and, next Monday, will be at home in Crosby Hall, for the amusement of the City amateurs.

The third and last *soirée musicale* of Miss Dolby will be on Tuesday next.

The Monday Evening Musical Entertainments, at the Hobo.rn National Hall, continue to be very attractive.

The London Sacred Harmonic Society commenced its season on Thursday night, at Exeter Hall, with Handel's "Israel in Egypt," conducted by Mr. Surman; the chief vocalists being Misses Birch, Thornton, and M. Williams, Messrs. Lockey, Lawler, and Whitehouse.

On the same evening, the Cecilian Society had a performance of sacred music, [illegible] Mr. G. Pitts, organist.

Miss Poole, who is not surpassed as a ballad-singer, has made her appearance at the Grand National Concerts at Her Majesty's Theatre. The Berlin choir gave a third and last morning concert at the Hanover Rooms last Monday; and in the evening sang at the National Concerts, for the benefit, the house being filled to overflow. They gave concerts this week at Blackheath, Oxford, Cambridge, and Brighton; and next Tuesday they take their departure for Berlin. Mr. Edward Loder's operatic romance is in preparation.

M. Jullien's concerts have been immense, y attended this week, owing to the attraction of the Exhibition Quadrille, with the French drummers. Wednesday next will be the final performances; and on Thursday the brief season will terminate with a second and last *bal masqué*.

A HINT TO THE BUYERS OF ETTY'S SKETCHES.—Among the large collection of sketches by this celebrated artist so.d at the recent sale, considerable numbers were drawn on paper stretched on a frame and canvass. A few days since, the possessor of one of these discovered, accidentally, that the paper used for the sketch had been pasted on an oil painting, and on carefully removing it discovered that he was the fortunate possessor of one of Etty's most finished portraits, which is pronounced by some of the family who have seen it, to be that of his uncle, Mr. Walter Etty. This painting is now in the possession of Mr. Donnadieu, of Duke-street, St. James's. It is said that Etty, when in want of a frame on which to sketch on some sudden idea, was in the frequent habit of using his paintings in this manner; and as one or two of his known pictures, especially (we are told) a portrait of Edwin Landseer, disappeared in a mysterious manner, it is probable that this has been their fate, and that they will be found among the possessions of some of the purchasers of his sketches.

Mr. Deputy Peacock, the chairman of the Commissioners of Sewers for the city of London, entertained a large party at the London Tavern on Tuesday. Amongst the distinguished guests were the Right Hon. the Lord Mayor, Lord Ashley, Lord Ebrington, the Chief Commissioner of the Metropolitan Sewers, Mr. Alderman and Sheriff Carden, Mr. Sheriff Hodgkinson, Mr. Alderman Copeland, M.P., Mr. Alderman Lawrence, the Recorder, the Common Serjeant, Mr. Masterman, M.P., Mr. R. L. Jones, Mr. Stevens, Mr. Evans, Mr. Eagleton, Mr. Holt, and Mr. Tyrrell.

Hawick episcopal church was opened with the usual solemnities on Saturday last, by the Right Rev. the Bishop of Glasgow, who, at the same time, confirmed sixty individuals—the whole number of adherents being over 150. It is reported, that, besides giving suitable ground for a manse and burial-ground, the Duke of Buccleuch has secured £100 per annum to the incumbent, in addition to his other sources of income.

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

There are now above nine hundred causes and claims before the Master of the Rolls and the two Vice-Chancellors, and one hundred and fifty appeals and appeal petitions and motions on the paper of the Lord Chancellor. This is a larger number by one-fourth than the largest arrears which compelled the Government to recommend that addition to the Judges of the Court which produced the appointment of the Vice-Chancellors Knight Bruce and Wigram.

Arrangements have been made for the Cape of Good Hope mail screw steamers, which are to leave Plymouth on the 15th of every month, to call at Madeira and Sierra Leone, on their passage to the Cape, and they will doubtless take mails for those intermediate ports of call. Her Majesty's ax ships, which used to leave the west of England with mails for Madeira and Sierra Leone, have ceased to do so for the last two months.

The Earl of Durham has, it is stated, given directions that all necessary relief shall be given to the families who have lost members in the late explosion at Newbottle Colliery, and that he will bear the charge himself, instead of this being done by public subscription, as usual on such occasions.

M. Guizot, as director of the French Academy, and conformably to the usages of that body, was received on Saturday by the President of the Republic, to whom he was charged to announce the election of M. Nisard, and to demand the approval of the President of the election. M. Guizot is said to have reminded for some time in consultation with the Prince, and to have been greatly pleased with his reception.

The Earl of Orkney has lately visited his estates in the Queen's County (Ireland), and made a reduction in the rents of all his tenants, reducing the average of £1 an acre, the old rent, to 13s. the acre; and has besides ordered his agent to supply them with timber and slates, and all other necessaries for erecting comfortable cottages, at his own cost.

The wreck of the *Gazelle*, Ramsay, from Sydney, has been discovered on the Goodwin Sands. The figure-head is broken off, but part of the decorations remain, with a small figure of a gazelle upon it. There are also two other wrecks on the sands.

Mr. Jacob Bell, chemist, of Langham-place, London, has issued an address to the electors of St. Albans, soliciting the representation of the borough He declares himself a free-trader, a decided but moderate Liberal, a supporter of the general principles of government, and a firm opponent of Papal Aggression

The destructive and fatal boiler explosion at Bradford, Yorkshire, in the mills of Messrs. Wood and Walker, mentioned in our last, has resulted in the death of another person, named Margaret O'Donnell, aged seventeen, making three killed, besides the injuries received by others, and a very large destruction of property.

The convict-ship *London* has arrived in Kingstown harbour, Dublin, where she will remain to receive male convicts from the provinces, with whom to sail for her destination, New South Wales. She is a fine vessel of 720 tons.

On Friday night week, an outhouse in Abbey-lelx (Limerick), in which a poor woman and a child were allowed for charity to sleep for the night, caught fire by some accident, and both mother and child unhappily perished in the flames.

The High Sheriff of the county of Limerick made his first proclamation on Thursday, at a county court, under the writ of election to return a member for that county; and named Tuesday, the 10th inst., as the day of nomination, instead of the 9th, as originally intended, the alteration being to accommodate the gentlemen and farmers of the county, who have to attend the large fair at Groom on the 9th.

The cutter yacht *Oberon*, of 43 tons, belonging to the Royal Irish Yacht Club, with her owner, Captain M'Cully, of Derry, has arrived safe at Sydney, New South Wales, after a good and rapid voyage

The Roman correspondent of the *Morning Herald* of *Modena* writes that the Earl of Shrewsbury has just left Rome for Sicily, after having had a long interview with the Pope on the affairs of the Catholic Church in England

The committee of management having decided upon the election of a resident medical officer for the Royal Cambridge Asylum for Diseased of the Chest, Brompton, the choice devolved upon Mr. Edwards, the late superintendent of the Tower Hamlets Dispensary, who was on Friday elected week to the office.

A party of English residents at Boulogne, on Wednesday night week, gave an amateur performance at the theatre there, for the benefit of the English and French poor of the town. The bill of fare included "The Rent Day," "The Irish Tutor," and "Catching an Heiress." The different characters were well supported.

Dr. James B. Thompson, just returned from the East, and for years engaged at home and abroad in the investigation of the causes and the influence of climate and disease, has been appointed as honorary secretary to the Epidemological Society

From Canada we learn that there is a rumour that the seat of government is about to be removed 500 miles down the St. Lawrence in June or July next.

The Rev. Mr. Anderson, member of the University of Oxford, became a convert from the Protestant religion and was received into the Roman Catholic Church on Sunday week by the Abbé de Ravignan, at the chapel of Notre Dame de Sion, at Paris. Mr. Anderson was confirmed on Tuesday week by Cardinal Fornari, in the Chapel of the Apostolic Nuncio.

According to the report of the police for the city of New York, there were more than 10,000 persons arrested for misdemeanours and felonies in that city during the past twelve months, where also 4267 licensed drinking-houses, and 718 unlicensed dittos

The Deputy-Rangership of Windsor Park, which was rendered vacant by the death of the late Sir William Bromantle, has been conferred on Captain F. H. Seymour, one of the Equerries in Waiting to his Royal Highness Prince Albert.

Letters from Rome of the 20th ult. state that the winter season promises well as far as regards the influx of foreigners.

Brooksby estate, which has been for some time in the market, has, we hear, been bought by Mr. Charles Lloyd, the wealthy London banker. We believe the purchase-money is about £70,000.

It has been stated that Mr. Wyld's 50-feet globe will be put up in Hyde-Park building; but this will not be the case. A negotiation is on foot to obtain the area of Leicester-square for its erection.

Letters from Rio and Pernambuco say, that on many plantations in Brazil tea is cultivated with remarkable success.

As a proof of the development of the export trade in cloth from Belgium, a Verviers journal states that the quantity exported to the United States in 1840 was 93,188 ells, whilst in 1849 it amounted to 986,7.0 ells.

The *Akhbar* of Algiers states that a Parisian dealer had purchased all the crop of oranges at Blidah, and had paid no less than 180,000 francs for it. Paris. The *Akhbar* recommends the colonists to cultivate oranges on a grand scale, as they will be sure of a market.

The King of Bavaria has formed the gigantic design of causing to be executed a series of pictures on subjects derived from annals of all times and all nations—the whole being destined to form a sort of pictorial universal chronology.

The hop duty for 1849, according to the *Globe*, has been generally paid, but the remaining moiety of the 1846 duty has been generally left in abeyance.

The Bey of Tunis, who was so hospitably received by Louis Philippe, has sent one of his officers to carry the expression of his condolence to Queen Marie Amélie, on the occasion of the death of the King her husband and of that of the Queen of the Belgians

Ballyboyle, Queen's County, Ireland, having been constituted a post town, the office there will be opened for the issue and payment of money orders on and after the 6th inst.

At Avignon the Rhone has risen to a great height, and, at the latest intelligence, was still rising. At the date of the last account the steamer from Lyons had been obliged to stop. The Ardèche had overflown.

We are glad to learn that our gracious Sovereign, with a consideration and liberality which distinguish her, has sent £50 as a donation to the funds for Holsey.

The *Keser Herald* states that overtures have been made to Mr. Halford for the purchase of Prime Minister, by Derby crack, and that only last week the large sum of £9000 was offered for him, with Mr. Merryman and Harriot thrown in

James Becket, only thirteen years of age, committed suicide on Sunday night, or Monday morning, in one of the cells of the Manchester borough gaol, by hanging himself with a portion of his handkerchief. He entered the gaol-pipe for lighting his cell, which projects about half a foot from the wall. He was last seen alive shortly after seven o'clock on Sunday night, when he was reading the Bible in his cell.

Mr. F. Calvert, Q.C., brother to Sir Harry Verney, M.P. for Bedford, is the Liberal candidate for the seat vacant at Aylesbury by the death of Lord Nugent. Mr. Serjeant Byles is retained on the Conservative side. Mr. Houghton, a landholder in the neighbourhood, who is also a previous Free-Trader, is also mentioned

The *indépendance*, of Brussels, says:—"Mr. Mimi has just passed through Paris, en route to Switzerland. He had an English passport, as he was preceded in his departure by several of his friends in London, but he did not dare to touch the French soil, and reached the Rhine by Belgium." The rendezvous was given by the exiles at Bale. The refugees of the cantons of Geneva and Lausanne were to go there also."

The Fugitive Slave Bill was becoming the cloak for the most outrageous proceedings in the United States. At Albany (Indiana), a family, who were of pure white complexion, and had, as such, mixed with the neighbouring whites for years, had, without notice, been arrested and thrown into prison. The rigour with which the law is being carried out creates much despair.

On the 15th ult., a Boston (United States) paper states that the existence of a third ring round Saturn, which had been for some time suspected, was ascertained by the astronomers at Cambridge (United States). It is interior to the two others, and, therefore, its distance from the body of Saturn must be small.

COUNTRY NEWS.

POSTBREACT ELECTION.—The election, caused by the elevation of Mr. Baron Martin to the judicial bench, is not likely to be contested in this borough. The present candidate is the Hon. Bethy R Lawley, son of Lord Wenlock. A few days ago, however, a requisition was signed to the inhabitants of more ultra principles, solicited Thomas Greenwood Cayton, Esq., of Bier-ley, near Bradford, to become a candidate. That gentleman has just forwarded a reply, in which he, "for the present," waives his pretensions. His grounds for pursuing this course are, that, as a gentleman of liberal principles is already in the field, his appearance might tend to divide the liberal interest, to damage the common cause, and to destroy that respect for his honorable and consistent career as a Reformer. The hon. gentleman accepted the compliment, and the banquet took place at the Victoria Rooms Although the arrangement had been only a few days in progress, four hundred persons were present, including men of all grades, from the borough Magistrate down to the humblest working man. The retiring Mayor of the borough (R. Andrews, Esq.) filled the chair. Mr Sheriff Layne, Mr Alderman Lealiby, and several other members of the Town Council were present. The usual loyal toasts and sentiments were duly honoured, and Mr Hume, in acknowledging the compliment paid to himself on the occasion, inculcated the necessity of further efforts on the part of the people for still larger reform civil, religious, and financial

ESTABLISHMENT OF A SURREY RURAL POLICE.—The Surrey magistrates met on Monday to receive the report of the committee appointed to consider the propriety of establishing a rural police force. A large body of the magistrates were present. The committee were unanimous in considering the present force insufficient to protect that part of the county lying beyond the metropolitan police district, and recommended the immediate adoption of a rural police in preference to proceeding under the Parish Constables Act, or enlarging the metropolitan police district to take in all Surrey, which would require a special act. The county with the superintendent, at a salary of £3 and 4 Yd. c. 93, sec. 29, which requires that every police division shall contain 25,000 inhabitants, the committee propose the formation of three divisions, the respective capitals of which are Epsom, Guildford, and Godalming; the latter being the most suitable residing at Dorking. They anticipate an expenditure of £3000 in repairing lock-up-houses and erecting stations, and propose a staff, consisting of a chief constable, chief superintendent, five superintendents, eight inspectors, and 70 constables. After mentioning the names of the gentlemen who had applied for chief constable, who will choose the subordinate officers, was fixed for the first day of Epiphany sessions.

EXTENSIVE FIRE AT MANCHESTER.—A fire broke out on Tuesday morning, between two and three o'clock, in the bleach-works of Mr [illegible] Holmes, of Douglas-mill, Pendleton, one of the largest works of the kind in the immediate vicinity of Manchester. The building stands on its left bank of the river Irwell, near the race-ground, and is six stories in height. Unfortunately there were no engines on the spot, but, in a short time, the Salford fire-brigade was present, as were several of the powerful engines from Manchester, accompanied by Mr. Thomas Rose, the active superintendent. So rapidly had the fire spread, however, that the place was nearly gutted, and only a few mangles could be saved from the ruin. The attention of the firemen was then directed to a bleaching-shed, and a small warehouse adjoining, both of which were saved. A large and very valuable dash-wheel, which drove part of the machinery, was also saved from destruction. The main part of the building is a complete wreck; and the extensive stock, consisting of calicoes, shirtings, &c., amounting to some 6000 or 7000 pieces, is also consumed. The loss is estimated at from £8000 upwards. The building and stock were insured in the North British office for £3500, and in the Sun office for £2000. The fire is the largest that has occurred in this county ago, was one of the first spinning establishments in the county, and had only recently been converted into a bleach-works by its present owner

ANOTHER BURGLARY IN SURREY.—Another daring burglary, accompanied with violence, took place on Saturday evening, last at the house of Mr Marshall, residing on Frenchay common, near Farnham. The particulars are as follow.—About eight o'clock on Saturday evening, Mr. Marshall, who lives with his family at the house by a long lane at the front door, on his opening the door, he found a group of seven men standing round it, and as soon as he presented himself one of their number inquired the road to Guildford. Mr. Marshall was in the act of pointing out to direct them when he was suddenly knocked down, as is supposed, by a life-preserver. The men immediately entered the house, when they were at once encountered by Miss Marshall, who, with great presence of mind, seized a gun which was attached to the door. Her brother always kept loaded, calling out at the same time, "I'll fire at them" The villains caught her upon the staircase, and, presenting pistols at her, dragged her to the front door, where they pointed out her brother lying in an insensible state on the gravel, and cautioned her to be quiet. They then attacked the house of everything of a valuable character of contained, taking off, amongst other property, a number of old guineas. Before leaving, they shamed Miss Marshall in such a way as to be unfit for publication in the columns of the Mr. Marshall remained in an insensible state for nearly two hours, and is still suffering severely from the injuries he sustained. The police are in possession of a description of the party, and have in custody a man and woman on suspicion.

DISCOVERY OF AN INGENIOUSLY CONCEALED STILL.—Superintendent Povey, of Burslem, Staffordshire, and sub-inspectors Fry and Olive, of Hanley, commissioned officers of Excise, discovered on Saturday last a very ingeniously concealed still, which was found in a house attached to the dwelling-house of a potter named Levi Calkin, at Shelton. The entrance thereto was so well concealed by a sliding door, that the premises had been thrice previously searched, and not by the Excise, without the discovery of the still being made. When the door had been discovered and slid by the officers who made the search on Saturday, a ladder was seen leading into the cellar or vault, which was found to form a complete and extensive distillery, consisting of a copper still at full work, 136 gallons of wash, eight gallons of whisky, numerous barrels, bottles, tubs, tin casks and cases, tun-dishes, and a quantity of malt-sprouts, &c. Calkin was taken before Mr. Rose and Mr. S. P. Wood, at Burslem, on Tuesday, when he admitted the offence; and also that he had once before been convicted for similar delinces, almost as well contrived to elude discovery, at Trent Vale. Being now summoned for aiding and assisting, he was fined in the penalty for that offence, £200; and on his expressing whether, when in prison for default of payment, he should be liable to be convicted of being the owner of the still, Mr. Rose said, certainly, the Excise-laws were, no doubt, very severe, but that was the intention of the Legislature, the circumstances of which occasioned, was one of the greatest evils existing in the Potteries. It was also a growing evil; and it would be well that it should be generally known, that, in all clear cases, penalties to the utmost extent would be enforced.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

A prevalent feeling that the Hessian question would be amicably arranged, supported by the advance of prices in Berlin, Paris, and Hamburgh, has caused a buoyant market during the week. Consols have registered an improvement of one per cent, and the closing prices of this day's proceeding, opening on Monday at the advanced quotation of 97⅞, and closing at 97⅞ The Market continued a sady on Tuesday, these prices being maintained; and on Wednesday an advance of about ¼ per cent was registered. Paris prices on Thursday quoting considerable improvement. Consols advanced to 97 ⅞ ⅜ and 97⅞ 98, for the January Account. The adjustment of the monthly Account has, however, a material influence on prices at present. "Continuations" have been at high rates—Bulls being desirous to carry over, as parties for the rise is the most numerous. Should this prove to be the case, prices will still further advance, unless checked by some warlike demonstration. Exchequer Bills continue their previous quotations. India Bonds have receded a few shillings: a notice of reduction to 3 per cent. after June next may account for this. When business closed, the Market was buoyant, at the following prices: Bank Stock, 212; Reduced, 97⅞; New 3 per Cents, 97⅞; Long Annuities, 13 per Cent. Annuities, 98⅛; Long Annuities, to expire Jan., 1860, 7 13-16; Ditto, 30 years, Oct. 10, 1859, 7 9 16. India Stock, 269; Consols for Account, 97⅞; Exchequer Bills, £1,000, June, 67 pm.; Ditto, £500, June, 64 pm.

Although business in the Foreign House has been limited, prices have, nevertheless, been supported; Mexican and Russian (in a slight degree) displaying an upward tendency. Mexican improved to 32¾ on Wednesday, and maintains the advance. Russian Four-and-a-Half per Cents also sharing in the improvement. Prices in Peruvian, Portuguese, and Dutch have been well maintained, and the Market closed firmly with quotations as follows:—Mexican, Five per Cent., 1845, 32¾ Ex Coupons, 33¼; Ditto, Account, 32⅝; Peruvian Bonds, Four-and-a-Half per Cent., 71⅛; Ditto, Account, 70¾; Ditto, Deferred, [illegible]; Portuguese, Converted, 35; Ditto, Four per Cent., 34¾; Russian Bonds, Four-and-a-Half per Cents, 100¾ Ditto, Five per Cent., 1850, Account, 103¾; Venezuela Bonds, Two-and-a-Quarter per Cent., 30⅜; Dutch, Two-and-a-Half per Cent., 12 Guild., 57⅜; Ditto, Four per Cent. Certificates, 87⅞.

Shares have been in demand at improved quotations, and a large business has been transacted Prices at the close of the week were not quite at the highest range, in consequence of some speculative realising. The last quotations are: Aberdeen, 10; Aylesbury, 4; Birmingham, Boston, and East Junction, 3; Birmingham and Oxford Junction, calls duly paid, or with a guarantee, 25; Birmingham, Wolverhampton, and Dudley, with a guarantee, 23; Exeter, 73; Daledonian, 10⅜; Ditto, 4½, Preference, 5⅜; Chester and Holyhead, 16½; Ditto, Preference, 41; East Anglian (£22½ and £ and 2 and D), 3⅜; Ditto (£3 10s.), 8 per Cent., Pref., 1⅜, Eastern Counties, 6⅝; Ditto, New Pref., Six per Cent., 11 ⅜; East Union, 3 and C Shares, 4⅜; East Lancasn, 10⅜; Great Northern, 15½; Ditto, Halves, A, Deferred, 4⅜; Ditto, Halves, B, 6 per Cent., 10⅝; Ditto, 5 per Cent. Preference, 12½; Great Southern and Western (Ireland), 39; Great Western, 73⅝; Ditto, New, £17, 10; Lancaster and Carlisle, 6⅝; Lancashire and Yorkshire, 22½; Ditto, Fifths, 4; Leeds and Bradford, 94⅜; London and Blackwall, 7⅛; London, Brighton, and South Coast, 85; Ditto, Guaranteed 5 per Cent. (late Croydon Thirds), 11, London and North Western, 1 5⅛; Ditto ditto, New Quarters, 19⅝; London and S-Western 70⅜; Ditto New £50, 57½, Manchester, Buxton, and Matlock, 1⅜; Ditto, New £10 Preference, 9⅛; Midland, 43⅜; Ditto, £50 Shares, 14; Ditto, Birmingham and Derby, 22; Newmarket, 3; Norfolk, 22; North British, 8; Ditto, Preference, 4⅜; North Staffordshire, 8⅜; Oxford, Worcester, and Wolverhampton, 18; Reading, Guildford, and Reigate, 12⅜; Royston and Hitchin, 7½; Scottish Central, 12½; Shrewsbury and Birmingham, Class A, 6⅜ dis.; Ditto, Class B, 6½ dis.; Shropshire Union, 2⅜; South Devon, 12⅜; South-Eastern, 20½; South Wales, 23; Wear Valley, Six per Cent. Guaranteed, 19; Wilts, Somerset, and Weymouth, 42; York, Newcastle, and Berwick, 17⅜; Ditto and Newcastle Extension, 12½, Ditto G. N. E., purchase or preference, 6½; Anglo Italian (late Italian and Anglo), 2½; Namur and Liege, 7⅜; Northern of France, 14⅜; Orleans and Bordeaux, 2⅜; Paris and Strasbourg, 4; Sambre and Meuse, 5⅜

FRIDAY AFTERNOON.—The Consol Market has been flat to-day, and prices have shown signs of weakness. The Three per Cents, Money and Account, have marked 97⅜ ⅜, the Three per Cents Reduced, 99⅜; and the New Three-and-a-Quarter per Cents [illegible]. Bank Stock, 212⅜. Exchequer Bills, 67s pm. Foreign Bonds and Railway Shares are unchanged.

THE MARKETS.

CORN EXCHANGE (Friday).—The present week's arrival of English wheat up to our market, coastwise, has been very moderate, only 1200 qrs. mostly from Essex and Kent by land carriage and sample this week from up the river Medway. Owing to the small number of both coasters and factors, the demand for wheat was but a limited one, and the large import of foreign flour—10,850 sacks and barrels—the demand for all kinds of wheat of British growth was to a large extent checked, at barely Monday's prices. Nearly 7000 quarters of foreign wheat have come fresh to hand, and 4000 quarters were sold at previous currencies. The middling and inferior kinds so little was doing that their value was almost nominal. The late supply of barley was on the previous week's terms, malting parcels changed hands at full prices, but other kinds were very dull. We had a fair inquiry for malt, and late rates were fully maintained. With oats we have scarcely supplied. The demand for beans was rather steady, at full pr. Beans, peas, indian corn, and flour commanded very little attention

ARRIVALS. English: wheat, 2220; barley, 2090; malt, 1960; oats, 340; flour 1030. Irish, wheat, 920; barley, 1220; oats, 5340; flour, 70.

English. Wheat, Essex and Kent, red, 38s to 40s; ditto, white, 40s to 45s: Norfolk and Suffolk, red 36s to 40s; ditto, white, 38s to 44s; rye, 29s to 30s; grinding barley, 21s to 23s; distilling ditto, 24s to 26s; malting ditto, 30s to 36s; Ware & mal, 40s to 44s; Chevalier ditto, 44s to 48s; brown ditto, 42s to 44s; Kingston and Ware, 50s to 52s; Chevalier, 52s to 56s: Yorkshire and Lincolnshire ditto, 44s to 48s; potato ditto, 19s to 22s; Youghal and Cork, black, 15s to 18s; ditto, white, 16s to 19s; tick beans, new 23s to 27s; ditto old, 28s to 30s; grey peas, 30s to 32s; maple ditto, 34s to 36s; white ditto, 37s to 39s per quarter; Suffolk and Essex oats, 20s to 23s; Scotch, 23s to 28s; Yorkshire and Lincolnshire, 22s to 23s per 280 lbs.—*Foreign.* Rouen red wheat, 40s to 42s; white, 42s to 45s; barley, 24s to 26s; oats, 15s to 17s; beans, 24s to 26s; peas, 24s to 26s per quarter. Flour, American, 20s to 23s per barrel.

The Seed Market.—Canary seed is very dull insale, at a reduction of from 1s to 2s per quarter. In other articles scarcely any business is doing:—

LINSEED.—The demand for foreign is to-day limited, crushing, 23s to 44s; Mediterranean and Odessa, 42s to 43s; hempseed, 32s to 35s per quarter. Coriander, 16s to 24s per cwt. Brown mustard-seed, 5s to 9s; white ditto, 5s to 7s; tares, 5s to 6s per bushel. English rape-seed, new, 23s to 27 per last of ten quarters. Linseed cakes, English, 13s 5s to 13 0s; Foreign, 12s 5s to 12s 10s per ton. Rapeseed cakes, £4 to £5 5s per ton. Canary, 45s to 56s per quarter English clover-seed, red, new, 45s to 54s; white, 45s to 54s extra, up to —s. Foreign, red, —s to —s; extra, —s to —s; white, —s to —s; extra, —s per cwt.

Bread.—The prices of wheaten bread in the metropolis are from 7d to 7½d; of household ditto, 5d to 6½d per 4lb loaf

Imperial Weekly Average.—Wheat, 40s 9d; barley, 24s 8d; oats, 17s 1d; rye, 27s 6d; beans, 28s 8d; peas, 28s 2d.

The Six Weeks' Average.—Wheat, 40s 1d; barley, 24s 3d; oats, 17s 11d; rye, 25s 8d; beans, 28s 8d; peas, 28s 2d.

Duties.—Wheat, 5s 0d.; barley, 1s 0d; oats, 1s 0d, rye, 1s 0d; beans, 1s 0d, peas, 1s 0d.

Per Gazette.—A public sale of 693 packages has gone off slowly, yet prices have ruled nearly Several parcels of Ceylon have changed hands on Liverpool account, and on the whole the market wears a healthy aspect. Common sound Congous is quoted as is 5½d to is 1d per lb.

Sugar.—For most kinds of raw sugar the demand is somewhat inactive In prices, however, no material change has taken place Refined goods very dull at 42s for brown lumps for grain and crushed sugars are very dull

Coffee.—We have to report an improved inquiry for good ord. native Ceylon, at 44s to 45s 6d per cwt. Plantation do., foreign coffees are dull and at a decline

Provisions.—For Irish butter the demand is somewhat active, at an improvement in value of 2s to 3s per cwt. Bacon, Waterford, 58s to 60s; Limerick, 56s to 58s; Waterford, 74s to 76s; Cork, 82s; Limerick, 72s to 75s. Tralee, 72s to 74s; and Sligo, 70s to 74s per cwt. English ditto, in moderate request, at 76s to 80s. Fine weighty Hams, 90s to 96s per cwt.; fresh 2s to 12s per dozen lb. Dutch butter is still advancing. Fine Friesland is worth 90s to 92s per cwt., and 8s to 8s 2s per dozen pots. Second quality, 4s to 6s. Irish, new, 72s to 74s per cwt. Limerick, sizeable, 44s; heavy, 40s per cwt. Most other kinds of provisions are quite inactive

Tallow.—The stock of tallow is now large, yet an increased business is doing, at full prices. P. Y. C. on the spot is selling at 37s to 37s 6d per cwt.

Oils.—Linseed has marked is lower to-day and, in some instances the quotations are in favour of the sell

Spirits.—East India rum is in good request, at 1s 6d to 1s 6½d per gallon, proof. We have a free sale for Leewards, at 1s 7½ 1s 8d per gallon. The inquiry for brandy is steady, at 1s 6d to 1s 6½d for foreign, and 1s 5d for Cognac

Hay and Straw.—Meadow hay, £2 8s to £3 15s, clover ditto, £3 to £4 2s; and straw, £1 to £1 8s per load.

Potatoes.—Selected samples are in good request, at very full prices, viz. 75s to 90s per ton. In other kinds a moderate business is done.

Cattle, Friday.—Current Prices. Inferior Welsh Mules, 18s 6d; Wylam, 14s 0d; Gosforth, 13s; Eden Mains, 10s; Heaton, 10s 6d; Lambton, 10s 9d; Hartley, 4s per ton

Hops, Friday.—An active demand has to-day prevailed, and

THE NELSON COLUMN,

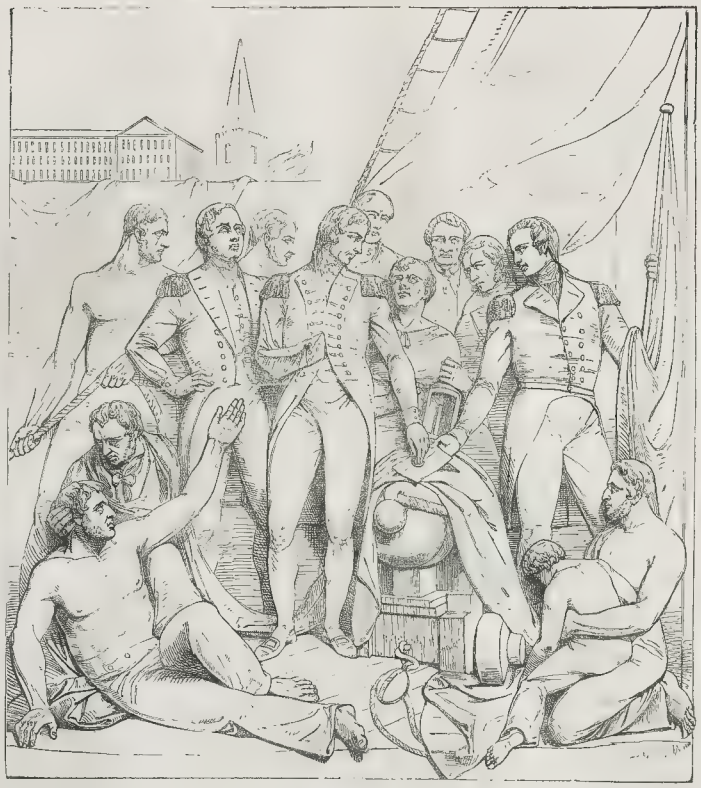
TRAFALGAR-SQUARE.

The Bombardment of Copenhagen is the incident in the life of the great Admiral forming the subject of the bas-relief just placed on the pedestal of the Nelson Column, on the panel facing the Strand. It is the third of the series, and was designed and modelled by the late Mr. Ternouth. The point of time chosen is where Nelson is sealing his despatch to send by the flag of truce. Nelson is standing in the middle of the group pressing the seal on the letter, which the bearer of the flag is resting on a gun. A sailor holding a lantern, and a group of officers, surround Nelson, interested spectators of the scene. There are some good points in the treatment of the group; but, on the whole, it is not so effective and masterly as the two other bas-reliefs. There is a certain air of stiffness throughout the whole, and of the two groups at the lower corners from each having two figures, the effect is bad, as they appear to form an episode unconnected with the main incident; they appear more as if the two parties had been fighting on their own account—the groups, in fact, conveying the idea of a pugilistic encounter, rather than that of a great battle. Besides the group of principal characters, there are sailors hauling in a cable; portions of a sail and ladder of the ship, and, in delicate relief, a church and city partly in flames, indicative of the doomed city on which the broadsides of Nelson's fleet are pouring their iron shower.

It is bas-relief was cast at the foundry of Messrs. Moore, Fressange, and Moore, where that of the Nile was also executed.

The incident is thus narrated in Clarke and Arthur's "Life of Nelson," (page 608):—

"The action now continued with unabated vigour. About two P.M. the greater part of the Danish line had ceased to fire: the taking possession of such ships as had struck was, however, attended with difficulty; partly by reason of the batteries on Amak Island protecting them, and partly because an irregular fire was made on our boats, as they approached, from the ships themselves. Lord Nelson naturally lost temper at this, and observed, 'That he must either send on shore and stop this irregular proceeding, or send in our fire-ships and burn them.' He accordingly retired into the stern gallery, and wrote, with great despatch, that well-known letter addressed to the Crown Prince, with the address, '*To the Brothers of Englishmen, the brave Danes*;' and in order to show that no hurry had ensued upon the occasion, he sent for a candle to the cockpit, and affixed a larger seal than usual."



BRONZE RELIEF, BY TERNOUTH, FOR THE NELSON MONUMENT, TRAFALGAR SQUARE.—THE BOMBARDMENT OF COPENHAGEN.

NAVAL AND MILITARY.

Siege Operations.—A series of siege operations took place on Wednesday at Chatham. They were to have been honoured by the presence of General Radowitz; but the gallant general was unavoidably absent. The operation of sapping, according to divers most approved methods, was performed by a portion of the force from Brompton and the Sappers and Miners of the East India Company, who also exhibited the different modes of pontoon bridging. The day was wound up, after the blowing up of a redoubt and destruction of a battery, by a sham siege, in which no accident occurred, and the numerous spectators present were amply satisfied. The operations of the day were under the command of Col. Sir F. Smith.

Arrival of Troops at Ceylon.—Detachments of artillery, 19th and 37th Regiments—in all 5 officers and 180 men—on board the ship *Columbine*, arrived at Columbo on the 4th September.

New Militia Act.—There are still rumours that the Duke of Wellington has at last convinced the Government of the absolute necessity of balloting the militia, and that we shall have a new Militia Act, and also a bill for enlisting seamen, introduced next session.

Shell Jackets.—A general order, dated Nov. 24, has been published by the Earl of Cathcart, at Manchester, forbidding the shell jacket being made the constant dress of the soldier when off duty.

Soldiers' Rations.—We noticed last week the contemplated reduction in the price of the rations supplied to soldiers in the colonies. It may now be added, that the extra expense in conforming this boon on the soldiers is calculated will be about £70,000 per annum.

The Medal for Egypt.—The returns or lists of the claimants of this medal are being sent in to the authorities at the Mint, as rapidly as they can be collected.

Army and Ordnance Expenditure.—An enormous blue book was issued to the public on Saturday last, containing the evidence taken before the select committee appointed last session to inquire into the expenditure on account of the army and ordnance. The committee accompany the evidence by a report that they had not had time to give the subject full consideration. They therefore recommend the appointment of the committee at an early period of the next session. The volume contains 1233 closely printed pages.

New Great-Coats for the Artillery.—A new and better description of great-coat, somewhat similar to the cloaks worn by the Royal Horse Artillery, of a dark blue colour, lined with serge, and to have scarlet collars, is about to be issued to the non-commissioned officers of the battalions and field-batteries. It is to be of much better quality than the grey coat now in use, and is calculated to last five, instead of three years, the time allowed for the present great-coats.

The Master-General of the Ordnance has appointed George Chapman, Esq., of the ordnance department, Dublin, to be ordnance storekeeper at Hong-Kong.

Submarine electric telegraph wires have been laid down on the bed of the Hudson above Fort Lee, so as to give a free communication with the south and west.

EMIR KHANJAR, THE PRINCE OF BAALBECK,

LEADER OF THE METAWELI SECT OF MOSLEMS IN SYRIA, ENGAGED IN THE RECENT INSURRECTION AT DAMASCUS.

The family of this Chief are the lineal descendants of the great Shehab family, one of the most intrepid and warlike sect of Moslems in Turkey. They are called "Metawell," and occupy the country around the plains of the far-famed Baalbeck, the ancient Cœle-Syria. The other Moslems hold this sect to be unorthodox, because, like the Sheites of Persia, they are followers of the sect of Ali; still, they cleave to the same doctrines and ceremonies of the Koran, but adhere, as the orthodox Moslems assert, to the wrong line in descent from the Prophet.

The Government of Baalbeck has been in this family for the last thousand years, and they frequently revolted from their allegiance to the Sublime Porte. They always professed to be the great friends of England; and, to do them justice, invariably entertained most hospitably all European travellers, especially those from England. They are expert swordsmen; and the present Emir, represented above, is one of the most daring soldiers and distinguished jereed players in any part of Asia. He on frequent occasions put the Turkish troops at defiance with a small troop of his own horsemen; and, when closely pressed, betook himself to his mountain fastnesses north of Baalbeck, and about the Lebanon north of the "cedars" of Lebanon. He on other occasions offered his services to the authorities at Damascus; and on one occasion—in 1845—when the Bedouins assembled some 30,000 strong in the Hourane country, east of the city of Damascus, he offered to take the command of the irregular troops, but was not permitted.

The Princes of Baalbeck collected the taxes for the Government from the people, and were charged with various unfair exactions from time to time; and at last these complaints became so general, that the Pacha at Damascus, in whose jurisdiction this district is situated, declined giving them any further official employment. This exclusion from office is, no doubt, the cause of the present revolt, and now that they are exiled, the Sultan is likely to make his sentence permanent. The Conscription is very odious and unpopular amongst the Orientals, and it was the only motive why the Syrians especially disliked the reign of Ibrahim Pacha in Syria: otherwise, the Egyptian Government was more popular, and it is said there was more done for the country in that short time than ever since. The present Government in Syria is not allowed a fair opportunity of carrying out its objects: it is hampered by too much European intrigue and petty official diplomacy—worse than useless in its efforts.

EMIR KHANJAR THE PRINCE OF BAALBECK, LEADER OF THE INSURRECTION IN DAMASCUS.

THE MASSACRE IN ALEPPO.

THE POPE THE CAUSE OF IT.

It is a curious coincidence that the most anti-liberal Pope Pius the IX. should, just now, be the fertile source of creating excitement and popular agitation in the east, in the west, and in the south, and, for aught we know at this moment, in the north also.

The exemption of the Jew and Christian populations of Turkey from the Conscription is very distasteful to the Moslem population, which is far the largest; and on a recent occasion there was a Greek Catholic Bishop's procession, which is very disagreeable to a Moslem people—the tolling of bells or any religious Christian demonstration is most galling to their feelings, and particularly so at this critical time. Thus the excited and angry populace, joined by the Bedouins of the desert, attacked the Christian quarter of the city, and the loss of life is said to be between four and five hundred, the amount in property pillaged somewhere between £40,000 and £50,000, and great injury and indignity offered to females and children. The Eastern cities are divided into separate quarters, and occupied by Jew, Gentile, and Moslem, the latter generally more than two-thirds of the population. The population of Aleppo is somewhere about 100,000; about 5000 Jews, and 15,000 Christians of different sects—the Greek Catholic forming the largest sect, the Latin and Maronite and Syriac, the smallest.

MEDAL COMMEMORATIVE OF THE MASSACRE OF

ST. BARTHOLOMEW

The Gold Medal here represented was struck by order of the Sacred Convocation of Prelates, held at Bayonne, in 1565, in commemoration of the massacre of St. Bartholomew, and the resolution of the Convocation further to exterminate heresy by the sword throughout Christendom. The crowned figure in the centre represents Charles IX. preparing to destroy Heresy, which lies chained at his feet, while the Queen Mother, Catherine de Medicis, at whose instigation that fearful butchery was perpetrated, appears as Minerva, her favourite impersonation, and offers the alternative of conversion, to her likewise refers the legend at the foot of the medal, "Nil nisi consil," so often to be observed on French coins of that date. The accompanying illustration is taken from Mezeray's work, and forms a somewhat startling commentary on Cardinal Wiseman's recent declaration of the mercy and forbearance, long-suffering, and meekness of the Romish Church.

THE "MASSACRE OF ST. BARTHOLOMEW" MEDAL.

Extraordinary!—We find the following account of an extraordinary cure in the *Union Medicale*:—"Phineas Gage, aged twenty-five, employed in the construction of a railway, was engaged in charging a hole made in a rock with powder, in order to blast it, when, supposing that the powder had become mixed with sand, he stirred it up with a long iron rod. An explosion instantly took place, and the bar was driven completely through the head of the man, and fell at a short distance from him, covered with blood and part of his brain. The iron rod weighed about six pounds, was thirty-four inches in length, and about an inch thick. It entered the left angle of the lower jaw, and came out at the top of the head, behind the bone of the forehead. The wounded man was knocked down by the blow, but immediately rose again, spoke to the persons round him, got up into a cart in which he kept standing while it was being driven for more than a mile to an inn, where he alighted and ascended a long staircase, and went to bed in the possession of his mental faculties. A surgeon arrived in half an hour after the accident. The upper part of the head was extensively fractured, and the wound at the side of the jaw was large enough to admit the finger. The small pieces of the skull were removed, the larger bones adjusted, and the wounds dressed. We shall not enter into the details of this interesting case, but merely say that the patient promptly recovered with the loss only of the sight of the left eye."

The *Publisher's Circular*, for December 2, contains a list of 78 new works on the Papal question, published between Nov. 14 and Nov. 30.

THE ILLUSTRATED LONDON NEWS

No. 459.—VOL. XVII. SATURDAY, DECEMBER 14, 1850. [SIXPENCE {WITH SUPPLEMENT GRATIS.

THE EARL OF CARLISLE AT LEEDS.

WHERE shall the jaded reader of newspapers find novelty? Where in those broad columns of print shall he look for instruction conveyed in an attractive form? Weary of Cardinal Wiseman and the endless Popish controversy—weary of the German question and its tortuous windings—weary of the French Legislative Assembly, and its gropings in the dark in the vain search after a principle and a belief—weary of the law courts, and their often-repeated tales of folly and crime—and more than weary of the continual roar and war of politics at home and abroad—there is scarcely a topic left to which he can turn. The progress of the "Crystal Palace" presents, it is true, an attractive theme. The Cattle Show—proving as it does that British agriculture, in its pastoral department, has not altogether lost heart and hope under a Free-Trade *régime*—offers another agreeable interlude amid the jangle and chatter of political and theological controversy, and as such it is to be welcomed along with other precursors of the fast-approaching Christmas. But for novelty, affording both pleasure and instruction, commend us to the recent appearance of the Earl of Carlisle before the public of Leeds. Hitherto, if Peers of the realm and Cabinet Ministers have been teachers of the people, it has only been in their capacity of law-makers. Lord Carlisle has descended from that more ambitious eminence, and become a teacher of the people on a humbler platform; and, let us add, without the slightest disrespect to his legislative labours, or those of any other Peer, in quite as useful, and in an infinitely more agreeable manner. The two lectures which his Lordship delivered last week to the members of the Leeds Mechanics Institution are signs of the times, to be cordially welcomed by all who love to see a friendly fusion of classes on the broad field of a common intellectual enjoyment. They do honour both to the heart and the head of this accomplished person. They will tend, at the same time, to strengthen the public respect for our aristocracy, which is not contented to rest its claims on birth, fortune, and position alone, but which can send its representatives to the intellectual arena, to win their knightly spurs in the ennobling and peaceful rivalry of science and literature.

We hope, for many reasons, that the two lectures of Lord Carlisle, although they may be his first, will not be his last; and that he will give to the world many more such sensible records of personal adventure as the history of his trip to America, and many more such elegant tributes to the genius of the literary worthies of his country, as his essay on the writings of Pope. Although it is not our intention to review these lectures as if they were books, we cannot allow the opportunity to pass, without expressing our hearty concurrence in one of the many correct opinions which his Lordship expressed in the lecture upon Pope; and we select it because it, has a higher and more general reference than to the subject of his oration, and because it is a truth, as yet imperfectly understood and appreciated by a large class of persons, who fancy themselves judges of literature; and also because it combats a misconception which has done much in our day, as well as in days gone by, to injure the public taste. The great poets and authors of a nation do more than its victories in war, or its achievements in industry and commerce, to fix it in the estimation and remembrance of the world. Greece and Rome live in Homer and Virgil; Spain has scarcely anything left to boast of, except Cervantes; and Camoens will shed lustre upon the name of Portugal, when all the Braganças are forgotten.

The highest class of poets are, as Lord Carlisle says, "the tuneful monarchs and law-givers of mankind." He did not, in lecturing upon Pope, attempt to elevate his hero to this high pedestal; but, in drawing a comparison between the productions of the youth and the maturity of his author, he quoted Pope's own lines upon the genius of his manhood:—

> That not in Fancy's maze he wander'd long,
> But *stoop'd* to Truth, and moralised his song.

Lord Byron remarked upon this passage, that Pope should have written "rose" to Truth. Lord Carlisle acquiesced—as who, that really understands what poetry means, will not?—in the criticism of the later poet, and added his own opinion, "that the highest of all poetry was ethical poetry, as the highest of all earthly subjects was moral truth." We are glad that Lord Carlisle dwelt so emphatically upon this point. There is a foolish and careless idea abroad among the half-educated masses, and even among many better educated people, who should know better, that rhyme and poetry are nearly, if not entirely, synonymous; and that poetry bears about the same relation to other literature, as the ballet does to the drama. It is considered that mere fancy and "filagree," and not the highest moral, religious, and scientific truths, come

PRESENTATION OF ADDRESSES TO HER MAJESTY, AT WINDSOR CASTLE.—THE ANTE-ROOM TO ST. GEORGE'S-HALL.—(SEE NEXT PAGE.)

within the province of poetry, and that the business of the poet is not to instruct, but simply to amuse—as if he were the mountebank of literature, or a jingler of sounds for the titillation of the tympanum. It may be doubted whether Pope, or the poets of his time, understood the height and depth of their vocation. Pope talked of stooping to "truth," as if "fancy" were higher than truth, and did not include it. Swift said—

> Let me in those shades compose
> Something in verse as true as prose

Waller, some years earlier, said, that poets "succeeded better in fiction than in truth;" and a whole host of poetasters accepted the opinions of these writers as their guides in the poetic art. The misconception still prevails, and finds a daily and hourly expression in the mouths of the herd of critics, and of those who put their faith in them. This age, with its wondrous discoveries and inventions—its searching philosophy—its triumphs over space and time, by the agency of electricity—and its possibly still greater triumphs yet to be achieved, by agencies at present unknown, but not undreamed of—which its practical poetry of daily life, unsurpassed and unequalled since the world began—is said to be hostile to the poetical spirit, and to be too much engrossed with material wants, to have leisure or inclination for the strains of the poet. If poetry and verse-making were convertible terms, this would no doubt be quite true; but they are not convertible. If all the verses that are not poetry were swept out of existence, a whole world of rubbish would be removed, but poetry would remain to delight and elevate the mind of universal humanity. We are glad that Lord Carlisle did literature the good service to impress this fact upon the attention of his audience; and we rejoice to believe, that, sooner or later, the old error, that poetry has nothing to do with truth, will die out of the popular understanding. The writers of the last generation had higher notions of their vocation than those who preceded them; and all true poets, from the days of Wordsworth to our own, have asserted loudly, in all times and places, the dignity and sanctity of their art. They knew that if they did not make the world, they were good for nothing; and, so far from thinking that the age was hostile or indifferent to those writers who fully understood their duty, they proclaimed their belief that the brightest day of English literature was yet to come, and that never were true poets and other great authors so honoured in the past as they would be in the future. In their belief we fully participate. Misconception on the part of the public will be removed in proportion as authors become earnest and truthful. Men of letters are learning more than ever to respect themselves; and when they shall do this still more effectually, the rest will follow. A literature that has no truth, is a house without a foundation. With truth—in their lives as well as in their writings—there is no position of social usefulness and distinction to which the great authors of this country might not aspire. In the meantime, they will be grateful to such men as Lord Carlisle, who act as pioneers for their elevation.

ADDRESSES TO THE CROWN.

The city of London, the University of Oxford, and the University of Cambridge on Tuesday laid before their Sovereign the expression of their indignation at the endeavour by the Bishop of Rome to exercise a power which the realm of England has almost ignored. The attendance was worthy of the great occasion.

The Lord Mayor and officers of the Corporation assembled at Guildhall at half past eight o'clock, and proceeded thence, at nine o'clock, to the Great Western Railway station, Paddington, which they left for Slough soon after ten o'clock.

On the members of the corporation arriving at Slough, they drew lots for the carriages in which they were to proceed to and from the royal residence, the procession having been formed, proceeded in due order to Windsor, arriving there by a quarter before twelve o'clock.

The procession from Slough to Windsor was formed in the following order:—

> Foot constables on foot, four abreast.
> The Commissioners of Police.
> Lord Mayor's Footmen, in state liveries
> Officers of the Lord Mayor's Household in carriages.
> Sword-bearer.
> City Marshal, on horseback.
> The Right Hon. the Lord Mayor, in his carriage, drawn by six horses,
> attended by the Swordbearer, Common Crier, and Chaplain. the Rev. Dr. Vivian
> His Lordship's Beadle on foot at his grave, bearing his mace.
> The Aldermen past the chair in their carriages, each attended by his Beadle on foot, in his
> state livery, bearing his mace.
> The Recorder in his carriage.
> The Aldermen below the chair in their carriages, each attended by his Beadle as above.
> The Sheriffs in their state carriages, accompanied by their Chaplains.
> The principal officers in their carriages.
> The Junior City Marshal on horseback.
> The Mover and Seconder of the Address in their carriages.
> The other members of the Corporation in their carriages.
> Police Constables on foot, four abreast.
> The procession was flanked by mounted police.

The Great Western Railway Company placed at the disposal of the corporation the railway carriage hitherto used by her Majesty. The company took down 70 private carriages and 200 horses for the accommodation of those who went by the special train.

The aldermen present were, Sir Peter Laurie, Farebrother, Thompson, Copeland, Sidney, Wilson, Challis, Sir James Duke, Sir Chapman Marshall, Finnis, W. Hunter, Moon, Hooper, and Salomons

Of the members of the Corporation there were present, the Recorder, the Sheriffs of London and Middlesex, Messrs. Carden and Hodgkinson; the City Remembrancer, Mr. John Wood, Mr. Henry Blake; Deputies Hale, Peacock, Obbard, Lott, Gomer Abbey, Bailey, Brewer, Messrs. Bailey, Brown, Dakin, Farrar, Fox, Freeman, Hopgood, Snelling, R. Taylor, and more than 100 other members of the Court of Common Council.

The Common-Serjeant, Messrs. Rylands and Locke, common pleaders; the Comptroller, Secondary Potter, the Commissioner of Police (Mr. Harvey), the Solicitor, the Bridge-Comptroller, the Architect, Under-Sheriffs Law and Ellis, and Mr. Josiah Temple, keeper of the Guildhall Library attended.

Special trains were also engaged for the members of Oxford and Cambridge; and at twelve o'clock, in spite of the cold, foggy day, nearly all the inhabitants of Windsor had turned out into the streets, to gaze upon the variegated crowd of aldermen, town-councillors, doctors, professors of the various sciences of arts, and graduates in the various faculties, who filled the streets. The Corporation moved comfortably along in vehicles of various descriptions, from the gorgeous carriages the Mayor and Sheriffs on occasions fly pressed into service at the railway station. The Universities numbly marched on foot—two and two—heads of houses, proctors, bedells, fellows and tutors, doctors, masters, and bachelors, trudged along, over the soft, damp clay from the Town-hall to the Palace, through files of people, who stood silently looking on. The effect of the scene was solemn. When the procession arrived at the Castle, the fog, lifting a little, disclosed a dense crowd of gazers up at a house of the occasion. Pouring through the gates into the courtyard, the mingled procession of corporators and universitymen passed on to the entrances, through a Guard of Honour drawn up to receive them, and were soon mixed together in the hall.

ADDRESS FROM THE COURT OF LORD MAYOR AND ALDERMEN.

The Corporation having formed in one of the large reception-rooms to the right of the staircase, had the honour of being first introduced to her Majesty, who was seated at the end of St. George's-hall, with her court around her. Among those on the right of the throne were Lord John Russell, Sir G. Grey, the Marquis of Westminster, Lord Marcus Hill, the Marquis of Anglesey, the Ladies in Waiting, and two pages of honour, stood on the left, and his Royal Highness Prince Albert received the addresses and presented them to her Majesty. The sides of the hall near the throne were lined with the gentlemen of the Queen's body guard in full uniform; and all the ministers were in the Windsor or other official uniform. Her Majesty was dressed in simple mourning. The Corporation having advanced to the Royal presence, drew up, and the Right Hon. J. S. Wortley, the Recorder, then read, in audible tones, the address of the Court of Lord Mayor and Aldermen.

Her Majesty listened with the greatest attention to this address, and at several portions of it slightly inclined her head, as if in token of assent; and, when it had been presented to her, and had been handed by her to Sir G. Grey, read, in a clear, sweet voice, the following "most gracious answer," every word of which was caught with the greatest avidity:—

"I receive with much satisfaction your loyal and affectionate address.

"I heartily concur with you in your grateful acknowledgments of the many blessings conferred upon this highly favoured nation, and in your attachment to the Protestant faith and to the great principles of civil and religious liberty, in the defence of which the City of London has ever been conspicuous.

"That faith and those principles are so justly dear to the people of this country, that I confidently rely on their cordial support in upholding and maintaining them against any danger with which they may be threatened, from whatever quarter it may proceed."

When the reply had been handed to the Corporation, Sir P. Laurie, the mover, and Mr. Alderman Farebrother, the seconder of the address, had the honour of being presented to her Majesty by the Lord Mayor; after which the deputation retired

COURT OF COMMON COUNCIL.

The deputation from the Court of Common Council, headed by Mr. John Wood and Mr. W. Blake, were next introduced, and their address was also read by the Recorder.

Her Majesty was graciously pleased to give the following reply:—

"I sincerely thank you for your renewed assurances of unaltered attachment to my person and throne, and to the constitution of this country.

"Your tried and consistent advocacy of the equal enjoyment of civil rights by all classes of your fellow-subjects entitles the expression of your sentiments on this present occasion to particular consideration.

"You may be assured of my earnest desire and firm determination, under God's blessing, to maintain unimpaired the religious liberty which is justly prized by the people of this country, and to uphold, as the purest safeguard, the pure and Scriptural worship of the Protestant faith, which has long been happily established in this land."

The deputation then retired, after the usual ceremonials; and

THE CITY LIEUTENANCY

were introduced, in all the honours of their full uniform, and presented their address; to which her Majesty was pleased to return the following most gracious answer:—

"Your renewed assurances on the present occasion of devoted loyalty and affection to my person and Government is highly gratifying to me.

"It will continue to be, as it has ever been, my earnest endeavour, in the exercise of the power and authority intrusted to me, as the supreme governor of this realm, to maintain the independence and uphold the constitutional liberties of my people against all aggression and encroachment."

The City Lieutenants then retired, and joined their corporate brethren in the Waterloo-hall, where a substantial luncheon was prepared for them. While those proceedings were taking place, the members of the Universities were assembled in two separate reception-rooms at the left off the staircase. The Duke of Wellington was an object of attraction common to them both, and Cambridge flocked freely into the Oxford-room to gaze on his Grace, who was seated by himself as one side of the apartment, in the full dress of Chancellor of Oxford, while by him stood Sir Harry Inglis and the authorities of the University. His Grace looked remarkably well, and at times said a few words to Sir H. Inglis and his friends around him. After the corporation had retired, the members of

THE UNIVERSITY OF OXFORD

had the honour of being introduced to her Majesty. The order of presentation was as follows:—Dr. Wynter, President of St. John's College; Dr. Symons, Warden of Wadham College; Dr. Harington, Principal of Brasenose College; Dr. Norris, President of Corpus College; Dr. Macbride, Principal of Magdalen Hall; Dr. Williams, Warden of New College; Dr. Ogle, Professor of Medicine; Dr. Acland, Christ Church; Mr. Hansell, Magdalen College; Mr. Gondin, Christ Church; Mr. Conybeare, Christ Church; Mr. Bliss, Magdalen College; Sir H. Inglis, Dr. Bliss, Principal of St. Mary Hall and Registrar of the University; Rev. Dr. Crawfurd, Mr. Ernest Hawkins, Rev. Mr. Dodson, Rev. Mr. Short (Trinity), Rev. Dr. Newman (Magdalen), Rev. J. C. Cox, M.A., F.S.A. (All Souls), Rev. F. Litchfield (Merton College), Rev. D. Thompson, Principal of St. Edmund Hall; Rev. Dr. Goulden, Rev. W. Jenkins, Rev. N. Dodson, Rev. E. Hussey (Exeter Hall), Dr. Richards (Exeter), the Hon. and Rev. Gerald Wellesley, &c. His Grace the Chancellor having then advanced to the foot of the throne, read in his peculiar, energetic manner, and with great vigour and animation, the address, to which her Majesty listened in an expressive and dignified attitude of attention.

The address, having been presented to her Majesty, was handed by her to Sir George Grey. Lord John Russell, who had been standing to the left of the throne, as if deeply interested in the contents of the document, scrutinized the faces of the deputation very keenly as her Majesty returned the following gracious reply:—

"I accept with much satisfaction the renewed proof afforded by your address of your attachment and loyalty to my person and government, and of your steadfast adherence to the principles of the constitution.

"It has ever been, and ever will continue to be, my endeavour to promote the efficiency and maintain the purity of our Reformed Church, the supreme government of which, under God, is by law confided to me. It is highly gratifying to me to be assured of your faithful adherence to its principles, doctrine, and discipline.

"While I cordially concur in the wish that all classes of my subjects should enjoy the free exercise of their religion, you may rely upon my determination to uphold alike the rights of my crown and the independence of my people against all aggressions and encroachments of any foreign power

"Your earnest endeavour, in the discharge of your important duties, to train up the youth intrusted to your care in faithful attachment to the truths of Holy Scripture cannot fail, under God's blessing, to have a powerful effect in strengthening the defences of our Protestant faith, and in preserving inviolate the privileges which are justly dear to the people of this country."

His Grace the Chancellor then presented several of the heads of Colleges and Halls, who had the honour of kissing hands, after which the deputation retired to the Waterloo-hall.

THE DEPUTATION FROM CAMBRIDGE

was next introduced. After a short delay in the Armoury-room outside St. George's-hall, Prince Albert, Prince of Wales, Duke of Cambridge, came from the hall, and received the deputation with much courtesy conversing for a few moments with several of the gentlemen with whom he was acquainted. The deputation then advanced, headed by his Royal Highness. The following was the address which the deputation was requested to proceed, but, from the eagerness of every one to be first, it was not strictly observed, except in the case of the authorities:—The Deputy Vice-Chancellor, Dr. Amaire, the Marquis of Exeter, the Right Hon. Henry Goulburn, Dr. Whewell, Dr. Cookson, Dr. Cartmell, Dr. Archdall, Dr. Okes, Mr. Pulling, Mr. Worsley, Mr. Drake, Mr. Gell, Public Orator, Mr. Bateson, Proctors Shecker (Trinity), Fenwick (Caius), Mr. Hildyard, Mr. Beeh (Queen's), Mr. Cartmell, Professor Sedgwick, Dr. Broadley, D.C.L., Deputy Professor of Civil Law, Dr. Vaughan, Doctors in Divinity, Doctors in Civil Law, Doctors in Medicine, Messrs. Taylor, Wilkinson, Taylor, Perry, Cumming, Masters of Arts, Bachelors of Divinity, Masters of Arts, Non-Regents, Regents, Bachelors of Law, Bachelors of Medicine, and Bachelors of Arts.

Having arrived at the foot of the throne, his Royal Highness read the address with great clearness and well-marked emphasis.

The Queen, having received the address from Prince Albert, and having given it into the custody of the Secretary of State, proceeded to read the following reply, which was most anxiously attended to. Her Majesty read it with great deliberation, and with decided accents:—

"I thank you for your loyal and dutiful address.

"I fully participate in your expression of gratitude to Almighty God for the blessings which He has been pleased to bestow upon this country, and I rejoice in the proofs which have been given of the zealous and undiminished attachment of English people to the principles of the Reformation.

"While it is my earnest wish that complete freedom of conscience should be enjoyed by all classes of my subjects, it is my constant aim to uphold the pure and Scriptural worship of God established in this realm by the law in this country, and to secure to my people the full possession of their ancient rights and liberties."

The deputation then returned to the Waterloo Hall, and, while partaking of the luncheon, discussed very freely the meaning of the reply. It was generally remarked that her Majesty looked very well, though somewhat flushed; and various opinions were passed with respect to the demeanour of Lord John Russell, who had stood with his finger on his lips and his eyes fixed intently during the greater part of the time that was occupied by the address and reply. In the critical disposition which the occasion evoked, it did not escape some good-humoured comment, that in the whole of the time during which the address was spread, the portrait of a Cardinal (Gonsalvi) ornamented one extremity, and the portrait of a Pope (Pius VII.) the other, and seemed to smile benignantly on the Royal deputation. The portraits had been placed there when the Waterloo Hall was first decorated.

About two o'clock all the members of the deputations had taken their leave, and the Castle resumed its ordinary quiet aspect.

Apartments were taken at Dotesio's Royal Hotel, Slough, for the Lord Mayor and Corporation, and the authorities presenting the addresses of Oxford and Cambridge.

[Next week we shall illustrate more fully than the pages of this week's Number will allow, the Grand State Ceremony of the Presentation of the City Addresses to her Majesty, in St. George's Hall, Windsor Castle; with the Presentations, also, by the Oxford and Cambridge Universities.]

THE CHURCH IN WALES.—Some startling disclosures, says the *Carnarvon Herald*, have recently been made with regard to educational and other charitable funds, as well as to the mode in which official clerical duties had of late been discharged in the parish of Llandudno. The result of these disclosures has been the resignation of the then officiating clergyman. This parish is just midway between the episcopal palaces of Bangor and St. Asaph, and the rectorial tithes belong to the Archdeacon of Merioneth, in whom the patronage of the church is invested.

RAILWAY TUBULAR BRIDGES.—On Thursday evening week, Mr. Edmond Wheeler, C.E., gave his first lecture before the members of the Literary Society, Wellington-street, Islington, on the Railway Tubular Bridges, the construction of the Conway and Britannia Tubular Iron Bridges. The lecture was illustrated by models and diagrams, and gave great satisfaction to an intelligent and discriminating audience.

MILDNESS OF THE SEASON.—On the 5th inst. there was to be seen in the avenue leading to Holland-house, Kensington, a tree, which, having shed its autumn leaves, had renewed those of early spring.

LORD MINTO AND THE REV. E. WILMOT.—The Rev. E. Wilmot, Vicar of Kenilworth, wrote to Earl Minto, asking authority to contradict the statement which had been made in the public journals respecting his intimating, on the part of Government, that they would offer no opposition to this step of the Pope, and has received the following reply:—

MINTO, Nov. 1, 1850.

I very much regret that the reserve necessarily imposed on [illegible] public duties does not admit of my entering into explanations [illegible] connected with my mission to Italy, which I should otherwise have been [illegible] I [illegible] hope, however, that you will receive the assurance in which statements [illegible] are incorrect, to be received with [illegible]

I have the honour to be

FOREIGN AND COLONIAL NEWS.

FRANCE

Tuesday last was the second anniversary of Louis Napoleon Bonaparte's election to the office of President of the French Republic. In honour of the occasion, a great number of individuals had the Legion of Honour conferred upon them, while civil and military promotions were bestowed upon others; and in the evening the City of Paris gave a grand *fête* at the Hôtel de Ville, to commemorate the event. The President of the Republic was present, accompanied by his cousin the Princess Mathilde, Prince Murat, General Excelmans, and other distinguished individuals. At the banquet, the Prefect of the Seine proposed as a toast, "To the President of the Republic," in doing which he took a retrospective glance of France during the last two years, and congratulated the President upon the manifestly improved aspect of the country, with signs of peace and prosperity for the future; all of which he attributed to the happy influence of the sagacity and power which the President had brought to bear upon the Government over which he had been called upon to preside.

The President of the Republic replied by saying that he was glad the confusion and uncertainty which pervaded France a few years ago had disappeared, and given place to prosperity and tranquility; and he felt assured, that, if any modifications were to take place in the future Government of the country, they would be accomplished without disturbance. It would be his delight to endeavour to ameliorate all grievances, and to advance the comforts and the interest of all classes of society. This address was received with enthusiastic applause.

After the banquet, the magnificent *salons* of the Hôtel de Ville, which are unique in Europe, were thrown open to between 3000 and 4000 guests. Bands of music were stationed in the Salle des Fêtes, the Salle du Trône, and the great ball-room, and the dancing was kept up with great spirit till four o'clock next morning

On Wednesday the speech was discussed in all circles. Some condemned it as being a direct attack on the Constitution of February, and as a slur of contempt upon the Constituent Assembly. While others praised it as a straightforward and disinterested address.

M. de Montalembert brought forward on Tuesday, in the Assembly, a report of the committee relative to the observance of Sundays. He said that the repose of Sundays was a blessing and a duty, and had been shamefully violated in France. The non-observance of that sacred day was a public profession of Atheism—a defiance thrown to the face of Providence

UNITED STATES.

The news from the States this week is to the 27th ult. It is not of much interest. The excitement caused by the Fugitive Slave Bill was waning, and all thoughts of a disruption of the Union on that score were beginning to be regarded as absurd. A great Union meeting had been called at Nashville to denounce the proceedings of the Southern Convention, and support the Union. The resolutions of Nashville, as passed, are the same as the Mississippi resolutions, except the one recommending non-intercourse.

CALIFORNIA.

The accounts from California are to the 17th of October. At San Francisco, the news of the admission of California to the Union was received with general enthusiasm. The ships in the harbour fired a round of salutes, a British barque, from Liverpool, hung the first to burn gunpowder on the exhilarating occasion. The American flag was suspended to the breeze in all quarters of the city. Universal joy seemed to have taken possession of all classes. The mining operations were going on with their usual success. The squatter war in Sacramento has not been renewed. Several fights with the Indians have taken place, one of which resulted in the slaughter of twenty-four of the savages, a number of whites having been severely, but not mortally, wounded. The overland emigrants are still exposed to terrible sufferings from famine and pestilence.

COUNTRY NEWS.

THE ELECTORS OF AYLESBURY AND MR. SERJEANT BYLES.—The following address has been issued to the electors of the borough of Aylesbury:—"In Mr. Serjeant Byles' address to you as one of the candidates for your suffrages, he states himself to be a staunch supporter of the Established Church. A man ought not to stand under false colours, and I suppose that before you promise him your votes you should put the following questions:

Did not the Cambridge electors, and the *Cambridge Independent Press*, some months since, upon your return as candidate for the county, charge you with being a Unitarian? Have you not preached Unitarian doctrines from the pulpit? Have you not been a constant attendant at Mr. Belcham's Unitarian chapel, in Essex-street, Strand, and other Unitarian places of worship? Have you not also professed the religion of an Independent Dissenter? When did you leave the Independent Dissenters to join the Unitarians? When did you leave the Unitarians to join the Established Church, which you state has not a staunch friend? Were you not formerly a supporter of the Whig Government? Do you not now hold an appointment, viz. that of Recorder of Buckingham, which was given to you by the Whigs? How long have you ceased to be a Whig, and a zealous supporter of Protectionist principles? Until these questions are satisfactorily answered, the learned Serjeant ought not to be a candidate for our borough.—YOURS, &c., FAIR PLAY.—Aylesbury, Dec. 5."—Mr. Byles met also this address, at a recent meeting of Mr. Baxter's friends, some questions were put on the subject, the answers to which did not seem to give much satisfaction to his supporters. Mr. Calvert's canvass is said to be proceeding satisfactorily to his friends; Mr. Houghton has retired from the contest.

ANOTHER CONVERT TO THE CHURCH OF ROME.—It is with feelings of the deepest regret we announce that E. B. P. Bastard, Esq., of Killey, was received by the Church of Rome on Saturday week.—*Exeter paper.*

ROMAN CATHOLIC LETTER-CARRIERS.—The following letter has been received by the rector of Rugby, in answer to a memorial addressed to Lord Clanricarde, respecting the recent appointment of a Roman Catholic letter-carrier:—"General Post-Office, Nov. 5, 1850. Sir,—I am directed by Lord Clanricarde to acknowledge the receipt of the memorial relating to the appointment of letter-carriers in the town and neighbourhood of Rugby, to which you are the first signatory. The memorialists are in error in supposing that the power of making any such appointment has been vested in Captain Hibbert. It is true that Lord Clanricarde has appointed letter-carriers in or round Rugby who were recommended to him by that gentleman; but Lord Clanricarde is responsible for those appointments, and if an improper nomination has been made, or if any of those letter-carriers have been guilty of misconduct, he is prepared to pay immediate attention to any well-founded complaint thereupon. An insinuation against the character of some letter-carrier is, indeed, made in the memorial, and Lord Clanricarde is reluctant to suppose such an insinuation could be made without good grounds by such highly respectable persons as have attached their names to it. But, even if the individual pointed at were named by him, Lord Clanricarde would not remove any man from an employment, or throw a stur upon his character, without specifying the grave charges, and the grounds upon which they were imputed to him. The only distinct objection made to the persons appointed letter-carriers at Rugby is that they are Roman Catholics. Religious gentlemen, however, are happily no longer a qualification or disqualification for ordinary employments in the public service. Lord Clanricarde believes there are various denominations of Christians residing in and about Rugby, but he cannot conceive it to be any one that a letter-carrier should encourage persuasion should deliver letters. As the signature of the Head Master of Rugby is affixed to the memorial, Lord Clanricarde desires to make no comment upon the danger resulting to that establishment from the receiving improper letters of the carrier who may deliver letters at the school. But if, by opportunities of disseminating tracts, it is meant to imply the disseminating of tracts, the memorialists may be glad to be told that a letter-carrier is prohibited from any paper which has not come regularly through the Post-Office is subject to immediate dismissal. I have the honour to be, with great respect, Sir, your most obedient servant, A. M. BLAKE.

BRISTOL AGRICULTURAL SOCIETY.—At the annual meeting of this society, held on Wednesday, at Bristol, Mr W. Miles, M.P., detailed the following results of experiments he had made with different kinds of manure:—13 tons of rapeize produced 30 tons 15 cwt. of turnips; 3 cwt. of guano, and 17 cwt. ditto; 3 cwt. London manure, 13 tons 9 cwt. ditto; 3 cwt. Flemish, 13 tons 1 cwt. ditto. He then tried a less quantity of artificial manure, with the following result:—10 tons of manure produced 20 tons 3 cwt. of roots; 2 cwt. guano, 14 tons 4½ cwt. ditto; 2 cwt. London manure, 7 tons 14 cwt; 2 cwt Flemish ditto, 10 tons ditto. So that guano held the second place in both. He must say, he had tried experiments till he was nearly tired, and he had come to this conclusion that, of artificial manures, those most worthy of the farmer's attention were guano, bones, and super-phosphate.

THE FREEHOLD LAND SOCIETY.—A *soirée* was held on Monday night, in the Music Hall, Leeds, to commemorate the society's having possession of their first plot of ground, consisting of about 5½ acres of land, in the immediate neighbourhood of the town. Mr. Flint, secretary of the society, stated that it had only been ten months in existence, during which time the members had subscribed £1000. The plot of ground purchased was on such terms, that each allottee would have his allotment paved and sewered, and ready for building, at the price of £29 10s. The Mayor of Leeds, Mr. Marshall, M.P., Alderman Carbutt, Mr. Edward Baines, of the *Leeds Mercury*, Mr. Cobden, M.P., and other gentlemen, having addressed the meeting, resolutions in accordance with the principles of the society were passed, and the proceedings terminated.

FOG IN MANCHESTER.—ACCIDENTS.—A fog in the neighbourhood of Manchester, unprecedented for duration, and of great density, prevailed more or less every day last week since Wednesday; but on Sunday evening and Monday it was more dense. It forced down the smoke from the factory and other chimneys, so that the atmosphere was almost stifling, and people had to grope their way through the streets by clinging close to the houses on either side, even in the day-time. People riding in gigs and other vehicles were forced to go far enough to find water courses or open streets into those they might want to drive to, and it was no uncommon thing to see them getting down to lead the horses, or to see some boy to lead them to the turning. On Sunday evening, a gentleman, driving in a cab from the town into Greenheys, missed his way through the hedge into a field. On the railways fewer accidents took place than might have been expected; but on Sunday evening a man was killed on the Lancashire and Yorkshire line, and on Monday morning another was seriously hurt on the London and North-western line.

FOG AT LEEDS.—SERIOUS LOSS OF LIFE.—At the close of last week and commencement of the present, a thick fog prevailed in Leeds and the neighbourhood, and during Monday night it was so dense, that even in the streets lighted with the usual gas lamps it was impossible to distinguish objects three or four yards distant. In order to avoid confusion and collision it was absolutely necessary to carry torches, and the cabs usually plying for hire were of necessity withdrawn from the stands, it being quite impossible for them to move even at a slow pace with safety. In numerous instances persons lost their way, and we are sorry to add several lost their lives also. On Tuesday morning three bodies of persons drowned during the night were taken from the river Aire, and information is in the possession of the police which leaves little doubt that at least five others have met the same melancholy fate.

FOG AT GLASGOW.—LOSS OF LIFE.—On Saturday and Sunday last, a dense fog hung over the city of Glasgow, which, in addition to its inconvenience and discomfort, has been attended with loss of life. The fog settled down on Saturday afternoon, and, with but brief intervals during the two days, enveloped the town in an atmosphere so dense, that objects could with difficulty be discerned at a few yards distance. On Sunday forenoon, in particular, the annoyance experienced by church-goers was excessive. It being impossible to keep a look-out ahead, personal collisions were of constant occurrence, and many missed their way. The traffic on the river was almost entirely suspended on Saturday, and those vessels which ventured up had to keep their bells constantly sounding. The Belfast steamer, in consequence of this obstruction to the navigation, was detained seven or eight hours beyond her time. The accidents resulting from the fog, were numerous, and in two instances fatal.

ROBBERY OF PLATE AT STAMFORD, LINCOLNSHIRE.—On Sunday morning, shortly after 11 o'clock, two men were observed by some servants of an adjoining house to enter the dwelling house of Miss Bolton, of No. 9, Rutland-terrace, Stamford. The family were at church. It was found that the thieves had effected their escape at the back-door, after having broken open the plate-chest in Miss Bolton's bedroom, and stolen fifteen silver forks, eight dessert ditto, eight large spoons, &c., all of the King's pattern; also one £5 note of the bank of Eaton, Cayley, and Co., and four sovereigns in gold. A box containing jewellery, and a sideboard, had been broken open, but nothing had been abstracted from either. A reward of 20 guineas had been offered for the discovery of the offenders, one of whom is described as rather tall, stout made, dressed in dark clothes, and wearing a greasy hat; the other as also dressed in dark clothes, and having a red neckercmef.

Large quantities of chestnuts are being imported at the present time from abroad, comprising entire cargoes of the article, the produce of the Channel Islands, France and Spain.

COURT AND HAUT TON.

THE COURT AT WINDSOR CASTLE.

The principal events in Court life during the past week have been the reception of addresses from the Corporation of the City of London, and the Universities of Oxford and Cambridge, on the subject of the recent Papal aggression, on Tuesday last, and the Privy Council on Thursday.

Her Majesty continues in the enjoyment of excellent health, and on Friday week took equestrian exercise in Windsor Park, accompanied by her august Consort.

On Tuesday, the Queen received deputations from the Corporation and Lieutenancy of the City of London, and from the Universities of Oxford and Cambridge, on the subject of the recent Papal aggression. In the evening her Royal Highness the Duchess of Kent, the Duke and Duchess of Norfolk and Lady Adelaide Elizabeth Howard, Lord John Russell, the Earl of Carlisle, the Earl and Countess of Bessborough, Viscount Canning, Lady Fanny Howard, Baroness de Speth, Sir Charles and Lady Mary Wood, Sir James and Lady Graham, and Sir George Couper had the honour of joining the Royal dinner circle.

On Thursday the Queen held a Court and Privy Council at the Castle. At the Court M Tricupi was presented to the Queen, at an audience, and presented his credentials as Minister Plenipotentiary from the King of Greece. The Right Hon. Richard Lalor Sheil was presented to the Queen at audience, kissed hands on being appointed her Majesty's Minister Plenipotentiary at Florence, and took leave of the Queen on his departure on his mission. The Duke of Richmond had an audience of the Queen, and presented an address from the hop-planters of Sussex and the Weald of Kent, praying her Majesty to prevent the levy of the remaining moiety of the duty of 1848, until after the meeting of Parliament, when their case will be brought before the Legislature. The noble Duke also presented to her Majesty several addresses against Papal aggression. At the Council, Parliament was ordered to be further prorogued from Tuesday, the 17th of December, until the 4th of February, and a proclamation was ordered commanding Parliament to meet on the 4th of February for the despatch of business.

The Queen and the Prince, with the Royal children, have taken their accustomed walking and riding exercise during the week.

Her Royal Highness the Duchess of Kent, attended by Lady Fanny Howard and Baroness de Speth, left her residence, Clarence House, St. James's, at half-past one o'clock on Saturday afternoon last, and visited their Royal Highnesses the Duchess of Cambridge and the Hereditary Grand Duchess of Mecklenburg-Strelitz. Her Royal Highness afterwards proceeded to Frogmore. We are happy to announce the safe accouchement of the Princess Alexandrine of Douglas (*née* Princess Marie of Baden). Her Ladyship gave birth to a daughter on Wednesday evening, at the family residence in St. James's-place, and, with the infant, is going on almost favourably.

ROYAL THEATRICALS AT WINDSOR CASTLE.—On Thursday evening the Queen gave the first of a series of dramatic entertainments in the Castle A temporary stage had been erected in the Rubens Room, which had been fitted up for the reception of her Majesty and the Princes, and the distinguished circle honoured with invitations to witness the performance, the arrangements being similar to those at former entertainments. The play selected was Shakspeare's "King Henry IV." (Part 1.)

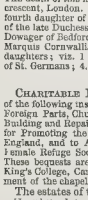
OBITUARY OF EMINENT PERSONS RECENTLY DECEASED.

SIR FRANCIS JOHN FORD, BART., OF EMBER COURT, SURREY.

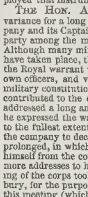
THE LADY JOHN HAY.

WILLIAM CONGREVE RUSSELL, ESQ., OF KING'S HEATH, FORMERLY M.P. FOR EAST WORCESTERSHIRE.

LOUISA, MARCHIONESS CORNWALLIS.



THE CURE OF ARS.



THE FRENCH CLERGY.

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

The decision regarding the suspended Lord Rectorship of Glasgow University cannot be made until near the meeting of Parliament, as Colonel Muir, with whom the matter now rests, will not return from Italy until the commencement of the session approaches. The decision must be given by Colonel Muir personally, but there can be no doubt that it will be in favour of Sheriff Alison.

It is currently reported that Sir A. B. Brooke, Bart., M.P., will be raised to the peerage; and that Colonel Cole, M.P. for Enniskillen, and Captain Archdall, M.P., will be the county members, to represent the new constituency in Parliament.

A Royal commission is about to issue to inquire and report upon the whole subject of the law of divorce not merely the proceedings in the Ecclesiastical Courts, but the proceedings in Parliament—not the divorce *a mensa et thoro* alone but the more weighty and important question of the divorce *a vinculo matrimonii*. The commission is chosen from the most eminent lawyers of both Houses of Parliament. It will be composed of the following: Lord Campbell, Lord Beaumont, Lord Redesdale, Dr. Lushington, Spencer Horatio Walpole, M.P., W. Page Wood, M.P., and the Hon. E. P. Bouverie, M.P.

From South Australia the last accounts report that the cultivation of the vine, for which the climate and soil are peculiarly adapted, is spreading so rapidly, as to make it probable that its produce will become one of the staples of the colony.

Sydney papers of the 19th of August state that the opening of intercourse with California is maintained, as having permanently established relations between the two countries.

The Earl of Carlisle presided last week at a public dinner given in Leeds for the benefit of the funds of the Leeds Tradesmen's Benevolent Institution. The noble chairman was supported by Mr. Beckett and Mr. Marshall, Members for the town; the Rev. the Dean of Ripon; Alderman Hunter, of London; Alderman Sidney, M.P., the originator of the Institution

The Austrian South-Eastern State Railway is now so advanced as to be passable for locomotives throughout its whole extent. On the 3d inst. the first engine traversed the distance from Gran to Presburg, whence another train had started for Pesth. The early opening of the line to the public may thus be expected.

Intelligence was received from Cadiz by the last Peninsular packet, that the commander of the Spanish Custom-house vessel, who so wantonly fired into the English mail packet, *Iberia*, a few months since, has been dismissed from the Spanish service.

Death from a practical joke occurred on Tuesday at Colne, near Blackburne, to John Riley, a labourer: whilst in a stooping position, a companion suddenly jumped upon his back, and so injured him that he died the following day

Babraham Hall, Cambridgeshire, accidentally took fire last Tuesday, but it was extinguished before £50 worth of damage was done.

Edward Griffiths, who escaped from Woolwich Dockyard, on the 16th of July last, has been apprehended at Liverpool and committed for trial. No intelligence has yet been received of either of the three convicts who escaped from the *Warrior* in the early part of last week.

At Castle Ashby, last week, the game-house of the Marquis of Northampton was found to have been entered by thieves during the night. A fine deer (a doe), with a number of hares and pheasants, had been carried off

On Thursday morning week, one of the large vats of Messrs. Beamish and Crawford's brewery, Cork, burst with a loud crash, throwing down a large portion of the adjacent wall. The porter which it contained rushed in a torrent through the vat-room, and thence escaped to the river, with whose waters it mingled. The vat is said to have contained 800 hogsheads, and the damage done is estimated at nearly £2000

On Monday, Mr. H. M. Wakley held an inquest on Patrick Sullivan, a glazier, who, while engaged cleaning windows at 15, Hart-street, was precipitated in consequence of twenty feet into the street by the breaking of the window-sill, and killed on the spot. Verdict "Accidental death."

The office of Prothonotary of the Court of Common Pleas, Dublin, vacated by the resignation of the Hon. Mr. Pinkett (son of Lord Pinkett), has, it is said, been conferred on Mr. Sausse, Q.C., and Crown prosecutor on the Leinster Circuit. The emoluments are £1000 a year. Mr. Sausse is a Roman Catholic.

Her Majesty's packet *Seagull*, Lieutenant Smale, sailed on the 9th, for Madeira, Teneriffe, and Brazils, with the mails. She had no passengers, but had on freight £40,000 in gold.

The *Hope*, Dudding, from Rouen, arrived this week in the Tyne, with a cargo of flour. This is, we believe, the first instance of such an import arriving in the Tyne.

The Rev. R. J. Butler, M.A., of Brasenose College, Oxford, and Chaplain to the Forces in the Ionian Islands, has been received into the Catholic Church of Rome on the 23d of November last. This gentleman was formerly warden of the House of Charity in Rose-street, Soho.

On Friday evening week, about ten o'clock, an explosion of fire-damp, by which four persons have been killed, took place at the Haydock Rushy-park Colliery, near St. Helen's (Lancashire), the property of Messrs. Richard Evans and Co. The immediate cause is not yet known, as the four sufferers were the only persons in the pit. Every precaution had, it could be suggested is taken by the proprietors to avoid these sad accidents, which are invariably the result of headstrong indifference on the part of the colliers to the instructions of their employers.

On St. Andrew's Day, the church which has been recently erected in George-street, Oxford, was consecrated by the Bishop of Oxford, under the name of "The Church of St. George the Martyr." The edifice, which is in the Gothic style of architecture, is intended as a chapel of ease to St. John Magdalen Church, and has been erected from the designs of Mr. Harrison, architect, of London, and formerly a member of Christ Church, in the University. The organ is accompanied by chaste and appropriate decorations.

A beautiful little church, erected in West Lavington, entirely by the munificence of the Rev. C. J. Laprimandaye and his lady, in the early English style, reflecting great credit on the architect (Mr. Butterfield, of London), was consecrated on Wednesday. An eloquent and appropriate sermon was preached by the Bishop of Oxford.

A few days ago, two men took out of the Whitehill Burn, a small stream which runs into the Wear, almost close to the lock at Lambley, fifty-three salmon! The *Durham Advertiser* blames the Earl of Scarborough for not opening the lock occasionally, so that the salmon may go up the river to spawn; the poachers then would not have had such a prize.

In St. Peter's church, Burnley, the middle portion of the chancel window has, during the past week, been filled with a beautiful representation of Christ, holding in his right hand the sacramental cup, and in his left the sacramental bread. It is the gift of Mrs. Hargreaves, and the monogram I.H.S., and also the bottom a representation of St. Peter holding the keys.

The new church at Skewen, near Neath, was consecrated and opened for divine worship on Thursday week, by the Right Rev. Lord Bishop of Llandaff. The church is situated on an eminence near the village of Skewen, in Neath Abbey, and is an interesting and beautiful object when viewed from a distance in the valley. It is of the early decorated style of architecture, and consists of the nave, chancel, south aisle and porch, vestry, &c.

Advices from Beyrout announce the loss of three English vessels at Jaffa on the 19th of November—the brig *Sandrpperry*, Ange., master, from London; the brig *Courier*, Baldry, master, from Liverpool; and the schooner *Grace*, Hain, master, from Limerick. All lives all saved.

It is intended by the operative tailors of Scotland to hold a conference in Edinburgh or Glasgow, for the purpose of forming a national union to repress the "sweating" system. One of the objects will also be to reduce the hours of labour to ten hours daily.

The Mayor of Liverpool has received a communication from Sir George Grey, Secretary of State, directing the immediate removal of the gunpowder magazines at Wallasey. This intelligence will be hailed with satisfaction by all colliers, but more especially by the inhabitants on the Cheshire shore, who reside in the immediate vicinity of this dangerous *depôt*.

On Thursday evening week, Mr. Fordman, gamekeeper to the Duke of Hamilton, found a coffin just beneath the surface of the shingle, near Walton Ferry, in Surrey. It contained the corpse of a man, in such a position that it was deemed highly requisite an inquest should be holden. Information was sent to the coroner.

On Sunday night, a poor man named Morris, making a short way to his own home, missed the path and made a false step into the Mardyke colliery, county of Cork, and falling a depth of 120 feet was dashed to pieces, the body being frightfully mutilated by coming in contact with an iron chain in his fall.

One of the most daring burglar, named Reading, who has long been at large, has been captured and committed for trial, charged with having, on the 1st of June, 1849, burglariously entered the dwelling-house of Mr. Augustus Munyard, at Milliker Farm, Mehopham, near Gravesend, and stolen two watches, several articles of wearing-apparel, and other articles. Also, on the 4th ult., three parties were apprehended at the time: one was convicted and transported for life; a second was acquitted; and another was admitted as Queen's evidence.

On Saturday last, the captain of a vessel lying at Liverpool had one of his arms bitten off by a vicious Bengal tiger. The horse was in a cart, at one of the dock stands, and the captain, in crossing the gangway, passed near the animal's head, when it made a snap at him, and took the ear completely off. The sufferer was promptly attended to by Mr. Woods, surgeon, and he is in a fair way of recovery.

The chapel attached to Peckforton Castle, Cheshire, the residence of John Tollemache, Esq., M.P., has been licensed by the Bishop for divine service.

Ashborne church, Derbyshire, a most beautiful structure, took fire during divine service on Sunday week, from an over-heating of the flues. Fortunately a plentiful supply of water was at hand, and the danger was speedily overcome.

A forgery was found on Tuesday to have been committed on the house of Messrs. Masterman and Co. The name counterfeited was that of an eminent member of the Stock Exchange. The sum obtained by the fabrication was £370, and it is to be regretted that no positive clue has, as yet, been found to the perpetrator of the fraud.

BRINGING IN IMPLEMENTS.

THE ANNUAL EXHIBITION
OF THE SMITHFIELD CLUB.

(By our own Reporter.)

The annual Exhibition of the Smithfield Club was opened to the public on Tuesday last. Arrangements were made on a more extended scale than at any previous Exhibition, an extra space having been enclosed and covered for the purpose, which, to prevent accident, was erected by Messrs. Fox and Barratt, of 46, Leicester-square, on their improved fire-proof principle for constructing floors, ceilings, and roofs, which has been found to answer so well at Madame Tussaud's, the dwellings of the working-classes at Spitalfields erected by the Metropolitan Association, and other public and private buildings.

Notwithstanding the extra space thus afforded, it was little more than sufficient for the increased number of animals which were forwarded to the Show, the present being one-fourth larger than the last, and of greater comparative proportions with the preceding ones. This increase has not been confined to one department, though it was most perceptible amongst horned cattle, whose numbers amounted to sixty head above that of the last Exhibition. We are happy to say that the increase in numbers was accompanied with commensurate excellence in the quality of the stock exhibited.

Her Majesty the Queen and his Royal Highness Prince Albert, accompanied by the Prince of Wales and Prince Alfred, visited the Show at eleven o'clock on Monday morning. They staid more than an hour; and, on leaving, expressed themselves as having been much pleased with the general excellence of the Exhibition. This, together with the great numbers of stock, combined with the difficulty of deciding to whom the prize should be awarded in many instances, where the merits of the competitors were so nearly equal, occasioned it to be much later than usual before the Exhibition was opened for the inspection of those who were entitled or favoured with tickets for the private view, which took place on Monday night.

The Prize Animals, as a matter of course, enjoyed the largest share of attention, and none more so than the 3 years and 9 months old Hereford ox, fed by his Royal Highness Prince Albert, which obtained the first prize of £20 in Class 4, for oxen or steers of any breed and age, above 80 and under 95 stones weight. This animal was bred by Mr. Thomas Sheriff, of Buckton, near Ludlow, and fed on cake, meal, hay, and roots. It is a short square animal. In the same class, Mr. Samuel Druce, of Eynsham, near Oxford, exhibited a splendid 4 years and 6 months old Hereford. There were, also, a 4 years and 6 months old pure North Devon ox, fed and bred by Mr. Richard Mortimer, of Silverton, near Collumpton, Devon; and a 4 years and 8 days old Devon steer, exhibited by Mr. John Tucker, of Staplegrove, near Taunton. Both these animals were highly deserving of notice; and, with an ordinary observer, might, as often occurs, occasion remarks as to the soundness of the decision of the judges. Such ought, however, to be reminded that age has something to do with the matter, as well as size. Amongst the oxen, the competition, as well as the prizes, was almost confined to Herefords and North Devons, as will be observed by looking at the prize list. The two classes of animals appear very much akin to each other. On this point the reader will find some interesting observations in the article on the Agriculture of Monmouthshire, which will be found in the Supplement accompanying the present Number. The two great prizes of £30 each, for Classes 1 and 2, were carried off by Mr. John Tucker, of Staplegrove, near Taunton, with a 4 years and 3 months old Devon ox (the second and third prizes being taken by Herefords); and the Earl of Hardwicke, in Class 2, with a very fine 3 years and 10 months

BRINGING IN FAT PIG.

BRINGING IN HEREFORD OX.

CARTING AWAY PIG.

CLASS 4. NO. 49.—PRINCE ALBERT'S HEREFORD OX.—£20 PRIZE, AND SILVER MEDAL.

CLASS 1. NO. 16.—MR. TUCKER'S DEVON OX.—£30 PRIZE, AND SILVER MEDAL.

old Durham ox. The Hereford ox, in Class 3, or oxen and steers, above two and not exceeding three years old, which obtained the first prize of £25, was one of the finest animals of its age, belonging to the Hereford breed, that we ever witnessed. If the Herefords and Devons almost possessed a monopoly of the prizes amongst the heavy oxen, the short horns carried it hollow amongst the heifers—many animals exhibited in this class were loaded with fat.

Amongst the extra stock, his Grace the Duke of Wellington exhibited a strange animal—a cross between a Scotch Highland cow and a Bramah bull. Is the greatest Captain of the Age turning his sword into a reaping-hook during the decline of life? At all events, it augurs well for the Peace Society.

The show of Leicester sheep was good, and the same remark applies to the long-wools, but none of the animals presented anything particularly striking beyond those shown at former meetings.

Classes 13 and 14 were devoted to long and short-woolled cross-bred fat sheep, amongst which were some very useful animals. This is a cross we do not fancy: it occasionally answers for feeding, but not for breeding purposes.

The Club would perform an excellent service, if, at the next and succeeding exhibitions, the following condition were annexed to animals shown in these classes, viz. that the breeds of the sires and dams should be stated. This would often prove a very instructive lesson to breeders, who are generally somewhat ignorant of the influence exercised on the character of the progeny by the different sexes. The Arabs, with their celebrated horses, trace all through the female; while we, on the contrary, generally look for the characteristics of the sire to preponderate in the produce.

Amongst the South Downs the competition was excessively severe; perhaps, on the whole, his Grace the Duke of Richmond's stock carried the palm, as they certainly obtained the greatest number of prizes. His Grace was, however, declared only second best in Classes 15 and 17, the principal premiums having been awarded in those classes to Mr. John Williams, of Buckland, near Faringdon, Berkshire, and Mr. J. V. Shelley. We congratulate the latter gentleman upon his succeeding, for the first time, in obtaining the leading prize in short-woolled-sheep, the value of which is enhanced on the present occasion by the severity of the competition, which we believe to have been unparalleled. Mr. Shelley's stock, exhibited both at the Smithfield and the Royal Agricultural Societies meetings, have for some years been characterised by great evenness of character, more so generally than those of his more fortunate competitors, where to be second best is no inconsiderable amount of praise. Mr. Salisbury also showed some good stock.

The pigs are always a favourite description of stock to the amateur sightseers at cattle shows. A man that would readily admit his insufficiency to judge of *the points* of a sheep or an ox, will willingly volunteer an opinion as to the merits of the grunters. Before making any further remarks, we must protest against a practice which has grown up of late years, of giving new titles to breeds of pigs solely because they happen to be reared in a particular locality, and not on account of possessing any marked character as to blood. The show of small porkers was neither more numerous nor of better quality than what we have previously witnessed. Those of Mr. Fisher Hobbs fully maintained their former character, but we are informed his best pig died in coming to the Exhibition. In Class 20, for pigs of any breed above half a year, and not above one year old, the first prize was awarded to Mr. Coate, of Hammon, Dorset, for 28 weeks and 6 days old *improved Dorset* pigs—why called improved Dorset we cannot tell, as they were very similar to the improved Essex, and had all the characteristics of a mixed breed from Neapolitan and Chinese blood. His Royal Highness Prince Albert obtained the second prize for a pen of 38 weeks and 6 days old Yorkshire pigs, fed on meal and milk: this pen, taken as a whole, presented a set of the finest pigs for general use ever previously exhibited. His Royal Highness made his *début* as a successful exhibitor with specimens of the porcine race; and it must now be gratifying to the feelings of his Royal Highness to know, that the perfect animals which he has exhibited on the present occasion almost forbid the possibility of further improvement. The pigs under notice are well calculated for the cottager; and although milk and meal may not be so plentiful in the cottager's sty as in those pertaining to Windsor Castle, we will, nevertheless, venture to affirm, that, with fair management, these pigs will make good bacon hogs at from nine to twelve months old. The Earl of Radnor exhibited two pens of very fine pigs.

In the Gallery, a very large assortment of implements was exhibited. The only novelties which we noticed were a new and simple furze-bruising and cutting machine, which did its work in a most efficient manner; and also a novel cider-mill. The latter was worked something similarl to a curd-breaking machine, and did a great amount of work with little labour, as compared with ordinary mills: every pippin was completely cut, and the apples were reduced to a very fine pulp. Mr. White, of Holborn, was the manufacturer of these two useful machines.

Messrs. Thomas Gibbs and Sons, of Half Moon-street, had their usual assortment of specimens of grain, grasses, &c., as well as of various agricultural seeds.

Mr. Skirving, of Liverpool, exhibited some specimens of the globe mangold-

CLASS 2. NO. 33.—EARL HARDWICKE'S OX.—PRIZE £30 AND SILVER MEDAL.

CLASS 3. NO. 52.—MR. HEATH' OX.—PRIZE £25, AND SILVER MEDAL.

wurzel, of enormous dimensions; besides which, his purple-topped Swedes appeared exceedingly diminutive.

The following is a list of prizes awarded:—

OXEN OR STEERS.

Class 1.—The first prize of 30 sovereigns to No. 16, viz. to Mr. John Tucker, of Staplegrove, near Taunton—a silver medal to the breeder, viz. to Mr. John Prescott, of Staplegrove: the second prize of 15 sovereigns to No. 8, viz. to Mr. Joseph Phillips, of Accington, near Wantage; the third prize of 9 sovereigns to No. 2, viz. to his Grace the Duke of Richmond, of Goodwood, near Chichester.

Class 2.—The first prize of 30 sovereigns to No. 33, viz. to the Right Hon. the Earl of Hardwicke, of Wimpole, near Cambridge—a silver medal to the breeder, viz. to the Earl of Hardwicke; the second prize of 15 sovereigns to No. 39, viz. to Mr. Henry Frampton, of Farrington-road, Faringdon: the third prize of £5 to No. 34, viz. to the Marquis of Northampton, of Castle Ashby, Northampton.

Class 3.—The first prize of £25 to No. 52, viz. to Mr. William Heath, of Ludham, near Norwich—a silver medal to the breeder, viz. to Mr. J. Bill, of Whiteway Head, Ludlow, Salop; the second prize of £15 to No. 56, viz. to Mr. J. S. Bull, of Dodhall, Kingston, Taunton; the third prize of £5 to No. 45, viz. to Mr. James Clover, of Cresting St. Mary, Needham Market.

Class 4.—The first prize of £20 to No. 90, viz. to his Royal Highness Prince Albert a silver medal to the breeder, viz. to Mr. Thomas Sheriff, of Buckton, near Ludlow, Hereford: the second prize of £10 to No. 79, viz. to Mr. J. S. Bull, of Dodhill, Kingston, Taunton.

Class 5.—The first prize of £10 to No. 85, viz. to the Right Hon. the Earl of Aylesford, of Packington, Coventry—a silver medal to the breeder, viz. to the Right Hon. the Earl of Aylesford; the second prize of £5 to No. 92, viz. to Mr. Thomas Bond, of Bishop's Lydeard, Taunton

Class 6.—The prize of £10 to No. 101, viz. to Mr. William Heath, of Ludham, near Norwich.

COWS OR HEIFERS.

Class 7. -The first prize of £20 to No. 110, viz. to the Right Hon. Lord Feversham, of Duncombe Park, Helmsley—a silver medal to the breeder, viz. to the Right Hon. Lord Feversham; the second prize of £10 to No. 124, viz. to Mr. Stephen Gooch, of Honingham, near Norwich; the third prize of £5 to No. 116, viz. to his Royal Highness Prince Albert.

Class 8.—The first prize of £20 to No. 138, viz. to Mr. Stephen Gooch, of Honingham, near Norwich a silver medal to the breeder, viz. to Mr. Nath. Cartwright, of Haugham, near Louth; the second prize of £10 to No. 129, viz. to Mr. J. R. Gurney, of Easton, near Norwich.

Class 9 —The first prize of £20 to No. 157, viz. to Mr. Thomas Aveling, of March, Isle of Ely, Cambridge—a silver medal to the breeder, viz. to Mr. Thomas Aveling; the second prize of £10 to No. 160, viz. to Mr. William Woodward, of Bresdon's Norton, near Tewkesbury.

LONG-WOOLLED SHEEP.

Class 10.—The first prize of £20 to No. 185, viz. to Mr. G. S. Foljambe, of Osberton-hall, Worksop a silver medal to the breeder, viz. to Mr. G. S. Foljambe; the second prize of £10 to No. 193, viz. to the Most Hon. the Marquis of Exeter, of Burghley House, Stamford; the third prize of £5 to No. 187, viz. to Mr J. S. Cranfield, of Harrowden, Bedford.

Class 11. The first prize of £20 to No. 193, viz. to the Most Hon. the Marquis of Exeter, of Burghley House, Stamford—a silver medal to the breeder, viz. to the Most Hon. the Marquis of Exeter; the second prize of £10 to No. 192, viz. to Mr. Thomas Twitchell, of Willington, near Bedford; the third prize of £5 to No. 198, viz. to Mr. Richard Newman, of Harrowden, near Bedford.

LONG-WOOLLED SHEEP (NOT BEING LEICESTERS).

Class 12. The prize of £10 to No. 206, viz. to Mr. Robert Beman, Morston-in-Marsh, Gloucester—a silver medal to the breeder, viz to Mr. Robert Beman.

CROSS-BRED

Class 13.—The first prize of £10 to No. 221, viz. to Mr. J. R. Overman, of Burnham Sutton, near Burnham Market—a silver medal to the breeder, viz. to Mr. J. R. Overman; the second prize of £5 to No. 222, viz. to Mr. John Hitchman, of Little Milton, near Wheatley, Oxon.

Class 14.—The prize of £10 to No. 232, viz. to Mr. J. R. Overman, of Burnham Sutton, Burnham Market—a silver medal to the breeder, viz. to Mr. J. R. Overman.

SHORT-WOOLLED SHEEP.

Class 15.—The first prize of £20 to No. 255, viz. to Mr. John Williams, of Buckland, near Faringdon—a silver medal to the breeder, viz. to Mr. John Williams; the second prize of £10 to No. 256, viz. to his Grace the Duke of Richmond, of Goodwood, near Chichester.

Class 16. The prize of £10 to No. 265, viz. to his Grace the Duke of Richmond, of Goodwood, near Chichester a silver medal to the breeder, viz. to his Grace the Duke of Richmond.

Class 17.—The first prize of £20 to No. 268, viz. to Mr. J. V. Shelley, of Maresfield-park, Sussex—a silver medal to the breeder, viz. to Mr. J. V. Shelley; the second prize of £10 to No. 269, viz. to his Grace the Duke of Richmond, of Goodwood, near Chichester.

SHORT-WOOLLED (NOT BEING SOUTH DOWNS).

Class 18.—The prize of £10—withheld.

PIGS

Class 19. -The first prize of £10 to No. 298, viz. to Mr. William Fisher Hobbs, of Boxted Lodge, near Colchester—a silver medal to the breeder, viz. to Mr. William Fisher Hobbs; the second prize of £5 to No. 289, viz. to Mr. W. M. Barber, of Langley Broom, near Slough.

Class 20.—The first prize of £10 to No. 307, viz. to Mr. John Coate, of Hammoon, near Blandford—a silver medal to the breeder, viz. to Mr. John Coate; the second prize of £5 to No. 304, viz. to his Royal Highness Prince Albert.

Class 21. -The prize of £5 to No. 311, viz. to the Right Hon. the Earl of Radnor, of Coleshill, near Faringdon—a silver medal to the breeder, viz. to the Right Hon. the Earl of Radnor.

GOLD MEDALS.

The gold medal for the best ox or steer in Classes 1, 2, 3, 4, 5, and 6, to No. 52, viz. to Mr. William Heath, of Ludham, near Norwich.

The gold medal for the best cow or heifer in Classes 7, 8, and 9, to No. 138, viz. to Mr. Stephen Gooch, Honingham, near Norwich.

The gold medal for the best pen of long-wooled sheep in Classes 10, 11, and 12, to No. 193, viz. to Mr. G. S. Foljambe, Osberton Hall, Worksop.

The gold medal for the best pen of short-wooled sheep in Classes 15, 16, and 18, to No. 259, viz. to Mr. John Williams, Buckland, near Faringdon.

The gold medal for the best pen of pigs in Classes 19, 20, and 21, to No. 307, viz. to Mr. John Coate, Hammoon, near Blandford, Dorset.

EXTRA STOCK.

The silver medal for the best beast in extra stock to No. 173, viz. to Mr. Stephen Gooch, Honingham, near Norwich.

The silver medal for the best long-wooled sheep in extra stock to No. 210, viz. to the Most Hon. the Marquis of Exeter, Burghley-house, Stamford.

The silver medal for the best short-wooled sheep in extra stock to No. 281, viz. to his Grace the Duke of Richmond, Goodwood, near Chichester.

The silver medal for the best cross-bred sheep in extra stock to No. 241, viz. to Mr. John Hitchman, Little Milton, near Wheatley, Oxon.

The silver medal for the best pig in extra stock to No. 317, viz. to Mr. W. M. Barber, Langley Broom, near Slough.

COMMENDATIONS.

Class 2.—The judges highly commend No. 25, Mr. R. Stratton's ox.

Highly commend Class 3 generally

Class 5.—Commend No. 94, the Earl of Leicester's steer.

Class 6.—Commend No. 100, Mr. John Rob's ox.

Highly commend Class 7 generally.

Commend Class 8 generally.

EXTRA STOCK CATTLE.

Commend No. 176, Messrs. John and James Martin's ox.

Highly commend the show of Leicester sheep in all the classes.

EXTRA STOCK CROSS-BRED SHEEP.

Commend No. 233, Mr. J. R. Overman's sheep.

Class 15.—Highly commend No. 252, Mr. Salmsbury's sheep.

Class 16.—Commend No. 261, Mr. Shelley's sheep.

Class 17. Highly commend No. 270, the Earl of Chichester's sheep.

EXTRA STOCK (SHORT WOOLS).

Commend 277, Mr. Samsbury's sheep; also 279, Mr. John Williams' sheep.

EXTRA STOCK. -PIGS.

Class 19. Highly commend No 295, Mr. Barnard's pigs.

Class 20.—Highly commend No. 300, Mr. Rawlence's pigs.

Class 21.—Highly commend No 310, Mr. S. Druce, jun.'s pigs.

Commend No. 315, Mr. W. Wood's pigs.

Commend No. 323, Mr. Coate's pigs.

Commend No. 324, Sir John Conroy's pigs

Commend No. 327, Mr. W. Fisher Hobbs' pigs.

Judges of Cattle and Long-woolled Sheep—Messrs. Thomas Reynolds, Ralph Oldacre, and Samuel Wiley.

Judges of Cross bred Sheep, Short-wools, and Pigs.—Messrs. Henry Lugar, Henry Fookes, and Arnold Denman.

At one o'clock the annual meeting of the members of the Club took place, at the Bazaar. The Duke of Richmond, President of the Club, occupied the chair.

The noble Chairman, in opening the proceedings, congratulated the members upon the distinguished honour conferred upon the Club by the visit of her most gracious Majesty and the Prince Consort on the previous day. He had in command to communicate to them her Majesty's gracious approval of all she had witnessed; and he was sure that the countenance given to the Exhibition by the Queen would result in the benefit of increasing their endeavours successfully to carry out the objects of the Smithfield Club.

This announcement was received with marked satisfaction by the members. The awards were then read, and the officers of the Club re-elected. An alteration in the medal was also determined on. Up to this year the obverse has been formed by a medallion portrait of the late Earl Spencer. It was proposed and unanimously resolved that a new die should be made, with a portrait of his Grace the Duke of Richmond in the place of the inscription. The latter will in future be engraved round the edge of the medal.

The first two days the attendance was not numerous, but on Thursday it greatly increased. No inconsiderable amount of the spectators realised the poet's description—

Who drive fat oxen, should themselves be fat.

The accompanying Illustrations show the Bringing-in of the Implements for

THE ILLUSTRATED LONDON NEWS.

Exhibition: among those shown are a Seed and Manure Drill, a Wheel Plough a Thrashing Machine, Hexagonal Harrows, &c. Next we have the arrival of a fine Fat Pig; the Bringing-in of a Hereford Ox; and the Carting away of the Pig. In the next page are portrayed some of the finest prizes

THE CHRISTMAS NUMBER.

WITH THE NEXT NUMBER OF

DIORAMA OF THE HOLY LAND.—The Painters of the Panorama of the NILE beg to announce that they will shortly submit to the public a magnificent glyptastic moving Diorama of SYRIA and PALESTINE. It has been for some time in preparation, and is now nearly completed. Having a direct reference to Sacred History, it will faithfully illustrate the various scenes of holy writ; but will embrace, also, much that owes its interest to modern events and recent discoveries. The effects will be novel and imposing; the views taken on which presents the most attractions, and the Diorama will possess the pleasing feature of fidelity, being wholly from original sketches.

OVERLAND ROUTE to CALIFORNIA, across the Rocky Mountains.—Now Exhibiting at the Egyptian Hall, a GRAND MOVING DIORAMA, illustrating the Overland Route to Oregon, Texas, and California, every afternoon, at a Quarter to Three; Evenings, Quarter to Eight. Admission, 1s; reserved seats, 2s.

INDIA OVERLAND MAIL DIORAMA.—Gallery of Illustration, No 14, Regent-street, Waterloo-place.—A gigantic MOVING DIORAMA of the ROUTE of the OVERLAND MAIL to INDIA, is now open daily. Mornings at 12, Afternoons at 3, and Evenings at 8 o'clock. Admission, 1s; Stalls, 2s 6d; Reserved Seats, 3s. Doors open half an hour before each representation

CALDWELL'S SOIREES DANSANTES EVERY EVENING. Mr. CALDWELL begs respectfully to announce that his extensive premises have been entirely rebuilt, under the superintendence of an eminent architect, and are now replete with every accommodation that art and experience can suggest—the whole forming the chef-d'œuvre Terpsichorean Establishment of the metropolis; will re-open on MONDAY, DEC. 16, with a Grand Full Dress Ball. The orchestral department under the direction of Mr. J. Bradly, of the Royal Italian Opera. Tickets 5s. each; Double ditto, to admit a Lady and Gentleman, Two Ladies, &c. Private Boxes, 3s. Dancing commences at Nine. Supper at One. Mr Caldwell's Academy, for Tuition and Practice, will open on TUESDAY, DEC 17, and continue open every evening. For quarter, £1 1s.; Six Private Lessons, at any hour, £1 1s.; Single Night's Practice, 6d; from Eight to Twelve. Dean street, Soho.

THE ILLUSTRATED LONDON NEWS.

LONDON SATURDAY, DECEMBER 14, 1850.

The cry of Celtic destitution is again heard. The Western Highlands of Scotland, which suffer from the same social maladies as Ireland—maladies produced by the same causes—are without an adequate supply of food for their population during the winter. The begging-box is once more to be sent round, ostensibly in behalf of the poor distressed people; but, in reality, in behalf of the distressed landlords. It appears, from a statement made by the Sheriff-Substitute of the Long Island, including Lewes and Harris, that, with reference to the large population in his district, he "anticipates urgent distress, amounting to famine, as a consequence of the cessation of that eleemosynary assistance on which great numbers of the population, including nearly all the cottars and many of the smaller crofters, have subsisted for the last four years." He further states his belief, "that the population are almost in all respects in a worse state than they were in 1846, when the potato disease began." In the large island of Skye, where nature has done so much and man so little to render the place a paradise, the population are in the same miserable state. The failure of the potatos, though varying in extent in almost every district in the island has already occasioned a loss from disease in some few favoured localities of about one-eighth, and in others of about seven-eighths, of the whole crop. The Board of Supervision, in a communication to the Home Secretary on the subject, state "that they see no reason to doubt the accuracy of this information, and that they fear that the condition of Skye and some other islands is nearly similar to that of the Long Island."

It thus appears that all the sums raised by the benevolence of the public for the relief of these poor people of the Isles have been expended in vain, or that they have served no better purpose than to prolong for four years the misery of a whole population. The supplies of charity are drained to the dregs, and the people are in a worse state than when relief was first administered. Unless, therefore, more money be subscribed during the present winter, the Irish famine and a consequent pestilence are likely to be paralleled, on a somewhat smaller scale, among the Celtic people of the Hebrides. We have no wish to dry up the sources of benevolence, and we trust the scandal will be averted from a Christian land, of the death from starvation of even one of these islanders; but we would ask in the interest of the state, as well as in that of these poor people, why something is not done to prevent the recurrence of such calamities? It is evident that the landlords of the remoter Highlands and islands of Scotland are quite as powerless as those of Ireland were to employ and feed the people; and that any hopes that may be built upon their voluntary efforts to remedy the deep-seated evil of Celtic destitution, will be raised without a foundation. The Board of Supervision seems to anticipate that both the Government and the public will be deterred from attempting to continue or renew eleemosynary assistance; in which case they suggest that the immediate relief of destitution must be provided by the local authorities from local resources—in other words, that the destitute shall be supported out of the poor-rates in the destitute districts. This is, in fact, the first step that must be taken, but it is not the only one. It would require in some districts a poor-rate of 10s. 8s. in the pound on the rental to feed the people—a poor-rate which the landlords, involved and encumbered as they are, would not be able to pay. But what has been done in Ireland suggests the next step. An adequate poor-rate must be levied, even if the landlords, who have by the mismanagement and neglect of their estates brought themselves and the people to this unhappy pass, be ruined altogether. The Irish Poor-Law, recognising the right of the able-bodied poor, accompanied as it was by an act for facilitating the sale of encumbered estates, has gradually swept away a race of bankrupt landlords, and transferred their properties to solvent purchasers, who have means at their command to turn the immense natural advantages of the country to proper account. The same laws must be passed for Scotland, however cruel their operation may at first appear. The State "must be cruel only to be kind." A race of landlords—the nominal, but not the real owners of the soil—paying, perhaps, ninety per cent. out of their rental as interest upon mortgages, and having nothing but a small margin upon which to live and maintain their own position in society, cannot—however good their intentions, and however great their sympathy with the people around them—do the duty which the State has a right to expect of them.

For the sake of the people, a stringent poor-law was necessary; for the sake of the landlords, the abolition of the laws of entail and an act for facilitating the sale of encumbered estates, such as is now in full and beneficial operation in Ireland, is equally essential. Nothing short of these two measures will suffice to raise the Celtic population of the Western Highlands from the misery and degradation into which they have fallen. In the meantime, we trust the people will not be allowed to perish; but we must, at the same time, express our hope that this will be the last appeal made to public or to private charity for the relief of the Highlanders. If they are too numerous for the soil, a solvent proprietary will find the means to remove the surplus population, with benefit to all parties; and if they are ignorant, a solvent proprietary will find the means to teach them. But, with an ignorant and a too numerous population, and an insolvent or deeply embarrassed proprietary, nothing but mischief can result to all parties—mischief, too, that has the unhappy fatality of increasing in amount and in intensity the longer it is neglected.

THE REV. Mr. Bennett, of St. Barnabas, has resigned the perpetual curacy of St. Paul's, Knightsbridge. The Bishop of London has accepted, "with very great pain, but with no hesitation," the resignation of the reverend gentleman. He is, therefore, no longer a "parish priest." The tone of his letter to the Bishop of London reflects credit upon him; and the reply of his Lordship is no less creditable to the judgment and temper of the right reverend writer. We may safely predict that, after this, Mr. Bennett will be no longer annoyed or persecuted by any mob of ill or well-dressed people, whatever may be the ceremonial which he shall adopt in his future ministration as a preacher of the Gospel. The rights of conscience will, we are quite sure, be respected in his case, as in that of every other person. He has put himself right with the public and with the Church; and while we hope that his resignation will be "for the peace and better ordering" of the diocese, we hope, also, that Mr. Bennett will derive from the step which he has taken, the serenity of mind which should follow every conscientious act, however painful the sacrifice which it may have involved.

METROPOLITAN NEWS.

SOCIETY OF ARTS.—At the weekly meeting of this society on Wednesday night, after the ballot for some new members, Mr. J. Grace Calvert, F.E.S., Professor of Chemistry at the Royal Institution, Manchester, read a very interesting paper, illustrated by diagrams and specimens of the various articles, on the bleaching of linen, cotton, calico, cotton flax, and woollen fabrics. The paper concluded with a recommendation of a further cultivation of flax in Ireland, so as to free this country from the necessity of a large importation of that article, which now annually takes place. He also showed specimens of the most important articles could be manufactured from flax, from the finest cambric to the fustian suitable for the labouring man's costume—some beautiful specimens of which were exhibited.

PATENT LAW REFORM.—On Monday night, a public meeting was held in Anderton's Hotel, Fleet-street, of the Inventors' Patent Law Reform League. Mr. John Ellis presided. The chairman, at some length, detailed the proceedings which the League had already adopted. The second report of the general committee stated that a deputation of members of the association had been appointed to present the petition to her Majesty, praying her Majesty to direct immediate measures to protect inventions at the Great Exhibition, and to reform the patent laws, as agreed to at the public meeting held on the 23rd of October. The report then went on to state that the petition was transmitted to Sir George Grey for presentation to her Majesty. On the 11th November, the deputation was received by Sir George Grey and Mr. Labouchere, when the Government having requested statements of the views of the committee, they were accordingly sent to the Home-office and the Board of Trade. In conclusion, the report said the committee found, that, to carry out the purposes of the League with energy and spirit, it required some extent of funds. They appealed, therefore, to the public for support; and they trusted that inventors and friends of reform would come forward, and not allow the cause to be crippled for want of funds. Several resolutions in accordance with the objects of the association were passed, and the meeting separated.

SOCIETY FOR THE AMENDMENT OF THE LAW.—A meeting of this society was held on Monday evening, at its rooms, 27, Regent-street; M. D. Hill, Esq., Q.C., in the chair. The minutes of the last meeting were confirmed, and some new members admitted. The chairman, referring to the new code of law and procedure in the State of New York, which has been given to them by Mr. Field, one of the commissioners by whom that code was produced and laid before the state of New York, observed that the council thought it would be very desirable to institute an inquiry, by means of questions properly framed, to be dispersed through the great state of New York, for the purpose of learning from a sufficient number to be quite sure that they had gained an adequate knowledge of what was the public opinion of the legal revolution, for he could call it by no other name, which had been wrought in the state. (Hear, hear.) Their indefatigable member, Mr. Stewart, had waited on Mr. Laurence, the American Minister in this country, and he had proffered his services to frame any such inquiries that it was to make; and they could not have a better channel of communication, as it would ensure a careful examination of their questions from the countrymen of that gentleman. The principle upon which they had framed was the following:—First, the attention of the public was to be drawn to what must be the main object in every well-constituted system of jurisprudence; they wanted to know whether the new system had given facilities for bringing a cause speedily and clearly before the determination of the judge, and for doing away with all other considerations whatever. (Hear, hear.) That object had not been obtained in our own system. It was difficult almost to credit the fact, that the English people, who boasted to be the most practical people, could endure the system which at that very moment was in operation in their courts of law, and of the working of which the following account might be taken as a specimen. A tradesman in humble life brought an action on contract against a rich merchant in this city, and his commercial existence depended on the result. At the trial it was found that the contract was not framed in such a manner as exactly conformed with the evidence. Application was made for leave to make an amendment, and the judge granted an amendment, notwithstanding an objection that the amendment proposed was open to a special demurrer. The judge reserved the point for the consideration of the court in banco, which gave effect, as it was bound to do, to the demurrer. The plaintiff was nonsuited, and, consequently, ruined. He was driven to self destruction, and terminated his existence by laying himself down before a railway train. That was a result of a special demurrer, which, it might be well to add, was abolished in general demurrer, in not having anything whatever to do with the merits of the case. (Hear, hear.) It was neither more nor less than a piece of legal pedantry (Hear, hear.) In the second place, they desired to know whether the practical working of the code had shortened the time of litigation in each suit. The third head of the queries related to the question of expense. Upon the abstract question of expense there could be no difference; but he (Mr. Hill) had brought with him certain details in addition to reduce too much the gains of the professional man. Now, a man must live by his labour; but he would say, simplify actions, and then the professional man would be relieved of a great deal of work, and would be content to receive smaller gains. (Hear, hear.) The number of actions would also be increased when the expense was diminished. (Hear, hear.) Mr. Stewart then moved a resolution to the effect that certain questions relative to the new code of the State of New York, and its practical operation, should be transmitted to Mr. Laurence, the American Minister, to be disseminated by him amongst the merchants and lawyers of the State of New York. The respondent was requested to reply to the following queries, which should be transmitted by the chairman:—Whether he was acquainted with the New York system of procedure lately come into operation; whether he had been professionally engaged or interested in any cause arising under it; what was his opinion respecting the effect of the code in promoting or repressing litigation—whether the new system had been found to work inconveniently in bringing the parties to litigation—how far the principle of admitting interested parties to be sworn as witnesses to the extent, by making parties competent to give evidence in their own cases—what obstacles still remained before a case could be decided solely on its own merits—whether the new system had been adopted in any other state, and—whether the course of procedure had diminished the incomes of professional men in a greater proportion than it had diminished their labour—whether the members of the legal profession were, as a body, favourable to the change—whether, having regard to the difficulties under the new system of pleading, the respondent dreamt a return to the old system? Mr. Webster having seconded the resolution, it was put and carried unanimously. Mr. Creasy suggested, that a committee of the society might be usefully employed in watching some portions of the New York code, with the view of giving publicity to them. The recommendation was formally approved. Mr. F. Taylor moved, that instructions should be given to the secretary to address a letter to the magistrates of the county courts, requesting them to state briefly whether, in their opinion, that part of the County Courts Act operated well which permits parties to be witnesses in their own causes. The motion was seconded and carried. Mr. Prowett moved, and Mr. Yeamstart seconded, the adoption of the first report of the committee on common law as to pleading, &c. in the superior courts. The motion was carried unanimously, and the proceedings terminated.

INSTITUTION OF CIVIL ENGINEERS.—At the meeting on Tuesday evening—William Cubitt, Esq., president, in the chair—the discussion on Mr. Stevné's paper on "The Ventilation of Collieries, theoretically and practically considered," was continued throughout the evening. In summing up the discussion, it was observed that the House of Lords in 1849 was again minutely analysed, with the view of showing that the deductions previously drawn were not correct, inasmuch as the results obtained were owing to circumstances which had no connection with the steam-jet. It was considered that a current of air in the up-cast shaft of at least 18 feet per second was most desirable, to produce which a motive column of air of 127 feet would be required, and this could be attained where ventilation by means of a furnace, or of a steam-jet at the bottom of the pit, was used, without raising the temperature to such a degree as would be impracticable in bratticed shafts, or in shafts used for winding coals, or for the passage of men. It was then shown that the principle applied at the top of the up-cast shaft, and acting merely by rarefaction, would be too costly for general adoption, whereas, if the combined area of the pumps of Struvé's mine ventilator was sufficiently large to produce the requisite velocity, (where Struvé's mine ventilator had been in use nearly two years) at a greater distance than 100 yards from the machine, and could not, therefore, extend prejudicially into the workings. It was mentioned that two other machines, similar to those in use at the Eaglesbush Colliery, were in progress of construction for two collieries in the neighbourhood of Swansea. M. Letercq, an eminent mining engineer, had asserted that no similar machine to Mr. Struvé's had ever been used in Belgium, and that he thought it, both for safety and economy, superior to any mechanical ventilation which had yet been introduced.

NORTH-STREET RAGGED SCHOOLS, BETHNAL-GREEN.—On Tuesday evening a numerous meeting of the friends of the above schools was held at Crosby Hall, to receive the first annual report. Lord Ashley, M.P., presided, and he was supported by several ministers of Bethnal-green, Whitechapel, and that part of the metropolis. The report detailed the steps taken for founding the schools, which had been in progress since the year 1849, and it stated that the North street schools now received 100 children daily. The committee were desirous to erect new schools. The expenditure amounted to £223 14s. 4½d. There was (included in this) £19 3s. 8d., due to the treasurer. Among the receipts were £50 12s. in subscriptions and donations, £20 in pence from children, and £32 from the Ragged School Union.

WATERLOO-ROAD RAGGED SCHOOL.—On Tuesday morning a bazaar for the sale of various articles of use and ornament was held in the above school-rooms, which are situate under the Royal Infirmary in the Waterloo-road. The object was to effect the liquidation of the debt for rent, &c., with which schools are at present encumbered. During many of the articles exhibited were several dresses, &c., manufactured and presented by the teachers. The sale was well attended throughout the day, and from it and the subsequent meeting a considerable portion of the sum was realised.

THE LONDON FARMERS' CLUB.—The monthly meeting of this body was held on Wednesday evening, and comprised a full attendance. The subject, which was introduced by Mr. J. C. Nesbitt, was, "The qualities of different kinds of food, and the best methods of fattening stock." The argument advanced was, the importance of apportioning the various descriptions of food in accordance with their chemical elements, in order to the production of flesh as well as fat, and the keeping the animal in health. Messrs. Shaw, W. Bennett, Mechi, Pawlett, R. Smith, and Williams took part in the discussion, which terminated in the adoption, on the motion of Mr. Shaw, seconded by Mr. W. Bennett, of a resolution affirming the importance of the subject, and the agreement of the principles laid down with the experience of the meeting

THE PROTECTIONISTS.—A meeting of the National Protection Association was held at the London Tavern, on Thursday; Geo. F. Young, Esq., in the chair; at which a kind of address, to be forwarded to the various local associations, was agreed to, to the effect that another trial should be given to the House of Commons; but if nothing was done for the protection of British labour and capital in the early part of the session, a general meeting of delegates from all parts of the kingdom should be convened, to adopt ulterior measures, the nature of which was not, however, indicated. The meeting was very thinly attended, and in the whole of the proceedings were extremely spiritless.

SCHOOL FOR THE INDIGENT BLIND.—A general meeting of the friends and patrons of this charity took place on Thursday, at the London Coffee-House, Ludgate-hill; the Hon. Earl Rodney in the chair. It appeared from the statement laid before the meeting, that the number of pupils had gradually increased from fifteen males to seventy males and eighty-one females; and a workshop had been established, where articles made entirely by them had been sold last year for £1258 6s. 10d. The receipts for the last six months amounted to £3495, and the expenditure to £3482, leaving a balance of £16. The statement of accounts was adopted, and a resolution passed empowering the trustees to sell out £1000 stock in the Three-and-a-Half per Cents, to meet the bills due after Christmas. A vote of thanks to the chairman concluded the business of the day.

SERVANTS' PROVIDENT SOCIETY.—Her Majesty has been graciously pleased to direct that the Servants' Provident and Benevolent Society, whose establishments, recently removed from Cork-street to Great Marlborough-street, have been extensively inspected by the Royal Highness Prince Albert, be in future styled the Servants' Royal Provident and Benevolent Society.

THE RESTORATION OF THE CHURCH OF ST. STEPHEN WALBROOK. This magnificent and enduring monument of the genius of Sir Christopher Wren will in a few days be re-opened for divine service, having undergone various improvements and alterations, with a view to restore the church to that state in which the great architect originally left it.

PRESENTATION OF FINNISH TESTAMENTS.—Two cases of Finnish Testaments have arrived by the vessel *Bullfinch*, from St. Petersburgh, which are intended for gratuitous distribution by the British and Foreign Bible Society. A case of French Testaments has arrived by a steamer from Calais, and four cases of Welsh Bibles and Testaments have subsequently arrived by a vessel from Stockholm, which are intended to be disposed of in the same laudable manner, and the Lords of the Treasury have given their sanction for the free delivery of the whole of the books to the society for the purpose mentioned.

ROYAL GENERAL ANNUITY SOCIETY.—On Sunday evening the Rev. John Jessopp, M.A., chaplain to his Majesty the King of the Belgians, and morning preacher at the Asylum for Female Orphan Children, and at the Widows' Chapel, Trinity-church, Trinity-square, Newington, in aid of the funds of this institution, which was established in 1827, for allowing annuities to decayed merchants, bankers, professional men, master manufacturers, tradesmen, artists, and commercial gentlemen, and to single ladies, daughters of the above classes of society. The reverend minister took his text from Gen. i. 1: "In the beginning God created the heaven and the earth;" concluding his discourse with an eloquent appeal in behalf of the institution, and which produced a liberal collection at the doors.

THE SOUTHWARK FUND.—On Sunday, sermons in aid of this fund for building schools and churches in Southwark were preached in the morning in all the churches and chapels of the deanery of Southwark by the special desire of the diocesan, the Lord Bishop of Winchester, and also by desire of the Lord Bishop of London in those of the parish of St. Mary, Newington, which belongs to the diocese of London. Clergymen of both dioceses joined in the operation of the Southwark Fund. The Southwark Fund was first opened in 1845, to supply the spiritual and educational deficiencies of the densely-thronged and ill-provided district on the south side of the Thames, where, with a population of 500,000, there was only church accommodation for 40,000, and school provision for less than 9000. After great exertion, a sum amounting to £30,000 was contributed with a view to remedy the evil, by means of which six churches and eleven sets of schools have in a great measure been erected; the former supplying accommodation for 5738, and the schools for 3582; but still further accommodation, in churches for 60,000, and schools for 7000, is required. The Bishop of Winchester has put the hands of the committee in so small that they cannot contemplate more than the erection of one more church and two more sets of schools, and therefore they most earnestly appeal to the public sympathy and liberality. At the parish church of Bermondsey, his Grace the Archbishop of Canterbury preached yesterday, taking his text from St. John, xii. 35—"And I, if I be lifted up from the earth, will draw all men unto me." His Grace, in allusion to the all-absorbing question as to the Papal aggression, said it was no reason to observe that the most effective way to arrest the onward march of Popery was to promote the extension of schools and churches. The collection at the door amounted to £73 4s. 10d. At the parish church of Newington, the Lord Bishop of London delivered a most eloquent discourse from the Ephesians, ii. 19, 20, and 21. Here the collection amounted to no less than £131 19s. 9½d. At the parish church of Lambeth, the sermon was preached by the Lord Bishop of Winchester, who took his text from Exodus, xxxv. 21, 22; and the collection realising therefrom amounted to £73 6s. 1d. At the parish church of Lambeth, the Lord Bishop of London preached in the morning, and the Archbishop of Canterbury in the evening. A special messenger arrived, with a communication that his Lordship had been taken alarmingly ill with a sudden attack of bronchitis, by which he was entirely deprived of his voice for the present; the sermon was accordingly delivered by the Rev. C. Brown, Vicar of Lambeth. The collection amounted to £27 8s. 7½d. The Venerable the Archdeacon of Surrey preached at Camden Church, Camberwell; and the Venerable the Archdeacon of Middlesex, at Trinity Church, Trinity-square. At the latter, £56 was collected, and at the latter £59. Among the eminent ministers who officiated for the cause were the Rev. T. Dale, at St. Matthew's, Denmark Hill; the Rev. C. B. Dalton, St. George's, Camberwell; the Rev. R. Mallett, St. Saviour's, Southwark; and the Rev. Daniel Moore, St. Matthew's, Brixton. The total amount collected is stated to exceed £1200. The various preachers took occasion to urge strongly the opposition to Papal doctrines by increasing the number of churches and schools.

ILLICIT DISTILLERY.—One of the largest seizures made since the capture of the Globe-road Distillery was effected on Wednesday by a body of the K division of police, led by Messrs. Benjamin, Tansley, and Fraser, Inspector, of the Inland Revenue department. The building in which the seizure was made stands in George-street, Bethnal-green, and has been used as a sugar-house, and the occupiers professed still to carry on a branch of the sugar-refining business. The whole plant of tubs, vats, pans, and other vessels, was then seized and carried to the Excise warehouse, in Broad-street, in several waggons. Two Germans found on the premises, named Schulze and Spreuht, were given into custody.

THE CUSTOMS AND THE DOCKS.—It is stated that the Customs authorities are preparing, with all possible dispatch, to bring the differences between themselves and the London and St. Katherine Dock companies to an issue. Difficulties have, however, arisen in connexion with some of the goods under seizure, the Dock Company not alone claiming them, but also other parties, who assert as merchants the right and title to them. In the investigations some very curious disclosures will be made when the whole investigation becomes public. The late police-office investigations prove that good reasons exist for assuming that felonies have not been uncommon in that quarter.

POST-OFFICE NOTICE.—On and after the 15th instant mails will be made up monthly for the Cape of Good Hope, to be conveyed from Plymouth by the packets of the General Screw Steam Shipping Company, under contract with her Majesty's Government, to touch at Madeira and Saint Helena, and the outports, which must in each case be paid in advance, will be as follows; viz. On letters not exceeding half an ounce in weight, to the Cape of Good Hope or Sierra Leone, 1s.; newspapers 1d.; letters to the Cape in the Gulf of Guinea, 2s. 6d.

BIRTHS AND DEATHS.—Births registered in London in the week ending Saturday, December 7:—Males [illegible], 510: total, 1004. The deaths during the same period: Males, 454; [illegible], 510: total, 1004. The deaths registered in the four weeks of November were 3911, 3977, 3921, 908, 1915, 961. In the week corresponding to last, of the years 1840-49, the average was 1128; but this number is much increased by influenza, which prevailed towards the end of 1847, when, in a single week (ending November 30) the deaths were 1676, compared with the previous week (ending November 30) the present return shows an increase both in the epidemic class of diseases, and in affections of the respiratory organs, the deaths from the former rising from 198 to 220, and those from the latter class (exclusive of phthisis), where they were 160, being now 208. Amongst epidemics, small-pox is remarkable for a suddenly augmented rate of mortality; after increasing by small degrees till it numbered 14 deaths in the previous return, it rose to 34 in the week ending the 7th, 29 of which occurred to persons above fifteen years of age. The sub-district of Christ-church, Marylebone, has been already noticed as a locality in which the complaint prevails, and accordingly it has contributed 12 deaths in a week. The same registrar now reports four deaths from small-pox, like the six others in Lisson-grove, one of which happened to a girl aged 15 years, and another to a female servant, aged 29; the latter case being described in the medical certificate as "variola, after vaccination at six years of age (no mark left on the arm)." Hooping-cough, also, has become more fatal: it carried off 33 children in the previous week, and 50 in the last, three-fourths of whom had not completed the second year. Diarrhœa and dysentery number 29; typhus, which among other epidemics presses with more equal severity on old and young, numbers 43 cases. A medical man who attended a fatal case of typhus in Wink's-buildings, Chelsea, describes the place as "pestiferous in the extreme," and adds that "in other cases of fever have occurred in the same house." Amongst diseases of the lungs, the weekly mortality by bronchitis has risen within the last fortnight from 74 deaths to 88; by pneumonia, from 82 to 86; and by asthma, from 29 to 32. Of 113. Among the deaths of the week were registered, one from intemperance and two from privation. A labourer, aged 48 years, died of "exhaustion from excessive drinking, and obtaining from the coroner a certificate to that effect. A cabman, aged 47, was, according to the verdict of the coroner's jury, starved "by not allowing himself sufficient necessaries, in consequence of eccentricity of character and habits."

METEOROLOGICAL OBSERVATIONS.—At the Royal Observatory, Greenwich, the barometer was unusually high. The mean daily reading was above 30 inches on every day except Wednesday, when it was 29 983 inches; on Friday, the mean was 30.290; and the mean of the week was 30.146. The mean temperature was below the average of the same days in seven years on the first three days of the week, and above it during the remainder. On Sunday the mean temperature was 36.9 degrees, or 6.4 degrees below the average. On Tuesday it was 50.1 degrees, or 9.6 degrees above the average, change which seem to operate unfavourably on the public health. The mean temperature of the week was 42.6 degrees. The wind was generally in the south-east.

POSTSCRIPT.

THE PAPAL AGGRESSION.

MR. BENNETT has published in the *Morning Chronicle* the whole of the correspondence that has recently passed between the Bishop of London and himself, and intimates that the Bishop was in too great haste to send his part of the correspondence to the press. The Bishop's letter of December 9th only reached him at half-past twelve o'clock on December 11th, in an imperfect form; and at six o'clock of the same evening he received an intimation that the Bishop thought it necessary, for his own justification, to publish the correspondence *in extenso*. It occupies more than a page of the *Morning Chronicle*, and turns very much on the ceremonies observed in St. Barnabas'

AN ADDRESS FROM THE PARISHIONERS OF ST. PAUL'S, KNIGHTSBRIDGE, to the Bishop of London, has been prepared, and is yet lying for signature, which expresses in strong terms their satisfaction and gratitude at the labours of Mr. Bennett. They say that, by his exertions, a complete change has been effected in the neighbourhood, and many persons brought into the fold of Christ. They are indignant at the treatment Mr. Bennett has received in his church from strangers, and they declare that they are bewildered and amazed at the report, that, as the result of his successful labours, he is to be removed from his ministry over them on the ground that his teaching is unfaithful to the Church. They announce their unshaken confidence in him, and entreat the Bishop not to disturb the peace of his ministry. This address was prepared before the Bill was struck; and the congregation will now probably follow Mr. Bennett

IT appears (says the *Ashmeaner*) that not only will Mr. Bennett leave Knightsbridge, but that the Rev. Sir F. Gastly, the Rev. G. G. Nugee, the Rev. G. F. DeGex, and the Rev. Mr. Fife all tendered their resignations immediately Mr. Bennett's decision was announced. None of the reverend gentlemen intend going over to the Church of Rome; and many of the most influential members of the congregation are desirous of setting on foot a fund for the establishment of a church in which they may indulge their own peculiarities in the performance of public worship, without governmental or episcopal interference, and which may be the foundation of a "Free Anglican Church."

THE EARL OF WINCHILSEA has addressed a letter to that most "excellent Journal" the *Times*, reminding his fellow-countrymen of the part he took in 1829, in causing the voice of "No Surrender to Popery" to ring through that, if every valley, and to echo from hill to hill throughout the land. The noble Earl boasts: "I have lived to see the fulfilment of all my predictions as to the consequences and results of that measure of 1829. I have lived to see Rome, as I then said she would prove to be, unchanged and unchangeable, and the concessions of political power then made to her, far from satisfying her, used but as a stepping-stone towards the undermining of all the Protestant institutions of our country." The noble Earl also says, Had he been Minister when the Popish bull which conveyed it arrived, not one day would have elapsed ere a right trusty messenger had left England's shores with a short and decisive communication, to the effect, that if the bull were not withdrawn within our Queen's realms, and placing both herself and her Protestant subjects out of the pale of Christianity, were not, within one hour after the letter was delivered, withdrawn, and an ample apology tendered, that the bull, and the bearers of the bull, would be no more seen by Rome than I have received due satisfaction at your hands

SURREY is to have its county meeting on Tuesday next at Epsom, at noon.

THE REPLY OF THE BISHOP OF NORWICH to the clergy of his diocese is published at great length. He would treat the Pope's Bull with supreme contempt did it stand alone; but the conversions from our Church gave it importance, and he accepted the issue his clergy, as the most important matter, to preserve the main distinction between their faith and the Romish, by bringing all their doctrines to the test of Scripture, while the Romanists bring even the Scriptures themselves to the test of human authority.

A GRAND ANTI-POPISH PROCESSION, demonstrative of the feeling existing against the Papal Aggression, took place at EXTHAM, Kent, on Wednesday. An immense figure of the Pope, in full pontificals, and of Cardinal Wiseman, were carried in procession, accompanied by a band of forty and fifty horsemen. After perambulating the country in the neighbourhood, they burnt the two effigies at Exham, amidst discharges of rockets and other fireworks, while a band played the National Anthem.

COURT OF CHANCERY.—A commission to inquire into the practice and pleading of the Court of Chancery has been issued to the following commissioners: The Attorney-General, G. J. Turner, Q.C., R. Bethell, Q.C., James Parker, Esq., W. P. Wood, Q.C., Samuel Compton and W. M. James, Esqrs. Charles C. Barber, Esq., will be the secretary.

MILITIA.—KNIGHTS OF WINDSOR.—The Queen has been graciously pleased to appoint Captain John Dumeen King, Half-pay Unattached, to the post of Military Knight, vacant by the death of the late Captain Lorimer.

MEETING OF PARLIAMENT.—A proclamation has been ordered to issue, summoning Parliament to meet on the 4th of February, for the despatch of business.

MONUMENT TO THE LATE SIR ROBERT PEEL IN LEEDS.—It has been definitively settled that the monument to the memory of this distinguished statesman shall be erected in Park-row, near the Court-house. It is to be a bronze statue, mounted on a granite pedestal. Mr. Behnes, the sculptor in ordinary to the Queen, has been engaged to execute the work, at a cost of 1500 guineas.

BROMPTON HOSPITAL FOR CONSUMPTION.—The ninth annual report of this charitable institution has just been issued; and, from the result of a meeting held on Thursday, the most sanguine hopes are entertained for the speedy completion of the building. The report observes "that it is hardly possible to exaggerate the amount of individual suffering which is occasioned by this and necessity." From this sad necessity the "Building Extension Fund" was projected, and which the extensive bazaar held in Soho Square, in aid of the Royal Military Asylum, was undertaking that has already received the express patronage of her Majesty the Queen and his Royal Highness Prince Albert. The act for incorporating the charity received the Royal assent on the 1st of August last.

LATEST FOREIGN NEWS.

FRANCE.

From Paris, our accounts of yesterday (Friday) state, that the anniversary of the election of the President of the Republic was celebrated by public dinners and other manifestations of joy in the principal provincial towns of the departments.

The religious solemnity which takes place each year on the 15th of December, in commemoration of the arrival of the mortal remains of the Emperor Napoleon, will be held on Sunday next at the Invalides. Prince Jerome Buonaparte will preside on the occasion.

A commercial treaty is about to be entered into between France and Belgium.

WEST INDIES.

Advices by the mail steam-ship *Clyde*, Captain Moss, arrived on Thursday evening. The only news of interest she brings respects the cholera at Jamaica, where it was committing the most frightful ravages up to the latest date, the 14th ult. Scarcely a district was exempt. About 25 per cent. of the population had fallen victims to the malady. The people died so fast that it was with great difficulty they could be buried. Many bodies were to be found lying about without coffins. The distress to the relatives of the deceased consequent upon this wide-spread mortality was truly appalling. Business of all kinds was nearly suspended throughout the island; and no one had the least notion when a reaction would take place.

The Queen has directed letters-patent to be issued, conferring upon the Right Hon. Sir R. M. Rolfe the dignity of a Baron of the United Kingdom, by the title of Baron Rolfe of Cranworth, in the county of Norfolk.

On Monday evening a literary entertainment, in aid of the funds of the East Islington Parliamentary and Financial Reform Association, took place at the Birkbeck Schoolroom, Windsor-street, Islington; Mr. F. W. Cosens in the chair, and briefly explained the laudable objects of the entertainment. A variety of recitations were then delivered and dramatic scenes enacted, much to the satisfaction of the company; and the evening passed off in a manner which was calculated to advance the interests of the association.

LAMBETH NATIONAL SCHOOLS.—The foundation-stone of the new National Schools, to be erected near the church, in Carlisle-street, Lambeth, was laid on Wednesday, by the Rev. Charles Baring Wall, M.A., rector. The district is very large, and much good will result from the increased facilities thus afforded to the lower classes, of procuring for their children a sound religious education, based upon the principles of the Church of England.

CLOCK FOR THE GREAT EXHIBITION.—An ingenious artisan of Dudley is at present engaged in constructing a very curious clock, which is intended for the Great Exhibition of 1851, the chief peculiarity being the length of time it runs without winding. The mechanism is standing only eight superficial inches, the motive power is only 28 lb., and yet the machinery is so nicely constructed, that it will take 436 days to run it down; consequently, the second hand will make 613,440 revolutions, and the balance 147,226,600 vibrations in the above time.

COUNTY RATES EXPENDITURE.—A large meeting of the vestryo. St. Pancras was held on Monday in the vestry at Camden-town, to urge on the Government the necessity of supporting a bill for giving to ratepayers a control over the county expenditure. Mr. Fraser, senior churchwarden, presided. Resolutions in accordance with the object of the meeting were adopted, and a local committee was appointed to assist the movement.

THE WEST INDIA DOCK RAILWAY.—Another portion of this railway, which is intended to connect the London and North-Western Railway with the East and West India Docks at Blackwall, was opened for pub ic traffic on Tuesday. The extension opened is to Camden-town, the station being near the Eagle.

On Monday evening, Messrs. Boulton's smallware manufactory at Manchester was on fire, but assistance being at hand, the flames were extinguished before damage to more than the extent of £200 was done

On Saturday morning, between one and two o'clock, an alarming explosion took place at the Chartered Gas-works in the Horseferry-road, Westminster. The cause of the disaster is unknown. The explosion was terrific, and carried away a portion of the purifying-house The workmen immediately cut off all communication with the gasometer or the damage might have been exceedingly great.

VISIT OF HIS ROYAL HIGHNESS PRINCE ALBERT TO THE GREAT EXHIBITION BUILDING IN HYDE PARK.—THE "PARTING CHEER."

THE GREAT EXHIBITION BUILDING IN HYDE-PARK.

The visit of his Royal Highness Prince Albert to the works in Hyde-Park was particularly interesting. Independently of his attendance there, as President of the Royal Commission, to determine the character of the proposed decoration of the interior, he came to witness one of the most skilful and delicate processes employed in the construction of the vast edifice, viz. the elevation of two of the semicircular ribs, forming, when glazed, the roof of the transept, and surmounting the loftiest trees on the ground. We have mentioned, in our notice of the progress, &c. of the Exhibition, the manner of depositing these ribs in their places.

After his Royal Highness's minute inspection of the whole of the structure, the carriage drew up for his departure, when, at the peal of a large bell, the whole of the men employed, some 2000 in number, came swarming into a semicircle round the spot where the carriage stood Just then a brewer's dray, laden with 250 gallons of beer, entered the gates, and was received with loud cheers. As the Royal carriage was driven off, hurrahs were vigorously given, to the manifest pleasure of the Prince, who repeatedly acknowledged them.

THE GREAT EXHIBITION BUILDING.—DETAILS OF CONSTRUCTION.

(*Continued from page 434.*)

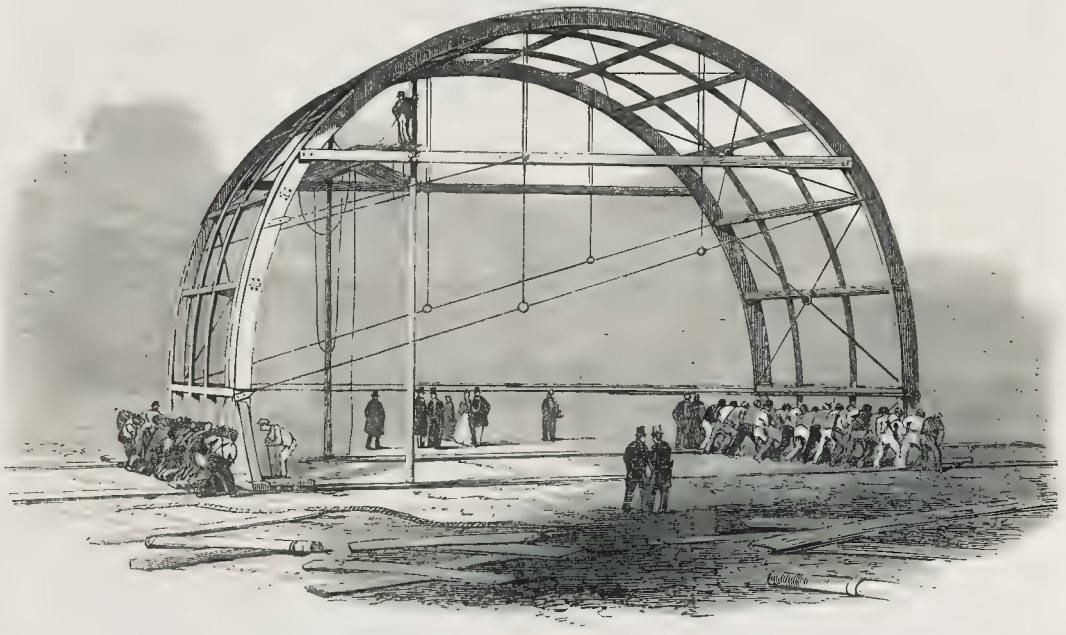
RAISING THE RIBS OF THE TRANSEPT ROOF.

We have all along considered the raising of the vast ribs of timber to form the roof of the transept, by far the most difficult of the operations to be performed in the construction of the Palace of International Industry. Great, however, as appeared the difficulties in accomplishing this operation, or rather series of operations, all the ribs, 16 in number, have been in eight days fixed in their places, and afford some notion of what the effect of the interior of the transept will be when entirely completed. The idea of a transept was a happy one—it changes the whole character of the interior of the building.

We wish those who have not the opportunity of witnessing the busy scenes daily enacted in all parts of the works, thoroughly to comprehend, by means of our Illustrations and descriptions, the truly animating and exciting spectacle of two thousand men engaged in their various occupations, all lending their aid towards the accomplishment of the great design: perhaps the gangs of men engaged in raising the monster ribs presented upon the whole the most picturesque appearance; the peculiar character and cut of the "long-shore men" engaged in this particular service, from their capacity of handling and hauling ropes, and of managing hoisting tackle, added considerably to the general effect.

The ribs of the transept may be compared to the ribs of the centering of a semicircular arch of 72 feet span. Every one engaged in engineering works knows the amount of skill required, and the great caution to be exercised, in putting together the temporary support of a stone arch while under construction. Piles are driven into the bed of the river, to support longitudinal and cross timbers; and on these, again, are framed various timbers, placed vertically, horizontally, and diagonally, and technically known as trusses, which support the ribs. But in the present case no such support can be obtained: the whole strength must be chiefly in the ribs themselves, which are required to be suspended by ropes, and raised bodily in pairs from the ground, to a height, in the first instance, of nearly 70 feet, without any scaffolding whatever. The weight of a pair of these ribs, when connected together, ready to be raised, is eight tons: and as there are altogether eight pairs of ribs, there will be a load of 64 tons in this semicircular roof, independently of the intermediate timbers and the glass.

The vertical supports for the roof consist of cast-iron columns, already described, placed one above another in three tiers—sixteen in each tier on either side. Above the top tier are fixed the trussed



MOVING A PAIR OF TRANSEPT RIBS, FRAMED TOGETHER, PREVIOUS TO HOISTING.

RAISING THE RIBS OF THE TRANSEPT ROOF

girders, 3 feet in depth, spanning from column to column, which are each 24 feet from centre to centre; and across the intersecting lines of the middle aisle are two double-trussed girders, 6 feet in depth, and corresponding in length with three spaces of 24 feet each: except under the columns of the south-east angle of the transept, the whole are placed on broad base-plates, already described, which rest on concrete foundations. In the exceptional case the foundation consists of a solid brick pier, built in cement. At the top of each column which supports the roof is a cast-iron socket, 4 feet 4 inches in height. The use of these sockets is to receive what may be termed the vertical legs or supports of the ribs, and which form parts of the rib as framed together on the ground.

In order to resist the lateral thrust of the roof, a strong gangway 24 feet wide, is formed on each side of the transept, which may be considered as an abutment, being constructed of strongly-framed and braced flooring, supported by trussed girders. Having prepared the way for the operation of raising a pair of the ribs, a view of which is represented in our present Number, we will now endeavour to describe the four different stages of the process:—Two separate ribs are first raised in a convenient situation in the central aisle, by means of ropes and tackle in connexion with *crab* engines, and framed together with thirteen purlines, 4½ inches by 10½ inches, and two intermediate rafters, the whole being further strengthened by wrought-iron diagonal ties, two on each side; from side to side of each rib extends a horizontal tie, made of six pieces of scantling timber, each 7 inches by 2½ inches, separated by blocks, and bolted together, and suspended from the crown by four flat iron rods, 3 inches wide by ½ inch thick. The legs of two ribs, when connected together, rest on a temporary sill, 15 inches by 5 inches, the whole being firmly strutted and braced together.

The first stage, then, is to move the pair of ribs from the site they have occupied during the time of being framed together, to the central space of the transept, ready to be elevated. This is accomplished by placing several friction rollers between stout planks laid longitudinally under the two sills, the whole being moved forward by a force of about thirty men, supplied with crowbars and other appliances. This stage of the operations is readily performed, and without danger. A view of this part of the process is shown at page 452.

The second stage in the process is raising the pair of ribs, framed together as already described, to the level of the temporary wooden tramway, on which the whole has to be moved to its destined position. This part of the process requires the united labour of forty-eight men, twelve to each of four *crab* engines, placed near to the four intersecting angles of the centre aisle and the transept. The use of the *crab* engines is to wind up the ropes by which the ribs are suspended; four men work the handle on one side and four on the other, while two men draw out the tail-rope as required, and the other two attend to the front part of the engine. The rope from each engine passes to a leading pulley on the opposite side of the transept, and thence, in a diagonal line, to hoisting tackle on the top of the double girder over the central aisle at its intersection with the transept, from which tackle it passes down to one side of the frame of double ribs, to which it is securely fastened.

When all the ropes and tackle are properly arranged and adjusted, Mr. Fox, who personally superintends every operation requiring extra care in its execution, gives the word of command, and the four gangs of men at once commence the task of raising the girders, by moving round the handles of the *crabs*, and thus winding the rope twice round the barrel, when the *tail-rope* is pulled out by the two men, as already mentioned: four guide-ropes, to steady the ribs in their upward movement, are connected therewith—two fore and two aft, the other ends of which are attended to by as many men. This part of the process is completed by lodging the ribs safely on the top of the large temporary beams or tram-plates. The third stage is to move the pair of ribs along the top of the transept to opposite the situation which it is destined to occupy. This is effected by intercepting between the temporary sill of the ribs and the tram-plates five friction-rollers, on each side of the transept, at the springing level. These rollers are each 12 inches in diameter, and, being formed with a sinking in the middle, are kept on the tram plates while being moved forward. In each of the rollers are perforations, capstan-fashion, to receive the ends of the levers, by which the whole is moved forward: twenty-four men are required for this particular service, whose attention is chiefly directed to keeping the rollers accurately at right angles to the tram-plates.

We now come to the fourth and last stage. When the frame of double ribs is moved to its horizontal position above the sockets, each side of the frame is attached to pulley-tackle on the top of a derrick raised on either gangway, as already mentioned, by means of ropes attached to the crank. Thus, the whole frame is once more suspended, and the rollers and temporary timbers having been removed, the legs are dropped into their respective sockets. The space on either side, 24 feet wide, is covered with lead, forming what is termed a "lead flat," which will receive the water from the roof of the transept. On the side of the "flat," removed from the transept, is a wide gutter lined with lead, and laid with proper fall to the rain-water heads over the hollow columns.

GREAT INDUSTRIAL EXHIBITION OF 1851.

The extraordinary resources of the contractors of the "Crystal Palace" have had no fitter occasion for their display than in the setting up of the massive circular ribs for the roof of the transept. Prince Albert, on his visit last week, specially witnessed, with great and acknowledged interest, the operation of raising and fixing a pair of them. About three quarters of an hour was occupied ere they were securely deposited in their places. Only two new remain of the whole number forming the transept roof to be lifted from the ground; and they will probably, by the end of the week, be in their appropriate seats. So considerably do they over-span the trees, that visitors have remarked, "How fine it will be by and by, when they have had to cut the trees;" whereas, not a single branch has been lopped or displaced. Preparations have already been made for glazing the transept roof, and portions will be covered in at the beginning of this month. The glazing operations have commenced markedly to advance; and the flooring alone is delayed for the reason stated last week, viz. the arrival of the waggons and heavy vehicles employed in freight, &c. for the Exhibition.

The offices of the Executive Committee were to have been occupied this week: both they and the room for the large wooden model of the whole structure are floored and glazed, and are to be at once proceeded with. The further experiments in the painting have taken place: the exterior will be of a plain stone colour; whilst the interior, as we previously stated, will be simply (but in general harmony with the contents of the four sections) decorated with red, blue, white, and pale yellow.

The visitors to the Exhibition have not been lessened by the bad weather. On Saturday upwards of 200 were noted down, exclusive of those having the privilege of *entrée*.

Copies of the rules concerning the reception of articles to be admitted, together with copies of the forms for making out the Catalogue, as prepared for British exhibitors, have been forwarded to the Foreign Commissioners.

The Executive Committee have arranged for a minuter division of the four grand sections of the Exhibition. Each of the Local Committees will be now distinctly enabled to mark the classes under which exhibitors of their district may wish their productions to appear.

The tenders for the refreshment-rooms are to be again sent in. Some of the superior confectioners and provision-mongers were deterred from application by the misapprehension that the whole refreshment service would not be apportioned to any one contractor, but that it would be divided according to the class refreshments sanctioned by the Committee, one contractor for each class.

A cloak-room and lost-property office, attached to the Building, has been publicly suggested as an advantage.

It cannot be too strongly impressed on all the Local Committees to petition for provision to be made in the approaching session for exhibitors' cases. The French manufacturers were holding back from want of some such assurance; and it was only by the persuasion and guarantee of M. Dumas (the celebrated chemist), one of the present Ministers of the Republic, that their dissatisfaction was allayed. The Society of Arts have done their portion in grappling with the Patent Laws, and have published a very interesting pamphlet on the rights of Inventors; and the public at large, through the Local Committees and others, should follow up these efforts.

Some discussion having appeared among the Westminster committee to attend the general meetings of the metropolitan committee in the city, and an objection having been urged by the London committee against sitting at Westminster, the matter has been settled by the handsome offer of the Society in the loan of its rooms in John-street, Adelphi, for committee meetings

The floor and counter space demanded by the aggregate metropolitan committee was, in square feet Raw materials, 7019; machinery, 41,291; manufactures, 89,185; sculpture, 8000; unclassed vouchers, 28,616. The amount awarded was, in square feet—Raw materials, 8000; machinery, 30,000; manufactures, 30,000; sculpture and fine arts, 7000; with an additional amount of wall space of 100,000 square feet. Only 89,000 had been applied for.

Various indeed are the departments of art and industry over which the articles to be exhibited by French contributors extend. The number of contributors is 2481. In the first division, of raw materials, 485; in that of machinery, 504; in manufactures, 1068 in sculpture, &c., 354.

Stones, slates, earths, gems, minerals, plasters, marbles, chemical products, grains, flour, sugars, chocolate, confectionery, hemp, hair, furs, wools, silks, skins, manures, &c., in Section 1. Machines, tools, steam-engines, weighing, calculating, printing, writing, balloons, springs, wheels, every description of astronomical, agricultural, surgical, and drawing instruments; telegraphs, bells, fire-arms, roofs, and fountains, in Section 2. Tissues, silks, cotton and thread goods, carpets, shawls, ribbons, lace, papers, pasteboard, jewellery, plate, metal and bronze ornaments, cutlery and iron ware, glass, porcelain, pottery, marble ware; objects of carpentry, upholstery, and furniture; picture-frames, saddlery, leather in all its ways, gloves, tooth-brushes, candles, soaps, perfumery, clothes, stays, feathers, appear in Section 3. And in the last Section, which promises to be extremely rich, cameos, metal engravings, mosaics, tapestry, statues, &c., in terra-cotta, plaster, architectural models, designs for ornaments, pictures, photographic and lithographic specimens, and a variety of processes connected with the Fine Arts, are specially noticeable.

There are upwards of 900 applicants from Belgium. Their embroideries, laces, linens, metal works, and objects of art in jewellery, sculpture, upholstery, are promised to be of first-rate character by the list furnished from the Central Committee.

The correspondent from Hong-Kong has forwarded £131 to the general fund, and the Canton subscriptions amount to £250 dollars. The Canton Committee are said to have promised highly curious and interesting specimens of Chinese art and industry.

The provincial intelligence relates principally to the settlement of the demand for space, &c., which is generally considered to have been satisfactorily allocated. Leicester has claimed for an additional space of 2500 feet.

The efforts by the various district committees continue to be successful in promoting the visiting associations of the working classes. Sir Culling Eardley Smith has offered his influence in furthering the establishment of temporary lodging-houses for the reception of the visitors; and already in the western suburbs of London the owners of lodging-houses are preparing for their harvest by demanding higher rents than they have usually obtained even during the fullest Christmas seasons.

The Committee of Clergymen, associated under the Bishop of London, for providing the great body of expected visitors with means of religious accommodation, recommend the raising of a fund to provide extra aid to the various parochial clergymen, hiring rooms for religious purposes, &c. The Society for Promoting Christian Knowledge has forwarded £500 for these objects. A further sum of £50 has been promised from Southampton, being the expected proceeds of the late ball there. The subscription will be, probably, about £800, and is a good evidence of the activity and energy of the Mayor in advancing the interests of the Exhibition. By his suggestion arrangements were, in the first instance, made with the railway company for conveying, at a fixed sum per train, to convey a certain number of visitors to and from the metropolis; and it was estimated that a visitor by one of these trains would have his journey expense defrayed at about two or three shillings.

An extraordinary piece of coal, says the *Staffordshire Advertiser*, was lifted out of a pit at the Twidale colliery. It weighs between four and six tons, six feet high, six feet in diameter, and eighteen feet in circumference. It is of circular shape, and will be forwarded to the Exhibition in a waggon, with the tackle, picks, &c., employed in raising it.

ILLUSTRATED LITERATURE.

LYRICS OF THE HEART; with other Poems. By ALARIC A. WATTS. Longman and Co.

In this exquisitely embellished work, Mr. Watts has assembled a selection from the various poems published by him since the year 1824. Such of our readers as are familiar with the "Poetical Sketches," the "Literary Souvenir," and the "Cabinet of Modern Art," need not be assured that the volume before us sustrines many sparkling gems of the poetic art, and "appeals to the domestic affections," which must endear the work to every hearth and home where it is seen and read. We quote one of the most interesting specimens:—

LEAVES FROM A POET'S AUTOBIOGRAPHY

(Written on the fiftieth anniversary of the Author's birthday, under circumstances of great mental depression.)

TELL me not a radiant morrow
Follows oft the gloomiest night;
That the darkest cloud of sorrow
Sometimes hides a world of light;
If the heart hath long been pining,
Faint and sick with hope's delay,
And the star above us shining,
Veils from earth its guiding ray.

Evil days have overtaken,
With their storm-charged clouds my way;
And my soul, till o'er me unshaken,
Shrunk with all its cell of clay
E'en the Muse invoked not often,
Save to soothe the spirit's wrong,
Pride to tame, or grief to charm,
Half withholds the power of song

Foul Oppression, fiercer, stronger,
That her step I strove to stay,
Till my feeble arm no longer
Might her trampling hoofs delay—
Treads me down: no more my heart is
In my buoyant faith of old;
When the Muse, Queen of Justice,
Gained the giant might of gold?

Stormy skies are lowering o'er me;
Raging billows gird me round
And the gloom that broods before me
Grows but more and more profound.
Not a beacon-light, or star-watch, cutting,
To my distant port a clew;
Fate, at one fell swoop, has left me
Of both chart and compass too!

Like a gallant ship succumbing,
That no more obeys her helm,
While I mow the tide wave cresting,
With its mandate to o'erwhelm
O'er my hopes, a death making,
Sweeps the flood of wreck and wrong;
Reeling stays and bulwarks breaking,
While I once be loved so strong.

Whilst upon the scene of ruin,
From his covert safe on high,
On the storm his work is doing,
Glares the Wrecker's baleful eye!
As the night gun goes its pieces,
Torn each stalwart limb from limb,
How his soulful joy increases,
If some fragment drifts to him!

Once, of old, my glad way winning,
Youth and Hope both led me on;
Now, unmoor'd, I'm drifting, drifting,
Youth alike are gone.
Sail and rudder, mast and rigging,
Crew, seldom to be kind,
Love, friendship, light, all gone too clearly
But the tr k we leave behind!

Friends with whom in youth I started
On life's first adventurous way,
Once so warm and pestal-hearted,
Ono by one have dropp'd away!
Some, on earth's vain turmoil surging
For the land that knows no wrong
Others Fortune's smiles estranging
From the weak, when *they* grow strong!

Summer friends, like swallows trooping,
Come when sunshine warms the heart,
But at winter's advent drooping,
For less chilling skies depart
Foes, like stormy petrels flocking,
Round the doom'd and labouring bark,
Deepening woe, misfortune mocking
Come when heaven is wild and dark.

Many a year, ambition dubbing,
Irksome labour claim'd my pen;
At the car incessant pulling
Mid the stir and strife of men.
From more noble pursuits diverted
To a task I piled in vain,
Tastes and sandrel's, hearts deserted,
Which, though late, I seek again!

Long Fate's adverse current clearing,
With a bold and sturdy stroke,
Hoping still, and still believing,
Did I bear that galling yoke
Day and night; at night, not ceasing,
Wanting that which sweetens toil;
Life of half its joys dispossessed,
Barkering peace for wild turmoil!

Manhood's vigorous prime exhausted,
All the flowering years of Life!
Health impaired, acquirements wasted
In that long and fruitless strife.
Just as Fortune's tide was turning,
And my respite all but won,
For the hour—now I know it—nearing,
But I suffer'd take it none.

Lawless Rapine, hundred handed,
Sordid, cunning, bold, and strong,
With her base fanners banded,
Falsehood, Fraud, Revenge, and Wrong,
Of the gaunt ones feared best one,
Swept my household gods away,
Ravaged even my hearth, and left me,
Save in heaven, no single stay!

But the great and just Redresser,
(Who may 'scape unscathed His frown?)
Thus can make the rich oppressor
In his rampant triumph drown.
May wounds not be pour'd in vain,
Sweaten even this bitter cup,
And from "penitence and pardon"
Lift my trampled spirit up!

The Engravings, some 40 in number, remind one of the better days of book illustration. They are from pictures by R. Stothard, R.A.; G. Barret; G. S. Newton, R.A.; D. Roberts, R.A.; F. Danby, A.R.A.; R. Westall, R.A.; T. Hofland; H. Howard, R.A.; R. F. Bonington; Sir T. Lawrence, P.R.A.; W. Etty, R.A.; and B. R. Haydon. All are most beautifully engraved in line, by our best artists. With such models of excellence in each department, we need scarcely add our commendation of this brilliant *réunion* of "Poetry and Printing." We should, however, add, that the volume is printed and embellished uniformly with Rogers's "Italy" and "Poems."

THE CHARTER HOUSE.—Thursday being the founder's day, the customary celebration took place at the Charter House, Carthusian-square. The aged brethren, slightly in number, assembled in the upper hall, and having partaken of an excellent dinner, drank to the memory of the benevolent founder of the institution, and the health of the master and other officials. At four o'clock divine service was performed, an excellent sermon preached by the Rev. E. Bode, M.A. The Latin oration was then delivered in the Governor's room by the successful scholar, Mr. F. M. Stopford (son of the late Lieutenant-Colonel Stopford), who was admitted into the institution on the nomination of her Majesty. The young gentleman was highly congratulated on his success; and his purse, with which he goes to Christchurch, Oxford, amounted to £241, of which her Majesty graciously gave £40. The remainder of the day were brought to a close by a dinner, at which about 100 Carthusians sat down, presided over by the Master (the Ven. Archdeacon Hale).

LARGE SEIZURE OF ADULTERATED PEPPER.—A seizure of considerable magnitude was made on Tuesday, by the officers of Inland Revenue, on the premises of a wholesale tea-dealer at the West End, of a quantity of pepper, adulterated with very deleterious ingredients. The adulteration of this article has recently become so notorious, that the Commissioners of Inland Revenue have determined to institute proceedings against all parties against whom detections can be made for the recovery of penalties to a large amount.

THE ROBBERY OF PLATE AND JEWELLERY IN THE STRAND.—The seven prisoners who were respectively examined for stealing nearly £2000 worth of jewellery from the shop of Messrs. Williams and Clapham, 14, Strand, were fully committed to Newgate for trial on Wednesday, the evidence being completed against them.

THE LATE ESCAPE FROM THE MODEL PRISON.—AUDACITY OF THE CONVICT.—George Hackett, who made his escape from the Model Prison, Pentonville, on Sunday, the 1st instant, and for whose apprehension a reward of £30 is offered, had the audacity, on Friday week, to make his appearance in Billingsgate, whither he was driven in a cab. He visited several public-houses, at one of which he paid for half a pint of rum to treat his companions, and then proceeded in the same conveyance down Thames-street, and over Tower-hill. What renders this act more daring is that his father worked for many years in the market, and the convict himself, having been brought up in the vicinity, is personally known to most of the porters and others about the neighbourhood, who either were afraid to attempt his capture, well knowing his desperate character, or else they had not seen the hand-bill offering the reward, which was only issued on that day.

CHESS.

TO CORRESPONDENTS.

C G, Skibbereen—You are quite mistaken in both cases. Look at them again attentively

E A M, KDRA.—The key-move of Enigma No. 685 is 1. K to Q B 2d

PAM, of Kent—As a general rule, Castling on the King's side is preferred; but which is best, after all, must depend entirely upon the circumstances of your game

P of Graham's Town—You are perfectly correct on both points

PUNCHES.—You are mistaken, since Black may easily retard the Mate by playing Rook to Q Kt 7th on his first move

BARE MACON.—It is published monthly, at is 6d per number

C M J.—Thy answers are correct

P C.—The key-move of Enigma No. 682 is 1 R to K sq that of No. 686 is 1. Q to K B 2d

EDWY.—In the Paris-Alfonsi Ivory, they cost, as you may see by the advertisements, £5 5s

A CAMBRIDGE GRADUATE.—They shall be duly examined. The one published, as you will have discovered by this time, admits of two solutions

SENEX.—We have not room at present for so long a solution as the one you require

P J I Woodstock.—It must be named from the file on which it stands at the time, and is therefore the Queen's Bishop's Pawn

JANE.—The Chinaman is merely a curiosity

OLD SUBSCRIBER.—It would save a great deal of trouble and disappointment, if our correspondents would bear in mind that all communications intended to be answered immediately should be sent to us *not later than Wednesday*

SOLUTIONS OF PROBLEM No 357, by Truck, of Rotterdam; J A B, PAM, of Kent; Van P—, of Rotterdam; D R, R P C, E B M, are correct

SOLUTIONS OF PROBLEM No 358, by E B, Truck, R P S, Clevedon, M B, E M A, J A B, W M, of Leamington College; Unknown, of Acton; Van P—, Rollinder, Barnsley; A Tyro, Omicron, R T C, Edwy, Scrutator, P F T, of Woodstock; Jack, M M C, J B, of Worcester; Salop, of Shrewsbury, R S T, of Torbay, E K L, are correct

SOLUTIONS OF PROBLEM No 359, by Derevon, Sigma, Yarmouth Duo, H L, D B, R T C, J G B, Juvenius, Lind Inn, Alfred and Conway, J P H B, Se Edmund, Bath Duo, Rev T J, and Hinworth, Jack, W D W, of Bristol, Bellary, Cape Town, Trinity College, Cambridge, R S T, C Follero, E H C, M E H, S L K, J A W, are correct

ENIGMAS.—J ENGLISH by J A E P of Graham's Town, Alexina, Barr Magus, J P H H L A M, are correct. All others are wrong

Replies to a great number of communications are unavoidably deferred until next week

*** In reply to a host of Correspondents on the subject, we beg to state, that the "Managing Committee" of the GRAND CHESS TOURNEY of 1851 meet every Saturday at the St. George's Chess Club; and all communications relative to the Tournament, if addressed to the Secretary, Mr M. G. Kemp, will be laid before them.

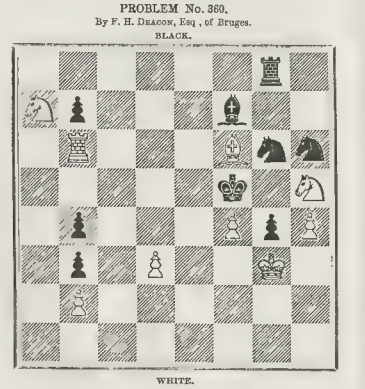
SOLUTION OF PROBLEM No. 358.

WHITE.	BLACK.	WHITE.	BLACK.
1. R to Q 4th (ch)	P takes R	3. Kt to K 6th	R to Q 2d or 3d
2. R to Q B 6th (ch)	K to Q 4th	4. Kt takes Q B P—Mate.	

PROBLEM No. 360.

By F. H. DEACON, Esq., of Bruges.

BLACK.



WHITE.

White to play, and mate in four moves.

COMMITTEE OF MANAGEMENT OF THE GREAT CHESS TOURNAMENT FOR 1851.

The following noblemen and gentlemen have undertaken the duties of arranging and superintending the encounters in this intellectual tourney, which is NOW definitively settled to take place in the spring of next year:—

His Grace the Duke of Marlborough	A. Fonblanque, Esq.
The Right Hon. Viscount Cremorne	H. Staunton, Esq.
The Right Hon. Lord Arthur Hay	Benjamin Smith, Esq.
C. R. M. Talbot, Esq., M.P.	Captain Kennedy
Marmaduke Wyvill, Esq., M.P.	W. Lewis, Esq.
J. Milnes Gaskell, Esq., M.P.	E. G. Cattley, Esq.
Sir Charles Marshall	H. T. Buckle, Esq.
The Hon. H. T. Liddell	

CHESS IN THE METROPOLIS.

M. ALEXANDRE'S LAST GAME.

The following well-fought partie has an interest beyond its mere intrinsic merits, since it was one of the last, if not the very last, played by the veteran Alexandre. His competitor on this occasion was Mr. F. H. Deacon, a young amateur from Bruges, who is destined, if we mistake not, to occupy a high position ere long in the ranks of Caissa.

(King's Bishop's Opening.)

WHITE (Mr. F. D.)	BLACK (M. A.)	WHITE (Mr. F. D.)	BLACK (M. A.)
1. P to K 4th	P to K 4th	19. Q to K 2d	Q to K B 3d (*l*)
2. K to B 2d 4th	K Kt to B 3d (*a*)	20. Q R to Q Kt sq	K Kt to his 5th
3. P to Q 4th (*b*)	P takes P	21. Kt to K 4th	B to K B 7th (ch)
4. P to K 5th	P to Q 4th	22. K to Q sq	R to Q sq (ch)
5. K Kt to K 3d	Kt to K 5th	23. Q B to Q 3d	Q to K B 5th
6. K Kt to K 3d (*c*)	K B to Q Kt 5th (ch)	24. P to K R 3d (*m*)	Q to K R 7th (*n*)
7. P to Q B 3d	P takes P	25. K to Q B sq	B to Q B 4th
8. P takes P	K B to Q B 4th	26. B to Q R 3d (*o*)	B to Q R 6th (*e*)
9. B takes K P (*d*)	Kt takes K B P	27. K to Q B 2d	K Kt to B 3d
10. Q to Q R 4th (ch)	Q B to Q 2d (*e*)	28. B takes K P (ch)	K to K sq
11. Q to Q B 4th	Q to K 2d (*f*)	29. Kt to K 6th	R to K sq
12. Kt to K B 4th	Kt takes K R	30 R to K B sq (*q*)	Kt to K Kt 3d
13 Kt takes B	K B P takes Kt	31. Kt to K B 7th (ch)	K to Kt sq
14. B takes Q Kt P	Q to K 2d	32. Kt to Q 6th (dis ch)	K to Kt sq
15. B takes Q R	Castles (*g*)	33. Kt takes R	Kt takes Kt
16. B to K 4th	Q Kt to Q 2d (*h*)	34. K to Kt 3d (*r*)	B to K 2d
17. B to Q B 2d (*i*)	K Kt to K B 7th (*k*)	35. Q B to K B 4th	Kt takes B
18. Q Kt to Q 2d	Q Kt takes K P	36. Q to Q Kt 5th	And Black surrendered.

(*a*) In the opinion of Jaenisch and the writers of the famous German "Handbuch," this the most effectual defence that can be opposed to the King's Bishop's opening

(*b*) P to Q B 3d is more generally played; but, we think, without due reason

(*c*) Much better than playing the Kt to K B 3d

(*d*) Somewhat dangerous, but, as the after-moves show, not ventured without consideration.

(*e*) P to Q B 3d would certainly have been stronger

(*f*) Very finely played. If White take the Q's Bishop, he must be mated; and if he capture the King's, it costs his Queen

(*g*) We should have preferred shutting in the Bishop by playing P to Q B 3d first.

(*h*) Black's fine position would seem to warrant more active measures; but, still, M. Alexandre's move is not a bad one.

(*i*) With the intention, apparently, of playing Q to K 4th if his K's Pawn were taken; but the move is not a good one.

(*k*) Q to K B 2d might have proved more troublesome to White a good deal.

(*l*) Q to K B 3d looks well enough, but would not avail him much.

(*m*) We doubt if he have any better move

(*n*) An excellent conception. If White, in reply, were to take the Kt, he must obviously lose the game instantly; and, if he take the Bishop, he will soon be in a bad plight; for it is mate.

WHITE.	BLACK.
25. Kt takes B	P takes Kt
26. Q to K sq	Q to K Kt 8th (ch)
27. K to his 2d (if to Q sq, he loses his Queen)	R takes Kt (ch)
	27. Q takes K Kt P
	And Black can never retrieve the game.

(*o*) Better to capture the Bishop at once, perhaps

(*p*) Threatening to take the Kt with his Queen, and then play Kt to K B 7th (ch), &c

(*q*) Intending to play Q to Kt 6th with the Queen

(*r*) This was well played, as the sequel shows.

DEATH OF HERR HANSTEIN.

THE CELEBRATED GERMAN CHESS-PLAYER.

THE grave has hardly closed over the remains of M. Alexandre, when the melancholy duty of announcing the demise of another distinguished player of Germany devolves upon us. Herr Hanstein, the president of the Berlin Chess Club, so well known, not only from his many lively contests with the great Heydebrant der Laza, but for his profound and searching articles on the openings of games, has been suddenly snatched from us in the vigour of his age, by an attack of typhus fever. Such a loss must be deplored wherever our intellectual game is practised, and will be lamented the more in this country, since so many had calculated on the presence and support of this admirable player at the forthcoming Tournament at the St. George's Chess Club.

NAVAL AND MILITARY INTELLIGENCE.

NEW SYSTEM OF CIRCULAR FORTIFICATION.—It may interest our military readers to know that a model in sand, on a large scale, of Mr. Ferguson's new system of circular fortification, has been prepared by Professor Cook and his assistants at the Military College, at Addiscombe. It was exhibited and explained by the cadets at the annual examination on Monday last.

REINFORCEMENT OF ROYAL ARTILLERY AT PORTSMOUTH.—The garrison of Portsmouth is to be increased by an additional company of Royal Artillery from Woolwich. That force will then amount to four companies to be stationed at that place.

DISTRIBUTION OF PRIZES AT THE EAST INDIA MILITARY COLLEGE AT ADDISCOMBE.—The usual half-yearly examination of the students of this college took place on Monday, in the presence of Sir J. W. Hogg, chairman of the East India Company, and a large number of officers of the service. The examination was conducted by Major-General Sir Charles Pasley, and the answers were regarded as indicating satisfactory progress in the military science. The Public Examiner reported that he could recommend to the military committee cadets for the engineers, ten for the artillery, and seventeen for the infantry service.

THE REGIMENTS ORDERED FOR FOREIGN SERVICE.—The following is the order in which these regiments will embark for Gibraltar and the Mediterranean. The exact dates of embarkation cannot be given, as the dates first named are seldom adhered to; but arrangements will be made so that tonnage will be provided for all the regiments by the end of February next. 39th Regiment will embark in January, and 47th Regiment about the middle, for Corfu; 41st and 49th Regiments will embark about the end of January, for Corfu; 56th and 74th Regiments will embark in January, for Gibraltar; 62nd Regiment will embark early in February, for Corfu; 3rd and 68th Regiments will embark and of February, for Malta.

THE ADMIRALTY PACKET SERVICE.—The only remaining service now performed by the admiralty vessels is that between Dover and Calais, Dover and Ostend, and between Malta and Alexandria. It is understood, however, the South-Eastern Railway Company will, at the ensuing session, stimulate their friends to apply to Parliament for the power to accommodate with the select committee on the subject should be attended to in respect of the services above mentioned; and we understand the railway company are prepared to show that the work can be performed in less than half the time of mail service, at a much less cost than is incurred by the Admiralty, taking into account the heavy expenses for Royal dockyard work, and wear and tear of the ships employed.

THE TURKS AT PORTSMOUTH.—The Turkish officers belonging to the two men-of-war in Portsmouth harbour have visited, during the past week, nearly all the departments in Portsmouth Dockyard and the Clarence Victualling yard, under the superintendence of Mr. Godfrey Thomas, R.N. Except the Captain, their uniform is copied from the English, viz. blue surtout coat, blue trousers, waist-belt, and sword. Their seamen have also been a good deal upon the dockyard, and have been busy, with their officers, at work, and, except their Captain, assimilate the other parts of their dress to the English fashion, which deprives them of their otherwise picturesque appearance. They spend a good deal of money on shore. They receive some vegetables and some meat on board, but they brought about two hundred quarters of wheat, which they have ground ashore, which supplies them with bread and flour. The wheat is of a most ordinary nature, long and horny in the corn, more like oats than wheat. The Turkish officers have been most courteous in their English visitors; but on Fridays and Saturdays, which days are appointed to ablution and religious observances, they are "not at home."

NATIONAL SPORTS.

As we mentioned in our last, the Newby Steeple-Chase, fixed for Friday next, is the only event of the kind on the calendar on this side of Christmas; it excites no interest whatever. The sporting *almanack* for next week are average in number, but of no public importance. Belford, Penrythn (Wales), Combermere, and Middleham, all commence on Tuesday; the South Lancashire (at Chatsworth) and the Scorton (at Catterick), on Thursday.

TATTERSALL'S.

THURSDAY.—The following were the closing quotations this afternoon:

WOLVERHAMPTON STEEPLE-CHASE.

5 to 2 agst Peter Sumple	8 to 1 agst Vam Hope	5 to 1 agst Maurice Daley
	DRAWN.	
to 1 agst Gresham	7 to 1 agst Primo Minister	45 to 1 agst Constellation
	13 to 1 ——— Sir Hugh	

WOLVERHAMPTON STEEPLE-CHASE HANDICAP.—FRIDAY.

The STEEPLE-CHASE HANDICAP.—Vam Hope, 1. Victim, 2. Seven ran.
The FREE HANDICAP HURDLE-RACE.—Rescue 1. The General, 2. Nine ran.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

The favourable nature of the Continental intelligence arriving so opportunely at the close of the Consol Account, to which must be added a demand for Money Stock, has together tended to the improvement and assets to speculators for the rise. Consequently, on Monday, the Market opened with Consols touching the advanced quotation of 97⅞ ⅞ closing at 97⅞ ⅞. On Tuesday, the opening price was 97⅞ 98, followed by an advance to 99. This was again improved on the following day, 98½ to ¾ being quoted; and on Thursday, Consols were done at 98⅝ ¾ for Money. The setting on Wednesday showed a large *Bull* account. The continuance of fetching about ¼ per cent. Old and respected member of the Stock Exchange was announced unable to meet his engagements on Thursday, from causes arising out of the settlement. Exchequer Bills are firm, and Bonds are in good demand. Foreign securities, the books for transfer of Consols closed on Thursday, and will open (with the other stocks now closed) on the 16th January. At the end of the week the official list gave the following quotations:—Bank Stock, 213½; Reduced, 97⅞; Consols, 98⅛; New Three-and-a-Quarter per Cent. Annuities, 99⅛; New Five per Cent. Annuities, 124⅛; Long Annuities, to expire January, 1860, 7 13-16; Ditto, Thirty years, October 10, 1859, 7 9-16; India Bonds, £1000, 85 pm; Ditto, under £1000, par pm; Bank Stock for Account, 214; Consols for Account, 98⅛; Exchequer Bills, £1000, June, 67 pm; Ditto, £500, June, 67 pm; Ditto, Small, June, 67 pm

The Foreign Market has been buoyant, prices, in several instances, displaying an upward tendency. Russian has advanced to 109 for the Five per Cents, and the Four-and-a-Half per Cents to 97⅞. In Mexican much speculation has prevailed, and the rise upon the opening prices of the week has been 2½ per cent. Intelligence *via* New York was received on Thursday, relative to a settlement of the debt, the bill having passed the Senate according to the terms agreed upon in the Chamber of Deputies. The money was to be settled by giving the creditors (they being willing) an order for 3,500,000 of the American indemnity, and reducing the interest to three per cent on the capital of something over ten millions. To pay this three per cent, twenty-five per cent on the duties at the frontier Custom-houses, sixty-five per cent. on the duties on exports from the Pacific, and five; per cent. on those from the Gulf ports, are mortgaged, besides the other national revenues whenever these do not suffice. Towards the close of the week a slight reaction occurred. The last list of prices generally is as follows:—Equador Bonds, 3⅜; Grenada Bonds, One-and-a-Half per Cent., 17⅛; Mexican, Five per Cent., 18½; Account, 34⅛; Peruvian Deferred, 3; Active, 3; Portuguese, Five per Cent., sixty-five per cent. on the duties on exports from the Pacific, and five; per cent. on those from the Gulf ports, are mortgaged, besides the other national revenues whenever these do not suffice. Towards the close of the week a slight reaction occurred. The last list of prices generally is as follows:—Equador Bonds, 3⅜; Grenada Bonds, One-and-a-Half per Cent., 17⅛; Mexican, Five per Cent., 18½; Account, 34⅛; Peruvian Deferred, 3; Active, 3; Portuguese, Converted, 1841, 34½; Russian Bonds, 109; Ditto, Four-and-a-Half per Cent., 97⅞; Spanish Five per Cent., 1840, Account, 18½; Ditto, Passive, 5⅜; Ditto, Three per Cent., 20½; Ditto, Deferred, 5⅜; Ditto, Three-and-a-Quarter per Cent., 31½; Belgian, Four-and-a-Half per Cent., 89⅞; Dutch, Two-and-a-Half per Cent., 58⅞; Ditto, Four per Cent., Certificates, 89⅞.

Great business has existed in the Share Market, prices not only having considerably advanced, but continuing to be well maintained. Orders from the north have had an influence, and the amount of business transacted on behalf of the public in North-Western, Great Western, South-Western, Midlands, and South-Eastern, may be regarded as an indication, that, since the relative value of money into consideration, all are fair objects of investment. The last prices are—Aberdeen, 14½; Ditto, Preference, 1½ dis.; Buckinghamshire, 17⅛; Caledonian, 10⅜; Ditto, Preference, 5⅜; Chester and Holyhead, 16⅛; Do., Preferential, 13½; Dublin and Belfast Junction, 23 , East Anglian (£25, L. and E. and L. and D.), 2⅜; Ditto (£18, E. and H.), 2⅜; Ditto (£3 10s., Six per Cent., Preference, 1⅜; Eastern Counties, 6 ; Ditto, Extension, Five per Cent., 5⅜; Do., Preference, New Preference, Six per Cent., 10⅜ x d ; Eastern Union, B and C Shares, 4⅜; East Lancashire, 19⅜ ; East Lincolnshire, Guaranteed Six per Cent., 10⅜; Great Northern, 17 ; Ditto, Halves, A., Deferred, 5⅜; Ditto, Halves, B, Six per Cent., 11⅜ ; Ditto, Five per Cent., Preference, 12⅜ ; Great Western, New, £17, 11 ; Lancashire and Yorkshire, 87⅜; Ditto, Quarter Shares, 13 ; Ditto, Fifths, 4⅜ ; Ditto, New, Guaranteed, Six per Cent., 130; Ditto, West Riding Union, 6⅜ ; Leeds and Bradford, 96⅜; Leeds and Thirsk, 14⅜ ; London and Blackwall, 7 ; London, Brighton, and South Coast, 86⅜ ; London and North-Western, 127 ; London and North-Western, New Quarters, 21⅛ ; Ditto, Fifths, 17 ; Ditto, Half Shares, 8 ; London and South-Western, 87⅜ ; Manchester, Buxton, and Matlock, 1⅞ ; Manchester, Sheffield, and Lincolnshire, 17⅜ ; Ditto, New, £10 Preference, 10⅜ ; Midland, 48 ; Ditto, £50 shares, 15⅜ ; Ditto, Consolidated Bristol and Birmingham, Six per Cent., 13 ; Norfolk, 14⅛ ; North British, 8⅜ ; North Staffordshire, 9⅜ ; Oxford, Worcester, and Wolverhampton, 16⅜ ; Preston and Wyre, 4⅜ ; Reading, Guildford, and Reigate, 18⅜ ; Royston and Hitchin, 7⅜ ; Ditto, Shrewsbury Extension, 3⅜ ; South Devon, 13⅜ ; South Eastern, 22⅜ ; South Wales, 23⅜ ; York, Newcastle, and Berwick, 19 ; Ditto and Newcastle Extension, 14 ; Ditto, G.N.E., Purchase or Preference, 5⅜ ; York and North Midland, 23⅜ ; Ditto, Preference, 5⅜ ; Boulogne and Amiens, 5⅜ ; Central of France (Orleans and Vierzon), 1⅜ ; Luxembourg, 2⅜ ; Namur and Liege, 7⅜ ; Northern of France, 15⅜ ; Orleans and Bordeaux, 2⅜ ; Paris and Orleans, 34 ; Paris and Rouen, 29 ; Paris and Strasbourg, 9 ; Rouen and Havre, 10 ; Sambre and Meuse, 5⅜

SATURDAY MORNING.—Consols opened buoyantly yesterday, quoting 97 to ⅞ ex div. The closing price was 97 to ⅛ ex div for Account. In the Foreign Market Mexican advanced to 37, afterwards receding to 36⅝ ⅞. Confirmation of the previous day's intelligence, as recorded above, was the cause of this rapid improvement Shares maintained the previous day's advance.

THE MARKETS.

CORN EXCHANGE, Friday.—In the present week the arrivals of English wheat up to our market coastwise have been 1310 quarters. By land carriage the receipts fresh up to-day were limited, and of very middling quality. Although the stands were scantily filled with samples of both red and white, the demand for all descriptions ruled heavy, at prices nearly equal to those paid on Monday. From abroad, nearly 7000 quarters of wheat have come to hand, partly from the Baltic. Fine dry samples were held all full rates of currency. In the middling and inferior kinds scarcely any business was transacted. The supply of barley was ... ate, yet the demand for that article ruled inactive, at late rates. Very little malt was offering. Was pro ... sold freely, at full prices. All other kinds were quite as dear. The aggregate supply of oats being small, the oat trade ruled steady; and, in some instances, the samples were 6d per quarter dearer. Beans, peas, Indian corn, and flour were very dull, but not cheaper.

ARRIVALS.—English: Wheat, 1310; barley, 3350; malt, 1610; oats, 170; flour, 2290. Foreign: Wheat, 1350. Foreign wheat, 6780; barley, 1000; malt, —; oats, 3030; flour, 3240 quarters.

English: Wheat, Essex and Kent, red, 38s to 42s; ditto, white, 40s to 50s; Norfolk and Suffolk, red, 36s to 40s; ditto, white, 38s to 44s; rye, 22s to 26s; grinding barley, 21s to 24s; distilling ditto, 28s to —s; malting ditto, 26s to 30s; Norfolk and Lincoln malt, 46s to 48s; brown ditto, 42s to 44s; Kingston and Ware, 48s to 53s; Chevalier, 56s to 58s; Yorkshire and Lincolnshire feed oats, 17s to 20s; potato ditto, 18s to 20s; Youghal and Cork, black, 18s to 18s; ditto, white, 16s to 18s; tick beans, new, 26s to 27s; ditto, old, 29s to 32s; grey peas, 30s to 32s; maple, 32s to 33s; white, 32s to 36s; boilers, 36s to 38s per quarter. Town-made flour, 35s to 40s; Suffolk, 28s to 32s; Stockton and Yorkshire, 28s to 32s per 280 lb.

Foreign: Barley, new, nominal, —s to —s; white, —s to —s; malt, —s to —s; rye, —s to —s; beans, —s to —s; peas, —s to —s per quarter. Flour, American, 20s to 22s per barrel; Canada, 20s to 23s per barrel

The Seed Market.—Clover and canary seeds move off steadily, at late rates; but all other articles are extremely dull, and almost nominal.

Liverpool.—English, sorrowful; Irish, dull; Baltic, crushing, 38s to 44s; Mediterranean and Odessa, 43s to 46s. Hempseed, 32s to 36s per quarter. Coriander, 18s to 24s per cwt. Brown mustard-seed, 8s to 10s; white ditto, 9s to 12s 6d. Tares, 9s 6d to 10s per bushel. English rape-seed, new, £23 to £27 per last of 10 quarters. Linseed cakes, English, £8 5s to £9 0s. Rape ditto, foreign, £6 to £7 10s per ton. Rapeseed cakes, £5 to £5 5s per ton. Canary, 45s to 52s per quarter. English clover-seed, red, —s to —s; white, —s to —s; —s extra, up to —s. Foreign, red, —s to —s; extra, —s to —s; white, —s to —s; extra, —s to —s.

Bread.—The prices of wheaten bread in the metropolis are from 7d to 7½d; of household ditto, 5d to 6½d per 4lb loaf.

Imperial Weekly Average.—Wheat, 40s 3d; barley, 24s 7d; oats, 17s 7d; rye, 24s 3d; beans, 28s 9d; peas, 29s 0d.

The Six Weeks' Average.—Wheat, 40s 3d; barley, 24s 3d; oats, 17s 3d; rye, 25s 3d; beans, 28s 9d; peas, 29s 0d.

Duties.—Wheat, is. barley, is., oats, is.; rye, is.; beans, is.; peas, is.

Tea.—Public sales of 4000 packages have passed off heavily. In the private market fine new Congous are worth 1s 8d to 1s 10d per lb. Green qualities unchanged. Watered singlo, 1s 6d to 1s 8d.

Sugar.—Most kinds have been in improved request this week, and, in some instances, quality parcels have commanded a trifle more money. Refined goods, both lumps and grocery, have become worth 49s 6d to 50s per cwt.

Coffee.—The demand for good ordinary Ceylon has slackened at 6d to 65s per cwt. All plantation kinds move off heavily at drooping prices.

Rice.—The market unit continues heavy, and, to effect large sales, lower rates must be submitted to. Caroline has been withdrawn at 15s 6d per cwt.

Provisions.—In Irish butter very little is doing, yet prices are mostly supported. Carlow, Clonmel, and Kilkenny, 90s to 92s; Cork, 84s to 86s; Limerick, 84s to 86s; Waterford, 82s to 84s per cwt. Fine weekly Dorset is selling at 94s to 96s per cwt; fresh, 12s to 13s per dozen lbs. The bacon trade is dull in the extreme. Hams, 60s to 64s per cwt. Waterford, singed, middle, 48s to 50s; 46s, heavy, 42s; Limerick sizeable, 42s to 44s; heavy, 40s; Belfast short middles, 38s to 40s. and thieves, 42s to 44s per cwt. Hog-puddings are quoting 4d per lb. Lard, 40s to 42s per cwt. Other articles command very little attention.

Tallow.—There is rather more doing in this article, at very full prices. P Y C on the spot is quoted at 37s to 37s 6d per cwt. Town tallow, 36s 6d to 37s 3d per cwt, net cash.

Spirits.—The dealers being mostly well in stock, the demand for rum has fallen off, and prices are barely supported. East India is still worth 1s 6d; Jamaica, 1s 8d to 1s 9d; and Demerara, 1s 9d to 1s 10d per gallon proof. The inquiry for brandy is less active. In corn spirits no change can be noticed.

Hay and Straw.—Meadow hay, £2 2s to £3 14s, clover ditto, £3 to £4 0s; and straw, £1 4s to £1 6s per load.

Wool.—Since the conclusion of the public sales—at which nearly 28,000 bales were disposed of, at an advance of 2d per lb—the demand by private contract has ruled inactive. Prices, however, are firmly supported.

Potatoes.—Although the demand is by no means active, prices have advanced from 6s to 8s per ton. York Regents are now worth 95s to 100s per ton.

Coals (Friday).—Tanfield Moor Butts, 13s, South Eddus, 15s; Walkur, 15s; Hetton, 17s; South Hetton, 15s 6d; South Durham, 15s 3d per ton.

Hops (Friday).—Really fine samples of new hops are in fair request at full prices, but most other kinds are somewhat lower to purchase. Present accounts from the plantations are favourable. Mid and East Kent pockets, 40s to 140s; Weald of Kent ditto, 60s to 70s; Sussex ditto, 50s to 72s per cwt.

Smithfield (Friday).—As is almost invariably the case just preceding the holding of the great Christmas market, the supply of beasts on sale in to-day's market was very extensive, and of excellent quality. Owing to the small attendance of buyers, the numerous supplies of meat in Newgate and Leadenhall, the best trade ruled excessively heavy, at barely Monday's quotations. The entire ... Full average numbers of sheep were brought forward, the time of year ... Calves were in good supply, and sold ... at barely last week's currency. Pigs sent to trading was ... moderate demand ... at £14 to £18 each, including their small calf.

Per 8 lb to stale the offals.—Coarse and inferior beasts, 2s 4d to 2s 6d; second quality, 2s 8d to 3s 0d; prime large oxen, 3s 2d to 3s 4d; prime Scots, 3s 4d; coarse-woolled sheep, 3s 4d to 3s 6d; inferior sheep, 3s 6d to 3s 8d; second quality ditto, 3s 4d to 3s 6d; prime coarse-woolled ditto, 3s 8d to 3s 10d; prime South Downs, 3s 6d to 4s 0d; large coarse calves, 3s 6d to 3s 8d; prime small ditto, 3s 2d to 3s 4d; large bogs, 2s 6d to 2s 8d; most ordinary sorts, 2s 4d to 2s 6d; prime ... quarter old store pigs, 18s to 20s each. Total supplies: beasts, ... 301; pigs, 300. Foreign beasts, 106 ... calves, ... sheep, ... pigs, 21.

Newgate and Leadenhall Prices.—The general retail trade is characterised by extreme ... to the large supplies on offer

Per 8 lb by the carcase:—Inferior beef, 2s 6d to 2s 8d; middling ditto, 2s 4d to 2s 6d; prime large ditto, 2s 8d to 3s 1d; prime ditto small, 3s 0d to 3s 4d; large pork, 2s 4d to 2s 8d; inferior mutton, 2s 4d to 2s 6d; middling ditto, 2s 8d to 3s 0d; prime ditto, 3s 2d to 3s 4d; prime veal, 2s 6d to 3s 0d; small pork, 3s 8d to 4s

W SIMPSON and E CHADWICK, Manchester, merchants.

SCOTCH SEQUESTRATIONS.

G WINDATE and R LAUDER, Glasgow, warehousemen. P K MEFFAN, Dundee, merchant. K MUNRO, Aberdeen, shoemaker. J CAMPBELL, Redhesay, grocer. M'GLASHAN, Edinburgh, commission agent. A WARDEN, Glasgow, sugar-merchant.

FRIDAY DEC. 13.

WAR-OFFICE, Dec. 10.

1st Life Guards: Lieut J M Hogg to be Captain, vice Winterbottom; Cornet and Sub-Lieut H Lygon to be Lieutenant, vice Hogg; Corporal-Major W Hessey to be Cornet and Sub-Lieutenant, vice Lygon of Macquarie.

1st Foot: F C B Ford to be Cornet, vice Hunt. 6th: H R Johnston to be Cornet, vice Hamilton. 7th: A C M Moore to be Cornet, vice Hutchinson.

1st Light Dragoons: C A G Browne to be Cornet, vice Sparke. 10th Light Dragoons: E M R Stapylton to be Cornet, vice Alexander; A Heaton to be Cornet, vice Thompson. 16th Lancers: Captain J Parke to be Major, vice Gardiner, deceased; Lieutenant G Armstrong to be Captain, vice Parke; Cornet J A Sartoris to be Lieutenant, vice Barton

Coldstream Foot Guards: Lieut and Captain and Brevet-Major C Wyndham Quin to be Lieutenant-Colonel, vice Sir Robert Gardiner Wilson, Knight, deceased; Ensign and Lieutenant Lord Arthur Hay to be Lieutenant and Captain, vice Berkeley; R J Lindsay to be Ensign and Lieutenant, vice Vernon

3rd Dragoon Guards: Lieut and Captain and Brevet-Major C A Berkeley to be Captain and Lieutenant-Colonel, vice Meadowcroft

Biff, &c. Scribe could not confine himself to the parable, having to find incidents for five acts, and he has, therefore, with his usual ingenuity, added many incidents to the scriptural story. The chief characters are thus distributed:—*Azael* (the Prodigal Son), M. Roger; *Ruben* (his father), M. Massol; *Boccharis* (High Priest), M. Obin; *Jephthé* (disturbed to *Azael*), Mdlle. Dameron; *Nephté* (the Egyptian), Madame Laborde; *Lia* (a Bayadère), Mdlle. Plunkett. The first act is in the Canton of Gessen:—a patriarchal tent scene by Desplechin. Here *Azael* is tempted by two adventurers from the city of Memphis, *Amenophis* and *Nephté*, to quit his pastoral life, and accompany them to see the world—that is, Memphis, thus described:—

La ville éternelle,
Riante et belle,
Où l'on oublie
De tout oubli.

The curious bit in this first act is that the fair *Jephthé* supports *Azael's* suit with his father, *Ruben*, to allow the son "à suivre sa pensée, à n'écouter que ses goûts," and so *Azael* leaves his home with the caravan, having a scarf from his lady love. In the second act there is a lapse of three months. *Azael* is in the full tide of dissipation at Memphis, and falls in love with a dancing Bayadère, *Lia*, which provokes the jealousy of *Nephté*. A fine scene occurs in which *Ruben* seeks his son, whom he does not recognise under the Egyptian costume; and he is told that *Azael* is dead. In the third act, one of Martin's pictures is realised in the interior of the temple, painted by Cambon. Here are the orgies of the priests, who eat the ox Apis sacrificed to obtain the overflowing of the Nile. *Azael* and *Jephthé*, who has accompanied *Ruben*, undergo many perils; the former being eventually thrown into the Nile by the orders of *Boccharis*. In the fourth act, in the Desert, painted by Thierry, *Azael* is seen as a camel-driver, not as a keeper of pigs, and is humiliated by the scoffs of *Nephté* and *Amenophis*, his former associates. In the fifth act is the return of the prodigal son to the peaceful Valley of Gessen, where he is pardoned by his father, and betrothed.

The spectacle of this opera surpasses anything ever before seen on the boards of the Grand Opera. The Egyptian Gallery in the Louvre has been exhausted as a model to aid in the gorgeous and picturesque *mise en scène*. The incidental dances by Sl. *Léonore* admirable, especially the "Pas des Poignards." The pantomime of Plunkett and the dancing of Mdlle. Robert are exquisitely graceful.

And now as to the music. Auber has fully maintained his reputation; but I do not think he has equalled his "Muette" ("Masaniello"). The general characteristics are—easy and flowing melody, most piquant instrumentation, and graceful harmonies; but it is wanting, according to my first impressions, in elevated style and dramatic intensity. As to execution, the triumph is due to Massol, who has achieved one of the greatest lyrical triumphs ever known in Paris, in *Ruben*. After being absent for several years from the Grand Opera, from which he drew his retiring pension, he returns, when he is no longer young, and beats all his juvenile colleagues out of the field. His air in the first act made a deep impression; but, in the second act, at the exclamation "C'est mon fils, et je l'ai perdu," the house rose *en masse* at the sublimity of Massol's expression. In the last act he was equally great. Roger's spasmodic exertions caused him to sing out of tune at times, but in some situations he played and sang with feeling and intelligence: the part is, however, beyond his physical powers,

"SOCIALISTS."—PAINTED BY E. ARMITAGE.

like *Jean of Leyden* in the "Prophète." Madame Laborde had two airs, with brilliant scale passages, diatonic and chromatic, which she executed to perfection. Mdlle Dameron was not very effective; and the new basso, M. Obin, is nervous and coarse. The overture, based on the orgie of the third act, is spirited, but not so striking as Auber's previous instrumental works. The opera will, no doubt, have a run; but it must be heard once or twice again, to decide whether it will ultimately occupy a permanent place in the *répertoire*, like the "Muette."

After five representations of Donizetti's "Figlia del Reggimento," Rossini's "Barbière" was given on Saturday night, at the Italian Theatre, with Sontag as *Rosina*, Calzolari the *Count*, Casanova *Bazilio*, Ferranti *Figaro*, and Lablache *Bartolo*. The enthusiasm for Sontag and Lablache was immense.

Ivanoff, the Russian tenor, who sang in London in 1835, will soon appear, in Donizetti's "Lucrezia Borgia."

Mdlle. Dupree, the daughter of the famed tenor, will also make her *début* shortly, and Colini, the new baritone.

Advices from Romano state that Rubini is dangerously ill. It appears that Mercadante's "Schiava Saracena" with Tadolini, Signori Cuzzani and Bassani, pleases the Neapolitans. Mdme. Garzanigs, Signori Colini and Fraschen, at Trieste, sustain Verdi's "Stiffelio;" and Campana's "Mazeppa" is held in favour at Bologna, through Mdme. Barbieri Nine, Signori Malvezzi and Ferri.

Letters from Berlin state that Mdme. Castellan had appeared, with continued success in *Lucia*, *Alice* ("Roberto"), *Desdemona*, and *Rosina* ("Barbière"). Flotow's "Grand Duchess," at the German Opera, was very popular.

FINE ARTS.

THE WINTER EXHIBITION.

"SOCIALISTS."—PAINTED BY E. ARMITAGE.

This charming picture of a very remarkable phase of French life has been admirably painted by Mr. Armitage. It represents a trio of disputants as to the benefits to be derived from Socialism, not the latest by several of the schemes which have of late disturbed society in France, and kept its people up to the boiling point of their vivacity. The scene is a *traiteur's*, or *cabaret*; and on the wall hang a military portrait and a few culinary implements—all alike characteristic of French glory—war and cookery. The party is an agreeable one; there is none of the virulence of Socialist controversy in their composition: the hirsute old gentleman and the *marqueur* in *sabots* have, perhaps, just playedoff a piece of pleasantry with the girl; perchance they have twitted her with the prospects of her *cher ami* by the proposed change:—her expression is between being delighted and posed; her simplicity is truly lovable. The variety of character in the three figures is extraordinarily fine.

The taste and ability of the artist are here strikingly displayed, in the happy manner in which he has wrought a beautiful composition out of a very trying theme. It is indeed a *true picture*: it needs no lengthened description, or learned commentary in a catalogue, to explain it; but tells its own story in a simple, complete, and inartificial manner, yet with a delightful facination, by the felicitous imitation of character and expression, which speak so powerfully an universal language. In pictorial embellishment and blazonry this little modest picture is outfaced by many in the room, but no other appeals to the spectator so eloquently.

SONGS AND HYMNS OF LIFE.—No. VI.

Upon thy lofty tower,
O lonely sage,
Reading at midnight hour
Heaven's awful page.
Thine art can poise the sun
In balance true,
And countless worlds that run
Beyond our view.
Thou canst with clear eyes
The azure cope;
To thee the galaxies
Their secrets ope;
Thou know'st the track sublime
Of every star;
Space infinite, and Time,
Thy problems are.
O sage, whose mental span
Thus grasps the sky,
How great the soul of man,
That soars so high!

But yet thou canst not guess,
With all thy skill,
What seas of happiness
My bosom fill.
Thou canst not track the woe,
The hope, the faith,
That prompt the ebb and flow
Of my poor breath.
Outspeeding with thy thought
The solar ray, [fraught,
Thou canst not, knowledge-
Discern my way.
My love—its depth and height,
Thou canst not sound;
Nor of my guilt's dark night
Pierce the profound.
O student of the sky,
My pride departs;
Worlds undiscover'd lie
In both our hearts.

CHARLES MACKAY.

THE SUPPOSED NEW RING OF THE PLANET SATURN.

Professor Bond, of Cambridge, U.S., is understood to have ascertained the existence of a faint ring of the planet Saturn, interior to the closest of the bright ones. An unusual appearance has been remarked within the last fortnight by several astronomers in the possession of powerful telescopes in this country, and is described as a faint illumination of a portion of the space between the interior bright ring and the ball, tolerably well defined on the side next the globe, but apparently fading off gradually from the edge of the ring, in the manner shown in the Engraving annexed. It is only seen with high magnifying powers and a practised eye. Professor Bond has suspected the existence of another ring for some time past, and was enabled to verify it on the night of November 18th, which was unusually fine. The outer ring has been known to consist of at least two nearly concentric circles for some years past. The planet here shown as it appeared through an inverting telescope.

SUPPOSED NEW RING OF THE PLANET SATURN.

THE THEATRES.

HAYMARKET.

On Monday Mr. Macready performed, with his usual force and high talent, the character of *King John*. The scenes in which the faithless monarch tempts *Hubert* to the murder of *Arthur*, and afterwards reproaches him for his presumed obedience, were remarkably vigorous, and that of his death powerfully effective. The *Constance* of Mrs. Warner was characteristically energetic; and the *Falconbridge* of Mr. Davenport adds another to his recent list of successful assumptions. Mr. Rogers, in the part of the *Cardinal Pandulph*, had, indeed, a difficult *rôle* to sustain—for the audience took advantage of the occasion to manifest, on every appearance of the actor, their anti-papal feelings. Mr. Rogers, as the victim of this Protestant demonstration, however, went through his scenes with courage, and made the usual points. The tragedy was well mounted, and the three principal performers were recalled.

On Tuesday, the delightful comedy of "Every One has his Fault" was revived, and powerfully cast. Mr. Stuart was *Lord Norland*; Mr. Davenport, *Sir Robert Bramble*; Mr. Bickstone, *Solus*; Mr. Lambert, *Harmony*; Mr. Howe, *Placid*; Mr. Cooper, *Irwin*; Mrs. Warner, *Lady Eanor*; Miss Horton, *Mrs. Placid*; and Miss Reynolds, *Miss Woodburn*. Full effect is thus given to every character. The performance was well received, and merits repetition.

SURREY.

The tragedy of "Coriolanus" has been made a feature of the present week. Its production is a step in the right direction. Mr. Creswick as *Coriolanus*, Mr. Mead, as *Aufidius*, and Miss Cooper as *Volumnia*, deserve commendation for earnestness in their endeavours to excel; such, indeed, was the appreciation by the audience of those made by Mr. Creswick, that he was summoned before the curtain at the end of the third act. Further proof is not wanting that it is to the works of the great poets that all classes of actors must look for their surest triumphs.

SADLER'S WELLS.

On Thursday week "The Stranger" was revived, Miss Glyn then performing *Mrs Haller* for the first time. Nothing could exceed the pathetic rendering which she gave to the various affecting situations, but the remarkable ease with which she realised the character and commanded the sympathies of a numerous audience. Doubtless, the improved taste of the age has doomed this play to a speedy extinction; but, if anything could recommend it to the favour of the judicious, it would be such acting as Miss Glyn's.

On Monday, "The Winter's Tale" was reproduced. Mr. Phelps' *Leontes*, and Miss Glyn's *Hermione*, are already things of fame, and now call only for record, not for praise. Miss Lyon's *Perdita* was respectable.

OLYMPIC.

Mr. Brooke and Miss Faucit, on Tuesday, enacted the *Hunchback* and his ward *Julia*, with remarkable power. The lady's delineation of the fair and redeemed delinquent was marked by delicate traits of feeling; and the manly energy of the *Master Walter* was, in the actor's hands, blended with paternal emotion such as renders his interpretation of the character decidedly the best we have witnessed.

MARYLEBONE.

On Wednesday, Mrs. Nisbett performed *Portia*, in "The Merchant of Venice," Mr. J. Johnstone being the *Shylock*.

It is with much satisfaction we state that on this (Saturday) evening the veteran Mr. Bartley will enact the part of *Falstaff*, in Shakespeare's tragedy of "Henry IV.," at the Princess', having previously performed it at Windsor Castle before her Majesty. We wish him every success; the more particularly as we believe his return to the stage is a desirable event, both in its personal and public relations.

A Modern Hercules.—There lives on the banks of the Dee-side, immediately opposite Balmoral Castle, her Majesty's Highland home, a farmer well known by the name of Street of Monaltrie, who is renowned in that mountainous district for his astonishing feats of strength and agility. Our informant tells us that he has witnessed him raising on his shoulders the heaviest horse (equal in size and weight to our own farm-horses) in that locality, and elevating him nearly two feet from the ground. Such a feat is, in the present day, no mean imitation of the wonderful exploits of Hercules himself. When equipped in the Highland garb, he is quite a paragon of the stately and robust character of the ancient Britons. It was under this same individual's roof that her Majesty the Queen, on her last visit, partook so cheerfully of his hospitable fare, cakes and milk, and pree'd his bottle of "Royal Lochnagar," after enjoying his facetious remark, "that she would ha'e nae better than that at hame."—*Scottish Guardian*.

IRELAND.

Extensive Emigration.—Notwithstanding the perils and discomforts of a winter voyage and the approach of Christmas, emigration continues almost upon as great a scale as during the spring or summer from some of the southern ports. In Dublin, during the last week, there has been a visible diminution in the numbers proceeding direct to America, or by steamers to Liverpool to take shipping there. Waterford is the chief port selected by emigrants from the counties of Waterford, Tipperary, and Kilkenny. The *Clonmel Chronicle* states that the streets of that town are crowded with the rural population, on their way to America, whilst in Waterford the influx of people from the adjacent counties is very great. In the western counties the emigration mania has, for the present, abated, but it is likely to be renewed in the spring. The *Roscommon Journal*, referring to the reduced prices at the fair of that town on Thursday week, says:—"Farmers have not much reason to be satisfied with the prices they obtained; and, with high rents and enormous taxes, we fear it will be impossible for them to hold on much longer. It is said a great portion of this class contemplate emigrating next spring; and we perceive that they are almost altogether neglecting to till the land which they had prepared for wheat. If our anticipations should be realised, we know not, under heaven, what is to become of our landlord class, for ruin would inevitably follow a continued extensive emigration, such as is likely to occur next year." There is not sufficient ground for this alarm, but there can be no doubt that the very extensive emigration of the better and more solvent class of farmers has already produced a pernicious effect in various parts of the country. Latterly, however, the pretty general readjustment of rents has given a decided check to the emigration of tenant-farmers; and it is certain that there is a better demand for farms at moderate rents in some parts of Roscommon, Westmeath, and other counties. In Ulster generally, especially in the north-eastern counties, there appears to be a decided tendency to improvement. The *Armagh Gazette*, in an account of the fair of Moy, on Friday week, says: "The demand for farm-horses was greater than the supply, which shows that there is an improvement in the times and the condition of the agriculturists in this part of the country.

Reduction of Poor-Rates.—Except in some western and a few southern unions, a decided reduction has occurred in the poor rates.

The Flax Movement.—Further satisfactory accounts have been received of the exertions of the gentry in the south to extend the cultivation of flax. Even in Kerry some progress has been made by the newly-formed Farming Society at Listowel, where subscriptions are increasing; and arrangements will be made to procure from the Ulster Society an instructor qualified to teach the farmers of Kerry the best mode of cultivating and preparing flax.

The Repeal Association.—The weekly meeting of the association was held on Monday, at Conciliation Hall, Mr. Richard Nolan presiding. Mr. John O'Connell alluded, at considerable length, to the recent address of the Most Rev. Dr. Cullen, Roman Catholic Primate; and to Lord John Russell's letter to the Bishop of Durham; and concluded by reading a "Report of the Committee of the Loyal National Catholic and Repeal Association of Ireland upon the Church Establishment grievance," in which it is stated that, "at this moment, when rival political leaders in England, for party purposes, are seeking to persuade the ignorant people that their liberty is in peril from the assumption of spiritual titles by Catholic Bishops, without claim or pretence to territorial possession, moneyed wealth, or temporal power, it deeply behoves Catholic Ireland to protest against the real grievance, the real robbery, the real oppression of having to support a Church to which the people do not belong." The hon. gentleman moved the adoption of the report, which was carried. The rent for the week was £9 12s. 6d.

"ENTHRONIZATION" OF CARDINAL WISEMAN.

The ceremonial prescribed by the Roman Catholic Church for the induction of an Archbishop to his see was performed at the church of St. George's, Southwark, on Friday (yesterday week), with a rather uncommon solemnity. Considering the great excitement which prevails on the subject of Cardinal Wiseman's installation, it might have been expected that some indications of that excitement would have been presented to our view as we approached the scene of the ceremonial. But the reverse was the fact. The precincts of the building were the usual aspect of Sabbath tranquillity, and the exterior calm was reflected by the most stilly and decorous silence inside doors.

The sombre character of St. George's derived additional dimness from one of the foggiest mornings of the winter season. Nor was artifical lustre—that gorgeous accessary to the service of the Roman Catholic Church—much resorted to in aid of the feeble light which glimmered through the Gothic windows of St. George's. For half an hour after we occupied our seat nothing preparatory was observable—the organ was hushed, and the choir silent; but about half-past eleven o'clock the preparations were observable in every part of the edifice. An acolyte came in this direction with a thurifer. Another carried a crucifix to the spot where the procession was to form. A chalice was transferred from one altar to another by a third. At length the order for forming the procession was given by the tolling of a bell, and the attendant clergy of the new "archdiocese" formed into regular order at the summons. The Cardinal himself, robed in scarlet and white, and wearing a small scarlet cap, proceeded from the sacristy, his flowing train borne by two train-bearers. After a brief pause at the extreme end of the nave of the church, the choir commenced chanting the "Hallelujah," from Beethoven's "Mount of Olives," and presently the procession was observed to move up the nave in the direction of the central altar. Foremost was borne the cross, with lighted candles on each side. Then came the Roman Catholic clergy subject to the new archdiocesan's jurisdiction, two by two, habited according to their respective ranks and orders. The peculiarity of the oratorian costume was striking. At length the Cardinal himself appeared, wearing a gorgeous mitre and pallium. A graceful canopy, fringed with silk and gold, was borne over his path by, as we were informed, the "converts" exclusively. There were at least 200, between the secular clergy and the various religious orders, in the procession. Lastly, came the Very Rev. Dr. Doyle, robed in the usual sacrificial vestments, preceded by the Very Rev. Dr. Cox, the Rev. Mr. Cotter, and the Rev. Mr. Daniel, as masters of the ceremony, deacon and sub-deacon. Having reached the screen, which fronts the sanctuary, the Cardinal was led into a small compartment at the left of the principal altar, called the Chapel of the Blessed Eucharist, whence, after a brief interval, the procession moved within the sanctuary, Cardinal Wiseman kneeling at the foot of the altar, and the celebrant clergyman ascending its steps, assisted by the deacon and sub-deacon.

The customary form of prayer having been read, the mitre, which had been exchanged for a scarlet cap a short time before, was formally placed upon the head of the new Archbishop, whilst the crosier, emblematic of his authority, was also placed in his hand. He was then conducted to the archiepiscopal chair, at the foot of which the whole body of the clergy made the usual obeisance—kissing the Cardinal's ring in recognition of his spiritual authority. The solemnities of high mass were then proceeded with; after which the Bull was publicly read, in virtue of which Cardinal Wiseman assumes the Archiepiscopal jurisdiction of Westminster. The proceedings closed with the presentation of an address to the new "Archbishop," and an exhortation, in which he impressed upon his clergy the duties and obligations incidental to their important mission. The mass was Haydn's, and performed by the choir in the most impressive style. It remains to be added that the strictest order and decorum prevailed throughout.

CARDINAL WISEMAN, PREACHING.

PAPAL AGGRESSION.

MEETINGS.

Wilts County Meeting.—On Friday week, pursuant to a requisition, numerously signed, by magistrates, freeholders, and residents, the meeting of the inhabitants of Wiltshire took place in the Market-House, Devizes. The building was crowded. The Very Rev. the Archdeacons of Wiltshire and of Salisbury, the Dean of Salisbury, W. Chaplin, Esq., M.P.; the Right Hon. Sidney Herbert, M.P.; J. Neild, Esq., M.P.; Captain Boldero, M.P.; H. S. Sotheron, Esq., M.P.; Walter Long, Esq., M.P.; Colonel Estcourt, &c., were present. Letters of apology were read from several peers and members of Parliament; among them was the following, from the Marquis of Lansdowne:—

Bowood, Nov. 30.

Gentlemen,—I have this day received here your letter, written on behalf of the provisional committee of the county meeting, to be held on Friday next, expressing a wish that I should attend and take a part in the proceedings. However flattered I feel by that wish, I cannot but consider that it would be improper for me to take a part in proposing resolutions which might be construed in any degree to fetter that discretion which, as a minister of the Crown, I am bound to exercise, in respect of the course on the important subject to which they relate her Majesty may be advised to adopt or recommend. I must add, however, that, so far as (without entering upon the merits of the Roman Catholic faith, respecting which a controversial and necessarily imperfect debate at a public county meeting will be productive of mischief only) those resolutions express a firm determination to uphold, by every means, the Protestant Establishment—and, more especially, to resist all attempts by any foreign potentate, ecclesiastical or civil, directly or indirectly, to interfere with the ordinances of our Church, or her Majesty's supreme authority as its head—they will have my entire and cordial concurrence

(Signed) Lansdowne.

Mr. Sidney Herbert, M.P., moved the first resolution, to the effect that the meeting regarded with disgust the audacious attempt to establish a Roman Catholic hierarchy in this country, and calling upon this Protestant nation to unite in an uncompromising and determined resistance to such aggression. The resolution, and an address founded on it, to the Queen, as well as an address to both Houses of Parliament, were carried. In the course of the proceedings, the Rev. Sir Erasmus Wilson said there was reason for alarm when the Regius Professor of Hebrew at Cambridge and two Archdeacons had sent round 15,000 circulars to the clergy of England, asking them to break their oaths. Mr. Phipps, too, the Rector of Devizes, after some trouble, obtained a hearing to defend the Tractarians, whom he declared are sincere men, and had honestly endeavoured to reform a church that is modelled for the advantage of the rich. Bishops with £5000 a year, he said, were not now to be tolerated.

A County Meeting in Cheshire was held at Knutsford on Friday week. The requisition was signed by upwards of three hundred of the noblemen, clergy, and gentry connected with the county. In point of numbers, influence, and respectability, this meeting was one of the most important which has been held. The Sessions-house was densely crowded. The Marquis of Westminster, Lord Delamere, William Tatton Egerton, Esq., M.P.; George Cornwall Legh, Esq., M.P.; John Tollemache, Esq., M.P.; Gilbert Greenall, Esq., M.P.; T. Trafford, Esq.; Randle Wilbraham, sen., Esq.; James France France, Esq.; Robert de Hollyngeworthe, Esq., and a great number of other noblemen and gentlemen, were present. The High Sheriff, Sir Arthur Ingram Aston, Bart., in the chair. Letters were presented from Lord Combermere and the Marquis of Cholmondeley expressive of their hearty concurrence in the object of the meeting. G. C. Legh, Esq., M.P., moved the first resolution, expressive of the indignation of the meeting at the recent aggression on the prerogative of the Crown and the liberty of the people of England. The Marquis of Westminster seconded the resolution, which was unanimously agreed to. An address was also carried, after Robert de Hollyngeworthe, Esq., had unsuccessfully proposed an addition, attributing the presumption of the Bishop of Rome to the encouragement given by the ministers to the Roman Catholics.

Warwick County Meeting.—A meeting of the nobility, gentry, and landholders of the county, convened in consequence of a numerous requisition, was held in the County-hall, Warwick, on Saturday week. The Earl of Aylesford, Lord Brook, Lord Guernsey, Viscount Lifford, the Hon. B. Percy, the Hon. Mr. Hewitt, Sir W. Hartop, Sir Francis Shuckburgh, Sir T. Biddulph, Mr. Spooner, M.P., Mr. Newdegate, M.P., Sir F. H. Goodricke, and a number of county gentlemen, were present. The capacious hall was crowded. A letter was read from Lord Warwick, excusing his non-attendance, and expressing an opinion that measures ought to be passed by Parliament to repel the Papal Aggression. Lord Brook moved the first resolution, declaring the late act of the Pope an infraction on the prerogative, and a danger towards liberty, which was seconded by the Hon. B. Percy, and carried, with some dissent. The memorial to the Queen, moved by Lord Lifford, was seconded by Mr. Newdegate, M.P. It prayed her Majesty to call the attention of Parliament to the insufficiency of the law, if it were insufficient, to repel such acts as that of the Pope. Mr. Bolton King moved an addition, praying her Majesty to consider the best means of discouraging the many innovations lately introduced by certain clergymen into the Church of England, seconded by Sir Francis Goodricke. Lord Lifford attempted to address the meeting, to prevent, it is believed, hostile discussion, but was compelled to resist by interruption. Mr B. Adderley, M.P., believed the amendment proposed by his friend Mr. King was in accordance with the object for which they were assembled. (Loud cheers.) The Hon. Mr. Hewitt, the son of Lord Lifford, opposed the addition; but the cries of "No Tractarians." "We will have it," were so general, that the hon. gentleman could not proceed. The addition was carried. The applause was immense. Three cheers were, with few dissentients, given for the Queen, and three groans for the Pope.

Demonstration in Edinburgh.—On Thursday week, a meeting of Protest-

"ENTHRONIZATION" OF CARDINAL WISEMAN, IN ST. GEORGE'S CHURCH, LAMBETH.

ants of Edinburgh opposed to the Papal Aggression, and to the public countenance given to Popery, as well as to the progress of Tractarianism, was held in the Music Hall, which was crowded in every part. Rev Dr. Cunningham, Rev. Dr. Candlish, the Rev. Dr Paul, Rev. H. K. Greville, Rev. D. T. K. Drummond, Rev. W. H. Gray, Sir James Forrest, Mr. Logan White, Sheriff Monteith, Dr. Mackay, Professor Menzies, Mr. Bruce, advocate, &c., were present. Mr. Cowan, M.P. for the city, took the chair. The proceedings were opened with prayer. Resolutions condemnatory of Papal encroachment were proposed by the Rev. Drs. M'Crie and Cunningham, the Rev. D. T. K. Drummond, the Rev. Andrew Thompson, and the Rev. Dr. Candlish, and unanimously adopted by the meeting.

SEAFORD (Sussex).—A highly respectable and numerously attended meeting of the inhabitants of this ancient Cinque Port was held at the Town Hall on Wednesday, the 4th inst. The Bailiff of the Corporation (James Singer Turner, Esq.) presided. The resolutions were proposed and seconded by William St. George Davies, Esq., M.D., Rev. Simon Simond, and Richard Ellis, Esq., Lieutenant R. N., Thomas W. Chambers, Esq., Mr. Outteridge (churchwarden), and Lieutenant H. F. M'Killop, R.N. An address to her Majesty was agreed to with acclamation. A vote of thanks was given to his Worship in the chair, and three hearty cheers for the Queen

There have been meetings at Slough, Stoney Stratford, Harwich, Castle Bayard Ward, Merton, the Parish of St. Andrew's, Leith, Lochgelphon, Edinburgh: Panicle, Frome, Bradford, Hawkhurst: of Dissenters, at Surrey Chapel, Blackfriar's road; at St Helier's, Jersey, where, after some opposition, and a protest, the address to her Majesty was carried; and at Dartford.

BIRMINGHAM.—A public meeting of the inhabitants of this town, convened in compliance with a requisition signed by upwards of 400 rate-payers of all shades of political opinion, was held in the Town-hall on Wednesday, for the purpose of considering the aggression of the Pope of Rome upon the rights of the connected, one of the largest and most tumultuous meetings ever known in Birmingham assembled. At some parts of the proceedings, the conduct of the dense mass which crowded almost to suffocation every part and avenue leading to the building was quite alarming. There could not be fewer than from 8000 to 10,000 persons present. The Mayor, who presided, having opened the business, Mr. James Taylor, of Moseley, moved an address to the Queen. (The confusion was so great that it was perfectly impossible to hear the concluding portion of the hon. gentleman's speech. The address was of the usual character. Dr. Melson seconded. Mr. Joseph Sturge moved an amendment, expressing to her Majesty that, "in our opinion, the appointment of the Catholic hierarchy does not require any Legislative interference. (Partial shouts of disapprobation.) We respectfully, yet earnestly, deprecate all restrictions upon the free enjoyment by every religious body within your Majesty's dominions, of its spiritual order and discipline. We therefore entreat your Majesty to sanction such measures as may be proposed for securing the maintenance and extension of civil and religious liberty." Mr. George Edmonds, Clerk of the Peace, seconded. The Rev. Mr. Angel James spoke in favour of the original motion; Mr. Dawson in favour of the amendment. Both gentlemen found it difficult to obtain a hearing. Several other gentlemen addressed the meeting, amidst considerable uproar; and after the assembly had been held together for upwards of six hours, noise and disturbance prevailing the whole time, the Mayor decided, though with considerable difficulty, the numbers were equal, that the amendment was not carried. But on putting the original motion, he declared that the numbers were against it, so that both resolutions were defeated. The excitement in the meeting was, at the close, almost overpowering. Resolutions of an imperfectious character were, it is said, addressed to the Mayor, whose conduct throughout a very trying day could not be too highly applauded, and he instantly left the chair and the hall. The Church party refused to concur in a vote of thanks; but Mr. Alderman Lloyd having assumed the chair, a vote of thanks to the chair was carried by acclamation. Three cheers were given for the Queen; and now, almost with one accord, the vast assembly uncovered, and the National Anthem was sung in a grand and impressive manner. Thereupon the assemblage quietly dispersed; and as it is many years since such a meeting has taken place here, there has perhaps never been one where there was a more general feeling of congratulation at the result.

EVENTS.

IN ST LEONARD'S, SHOREDITCH, the Rev. Mr. Evans, the vicar, has refused the use of the church to parties desirous of holding a meeting to present an address to the Queen. His is said to be a Puseyite.

THE MINISTERS OF THE CONGREGATIONAL DENOMINATION in and near MANCHESTER have published a long declaration against the Papal doctrines, and against the present aggression. They recommend that the Romish Church shall be no further endowed, and that all grants to that Church should be discontinued. They further recommend a searching reform in the Universities, and a more assiduous attention to the preaching of the gospel of Christ.

THE MAGISTRATES OF MIDDLEWICH have resolved, by a majority of one, not to present an address to her Majesty.

THE INHABITANTS OF GREENWICH, like those of Exeter, have had a great procession, and have burned, in effigy, the Pope, the Cardinal, &c. *The auto da fe* was carried into execution on Blackheath, amidst an immense crowd of spectators. The effigies were suspended from a gibbet, with the inscription "Retribution" fixed on them, and they were consumed to the tunes of "Rule Britannia" and "God save the Queen." No conflict took place, and there were no rude assaults to repel by its martial spirit than the paper missives of the Pope.

AT ST. BARNABAS, an extract from the statute 1st William and Mary, cap. 18, has been posted on a notice-board publicly, to the effect that persons willingly and of purpose maliciously or contemptuously coming into any cathedral, parish church, chapel, or other congregation permitted, and disquieting and disturbing the same, or misusing any preacher duly authorised, shall be subject to the penalty of £20. On Sunday, Mr. Bennet, who has become one of the lions of the agitation, preached a very pointed sermon at this church, taking as his text. from the Gospel for the day, the 21st chapter of St. Luke, 26th verse—"And there shall be signs in the sun, and in the moon, and in the stars, and upon the earth distress of nations with perplexity, the sea and the waves roaring, men's hearts failing them for fear, and for looking after those things which are coming on the earth." He subsequently took for his text the 13th verse of the same chapter of the *Chronicle*:—"Let me beseech you by the bowels of mercy, by the entreaties of love, by the voice of the Shepherd, pause a little, reflect a little, before you add any accumulation to your sins, which are now, God knows, heavy enough. If I could but save one soul in this hour of temptation and trial, it would be a reward, an ample reward to me, for all the tears and sufferings which God may bring upon me. Now, in one hour, thoughts, your words, your standing here or standing there, the tone of your voice, the compression of your lips, your frown of wrath, your sneer of contempt, your smile of love, your stamp of defiance, or your submission of peace, your obstinacy in resisting the Holy Ghost, or your soft and gentle yielding to the better mood of its gracious and generous influence—all this, at this very instant, while I preach and you hear, is being recorded, God looking on; it is all pouring out quick and fast, sure and full, into one of the scales of the everlasting and eternal weight of all the earth. Now the scale moves—it is poised—it begins to sink it is inclined it weighs down. Whither does its index point? Is it to your condemnation? Oh, no! It is not—it must not be so! You have conquered the devil, oh, Christian brother, you have gained the victory, the scale is in your favour, and your soul is saved!" A visible effect (says the *Chronicle*) was produced on the congregation by this solemn appeal, assisted by the preacher's impressive delivery of manner and sustained fervour of tone. The sermon was listened to with breathless attention. At the conclusion the offertory was read. As the congregation retired the organ played slowly "God save the Queen." At the door a serious rush subsided passage coming out of the church with hisses, jeers, and cries of "No Popery."

CARDINAL WISEMAN has been active, and delivered a sermon on Sunday at St. George's Cathedral, which was temperate. In the evening he delivered the first of a series of lectures at the same place, in which he stated, softening the aggression as much as he could, that "the question of the Catholic Hierarchy, or rather its history, may be summed up in a very few words. Its substance is as follows: "Catholics being, in regard to the exercise of their religion, on a footing of perfect equality with their fellow-subjects (so at least it was thought all a few weeks ago), and being governed by a Church necessarily episcopal, having been governed till now, under a temporary form, by Vicars-Apostolic, have received, from the acknowledged and legally recognised Head of their Church, a hierarchy, that is, a body of Bishops, having their sees and titles from that England. Bishops who before bore foreign titles, under which spiritually they governed British Catholics, have now received domestic titles. And the sphere of their jurisdiction is called a diocese instead of a district. The Bishops receive no new consecration, greater power, nor greater emolument." He showed at great length that in the change there was no danger to the state, nor to individual liberty; and in reference to the alarm excited, he said—"Ought it not to be a political earthquake and a religious hurricane, indeed, that could thus shake to its basis of the throne of our gracious Queen, which rests secure upon the affections of every subject (of none more than of Catholics)—to dispoil of its rights and prerogatives a Church which has a thousand roots in the very substance of its nation—and, finally, to introduce at last what has been a popular bugbear in Popery into your very families—had any one told you six months ago that the Bishop of Rome had power to do all this in England, you would have laughed at him, you would have thought him a madman. Or, had he presumed to tell you that he had such tremendous power And if, by way of jest, or through curiosity, you had asked the fanatic who told you so, by what wonderful sorcery, by what compact, he had come to do all this, and he had answered you, 'By a scrap of paper, wherein he should desire the Catholic districts of England to be thenceforward called dioceses, and the Bishop of Trachis to be called Bishop of Beverly, and the Bishop of Tios to be called Bishop of Liverpool,' you would, I am sure, have considered the man little better than an idiot who asserted or believed in such effects from such a cause. And yet, now that this has been done, all those terrible consequences are seen to have flowed from it, the nation is made to believe that the Pope has possessed, and has exercised this tremendous power." He added, "Even taking the question of names, I have scarcely any doubt that a very few years, or perhaps even months ago, had the question been put to the great mass of the English people, 'Whom would you rather have to govern the Catholic Church in this island, the Pope's own vicars or Bishops belonging to the country?' the latter would have been preferred and chosen, as being more thoroughly native, English, and domestic; and as implying, in name at least, a total or immediate severance from that foreign object of Protestant prejudice, the Pope of Rome. Indeed, I have been assured, upon what I consider excellent authority, that even in 1799 Mr. Pitt suggested to Cardinal Erskine, as one good mode of diminishing English prejudices in regard to Catholics, that the Bishops should cease to be vicars apostolic and become local titulars. I cannot, therefore, consider the strong commotion which has agitated the nation to be the result of reasoning upon the realities of the case." The Cardinal referred to other countries, such as the United States, where three new archiepiscopal provinces have been created, to show that the Pope exercised this power without exciting alarm in them; and such as Belgium and Austria, to show that even the Catholic Governments of the inquisition did not, in the many and some of the outrages against human nature were now committed, that in bygone ages were sanctioned by all religions. In Belgium the Pope appoints as many clergy as he pleases; but the State will only pay as many as it pleases, and so the two powers rub on harmoniously." He concluded a long discourse by expressing great confidence in his own faith, in declaring that he would rather suffer for it than be exempt, and in exhorting his people to lift up their heads in humble hope that the storm would soon blow over.

THE BISHOP OF BRECHIN (Scotland) has published a protest against the Pope's Bull

THE DUKE OF NORFOLK has written a letter to Lord Beaumont to declare that he agrees with the noble Lord, and that ultra-montane opinions are incompatible with allegiance to her Majest

SIR CHARLES WOLSELEY, R.M., has informed the *Morning Chronicle* that Catholic editions of the New Testament are to be had for eightpence each.

THE BISHOP OF LONDON has directed a visitation of all the churches and chapels of his diocese in which the Puseyite forms of worship are supposed to be practised in.

THE REV. HUGH STOWELL, of Manchester, delivered a lecture on Wednesday evening, to a crowded audience, at the Beaumont Literary institution, Mile-end, on "the deference which have been set up for the recent Papal aggression."

THE BIRKENHEAD MEETING.—The place selected for the meeting on the Papal aggression is in the large square in front of the north-east entrance to the market. This spot it is calculated will afford standing room for 40,000 people; and, for the accommodation of those who intend to take a prominent part in the proceedings, a platform is being erected. The magistrates sit daily to concert measures for preserving the peace, but the opposition is to be of a very formidable description.

RESIGNATION OF THE REV. MR. BENNET.—By a letter, dated the 4th instant, this rev. gentleman has sent in his resignation. He made such an offer, it seems, as long ago as the 20th of March, but the Bishop continued to object to his conduct. On the 4th instant, therefore, he says

> I conclude, therefore, that in making this call upon me you wish to express all that was involved or contained in your former refusal to accept my resignation, and your opinion that I am guilty of such sinfulness to the Church of England, and that [illegible] signify your judgment as Bishop that it is [illegible] and better [illegible] of this portion of the Church which is under your supervision, charge, and [illegible] in the loving of St. Paul's." To this judgment of my Bishop deliberately [illegible] and the call thereupon deliberately made, I cease to be your vicar as an act accordingly. I now redeem the pledge given in my letter of October 30, and, in answer to your "call" now made upon me, I hereby send you my resignation of the perpetual curacy of St. Paul's, Knightsbridge

It appears from the correspondence between the rev. gentleman and the Bishop, extracts of which have been published, that the right rev. Prelate has, since 1847, had his attention directed to Mr. Bennett, and that, since February, 1849, there has passed between them a series of letters, the last of which, dated 20th ult., finually admonished him against the peculiarities in his mode of performing divine service. The letter of the Bishop thus concludes

> In your recently published letter to Lord John Russell, you declare that what your intention and view was at the time of Mr. Barnabas' [illegible] to commence and proceed in the services that it shall be now, please God, for ever the same, unchanged, unchangeable. [illegible] available inference from [illegible] declaration, that the novelties of which I complained, and which I called upon you to lay aside, will not be given up, although I have for seldom months been waiting for the Church's order and intention. This leaves me no choice as to the course to be pursued. It is impossible that I can [illegible] the [illegible] and good order of the Church which is under my episcopal charge" would be satisfied [illegible] and necessary attempt given to the Church's enemies. If you will not [illegible] [illegible] [illegible]

NEW BOOKS, &c.

13, Great Marlborough-street.

MR. COLBURN'S NEW PUBLICATIONS.

I.

PEPYS' DIARY—CHEAP RE-ISSUE. Vol. I. is now ready, price 5s., of PEPYS' DIARY and all the Passages restored from the Additional Notes, will be published in each month, with Portraits, &c., price only 6s. each bound.

FREDERICK SANG, from the Royal Academy of Munich, Decorative Artist in Fresco, Oil, and Distemper, PAINTS for Ceilings, &c. &c., in every style of artistic arrangement, and for every kind of room. In addition, the rooms are furnished with superior Furniture (masked in plain figures the price), giving at one view a drawing-room fit for reception. Bed-rooms and Library-rooms, 2l. 2s. per yard. French and all Foreign Hangings of the first class. Rooms and Passage Carpets, 2s. 6d. to 3s. 6d. per yard. Floor-Cloth (4 yards wide), cut to any dimensions, 3s. 3d., 2s. 6d., and 2s. 9d. per yard.

VILLA RESIDENCES in Camden-square, Camden New Town, to be LET or SOLD.—These houses will be found most desirable for the family of a professional man; the situation is one of the most delightful, and elevated in the suburbs of London, the sewerage, roads, and paving are of the best description, the Square is completed on the north side, whence trains run daily to the City, and at all hours. The church is conveniently placed at one end of the square, and there is a large garden in the rear, and there is a large enclosed ornamental piece of ground in the centre of the square, for the exclusive use of the inhabitants.

Rents, from £65 to £130 per annum.

Parties in search of a family house, in a healthy and highly respectable locality, are requested to view the situation of these villas and the surrounding country, and to judge for themselves.

For further particulars apply to Mr. G. NEWMAN, 16, Stratford-place, Camden-square; or at the Office, No. 16, Camden-square, Camden New Town.

Any information regarding the title, which is direct from the freeholder, may be obtained of Messrs. DAVIES, SON, and CARSELL, Solicitors, 21, Warwick-street, Regent-street.

STEAM COMMUNICATION with the BRAZILS and RIVER PLATE.—ROYAL MAIL STEAM-PACKET COMPANY.—Sailing 1st of each month, the Steamer Captain Revell, and thenceforward on the 9th of each month, one or other of this Company's Steamers, will leave Southampton, with Mails, Passengers, &c., for Madeira, Teneriffe, St. Vincent (Cape de Verde), Pernambuco, Bahia, and Rio de Janeiro, and from thence by Branch steamers to Montevideo and Buenos Ayres, returning by the same route to Southampton.

Fares, including Steward, &c.—The Fares, freights, &c., may be had on application at the Company's Offices in London, or at Southampton, where particulars of the Company's steamers will be issued for the places above mentioned.

Goods taken on moderate freight outward to Pernambuco, Bahia, Rio de Janeiro, Montevideo, and Buenos Ayres, and homeward from the same places, as well as from St Vincent (Cape de Verde), Teneriffe, and Madeira.

Passengers are recommended to make early application for securing proper berths.

E. CHAPPELL, Secretary, No. 59, Moorgate-street, London.

BRIGHT and CO.'S PATENT POWER-LOOM BRUSSELS CARPETS. These Goods are strongly recommended to the notice of the Public on the following grounds:—They are woven by Steam Power, and are, therefore, more firmly made than can be the case with hand-woven goods. They have the same good quality of Worsted throughout, whereas in the common Brussels the dark colours are generally made of an inferior Worsted. They are woven by a patent process, and by patent machinery; and the colours are more durable, and will stand more severe test than those of any other Brussels Carpet now sold, and are the production of an almost unlimited variety of shades or colours; patterns are, therefore, more effective.

The Patent Power-loom Brussels Carpets of this Manufacture can be offered at a price about 20 per cent. below that of goods of equal quality, and will be found more durable.

Patterns of colours, and in price, the Patent Power-loom Brussels Carpets offer great advantages to the Public.—Wholesale, 30, Skinner-street, Snowhill, London; Mr. Bright's Warehouse, 6, Old Bond-street.

PATENT POWER-LOOM BRUSSELS CARPETS.—These Carpets, manufactured by BRIGHT and Co., have now stood the test of time and wear; and in consequence of manufacture, in variety of pattern, and in brilliancy and durability of colours, the warmest approval of what has been said in their favour. Notwithstanding this, parties interested in promoting the introduction of these Carpets, have been induced to submit them to the test of imitation. The merit of inventions which offer solid advantages to the public BRIGHT and CO.'s Power-Loom Brussels Carpets can be offered 20 per cent. lower than any other goods of equal quality, and we can assure the public that we have laid down upwards of 20,000 yards of these Carpets at a considerably LESS charge. 6, Old Bond-street, and CUMMING, CARPET MANUFACTURERS, 4, REGENT-STREET, opposite Howell and James's.

GOSNELL'S STARCH.—The Ladies are respectfully requested to make a trial of the CELEBRATED PATENT DOUBLE-REFINED POWDER STARCH, which for cleanness and new stands unrivalled.

Testimonial from the Lady Mayoress of London:

"The Lady Mayoress begs to thank Messrs. Fanzin and Turner for a box of Gosnell's Patent Double-refined Powder Starch, manufactured by Mr. Witherspoon, of Glasgow. The laundress has reported the Starch to be of very superior quality, and the Lady Mayoress will have much pleasure in recommending it."—Mansion House, July 31, 1849.

Sold Wholesale, in London, by Messrs. Fanzin and Turner, Hooper, Bentham; Charles G. B. Williams; Croft and Innocent; Petty, Wood, and Co.; Frederick Brothers, and Mr. Snelling.

AGENTS WANTED: apply to Mr. R. WITHERSPOON, 69 Dunlop-street, Glasgow.

NEW MUSIC, &c.

COMIC SONGS.—"COURTING'S VERY CHARMING," "My WIFE is a WOMAN of MIND." Composed by J. BLEWITT. Price 2s. each (post postage free). These songs are of a perfect and unique character. "Courting's very Charming" is one of the best comic songs for a lady that has appeared for many years. "My Wife is a Woman of Mind" is composed for tenor or baritone voices, being in the compass of most singers. The veteran Blewitt pronounces it to be the most effective song he has ever written. It makes quite a sensation wherever he sings it.

DUFF and HODGSON, 65, Oxford street.

"LAUGH WHILE YOU CAN." Illustrated SONG for the Season: Dedicated to all Sufferers in Mind, Body, or Pocket, by Sol. "Better than champagne for enlivening a dull party. We heartily welcome Mr Pratt. The patronage of his song is unlimited, and the music equally so."—For other favourable notices, see "Church and State," "Daily News," "Herald." Posted free for 30 stamps. Library, 1, Edwards-terrace, Kensington.

"THE MOUNTAIN DAISY," sung by Mdlle. JETTY TAEFFE, at M. JULIEN'S Concerts, and nightly encored, is now published, also "The Boy of Naples," "The First Violet," and all the songs sung by Mdlle. TREE, may be obtained of JULLIEN and CO., 214, Regent-street.

JULLIEN'S ALBUM for 1851.—This very favourite musical annual is now published, and contains all the newest dance music of the season, viz.: The Jullien Polka, a variety of new vocal compositions by Auguilus, Balfe, Bakey, Barker, Lodge, Macfarren, Maynard, Rosh-Albert, and other composers of eminence. The Illustrations are executed in colours, by Brandard, Kell, Kenny Meadows, Lind and Jetty Treffz, in oil colours, by Baxter, patentee: together with other elegant designs by Brandard. Bound in handsomely embossed French covers, viz: in illuminated binding, 25s. each. JULLIEN and CO., 214, Regent-street, and all music sellers.

JULLIEN'S CADEAU for 1851.—The elegant present is now published, and contains the newest waltz, quadrille, polka, and galop by Jullien and Koenig, with a new illustration in gold and colours by Brandard. The whole handsomely printed on fine music size paper, gilt edged, and tied with ribband in a handsomely embossed cover. Price 5s., and forwarded post free to any part of the kingdom. JULLIEN and CO., 214, Regent-street, and all musicsellers.

JULLIEN and CO.'S MUSICAL PRESENTATIONS FOR THE YOUNG JUBILEE are published. Terms of subscription, 3 guineas per annum.—The principal feature which distinguishes this work from all others is, that the subscribers, besides being liberally supplied with music during the year with standard and new vocal and pianoforte compositions, are also presented with three illustrated volumes, containing the whole of the music published by themselves during the term of subscription.—Prospectuses forwarded free on application to JULLIEN and CO., 214, Regent-street.

JULLIEN'S ETRENNES for 1851.—JULLIEN and CO. have now completed their collection of MUSICAL ALBUMS, Annuals, Bijoux, Cadeaux, and all musical publications suitable for the season. Prospectuses, with full particulars, &c., are arranged for inspection similar to the Exposition de Jour de l'An in Paris. The great advantage of this Exposition is, that purchasers can see in one collection all the works published in London, and, after comparing the merits of each, make a more satisfactory selection than can elsewhere be obtained.—JULLIEN and CO., 214, Regent-street.

THE HON. MRS. NORTON'S NEW SET of ENGLISH BALLADS, entitled MUSIC ON THE WAVES, with a Poetical Introduction and Dedication to her Grace the Duchess of Montrose bound and illustrated in colours, with an Original Drawing by LEE SAUNFIELD, is just published, and forms by far the most attractive gift book for the season. Price 15s.—CHAPPELL, 50, New Bond-street.

PIANOFORTES for HIRE, at CHAPPELL'S, 50, NEW BOND-STREET.—Every variety of Grand, Collegiate, and Square Pianofortes, by Broadwood, Erard, Collard, Collard, and Collard, Clementi, Pether, Tolkien, and other first-class makers, may be had from the factories of any of the best makers.—50, New Bond-street.

TOLKIEN'S 25-GUINEA ROYAL MINUTO PIANOFORTES, nearly 7 octaves, O G fall, metallic plate, with all the latest improvements, in rosewood, 25 guineas; in mahogany, 23 guineas. The great peculiarity and worth of these pianos is, that they will stand in any climate, and are guaranteed for five years. Any additional beautiful tone and touch.—TOLKIEN, Manufacturer, 27, 28, and 29, Berners-street, Oxford-street. Ware-rooms, 44 and 45, Berners-street, two doors from Piccadilly. Drawings post-free.

REEVES' WATER-COLOURS.—REEVES' DRAWING PENCILS, Oil Colours, Brushes, and every article connected with Painting. Manufactory, 113, Cheapside, London. May be had of all Stationers and, Booksellers on town or country.

JONES'S £4 4s. SILVER LEVER WATCHES, and £10 10s. GOLD LEVERS, at the Manufactory, 76, STRAND, LONDON.

All rivalry, either of the Swiss manufacturers or any other house, for correctness, quality, and price are foreign work. On receipt of a Post-office Order, payable to JOHN JONES, for £4 4s., one will be sent from Jones's Manufactory of Watchwork, free for 34.

WATCHES, CLOCKS, and DIALS, cheaper than ever.—JONES'S Manufactory, 13

EXHIBITION OF THE BIRMINGHAM AND MIDLAND COUNTIES AGRICULTURAL ASSOCIATION, IN BINGLEY HALL, BIRMINGHAM.

BIRMINGHAM AGRICULTURAL ASSOCIATION.

(Continued from page 458).

according to breed; and in this respect the classification differs from that of the Smithfield Club, where all kinds of stock are ranged side by side. Each method has its advantages, and there may be some reason to fear that the Birmingham Exhibition, as it grows older, may become unduly partial to breed; but at present there is no sign of this. Crosses occupy a very prominent position in the specimens exhibited, and in the department of sheep especially (in harmony with the agricultural system of the midland districts) they come out with great force. Of the long-horned Warwick cattle, there were but two specimens exhibited on Tuesday at Birmingham. The crosses of South Downs or Leicesters with other breeds were well deserving of admiration.

Among the pure breeds exhibited, the show of Herefords deserves to take the highest place; and in this department the display was fully equal to that at the Baker-street Bazaar. The districts around Birmingham exhibit a great partiality to this description of stock, and fine herds are kept up by Sir Francis Lawley, Lord Hatherton, and other large proprietors.

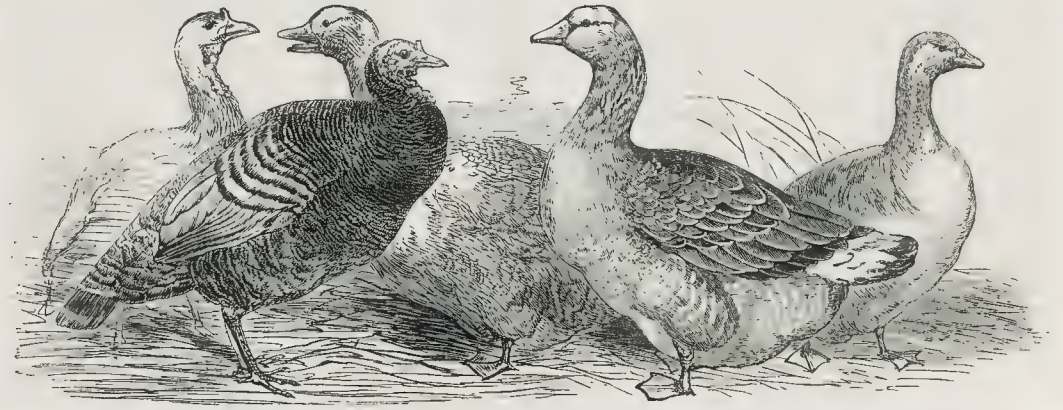
Among the show of heavier stock in Broad-street was an extraordinary cross-bred animal, of gigantic size, but in the framing of which nature seems to have accompanied the increased proportion with great awkwardness of build, and a wide departure from shapeliness. One of the crosses of sheep appeared to contain some admixture of foreign blood, as if an attempt had been made to increase the frame of the animal and its capacity for taking on flesh, at the same

SILVER-SPANGLED HAMBURG FOWLS.—FIRST PRIZE.

POLAND FOWLS.—FIRST PRIZE AND EXTRA SILVER MEDAL.

time that the square proportions of the native breeds were preserved. In pigs the show was a very large one, and there were some first-rate animals produced; but, taken altogether, this department was much inferior to that of the Smithfield Club Show.

We regret not to have room for the list of prizes; but we have illustrated the next feature of the Show—the Poultry department. In an exhibition of the kind nothing can be more appropriate than that this department should be included. The price of poultry in the metropolis has not yet stimulated our farmers to pay much attention to their poultry-yards, where, in many cases, were it properly managed, considerable profits might be realised. In the meantime, Birmingham and its neighbourhood are getting up a fine collection of barn-door fowl. Such a display of poultry, of all kinds and sizes, we have never seen collected together before as on Tuesday in Broad-street. From Dorking to Cochin China and Malay, from Spain to Poland and Hamburgh, every variety was splendidly represented. There were geese, ducks, and turkeys, too, of all kinds; and even pigeons, with their never-ending diversities of breed, were not excluded from the collection. Among the whole, a choice selection of high-spirited gamecocks kept up, throughout the entire day, a well-sustained chorus of their "shrill clarion" notes. The general attractions of the Show drew together on Tuesday a large number of visitors, who were all highly pleased with the excellent arrangements laid down for the occasion.



AMERICAN TURKEYS.—FIRST PRIZE.

GREY GEESE.—FIRST PRIZE.

London: Printed and Published at the Office, 198, Strand, in the Parish of St. Clement Danes, in the County of Middlesex, by William Little, 198 Strand, aforesaid.—Saturday, December 14, 1850.

THE ILLUSTRATED LONDON NEWS.

SUPPLEMENT.

VOL. XVII.] SATURDAY, DECEMBER 14, 1850. [GRATIS.

THE SCHLESWIG-HOLSTEIN MEDAL.

(To the Editor of the ILLUSTRATED LONDON NEWS.*)*

THE historical aspect of the struggle that has for the last three years been going on between the Duchies and Denmark has been, in European eyes, so completely merged in the political, that I doubt whether any one among the numerous diplomatists who have on various sides been negotiating in this unhappy question would be able to unriddle the allegorical groups with which we are at present occupied; and yet, of all the revolutions that have agitated Europe since the February of '48, there is none for the right understanding of which previous historical knowledge is more necessary than for this one of Denmark and its reaction in the Duchies.

It has, naturally enough, been the object of Danish statesmen—and they, be it remembered, by means of a well-disciplined and extensive diplomacy, have all along had the ear of the Cabinets of Europe—to keep these historical antecedents in the background. On the other hand, those organs of public opinion in Germany which have made the greatest clamour about the Schleswig-Holstein cause, have been equally careless of those strictly constitutional rights, the defence of which are the real *casus belli*, and have directed the public attention altogether to those points in which the movement tallied with the *pan-Germanistic* views of the writers. Hence it was equally the object of Danish politicians and German unitarians to represent the Schleswig-Holstein war as the offspring of the Revolution of '48: of the former, in order to stamp it with an insurrectionary character; of the latter, to represent it as a ramification of that general movement towards Unity, one of the most forcible arguments for which was its universality. The little people of Schleswig-Holstein itself, however, whenever its real tones could be caught amid the louder bellowing of its German neighbours, were heard modestly insisting on constitutional liberties preserved through good report and evil report for the space of four centuries.

Among other peculiarities which the Anglo-Saxon population of Schleswig-Holstein have in common with their English descendants, and which distinguishes them most markedly from other Germans, is their extreme reserve and untalkativeness. Owing to this, with the exception of Messrs. Droysen and Samwer's work,* and of the Manifesto of the Stadtholderate, issued just before the battle of Idstedt, no statement of their case by themselves has appeared. The Medal which you now give to the world is intended in part to remedy this defect, and to hand down to posterity the memory of one of the most determined and hard-fought struggles for ancient liberties which the world has ever witnessed.

The Schleswig-Holstein Medal represents the two great eras of Denmark's connexion with the Duchies. On the obverse, that of the first establishment of the union between the two countries; on the reverse, that of the struggle on the part of the Duchies for the maintenance of the conditions of that union.

In the year 1460, the Sovereignty of the Duchies (or rather of the then county of Holstein and Duchy of Schleswig), united about a century before under the Schauenburg dynasty, became vacant. The right of election was, at that time, vested in the United Schleswig-Holstein Diet. Christian I. of Denmark, founder of the still reigning dynasty of Oldenburg, sister's son to the deceased Duke, and a Count Otho of Schauenburg, were the candidates for the vacant throne; the former backing his claim by a threat of invading Schleswig as a lapsed fief of the Danish Crown. Upon this, the United Ducal sceptre was offered by the Diet to Christian I., on certain conditions embodied in a treaty signed at Ripen, on Wednesday after "Invocavit," 1460; the object of the treaty being to guarantee the everlasting union of the Duchies as *one* independent principality, distinct from, and totally unconnected with, the *Crown* of Denmark, though, by an historical accident, having as their Duke the same *person* who happened to be King over that country. It is this transaction which the obverse of the Medal represents. On the right-hand side is the figure of Christian I. The two female figures on the left represent the two Duchies, their close union being denoted by the sister-like embrace which unites them. The one on the right is known to be Schleswig by the lions on the banner; the one on the left to be Holstein by the nettle-leaves on the scutcheon against which she is resting; the lions and nettle-leaves being respectively the arms of the two Duchies. On the altar lies a scroll entitled the "Land's Privileges," to which Christian I. is pledging his word before a crucifix. It is this document which contains the two sentences forming the mottoes round the group—on which few words the entire legal basis of the connexion between the Duchies and Denmark rests:—1. "Dat se bliven ewich tosamende ungedelt" ("That they [the two Duchies] remain for ever undivided"). 2. "Nicht also eneme Koninge to Dennemarken" (That they swear allegiance to him (Christian I.) "not in his capacity of King of Denmark," but, as the charter goes on to say, "as unto the Lord of *these* realms"). This charter of the Land's Privileges was renewed at every successive coronation (that of the present King Frederick inclusive), and the oath to retain the indivisibility of the Duchies intact, solemnly taken. On the base of the altar is the name of the town of Ripen; and below, the date of the treaty.

THE SCHLESWIG-HOLSTEIN MEDAL.

The reverse of the Medal represents the struggle now being carried on on the part of the Duchies against Denmark, to maintain the integrity of this Constitution of 1460 against the encroachments of the Radical party at Copenhagen. Denmark, under the form of a sea-dragon (happily enough borrowed from the arms of that kingdom), with a Royal crown surmounted by a cap of liberty, is attacking the sister Duchies. Schleswig, as the one most imperilled, and whom the monster has already partly within his clutch, has been very beautifully represented by the artist as grasping hold for support on her sister of Holstein, who, firmly propped against the citadel of Rendsburgh, is able to yield it abundantly. In the distance is a ship, with the "Danebrog" (the Danish ensign) hanging half-mast high, to represent the old maritime honour of Denmark as mourning at the unrighteous scenes it is obliged to behold. To the left, the sun is seen rising, in allusion to a line in the popular air of the Duchies—

Die schönerer Morgen tagt.

The facts of which this group is allegorical have been strangely ignored in all that has been written on the subject of the Duchies in England.

The ultra-revolutionary party of Young Denmark, known under the name of the "Eider-Partei," from their cry having been "Denmark to the Eider!" suddenly found its hour had come, when the echoes of the Parisian Revolution went reverberating through the politics of Europe. The object of this party, steadily pursued for ten years, had been the destruction of the old union between the Duchies, and the subjection of Schleswig to Denmark. At the head of 15,000 men, the revolutionary Club of the Casino, headed by one Orla Lehmann, whose toast some time previous had been, "Let us write with bloody swords our laws upon the Schleswig-Holsteiners' backs," marched to the palace of the King, and demanded the incorporation of Schleswig. The alternative given to the King, if he refused, was, that the people would be driven to the self-assistance of despair. "Fortvivlelsens selvhjelp," which forms one of the mottoes on the reverse. The King yielded; and forthwith the German Ministry, which had till then governed the Duchies for Copenhagen, was driven forth, and the incorporation decreed.

On this being known in the Duchies, and that an invasion of Schleswig by Danish troops was immediately to be apprehended, a Provisional Government was named, who assumed the reins of administration, and have ever since ruled in the name of the rightful Duke Frederick VII., who, in his capacity of King of Denmark, had invaded them. From the proclamation they then put forward, calling upon the people to arrested resistance against foreign invasion, is taken the other motto on this side of the Medal, "Recht und Gerechtichkeit stehn uns zur seite" ("Right and Justice stand on our side").

I must apologise for the length to which I have been forced to go, but it was impossible to condense so much historical matter into a shorter space.

I remain, your obedient servant, R. B. D. M.

(The accompanying Engraving is larger than the actual size of the Medal, which is 1¾ inch in diameter).

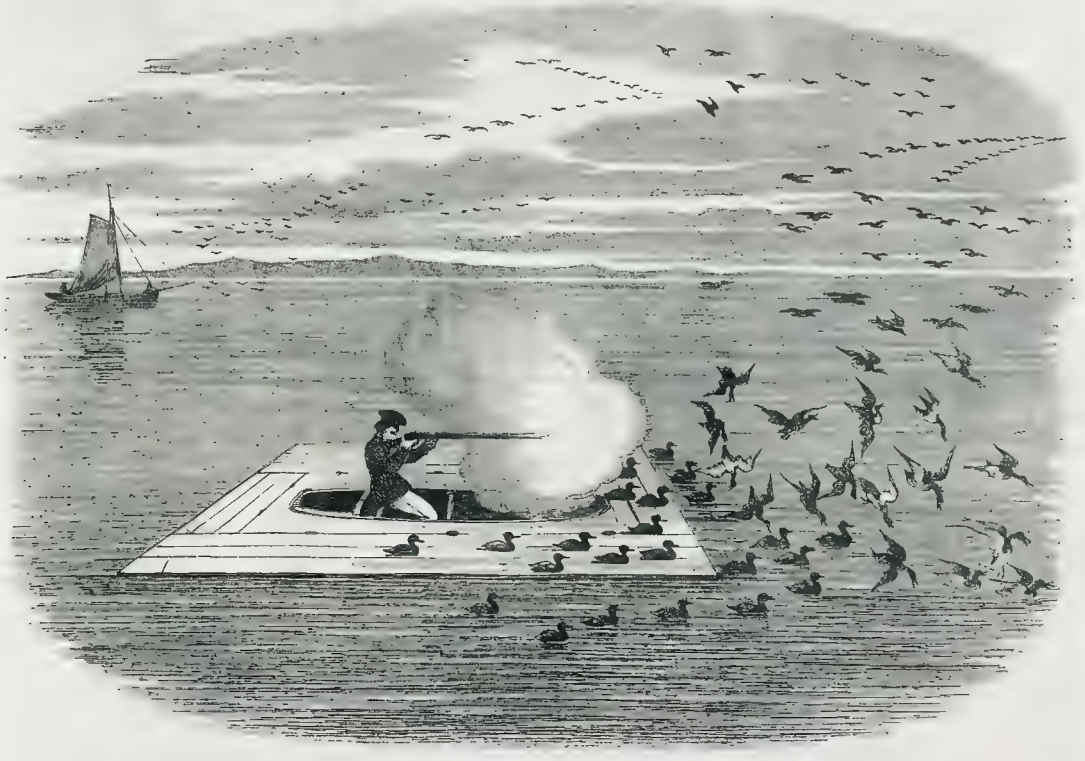
* An English edition of this work, entitled "The Policy of Denmark towards the Duchies of Schleswig-Holstein," was published by Messrs. Longmans, in the course of last summer.

DUCK SHOOTING ON THE POTOMAC.

IN the autumn, the ducks, warned by the cold breezes and forbidding shores of the north that winter comes on apace, collect their families, which they have raised in safety on the lonely waters of the great lakes and amid those marshes where the sportsman seldom penetrates, and commence their migration to the sunny shores of the south.

Tempted by the still inviting shores of the Potomac, they linger a while upon her waters, and give to the surrounding sportsmen opportunities for exercising their skill. No time is lost: every one at all imbued with the spirit of Nimrod shoulders his piece and betakes himself to the scene of action. At first, the ducks are easily approached and shot; but they are soon rendered excessively shy by the incessant discharge of musketry from every nook and possible place of concealment. The sportsman then resorts to all manner of decoys, in order to approach them. Sometimes he covers his canoe with green bushes, and floats quietly with the current among the unsuspecting flock, and obtains a fair shot. The gun used is one made expressly for this sport, and bears the name of "Potomac duck gun." It is a short and very heavy piece, with a muzzle two inches in diameter, and is sometimes made to work on a swivel in the bow of the canoe. It carries a load of shot weighing five ounces, and the destruction dealt upon a flock just rising from the water can be imagined.

One individual, who had tried in vain many plans, was one day seen to roll into the water a number of pumpkins; these drifted in among the ducks, and were soon scarcely noticed by them. Our man then brought forth a huge



WILD DUCK SHOOTING ON THE POTOMAC.

pumpkin, well hollowed out, with holes for his eyes and mouth. This he placed upon his head, stripped himself, and swam gently towards the ducks. They scarcely noticed the pumpkin; and our hero succeeded in drawing many a poor duck under the water, who had only time to give a quick quack, when he was no more, and hung quietly to the captor's belt, without even attracting the attention of his comrades.

But one device attracted my notice especially, and I have given you a sketch of it (see Engraving). This successful admiralty. The hunter builds him a small skiff with very low sides; this he surmounts with a platform of boards, and paints the whole so as scarcely to be distinguished from the water: on this platform and around it he places his wooden decoy ducks, and then himself at the bottom of the skiff. In the meantime he has a confederate, who, in the boat in the distance (see Illustration), sails around and scares up the ducks; they alights or hover around the decoy ducks, and our fortunate sportsman rising, deals death among them. He sometimes kills at one shot fifteen or twenty. The sport does not last long, as they soon become w. ary of the beautiful but treacherous water, and hasten to the lagoons and bayens of Florida, where they can feed and sport undisturbed.

The canvass-back is considered far the best for the table; and, indeed, epicures say that they are unequalled for delicacy, and at the same time flavour, in the duck line.—*From a Correspondent.*

FRED HOLDERSWORTH; OR, LOVE AND PRIDE.

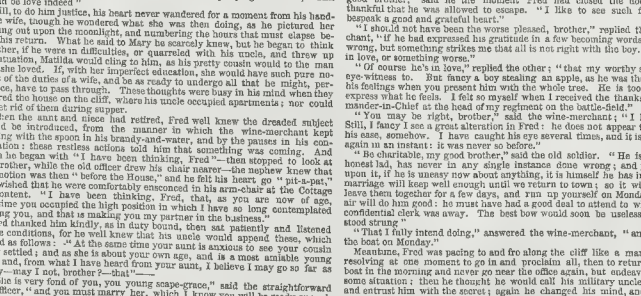
BY THOMAS MILLER.

(*Continued from page 427.*)

CHAPTER VII.

In the evening, Fred and his pretty cousin went out for a walk in the moonlight on the cliffs in the direction of Ramsgate. He was at last certain, from the conversation over dinner, that nothing was known of his marriage; and, as he had taken two or three glasses of champagne, he felt much lighter about the heart than he had before done during the day

They walked along for some time in silence, except at intervals, when a few common-place observations were exchanged, looking over the sea, where the moonshine slivered thousands of waves, and went stretching along like a pathway of light until it was lost in the far distance. They listened to the deep murmur of the ocean, the low thunder of the waves that broke upon the beach, and heard some bell that marked the time ringing far out at sea, as the "good ship" glided on her way to a distant land.



"I like you very well," answered Fred; "why should I not? Now, supposing I were to say, that if my uncle wished me to marry you, and I were willing, what should you say if I asked you to consent to it?"

"I should first ask you if you loved me?" replied Mary, in a tone of voice which was scarcely raised above a whisper.

Fred felt her eyes were upon him, although he could not see them for the shadow made by her bonnet; so he sighed, and said, "And what is love, my pretty cousin?"

"I cannot tell," answered Mary; "though I have often thought about it. My love would be ever to think of him on whom my affections were centred. He alone would fill my heart and thoughts; his image would never be absent from me day nor night; I should never be weary of looking at him, and when he was absent I should sit listening for the sound of his returning footsteps. All my study would be to make him happy, to anticipate his wishes. When he was weary I should sit and watch beside him, when sad I should comfort him, and should he ever be so unfortunate as to fall into difficulties I should almost be glad, for then the sincerity of my love would be tested." The beautiful girl raised her face to heaven as she ceased speaking, and, as the moonlight fell upon it, it seemed as if Love himself was hovering near her, and throwing over her countenance the white radiance of his silver wings. She then turned towards the sea, and saw the waves chasing one another, as if in play, and Fred felt that in her strong emotion her arm trembled as it rested on his own, and he could not help saying to himself, "This would be love indeed!"

Still, to him justice, his heart never wandered for a moment from his handsome wife, though he wondered what she was then doing, as he pictured her looking out upon the moonlight, and numbering the hours that must elapse before his return. What he said to Mary he scarcely knew, but he began to think whether, if he were in difficulties, or quarrelled with his uncle, and threw up his situation, Matilda would cling to him, as his pretty cousin would do were a man that she loved. If, with her imperfect education, she would have such pure notions of the duties of a wife, and be as ready to undergo all that he might, perchance, have to pass through. Fred was never busy in his mind when they entered the house on the cliff, where his uncle occupied apartments; nor could he get rid of them during supper.

When the aunt and niece had retired, Fred well knew the dreaded subject would be introduced, from the manner in which the wine-merchant kept playing with the spoon in his brandy-and-water, and by the pauses in his conversation: these restless actions told him that something was coming. And when he began with "I have been thinking, Fred"—then seemed to look at his brother, while the old officer drew his chair nearer—the nephew knew that the motion was then "before the House," and he felt his heart go "pit-a-pat," and wished that he were comfortably ensconced in his arm-chair at the Cottage of Content. "I have been thinking, Fred, that, as you are now of age, it is time you occupied the high position in which I have so long contemplated placing you, and that is making you my partner in the business."

Fred chanked him kindly, as in duty bound, then sat patiently and listened to the conditions, for he well knew that his uncle would append these, which he did as follows: "At the same time your aunt is anxious to see your cousin lady, and, from what I have heard from your aunt, I believe I may go so far as to say—may I not, brother?—that"——

"She is very fond of you, you young scape-grace," said the straightforward old officer, "and you must marry her, which I know you will be ready enough to do, and I wish you every happiness, my partner in the business."

Fred shook him kindly, as in duty bound, then sat patiently and listened to the conditions, for he well knew that his uncle would append these, which he did as follows: "At the same time your aunt is anxious to see your cousin Mary settled; and as she is about your own age, and is a most amiable young lady, and, from what I have heard from your aunt, I believe I may go so far as to say—may I not, brother?—that"——

"She is very fond of you, you young scape-grace," said the straightforward old officer, "and you must marry her, which I know you will be ready enough to do, and I wish you every happiness, my partner in the business."

Fred rushed

not leaving their wives a single change of anything, but stripping the house. There was Nancy Houghton's husband, for instance—but I'll tell you all about that some other time. Dearv me! if any of those housebreakers knew that there were two lone women and so much money in a place like this, why they would murder us in our beds. I think the best thing would be to bury it somewhere in the garden, after dark; but then some of Fred's mouldiwarps might throw it up. I think, if I put it in a saucepan, and left it all night upon the hob, it would be safe: but these thieves generally break in in the dark, and they might run against the saucepan and knock it down; then they would hear the money rattle. I'll put it at the bottom of the clothes-basket, and sometimes they carry off the clothes-basket and all. I'll sew it up in one of the mattresses, that will be the best; I can draw it up again as neatly as if the seam had never been opened. He's not so bad, after all; for if he has run away and left you, he's done it like a gentleman. I will say that of him, if I never set eyes on him again." And leaving her daughter this consolation, she went up-stairs to secure the money.

But comfort was nearer at hand than Matilda anticipated, for, before her mother returned down-stairs, Tollerton came in with a letter. It had been sent by some one Fred knew, who came in town in the same chaise as his uncle, for he was aware that she could not hear from him before Tuesday, if he sent by post; so he addressed it in an inclosure to Tollerton, with the following note:—

"Dear T., If you would save the most beautiful, the most affectionate from misery—if ever you were attached to your fanciful friend—if you ever found a pleasure in giving happiness to a doating heart, please forward or take this to per address, and state that matters of most important business, which I have to negotiate for the house, will detain me until to-morrow, in consequence of the samples not arriving as per order—or anything, my friend! my brother!——My life, my happiness—the happiness of my angel is in your hands. Fly! fly! fly! and make her happy. Any expense you may be put to for cab-hire, &c., please debit to my account. My heart is in your hand.

"Yours faithfully while this heart quivers, "F. H.

"P.S.—Unless I can escape, I am to be married to my cousin. I believe my uncle has purchased the license. Oh, my friend! my heart is sinking and trembling on the verge of bigamy as I now do—never be so near transportation for life, with, I believe, hard labour. Please inquire of your young friend, the barrister, whether they crop the hair of convicts."

Tollerton smiled and sighed as he read the note, and wished he had no greater trouble to endure than to marry Fred's pretty cousin. That day he was detained rather later than usual at the Bank; but, no sooner was he released, than he called a cab, and, without any luncheon, went munching two three-o'clock buns as he rode along, and made the best of his way to fulfil his friend's mission.

Tollerton had envied the little note, which, with trembling hand, she raised to her lips, while two big tears stood for a moment upon her fringed eyelashes before they fell, and her tongue faltered as she begged of him to excuse her for a few moments, while she hurried up-stairs, her heart beating like a drum, to read her husband's letter.

What though it was high-flown and nonsensical; it came from the heart, and reached the heart it was intended for. It seemed to break the silence around her, and as she read she fancied she again heard his voice, for it was filled with those endearing terms which a woman loves to hear, when she loves as well. It comforted her, and brought promise that on the morrow they should be together.

(To be continued.)

LITERATURE.

The Emperors of Rome from Augustus to Constantine. By Mrs. Hamilton Gray. Hatchard, Piccadilly.

The history of Imperial Rome told in the biographies of the Emperors, adapted to young persons, and adorned with numerous wood-cuts, is a useful book. Mrs. Gray has taken great pains in compiling it. Her style is plain and copious, rather than otherwise. At present, books of this description are much better written, more carefully compiled, and much better ornamented than formerly. It was a reproach to England that she had no good elementary school-books; but, by the exertions of many distinguished authors and publishers, that reproach is no longer deserved. Mrs. Gray's book is one that helps to remove it: she would have made it better for the purpose had she spared some reflections, and more rigidly confined herself to narrative. By judicious condensation, she might much reduce the bulk of the volume—which contains nearly 600 pages—to the advantage of both her readers and her publishers pockets. The period treated of by this book is very important, including the rise and progress of Christianity; but, except as the Emperors came into conflict with the Christians, that does not belong to their biography. The present, too, is only a fourth portion of a work; and we rather shrunk from a history of Rome "embracing the whole period from its infancy to its close," in four thick volumes, for young people. We are right in saying that much of the history of that period has yet to be written; but it must be written for men, before it can be made useful for children; it must be composed for the learned, before it can be compiled for the volume. The process of research and abridgment are rarely successfully performed by the same person. Mrs. Gray's book fills a vacancy in our course of historical instruction for young persons, and will be acceptable to teachers and learners.

Poems. By William Allingham. Chapman and Hall.

These Poems are modestly introduced to us as the mere trials of an apprentice to the Muses, who prints them for the self-improvement involved in the mysterious process of carrying a small volume through the press. Mr. Allingham's volume betrays an acquaintance with the later school of poets now living, and we think that his mind is able and willing to sympathize with the spirit of the present time. It is rather didactic than descriptive. He labours at the picturesque, but reflection is to him a natural and easy exertion of the understanding. In his search for the striking, he sometimes aims at the quaint, and evidently is apt to mistake the eccentric for the original. One example must suffice:—

ROYAL MARRIAGES.

Three days agone
Her hand was won
By suitor that was skilled to woo;
And now come we,
In state, to see
The Church's ceremonials due.

The bride, in white
Is clad aright,
And in the carriage closely hid;
No bride-maid's feet—
For too, too pale
The cheek beneath its downcast lid.

White favours rest
On every breast;
And yet methinks we seem not gay.
The church is cold,
The priest is old,
Now who will give the bride away?

Bowed sexton there,
With frosty hair,
Stand forward and discharge thy trust.
Priest's words sound forth:

They're "Earth to earth,
Ashes to ashes, dust to dust."

Withdrawn in gloom
Waits Death the groom;
(His wedding-chimes how slow they swing!)
With icy grip
He woos will clip
Her finger with the wormy ring.

The match is fair;
This silent pair,
Here to each other given for ever,
Were lovers long,
Were plighted strong
With oaths and bonds that nought could sever.

So sisters two
Are parted now,
Quitting the home where both drew breath;
The Soul made wife
To the Prince of Life,
The Body wedded to King Death.

Such a poem undoubtedly shows original talent; but the following is in a much chaster and more consistent style:—

THE THREE FLOWERS.

A Pilgrim light, for travel bound,
Trippʼd through a gay parterre:
The cool fresh dew was on the ground,
The lark's song in the air.
He chose a bud as blue as heaven,
Ere turnʼd he to depart:
And kissʼd it over seven times seven,
And stored it next his heart.
How happy I might the tender thing,
So passionately pressed,
Have kept the sweetness of its spring,
Nor withʼer'd in his breast.

He strode along through cultured fields
By sturdy conquest won;
And blessʼd the shade the woodland yields
From too oppressive sun.
But spying first a pink red bloom—
Come good or evil hap,

His airy precipice he climb,
To set it in his cap:
Then on with dauntless step he went,
But never taking heed
How leafy leaf the prize was shent,
And scatterʼd in his speed.

Oʼer moorlands wended he his way;
The heather far and near
Stemmʼd in the light of sinking day,
And of the waning year,
His bent regard descrʼed a flower
As rarely as upper snow,
Whose subtle fragrance had the power
To bring him kneeling low.
He stoopʼd to it—he fell asleep—
The sun's last ray had set;
And oh, that slumber was so deep,
He has not wakenʼd yet!

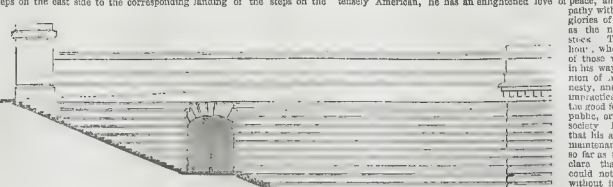
A narrative of considerable pretensions, entitled "The Music Master," has the merit of a simple pathos, such as to justify us in accepting the small volume before us as the promise of much better things.

Illustrated Duties of the Olden Time. Foilhorp, Brighton; Hogue, London

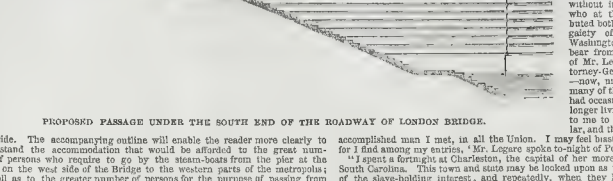
Good old Mr Newberry, of St. Paul's Churchyard, was content to encase his little books in a motley wrapper, of a very remote school of design. What would he have said had he lived to behold this gay nursery quarto, in its gay green binding, with Jacobean gilt tracle-work? Equally surprised would he be with the interior of this holiday volume, in which each Duty is neatly engraved, with beside it a picturesque illustration of its incidents. Thus, we have "Humpty Dumpty, and the King's Horses and the King's Men," of the olden time. "Little Bo-Peep" is in three scenes—the loss, the dream, and the tail-less sheep. The "Song of Sixpence" has its separate incidents told in distinct groups, well contrasted. "One who is so Merry" is a pretty piece of fairy-work. In "Rock-a-by Baby," the mother is weeping for her last infant, who is slung on the tree-top, where guardian sprites are watching. "Goosey Goosey Gander" has an Elizabethan carved staircase to wander on. "Good King Arthur" stealing the barley-meal, and the Queen frying the pudding, is the very *picturesque criminis*. Each of the twenty-nine subjects has a "stick" border or frame, and the title-page is printed in gold and silver. Altogether, it would be difficult to point to a child's book more confused in such purely artistic taste as the "Illustrated Duties of the Olden Time."

PROPOSED IMPROVEMENT AT LONDON BRIDGE.

In our Journal of November 1st, we noticed a plan proposed by Mr. Dawson, for a Passage Way at the south end of London Bridge, from the first landing of the steps on the east side to the corresponding landing of the steps on the west side. The accompanying outline will enable the reader more clearly to understand the accommodation that would be afforded to the great number of persons who require to go by the steam-boats from the pier at the stairs on the west side of the Bridge to the western parts of the metropolis; as well as to the greater number of persons for the purpose of passing from one side of the bridge to the other without the risk of accidents in crossing the roadway, usually thronged with carriages of every description. The passengers to and from the Brighton, Dover, North Kent, and Greenwich Railways, the termini of which are all in this immediate vicinity, could scarcely fail to appreciate the advantages of such an improvement, which in no way would interfere with the stability of the Bridge, and, in regard to appearance, would be decidedly ornamental.



PROPOSED PASSAGE UNDER THE SOUTH END OF THE ROADWAY OF LONDON BRIDGE.



SECTION OF ROADWAY.

THE EARL OF CARLISLE'S IMPRESSIONS OF AMERICA.

The following are the most prominent portions of the lecture delivered by the Earl of Carlisle at the Leeds Mechanics' Institution on Friday evening last:—

"It is my wish to touch very lightly upon any point which among us, among even some of us now here, may be matter of controversy. I, however, honestly think that the experience of the United States does not as yet enable them to decide on either side the argument between the established and voluntary systems in religion. Take the towns by themselves, and I think the voluntary principle appears fully adequate to satisfy all religious exigences. Then it must to remembered that the class which makes that ability elsewhere, scarcely, if at all, exists in America. It is the blessed privilege of the United States, and it is one which goes very far to counterbalance any drawbacks at which I may have to hint, that they really have not, as a class, any poor among them. A beggar is what you never see. On the other hand, over their immense tracts of territory, the voluntary system has not sufficed to produce sufficient religious accommodation. It may, however, be truly questioned whether any establishment would be equal to that function. This is, however, one among the many questions which the Republican experience of America has not yet solved. As matters stand at present, indifference to religion cannot fairly be laid to her charge. Probably, religious extremes are pushed farther than elsewhere. There certainly is a breadth and universality of religious liberty which I do not regard without some degree of envy." (Applause.)

"The House of Representatives, the more popular branch of the government, returned by universal suffrage, assemble in a chamber of very imposing appearance, arranged rather like a theatre, in shape like the arc of a bow, but it is the worst room for hearing I ever was in; we hear complaints occasionally of our Houses of Parliament, old and new, but they are faultless in comparison. In parts of the house it is impossible to hear anybody; in others it answers all the purposes of a whispering-gallery, and I have heard members carry on a continuous dialogue while a debate was storming around them. Both in the senate and the house every member has a most commodious arm-chair, a desk for his papers, and a spitting-box, to which he does not always confine himself. I went very often, and it was impossible to surpass the attention I received; some members seat in the body of the house was always given to me, and I was at liberty to remain there during the whoe of the debate, or write my letters as I chose The palpable distinction between them and our House of Commons I should say to be this—we are more noisy, and they are more disorderly. They do not cheer, they do not cough, but constantly several are speaking at a time; and they evince a contemptuous disregard for the decisions of their speaker. They have no recognised leaders of the different parties, the members of government not being allowed to have seats in other House of Congress; and the different parties do not occupy distinct quarters in the house, so that you may often hear a furious wrangle being carried on between two nearly contiguous members. While I was at Washington, the question of slavery, or at least of points connected with slavery, gave the chief colour and animation to the discussions in the House of Representatives. Old Mr. Adams, the ex-President of the United States, occupied, without doubt, the most prominent position; he presented a very striking appearance, standing up erect at the age of seventy-five, having once filled the highest post attainable by an American citizen, with trembling hands and eager eyes, in defence of the right of petition—the right to petition against the continuance of slavery in the district of Columbia, with a majority of the house usually deciding against him, and a portion of it lashed into noise and storm. I thought it was very near being, and to some extent it was, quite a sublime position; but it rather detracted from the grandeur of the effect at least, that his every excitement was as great as to pitch his voice almost into a screech, and to make him more disorderly than all the rest. He put one in mind of a fine old game-cock, and occasionally showed great energy and power of sarcasm. I had certainly an opportunity of forming my opinion, as I sat through a speech of his that lasted three days; but then it is fair to mention that the actual sittings hardly last above three hours a day—about four dinner is ready, and they go away for the day, differing much herein from our practice; and on this occasion they frequently allowed Mr. Adams to sit down to rest. All the time, I believe, he was not himself for the discontinuance of slavery, even in the district of Columbia, but he contended that the constitution had accorded the free right of petition. One morning he presented a petition for the dissolution of the Union, which raised a great tempest. Mr. Marshall, of Kentucky, a fine and graceful speaker, moved a vote of censure upon him. Another member, whom I need not name, the ablest and fiercest champion whom I heard on the southern or slave-holder side, made a most savage onslaught on Mr. Adams; then up got that "old man eloquent" and no one could have reproached him with not understanding how to speak even daggers. His brave but somewhat troublous spirit has passed from the scenes upon which he played so conspicuous a part, but he has left behind him some words of fire, the sparks of which are not yet extinct. Nothing came of all this stir: I used to meet Mr. Adams at dinner while it was on, very calm and undisturbed. After seeing and hearing what takes place in some of those sittings, one is tempted to think that the Union must break up next morning; but the flame appeared to consider itself almost as quickly as it ignited. The debates in the senate, during the same period, were dignified, business-like, and not very lively; so it may be judged which house had most attraction for the passing traveller. I heard Mr. Clay in the senate once, but every one told me that he was labouring under feebleness and exhaustion, so that I could only perceive the great man in the tones of his voice. I think the most attractive quality was still more perceivable in private intercourse, as I certainly never met any public man, either in his own country or in mine, always excepting Mr. Canning, who exercised such fascination over the minds and affections of his friends and followers as Henry Clay. I thought his society most attractive, easy, simple, and genial, with great natural dignity. If his country make better men presidents, I should applaud their virtue in resisting the spell of his eloquent attractions. When the actual list is considered, my respect for the discernment elicited by universal suffrage does not stand at a very high point. Another great man, Daniel Webster, I could not hear in either House of Congress, because he then filled, as he does now, the high office of Secretary of State; but it is quite enough to beam on he jutting dark brow and cavernous eyes, and massive forehead, to be assured that they are the abode of as much, if not more, intellect than any head you perhaps ever remarked.

For many, if not for all reasons, I am well content that he should be against at the head of the American Cabinet; for I feel sure, that, while he is ever intensely American, he has an enlightened love of peace, and a cordial sympathy with the fortunes and glories of the old, as well as the new Anglo-Saxon stock. The late Mr. Calhoun, who impressed most of those who were thrown in his way with a high opinion of his ability, his honesty, and, I may add, his unpracticability, I had not the good fortune to hear in public, or meet in private society. It is well known that his attachment to the maintenance of slavery went so far as to lead him to declare that real freedom could not be maintained without it. Among those who at that time contributed both to the credit and gaiety of the society of Washington, I cannot forbear from adding the name of Mr. Legare, then the Attorney-General of the Union —now, unhappily, like too many of those whom I have had occasion to mention, no longer living. He appeared to me to be the best scholar, and the most generally accomplished man I met, in all the Union. I may feel biassed in his favour, for I find among my entries, 'Mr. Legare spoke to-night of Pope as the highest.'

"I spent a fortnight at Charleston, the capital of her more energetic sister, South Carolina. This town and state may be looked upon as the head-quarters of the slave-holding interest, and repeatedly, when they have thought that the policy of the North too encroaching either upon questions relating to what they term their peculiar institutions, which is their euphonious description of slavery, or, when we should feel a juster sympathy with them, upon questions relating to the protection of the northern manufactures in opposition to a liberal commercial policy, they have not only held the very highest tone in favour of a dissolution of the Union, but they have proceeded to overt acts of resistance. I am bound to say that I spent my time there very pleasantly. There was much gaiety and unbounded hospitality. I have made no disguise of what my opinions upon slavery were, are, and ever must be; but it would be uncandid to deny that the planter in the Southern States has much more in his manner and mode of intercourse that resembles the English country gentleman than any other class of his countrymen; he is more easy, companionable, fond of country life and out-of-door sports. I went with a remarkably agreeable party to spend a day at the rice-plantation of one of their chief proprietors: he had the credit of being an excellent manager, and his negroes, young and old, seemed well taken care of and looked after; he repelled the idea, not of educating them that is highly penal by the law of the state—but of letting them have any religious instruction. I was told by others that there was considerable improvement in this respect. Many whom I met entertained no doubt that slavery would subsist among them for ever; others were inclined to think that it would wear out. While I was willing not to shut my eyes to any of the more favourable external symptoms or mitigations of slavery, other indications could not come across my path without producing deep repugnance. On the very first night of my arrival I heard the first sound of a curfew-bell; on inquiry, I was told that after it had sounded every night at about nine o'clock, no coloured person, slave or free—mark that! might be seen in the streets. One morning, accordingly, I saw a great crowd of coloured persons in the street, and I found that they were waiting to see a large number of their colour, who had been taken up the night before on their return from a ball, escorted in their ball-dresses from the gaol to the court-house. Indeed, it was almost principally with relation to the free blacks that the anomalous and indefensible working of the system appeared there to develop itself. I was told that the slaves themselves looked down upon the free blacks, and called them rubbish. I must not omit to state that I saw one slave auction in the open street, arising from the insolvency of the previous owner: a crowd stood round the platform, on which sat the auctioneer, and beside him were placed in succession the lots of negroes. I heard the auctioneer tell one old man, whom I could have hardly distinguished from a white person, that he had been bought by a good master. One could not help shuddering at the future lot of those who were the subjects of such a congratulation. In point of neatness, cleanliness, and order, the slave-holding states appeared to stand in about the same relation to the free, as Ireland does to England: everything appears slovenly, ill-arranged, incomplete, windows do not shut, doors do not fasten; there is a superabundance of hands to do everything, and little is thoroughly done.

"Passing from the physical to the moral atmosphere, amidst all the vaunted equality of the American freemen, there seemed to be a more implicit deference to custom, a more passive submission to what is assumed to be the public opinion of the day or hour, than would be paralleled in many aristocratic or even despotic communities. This quiet acquiescence in the prevailing tone, this complete abnegation of individual sentiment, is naturally most perceptible in the domain of politics; but I thought that it also in no inconsiderable degree prevaded the social circle, bassed the decisions of the judicial bench, and even infected the solemn teachings of the pulpit. To this source may probably, in some measure, be traced the remarkable similarity in the manners, deportment, conversation, and tone of feeling, which has so generally struck travellers from abroad in American society. Who that has seen can ever forget the slow and melancholy silence of the couples who walk arm-in-arm to the tables of the great hotels, or of the unsocial groups who gather round the greasy meals of the steam-boats, to wind up the five minutes meal, come like shadows, so they fall. One of their able public men made an observation to me, which struck me as pungent, and perhaps true, that it was probably the country in which there was less misery and less happiness than in any other of the world.

"If we ascend from social to political life, and from manners to institutions, we should find that the endless cycles of electioneering preparations and contests, although they may be carried on for the most part without any serious turbulence, or overt bribery, by which they are sometimes but too notoriously disgraced among ourselves, still leave no intermission for repose in the public mind, by engrossing all the energies of existence; absorbing to themselves every other question of internal and foreign policy; lead their public men—I will not say their best, but the average of them to pander to the worst prejudices, the meanest tastes, the most malignant resentments of the people; at each change of administration incite the new rulers to carry the spirit of proscription into every department of the public service, from the minister at a great foreign court to the postmaster of some half-barbarous outpost—thus tending to render those very functions ought to withdraw them the most completely from party influences the most unscrupulous partisans; and would make large masses welcome war and even aequiesce in ruin, if it appeared that they could thus counteract the antagonistic faction, and eliminate the rival leader, or remotely influence the election of the next President."

UPPER CANADA AGRICULTURAL EXHIBITION.

(From our own Correspondent.)

The Annual Exhibition of the Agricultural Association of the Province of Upper Canada was held at the town of Niagara, on the 18th, 19th, and 20th days of September last.

The spot selected is admirably adapted to the purpose, being easy of access by means of steam navigation to all parts of the province and the neighbouring states of the American Republic. Situated some sixteen miles from the great Falls of Niagara, and, in a favourable condition of the atmosphere, within the sound of the ceasing waters, it has also connected with it historical recollections of no mean interest. There the loyalists of the old war, whose adherence to the Royal cause resulted in their own expatriation, and the confiscation of their property, found a last rest: "for the sole of their foot," and planting the British standard in the then unbroken wilderness, began life again, and made for themselves homes which many of their descendants are still in the enjoyment of. There the first Parliament of Upper Canada assembled under Governor Simcoe; and, in these primitive times, political parties being unformed, the orators were few and their work light, so that the "business of the state" was transacted in as few hours as it now takes weeks.

The Association is a very youthful institution, the present being but the fifth year of its existence. The first Exhibition was held at Toronto, the second at Hamilton, the third at Cobourg, and the fourth at Kingston. Each succeeding one has been a decided improvement upon the predecessor; and the last was characterised by competent judges, as little inferior, in many respects, to some of the earlier exhibitions of the same description in the mother country, whose example in this, as in many other matters, we feel it a delight, as well as a benefit, to follow.

The revenue of our Association is derived from several sources. First, a liberal annual parliamentary grant of £600 out of the provincial funds; secondly, subscriptions from members—the payment of five shillings constituting an annual, that of £2 10s. a life member, thirdly, voluntary grants from the funds of township and county societies; fourthly, the payment of a small fee or entrance into the show-ground; and, finally, a contribution from the locality

UPPER CANADA AGRICULTURAL ASSOCIATION.—THE EXHIBITION AT NIAGARA.

where the show is held, which is considered a sort of recompense to the Association for the benefits its meeting confers upon such locality.

The Exhibition ground at Niagara was inclosed by a board-fence ten feet high, octagonal in form, each side of the octagon measuring 350 feet in length. Inside the inclosure were erected suitable buildings for the several departments of the Exhibition; and outside were refreshment booths, and the "wonderful sights" and amusements which are commonly assembled in incongruous abundance at "old country fairs."

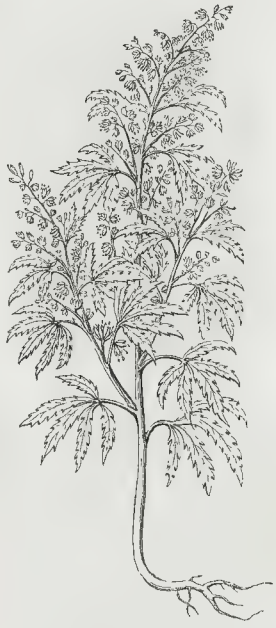
It is estimated that the show-ground was visited by 20,000 persons, including a large number of mechanics and farmers from the United States. The number of premiums awarded was 600, amounting to about £1000; and the competition in many of the classes was very great, fourteen entries being an ordinary number—these, in some instances, swelling to as many as twenty-seven. These facts demonstrate the wide-spread interest excited by the occasion. The show of horned cattle, horses, sheep, and swine was pronounced highly gratifying, and exceedingly creditable to our agriculturists, many of whom, by importing choice animals from Britain, and paying close attention to the art of breeding, have, in a few years, effected a wonderful change. Several other departments of the Exhibition were well sustained, and various articles of machinery and manufacture, as well as farm implements, indicated a rate of advancement which augurs well for the future. But the show of our staple product, wheat, was the crowning feature of the Exhibition. It is to be remarked, that the Canada Company annually furnishes the Association with £25, to be awarded as a premium to the exhibitor of the best twenty-five bushels of this grain, the Association giving £12 10s. for the second best. At Niagara there were twenty-one competitors for these prizes: the sample which gained the first weighed 67 lb. per bushel, grown by Mr. D. Christie, of Dumfries, a portion of which will be sent to the Grand Exhibition in England; while the lightest shown weighed 63 lb. per bushel. Several American gentlemen, thoroughly acquainted with their own country, said that even the "Genesee Flats," celebrated as the very best land in the Union for the cultivation of wheat, cannot compete successfully in that particular with Upper Canada.

As a whole, the Exhibition proved not merely the excellence of Upper Canada as an agricultural country, and the skill with which its farmers are turning that excellence to account, but also that there is a spirit abroad which will not rest satisfied unless the rate of progress for the future, at least, equals that of the past. This great province is fast increasing in wealth and population, and there can be little doubt of the fortunes of a country which seventy years ago was an uncultivated desert, but is now inhabited by nearly a million of souls, possessing in abundance all the necessaries and many of the luxuries of life, and living under political and educational institutions evincing a high standard of intelligence and refinement.

The accompanying View shews the Exhibition ground, with part of the town of Niagara in the distance, from a Sketch by Mr. G. F. Price, of Toronto.

CULTIVATION AND MANAGEMENT OF HEMP.

HEMP belongs to a class of plants (*Urtica*) totally different from the flaxworts. The common stinging-nettle, dead-nettle, or wild hemp, will serve as popular illustrations of the Hemp plant. It differs from the usually cultivated plants, in having the female and male flowers on separate stems.



HEMP (MALE).

The soil best adapted to the growth of Hemp is a rich strong mould, or light clayey loam: all the best Hemp soils contain a portion of sand, which keeps the soil open. Hemp cannot be pulled on strong clays. During the last Continental war, Hemp was grown on bog land, in the neighbourhood of Crowland and Spalding, but was discontinued before its conclusion, owing to its producing an inferior article. Under ordinary culture, the produce of Hemp will amount to 60 or 70 stone per acre. When grown under favourable circumstances, Hemp is a plant of rapid growth, frequently in this country obtaining a height of six, and sometimes of seven, feet. It is reported, however, to attain in Italy, and warm Oriental climates, a height occasionally of from 15 to 18 feet, without any diminution of the equal texture and fineness of its fibre.

When the farmer has selected the portion of land intended for Hemp, it should be ploughed in November into six-yard ridges, so that it may mellow during the succeeding frosts. Early in March the land should be cross-ploughed, if the weather is dry, and remain in that state until April, at which season it should be well harrowed, rolled, harrowed, and cleared of weeds, twitch, &c.: twitch and horsemint are fatal to Hemp. The roller and harrow must be applied as often as is requisite to get the soil into a fine tilth, in which state it may be allowed to remain for a few days for the weeds to sprout and the ungathered roots to dry up; after which the land must be ploughed the same way of the field in which it is intended to grow the crop, the sets being laid six or eight yards wide. By the time these repeated ploughings, harrowings, &c. are accomplished, the month of April will be somewhat advanced, at which period the farmer must have his manure ready: 20 tons at least of well-rotted mixed stable and feeding-shed manure should be applied to an acre. The manure should be carefully and evenly spread on the side of the field intended to be first ploughed, the plough following immediately after the spreader: the spreader of the manure must be directed to throw out half the heap next to the ploughman first, and then turn down the other half; by this means the manure is not dried up by the sun. The ploughman must be careful not to cut a furrow more than six inches deep, for Hemp requires as many seams as possible for the seeds to fall in along with the manure.

An acre of land requires from two-and-a-half to three bushels of seed: if the Hemp is required to be manufactured into linen, two pecks more should be added. The best season for sowing hemp is from the 1st to the 12th of May—a few days later *must do*, if the weather is wet: if sown later than the 12th of May, the fibre generally grows thin and weak.

Hemp should never be sown earlier than the 15th of April; the first week in May will be found the best period, for Hemp is a most unprofitable crop unless sown on a soil sufficiently rich to force it rapidly forward. It is better to wait a short period for genial weather, rather than incur the risk of the crop being destroyed by a spring frost.

When Hemp is sown prior to the 12th of May, it is fit to pull for white or linen purposes about the 12th of August: previous to that period, the fibre will *not have set*, nor the male have shed its pollen. It was a practice, many years ago, when White Hemp ruled high, to pull the weak plants and all the male stems immediately after the pollen was shed, and leave the female stems to stand for seed. This labour was performed by women and old men. The price of pulling 100 gleans, as they were termed, was 1s., or 1s. 2d. per hundred of six score. After the Hemp was pulled and tied round the head with four or five of its own stalks, it was laid down in rows with the root part spread out; and a man went round in the evening, with a boy or woman, to set it up in stooks of five or six gleans—the boy taking a fork, such as farmers generally use, to knock and shake out the soil from the roots, and scrape out the undergrowth that lies in the bottom of the stems. In the course of a few days it will be ready to take to the water; before doing so, it will require tying near the roots. This is usually done with a band composed of twisted leaf-reed, cut for the purpose two or three days previously. The gleans must then be jumped on the ground to level the roots. When the Hemp is carried to the water, care must be taken that the tops of the Hemp ban; well over the sides in order to cover the stems well; for if the covering sods touch the stems at the sides, the fibres turn black at the points of contact. The sods with which it is necessary to cover the Hemp whilst in the water are generally cut adjacent thereto, and are usually replaced when done with. The sods are sometimes cut with a rip and sod-spade; sometimes with a paring plough, and then cut into short lengths by a spade. Great attention has to be paid to the process of watering or retting. After laying the sods over the heap, they must be frequently trod upon, in order to sink them, and make the water appear between the sods; care must be taken that the roots of the Hemp are put lowest in the water. The treading must be repeated every day, until the Hemp is ready to be taken out of the water, which will be from nine to ten days if the weather is warm, and rather longer if the weather is cold. Considerable experience is requisite before a person becomes a thorough judge on this point. The following rules, if strictly followed, will serve as pretty safe guides:—When the retting is supposed to have gone far enough, take a gleam from the middle of the water, from which take out a stem; then hold the stem by the root end, and draw the thumb-nail up the stem to the top. If the fibre slip up the stem, it will be sufficiently retted; if not, it will require another day, or perhaps more. Also, spread the gleam on its side to dry; it will do so in the course of the day: if the stem then breaks freely, and the fibre leaves it easily, it will be properly retted.

The sods must now be taken off. Two men will be required to take out the gleams—one to lift them partly out of the water with a fork (root first); the other to take them from him with a fork, and land them on the ground, which is technically termed a couch. The next day (for if suffered to remain longer on the couch, it heats and rots) it is carted out and taken to grass land that has been mown and the hay taken off previously for some time, so that a considerable quantity of new grass has grown, which prevents the fibre from being much injured by worms. When laid out on the eddish, it should be evenly spread, by women, in rows. It will require to lie on the eddish perhaps three weeks or more, for the fibre to become free and bleached. It will require turning over with a light poll, putting the pole underneath the top part, and lifting it over. This must be done very nearly every three or four days, usually by women.

To ascertain when it has lain sufficiently on the grass, the grower must within ten days examine the stems in different parts of the field: if any pink spots are discovered on the stems, it will be sufficiently bleached, if not it must lie longer: there can be no fear of the fibre deteriorating until the pink spots appear, which by frequent turning may occupy three weeks. The hemp must then be gathered, tied into bundles, and set into stooks to dry (the stooks consisting of ten or twelve bundles each), and tied from the middle bundle of each side to each end, to keep the wind from blowing it over. When perfectly dry, it must be carried from the field and placed in a barn, or ricked in some exposed part, with a culls roof to keep it dry. The scutching has next to be provided for. The scutchers should be instructed to make up the Hemp carefully into bundles of half-stones each comprised of four heads, and tied round with their own heads tightly drawn through the hands. The pullings, as they are termed, are tied up into half-stones with a band round the middle, the ends drawn together tied in a knot.

The female, or Seed Hemp, if allowed to stand for seed, should be treated as follows:—In the early part of September the Seed Hemp will be ready for pulling. this may be known by observing and examining the four low seeds on the stem, called by growers elbow-seed; if they are of a dark grey colour, firm inside, and the husks turning a little yellow, it is fit to pull. At this season strong winds sometimes occur, sufficient to break some of the Seed Hemp; instructions should therefore be given, in gathering, to collect the fallen stems (as they contain seed), and be careful not to break the stem, or cramp it with the hand. Breaking is very detrimental to Hemp.

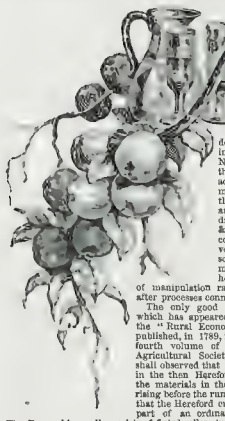
The Seed Hemp should be set up in stooks of forty gleans each, and the undergrowth raked up and spread evenly over the tops of the stooks, to keep away the birds, which will otherwise infest it; and the heads tied round with a band of the same material, to keep the wind from disturbing it. The seeds are known to be sufficiently matured to thrash out by the crispness of the capsules, and the facility with which the seeds fall out. In thrashing, a cloth has to be procured, and spread in some convenient part of the field, and a bolster raised on the side of the cloth from the wind, to prevent soil from falling among the seed. The stooks must be drawn to the cloth by a rope passing round the stook under the heads, and over the drawer's shoulders: this requires a strong man. He must then place the head part carefully on the cloth. To prevent loss of seed, thrashing ought to be proceeded with as soon as ready. When thrashed, it may be watered, as previously directed, or made into a rick, and have a spring rel. If placed in a rick, care must be taken that it is properly thatched; for, if the least wet gets into the rick, it will destroy the fibre. Hemp can be dew-retted in the manner described in the account of flax.

HEMP (FEMALE).

Hemp being different from that of ordinary crops, and requiring very good land, with much labour and attention, its culture is not likely to be followed, especially at the average prices of late years, of which the following account may be received as a fair estimate:—

EXPENSES.		PRODUCTS.	
Rent and taxes per acre	£2 10 0	60 stones of Hemp, at 4s 8d	£13 10 0
20 tons of manure	5 0 0	20 bushels of seed, at 4s 6d	4 10 0
3 bushels of seed	0 15 0		18 0 0
Tillage	1 10 0		
Pulling, stepping, &c.	1 10 0	Add 15s. value of dressing of grass-land	0 15 0
Taking from steep, spreading, thrashing, &c.	1 10 0		
Scutching, 1s 6d per stone, for 60 stone	4 10 0		
Cleaning seed, taking to market, &c.	0 7 6		
Net profit..	1 2 0		
	£18 15 0		£18 15

CIDER—MAKING IN DEVONSHIRE



S, in consequence of some observations made by the author of the article on Devonshire farming, respecting the cider of that county, several subscribers expressed a desire that we would insert in the ILLUSTRATED LONDON NEWS a descriptive account of the cider manufacture, we now accede to their request. The modes of procedure as regards the mill and press in the Hereford and Devon districts are very different; also the form of mill, &c. often vary in the same county. We have to thank several correspondents for descriptions of the Devonshire mode of proceeding; they all, however, related to the mode of manipulation rather than to the important after processes connected with the fermentation.

The only good description of cider making which has appeared since Marshall's account of the "Rural Economy of Gloucestershire" was published, in 1789, is that of Mr. Falkner, in the fourth volume of the "Journal of the Royal Agricultural Society." In that work, Mr. Marshall observed that an improvement was desirable in the then Hereford cider mill, for preventing the materials in the last stage of grinding from rising before the runner. It ought to be remarked that the Hereford cider mill is the exact counterpart of an ordinary mortar or cement mill. The Devonshire mill consists of fluted rollers turned by rude millwork, as exhibited in one of the Illustrations. Marshall appears not to have been aware that this mode was pursued in Devonshire; for, in reference to mills with fluted rollers, he observes that, "in this district (Gloucester), where stone is sufficiently plentiful, the stone runner and trough seem to be the most eligible mill at present known;" adding, "though it appears to me highly probable, that, with attention and perseverance, a more perfect machine might be invented." Of the Hereford cider-press Marshall speaks as "*a most perfect machine.*" We cannot, neither do we think our readers will, say the same of the Devonshire press, after a perusal of this article, and an inspection of the Illustration. In order to give a more local value to this article, we shall make a few extracts from the details furnished by some of our correspondents:—

"In this county (Devon) cider is of universal use among the rural population. The usual daily allowance for each farm labourer is three pints. It also forms a considerable article of export to London, Bristol, Liverpool, Wales, and Ireland."

"The year 1830, one of remarkable abundance, gives the number of 10,265 hogsheads shipped from the two ports of Exeter and Dartmouth. In 1826, the same ports shipped more than double that quantity."

The earliest dropping of the apples takes place about the middle of August. These are termed "grass fruit," and are collected into a sack (see Illustration), or else picked up in baskets and carried directly to the pound-house. The cider from the first pounding is not considered so good in quality as that which follows the more advanced state of the fruit. As the apples continue to fall from the trees in greater numbers, they are collected in large heaps, spread over a considerable space on the grass, where they are allowed to remain exposed to the sun and air until the approach of frost, when they are all carried to the pound-house, what have remained on the trees being shaken off or else knocked down with a pole.

In Hereford, the ordinary mode of gathering consists in sending men to beat the trees with long slender poles or rods, provincially termed "polting lugs," followed by women with baskets to pick up the fruit. As, however, apples on the same tree differ in the time of ripening, the character of the fruit so gathered is necessarily unequal: careful persons, therefore, go over the trees twice, once with a hook, when the spontaneous fall takes place, leaving such of the fruit to mature as will not quit the boughs with a gentle agitation, and a second time with polting lugs, when those left are sufficiently matured, or winter is likely to set in. When this occurs early in the season, or, owing to the coldness of the summer, the apples have not sufficiently ripened, it is customary, by way of correcting the crudity of such unripe fruit, to lay the whole in large heaps, in the open air, exposed to the weather, until the ripest of the fruit begins to rot. Some allow the ripe apples which have spontaneously fallen to lie on the ground for ten days. This practice is objectionable, as exposing the fruit to rain and dews.

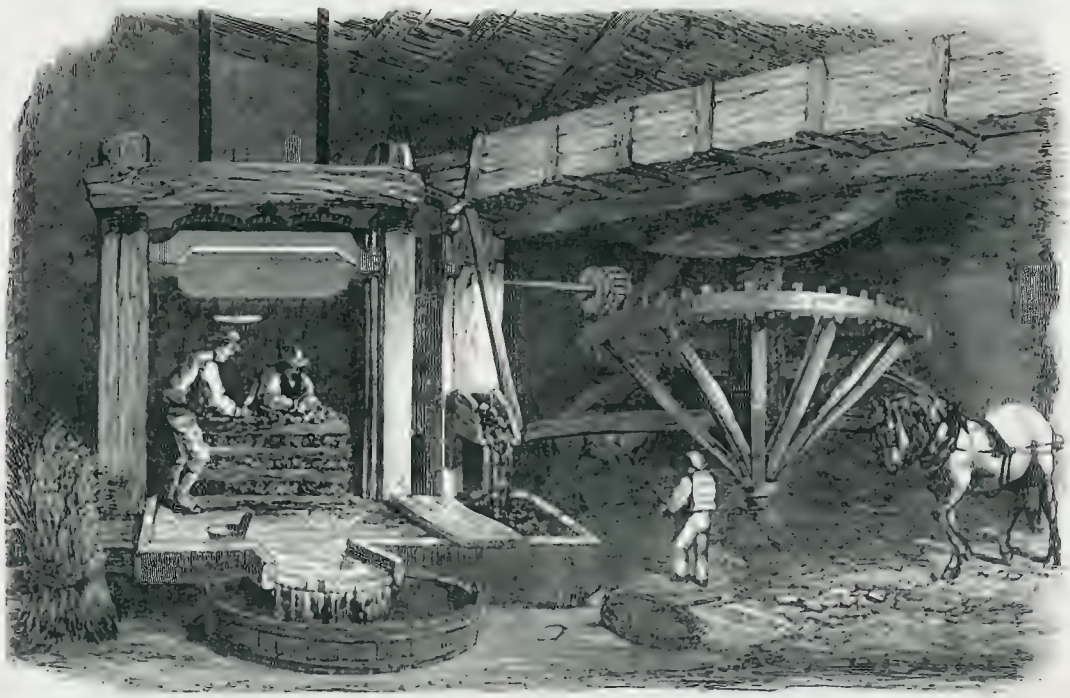
Manufacture.—For this purpose, we first visit the pound-house, a building which contains the pound, the cider-press, and an elevated floor on which the apples are laid previously to being pounded, or rather ground, as the present mode more strictly applies.

COLLECTING THE GRASS-FRUIT.

After the apples are gathered from the orchards they are laid on the floor (see Illustration), in which is a hole communicating with a trough or shoot, containing a certain arrangement of rollers, between which the fruit is crushed or ground for the "mock." These rollers are worked by a large wheel driven by horses, and the ground apples are dropped into a trough under the shoot.

The cider-press is composed of two upright beams, about six feet asunder,

LAYING THE FRUIT.



POUND-HOUSE.—THE MILL AND PRESS.—FILLING "THE MOCK"

with a heavy transverse beam at the top, through which pass two iron screws which by means of wheels work another beam, the ends of which are fitted into grooves on each side of the uprights. This beam carries a wide board to press upon the pile of crushed apples, technically called a "mock" in some parts of the country, and in others a "cheese." The base of the press has a ledge with a mouth in the front, from which the expressed juice flows into a vessel placed underneath, from which it is placed in the usual casks. As the liquor flows it is exceedingly sweet and luscious, and the new cider has a strong aperient effect when drunk

The pile of "mock," of a square form, is made with alternate layers of reed or straw and crushed apples: some manufacturers substitute a hair cloth for the reed, in which the apples are folded. When the pile is sufficiently high, the flat board over the heads of the figures (see Illustration) is brought down upon it, and screwed tight by means of a long lever. The cider now flows freely; and after having been subjected to this pressure the necessary time, the press is unscrewed, the edges of the mock pared off and thrown on the top, and the pressure put on again. This process is repeated several times, and, finally, the whole pile is disturbed and made up for the last squeeze, until no more cider flows out of it

The refuse of the "mock," when dried, makes an excellent backing for the winter fire. It is mainly remembered concerning

NEW BOOKS, &c.

Just published, in imperial 8vo, extra cloth, gilt edges, £1 11s 6d.

"The value of this little memorial is its Truth. It contains many highly instructive, as well as interesting facts —Protestant Witness
"This is a very interesting memoir."—Dublin Christian Intelligencer
"One of those beautiful delineations [illegible] which captivate readers of every class. [illegible] Nisbet and Co.; Hamilton, Adams, and Co.; Seeley and Co.; Nisbet and Co.; Hamilton, Adams, and Co. Dublin: Robertson and Co. Edinburgh: Oliver and Boyd

NEWSPAPERS for 1851.—Gratis.—A New LIST of all the LONDON NEWSPAPERS and MAGAZINES, with price, publication day, and address, and a Year of Subscription Palace, may be had gratis of JOHN NASH and Co., old established Newspaper Agents, 3, Bridges-street, Covent-garden, and 4, Upper Wycombe-street, Portland place.—The "Times" and all other Daily Papers forwarded by the Morning and Evening Mails, at a reduced price. * * Begs to call attention to the "Evening Mail" and the "St. James's Chronicle," published three times a week, price 1d each per quarter; the "Evening Mail," being an evening edition of the "Times," contains all the important news of that journal, and is, therefore, one of the best and cheapest newspapers for country circulation. The "St. James's Chronicle" especially recommends itself to families the clergy, and country gentlemen, by exclusion of all matter of a questionable tendency, as well as by the varied and attractive character of its miscellaneous intelligence. All newspapers are forwarded by J. N. and Co., in printed covers, and with strict regularity.

UNITED KINGDOM MUTUAL SOCIETY. For granting Survivorship, Deferred, and other Annuities. Policies Free from Stamp Duty.
No Admission 2 cs.
The whole of the Profits divided among the Members.
Premiums payable yearly, half-yearly, quarterly, monthly, or weekly
Prospectuses, &c., to be obtained on application at the Offices, 36, Moorgate-street, City.

A PREMIUM of FIVE GUINEAS is offered by the COMMITTEE of the ROYAL SOCIETY for the PROTECTION of LIFE from FIRE, for a DESIGN and MOTTO that shall, in their opinion, be the most suitable for the Society's Honorary MEDALLION, for presentation to individuals personally rescuing life from Fire. Size required, that of a crown piece. Motto may be either in English or Latin, conveying a recognition of God's mercy in the result attending man's exertion, when that is performed.
The Design must be forwarded to the Secretary before the 14th of January. By authority of the Committee,
SAMPSON LOW, Junior, Secretary.
169, Fleet-street, Dec. 18.

MEDICAL, INVALID, and GENERAL LIFE ASSURANCE SOCIETY, Chief Office: London, 25, Fallmall; Dublin, 22, Nassau-street; Frankfort, Grosse Eschenheimer Gasse, Bockenheimer Anlage, Neuer Jüdenhof.

James Whatman, Esq., F.S.A., 54, Grosvenor-street
At the ANNUAL GENERAL MEETING of this Society, held on Thursday, the 28th day of November, 1850;
BENJAMIN PHILLIPS, Esq., F.R.S., in the chair:
The Directors in their ninth year of the Society's business ending the 5th September, 1850, and the Report of the Auditors thereon having been read and duly received, the following Report of the Directors was also read
REPORT
"The Directors are happy to have it in their power to inform the Shareholders, that the financial year ending the 5th September, 1850, has furnished the most satisfactory result which they have yet had to lay before the shareholders, whether as regards the amount of new business done or the extent of cases incurred.
"During the year ending the 30th September, 1850, there have been issued on the Life Scale 904 new Policies, assuring the amount of £213,489 16s 11d, and yielding an annual revenue, on the new policies issued during the year, of £6,408 10s.
"This exceeds the amount of business transacted by this office in any former year, not only in the number of Policies, but in the sums assured by those policies, but also in the yearly premiums payable upon them
"The following table shows the results of the business transacted in each year since the establishment of the Society

Year.	Number of New Policies issued	Sums Assured by New Policies in each Year.	Annual Premiums payable on New Policies in each Year.
1843	120	£55,345 1 0	£1887 13 7
1843	296	97,830 18 0	4023 18 0
1844	197	80,415 9 6	4193 4 3
1845	195	103,014 11 0	5363 17 0
1846	199	83,700 14 5	4985 8 5
1847	213	113,548 4 6	4537 2 4
1848	413	174,458 17 9	6980 15 4
1849	475	201,712 13 6	7498 0 0
1850	904	213,489 16 11	6408 10 0
Total.	2761	£1,063,320 6 8	£47,422 6

"It is plain, from this statement, that in the course of a very few years, the Society has acquired a very large amount of business, equalled by few old-established Companies in the metropolis
The Directors wish to impress on the Shareholders the important fact that this large amount of business is not owing to any sacrifice of dental cause, but has taken place until only throughout the whole field of the Society's operations, showing clearly the confidence reposed in the Society by the public
It is also most gratifying to be able to report that the losses by deaths during the year are less than in any preceding year, except the year 1844; from which it appears that, with the exception of the three first years, when the number of deaths was [illegible] the mortality has been most favourable of the present number, the mortality has been less than [illegible]
It remains here only further to state, that the Members of the London Board of Office by rotation will be Mr. Bentley, Esq., and Robert Bentley Todd, M.D., and the Auditors a so going out of office by rotation are James Parker Deane, D.C.L. and Martin Lawrence Wech, Esq., and offer themselves for re-election, for audit at GLEN-BOURN HOUSE, No. 23, Cranbourn-street, Leicester-square. Prospectuses, E. WOOKEY and Co., Printers.

Lopas and Hutchins, Flint Glass Manufacturers, Wholesale terms.—At THOMAS MILLINGTON'S import glass warehouse, 67, Bishopsgate-street Without (same side as Eastern Counties Railway Station).

ARTIFICIAL TEETH.—Mr. W. PATERSON, for the last eight years principal assistant and sole designer to the celebrated Mr. J. L. Cralgin, removed to 57, Finsbury-square, begs to announce that he has dissolved connection with that establishment, and may now be CONSULTED DAILY, at 93, Fleet-street, City, from 9 A.M. to 6 P.M., where he hopes, by following out the principle of strict integrity and pure quality in his dealings, to [illegible] the best materials and workmanship and to meet the present [illegible] times at one-third the charges of more pretending establishments, to merit a full share of public patronage and support.—N.B. Any improvement in the art, as practised in the leading houses of London and Paris. Mr. C. D. strongly recommends on the premises. Is enabled to produce his own highly-approved mineral teeth at the above ratio of terms, an advantage not enjoyed by any other dentist in London —93, Fleet-street, City.

H. M. STEAMER "RIFLEMAN," IN CHASE OF A BRAZILIAN SLAVER.

JOURNEY TO THE GOLD-WASHINGS AT YURUARI, IN VENEZUELA.

(*Continued from page 466.*)

long swords with silver handles and scabbards; but they live like peons, some half-dozen drinking out of one cup. Their furniture scarcely ever consist of more than a hammock and two or three chairs, and they are excessively lazy. The women are handsome and courteous

"The constant talk there was about the auriferous deposits, and it was asserted that a few who had worked had made sums varying from eight dollars to ten dollars, and even sixteen dollars per diem, with but little trouble, throwing away a large portion again, from the want of means to properly separate it from the sand.

"The climate of Upata resembles an European spring, although the time of my visit was the hottest part of the year. It is beautifully situated on a circular plain surrounded by a chain of hills, among which innumerable spots might be selected for residence.

"After remaining at Upata two days, we started at seven o'clock in the morning, passed by Santa Maneri, crossed the Carahapo twice, and arrived in the evening at Candelaria. Saw many quartz rocks near Candelaria, from which, in a few pieces picked up in a pasture, a little gold and silver was discovered.

"From Candelaria we left for Carapo, where we arrived in the evening. We started next morning for Tupuquen, arrived there at one o'clock, and on the following day made our way to the Yuruari, the gold district, where we found the water very high and the current exceedingly strong; but convinced myself of the existence of an auriferous deposit by washing a few grains.

"Those parties who have worked here in the dry season say they have only to take up the sand from the centre of the river, and they can see the gold. We met an old man who had got as much as eleven ounces in one day, and in twenty-six days had accumulated seventy-six ounces.

"I have not the slightest doubt but that there is abundance of gold in the centre of the river, and, with proper and simple, and at the same time portable, machinery, worked from a raft or boat all through the year, a fortune could soon be accumulated. The whole country from Upata to Tupuquen seems to be a mine of white quartz. The gold is washed down through the different ravines into the Yuruari.

"Having satisfied myself of these facts, and finding that it was impossible to work without proper implements at this season of the year when the river was so high, I determined to return; left Tupuquen for Pastora, and arrived at Guacipati, which is an ancient Indian village, with a church and convent, but which is now totally deserted, and slept in the convent; went again to the Yuruari, one league distant from it; found the river too high to do any good

Retraced my steps to Upata and Tablas; and, after paying a visit to Bolivar, returned to Trinidad."

The Illustration, from a sketch by the narrator of this journey, shows the Monastery and Church of Guacipati, and the not unpicturesque country.

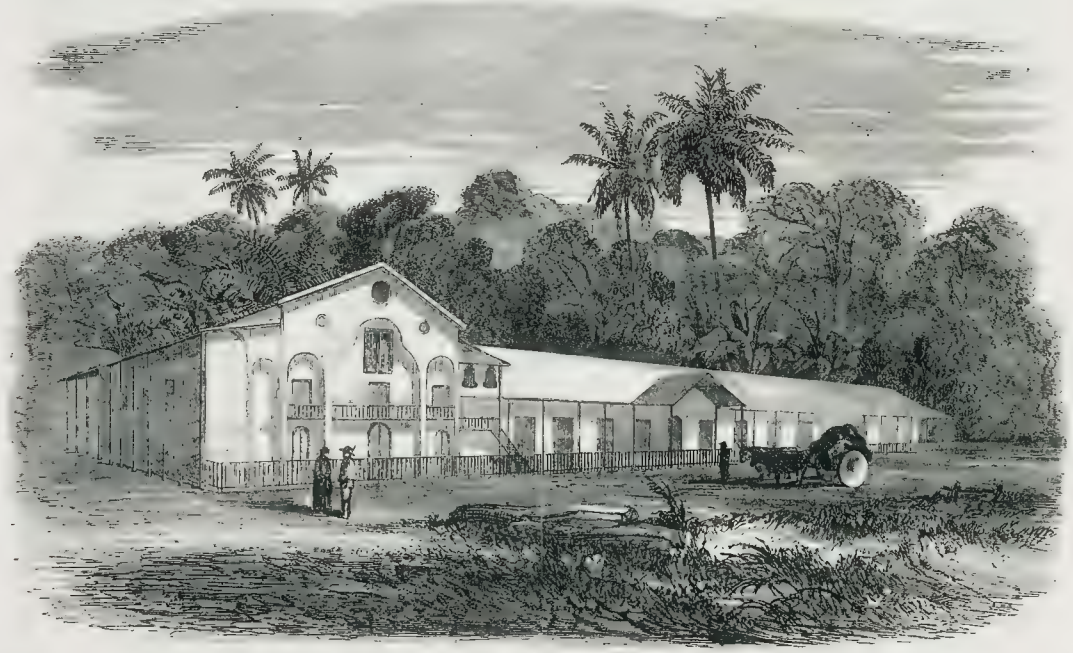
EMIGRANTS' HUT IN PORT PHILLIP.

THE annexed is a Sketch of the usual hut or "station" seen in the interior of the colony of Port Phillip, Australia, especially where stone is not readily procured. It is built entirely of wood—"slabs" as they are termed—with shingle roof of the same material. The dwelling-house contains two principal rooms, fourteen feet square—one used as a living-room, and the other as a sleeping apartment. There are likewise two bed-rooms behind these, about fourteen feet by nine. The kitchen is seen as a detached building to the right of the house, and the "store" is on the left. Coach-house and stabling, fowl and other out-houses, with the hut of the men, and the shearing-house, are behind; and these buildings, with enclosed stock-yards and a paddock or two, form the head station. The one here sketched is on the Edward River, 270 miles from Melbourne, on the "run" occupied by Messrs. Sylvester and Smith, and is a fair specimen of the squatter's home. Indeed, with its verandah, supported by painted green pillars, its cedar doors and window-frames, its neat enclosure, and, in many cases, its battened and gally-papered interior, the slab hut is a picturesque object, bearing about it many pleasing associations with the still fondly remembered mother country, her comforts, and even her elegances.

SETTLER'S STATION IN PORT PHILLIP.

HER MAJESTY'S STEAMER "RIFLEMAN," IN CHASE OF A BRAZILIAN SLAVER.

THE above Sketch shows her Majesty's steam-vessel *Rifleman* in chase (under sail and steam) of a Brazilian slaver, supposed to be full. The *Rifleman* had been stationed off St. Sebastian and Santos, to intercept her landing, fourteen days, when her Majesty's brigantine *Kestrel*, which was also cruising during the interval of the arrival of the English packet, chased this vessel for nine leagues off the land. The brig, however, sailed out of sight in a very short time: the *Kestrel* was going 9½ and 10 knots, and the brig was supposed to be going 11½; the *Kestrel* still continued the chase, but to no purpose. She then—having to return to Rio de Janeiro to take the mails to the River—gave the necessary information to the *Rifleman*, and, about three days after, the brig was observed by the *Rifleman*, steering away for the land. Chase was immediately made, which was continued for a long time; but, owing to the brig's good sailing qualities, and being about seven miles to windward, she, very unfortunately, by the aid of the squall to windward, made her escape, and landed 500 blacks to the northward of Cape Frio ten days after. This was, however, the first instance of a vessel escaping when once observed by the *Rifleman*. The slaver was supposed to be the *Esmeralda*, a very fine large brig, expected for some time before. The slaver, after landing her human cargo and slave-deck, &c., came into Rio harbour in ballast, where already the *Rifleman* was coaling and provisioning for further service. The land on the starboard side is part of Santos. The *Rifleman* is at present cruising to the southward; the *Cormorant*, *Sharpshooter*, and *Harpy* (tender to the *Southampton*), to the northward.



JOURNEY TO GOLD-WASHINGS IN VENEZUELA.—MONASTERY AND CHURCH OF GUACIPATI

THE ILLUSTRATED LONDON NEWS.

No. 460.—VOL. XVII.] SATURDAY, DECEMBER 21, 1850. NUMBER AND SUPPLEMENT, 1s.

CHRISTMAS.

ONCE more the great Christian festival approaches, appealing to the world by the reminiscences of the day for the celebration of which it was founded, in behalf of the great principle of "peace on earth, and goodwill towards men." We seize the occasion, when the minds of all our readers are likely to be predisposed, by the name and character of the day, to the reception and encouragement of sentiments befitting it, to express the desire, that, not alone throughout this mighty empire of Great Britain, but throughout all those portions of the world where Christmas is considered a sacred festival, it may this year be celebrated amid the feelings that are most suitable to it—feelings of mutual toleration and goodwill; feelings of humility for past shortcomings; of gratitude for past and present benefits; and of hope for the future, both of individuals and of humanity.

It is true, that, if we look back on the history of the Year, of the close of which the approaching Christmas is the immediate forerunner, and test its character by the rigid application to it of the great idea of practical Christianity, we might, if disposed to take a gloomy view of things, find that it had little to boast of. A man of too ardent a temperament, expecting too much of his fellows—attributing too much power to reason, and too little to habit, to supposed self-interest, to passion, and to prejudice, and being too impatient to wait for the slow realisation of his theories of improvement, might be disappointed by the history of 1850. He might draw a dark-coloured, and yet not a very greatly exaggerated, picture of Christendom, and allege but too many reasons for doubting whether our boasted triumphs of art, of science, and of literature were of much practical value in humanising the race; and whether, amid all our civilisation, we were not, in many essential respects, quite as barbarous as our forefathers. If he looked to the Continental portion of Europe, he might assert that the flower and vigour of the population were drawn from the pursuits of their peaceful industry, to bedizen themselves in the accoutrements of war, to strut with muskets on their shoulders, or swords in their hands; leaving their fields untilled, or only tilled by women (unfitted for the task), or deserting their looms and anvils, to devote their whole time and thoughts to the destruction of their fellow-citizens. He might ask if this was in the year of grace 1850? and blush to own that during that time about 2,500,000 men in the principal countries of this portion of the world, countries claiming to be the "very head and front" of civilisation, had become wealth-wasters, instead of wealth-producers—had mortgaged their future resources, and sown the seeds of many future troubles and perplexities in pursuit of their own chimera, or that of their Kings and rulers.

If, leaving the Germans, the Russians, and the French to their actual warfare, or to their equally costly and ruinous preparation for it, he should turn his attention to the American continent, he might find some cogent reasons for denying the progress of the race, when he recalled to memory the fact, that the greatest confederation of free states which the world ever saw had, during the whole year, been engaged in a bitter strife, threatening disintegration and internecine war upon the apparently simple question whether one man had any property in the blood and bones of another—whether a fellow-Christian the colour of whose skin was black, or even slightly tinted with that colour, might or might not be made a chattel like an ox, or be bought and sold in the open market, like a yard of broadcloth or any other piece of merchandise. If coming still nearer home, and asking what progress Great Britain had made in the interval, he might, if hypercritical as well as enthusiastic, allege his doubt whether the theological animosities of the year were not more fitting for the sixteenth than the nineteenth century, and feelingly deplore that such bitterness had been aroused in the desecrated name of Christianity.

But the wiser and cooler-headed observers of events—the men who make allowances for prejudice, passion, and self-interest, and who do not expect the great truths of social science and of religion to advance among mankind with much rapidity until men are better prepared by education to receive them than they are at present, or are likely to be for some generations hence—will draw a more hopeful picture of the events of 1850. Reasoning upon them with the charity and forbearance inspired by the kindly festivities of Christmas, they will find reason to believe that our retrogressions have been more apparent than real; and that the folly and suffering of 1850 have been caused by the impatience of the well-meaning few, rather than by the wickedness of the unreasoning many. If Central Europe have been transformed into one vast camp, and Eastern and Western Europe have prepared themselves to take part in a possible and but too probable quarrel, it has been mainly owing to the fermentation of an idea of progress, and not of retrogression—a reconstruction of political relationship between kindred nations, based upon true liberty, and on the well-being of the industrious masses. To set right an antiquated wrong is always a troublesome process even in private affairs, but still more so in public ones; and Central Europe cannot be expected to become a congeries of free constitutional states without undergoing a long period of probation and suffering, extending from themselves to their more immediate neighbours. So, in America, the inopportune agitation of the Slavery question, by men who have more zeal than discretion—more love of a principle than knowledge of the best means to give it effect, though it may have led to controversies and conflicts, which might more advantageously have been avoided, is in effect a proof of love of justice and of practical Christianity, which knows no difference of race or colour. So, in Great Britain, the theological strife of the latter portion of this fast-expiring year is evidence, after all, of a

MANUFACTURE OF GLASS FOR "THE CRISTAL PALACE," AT MESSRS. CHANCE'S WORKS, SPON-LANE, NEAR BIRMINGHAM.—(SEE NEXT PAGE.)

sincere love of truth amongst the people in whose minds it has been excited; and of a steady independence of character, from which none but the best results can be anticipated.

We see reason to believe, therefore, that 1850 will be a year of salutary experience to all the Christian nations; that it will teach the Continental states the beauty as well as the duty of peace; and that it will teach philanthropists, who lecture and preach upon the rights of the slave, that they would succeed better in the crusade if they made some little use of the uniform law of love, the position of the slaveholder, and gave him time to arrange a question, of which the immediate settlement would cause his worldly ruin. We believe, as well as hope, that the experience of the year will show every form of religion that it is a mistake to confound toleration of a rival with submission to a rival's doctrine, and convince the aggressive that equality before the law does not warrant any attempt to enforce superiority.

We have all much to learn, as well as to unlearn—nations equally with individuals. The "peace on earth," which is to be the ultimate result of Christianity in this world, depends upon the "goodwill" of individuals to each other. Until individuals are tolerant and forbearing—until they see not alone the mote in the eye of their neighbours, but the beam in their own—until they cease to expect from others a perfection of character which they have not themselves attained—so long will truth make slower progress than it would. These sentiments are uppermost in men's minds at the genial festival of which we write. The concluding wish which we desire our Christmas Number to convey to all our readers is, that the festival may not only excite, but prolong these feelings, till they become a rule of life to the highest and the lowest; and that each and all may, in the ordinary language of the people at this season, enjoy "A merry Christmas and a happy New Year!"

MANUFACTURE OF GLASS FOR THE CRYSTAL PALACE.

Our readers are doubtless aware that the whole of the Glass manufactured for Mr. Paxton's building is produced at the extensive Glass-Works of Messrs. Chance and Co. This establishment is situated in Spon-lane, near Birmingham, within two miles of the works of Messrs. Fox, Henderson, and Co., the contractors for the building. Messrs. Chance's Glass-Works is said to be one of the largest in the world, and is devoted entirely to the manufacture of plate and crown glass, and glass shades. At the present time the Messrs. Chance employ about 1200 men, including a few Belgians and Frenchmen in the plate glass department. The works cover a large space of ground, and are conducted upon a principle which seems in the highest degree advantageous to the social condition and moral improvement of the whole of the workpeople, young as well as old, and which reflects much credit upon the enlightened philanthropy of the proprietors. Our present purpose is not, however, to describe the means which the Messrs. Chance have taken to secure the physical comforts, and to improve the moral and intellectual condition of their colony, or town of glassmakers, at Spon-lane, but to give a few details of the manufacture of the immense quantity of plate glass required for the "Crystal" Palace. The quantity of glass to be supplied by the Messrs. Chance will amount to nearly 400 tons; requiring about 600 tons of fine sand and other materials for its manufacture, besides the combustion of about 3000 tons of coals. Owing to the laborious operation of the Excise duty upon glass—happily abolished by the lamented Sir Robert Peel—the English manufacture was long inferior to the French for plate glass, and to the Bohemians for coloured and ornamental glass. Since the excisemen was released from his attendance at the glass-house—to the satisfaction of the manufacturer, and to the immense benefit of the country—the English have been gradually improving themselves in the manufacture of every variety of this beautiful article, and adopting processes new to England, but which had been long in use in other countries, where the manufacturer was not impeded by the operation of impolitic laws. Among these new processes, that of the manufacture of plate glass, in the mode represented in our illustration, is one of the most interesting. When the Messrs. Chance took the contract for the supply of this large quantity, they found it necessary to import a few foreign workmen, in consequence of a scarcity of English hands sufficiently skilled or experienced to complete the order within the time specified. The greater portion of the glass is, however, made by Englishmen; they becoming such proficients in this branch of the manufacture, as to justify the assertion, that, if they do not surpass the French and Belgians, they are equal to them. The process represented by the Artist is very simple and beautiful, but requires a steady and practised hand. When the requisite weight of "metal" is taken from the furnace by the "gatherer" into a ladle, it is poured out in the ordinary manner. It is then, after being re-heated in the furnace, swung in the manner represented, above the head and below the feet of the workman, until it assumes the form of a cylinder. The workman places the cylinder across the mouth of the furnace, with a pit or well beneath his feet, six or seven feet in depth. He swings and balances the molten metal—firmly affixed to a hook of glass at the end of a long iron bar, or "pontil"—first above and then beneath him, until it gradually expands to the size which the original quantity of "metal" was estimated to produce. The slightest miscalculation of his power of swinging it, or deviation from the proper course, might dash the hot glass either against the side or end of the pit, or well, or against the wall of the furnace—or, worse than all, against the body of a fellow workman or of a spectator. No such accidents ever happen, though the stranger unaccustomed to the sight is for a while in momentary dread of some such a result, or of the dispersion of a scalding shower of liquid Glass into his eyes. There is no possibility of the least calamity, as the glass is not sufficiently liquid for dispersion. When swung to the proper length, the cylinder is about four feet long, and twelve inches in diameter. The next operations are to convert it into a tube, by disconnecting it from the blowing-iron, and removing the ball-like extremity. These processes are performed by boys, with strings of red-hot glass, which easily cut through the yielding "metal." The boys then take the tubes from their arms, and remove them to another part of the building, where they stand on end, like chimney-pots, to await the operation which shall convert them into flat sheets of glass. This is also very simple. The tube is cut down the middle, and in this state placed in the "flattening kiln," where the moderate application of heat, aided by a gentle touch from the attendant workman, brings it flat upon a slab of stone. It is then gently rubbed, or smoothed, with a wooden implement, and passed into a cooler part of the kiln, where it soon hardens. It is then tilted on edge, and the manufacture is complete. It is afterwards cut to the ordinary way to the required size.

Such is the whole process, which we trust the Illustration will enable the non-professional reader to understand.

We should state, in conclusion, that these Glass-Works are not open for the inspection of sight-seers and strangers in general, as visitors interfere too much with business to be welcome, and that we are, therefore, all the more indebted to the courtesy of the Messrs. Chance in making an exception in our favour, an exception which they doubtless made all the more readily on account of the natural interest excited in the public mind by all that relates to the rise and progress of the great Palace of Industry in Hyde Park.

AN AMERICAN TORNADO.—A destructive tornado took place on the Mississippi river and the adjacent country on the 30th ult., causing more damage than has occurred on the great Western Valley from a similar cause for many years. In the town of Cape Girardeau, Mobile, just below St. Louis, seventy or eighty buildings were destroyed, comprising many of the largest warehouses in the place. A Catholic convent and the Baptist and Catholic churches were levelled to the ground. Two large electric telegraph masts were snapped off like pipe stems. The loss of life is not yet ascertained, but it is supposed to be very large, as numbers must have been buried beneath the ruins of the fallen buildings. Many were injured and had narrow escapes of their lives.

AMERICAN STEAM-BOATS.—Three of the largest western steamboats have been sunk on their passage from Cincinnati to New Orleans. A steamer was burned at the mouth of the Potomac, on the 28th ult., and eight persons, including the captain, perished in the flames.

FATAL WRECK.—The *Helena Sloman* steam-ship, which left Southampton on the 1st ult., was totally lost on her voyage to New York. She had been beating about in great distress for eight days, when she was discovered by Captain Hovey, of the American packet *Devonshire*, who, with his crew, rendered every possible assistance to those on board, which consisted of 180 persons, 176 of whom he removed to his own vessel in perfect safety. Five, however, of the passengers were unfortunately drowned, and we grieve to add that four of the crew of the *Devonshire*, in their humane endeavours to save their fellow-creatures from a watery grave, met, unhappily, with that sad fate themselves.

During the past week, the Cornish fishery drift-boats have been taking from 1000 to 5000 pilchards mixed with herrings. The catches of hake have exceeded in quantity any during the last twenty years. As many as 15 to 20 barn per boat have been taken; they sell at 3s. 6d. per twenty-one. The last-named fish is a most delicious food.

THE LATE LORD LEIGH.—The will of the Right Hon. Chandos, Baron Leigh, bears date 6th of July, 1836; and though raised to the peerage on the 23 of March, 1839, his Lordship did not in any way alter his will, but it stands in his private name, "Chandos Leigh." He was an only child, and has added considerably to the property he inherited from his father. The estates extend over the counties of Chester, Bedford, Buckingham, Gloucester, Leicester, Warwick, and Stafford; from which a provision is made for younger children, the eldest son succeeding to the title, and being appointed the residuary legatee. The personal estate (exclusive of freeholds) was valued for probate duty at £180,000, and was administered to by his widow the Dowager Baroness Leigh, and his cousin the Hon. Edward Turner Boyd Twiselton, the executors. His Lordship was a Roman Catholic, and died at Bonn, in Germany, on the 27th of Sept. last, in his 66th year, leaving a large family.

FOREIGN AND COLONIAL NEWS.

FRANCE.

From Paris, this week, there is not the slightest intelligence of interest.

The committee of the National Assembly, to whom the subject had been referred, reported, on Monday, against a discussion at present on the electoral law, which was approved by the Assembly, and the House passed to the order of the day. Fourteen members of the left, however, have inscribed their names to speak against the conclusion of the Committee, when the report comes on for discussion in the House.

A Committee of the Assembly has been appointed by the Ministers of Commerce and Finance, to enquire into the depreciation of gold, and the causes of so much disturbance in the exchanges.

Trade in Paris is exceedingly brisk at the present moment; and, from the general peaceful aspect of Continental affairs, it is confidently expected that it will long continue so.

The *Evénement* has been fined 21,495 francs, for printing some supplementary copies without the printer's name.

The *Voix du Proscrit* has published another manifesto from the political exiles in London, with the view of extending their revolutionary principles.

GERMAN STATES.

The advices from the various capitals of the German Confederation show that the preservation of peace between Austria and Prussia is now as completely assured as if no misunderstanding whatever had taken place between those Powers. In Prussia, the national militia, or *landwehr*, which had been called out, has been dismissed, without any of the disturbances or unpleasant consequences which it was thought might result from the military feeling that they had been trifled with, in being called away in the depth of winter from their avocations, their homes and families, for no other purpose than to serve the ends of a diplomatic ruse. In Austria, the various army corps are being reduced, and dispersed amongst their former places of location in the different provinces of the empire.

The Free Conferences at Dresden will commence on the 23rd inst.; and there, it is expected, all the details of the measures agreed to at Olmütz will be satisfactorily adjusted. The Berlin journals of the 16th inst. contain a letter addressed to the German Governments, to send their plenipotentiaries, with full instructions, so that they may proceed, by free and mature consultation, to revise and improve the fundamental laws of the Germanic Confederation.

DENMARK AND SCHLESWIG-HOLSTEIN.

From the Duchies we learn that the new Generalissimo, Von der Horst, is likely to commence hostilities against the Danes within a short period, the being the desire of the Staatsrath, who deem the opposite line of conduct of the late Commander-in-Chief, General Willisen, to have been an injury to the cause. Several officers, among whom Von Gagern is mentioned, have testified their opposition to the new-adopted policy by tendering in their resignations. General Willisen has retired to Magdeburg, and not to Kothen, as stated in some papers.

It is stated that the King of Denmark has put aside his recently-adopted wife (who was formerly a milliner in Copenhagen), for the purpose of marrying the Princess Louisa of Hesse, according to a proposition of the Emperor of Russia.

UNITED STATES.

The accounts from New York this week are to the 6th inst., and they bring intelligence of the meeting of the new Congress (the thirty-first of the Republic) on the 2nd inst., and of the delivery of President Fillmore's Message. This state document displays much more than ordinary ability, and is of the customary fullness and great length to which Presidential Messages habitually extend.

Mr. Fillmore commences by averring that the constitution will be his guide, and that, in questions of doubt, he will look for the solution of them in the judicial decisions of the Supreme Court of the United States. If any act should pass both Houses of Congress which should appear to him unconstitutional, or an encroachment on the just rights of other departments, or which shall contain provisions hastily adopted and likely to produce consequences injurious and unforeseen, he will consider it his duty to apply the veto power conuded to him by the constitution, and arrest it. He solicits an amendment to the conflicting parties in the State in reference to the slave question, and declares that both Congress and the country may be assured that, to the utmost of his ability, and to the extent of the power vested in him by the law, he shall take care that the laws be faithfully executed. In doing so, he shall shrink from no responsibility, and shall endeavour to meet events as they may arise, with firmness, as well as with prudence and discretion. His Excellency has been rejoiced by the United States and Great Britain for facilitating and constructing a ship canal, to connect the Atlantic with the Pacific, through the territory of Nicaragua, and that but two objects in connexion with it remain to be accomplished, viz. the designation and establishment of the two ports at each end of the canal, and fixing a distance from each shore within which belligerent operations shall not be carried on.

Mr. Fillmore is of opinion that the federal revenue should be raised mainly by import duties; that these duties should be, as far as possible, specific *ad valorem* rates; when unavoidable, being estimated on the home instead of the foreign valuation; and that these duties should be so fixed as to benefit incidentally home industry, by shielding it from destructive foreign competition, thus favouring a recurrence to a system of protective duties.

He recommends the establishment of a mint in California, and the formation of an agricultural *bureau* of the Government. He recommends protection to the American commerce in Asia, and advises a reduction of postage to an uniform rate of three cents for prepaid letters and single printed letters, whatever the distance that they are conveyed. He suggests the revision of the Republic's naval code, rendered necessary by the recent abolition of flogging; the establishment of lighthouses and improvement of harbours; and the appointment of a tribunal, to adjudge all claims upon Government, also, the creation of a pension fund for the army and navy, and houses of refuge for those who have served their country; and concludes by saying, "The series of measures to which I have alluded may be regarded as a development in principle and substance—a final settlement of the dangerous and exciting subjects which they embrace."

The heads of the several "departments" of the Government have also rendered their customary "reports" to Congress; but they contain nothing exceeding local interest.

Nothing important had yet been done in Congress.

The Governor of Virginia, in his message, says: "Virginia, and I think all slave-holding states, can and ought, calmly but explicitly, to declare that the repeal of the Fugitive Slave Bill, or any essential modification of it, is a virtual repeal of the Union." And the same sentiment has been very generally expressed by the Southern States.

By the establishment of a new line of steamers, under the direction of the Messrs. Cunard, New York is now placed in regular communication with the West Indies, and St. Thomas and Bermuda.

AUSTRALIA.

Accounts of considerable interest to the latter end of August have been received from this remote but most important dependency. They are replete with evidence that the mismanagement and overbearing blundering of the Office, and its Colonial representative, the Governor of New South Wales, are doing their utmost to bring about a feeling of irritation, disgust, and contempt amongst the colonists for their connexion with, and government by, the mother country, complete analogous to that which effected the separation of the American colonies (now the United States) from the British Empire in the last century; and which, if wiser counsels do not prevail in Downing-street, will, most assuredly, speedily produce similar results in the case of our Australian colonies.

The occasion on which the displeasure of the colonists, and their determination to right their own wrongs themselves, and to take into their own hands the remedy of their grievances, was unmistakably and boldly expressed, was at a public meeting held in Sydney, on August 12, to take into consideration the Governor's despatch on the anti-convict meetings in June, last year, when the aversion of the colonists to the renewal of transportation was palpably manifested. The meeting, which numbered about 4000 persons, took place on the open ground adjacent to the Circular Wharf, and was the result of a spontaneous feeling of indignation which prevailed throughout the city on the publication of Sir Charles Fitzroy's despatch. Robert Campbell, Esq., presided. The Governor's obnoxious despatch having been read by Dr. Aaron, the chairman observed that the two great principles which they were called upon to decide were civil freedom and the maintenance of truth: in defence of the latter he was sure some discord would necessarily ensue. The charges of the Governor were false; but the question involved must be settled, and not left open to invite discord between the Government and the people or between the different classes and interests of the colony. He reiterated the charge of discourtesy of which they had accused the Governor. "The despatch, sent from a peaceable and orderly meeting, went down peaceably to his Excellency's gates, where they were met by soldiers and loaded muskets; the gates were closed against them; the kitchens, stables, and out-houses of Government-house were garrisoned with military, and the guns of the ships-of-war in the harbour were pointed at the meeting; the deputation were refused admission as a body, and were treated with a marked discourtesy." The Governor had stated that the meeting in June was composed of the dregs of Sydney, and that few respectable persons were present; but the resolutions having all been moved by members of council, proved that it was no mob meeting. After some further observations from the chairman, the first resolution was proposed and agreed to as follows:

That this meeting, having had under its consideration a despatch from his Excellency Sir Charles A. Fitzroy, dated June 30, 849, transmitting to Earl Grey the great protest of the inhabitants of Sydney, in public meeting assembled, against the renewal of transportation, hereby declares, that in that despatch, his Excellency has in a case of the utmost importance to the general welfare of this country, grossly misrepresented a series of facts of public notoriety, traduced the character of a large majority of the colonists of all classes, and in all parts of the territory, and betrayed the interests of the colony into the hands of its enemies.

The second resolution was as follows:—

That this meeting, aware of the insidious efforts of an interested and numerically insignificant section of the colonists to re-establish transportation to this country, and apprehensive of the partial success of these efforts, when treacherously commended to her Majesty's advisers by the Government, feels bound to declare its deliberate opinion that no faith can be placed in the promises of the Secretary of State for the Colonies on this momentous question, and therefore it solemnly demands the immediate and final revocation of the Order in Council making New South Wales a penal settlement.

Mr. J. R. Willshire, J.P., moved the third resolution.

That this meeting declares its opinion that the despatch of Sir Charles A. Fitzroy testifies his incapacity for, and unworthiness of, the responsible office of governor of this colony, and earnestly prays from her Majesty his instant removal therefrom

The proposer was of opinion that the Governor had betrayed the interests of the colony, and the sooner they were rid of him the better. The Governor had had great stress upon the receipt of an address bearing 1600 signatures, but he (Mr. Willshire) was in a position to prove that at least 500 were spurious, the manufacture of some of which he had witnessed; and he would have no difficulty in proving to his Excellency that a majority of the names were the names of persons who never existed; and the person who manufactured them was William Henry Wade, who had formerly been in the official situation of assistant city surveyor. (Great sensation.)

Mr. J. M. Grant seconded the resolution in a lengthy address, in the course of which he remarked, that if the people had been really instigated to rebellion, as the Governor would have it thought—to resort to physical force—neither himself nor the handful of soldiers at his command would have deterred them—they would not have able to hold the city five minutes. Had they determined on resisting the landing of the convicts by force, and a contest had ensued which had led to the shedding of blood, it was not the people who would have been to blame, but Earl Grey, and his contemptible agent, the Governor of the colony.

The other resolutions passed were as follow:—

That, in accordance with the resolution adopted by the public meeting of the 18th June, 1849, this meeting reiterates its opinion, "That it is indispensable to the well-being of this colony, and to the satisfactory conduct of its affairs, that its government should no longer be administered by the remote, ill-informed, and irresponsible Colonial-office, but by Ministers chosen from, and responsible to, the colonists themselves, in accordance with the principles of the British constitution."

That a memorial, embodying these resolutions, signed by the chairman on behalf of this meeting, be transmitted through the local government to her Majesty the Queen

A committee was appointed to prepare petitions to both Houses of Parliament, embodying the above resolutions.

WEST INDIES.

We have advices and New York from Jamaica to the 14th ult. The cholera, which had been raging with increasing virulence for more than a month, was still carrying off its victims at the rate of from 150 to 200 per day. Coffins could not be prepared fast enough for the dead, and many bodies were left upon the surface of the ground, to poison the air, for the want of necessary hands to dig pits to receive them. A month has already elapsed since it was announced that the physicians were all broken down with fatigue, and unable to attend the sick to which they were called; that the stock of medicines was exhausted, and unless a supply was received from abroad, the island was threatened with depopulation. The citizens of New York propose to send some relief to the suffering inhabitants.

INDIA.

Despatches were received in town during the week in anticipation of the usual advices from India. The dates are—Calcutta, Nov. 7; Bombay, Nov. 16. The news is of no interest, all being uniformly tranquil at present.

The late rumour of the Affredees having made a descent upon the salt-mines on the Kohat frontier remained without confirmation.

The Governor-General was preparing to proceed to Lahore and the Peshawur frontier.

The Nepaulese Ambassador arrived at Bombay on the 6th ult., from Suez.

The Honourable Company's iron steamer has been wrecked.

Piracies were of frequent occurrence in the waters of the Indian Archipelago. Java is tranquil.

Affairs on the western coast of Borneo have discontinued their resistance against the Dutch.

At Hong-Kong the fever has declined among the troops.

The gangs of Chinese robbers in the province of Kwangsee are gradually disperang.

NAVAL AND MILITARY INTELLIGENCE.

ORDNANCE APPOINTMENTS.—Mr. Boate, Deputy Ordnance Storekeeper at Spit-head, Gun-wharf, at Portsmouth, has been appointed Storekeeper at Athlone, vice Lamb, deceased; and Mr. Hall Stokes, Deputy Storekeeper at Berbice, succeeds to the vacated appointment at Portsmouth. The situation of Ordnance Storekeeper at Berbice will be abolished on the removal of Mr. Stokes.

THE TROOPS IN JAMAICA.—Major-General Bunbury, commanding the troops in Jamaica, has issued an order that the several military medical officers shall afford such medical assistance as may be in their power to persons residing in the vicinity of each military station who may be attacked with cholera. In consequence of the cholera having already been stationed at Port Royal, the General has removed them into barracks at Stony-hill.

NEW PATTERNS OF SUMMER TROUSERS.—A circular memorandum has just been issued by the authorities at the Horse Guards respecting the summer trousers lately worn by the infantry. As complaints of the delicate and fugitive nature of the dye or the light grey trousers have frequently been made, it is directed in this memorandum, that, in future, manufacturers are to exclude the lavendar shade altogether from the fabric, and, so as to secure duration both of colour and wear, to substitute for the lavendar shade a pure indigo blue. The yarn used in the manufacture must be wool-dyed, of a fast woaded indigo blue, without admixture. An approved pattern of this improved manufacture was last week sealed and deposited at the office for military boards for the regulation of all future supplies.

THE IRELAND.—This regiment, the 4th of the forces in Ireland consist of nine regiments of cavalry, twenty-four of infantry, and five infantry *depôts*, or 24,600 men.

ROYAL ARTILLERY COMPANY.—A regimental order has recently been issued, commanding the drills, which have been so long suspended, to be resumed. The present Court will assist, it is believed, in every way in advancing the military improvement of the corps.

CRUISE OF A WESTERN AFRICA.—The *Mermaid*, Mr. Alex. Kilroy, Surgeon Superintendent, and Mr. J. P. Anderson, Master, has arrived at the moorings opposite the Royal Arsenal, to take on board male convicts for Western Australia, and will call at Cowes, on her passage out, it is supposed to take juvenile convicts from Parkhurst Prison for the same destination, where they will have free tickets granted them.

MURDER OF A PRIZE CREW ON THE COAST OF AFRICA.—The *Morning Herald* states, that a letter has been received from the *Phœnix* screw sloop, Commander Woodehouse, on the coast, acquainting an old man in Hampshire with the death of his son, under the following circumstances:—About six weeks previous to the 3rd of October (the date of the letter), a boat belonging to the *Phœnix* captured a small craft, with 300 slaves on board, in the river Congo. The gunner and three men (one of whom was the old man's son) were put on board to take the slaver to the *Phœnix*, then lying off the mouth of the river. On getting out to sea, the same night the slaves killed them all, and threw them into the river, the vessel then making her escape. The account does not say how many of the slaver's crew were left on board, or whether their arms had been taken away, or whether the four men were properly armed.

ATTEMPTED ESCAPE OF SMITH O'BRIEN.—Amongst the intelligence received from Van Diemen's Land this week, is an account of a rumoured attempt to escape by Mr. Smith O'Brien to California, which was generally credited. The following particulars of his event taken from the Colonial Journals:—On Sunday and Monday, the *Victoria* cutter, commanded by a man named Ellis, was observed hovering about the island, the wind being light until evening, when it fell calm. Shortly before sunset Mr. S. O'Brien, who, notwithstanding his avowed intention of escaping, should an opportunity offer, has considerable liberty allowed him, went down to a sandy cove, one of the few places where landing is generally and, and there hailed the shore a boat with three men put in, and he rushed up to his middle to meet it. A constable on duty, who was a witness of the act, covered him with his piece and called to him to forbear, seconding this by rushing at the boat and knocking a hole in her bottom with his carabine. He then pointed out to all four the folly of resistance, and required them to submit quietly, which they did. The officer in charge, meantime, having missed his prisoner, came rushing down the beach, and secured him while still in the water. He was then conducted to his house, and the three men confined for transmission to Hobart Town. A whale boat, with six hands, was sent on board the cutter, seized her, and brought her in. She, too, was left on board, will be sent on to Hobart Town immediately. It has not been thought necessary to impose any restraint on Mr. S. O'Brien greater than that to which he was previously subjected.

BLOCKADE BY A PORTUGUESE 32-GUN SHIP.—Intelligence from Hong-Kong and Macao state that, at the latter place, on the 29th of Oct., the anniversary of the birth of the Portuguese Queen's cousin, Don Fernando, Captain d'Assis e Silva made arrangements to give a party on board his ship, the *Donna Maria II.*, of 32 guns. A number of the officers of the ships and the officers of the United States sloop *Marion* were invited. At noon the *Donna Maria II.* fired a Royal salute, shortly after which several of the invited civilians went off to the vessel, which was then lying at anchor in the Typa. At half-past 2 P.M. the ship blew up with a fearful explosion, entirely destroying the vessel, and all on board, except the captain's son and some twelve or thirteen men, who were taken up in the water by the boats of the United States sloop of war. The crew consisted chiefly of Lascars, natives of Goa, with European marines; the number on board at the time of the catastrophe could not have been far short of 300 souls. The American officers, it is believed, escaped, as they were about to quit their vessel when the explosion took place.

THE CENSUS.—Official notice has been sent to the 2200 District Registrars of England and Wales, that they are forthwith to prepare, and transmit before the 3rd of January, a list of the names of enumerators, which, in the gross, will amount to about 50,000 persons, whom they are authorised to engage for the 31st of March; each enumerator being paid for his services on that day the minimum of 18s., but which, in some crowded neighbourhoods, may reach to 30s. The necessary qualifications are "intelligence, activity, and respectability, and from the age of 18 to 60.

The *Roscommon Journal* says that a Scotchman in a neighbouring town put a placard in his shop window, stating that he "wanted a boy," and the next morning on opening his door was surprised to find a basket lying outside, which, on opening, he found to contain a male child, with a label attached, having on it "Here he is."

PAPAL AGGRESSION.

MEETINGS.

The Worcestershire County Meeting, on Saturday last, called in consequence of a requisition, signed by 800 persons, was numerously attended, and included a number of Roman Catholics. The High Sheriff (Mr. J. C. Watkins) having opened the proceedings, read letters from Earl Beauchamp, Mr. Foley, M.P., and Sir Thomas Winnington, expressing concurrence in the objects of the meeting. Mr. James Taylor having moved an address to the Queen, Sir Edward Blount, Roman Catholic, moved, amidst mingled hisses and cheers, an amendment, which, after expressing loyalty and attachment, declared there was no necessity for any legislative interference with the appointment of the Romish Hierarchy. On the subject, he said, of the Roman Catholic Hierarchy of England, they had been greatly misled. There had been no aggression. The Protestants had found fault with the Pope's appointment of vicars in England — persons whom the Pope could remove at pleasure. Why, it was asked, did they not appoint Roman Catholic Bishops? That recommendation had been adopted, and now they heard of nothing but the assumption of power by the Pope. Both the Duke of Norfolk and Lord Beaumont, he declared, were held in little estimation. His amendment was seconded by Mr. R. Berkeley, junior, a Catholic gentleman of property, residing at Spetchley, near Worcester; but the original address was carried by a large majority. On the motion of Lord Lyttelton, an address in the Lord Bishop of the diocese, admitting the principle of religious toleration, and of desire not to interfere with it, but expressing an opinion that this Bull did not come within the spirit of toleration; with an addition, also, moved by Mr. Corbet, condemning the introduction, at services of the Established Church, by some of the clergy, of principles and practices of the Church of Rome, was voted by a large majority. Three cheers were given for the Queen, and three groans for the Pope.

The Norfolk County Meeting took place on Saturday, at Norwich; E. R. Pratt, Esq., High Sheriff, in the chair. Lord Leicester, Lord Sondes, Lord Walsingham, Lord Colborne, Lord C. Townshend, Sir John Boileau, Bart., Sir W. B. Proctor, Bart., the Hon. D. Astley, Mr. E. Wodehouse, M.P., Mr. S. M. Peto, M.P., &c., were present. Letters from Lord Wodehouse and Mr. A. Fountaine expressed their sympathy with the purpose of the meeting. Lord Leicester, amid considerable cheering, moved a resolution, protesting against the recent unparalleled attempt of the Pope, and expressing a deep sense of the value of the principles of the Protestant Church. His Lordship commented on the members of the Church whose duty it was to discourage the aggression, and said they would not "be allowed to receive the revenues of a Church whose simple truths they despised and whose doctrines they subverted;" a statement which the meeting heartily applauded. The resolution was carried unanimously, as was also one condemning the approximation of part of the clergy to the Romish Church. In supporting this resolution, Mr. A. Hammond denied that the secondary title adopted by Government to the Catholic See had been the cause of the Papal aggression. He asked certain clergymen, "Why eat Protestant bread, and receive Protestant pay, and, at the same time, sell us to the enemy?" (Applause.) If their young men had romish instructors at the Universities, with Popish ceremonies, they would very naturally become Puseyite priests (Great applause). His advice was, to put down priestcraft in whatever shape it might come; and they might then leave Cardinal Wiseman and the Pope to fight it out. (Loud and continued applause.) A loyal address to her Majesty, on the motion of Lord Colborne, was unanimously adopted.

The County of Surrey met at Epsom on Tuesday, convened by the High Sheriff, in compliance with several requisitions, each numerously signed, from different parts of the county. The gentlemen present resident in the county were numerous; but the general public, from the unfavourable state of the weather, did not exceed five hundred in all. W. Freshfield, the High Sheriff, presided. The principal speakers were Sir Edward Sugden (who then, at an advanced age, attended a county meeting for the first time in his life, and moved the first resolution, contending at great length that the act of the Pope and Cardinal Wiseman was illegal), Sir John Easthope, Mr. Alcock, M.P., the Hon. J. Locke King, M.P., Mr. H. T. Hope, M.P., Mr. R. D. Mangles, M.P., &c. A characteristic letter from H. Drummond, Esq., M.P., denouncing the Popish priests, was read. Resolutions expressing indignation at the conduct of the Pope, describing it as ingratitude—expressing satisfaction at her Majesty's declaration to uphold her supremacy, and grief and alarm at the prevalence of Popish practices in the Church—were adopted; and an address in conformity with them, as well as petitions to both Houses of Parliament, were agreed to, and ordered to be presented.

A Meeting of Newmarket, on Tuesday, headed by the Mayor and many of the principal inhabitants, and very numerously attended, was conspicuous for the great excitement manifested against the Puseyite party in the Church, and for an entire dissent to the address, declaring that the Papal Usurpation followed contributed, like that party, to invite the Papal aggression. But the address without the addition, was adopted by the meeting, which displayed great abhorrence of the Pope and loyalty towards her Majesty the Queen.

The Birkenhead Meeting came off on Friday last, without further disturbance; and there have been meetings at Doncaster, Worksop, Croydon, Lewisham, and Maidstone.

At Cambridge, on Wednesday, there was a numerous meeting of the inhabitants, under the presidency of the Mayor. The usual resolutions and an address were carried; but the meeting is noticeable on account of the opposition manifested, at the commencement, by a considerable minority, and vociferous calls for "No Church-rates." "No Bishops," "No State Church;" and it was some time before order was sufficiently established to allow of the business proceeding. An amendment was moved by an Independent minister, Mr. Babier, condemning any interference with the religious opinions, discipline, or ecclesiastical arrangements of any class of her Majesty's subjects, as a violation of the rights of conscience and the principles of civil and religious liberty. The amendment was respectably supported; but, on being put to the meeting, the original resolution, to express indignation at the Papal rescript, was carried by a large majority.

EVENTS

It seems, from a letter written by Lord Colchester to the *Daily News*, that Mr. Bennett had established a convent in connexion with his chapels of St. Paul and St. Barnabas, at Oakham, the establishment of a daughter of Lord Lovelace, the Hon. Mr. Law, was the chief. She accepted the office contrary to her father's wishes; but she had, after much solicitation, wrung from him, shortly before his death, a reluctant assent. Mr. Law complained that Mr. Bennett did not second his endeavours to make his daughter give up the project, and he so disposed of his property by will that she should not give it to the establishment.

Cardinal Wiseman, on Sunday, in the second of his series of lectures on the "Roman Catholic Hierarchy," complimented his Roman Catholic brethren on their forbearance, and referred to the Queen's answer to the addresses—firm yet gentle, moderate, and wise—as a proof that the storm by which the Roman Catholics had been assailed was blowing over. He also affirmed that the Pope's Bull concerned only the Catholic community, and that the Catholics were invited to wish for a hierarchy here by seeing a Romish Archbishop in Australia and a Romish Hierarchy in the United States. He referred to the differences in the three drafts of addresses to the Queen by the prelates, and to the Bishop of Exeter's denial of her Majesty's supremacy, as a proof that the Catholics could not do so. He said he believed her Majesty to be attached to them, and the prelates doubted and Dr. Phillpotts denied. He concluded by affirming that it was from misunderstanding a word in his own pastoral letter, that the Pope was accused of having spoken of England as a heathen land previous to the reunion of the Church after an interval of 300 years. The Pope had used no such language, and what he (the Cardinal) meant was, the Roman Catholic Church of England, and not the Protestant Church or the Protestant nation.

DOCUMENTS.

The Archbishop of Canterbury and the Laity.—The Archbishop having been applied to by a body of laymen for advice as to their conduct with reference to the Papal aggression, especially with regard to the prevalence of objectionable practices in some churches, and to the question of the right of members to leave their church; or, whether they should continue to worship in a church, to the ceremonies of which they have an objection; and also, whether it is the duty of those who have voted for the supremacy in counties to withhold subscriptions from such candidates as decline to give a pledge, to do all in their power to obtain a re-imposition of such portions of the Catholic Disabilities Act as may check any future aggression on the Established Church of this country by the See of Rome? his Grace returned the following reply:—

Addington, Dec. 11.

Sir,—You will excuse me if, in a time of such engagement, I answer your questions more briefly than perhaps you expect: but I will, in few words, give it as my opinion

1. That only great unfaithfulness, and very objectionable practices in his parish church, should induce a layman to leave it for another; but that, when salvation is concerned, order is a secondary consideration.

2. I do not think that the occasion is such as to justify the demand of a pledge from a member of Parliament to any particular measure.

3. Most's minds are at present in so excited a state, that any alteration of the Prayer-book or Act of Uniformity is further removed than ever. Those who object to any part of the Liturgy should be satisfied that it treats of subjects on which there always has been difference of opinion among members of the Church.

The principal duty of the laity, at present, is to promote the teaching and preaching of the Protestant faith, as I conceive it appears.

I have the honour to be your obedient servant,

J. B. Cantuar

The Bishop of Winchester having had a similar application made to him, has referred the applicant to the Archbishop's letter.

The Bishop of St. David's (Dr. Thirlwall) has stated, in a letter to the Archbishop of Canterbury, the reasons why he could not sign the conjoint address of the prelates. They are in substance as follows:—"The reference to the Act of Elizabeth appears to me in every respect most unadvisable. My own opinion would have been, that the provision cited from it has been virtually repealed by the Roman Catholic Relief Act. But at all events the words cannot be made to prove, if any thing, far too much; for the law of Elizabeth has not been violated for the first time by the recent Bull. It was equally so at defiance, by the appointment of Vicars Apostolic, who have so long exercised their functions without complaint or molestation, and it seems unreasonable to charge the Pope with defying a law which has been so long permitted to sleep. But a still weightier objection in my mind is, that those who refer in such a manner to the statute of Elizabeth must be considered as expressing a wish to see it again put in force, which it seems to me would involve the repeal of the Relief Act. I cannot consent to make myself responsible for language which, directly or indirectly, indicates such an object. I think it needlessly harsh—to say the least—to treat the Pope's 'anticipation' of our return to his communion, which he must consider as the greatest of all blessings to us, as an 'unwarrantable insult.' And I am still afraid that the concluding petition for protection to the labours of the clergy will be interpreted, not without an appearance of justice, as a wish to see the Roman Catholic proselytisers silenced by Act of Parliament. These last objections, however, I might consent to waive in deference to your Grace's judgment, and for the sake of unanimity. But that which relates to the Act of Elizabeth appears to me to involve principles which I may not sacrifice to any other consideration."

The Bishop of Oxford, and Eton.—The Provost of Eton College, the Headmaster of Eton, the Mayor of Windsor, Sir East Clayton East, the Rev. J. Gossett, and a large number of clergy and laity, having addressed the Bishop of Oxford, expressing, amongst other things, their thankful and unshaken confidence in their position as members of a true branch of the Holy Church Universal, his Lordship made a long reply, of which the following sentences are the peculiarities:—"Our first duty now is to resist this aggression of the Pope. But if we shall be safe, we must be on our guard against other dangers also. On the one hand, there is among some of us a leaning towards the Church of Rome, which is wholly alien from the tone and temper of our own Church, and which, step by step, has led too many to join that corrupt communion. Upon this evil all eyes are now fixed, and I dare not undervalue its enormity or the insidious progress with which it saps the faith of those who yield ever so little to its first temptations. There is another and a no less fearful peril. Stirred up by the Pope's indecent aggression, a certain stream of common opinion is now running with the violence of a flood against Rome. It is the nature of a flood to be muddy and turbulent, and to overwhelm all ordinary barriers with its violence; and so it is among us. Unchristian thoughts, hard words, and unproved imputations abound. Those who fear the spiritual domination, and those who hate the spiritual corruptions of Rome, and those who hate all assertion of spiritual authority anywhere, and even those who hate all belief in spiritual realities, are for the time united together. Our very walls are inscribed by the same hand with the legends of 'No Popery,' 'No priestcraft,' 'No religion.' In such a time even good Christians become subjects and the victims of fierce mutual suspicions, and the common enemy alone triumphs. Such a time must be full of danger to the calm and peaceable and loving temper which should possess our own souls, and to the maintenance of our common church against these evils, then, we must guard with as much vigilance as against external Popery."

CHURCH, UNIVERSITIES, &c.

OXFORD.

Seizure of College Plate for Poor-Rates.—In consequence of a distress warrant having been issued against the Rev. Dr. Wellesley, principal of New Inn Hall, Oxford, by the city magistrates, for a poor-rate for the parish of St. Peter-le-Bailey, amounting to 23 13s., and the expenses, the inspector of the Oxford police, on Saturday last, carried the same into effect by seizing half a dozen silver forks from the lodgings of the principal. The question respecting the liability of Oxford colleges to contribute towards the relief of the poor of Oxford has long been in agitation. Some few years ago a similar seizure of plate for poor-rates was made by the officers of St. Michael's parish at Exeter College, which led to a trial before the Serjeant-at-Arms, from the proceedings of which the officers were beaten, owing to a technical point. The principal of New Inn Hall has redeemed the plate by paying the amount of the poor-rate and expenses. An action will, it is understood, be brought against the parish officers for an illegal seizure, when the question as to the liability of the colleges and halls to pay poor-rates will be tried upon its merits. Similar proceedings will shortly be taken against Pembroke College, for the payment of poor-rates to the parish of St. Aldate.

CAMBRIDGE.

Ordinations.—The following ordinations are fixed for the present month: On the 21st, being the feast of St. Thomas, by the Archbishop of Canterbury, at Addington; the Archbishop of York, at Bishopsthorpe; the Bishop of Rochester, at the cathedral; and the Bishop of Lichfield, at Eccleshall. On Sunday, the 22nd instant, by the Bishop of Winchester; the Bishop of Lincoln, at the cathedral; the Bishop of Bath and Wells, at the cathedral church of Wells; the Bishop of Gloucester and Bristol, at the cathedral church of Bristol; the Bishop of Ripon, at Ripon; the Bishop of Salisbury, the Bishop of Chichester, the Bishop of Oxford, the Bishop of Hereford, and the Bishop of Llandaff, in their cathedrals. The Bishops of Worcester and Chester have fixed their ordinations for the 16th of March, 1851.

Preferments and Appointments.—*Archdeaconry:* The Rev. T. Finch Holiday Bridge, Rector of St. John's, Newfoundland, to be First Archdeacon of Newfoundland and Labrador. *Honorary Canonry:* The Rev. Robert Mosley Master, Incumbent of Christ Church, and the Rev. William Robinson, D.D., St. Michael's-on-Wyre, in the Cathedral Church of Manchester, the Rev. E. James Moor to the Cathedral Church of Norwich. *Rectories:* The Rev. Charles Compton Bonnyn, to Nettleton, Wilts; the Rev. William Edward Pooley, to Chelmsford, Suffolk; the Rev. David Jeffrey, Curate of Neath, with Llanbedr tre Newydd (Newborough), in the Isle of Anglesea; the Rev. Francis Augustus Weekes, to Aston-upon-Trent, with Shardlow, Derbyshire. *Vicarages:* The Rev. John Ambrose Cook, to North Benfleet; the Rev. William Brailsford, to Aline, Yorkshire; the Rev. David Mapleton, to Meanwood; the Rev. Charles Orland Kenyon, to Great-Ness, Salop; the Rev. Charles Darby Reade, to Stow-Bardon; the Rev. M. Butt, to Wingrave-cum-Rowsham, Bucks.

Vacancies.—*Rectories:* Ashwellthorpe, with Wreningham Rectory, Norfolk, dio. Norwich; value £648, with residence; patron, Lord Berners; Hon. and Rev. R. Wilson, deceased. Rudham East, with West Rudham V., Norfolk, dio. Norwich; value, £403, with residence; patron, Lord C. Townsend; Rev. T. Bland, deceased. Witham, South, county and dio. Lincoln; value, £120, with residence; patron, Earl of Dysart; Rev. J. H. Willan, resigned. *Vicarage:* Toft-Next, Norfolk, dio. Norwich; value, £403, with residence; patron, Lord C. Townsend; Rev. T. Bland, deceased. *Mastership:* Cavendish Grammar School, Suffolk; Rev. W. M. Cox, promoted.

Licensed.—The Lord Bishop of London has licensed the following gentlemen to appointments within his diocese: The Rev. H. W. Maddock, M.A., vicar of Kington, Herefordshire, to the incumbency of All Saints' Church, St. John's Wood; the Rev. H. T. Rees, M.A., late curate of Runcorn, Cheshire, to the incumbency of St. Martin's-in-the-Bull-ring; the Rev. W. J. H. Thomas, M.A., to the curacy of St. Peter's Church, Hammersmith; the Rev. W. Garrett, M.A. to the incumbency of Trinity Church, St. Giles's-in-the-Fields; the Rev. R. F. Clement, M.A. to the curacy of St. Pancras New Church.

Testimonials.—The following clergymen have lately received testimonials of esteem and affection.—The Rev. J. W. Middleton, Incumbent of Dunston, near Taunton, from the congregation; the Rev. Edward Rudge, Incumbent of St. Alkmund's Church, Derby, from the teachers of the Boys' Sunday School; the Rev. C. H. P. Linton, Curate, from the congregation of Holy Trinity Church, Birkenhead; the Rev. Edward Rudge, on his retirement from the Curacy

THE CROW-BOY; OR, THE CHRISTMAS LUNCHEON.

WITH AN ILLUSTRATION BY PHIZ

All sorts and conditions of life, in-door and out-door, find their appropriate consolation in the Christmas season. The day of itself, fine or dreary, seems, as if by virtue of its associations, to induce happy feelings. There is an influence in the time which forbids even the wretched to be miserable. The pauper dreams, though wide awake, that he is rich; and the beggar feels as potent as a King. His rags, indeed, are the true robes of royalty; and frequently, in their unexpected combinations, are so picturesque as to excite the admiration of the æsthetic. Even the rude worker in the fields, to whom no Christmas dinner is a probability, has his share in the common enjoyment, though, as it would appear, of a most mysterious sort. But, of all these special idealists, the CROW-BOY on CHRISTMAS DAY, engaged in the open corn-field, strikes us with the most wonder. He is a psychological curiosity, as profound a mystic as Böhme, and a better poet than Bloomfield.

Our Artist has hit the character in the specific situation to a nicety. The actual about the Boy is as cold and hard as are Nature's dealings in general with her unsophisticated children, who have not acquired the skill to subdue their parent to their own mood. The wintry cloud, the cheerless snow, the chill blast—these are his only companions in his solitary occupation. But there is an Idea, that somehow or other has grown up in his mind: "It is Christmas Day!" By virtue of this idea, he is a metaphysician of the first water—an ideologist—a philosopher as intensely absent as Newton. He feels no more the cloud, the snow, and the wind, than the unparalleled mathematician himself, while wrapt in his sublime speculations. felt the want of the dinner which he habitually neglected. With that unedifying article, however, our Crow-Boy is supplied. He has had it in his wallet all the morning—an extra store of bread, bacon, and cheese; for this is Christmas Day!

And this frugal meal is, to our Crow-Boy's imagination, a feast far exceeding the Lord Mayor's, a banquet equal to a Bishop's, a revel not to be matched by a Lord Cardinal. Observe him while engaged in its mastication. His cheek is stuffed with the wholesome and savoury morsel; while his dog, with his lips overflowing with slaver, looks up expectantly into his face; and his gun lies idly by the hedge. You may note by his sidelong leer that he well enough perceives the crows at their work of depredation. But it is Christmas Day, and festival tide with him. Care may sleep at such a season; therefore let them feast on. His gun for this day, at any rate, shall sound no alarm.

The season, too, makes the Boy charitable to the poor crows. Out of the treasury of his happiness he can afford to impart a blessing to them. They shall also have their Christmas Day; for though, by convention they are his victims, by Creation they are his fellow-creatures. Nature made the field for them as well as for him and his master. Nay, she gave to them a special privilege in the air. Man can only walk; they can fly. Herein they are more like the angels than their tyrant. The Boy thinks, perhaps, on this—in however rude a guise—and, seized with a poetic wonder, feels the weight of the unintelligible universe, and confesses himself as great a fool as the wisest. But he, thus life-and-food-enjoying in his Christmas solitude (solitude save for those crows, who on this day dine with him, perhaps not uninvited guests),—he himself is, after all, the greatest mystery.

J.

THE CROW-BOY'S CHRISTMAS LUNCH.—DRAWN BY PHIZ.

THE WESTMINSTER PLAY.

The immemorial usage which prescribes the performance of a Latin Play at Christmas by the scholars of Westminster, was honoured, on Saturday evening, by a most spirited and successful enactment. The Play was the "Andria" of Terence: the cast is as follows:

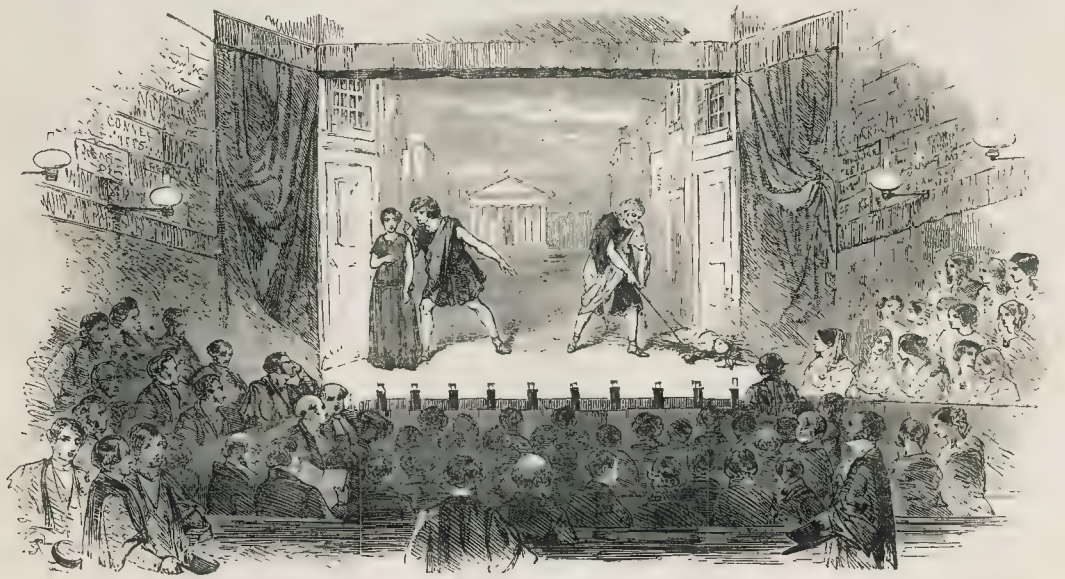
Simo	.. ..	.. W H Bennett.
Sosia	.. ..	.. W G Henderson.
Davus	.. ..	.. H Blagden
Pamphilus	.. ..	.. W. G. Armitstead.
Mysis	.. ..	.. S. A. drews
Charinus	.. ..	.. W H Horne.
Byrrhia	.. ..	.. S Madan.
Lesbia	.. ..	.. C P Ingram.
Chremes	.. ..	.. H Barnes
Crito	.. ..	.. E T Chamberlayne
Dromo	.. ..	.. J. W Oliver.

PERSONÆ MUTE

Servi	.. ..	.. W. Madan.
Simonis	.. ..	.. W. Hawthorn.

Mr. Blagden (the captain of the school), as *Davus*, acted with a subtlety and energy which satisfactorily attested his correct appreciation of the salient points in the character of the slave, with whom deceit is second nature, and whose natural fertility of invention has been made inexhaustible by oppression: the performance was marked by great propriety of declamation, and a considerable infusion of genuine histrionic fire. Mr. Armitstead's *Pamphilus* had many points of excellence, especially in the tender passages. His indignant repudiation of *Mysis's* apprehension that he might prove unfaithful, was very striking. Mr. Bennett, as old *Simonis*, was cautious, apprehensive, wary—just as he ought to be. Mr. Barnes, as *Chremes*, acquitted himself very creditably; and Mr. Horne, as *Charinus*, was the picture of a pensive lover. Mr. Chamberlayne, as *Crito*, and Mr. Oliver, as *Dromo*, were equally worthy of commendation; and Mr. Madan is especially deserving of honourable mention for the drollery with which he impersonated *Byrrhia*. Mr. Andrews, being fortunately gifted *vultu adeo modesto, adeo sereato, ut vibrá supra*, made an admirable representative of *Mysis*, and excited the admiration of all the ladies by the feminine graces which he contrived to throw around the character. Mr. Henderson's *Sosia* was also very amusing. Altogether, the play went off famously. The enthusiasm of the audience was unbounded; and the dormitory, in which, as usual, the stage was erected, was crowded to excess.

On Tuesday, the "Andria" was repeated before a great number of visitors, including, among others, the Marquis of Lansdowne, Lord de Ros, Viscount Courtenay; M. Van de Weyer, the Belgian Minister, and his son; Mr. Baron Parke, Mr. Justice Williams, Mr. Justice Talfourd, Sir David Dundas, the Dean of St. Paul's, General Fox, Mr. Macready, and Mr. Plowden, M.P. As is usual on the second night of representation, the play was prefaced with a Latin prologue, which was spoken by Mr. Blagden, the captain of the school, and was received with such applause as to be repeated. To the "Andria" succeeded that sort of Atellane nondescript which it is customary to represent on these occasions, and in which some prominent topic of the day is subjected to a little festive ridicule in doggrel Latin. In the present instance, the Peace Congress was the object selected. The *alumni* assemble in meeting—a chairman is chosen, who addresses the "pacificatores." The first resolution, proposed by a representative of the medical profession is *toto ut cessent bella mundo*. Mr. Armitstead, who represents the lawyer or "cansidicus," suggests at the conclusion of his address, *ut omnia dissidia ad causidicorum judicium referantur*. The motion is opposed by Mr. Horne, an officer in the army, and Mr. Blagden, who represents a worker in lead and steel. The latter so effectually lays it on our peacemaking doctor, that he can hardly be restrained from having recourse to personal violence, and at length challenges him to a meeting at a distance of ten paces. On this the lawyer breaks forth into an ejaculation which plainly indicates that he has no hope of the proximate advent of universal peace, and, as if to make conviction doubly sure, his wife makes her appearance in the person of Mr. Andrews, who tells him that a sheriff's officer is below, and that, whilst he is attending to the public affairs, the private *supellex* is being removed. He is then tauntingly told, *te bella domestica terrent*. The squib went off with infinite humour, and was wound up with a short epilogue, delivered by Mr. Bennett.



WESTMINSTER PLAY.—SCENE FROM THE "ANDRIA" OF TERENCE.

Advices from St. Domingo city to November 2nd state that, through the intervention of the English and French, a treaty of peace has been concluded between the Dominicans and Haytiens.

FROZEN-OUT GARDENERS.—DRAWN BY FOSTER.

FROZEN-OUT GARDENERS AND SNOW CLEARERS.

BY THOMAS MILLER.

WITH ILLUSTRATIONS BY FOSTER.

"We've got no work to do—co co."—*Street Melodies.*

THERE are few but what have heard this miserable chorus, bawled out by half a dozen wretched-looking fellows, bearing bunches of frozen greens on the tops of long poles, as they paraded the streets of London in winter—looking as much like real gardeners as a St. Giles's sailor looks like a real British tar. You can readily enough imagine that they are frozen-out vegetarians, weary of cold turnip tarts and cabbage curries; that they would fain have a change from potato patties and celery custards, and have found out that a rump-steak is far more savoury than a pie made of onions and flavoured with sage. But beyond failing in the vegetarian cookshop-way, and taking in some half-score greengrocers, you know at a glance this is the nearest approach they ever made to gardening.

Your real "Frozen-out Gardeners" are generally fine-looking fellows, wearing a tinge of the summer sun on their cheeks, like a red winter-apple. They are generally round-shouldered men, and a little bent, through hard digging, and look about as much at home in our streets as we might imagine wild hares or rabbits would be, picking up a living in Covent Garden Market. They bring with them pleasant associations, turning the memory to spring flowers, which are as sure to come as the last were to wither and die; and, while you look at them, you remember the hundreds of sweet spots which you have passed in your suburban rambles, and the delight which their labours have afforded you, and you give them what few pence you can spare, with a "God bless you."

They look not up at the windows and down at the areas, like your hardened and common beggars, but on the ground, as if reproaching it for being so "hard" as to prevent them from earning a livelihood. They tried the earth with their spades, and it rang like the iron tongue a harsh overseer, who refuses to give the applicant either labour or bread; so they come like the frozen-out robins and little wrens, to seek a few crumbs at our City doors

Tall, taper lettuces, and crisp Savoy cabbages, and early greens, of every description, are pretty enough to look at in the shops at Christmas, and very pleasant to the palate. But go and gather them! On a bitter winter's morning they are great globes of hoar-frost, gigantic balls of ice, candied with chilling Wenham, glittering with freezing showers and frozen snow—colder than steel that has lain out all night—cutting sharper than a knife, if you once handle them, and seeming to freeze into your very bones. Yet amid these the poor Gardeners labour from morning to night, handling them when their hands have no feeling, stooping amid them when the wind comes cutting at their ears like a scythe, and piling them in carts, and bringing them to our very doors, without murmuring, only too thankful that they are, by such hard means, able to obtain bread.

It is when a bleak, black, biting frost comes suddenly upon them like

SNOW SWEEPERS.—DRAWN BY FOSTER.

a "thief in the night," and seeming, as it were, to "burn" up every green thing, that Hope deserts them, and Despair drives them into our streets. When the earth is like iron, and the sky dim and cold as ice, while the clouds seem frozen together, and the bare branches of the trees are brittle as glass, then it is that bird and beast sadden their wild nature, and draw towards the habitation of man, as if they had a claim on his protection; and with them come our fellow-men, the "Frozen-out Gardeners."

You know when they are genuine, not so much by their heavy boots and blue aprons, as by the manner in which they accost you: it is so like "Would you have this plant set here, or these there, please sir? Those peas want rodding, and that grape-vine must be pruned." They come not to you with the beggar's whine, but like men who feel that they have a fellow claim, since the elements have warred against them; as an arctic voyager might come upon a Laplander's snow shed, when he had eaten his last strip of rein-deer's hide, and solicit a share of his meal. But still, like *Lear*, they

Tax not you, you elements, with unkindness.

Be kind to them, fellow-citizens. Their occupation is such as our first parents followed in the Garden of Eden, when long-haired Eve trailed the thick blowing roses, and Adam gathered the fruit which they banqueted upon. Through them we have the works of God brought to our City homes in spring and summer—sweet flowers, telling us how Nature progresses, and bringing visions of green spots where the banded birds are anthemning, and the bee going round and saying something soothing to the blossoms; while the butterflies, like children who have nothing to do but play, sit swinging on the flowers. For such pleasures as these we are indebted to the poor "Frozen-out Gardeners." How little do we think that the mountains and forests covered with fan-like ferns the pointed avalanches, and deep abysses into which they seem toppling, and all the twisted and entangled roots, and the thousands of fantastic forms which we admire so much in the frostwork on the glass—that the same element which created these prevents thousands of our fellow-creatures from following their occupations and earning bread. The plough lands which we admired in the autumn, the sick-layer's mortar freezes, the brickmaker cannot mould, the joiner's glue sets too soon, the ropemaker's hemp breaks, the glazier's glass is more brittle, and scores of others are thrown out of employment, like the Frozen-out Gardeners.

"Clear your snow away, marm? do it for a penny," is another cry which assails our ears; and looking out of the window, we see two little urchins with their shoulders up, and one bearing a broom worn to the stump, the other a broken shovel, and both ready to go to work at a moment's notice for the smallest consideration. Others there are, who mount the roofs of houses, and without saying so much as "by your leave," pitch down whole spadefuls of snow upon the unsup eting passengers, which either settle in the nape of the neck or get imbedded in the front of the waistcoat, and then, like Wordsworth's river—

Glide at their own sweet will,

and make you, against your own, a thawing machine.

The old woman with her little shovel comes out, and goes scrat-scrat on the pavement, like a hen on a cinder-heap. It gives the shop-boy an excuse for throwing a few shovel-fuls of snow on the passers-by, and having a snow war with the butcher-lad next door. Nanny and Betty, while clearing it away, find an opportunity of retailing all the abuse their "missesses" have heaped upon each other, and a good deal more to it. While the evening-paper runs on before you with his broom, gives half-a-dozen strokes, then takes off his hat by the kerb-stone, and looks as if he would have you believe that he had given the road an extra "brush" solely that you might step clean and spotless across it. If he has any spite against the shopkeeper opposite, he sweeps a slanting path up to the door of another neighbour who is in the same line of business.

What transformations snow undergoes in London: from white it changes to a kind of coarse, brown, dirty-looking sugar; then it gets trampled into cold wet cakes, clinging to your feet at every step, as if hoping to be carried away where it would not be so much trodden upon; then it sinks into dirty slush, as if it cared not what happened to it, and is glad to escape in that shape either into the gutter or the street-contractor's cart.

There is something very solemn in the appearance of a country covered with snow on a cloudy day, especially if you look over some point of it that is uninhabited, for there are many of those sounds or rural objects either heard or seen, which give such life to the same scene in summer. The birds are generally silent, or hidden somewhere for shelter and warmth; the cattle are driven from the fields; you miss the figures that dotted the landscape—their out-door employment is gone; the woods are silent; the hills without an echo. Children no longer go singing through the lanes. The grass and flowers are all buried beneath a winding-sheet of snow. The river is the only moving object in the landscape; and, as it rolls along, you watch the snow fall into it and melt: flake after flake is seen for a moment, until it touches the water, and then is "gone for ever." Sometimes two flakes cling together as they fall, and, so united, perish; and while you gaze, images of Love and Hope cross the mind and shape themselves into strange forms—of Love that died before its time, and Hope whose dreams were never fulfilled; and you picture her with her broken anchor,

Half buried in the drifted snow,
Sleeping upon the frozen ground,
Unheeding how the wild winds blow,
Bitter and bleak on all around;

for such images will float before the eye, even at the merry and holy time of Christmas, when you are alone with Nature.

CALENDAR FOR THE WEEK.

SUNDAY, Dec. 22.—4th Sunday in Advent.
MONDAY, 23.—Sun rises 8h. 6m., sets 3h. 51m.
TUESDAY, 24.—Christmas Eve.
WEDNESDAY, 25.—Christmas Day.
THURSDAY, 26.—St. Stephen.
FRIDAY, 27.—St. John the Evangelist.
SATURDAY, 28.—Innocents.

GREAT EXHIBITION OF THE INDUSTRY OF ALL NATIONS

SPLENDID PRESENT
TO SUBSCRIBERS TO THE ILLUSTRATED LONDON NEWS.
In preparation,
A MAGNIFICENT VIEW OF THE EXTERIOR OF THE VAST BUILDING
DESIGNED BY MR. PAXTON
FOR THE GREAT EXHIBITION IN 1851.

This View will be Engraved in a very superior style, and printed on a large sheet of fine paper: it will be published at the time of the opening of the Great Exhibition. The Print will be given to all Regular Subscribers to the ILLUSTRATED LONDON NEWS

Also in preparation,
A SPLENDID VIEW OF THE INTERIOR
OF
THE GREAT EXHIBITION BUILDING.

*** Further particulars of these Prints, together with other Engravings in preparation connected with the Great Exhibition, will be duly announced. 198, Strand, September, 1850.

TO CORRESPONDENTS.

AN OLD AND CONSTANT SUBSCRIBER, and S P G. We are not aware of the hon. member's intentions as to the Marriage Bill.
WOOLLOOMOOLLOO.—Sea-bill fire-preservers were invented some thirty years since.
J M R, North Shields.—Apply to Mr. Evans, printer, &c., Great Queen-street, Lincoln's-inn-fields.
A SUBSCRIBER, TOTNES.—The Secretary of the Orthopedic Hospital is Mr. R. Maskell, 7, Bloomsbury-square.
R T W.—To a re six distinct varieties of the farthing of Queen Anne; indeed, there may be said to be seven; but one sort of them was *only really* an imitation, which has a seated figure of Britannia, and the date 1714 in the exergue. It is worth from 7s to 10s. The very rare variety has Britannia standing, with an olive branch in her right hand, and a spear in her left. reverse, "Bolle et Face." In the British Museum are all the varieties.—(See "Popular Errors Explained and Illustrated.")
A SUBSCRIBER, Rochester.—The husband of the daughter of an heiress (which heiress has left sons and daughters) may inquire with his own arms those of his wife's father, quartered with the coat of (as) her maternal grandfather.
J D N, Dublin.—The impressions received are from a copper coin of Elizabeth, struck for Ireland, and very common.
A REGULAR SUBSCRIBER, Lambeth, is thanked. The "Magic Lantern" was illustrated in our Christmas Number.
EDGAR DE HAVILAND, Bridgwater.—An Exhibition of Studies from the Old Masters has just been opened at the British Institution, to Pall mall.
PARAVA is recommended to apply to the office of the asylum.
CLERICUS, D.C.L.—The present entrance-money to the Royal Society is £10, the annual subscription £4; members are elected by ballot, upon the nomination of six or more fellows.
W W.—M Chaussard enumerates upwards of 600 works expressly devoted to the life of Joan of Arc, or her history. Test of M Lebrun that Charmettes is the fullest biography.
J E R, Newgate-street.—Apply for the "Channel Islands Guide" to Mr Crumbley, Fleet-street.
G A B, Islington.—The proceeds should be proportionably divided between the freeholder and leaseholder, according to their respective interests.
A SINGLE MAN.—It is a popular error to suppose that the vile custom of a man's selling his wife is legal; for it is directly punishable by law. (See "Popular Errors Explained," p 249)
M H.—The cost of investigating and arranging quarterings evidently depends on the amount of research and labour bestowed upon it. The fee in the case you refer to is £5 5s.
Chief Magistrate is entitled to the appellation of "the Right Honourable the Lord Mayor."
NECROPOLIS.—The style is "The Lord Mayor of the City of London."
I H S, Wyndham Club.—Received.
L Clerk.—The wine shall disappeared.
J S.—A benefit club.
F H, Burwood-place.—Is thanked.
J B.—Apply to Ackermann and Co, Strand.
JEANS, Dean.—We think not.
QUIDAM, Teddington.—Thanks.
J G L, Bury.—The lines will not suit.
T W R ("Essex").—Is thanked.

G G.—We regret that we have not room.
L S.—Declined.
Q E D.—Thanks.
A THIN PROPRIETARY, Greenwich, is thanked.
S S.—Certainly.
JOHN MILL.—Declined.
J F L, Brighton.—Thanks.
QUERIST.—Address, Col. the Hon. C. Grey.

*** Numerous Answers to Correspondents are unavoidably postponed.

BOOKS, &c., RECEIVED DURING THE WEEK.

The Mirror of Maidens.——The Island of Calypso.——Jack and the Giants, illustrated by Richard Doyle.——Monk and Washington.——Hints for Happy Homes.——Across the Atlantic.——The Kickleburys on the Rhine.

THE CHRISTMAS ILLUSTRATIONS will be continued next week, with an Engraving of the Royal Kitchen in Windsor Castle; and Scenes from the Christmas Entertainments at the Theatres.
The promised Picture of the Presentation of the Addresses to her Majesty at Windsor Castle is unavoidably deferred till next week
The Illustrations of the Great Exhibition Building will be resumed next week.
The continuation of "Fred Holdersworth" in our next.

WITH THE PRESENT NUMBER
IS PUBLISHED
A CHRISTMAS SUPPLEMENT.
Price of the Two Numbers, One Shilling.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, DECEMBER 21, 1850.

THE German "difficulty," compared with which the "Irish difficulty," which has so long puzzled the wisest heads in Great Britain, is but a trifle, has, since the conclusion of the negotiations of Olmütz, assumed a new shape and a new name. The idea of the "unity" of Germany having produced no other effect than to make its hopeless "disunity" more painfully apparent, a middle course has been suggested, by which the rival pretensions of Austria and Prussia may be satisfied, and peace restored to the German nations. As there cannot be a "unity," it is proposed that there shall be a "duality;" in other words, that the states of Germany, instead of being concentrated under one head, shall form what astronomers call a binary system, in which the two suns of Austria and Prussia shall revolve around and sustain each other, co-existent and co-equal. The learned professors of the universities, who occupy the high places, both of government and of journalism, are debating upon the wisdom and practicability of a reconstruction of Germany on this basis; but at present the idea does not appear to afford much satisfaction to either of the high belligerents, who, for the last two years, have kept central Europe on the war-footing. By such an arrangement, Austria would lose the undivided headship of Germany, which she has long nominally enjoyed; and Prussia would be obliged to abate the high pretensions which the King and her people have alike put forth. Neither seems in the humour to make the sacrifice of honour and dignity which this would involve; and the "duality" of Germany threatens to be as difficult a matter to bring about as its "unity." Since the subject was first broached, the partisans of the four Kings of Germany, namely, those of Saxony, Hanover, Wurtemburg, and Bavaria, who consider it by no means necessary that their potentates should be extinguished, either in the unity or in the duality of the Fatherland, have suggested another arrangement. "It is likely," says a recent letter from Munich, "that Bavaria and Wurtemburg will join, not precisely in opposing Prussia and Austria, but in endeavouring to diminish the apprehended evil of the rival supremacy, by seeking to obtain a share of it, or rather to divide the power into thirds, and thus convert the dualism into what is termed a '*trias*;' the third portion to be composed of the four kingdoms." So many are the difficulties which the ambition of the King of Prussia has called into existence, that any arrangement seems equally impracticable. In the meantime, it is matter for rejoicing that the two great rivals have begun to disarm. Both states have issued orders for a general reduction of troops to the effective numbers previous to the last war-panic, when Prussia called out her *landwehr*; and Prussia has ordered the disbanding of the second class of the *landwehr* to be completed by the 23rd instant, when the disbanding of the first class will commence. Before New Year's Day, it is anticipated that nearly the whole of this formidable militia will have returned to their homes. The Free Conferences, which open at Dresden on Monday next, and which, in all probability, unless some unforeseen accident bring them prematurely to a close, will continue for several months, will thus be carried on under better auspices than if each of the disputants had his armies on the war-footing. This is the most hopeful feature of the present state of the German controversy, and proves so considerable an abatement of former jealousies and mistrust of the rival powers, as to encourage the expectation, that Kings and people, being alike weary of this long and suicidal contest, will ultimately agree to some practicable scheme by which they may live together in harmony.

MR. FILLMORE'S first message to Congress has excited much attention, both with a view to ascertain the character of the man and the nature of his policy. We regret to say that our conclusions, after a diligent examination, are unfavourable on both points. His foreign policy is to preserve peace and maintain the dignity of the United States, and his language and conduct on this point are worthy of our respect. But there is a quality in the speech, which, probably, recommends it to his countrymen, that is derogatory to his dignity and character. Placed by the accident of General Taylor's death in his present exalted position, he has sought to recommend himself to his countrymen by a great variety of small bribes to particular classes of the people. To the Fugitive Slave Bill he adheres with more pertinacity than justice, to gratify the South; and he recommends an increase and an alteration of import duties, to please the North. He is a professed friend to the labourers in California, where he proposes to protect them against capitalists; and he is to tax them throughout the Union on their clothing, their tools, and their luxuries, to enrich the other class. To compensate the farmers, apparently, for the duties he proposes to lay on them, in order to promote manufactures, he is to procure guano from Peru at a cheap rate, and to provide them a chemical lecturer and an office of instruction to teach them how to improve their cultivation. For the commercial classes, he is to make canals and harbours; and for every class, not trusting them to their own exertions, the Government is to do something to promote their prosperity. This astonishes us, as much for its violation of just principles, as its application to a people renowned for the electric telegraph and steam navigation. For petty and minute expedients, intended, apparently, to propitiate the several interests of the State, and gain popularity, it is the most remarkable Message that ever proceeded from one of Washington's successors. It makes us conclude that Mr. Fillmore is a far better lawyer than a politician. He has certainly not mastered the great social problem of the day; and his adoption of the worn-out system of Protection is alike derogatory to his capacity as a man and a ruler.

IMPERIAL PARLIAMENT.

Tuesday last being the day to which Parliament stood prorogued, the House met at three o'clock, when the Lord Chancellor took his seat on the woolsack; in the House of Lords, accompanied by Lord Monteagle and Lord Stanley of Alderley, the other commissioners appointed for the occasion. The House of Commons having been summoned in the usual form, and being in attendance by their officers, the commission was read by Mr. Rose, one of the clerks of the House of Lords. The Lord Chancellor then read the Royal proclamation, declaring Parliament to be further prorogued to Tuesday, the 4th February, when both Houses will meet for the despatch of business.

POSTSCRIPT

PAPAL AGGRESSION.

THE CUMBERLAND COUNTY MEETING was held on Wednesday, at Carlisle. 2000 persons were present. The High Sheriff, Thomas Salkeld, Esq., presided. Mr. Hasell, of Dalemain, moved an address to the Queen. Mr. Irisco seconded. Mr. P. H. Howard, M.P., a Roman Catholic, moved an amendment:—"That full religious liberty is the birthright of every Englishman, and that any legislative interference with the spiritual government of an unendowed church, which claims nothing from the State but toleration, is alike impolitic and unjust." Mr. Howard defended the Catholics from the imputation of being the foes of civil and religious liberty. Mr. M'Gibbon, manufacturer, seconded the amendment, which, after some discussion, was supported by about 100 hands, and the original motion was carried by a large majority

A large meeting of inhabitants of St. Luke's, Chelsea, which was held on Thursday night, adopted an address to the Archbishop of Canterbury and to the Bishop of London; and a permanent committee was appointed to act in co-operation with the metropolitan committee, so as to render the power of the laity more effective in preserving the purity of our Protestant religion

One of the largest meetings ever held in Bath took place on Thursday at the Upper Assembly-Rooms in that city, under the presidency of Lord Ashley, M.P. It was composed exclusively of laymen of the Church of England, in imitation of the great meeting held in Exeter Hall at the time of the Tavistock Lord Ashley, who was greatly applauded, impressed upon the meeting the necessity of their not allowing the excitement and indignation which had been created by evangelists. The laity should always remember that it was they who had invariably reformed the Church. Already their efforts had not been unsuccessful, since they had resulted in the resignation of the Rev. Mr. Bennett, and the quietude of a private will known in the west of England, to whom he would not allude by name. The meeting was addressed by several gentlemen, and resolutions were passed unanimously condemning the Papal aggression and Tractarianism, and memorials to her Majesty and to his Grace the Archbishop of Canterbury were adopted by acclamation.

A MEETING OF THE COUNTY OF NOTTINGHAM, on the Papal aggression, has been convened for the 2nd of January.

MONSTER SURREY MEETING was held at Usk on Wednesday. There was a very large attendance of the leading persons residing in the neighbourhood, and resolutions and addresses, similar in spirit to most of those recently adopted at various meetings throughout the country, were agreed to.

The Lamerick Chronicle says:—"Last Sabbath, the officer in command of the Roman Catholic soldiers of the 1st Royals, at Rathkeale, was obliged, for the fifth time, to withdraw his military from the chapel, in consequence of the political nature of the observations made by the priest."

PLATE ROBBERY IN THE STRAND.—At the Central Criminal Court, yesterday (Friday), Charles Clinton, aged 17; Daniel John Shew, aged 34; James Badcock, aged 19; John Gardener, aged 38; and George Buncher, were put upon trial, before Mr. Justice Wightman, for burglariously entering into, and stealing out of, the premises of Mr. Thomas Clapham and another, in the Strand, plate to the amount of £1500; and Mary Ann Buncher and Mary Ann Cheveneau were charged with harbouring the prisoner Buncher and Gardener, after they had committed the robbery. Clinton pleaded Guilty. The same evidence was given as that adduced before the police-magistrate a few weeks ago, and which we noticed at the time. The learned Judge, in summing up, referred to the evidence, and observed, that although, undoubtedly, there was a good deal of suspicion in the matter, it appeared to him that the legal evidence was not sufficient to justify a conviction. If the jury entertained the same opinion, it would be unnecessary to proceed further with the matter.—The Jury returned a verdict of "Not Guilty."—The prisoner Clinton, who had pleaded guilty, was sentenced to be transported for twenty years.

THE DAY (Saturday) being St Thomas's Day, the election for common-councilmen in the City takes place, according to annual custom.

ESTABLISHMENT OF STEAM COMMUNICATION WITH BRAZIL.—Her Majesty's Government have concluded a contract with the Royal Mail Steam-Packet Company for the conveyance, by steam-packets, of the mails between this country and Brazil. The first packet under this contract will leave Southampton on the 9th January next, after the arrival in that port of the day mail from London, and the service will thenceforward be continued by packets sailing from Southampton monthly, and calling at Lisbon, Madeira, Teneriffe, St. Vincent (Cape de Verds), Pernambuco, and Bahia, on the route to Rio de Janeiro. A branch packet will proceed, on the same arrival at Rio de Janeiro of the packet from England, to Monte Video and Buenos Ayres. The mails for Brazil and the other places mentioned will be made up in London on the morning of the 8th of each month, except when the 8th happens to fall on a Sunday, when the mails will be made up and despatched from London on the morning of the following day.

MUNIFICENT DONATIONS.—On Thursday, at the Court of Common Council, the Lord Mayor announced that Mr. Henry Beaufoy, who had already acted with unparalleled liberality to the great institution of the City of London School, had invested another sum of money, amounting to upwards of £1000, for the establishment of prizes. The Common Council also granted 200 guineas to the Royal Free Hospital, Gray's-inn-road.

LATEST FOREIGN NEWS.

FRANCE.

The accounts of yesterday (Friday) from Paris are taken up chiefly with a speech made by the President of the Republic, on Wednesday evening last, at a dinner given by M. Dupin, the President of the Legislative Assembly, in which Louis Napoleon took occasion to administer a reproof to M. Dupin and his friends, for the display of that private animosity against their opponents which the Government, it is generally considered that Louis Napoleon was quite justified in alluding to the want of union with the Executive, considering that M. Dupin had been so very earnest against him in the Permanent Committee. All the Ministers and Foreign Ambassadors were present, as well as several members of the representative body, on the occasion.

A new Legitimist Committee of twelve has been formed (in the room of the five chosen at Wiesbaden), who are actively engaged in promoting the interests of the Duke of Bordeaux. The Orleanists are much displeased at this political movement, and contemplate the appointment of a committee of their own selection, by way of counteracting the influence of the former.

In consequence of a commission having been appointed to examine all matters bearing upon the metallic currency, it was generally believed that the Government would withdraw gold from circulation.

METROPOLITAN NEWS.

NATIONAL PROVIDENT INSTITUTION.—The fifteenth annual meeting of this society was held at the London Tavern, on Monday; Mr. S. H. Incas in the chair. Mr. Marsh, the secretary, read the report of the directors, which says, "During the past year 1549 policies have been issued, the annual premiums on which amount to the sum of £29,846 3s. 6d.; but in addition to this, proposals for assurance have been declined as ineligible. Large as is the number of policies issued in the past year, it will be seen that it is about 180 short of the number effected in the preceding; but there is no doubt that, but for the great excess of assurance, in 1849, over every former year, was materially contributed to by the alarm on the public mind which the fatal effects of the cholera produced during several months of that period, the number of deaths since the last report has been 731; and the amount of claims arising therefrom, £37,413 12s. 5d.; the former being 28 fewer, and the latter less by £8661 11s. 3d. than last year. The total amount paid to families of deceased members, since the commencement of the institution, including bonuses, is £194,838 6s. 6d. The annual income of the institution is now £179,500 16s. 9d. The accounts for the year ending the 29th of November last have been duly audited. The balance of receipts over the disbursements is £106,826 7s. 6d., increasing the capital stock of the institution at that d te to the sum of £623,869 14s. 7d., which is invested in real and Government securities. After a short conversation, the report was adopted; and the usual business of appointing auditors, &c, for the ensuing year having been transacted, the meeting separated.

ROYAL NAVAL FEMALE SCHOOL.—The examination of the pupils of this institution, previous to the Christmas vacation, took place at the school on Richmond-green, on Tuesday. There was a numerous attendance of the friends of the pupils, and other persons interested in the welfare of the school, amongst whom were Lady W. Pitzroy and the Misses Pitzroy, Lady Young, Lady Bryant and the Misses Bryant, Mrs. D. B Chapman, Mrs. C. Baring Young, &c. The pupils were examined in the various branches of education taught at the school, including Scripture, geography, music (with thorough bass), French, drawing, writing, arithmetic, history, the use of the globes, grammar, economy, &c.; and never on any former occasion did they exhibit more gratifying proof of the sound religious principles inculcated, and of the progress made in the various branches of study pursued at the institution. The examination was in all respects most satisfactory, and gave equal evidence of capacity in the teachers, as of ability and industry on the part of the pupils. Amongst other charitable bequests, the late Miss Kennet, of Montpelier-square, Knightsbridge, has left £50 to the Royal Naval Female School

AID TO THE INDIGENT IN ST. ANDREW'S, HOLBORN.—A meeting of gent emen connected with this parish was held on Monday evening, at the upper room, St. Andrew's-court, for the purpose of establishing a Parochial Visiting Society, having for its object the relief of the necessities of the poor and the improvement of their social, moral, and religious condition. The Rev. J. J. Toogood presided. The minutes of the preliminary meeting having been read, the chairman opened the proceedings by expressing the anxiety he felt to obtain the co-operation of his parishioners in visiting and assisting the poor inhabitants of that populous parish. He proposed that a society should be formed, to be conducted in accordance with the rules of the Metropolitan District Society, the managers and visitors being lay members of the Church of England, but relief being administered to all, without reference to religious persuasion. Messrs. Ascroft, Elder, Grover, J. R. Taylor, and other gentlemen expressed their hearty approbation of the objects contemplated by the proposed society, and a committee was appointed and subscriptions entered into for the purpose of carrying them into effect

ROMANISING PRACTICES IN THE CHURCH OF ENGLAND.—On Thursday evening a very numerous meeting of the lay inhabitants of St. Luke's, Chelsea, was held in the Commercial Hall, King's-r ad, and addresses to the Archbishop of Canterbury and the Bishop of London, deprecatory of Romanising ceremonies, as recently introduced in some of the ch rches and chapels in the service of the Church of England, were unanimously adopted.

ORIENTAL BANK.—On Thursday, the annual meeting of the shareholders in this bank was held at the Banking-house, in Walbrook; H. G. Gordon, Esq., in the chair; when a dividend of 7 per cent. was declared, and £4000 carried to the reserve fund, which now amounts to £112,000, in addition to about £50,000 paid-up capital. Resolutions were also carried for amalgamating the Royal Ceylon Bank with this company.

REPEAL OF THE WINDOW TAX.—A meeting of deputations from the various metropolitan parishes was held at the Court-house, Marylebone, on Wednesday evening, for the purpose of organising measures for a general agitation to obtain a total and immediate repeal of the window tax—Mr. J. A. Nicholay presiding—when resolutions to the following effect were unanimously carried:—That, in accordance with the resolution carried unanimously, December 4, 1850, this meeting do pledge itself to use every possible means to obtain a total and immediate repeal of the window duty, a tax not only oppressive and unfair, but degrading to the morals and sanitary condition of the working classes; and that it is desirable that the deputation from each of the metropolitan parishes do wait upon the Chancellor of the Exchequer as soon as possible after Christmas to urge the total and unconditional repeal of the tax.

IRISH CHURCH MISSIONS.—A special meeting of the Society for Missions to the Roman Catholics of Ireland, in connexion with the Established Church, was held in Exeter Hall, on Tuesday; the Duke of Manchester in the chair. The area of the great hall was densely crowded on the occasion, chiefly by ladies. The principal speakers were the Rev. A. R. C. Dallas, the Rev. John Greig, of Trinity Church, Dublin; and the Rev. Dr. M'Neile, of Liverpool. The two former speakers detailed the results of their recent visits on a tour they had made to the Society's missions in Connemara, first in the course of last summer, and again a few weeks ago; from which it appeared that nearly 3000 persons had been added to the number of the Protestant readers, who had of late years become instructed in the Scripture readers, who had of late years become instructed in the Scriptures, and had renounced the errors of Romanism. The speech of Dr. M'Neile was chiefly directed to the question of the Papal aggression, and he proposed, amidst the cheers of the meeting, as a means of meeting the Pope's bull, that the College of Maynooth should be instantly disendowed, and all money grants withdrawn from the Romish Church in the colonies and elsewhere; and that a total abjuration of the Pope of Rome ought to be a *sine qua non* for election to any office of trust or power under the Crown of England. A liberal collection followed at the close of the meeting.

SOCIETY FOR IMPROVING THE CONDITION OF THE INSANE.—The first meeting for the season of this society took place on the 18th inst., at the residence of the treasurer, 26, Carendishsquare, when a paper was read detailing a remarkable case of cure of insanity, caused by tapeworm, by the use of kous-u. The society awards annual prizes for the best essays on subjects named by them, and also presents to the attendants who take care for long and confidence and best conduct. The Right Hon. the Earl of Shaftesbury is president, and Sir Alexander Morison, M.D., treasurer.

SMITHFIELD MARKET.—On Wednesday night, a meeting of butchers and others connected with the trade of Smithfield Market took place at Farringdon Hall, Snow-hill, to take into consideration the proposed bill which the Corporation have intimated their intention to inflict upon the trade in connexion with the markets of Smithfield when enlarged according to the corporate plan Mr. C. Pearson, with Deputies Bedford, Hicks, and several Common Councilmen, were present. After a few preliminary remarks from the chairman, he introduced Mr C. Pearson, who said he felt the greatest interest in the proposed extension of the market by the Corporation, who were desirous to do all they could to meet the wants and wishes of the public, and with respect to which he felt that those who objected to the existing market had not fairly considered such propositions As to the sanitary part of the question, he thought that would be improved in the proposed alterations. Better arrangements were proposed for the management of the market, for driving and getting rid of the alleged cruelties. In conclusion, he expressed his opinion that nothing could be better than the proposed enlarged market for the sale of live and dead cattle. Other gentlemen addressed the meeting, after which a vote of thanks to Mr. Pearson, and also to the chairman, the meeting separated.

POSTAGE OF LETTERS.—A very large number of letters are collected all over the kingdom by the country postmen on their route from village receiving-houses, with letter-bags to the chief post-offices in towns. These letters are collected from houses, and all the receiving-houses in villages, situated at a distance from any letter receiving-office; and by a late regulation all such collected letters were to be pre-paid by stamps. This regulation has been found so inconvenient to the public who live at a distance from towns, that the Postmaster-General has just issued instructions that the country postmen shall, if required, take the postage of such letters in money.

DEPARTURE OF FEMALE EMIGRANTS.—On Saturday, forty-six young females, whose ages varied from sixteen to twenty-six, left the Emigrants' Home, in Halton-garden, where they had been domiciled for some weeks past, since their selection from a great number of females who had presented themselves as candidates for admission to the excellent institution of the "Female Emigration Fund," for which object, it will be in the recollection of our readers, public subscriptions were, a few months since on the plan suggested by the Hon. Sidney Herbert, M.P., so handsomely responded to. The forty-six females in question were embarked on board the *Gaston*, lying in the basin of the London Docks, which will immediately sail for the Cape of Good Hope, where the committee have made every arrangement for their immediate settlement on their arrival.

SUICIDE OF MR. GEORGE SPENCE, Q.C., OF THE CHANCERY BAR.—On Monday, Mr. Wakley, M.P., coroner for Middlesex, and a jury of highly-respectable inhabitants of the parish of Paddington, assembled at the residence of the late Mr. George Spence, Q.C., in Upper Harley-street, to inquire into the circumstances attending the death of that gentleman. The deceased, who was 63 years of age, had been in a desponding, low state of mind for some time past. Dr. F. W. Mackenzie said, on Saturday last the gentleman in a state of collapse, with wounds of an incised character on both sides of the neck, on the thigh, and on both wrists. The chief hæmorrhage was from the wounds in the neck. The deceased was rational and collected when witness saw him. He said he had been in a very despondingstate previously, and had indicted the wounds upon himself while in a fit of despondency. He added that it was useless to adopt any means to save him, as he felt his life could not be preserved. Witness did all that was necessary, and remained with the deceased until Mr. Squibb arrived. Mr. George James Squibb, surgeon, said he saw the deceased between three and four o'clock on Tuesday morning. He was then in a state of extreme depression, arising from excessive hæmorrhage. On seeing witness, the deceased said, "You see what a dreadful thing I have done. I am pleased I have been punished in this world, and I hope I shall be forgiven." Time had ceased never rallied, and died on Thursday from exhaustion and loss of blood The jury returned a verdict to the following effect:—"That the death of the said George Spence was caused by exhaustion arising from loss of blood, by and from certain wounds in his neck and divers parts of his body; and that the said wounds were inflicted by himself while in an unsound state of mind." The deceased was very much respected at the bar and in his private circle. He has left one son.

ACCIDENT AND LOSS OF LIFE.—Shortly after eleven o'clock on Monday morning, the neighbourhood of Great Scotland-yard, Hungerford-market, was the scene of an accident, attended by the loss of two lives. At the same time, a great deal has been constructing, which opens in Middle Scotland yard, and extends some distance into the river Thames, near Nort-umberland Wharf. At the usual hour in the morning the various men were at work in the said continued at their respective departments, when the tide came in a-head of the shaft leading into the sewer. He was taken out almost exhausted, and conveyed to the hospital, but no fatal injury is apprehended. Three or four other persons, on hearing the rush of the water into the sewer, would not be prevented by a ladder, succeeded in making a retreat just in time to avoid being drowned The whole of the men were actively engaged during Monday afternoon in pumping the water out of the sewer, and between four and five o'clock they succeeded in clearing the immense subterranean passage of the principal portion of its contents, when they beheld the lifeless bodies of two poor fellows who had been engaged in forming the brickwork at the entrance. Their names were Edward Corman and Frederick Country Elliott. The former was a bricklayer, who resided in Fox-court, Gray's-inn-lane; and the latter a labourer. One has left a widow and three children totally unprovided for; and the other, it is supposed, has left a widow and four children and two pennilies. The two bodies were removed to St. Martin's Workhouse, to await a coroner's inquest. The formation of this sewer has been for some weeks in operation, and when the accident occurred was nearly completed. A considerable gins of considerable power was erected on the bank of the river for the purpose of pumping out the sewage water coming down the drains, so as to prevent it from interfering with the brickwork of the sewer under the bed of the river's edge but, a canal was made from the high water to the low water mark, and up that canal the tide flowed, as a matter of course, more rapidly. The workmen went down as usual after breakfast to resume their labours, which was to connect the sewers, and to receive the contents of both when they could not otherwise be carried off; and while so employed, about eleven o'clock, they suddenly found the tide rushing in upon them at a rapid rate. The works are carried on by Messrs. Humphreys and Clark, the contractors, under the Board of Works, and are constructed for the purpose of connecting two sewers, one coming from Parliament-street, and the other from Whitehall, through Great Scotland-yard. The object of constructing those sewers, and making them under the river's edge at the bottom of Northumberland-street, was to prevent the Westminster sewers, heretofore discharged in the vicinity of the New Houses of Parliament (and so much complained of by members for the last two sessions), from contaminating the atmosphere in and around the New Palace; and to do this it was necessary to reconstruct the sewer coming down Whitehall and Parliament-street, and discharging itself in the Westminster main sewer, and make it meet at a point at the bottom of Northumberland-street, where the new Westminster sewer was intended to discharge itself. Respecting the origin of the disaster, it has been ascertained that it was owing entirely to the spring tides, which frequently occur at this season of the year. Every precaution had, it appeared, been taken to guard against such a catastrophe; extra banks had been made at the end of the sewer to keep the water out, but, notwithstanding, the tide rose so high as to flood the entire arch.

MURDEROUS ATTACK AND STREET ROBBERY.

At Marlborough-street, on Thursday, William Thompson, who described himself as a cabman, was brought before Mr. Bingham, charged with the following daring street robbery.

The prosecutor, Mr. Adolphus Dubois, dentist, 65, Prince's-street, Leicestersquare, deposed that on the previous night, about nine o'clock, he was proceeding along Upper Norton-street, when suddenly from a door-way three men, one of whom was the prisoner, rushed upon him; and the prisoner came in front of him, and passed some kind of an instrument round his neck, and twisted it. Witness then called out, and the prisoner twisted it tighter, the other men at the time calling out, "Give it him." The prisoner suddenly let go his hold, and he (witness) called out "Murder" and "Police." The other two men, who are not in custody, then came forward and held his hands down, while the prisoner forcibly tore his coat open, and snatched his watch and chain from his waistcoat pocket. The two men then ran away, and the prisoner gave the instrument to another man, and witness became unconscious. When prosecutor came to himself, he found his coat torn and his watch and chain gone. The watch and chain produced were his property. Witness added, that he was still suffering from the effects of the injuries that he had experienced, and his throat was much swollen in consequence.

Mr. John Tanlag, 23, Charles-street, Middlesex Hospital, stated that about a quarter-past nine last night he was in Upper Norton-street with a friend, when in an instant, opposite to where he was walking three or four individuals, one of the most immediately after he heard a cry of "Murder" and "Police," and then saw two men run down the street, and the prisoner crossed over towards where he was standing. Witness's friend then called out "Here is one of them," and witness caught hold of him by the collar. Witness held the prisoner till a police-constable came and took him into custody. They then walked over to the prosecutor, who was about forty yards from them; and he (prosecutor), on seeing him (prisoner), recognised him as the man who had attempted to strangle him. A female deposed that she resided opposite to where the prosecutor was living, and handed to the constable the watch and chain produced, which she said she had picked up in the area of her house, close to where the prisoner was stopped

Matilda Carrell said, she lived at 38, Upper Norton-street. About 9 o'clock she and her family were at supper in the parlour, when she heard the cries of "Murder" and "Police." She ran to the door, and on the step of the next house she saw three men, who were holding the prosecutor, and she heard one say, "Give it him." "Do for him." She then saw the prisoner put his hand through the railing of the area, and she heard something drop on the stones. She went out and saw the son what it was, and on the stones she found the watch and chain produced.

White, 33 E, stated that he was in Norton-street, when he heard the cries of "Murder" and "Police," and proceeded to the spot to see the prosecutor standing against the railings of No. 38, in a state of great excitement. On speaking to him, he complained that he had been robbed and almost murdered. Witness then crossed over to where the second witness was standing, and took the prisoner into custody.

The prisoner, who is supposed to belong to the gang who attacked Mr. Cureton, said he was perfectly innocent of the offence, and was remanded until Monday next.

ENCOUNTER WITH BURGLARS.—On Thursday morning, a communication, the full particulars of which are not allowed at present, for obvious reasons, to transpire, was received by the Commissioners of Police at Scotland-yard, of a rencontre between the police and some desperate burglars. It appears that the police had received into licence of an intended burglary in Kent, and a party proceeded to the house indicated in the vicinity of Lewisham and Blackheath, and early in the morning perceived four men in a light chaise cart. The officers challenged the parties to surrender, and stopped the horse; on which two of the men presented pistols at the officers, who, not being adequately armed, were compelled in order to allow the thieves to escape, but kept possession of the cart, which contained housebreaking implements of the best description. It is said that the thieves form part of what is termed the "Surrey gang."

MODE OF DELIVERY OF LETTERS AND NEWSPAPERS IN THE COUNTRY Several complaints having been made to the Postmaster-General by certain parties against an early delivery of letters and newspapers in the country on a Sunday morning, the Postmaster-General, the Marquis of Clanricarde, has given notice on Saturday to the different post-masters, sub-post-masters, and letter receivers throughout the United Kingdom, that those persons who do not wish to receive their correspondence or newspapers on a Sunday morning, need only give notice to the effect that they are to be delivered in the former way on the Monday. Any party giving such notice, which is to stand imperative for three months, cannot, under any emergency, obtain their letters and newspapers till the regular delivery on the Monday.

FIRE AT BERMONDSEY.—On Wednesday, between five and six o'clock, a fire broke out in the Rose and Crown Tavern, Salisbury-lane, Bermondsey-wall, which was attended with a serious destruction of property. The premises belonged to Mr Ladd, a licensed victualler, and, owing to the inflammable character of the stock in trade, the flames travelled with such rapidity, that the various inmates had the greatest difficulty in effecting a safe retreat. The engines promptly attended, but not before the flames had seized upon every part of the premises. The engines were worked with full vigour for some hours, but the flames were not subdued until nearly everything on the premises was destroyed, and the building ruined The total loss, it is believed, will exceed £1500. The sufferer was insured in the Monarch fire-office.

FALLING OF A PORTION OF THE KING'S-CROSS TUNNEL.—On Monday afternoon, shortly after three o'clock, an accident of a fatal character occurred at the terminus of the Great Northern Railway, at King's-cross. A large body of navvies and other workmen have been for some little time engaged in excavating a tunnel, which is to pass from the eastern side of Maiden-lane-bridge, under the Regent's Canal, into the permanent station on the sites of the late London Fever and Small-pox Hospitals, at King's-cross. These men are in the employ of Mr Hodge, the sub-contractor to Messrs. Jay, the contractors for the terminus, and at the time mentioned the miners had returned from their dinner meal, and were at work in groups in various parts of the tunnel. One group of miners, headed by a man named Abel Wynne, were at work in the tunnel about forty yards from its mouth, and were engaged in making ready for what is technically termed the "end," a portion of timber used in supporting the roof before new work is introduced. He had just exclaimed, "Come, my men, we must pitch into this work, and get 'the cill' in," and had made one or two strokes with his pick, in conjunction with a man named Samuel Edwards, two stones of a large quantity of earth gave way, and fell upon them and other workmen. An alarm was instantly raised, and after some delay the men were dug out, when it was found that the poor man Wynne had his head crushed in a frightful manner. He was conveyed to Randall's Cottage, near Randall's tile kilns, in Maiden-lane, but life was quite extinct. The other men were but slightly injured. No cause can be assigned for the falling of the earth.

BIRTHS AND DEATHS.—Births registered in the week ending Saturday, December 14—males, 728; females, 703: total, 1431. Deaths during the same period—males, 543; females, 547: total, 1090. This return shows that the mortality of London, which in the last week of November declined to the desirable rate of 1000 in the week, rose to 1094, last week, and that the number of deaths registered being 1090, greater than that of any corresponding week in the ten years 1840-9, with four exceptions—namely, in 1844 when a week of unusually low temperature (the mean not exceeding 28 was fatal to 1291 persons; in 1846, when the deaths were 1163, that week being also marked by low temperature, 1847, when the deaths rose to 2416, at that time influenza being epidemic; and in 1849, when the deaths were also prevailing to some extent, and cholera having appeared. Last week has carried off an unusual number of aged persons (those of sixty years and upwards); and the increase over the previous return is principally occasioned by bronchitis and pneumonia, or inflammation of the lungs. In the last three weeks the increase of bronchitis appears from the numbers returned as follows:—64, 88, 114; that of pneumonia is shown by 67, 86, 133, whilst the mortality from phthisis in the same periods has been more uniform, namely, 112, 119, and 116 deaths. The greater activity of small-pox, lately, has been noticed; in the present return it numbers 24 fatal cases (nearly the same as in the preceding), whilst measles has carried off 20 children, scarlatina 29, hooping-cough 42, croup 12, and typhus 37. From diarrhœa there were only 10 deaths; two, caused by cholera, are recorded thus:—In 13, Clarke's-buildings, on the 6th December, the daughter of a costermonger, aged 3 years, died of "bilious cholera (24 hours), convulsions (2 hours)." In West London, at 16, Dean-street, St. Andrew's, on 9th December, the daughter of a laundary, aged 15 years, died of "English cholera (30 hours)." As described by the registrar, "the street is narrow and not very clean." In connexion with various deaths from scarlatina and typhus, the registrars are careful to mention nuisances to which the sufferers have been exposed: in one instance, a large open sewer runs through the floor, which the inmates of the house find it necessary to cover with sawdust; in another, "an open sewer behind the house;" in a third, "offensive effluvia from cesspools;" and in a fourth, a drain "offensive in the extreme"—decked with, and to the extent, the persons who live there cannot suffer the door to remain open, and frequently the head of the family is seized with vomiting before leaving for his work in the morning.

METEOROLOGICAL OBSERVATIONS.—The mean daily reading of the barometer at the Royal Observatory, Greenwich, was highest on Sunday, when it was 30.232 in.; it was also above 30 in. on the two following days. The mean of the week was 29.935 in. The temperature was lowest on Tuesday, when the daily mean was 32.8°, which is less by 6° than the average of the same day in seven years. It rose on Thursday, Friday, and Saturday, when the mean was about 46°, or 9° deg. above the average. The mean of those whose week was 41 deg. The wind was, for the most part, in the south-east on the first four days, and in the south-west for the rest of the week.

COUNTRY ROAD SCENE IN WINTER.—DRAWN BY FOSTER.

Bare the branches of the trees,
  Save the snow that serves for leaves;
In the wind they seem to freeze,
  But appearance still deceives.
They rejoice in their capotes,
Warm as white are their great-coats.

Warm as is the coachman's there,
  Who, on coach-box mounted high,
Wields the reins with ease and cheer,
  And into the town hard by
Speeds his steeds, that gaily go,
Caring nor for wind nor snow.

Less care they who crowd the roof—
  Happy schoolboys, overglad;
To the weather Christmas-proof;
  Laughing, shouting, almost mad!
Thoughts of home and merry times
Sing within their hearts, like chimes.

Hears their shout, with answering joy,
  Carrier, looking from his cart;
Once he was himself a boy,
  And is yet one in his heart.

Willing, then, he turns aside—
They may pass him in their pride.

Dull to them the railway train,
  Sloping bank and tunnel dim;
Now are they set free again,
  And in air their senses swim.
Each upon his coach-top throne;
Each a king, yet not alone.

Social monarchs! friendly crew!
  What he gives, that each receives;
When shall men such love renew,
  Free from all that now aggrieves,
And restore the old and sage,
Childhood's ever golden age? H.

THE CHRISTMAS PARCELS TRAIN.

WITH AN ILLUSTRATION BY DUNCAN.

Bless the railways—what a bustle!
  Why such faces—wild yet cheerful?
Wherefore do the people tuzzle—
  Strive the hopeful with the fearful?
Has the Parcels Train arrived?
—Have you Michaelmas survived?
See you not it has? What else
The traffic and the strife compels?
What brings these oysters row on row,
That marvellous pile, that wondrous show,
Those countless scores of ducks and geese,
Those pheasants, turkeys—prophecies
Of coming hospitalities?
That Train, like a chest, so titanic in size,
Is a shrine that holds Gifts for both simple and wise.
It took them, to give them; that greatest and least,
The absent and present, might join in the feast.
From the top of the train, box, band-box, and hamper
Tumble down, toss about; while with scramble and scamper,
Here and there, he and she seize on, as they may,
This parcel or that, and with haste bear away.

O Christmas! O Christmas! thy votaries here
Are jocund, yet anxious,—and curious, I fear.
Each daughter of Eve with wonder would guess
Each parcel's worth from its heaviness;
What it holds, forthwith on the spot she would know
But wait she must, and home must go—
There box and bandbox, and hamper and all,
Will be rummaged, I trow, by big and by small—
By Peter and Thomas, by Philip and Paul;
By Grace of the parlour, and Bet of the hall.
And father and mother, grandpa and grandma,
Great aunt and kind cousin, et cetera—
The donors of all sorts of Christmas cheer—
Be named with a blessing, perhaps with a tear,
For all the good things these packets contain,
To the station now brought by the Parcels Train.

On Christmas Eve and Christmas Day,
  Both after dinner and before;
And on, on, on to New Year's Day,
  And on to Twelfth Night; o'er and o'er,
Those sacred names of kindred, friend,
  And old acquaintance drunk shall be,
As those who from afar did send
  Their offerings to Festivity—
The banquets of this happy tide!
Thereat their spirits shall preside;
And ever as the cup they drain,
The guests shall thank the *Parcels Train*. D.

A CHRISTMAS TRAIN, TAKEN ON THE SOUTH WALES RAILWAY, BETWEEN CARDIFF AND NEWPORT.

GREAT INDUSTRIAL EXHIBITION OF 1851.

The attractions of the Great Crystal Palace increase as its advance towards a complete and perfect structure becomes more evident. The whole of the transept ribs having been fixed (our readers may remember that the first pair was elevated on the 4th instant, and the last pair was safely adjusted by the 12th instant), the work at the north-eastern and western sides has lately been wonderfully progressed with. Upwards of 160,000 square feet of glazing has been set within the last ten days; and the whole roof, as far as it stands, would have been covered, but for certain interruptions, over which the contractors had no control. The western end, indeed, may be said to be complete save in the glazing and face work. The framework and flooring of the galleries has been expeditiously proceeded with, as also the cross galleries which traverse the building in several parts; wrought-iron tie-rods are inserted diagonally between the columns supporting the galleries, as an additional strength.

The ornamentation of the interior is left entirely to the taste and judgment of Mr. Owen Jones; and our readers may be enabled to judge from his clear and ably written paper, from which we have extracted that gentleman's arguments for the colours he has adopted, the ability and knowledge which are attached to his present arrangements. Mr. Owen Jones read his paper on the proposed decorations for the building on Monday night, to a very full meeting of the Royal Institute of British Architects. He stated the ancient employment of colours in most of the great architectural monuments, and especially alluded to the development of Gothic architecture by their aid. Simple tints were totally inapplicable to the vast building in Hyde Park; and the parti-colouring was alone capable of bringing the interior and its contents into one perfect harmony.

The prevailing colours used in decoration by the ancients were the "primaries," blue, red, and yellow; the "secondaries" appearing very sparingly. This principle is found in the remains of Nineveh, Central America, Egypt, and Greece. In the early manuscripts, and stained glass of the middle ages, the primaries were chiefly used; and the periods marked by the introduction of the secondaries, purple, green, and brown, were those of the decline of art and the incapacity of the artist. The lecturer continued thus:—"In the decoration of the Exhibition Building, I therefore propose to use the colours blue, red, and yellow, in such relative quantities as to neutralize or destroy each other: thus no one colour will be dominant, or fatigue the eye, and all the exhibited objects will assist and be assisted by the colours of the Building itself." And after accounting for the introduction of white, which disperses the harsh antagonism of the "primaries," he observed—"As one of the objects of decorating a building is to increase the effect of light and shade, the best means of using blue, red, and yellow, is to place blue, which retires, on the concave surface: yellow, which advances, on the convex; and red, the colour of the middle distance, on the horizontal planes: the neutral white on the vertical planes. Following out this principle at the building before us, we have red for the undersides of the girders, yellow on the round portions of the columns, blue in the hollows of the capitals. Now it is necessary not only to put the several colours in the right places, but they must also be used in their due proportions to each other: and an examination of the most perfect specimens of harmonious colouring of the ancients will show that the proportion of eight, five, and three has generally obtained—that is to say, that there has been as much blue as the yellow and red put together. Thus the light and the shade are made to balance each other." After other remarks in support of his arrangements, Mr. Jones concluded his very interesting paper with an appeal to his brother architects for a patient and fair appreciation of his efforts, which he confidently hoped, from a long experience, would not disappoint public expectation or prove unworthy of this great occasion.

The French exhibitors ask for a prolongation of time for the delivery at Paris of their contributions. M. Dumas supposed the arrangements till the 20th of Jan., which period is still asserted to be insufficient. At present the Paris manufacturers are busy in executing orders for New Year's Day; and those of the other districts, employed in fancy and delicate wares, object that the freshness and bloom of their productions would be off if they are to be sent months before the opening of the Exhibition. This objection is earnestly made by the silk, ribbon-dyeing, and print trades of Lyons, St. Etienne, Mulhausen, Rouen, Leedan, &c. Similar exhibitions have been made in Switzerland and Germany. As we have previously stated, great apprehension exists respecting the necessity of a sufficient protection for new inventions, and some distinct understanding must be speedily arrived at, or the loss will be great to the Exhibition, from the refusal of various eminent firms to forward specimens of their art and skill. The Central Commission has been deliberating on the incidental expenses of the transport, agency dues &c., of the articles forwarded from France, together with a required sum of £6000 for the purchase of samples of manufactures, machinery, &c., for the public collections of France. The various modes of transport are under consideration, and the ware-rooms at the stations of the French Northern and Havre lines have been officially inspected to ascertain their amount of accommodation.

The official circular respecting the reception of foreign articles at the Building requires them to be delivered at the south side, marked with the name of the country of which they are the produce, &c. Two lists of invoices in the English language of every article to be mentioned in the Catalogue are to be appended. Productions of each country are to be brought into port under the Custom-house officers' examination, and for the officers of the Commission to ascertain their bulk, &c. Agents, &c. must unpack and arrange all articles, and must remove packing-cases at once from the Executive Committee within six days. Every agent, &c. will be provided with a pass-ticket.

The Custom-house regulations require all goods, &c. for the Exhibition to be marked "Goods for the Great Exhibition only," and to be entered separately by a warehousing bill at sight. Packages can be landed by permission from the Registrar, after seeing the bill of lading, with a certificate from the central authority of the country, or the English Executive Committee. The goods may then be forwarded to Hyde Park, with the notes of the weights or measures of goods will be taken by the Registrar, and the conveyance to Hyde-Park. On the arrival of the goods, the note accompanying the conveyance will be returned to the Registrar, who will compare the marks and numbers thereon with the warehousing bill of sight. if found correct, the latter document is to be forwarded to the Comptroller of Warehousing Accounts, Hyde-Park, and the re-lading attached to the bill as a discharge.

In the official memoranda relative to the catalogue, the instructions for facilitating its compilation require exhibitors to fill up blank forms, obtainable from the local committees, with particulars of exhibitors' name, streame, address, and capacity in which each one appears, whether as producer, designer, or proprietor, &c., with the name and description of articles exhibited. It is also intimated that information as to the uses, consumption, excellence, price, and locality of the raw materials and processes, and as to the novelty, importance, novelty, use, superior execution, or other particular features in machinery, and manufactures, and fine arts would be desirable, as naturally increasing the value and practical utility of the catalogue. Two English copies of the exhibitor's descriptions are to be forwarded to Mr. D. Wyatt, on or before Jan. 31. Illustrations of articles may be inserted in the large catalogue, at the expense of exhibitors, after approval by the Executive Committee. Communications to Mr. Wyatt, at the Hyde-Park Building, must in these cases be immediately made. Exhibitors desirous that the description, &c. of their contributions should appear in the French and German editions, must append a French and German description, made out as above declared.

Application is to be made to the Commissioners for the admission of wines, the produce of Portugal, to the Exhibition. It will certainly, we presume, be refused. A Central Committee has at last been appointed, of manufacturers, agriculturists, and others.

The Spanish Central Committee has been zealously assisted by the Government in their endeavours to procure a full representation of Spanish produce, especially in woollen and leathern manufactures.

Registration of designs to be exhibited may be, as we have announced, effected at the Building in Hyde Park, on and after the 1st February next. Designs for ornamenting articles of metal, wood, glass, earthenware, ivory, *papier maché*, paper-hangings, carpets, floor-cloths, shawls, yarn, thread or warp, woven fabrics, and lace, &c., patterns for shawls, &c., and models to some purpose of utility, are here included. The right of the proprietor is protected by a penalty of from £5 to £30 for each offence, to be recovered in the Superior Courts, or by summary proceeding before two magistrates. Copies of the designs or any specimen of manufacture, as in woven fabrics, must be prepared according to rules obtainable from the Designs Office, at Somerset-place, Somset House, or from the Executive Committee of the Exhibition.

The Metropolitan Committee of the Chairman of Sections, at their last meeting, arranged the vouchers for space into the thirty sections recommended by the Executive Committee to the General Local Committees throughout the kingdom. The amount of space, after considerable discussion, which each section should receive, was also determined. It now remains to pass judgment on the claims of exhibitors organised under the thirty sections, and to allot the amount of space to each exhibitor.

Lord Ashburton took the chair, and the Committee were assisted by Dr. Lyon Playfair and Lieut-Colonel Lyon.

The four great sections are divided into thirty minor classes, by the arrangement issued from the Executive Committee:—

Raw Materials.—1. Mining, Quarrying, Metallurgy and Mineral products. 2 Chemical and Pharmaceutical processes and products. 3. Substances used as food. 4. Vegetable and Animal substances used in manufactures, implements, &c.

Machinery.—5. Machines for direct use. 6. Manufacturing Machines and Tools. 7. Mechanical, Civil Engineering, Architectural, and Building Contrivances. 8. Military Engineering and Naval Architecture, Structures, &c.; Armour, and Accoutrements. 9 Agriculture and Horticultural Implements and Machines. 10. Philosophical Instruments and Manufactures. 11. Miscellaneous Contrivances, including processes depending upon their use, Musical and Acoustical Instruments.

Manufactures.—11. Cotton 12. Woollen 13. Silk and Velvet. 14. Linen. 15. Mixed Fabrics 16. Leather, including Saddlery, Skins, Fur, and Hair. 17. Paper, Printing, and Bookbinding. 18. Printing and Dyeing of woven, spun, felted, and laid Fabrics. 19. Tapestry including Carpets and Floor-Cloths. Lace and Embroidery, Fancy and Industrial Work. 21. Articles of Clothing for immediate personal, or domestic use. 22. Cutlery, Hand Tools, and Surgical Instruments. 23. General Hardware. 24. Working in Precious Metals, Jewellery, and all articles of luxury not included in the other juries. 25. Glass. 26. Ceramic Manufactures—China, Porcelain, Earthenware, &c. 28. Decoration, Furniture, and Upholstery. 27. Manufactures in Mineral Substances, used for building or decorations, as in Marble, Slate, Porphyries, Cements, Artificial Stones, &c. 28. Manufactures from Animal and Vegetable Substances, not being woven, felted, or laid. 29. Miscellaneous Manufactures and Small Ware.

Sculpture.—30 Models and Plastic Art.

Local Committees are requested to mark IN RED INK on *the top of each voucher* which of the thirty divisions the exhibitor wishes his productions to be placed in.

Silk throwing machinery has been offered by the Derby committee, as silk throwing is said to have been first established in Derby

The recommendation from the Leeds committee, that the district productions should be classed in primary groups of particular kinds or distinct textures, and then subdivided into secondary groups, or colours, appears to be discreet. A pattern will be attached to each bundle of woollen goods, to prevent all unnecessary or injurious handling, or unpacking.

Two mechanics of Bolton, one a handloom-weaver, and the other a millwright, have obtained a prize of £5 each for essays on the "Advantages to a working man from visiting the Great Exhibition." Both were offered by Mr. Bridson, the chairman of the Bolton Mechanics' Institution.

Mr. Nicholay, of Oxford-street, will arrange the series of American fairs, partly contributed by the Hudson's Bay Company; the chairman of which, our readers may remember, promised, last year, at the first meeting in the Mansion House respecting the Exhibition, "that the finest beaver that could be obtained in the Company's territories should be forwarded to the Exhibition." Mr. Nicholay also offers to procure a set of the skins of animals of this country, and will be obliged by any fine specimens with which he may be favoured, and which he will dress at his own cost.

From Bristol, we learn that Messrs. Fry and Sons are preparing specimens of their noted manufacture in cocoa and chocolate; and that a large collection of Somersatshire minerals, from the Mendip Hills, together with a variety of agricultural and other machinery, is promised. Various curiosities are also noticeable: one, a case of spectacles, showing improvements in their make and shape, from the time of James I. up to the present day; stained glass, leather, calotype pictures; boots neither sewn, pegged, or fastened with nails; hair-working, wood-carving, achromatic microscopes, agricultural tools and implements; a broad gauge locomotive, composed of more than 3000 pieces; sugar machines for separating syrup and molasses from the crystals of sugar; Somersetshire and Gloucestershire cheese-moulds, in glass, wood, iron, &c.; clocks, a specimen coat, floor-cloths, anatomical figure in ivory, and cushions and cotton cloth manufactured by the native Africans; besides miscellaneous articles of general interest.

A piano, with an octave movement to enable a player to trill with the finger instead of spanning the octave, is offered from Bridgewater; as also a piece of carving in Brazilian oak, with the subject of the Canterbury Pilgrims at the Tabard, &c., with *iber* contributions.

Musical instruments presented by the metro olis will be of the highest character especially pianos and harps. Great satisfaction has been expressed at the addition of the Music Committee to the London representatives

The subscription from Huddersfield will, probably, amount to £1000. There is one "Visiting Club," among several established in the town, where the subscriptions are 4s. per week. Mr. John Gott has given £50 to his men at the Dowlais Iron-works, who are also forming an association for a metropolitan trip in 1851. Mr. Harrison's proposal for a "Mechanics' Home," to which we alluded some weeks back, is likely to be realized. A working-man will be able to secure the amplest accommodation for his wants on the premises; the charge for occupancy of an apartment, it is now decided, will be 1s. 3d. per night.

The military force usually stationed in the metropolis will be strongly increased. All the battalions of the Guards are to be located in London during the season. The police is to be augmented, and application, it is rumoured, has been made to the Royal Commissioners for funds to meet any extra expenses in this department.

The working-men throughout the kingdom will benefit much from the formation of the visiting clubs which have now arisen, and which progress satisfactory in almost every district. Railways have given an impetus to pleasure clubs by their excursion trains; but the desire for recreation and amusement by travelling to and examining the wonders and curiosities of other neighbourhoods, will be largely increased by the accomodation provided for the influx, from all quarters, of working-men and their families in 1851. Local clubs, it is to be remembered, are to be conveyed at a single fare for the journey up and down, when 200 passengers for the journey have been secured. This is fixed by agreement with the Executive Committee; and the proviso that the companies shall not be required to bring up any clubs before the 1st of July can easily be met by proper arrangements with the railway authorities of each district.

Regulations under which a register was opened at the offices of the Executive, for persons disposed to provide accommodation for artisans from the country who may visit the Exhibition, require that the names of persons of good repute only will be received, whose house and accommodation may be officially inspected. Accommodation for married people, for single men, and single women, must be distinct. Lodgings for females must be superintended by a married woman. Prices to be charged must be fixed in every room: a form of application must be obtained from the Executive Committee's offices, filled up and signed, by all desirous to register.

MOHA MUDGAREE;

OR, A REMEDY FOR DISTRACTION OF MIND.

(*Done into English verse from the verbatim translation of Sir W. Jones.*—Vide "Asiatic Researches.")

Restrain, deluded man, thy thirst of wealth,
Repress it with the force of mind and will.
Would'st thou preserve thy spirit in its health,
With noble actions feed it to the till.

Thy wife, thy son, thy daughter—what are they?
The wonders e'en of this world who can tell?
What art thyself? whence com'st thou? Canst thou say?
My brother, ponder, ponder on this well.

Boast not of youth, nor opulence, nor power;
Ere thou canst think, Time snatches these away.
Check these delusions—fancies of an hour—
At Brahma's foot repose thy hopes, and pray.

Like water-drops upon the lotus leaf,
With tremulous motion gliding to and fro,
Is life: the converse of the good is brief—
It is our ship upon the seas below.

With body weak, mouth toothless, hair grown grey,
The staff he leans on shaking in his hand,
Man's thirst of gain survives in his decay,
And would were all earth's wealth at his command.

How quickly are we born, and old and dead!
How short the interval 'twixt death and birth!
The viciousness of nature wide widely spread!
Wherefore, O man! liv'st thou in thoughtless mirth?

Day follows day; eve follows eve; morn, morn;
Springs after springs, winters on winters rise:
Life ever on Time's stream is onward borne;
But mortal expectation never dies.

Beneath the canopy of Heaven to dwell,
Under the shade of some wide-branching tree,
All vain pleasure, worldly joys to quell,
The ground our couch—this, this is to be free!

Love not too fondly woman, kinsman, child,
Nor friend in peace; in war hate not thy foes;
Be equable to all, and gently mild,
Would'st thou attain to Vishnu's calm repose.

The eight primeval mountains and seven seas,
Bramah and Indra, Budra and the Sun,
These are the never-changing—only these;
Not thou, nor I, nor man—wherefore all passion shun.

In thee, in me, in all we see and know,
Their life and breathes a part of Vishnu's soul;
Then love not, hate not, with immoderate glow,
For all things are but parts of One Great Whole.

The boy so long delighteth in his play,
The youth so seeks the maiden of his love,
The old man frets so long his thoughts away,
That there are none to worship Him above.

Ponder, my brother, ponder on this word—
The word of truth, that passes not away;
What hope is there for him, who, having heard,
Will not bow down his head and meekly pray?

The Basilica at Munich.—The Basilica of St. Boniface, commenced at the private cost of King Louis, of Bavaria, in 1835, and well known to all who have since visited Munich, was consecrated on the 24th ult. St. Boniface is built on the model of the church of St. Paul, at Rome, which was burnt fifteen years ago. The entrance front presents an arcade of nine arches, supported by eight columns of limestone and the side walls. The building is constructed mainly of red brick. Three doors of large size (the centre one nearly 30 feet high) are adorned with emblematical carvings by Glink. The interior, which has a length of 262 Bavarian feet and a width of 124 feet, is divided into five aisles by four ranges of columns, each of which is composed of one monolithic shaft for the altar. The centre and principal division is 78 Bavarian feet high; the height of the side aisles is 43 feet. The columns are of pale grey marble: the capitals and bases are white; the floor is open, and the ground formed by the principals and the purlins are painted blue, and powdered with gold stars. The woodwork is of deep red, with gilding. The high altar is approached by a flight of twelve steps. Below the pavement, which is of mosaic work, are formed vaults for the burial of the brethren of the Benedictine convent to which the Basilica is attached. The connection of the buildings is seat on the plan, behind the abside. There is also a small subterranean chapel, in which to celebrate the funeral service. The interior of the church is profusely decorated with frescoes, by Moss. H. Hess and his pupils, who commenced them in 1840. M. Ziebland is the architect by whom this magnificent church for the Roman Catholic religion has been erected; and it is worthy of note, as an evidence of the King's imparhaity, that M. Ziebland is a Protestant.

COURT AND HAUT TON.

THE COURT AT WINDSOR CASTLE.

Her Majesty the Queen and his Royal Highness Prince Albert have dispensed a series of courtly hospita ities during the past week, at Windsor Castle.

On Tuesday last, the Duke and Duchess of Bedford, the Marquis and Marchioness of Westminster and Lady Octavia Grosvenor, the Marquis and Marchioness of Exeter and Lady Mary Cecil, the Earl and Countess Spencer and Lady Georgiana Spencer, and Lord George Lennox arrived at the Castle, on a visit to the Queen and the Prince

On Wednesday, there were the following additions to the Royal circle:—The Marquis of Granby, the Earl and Countess Granville, Lord and Lady Seymour and the Hon. Miss Seymour, and Sir William Gibson Craig, Bart.

On Thursday, a numerous and distinguished circle were honoured with invitations to be present at the second dramatic performance, in the Rubens Room.

The Queen and the Prince, with the youthful members of the Royal family, continue in the enjoyment of excellent health, and have taken their accustomed daily riding and walking exercise.

The Marchioness of Douro has relieved the Viscountess Canning in her duty as Lady in Waiting to the Queen.

His Royal Highness the Duke of Cambridge arrived in town on Monday night from Dublin. On Tuesday morning, his Royal Highness went to Kew, to visit their Royal Highnesses the Duchess of Cambridge and the Hereditary Grand Duchess of Mecklenburg-Strelitz

His Excellency the French Ambassador has left town for Paris. M. Marescalchi will act as *chargé d'affaires* during the absence of his Excellency.

The Duchess of Sutherland, who is staying with the Duke and Duchess of Argyll, at their residence near Edinburgh, is not expected to arrive at Trentham until after the *accouchement* of the Duchess of Argyll, which is daily expected.

We are glad to learn that the health of the Duke of Newcastle has considerably improved, so much so that his Grace is enabled to sit up and transact business.

The Marquis of Lansdowne (Lord President) left town on Wednesday, for his seat, Bowood Park, Wilts.

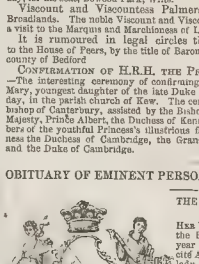
Viscount and Viscountess Palmerston left town on Tuesday for Broadlands. The noble Viscount and Viscountess go to Bowood on Friday, on a visit to the Marquis and Marchioness of Lansdowne.

It is rumoured in legal circles that Baron Parke will be called to the House of Peers, by the title of Baron Ampthill, of Ampthill Park, in the county of Bedford

Confirmation of H.R.H. the Princess Mary of Cambridge.—The interesting ceremony of confirming her Royal Highness the Princess Mary, youngest daughter of the late Duke of Cambridge, took place on Thursday, in the parish church of Kew. The ceremony was performed by the Archbishop of Canterbury, assisted by the Bishop of London, in the presence of her Majesty, Prince Albert, the Duchess of Kent, besides the more immediate members of the youthful Princess's illustrious family, consisting of her Royal Highness the Duchess of Cambridge, the Grand Duchess of Mecklenburg-Strelitz, and the Duke of Cambridge.

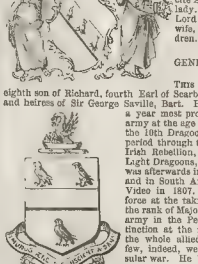
OBITUARY OF EMINENT PERSONS RECENTLY DECEASED.

THE RIGHT HONOURABLE LADY SCARSDALE.



Her Ladyship died on the 16th Inst., at the Hall, Barrow-on-Trent, in the 84th year of her age. She was originally Felicia Mary Josepha de Warines, a Flemish lady. Her husband, Nathaniel, second Lord Scarsdale, of whom she was second wife, died in 1837, leaving several children.

GENERAL THE HON. SIR WILLIAM LUMLEY, G.C.B.



This distinguished cavalry officer was the eighth son of Richard, fourth Earl of Scarborough, by his wife Barbara, sister and heiress of Sir George Saville, Bart. He was born the 25th August, 1769, a year most productive of heroes. He entered the army at the age of eighteen in 1787, as a Cornet in the 10th Dragoons. His services extend from that period through the greater part of his life. In the Irish Rebellion, in 1798, he commanded the 22nd Light Dragoons, and was wounded at Antrim. He was afterwards in Egypt, at the Cape of Good Hope, and in South America, at the capture of Monte Video in 1807. After commanding the advanced force at the taking of Ischia, and after attaining the rank of Major-General, Lumley joined the British army in the Peninsula. He there won great distinction at the first siege of Badajoz, and he led the whole allied cavalry at the battle of Albuera; few, indeed, were more useful during the Peninsular war. He became a General in 1837 He had been previously created a G.C.B., in 1831; and in 1840 he was appointed to the Colonelcy of the 1st Dragoon Guards, removing thither from his prior Colonelcy of the 6th Dragoons. He received a gold medal for Albuera. Sir William Lumley had also been a Groom of the Bedchamber to her Majesty, and in 1842 he was named Extra Groom in Waiting. Sir William married, first, in 1804, Mary, daughter of Thomas Sutherland, Esq., of Ulverston. This lady dying in 1807, he married, secondly, in 1817, Louisa Margaret, widow of Colonel Lynch Cotton. The gallant General died on the 10th Inst., in the 82nd year of his age.

GEORGE SPENCE, ESQ., Q.C.

This eminent and indefatigable member of the Chancery Bar was the son of Mr. Spence, a dentist of high repute in London. He was born in 1786, and was educated at a Scotch University; after graduating there, he became a pupil of the late distinguished lawyer, Mr. John Bell. He was called to the bar by the Honourable Society of the Inner Temple on the 28th of June, 1811; and he soon attained considerable practice in the conveyancing and equity department of the profession. Although not possessed of eloquence, or an impressive delivery Mr. Spence had that painstaking industry and unostentatious sound sense which go far to form a sterling lawyer and a useful advocate. In 1834 Mr. Spence was made a Queen's Counsel, and a Bencher of his inn. A few years ago he was appointed by the Honourable Society of Lincoln's Inn their lecturer on Equity Jurisprudence. As a writer upon Law Mr. Spence had a high and deserved reputation. His work on "The Equitable Jurisdiction of the Court of Chancery," is founded partly on Maddock's "Treatise on the Principles and Practice of the High Court of Chancery;" yet it is, in many important particulars, essentially an original work. This able production, the second volume of which appeared in 1849, has been generally commended and esteemed.

In politics Mr. Spence was a Liberal. During the Reform agitation, he, at a serious expense to himself, unsuccessfully contested Reading for a seat in Parliament. He married the daughter of a solicitor at Liverpool, and by her (who survives him) he leaves three sons. Mr. Spence, while a state of temporary insanity, committed suicide and died on the 12th inst., at his house in Hyde-park-square. His amiability and kindness will long be remembered by the profession; and his melancholy death is most generally deplored.

SIR JOHN MACPHERSON GRANT, BART., OF BALLINDALLOCH AND INVERESHIE.

The Macphersons of Invereshie, of whom the deceased Baronet was the male representative, are the chiefs of a large tribe, which, for ages past, have been distinguished under the name of "Slioch Gillies," and which is composed of many considerable families, not only of the name of Macpherson, but of others, such as the Gillanes, Gillespies, &c.

Sir John was son and heir of Sir George Macpherson, first Baronet, M.P. for Sunderland, who assumed his second name of Grant as heir of provision to his father's maternal uncle, General James Grant, of Ballindalloch. He was born 3rd August, 1804; and married, 7th September, 1836, Marion Helen, eldest daughter of Mungo Nutter Campbell, Esq., of Ballimore, in Argyllshire, by whom he leaves, with other issue, a son and successor, the present Sir George Macpherson Grant, Bart.

Sir John was formerly Secretary of Legation at Lisbon. In 1847 he was appointed one of the Board of Supervision for the Relief of the Poor in Scotland; and, in 1848, was nominated a Deputy-Lieutenant for Elgin. He was also a Deputy-Lieutenant for Banffshire.

J. WILLIAM LILLINGSTON, ESQ., OF BALMACARA HOUSE, LOCHALSH, ROSSSHIRE.

This gentleman, who died on the 3d inst., was a Magistrate and Deputy-Lieutenant for the county of War ick, and took a considerable and active distinction in North Britain, where he resided, by the deep interest he took in the welfare of the peasantry and the smaller tenantry. In the first severe suffering from the potato disease he was twice mentioned in the House of Commons, by Lord John Russell, as a pattern to other landowners in the Highlands and Islands. Miss Sinclair, in her work "Scotland and the Scotch," says much of Mr. Lillingston's exertions to do good.

He was the eldest son of the late A. S. Lillingston, Esq., of Elmdon, Warwickshire, and derived his descent from the ancient family of De Lillingston, of Lillingston, in Oxfordshire, about the time of the Conquest, and subsequently of Lincolnshire and Yorkshire, of which family was Gen. Lillingston, who, with Sir Walter Vane, at their own expense raised the 6th Regiment, in 1673.

Mr. Lillingston married, in 1831, Kathrin Innes Lindsay, great niece and heiress of the late Sir Hugh Innes, Bart., M.P., and by her, who survives, had a son and daughters

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

M. Soyer has taken Gore-house, formerly the residence of the late Lady Blessington, for the six months of the Great Exhibition, at a rent of £600 for that time. It is to be fitted up as an hotel, and the beautiful grounds are to be laid out for entertainments in the style of those afforded to the public at Cremorne.

The Hon. Abbott Laurence, the American Ambassador, was entertained at a public banquet, on Saturday, at the Adelphi Hotel, by the members of the Liverpool American Chamber of Commerce. J. Malcomson, the president of the chamber, presided.

The committee of the Sheffield Freehold Land Society have completed the purchase, for the sum of £4400, of an estate of 31 acres, forming a portion of the large domains of Offley Shore, Esq., which have been brought to the hammer under an order from the Court of Chancery. The land is distant about a mile and a half from the centre of the town.

The entrance to the harbour of Cronstadt (Baltic) is completely blocked up with ice, which shifts with the wind, but does not extend much beyond Cronstadt: thence, seaward, all is clear; but to the eastward all is covered with ice, and impassable.

The *Carlisle Journal* affirms that it has been decided that the tenants of grouse shooting are liable to be assessed for the support of the poor.

It is reported that Sir James Emerson Tennent, late Colonial Secretary at Ceylon, has received an offer of the Governorship of St. Helena, and that Mr. Wodehouse has also received the offer of an appointment, but not in Ceylon.

At a sitting of the Hull Town Council, last week, the previous question was moved and carried on a motion that, in the opinion of the council, it would be impolitic to apply to Parliament for a bill to reduce the water bailiff dues." Notice was then given of the intention to move resolutions authorising the corporation to buy the Hull Docks from the company.

On Saturday week, a meeting of millowners was held in the Town Hall, Halifax, to consider what steps should be taken to ensure greater safety in the management of boilers. The meeting was composed of the leading millowners of the district; and unanimously adopted a memorial to her Majesty's Government, praying for the institution of a government inspection of boilers.

Mr. Walter Baine, of the firm of Baine and Johnstone, one of the first merchants in Greenock, was found dead in bed on Wednesday morning last week.

The inquest on the twelve bodies of the persons killed by the boiler explosion at the mill of Messrs. Firth, at Halifax, terminated, after three days' inquiry, by the return of a verdict of "Manslaughter against Mr. Samuel Firth, one of the partners, and Joseph Hillhead, the engineman." The evidence favoured the conclusion that the boiler was a defective one, and ought to have been discontinued from use.

At Dover, on Tuesday, Mrs. Sophia Jane Jermy, widow of the late Mr. J. Jermy Jermy, who, with his father, was assassinated at Stanfield Hall, by Rush, was married to Mr. Thomas Beever, eldest son of Sir T. B. Beever, Bart., of Haigham Hall, Norfolk.

The chairman of the East India Company, Mr. J. Shepherd, has kindly given Mr. Ward (grandson of the illustrious Nelson) a cadetship, in memory of the important services of England's greatest naval hero.

Cardinal Wiseman has received autograph letters of congratulation from the Emperor of Austria, the King of Bavaria, and the President of the French Republic.

Advices from Buenos Ayres to October 16 confirm the imminent probability of war between that republic and Brazil.

An official census of the State of Massachusetts has just been completed, showing a population of 994,655, being an increase of 256,965 since the last census. This is at the rate of 35 per cent., or more than double the average increase of the five preceding decades.

The Right Hon. Dr. Lushington, Mr. Falconer, and Dr. Twiss, of Doctors' Commons, are appointed arbitrators to determine the boundary between the provinces of Canada and Nova Scotia, which has for some years been in dispute.

Mr. Charles Mills has bestowed an Indian cadetship on one of the sons of the late Rev. Mr. Hollest, whose cruel fate is fresh in the recollection of the public.

Gen. Egerton's gardener, of Eaton Lodge, near Tarporley, in Lancashire, on the 4th inst., gathered a dish of green peas, and on the 6th he got up a dish of new potatoes, all sound and perfectly free from disease. Both were grown in the open air.

On the 7th inst., Captain Binstead, R.N., received a letter from the secretary of the Royal Humane Society, informing him that the Court were pleased to award him the medal for his humane and noble conduct in recently plunging into the river Calder, and saving the life of a beautiful little girl"

On Wednesday, a retired tradesman, named Porter, was killed, while walking in the streets of Preston, by a skip from the upper story of a warehouse falling upon his head, the rope being unsound.

M. Martin d'Auch, the only surviving member of the first Constituent Assembly of the First French Republic, and the only one who, at the oath of the Champ de Mars, after the declaration of the Three Fourths, has since died at Castlenaudary. In David's well-known picture, M. d'Auch is represented with his arms folded on his breast, and reasing to join his colleagues.

The three principal professors of Owen's College, Manchester, have now received their appointments. They are—Mr. A. J. Scott, principal and professor of logic and mental philosophy; Mr. Greenwood, professor of the languages and literature of Greece and Rome and of history; Mr Alexander Sanderson, professor of mathematics and natural philosophy. The former gentlemen are of the University College, London, and Mr. Sanderson is of Queen's College, Cambridge.

The Royal West India Mail Steam-Packet Company will, we understand, be prohibited by the Government from taking passengers and cargo for Lisbon by the Brazilian packets, in order that they may not interfere with the trade of the Peninsular and Oriental Company's steamers. The object of the Brazilian packet sailing at Lisbon is to secure the traffic between Portugal, the Cape Verde Islands, Madeira, and the Brazils.

On the occasion of the despatch of the first mail for the Cape of Good Hope, the people of Plymouth have resolved to make it a holiday by a procession, a grand dinner, &c. The corporation of Plymouth and Devonport having also determined to meet the directors of the company to which the steamers belong, and to present an address.

Mr. Eyre B. Powell, chief clerk to the Comptroller of Legacy Duties at Somerset-house, and formerly attached to the stamp department in Ireland, has been appointed Comptroller and Accountant-General of Stamp Duties in Dublin, in the room of Mr. Sisson Cooper, deceased.

Mr. W. Garry Lettsom, now paid attaché to the mission at Washington, has been appointed, in the same capacity, to the mission at Madrid.

James Carter, Esq., Puisne Judge of the Supreme Court of New Brunswick, is appointed Chief Justice of that Court.

The Rev. Mr. Barrow, the vicar of Evercreech, has presented to the church the Decalogue, in two splendid tables, printed in the black letter of the thirteenth century, with illuminated missal scroll-work on a gold ground, elaborately and beautifully worked out.

The Bishop of Durham has presented £4000 towards the erection of a new church at Blyth, Northumberland, provided that £4000 more are subscribed for the purpose.

Miss Jane Cooke has just contributed the entire sum necessary or putting up the new organ in the parish church at Cheltenham.

Dr. Stevenson Bushman has been elected senior physician to the Metropolitan Free Hospital.

Mr. Bastard, of Kirley, a Devonshire gentleman of large fortune has joined the Church of Rome.

James English, beadle of St. John's, Notting-hill, was found on Thursday morning week, lying on Notting-hill Terrace, in a stupor. He was carried to a surgeon's, and died in five minutes. On his person were found two small bottles, containing respectively laudanum and essential oil of almonds. A *post mortem* examination showed that these drugs were the means of death Mr. Hance, a guardian, explained that deceased had appropriated two cheques, value £12, the property of the parish.

The late Captain Cory, of Bristol, has bequeathed £900 to Steynton church, Milford Haven, for the purchase of an organ, and an endowment for the organist.

Mr. J. Shepherd has, in consideration of his sad bereavement of his parents and sisters by the wreck of the *Ocean*, given an Addiscombe cadetship, for the East India Company's service, to Mr. M'Neil, who, with his brother, leaving Addiscombe, was wonderfully preserved from the fate of his parents and sisters.

A Mr. Denis O'Flynn has refused to take the corporate oath prescribed by the Act of Parliament on being elected to the town council of Cork, as a Roman Catholic, and yet he has been admitted to take his seat in the council, his right to which is about to be questioned *ex quo warranto* in the Queen's Bench.

The successful competitor for the (East Indian) seminary appointment given by Mr. Henry Alexander to the Royal School of Armagh is Eric Stanhope Fox, aged between 13 and 16.

The Commissioners of the Board of Customs have issued orders to their subordinates at the port of Southampton to allow the trans-shipment of the French mails for the United States from the Havre to the American mail packets calling at Southampton without passing through the local post-office at that port, in order to prevent any delay, as it appears that the French mail only arrives at Southampton just previous to the departure of the American packet from thence to New York.

Mr. R. A. Stafford has been appointed by the Council of the Royal College of Surgeons to deliver the annual oration in memory of John Hunter, the founder of the Museum bearing his name.

The latest returns of the number of steam-engines employed in France, in factories, steamers, and on railways, give the following results:—There are 5507 establishments, of various kinds, at which steam-engines are used. This machinery is worked by means of 9283 boilers, of which 8776 have been made in France. The whole represent 66,120 horse-power. The number of boilers employed the preceding year was 8023; the number of establishments at which steam-engines were employed being then 4083.

CHESS.

TO CORRESPONDENTS.

E H C—The whole of the games in the great Tournament will be published, with copious explanatory notes and full particulars of the undertaking, by the Editor of the *Chess Chronicle*, and the managing committee have decided that every subscriber of one guinea to go towards to the funds of the Tourney shall be entitled to a copy of the games

B W F, Norwich: STONEHENGE, Ryde, should such send his suggestions to the committee, addressed to H G Keen, Esq, secretary, 3, Cavendish-square

E W 1. A native of India, assisted by the Rev Mr Loveday, of Dubli. 2. Play over their games with care, and you will soon form a pretty accurate opinion of their relative merits; provided always, that you are tolerably versed in Chess yourself

H N S—As a large number of members to the St George's Club is limited, and there is likely to be an extraordinary influx of candidates next year, on account of the Great Chess Tournament which will be held there, you should join it without loss of time Address to Mr R Longbottom, Secretary, 5, Cavendish-square, who will give you the right way

AGNES—Your solution of Problem No 357, although differing from the author's, will pass muster

M P—Have the goodness to favour us with the names of any amateurs in your neighbourhood. The Problem shall be examined

J F S, Suffolk—Can you oblige us with the names of your chief amateurs?

F J S D—Your first inquiry is written so illegibly, that we have tried in vain to make it out. In reply to the second, Mr. Horwitz's work on end games has not yet made its appearance

G H H—They shall be examined. In the replies you sent, did you stipulate what prize you would play for? It is of e to suppose that any good player would undertake a game by correspondence without some strike being dependent on the result

R U W—Red sun, of course, purple in the perpetual darkness, and the game is drawn

SIGMA—We cannot afford space for the other solution. The key move is —1. B to Kt 8th

W Lee, Ryde—If you will send us your address. The secretary will forward it shortly

ϕ_5 Glasgow—We have before stated that the Problem called the Nepaulese Problem was not *presented by his Excellency Jung Bahadoor as a composition of his own*. It was shown by him to Professor D Forbes, the Oriental scholar, through whom we received it as one which had been long known and admired in India. As to the modest claim of "O K" to the meaning, that must be put out of court at once, since the position may be found in the *Chess-player's Chronicle* and "Le Palamède," years ago, and was actually published in our columns, we subsequently found, as far back as 1841

B A Q and AGNES; G F, Foxwall—Problem No. 360 cannot possibly be solved in the way you suggest

FARNHOOD—1. Your solution is wrong. 2. The former communication never reached us

CAUTO They are always acceptable

W R, Glasgow—Your communication dated November 2nd has only this moment reached us, and we quite agree with you that "B A M M's" Problem, No. 350, is impracticable in six moves

G F F It has no point Devote a few months to the study of Bolton and D'Orville

W B, and A SCHOOLBOY—Remarkably neat and pretty, if not very difficult

A YANKEE—The problem cannot be solved in any other way than the one indicated by us, and correct variation on that key 2 Bs at will wonder." Is it not obvious to any one, that if Black were to take the Queen he must be mated with the Kt next move?

R T C 1 We should recommend your club to acquire a little more experience in the game, before undertaking a match for a thousand guineas 2 No chess club should be without the *Chess-player's Chronicle*, which is the monthly organ of chess-players throughout the world 3 Certainly

A A, Birmingham—The solutions are neither of them satisfactory

PAII—The Scotch gambit is one of the best

CAPE TOWN—We have not been made aware of the progress lately, for nobody seems to take any interest in it. You are mistaken with regard to Enigma No 625

TEUT. COLL., CAM—Problem 360 can only be solved in one way. Your supposition is quite erroneous

ST EDMUND—A great deal more patience and skill than you suppose are demanded in making a really fine Chess Problem. The position you send for move is an obvious mate in three

CAPE TOWN, D C L, DONOR, and CHAMPION If our Correspondents will oblige us with an address, articulars of the Ch as Tournament shall be sent them

BARN HAGGA—The Key move to 619 is—1 Kt to Q 3d.

TRIBUD You will find the rules of the game, &c. in the "Chess-player's Handbook," published by Bohn of Covent-garden. For Club regulations, apply to the Secretary of the Reading Berkshire Chess Club

P S—Meehl's Terzaco Chess-boards are made, if we are not mistaken, in solid wood, in paper *mondé*, and in glass. We have not any acquaintance with the last for a long time

T J is thanked. Can he, in the meanwhile, oblige us with the names of any amateurs of Chess in the neighbourhood of Feltham

PHILO-CHESS.—Subscriptions to Messrs Kling and Horwitz's forthcoming work are payable to Mr Mott, 81, King William-street, Charing-cross

SOLUTIONS OF PROBLEM No 358, by Agnes, W M, of Leamington College, are correct

SOLUTIONS OF PROBLEM No 359, by Sigma, H L, of Sheerness; M D, F H S, Dr R, Rev J T, Miles, Judy, St Edmund, Darevol, Cape Town, F G B, Juventus, B B, W B M, Milo, Philo-Chess, Saigus, Old Joe, T J, Feltham; J A W, of Dublin, are correct

SOLUTION OF ENIGMAS, by I R A (except 628), P A II, H L M, Kara, W S T, are correct

All others are wrong

*** A Gentleman is desirous of playing a Game of Chess by Correspondence. Address G H H, Post-Office, Newcastle-on-Tyne.

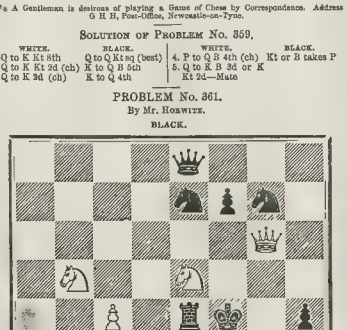
SOLUTION OF PROBLEM No. 359.

WHITE.	BLACK.	WHITE.	BLACK.
1. Q to K Kt 8th	Q to Q Kt sq (best)	4. P to Q B 4th (ch)	Kt or B takes P
2. Q to K Kt 3d (ch)	K to Q B 5th	5. Q to K B 3d or K	
3. Q to K 3d (ch)	K to Q 4th	Kt 2d—Mate.	

PROBLEM No. 361.

By Mr. HORWITZ.

BLACK.



WHITE.

White to play, and mate in four moves.

CHESS IN THE PROVINCES.

In the following rattling skirmish, Mr. STAUNTON gives his Queen's Rook to one of the best players in the leading Chess Club.

(Remove White's Queen's Rook from the board.)

(The Double Gambit, or the Cunningham Gambit, which?)

WHITE (Mr. S.)	BLACK (Mr. W.)	WHITE (Mr. S.)	BLACK (Mr. W.)
1. P to K 4th	P to K 4th	10. B takes K B P (ch)	K takes B (b)
2. K B to Q B 4th	K B to Q B 4th	11. Kt to 5th (Con-	
3. P to Q Kt 4th	B takes Q Kt P	sidering the check)	K to his sq
4. P to K B 4th	P takes P	12. Q to K R 5th (ch)	P to K Kt 3d
5. K to B 3d	K B to K 2d	13. Kt takes Kt P	K Kt to B 3d
6. P to Q 4th	B to K R 5th (ch)	14. R takes Kt	P to Q 3d (c)
7. P to K Kt 3d	P takes P	15. Kt to K B 8th (dis.	
8. Castles (a)	P takes P (ch)	ch. and mate)	
9. K to R sq	K B to K 2d		

(a) The change in the opening from the double gambit beginning is entertaining enough.

(b) It is not usually advisable in similar situations to take the Bishop. In the event of the King going to his R sq instead, the following is the probable result—

WHITE.	BLACK.	WHITE.	BLACK.
10.	K to R sq	14. Kt takes K R P (ch)	K takes Kt
11. K B to Q Kt 3d	K Kt to B 3d	(If Q takes K R P, Black	
12. K Kt to his 5th	P to Q 3d	may play Q to K R 4th	
13. K Q to K 3d	Q to R 4th	&c.)	
		15. Q takes R, and wins	

(c) The game was quite irretrievable. If he had taken the Rook, White would have mated him in four moves.

CHESS ENIGMAS.

No. 629.—By HERR RICHTADT.

(This is one of the most beautiful little Problems we ever remember to have met with.)

White: K at Q Kt 3d, B s at K Kt 3d and Q Kt 7th, Kt at Q B 4th; Ps at K B 2d, K Kt 4th, Q 3d, and Q B 3d

Black: K at Q Kt 4th; Ps at K R 6th, K Kt 4th, Q 3d, and Q B 4th.

White to play, and mate in four moves.

No. 630.—By JUPU.

White: K at Q 2d, R at Q 7th, B at K Kt 7th, Kt at K 5th, Ps at Q 3d and Q B 2d.

Black: K at Q 5th, Q at Q B sq, R at K 3d, P at Q 4th.

White having to play, gives mate in four moves.

No. 631.—By CHECK IN THE EAST

White: K at K R 4th, Q at K 7th, R at Q R 6th, Kt at Q B 6th; Ps at K B 3d, K R 5th, K B 6th

Black: K at K B 4th, Q at her sq, Rs at K R 2d and K B 2d, B at Q B 6th, Kt at Q Kt 5th, P at Q Kt 2d.

White playing first, mates in three moves.

NATIONAL SPORTS.

Although the racing campaign for the year is at an end, and the Steeplechasing calendar is "blank" up to February, the speculative classes are supplied with a stimulus by a match recently made between those renowned animals, the Flying Dutchman and Voltigeur, the former giving 9 lb., to run on Tuesday, the 13th of May next, two miles over the Old Course at York, for £1000 each, the Race Committee giving £400, to make two days' racing. We need scarcely add, that the match creates extraordinary interest, and that the betting will be very heavy. The Dutchman is the favourite.

Betting "Boxing" week, the only Changing meetings during the next seven days will be at Newcastle on Wednesday, and High Leven on Thursday.

TATTERSALL'S.

MONDAY.—The following were the results of a very flat afternoon:—

CHESTER CUP.

1000 to 18 aget Langton (t)	1000 to 15 (ag) Black Doctor (t)	1000 to 10 agst Dahcotah Chie
1000 to 15 —— Damask (t)	1000 to 15 —— Valentine (t)	(t)
1000 to 15 —— Baby (t)	1000 to 10 —— Glance (t)	1000 to 10 —— Tronmer (t)
	1000 to 10 agst Went-you-come-out-to-night (t)	

TWO THOUSAND GUINEAS.—5 to 1 agst Newmaister.

DERBY.

12 to 1 agst Mountain Sylph c. | 14 to 1 agst Newmaister (t) | 35 to 1 agst Storm

THURSDAY.—Very few members present, and not a bet laid.

GRAND INDUSTRIAL EXHIBITION FOR CANADA.

FESTIVITIES AT MONTREAL.

EARLY in the present year the attention of the citizens of Montreal was roused to the necessity of preparing a suitable display of Canadian industry, for exposition at the Great Industrial Congress of 1851; and some spirited local efforts were made. The Government took up the matter, and voted £2000 currency, on the recommendation of a commission appointed to report on the matter; and the local effort of the citizens of Montreal was forthwith merged in the general one, the citizens adding £250 from their subscribed fund, and it was decided to hold a Grand Provincial Industrial Exhibition, in the city of Montreal, on the 17th, 18th, and 19th of October, 1850.

The Commissioners appointed a committee of eleven gentlemen of the city of Montreal to carry out the requisite measures of detail, and to organise the city, and the city forthwith gave efficient co-operation and valuable assistance. A prize list (the value of prizes in which amounted to near £1600) was shortly issued, and active measures taken to bring the matter before the entire province.

It gives us pleasure to state that the city of Montreal, thus selected as the place of exhibition, devised liberal schemes of entertainment and hospitality befitting the occasion. And we have before us a programme of the festivities attendant on the Exhibition, all of which were defrayed out of a separate local fund.

The accompanying spirited Sketches are from the pencil of Mr. Somerville, artist, of Montreal.

THE DINNER

Was given by the Mayor and Corporation of the city, in the beautiful rooms of the Masonic Hall, which, for this purpose, for the Ball, and the Lectures of his Honor during the week, were placed gratuitously at the service of the committee by the proprietor, their liberal and enterprising fellow-citizen, Moses Judah Hayes, Esq.

The Mayor, E. R. Fabre, Esq., presided, and was supported by Aldermen M'Farlane and Laroque. On his right were the Hon. Josiah Quincy, jun., ex-Mayor of Boston, Mass., and several members of the Boston City Council; also Samuel Payne, President of the Vermont Central Railroad; Mr Putnam, of Boston; and many other distinguished strangers; Colonel Dyde, Sir Hew Dalrymple, Colonel, Horn, Major Calley, Major Talbot, and many other principal military gentlemen. Heads of departments, &c., accepted the Mayor's invitation; many of the leading citizens testified their cordiality by their presence on the occasion. The room (which is from a design by J. Wells and sons, architects) was tastefully decorated with fanciful devices of evergreens and flowers, and the banners of all the national societies were hung around the room. In compliment to the distinguished visitors from the States, who were present, as well as to the thousands in the city, the American flag was tastefully joined with the British, and the Sketch in our pages is taken at the moment when the Hon. J. Quincy addressed the guests. The band of the 20th Regiment, by the kind permission of Lieutenant-Colonel Horn, attended. The Mayor gave "The Queen," which was received with three times three; "Prince Albert and the Exhibition of 1851;" and the "President and People of the United States," to which the Hon. J. Quincy, jun., returned thanks.

In reply to the toast of "Our Upper Canada visitors," E. W. Thompson, Esq., of Toronto, made some exceedingly appropriate remarks, expressive of his firm conviction of the benefits these opportunities of meeting persons from various sections of the continent would produce.

Excellent speeches were also made by the Inspector-General and the President of the Board of Trade, and a long list of loyal, patriotic, and other appropriate toasts were cordially received, and the company separated highly gratified.

A Grand Ball took place in the same room on the following evening, Friday, October 18, when upwards of 800 persons joined in the gay scene. The Masonic Hall was tastefully decorated for the occasion. On the east side were hung the various banners of the national societies, and, on the west side, a single wreath of evergreens. the orchestra was also decorated with banners and evergreens. The assemblage were a number of heads of departments, and members of both houses of Parliament; together with a part of our visitors from Boston, and various portions of Canada. The greater proportion of the ladies and gentlemen's dresses were plain, but there were some costume dresses. We must say of the whole that they were luxuriant as well as elegant, and there was every tasteful variety.

(The EXHIBITION in the Halls of the Bonsecour on Monday, Oct. 17, has already been described, with two large Engravings, in the ILLUSTRATED LONDON NEWS for Nov. 23.)

The collection of minerals, earths, &c., was very extensive and important, and was exhibited under the superintendence and arrangement of W. E. Logan, Esq., provincial geologist. Some months previous, a lengthy and elaborate report was published by Mr. Logan, at the request of the Executive Committee, enumerating the localities and descriptions of the vast variety of this most important portion of the resources and wealth of Canada, and with the approbation of the Canadian Government. Mr. Logan will visit England in the approaching spring, and personally superintend the exhibition of the fine collection of minerals which have been forwarded from Canada.

THE REGATTA.

We present a truthful and interesting Sketch of this scene, as it appeared from the Island Wharf; in which are also embraced a View of the Exterior of the large Market, the great centre of attraction during the days of the Exhibition. The Rotunda commands a most extensive view of the city, the River St. Lawrence, and the surrounding country. It was, as shown in the Sketch, adorned with numerous flags; and thousands of the visitors availed themselves of the opportunity of taking a view from its elevated and commanding position. The market building is the property of the corporation of the city, and was erected from designs furnished by W. H. Footner, Esq., architect. It was generously placed at the disposal of the committee by the Mayor, free of all charge. On the right, in the Sketch, is the Island and Fort of St. Helen's, which commands the entrance to the port of Montreal, where during the summer months ride hundreds of ships, loading and discharging, 1000 miles inland from the storms of the gulf and the ocean.

THE TORCHLIGHT PROCESSION

Came off on Friday evening, and, true its novelty, was a great treat. It was got up and conducted by the fire brigade of the city; and the Sketch in our pages, taken as it appeared in the Place d'Armes, in front of the great Cathedral, is very striking and faithful. (It is a matter of regret that the Montreal Bank, from the steps of which the view is taken, does not appear in the illustration that has been sent us. It is the handsomest building in British North America.) All the fire companies, with their engines, hose-reels, &c., drawn by horses, richly caparisoned and decorated, formed the procession. They had a most imposing appearance, and were attended and cheered by thousands of the populace, and every window and available point of sight was crowded with spectators. By no means the least attractive arrangement of the committee was the address of the Hon. Mr. Justice Day, which was delivered in the Masonic Hall, on Saturday, and was indeed a rich treat to the highly respectable audience.

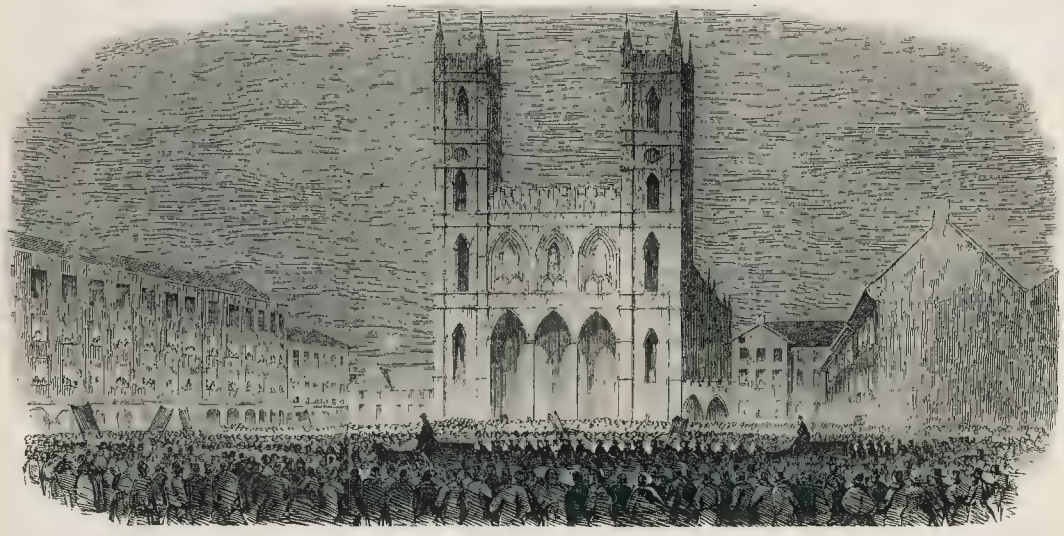
On Saturday evening, a dinner was given by the President of the Mechanics' Institute, W. Spiers, Esq., in connexion with the institution over which he so worthily presides; and a large number of resident members, with *confreres* from the United States and Upper Canada, partook of the excellent cheer at Mack's Hotel. The company separated at an early hour to witness the display of fireworks which took place on the Island Wharf on Saturday, as a wind-up to the exciting festivities of the three days Not less than 25,000 to 30,000 people lined the wharfs and available places for the view, and testified their delight by their continued shouts of applause and huzzas. Everybody was pleased, and not a dissentient voice was heard as to the complete success of the "Grand Provincial Industrial Exhibition of Canada," and the Montreal festivities.

Some idea of the interest taken may be formed from the fact that at least 20,000 persons visited the Halls of Exhibition. Upwards of 200 packages of the articles have been forwarded to London, per *Fear* and *Cygnet*; and the committee are still actively engaged in preparing further specimens of Canada industry, which will come by the February steamers.

The following is a list of the Executive Committee, under whose superintendence the Exhibition took place, and to whose exertions on the occasion the success we have spoken of is mainly owing:—E. R. Fabre, Esq., Mayor of Montreal; John Ostell, Esq.; C. W. Meakins, Esq.; John Fletcher, Esq.; Henry Lyman, Esq.; W. H. Footner, Esq.; William Bristow, Esq.; C. P. Ladd, Esq.; Wm. Spiers, Esq.; W. A. Townsend, Esq. John Leeming, Esq., secretary. The Commissioners are *ex officio* members of the Executive Committee. Amongst these gentlemen, the labours of the secretary, John Leeming, Esq., were particularly onerous; and we are glad to be able to state that a public testimonial is now being got up to present to that gentleman, as a slight mark of public respect for his willing, efficient, and unremunerated services.

GRAND DINNER IN THE MASONIC HALL, AT MONTREAL.—(SEE PRECEDING PAGE.)

THE REGATTA, AT MONTREAL.

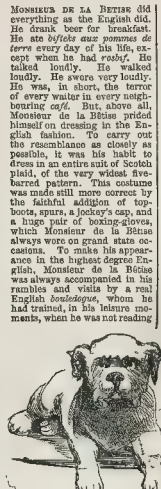


TORCH-LIGHT PROCESSION IN THE PLACE D'ARMES AT MONTREAL.

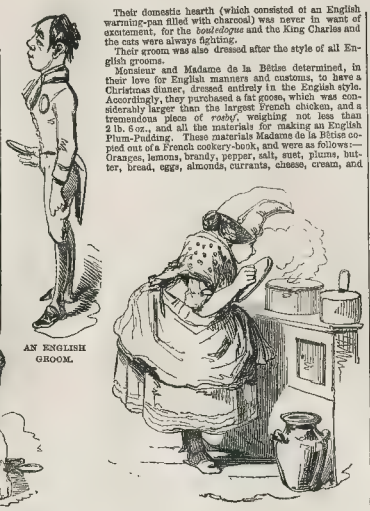
THE DREADFUL TURN-OUT OF A FRENCH PLUM-PUDDING!!!

OR, THE MISFORTUNES OF MONSIEUR AND MADAME DE LA BETISE, WHOSE GRAND OBJECT IN LIFE WAS TO LIVE IN THE ENGLISH STYLE. TRUTHFULLY NARRATED

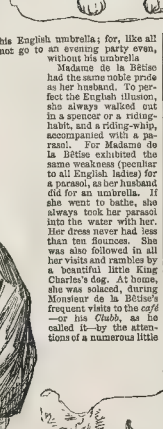
BY HORACE MAYHEW AND ALFRED CROWQUILL.



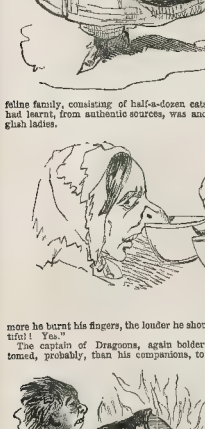
AN ENGLISH GROOM.



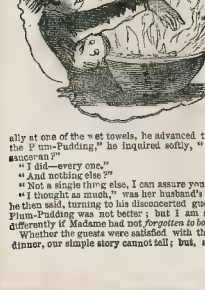
MONSIEUR DE LA BETISE did everything as the English did. He drank beer for breakfast. He ate *bifteks aux pommes de terre* every day of his life, except when he had *rosbif*. He talked loudly. He walked loudly. He swore very loudly. He was, in short, the terror of every waiter in every neighbouring *café*. But, above all, Monsieur de la Bêtise prided himself on dressing in the English fashion. To carry out the resemblance as closely as possible, it was his habit to dress in an entire suit of Scotch plaid, of the very widest five-barred pattern. This costume was made still more correct by the faithful addition of top-boots, spurs, a jockey's cap, and a huge pair of boxing-gloves, which Monsieur de la Bêtise always wore on grand state occasions. To make his appearance in the highest degree English, Monsieur de la Bêtise was always accompanied in his rambles and visits by a real English *bouledogue*, whom he had trained, in his leisure moments, when he was not reading



"Ossian" or learning the "Box," to carry his English umbrella; for, like all Englishmen, Monsieur de la Bêtise would not go to an evening party even, without his umbrella.



Madame de la Bêtise had the same noble pride as her husband. To perfect the English illusion, she always walked out in a spencer or a riding-habit, and a riding-whip, accompanied with a parasol. For Madame de la Bêtise exhibited the same weakness (peculiar to all English ladies) for a parasol, as her husband did for an umbrella. If she went to bathe, she always took her parasol into the water with her. Her dress never had less than ten flounces. She was also followed in all her visits and rambles by a beautiful little King Charles's dog. At home, she was solaced, during Monsieur de la Bêtise's frequent visits to the *café*—or his *Clubb*, as he called it—by the attentions of a numerous little

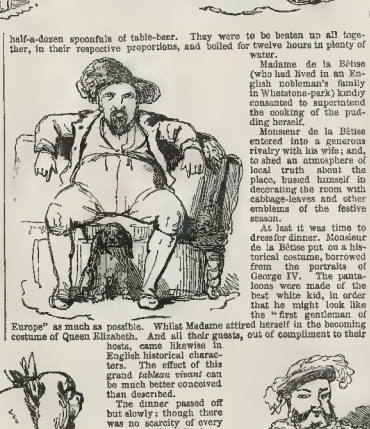


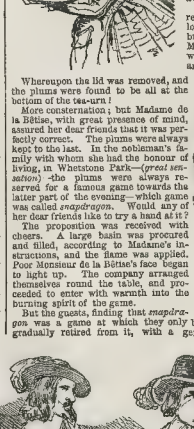
feline family, consisting of half-a-dozen cats and as many kittens, which she had learnt, from authentic sources, was another interesting custom of all English ladies.

Their domestic hearth (which consisted of an English warming-pan filled with charcoal) was never in want of excitement, for the *bouledogue* and the King Charles and the cats were always fighting.

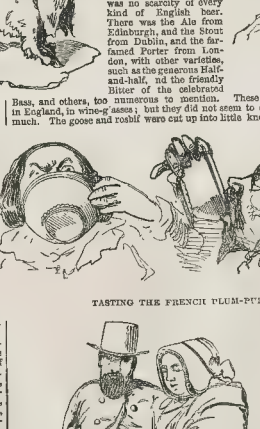
Their groom was also dressed after the style of all English grooms.

Monsieur and Madame de la Bêtise determined, in their love for English manners and customs, to have a Christmas dinner, dressed entirely in the English style. Accordingly, they purchased a fat goose, which was considerably larger than the largest French chicken, and a tremendous piece of *rosbif*, weighing not less than 2 lb. 6 oz., and all the materials for making an English Plum-Pudding. These materials Madame de la Bêtise copied out of a French cookery-book, and were as follows:—Oranges, lemons, brandy, pepper, salt, suet, plums, butter, bread, eggs, almonds, currants, cheese, cream, and





half-a-dozen spoonfuls of table-beer. They were to be beaten up all together, in their respective proportions, and boiled for twelve hours in plenty of water.



Madame de la Bêtise (who had lived in an English nobleman's family in Whetstone-park) kindly consented to superintend the cooking of the pudding herself.

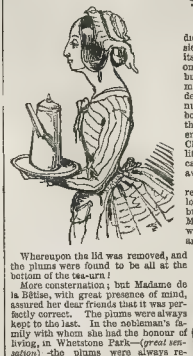
Monsieur de la Bêtise entered into a generous rivalry with his wife; and, to shed an atmosphere of local truth about the place, busied himself in decorating the room with cabbage-leaves and other emblems of the festive season.

At last it was time to dress for dinner. Monsieur de la Bêtise put on a historical costume, borrowed from the portraits of George IV. The pantaloons were made of the best white kid, in order that he might look like the "first gentleman of Europe" as much as possible. Whilst Madame attired herself in the becoming costume of Queen Elizabeth. And all their guests, out of compliment to their hosts, came likewise in English historical characters. The effect of this grand *tableau vivant* can be much better conceived than described.

The dinner passed off but slowly: though there was no scarcity of every kind of English beer. There was the Ale from Edinburgh, and the Stout from Dublin, and the far-famed Porter from London, with other varieties, such as the generous Half-and-half, nd the friendly Bitter of the celebrated Bass, and others, too numerous to mention. These were served round, as in England, in wine-g asses; but they did not seem to exhilarate the company much. The goose and rosbif were cut up into little knobs, and handed round, according to the rule practised in all English circles, t> ach guest, but were removed without a single word of commendation. At last, the moment for the grand event of the evening had arrived! Desire lodged upon every lip; curiosity lurked in the corner of every eye. The entire assembly was sitting upon the tiptoe of expectation (if so familiar an expression may be allowed upon so solemn an occasion), when the door was thrown open not a breath was heard—and in marched the servants, proudly bearing the Glory of England: the celebrated dish, whose generous character it is, unlike most human characters, only to yield greater and greater goodness the oftener it is brand(i)sed; the universal guest on Christmas Day at every English table, who is always received with cheers the instant of his arrival—the ever-welcome ENGLISH PLUM-PUDDING!

The Plum-Pudding was placed before Madame de la Bêtise, who, all smiles of conscious triumph, proceeded to pour it out, and to send it round, with a kindly intimation that "there was plenty more in the tea-urn."

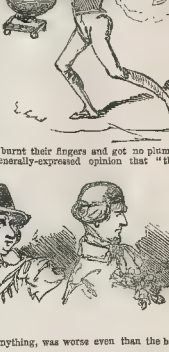
The guests proceeded to taste the Pudding, when it was universally pronounced "delicious." Still their faces did not express much relish, but Monsieur de la Bêtise was extremely loud in its praises. He had already emptied one cup, and sent up for a second; but no one seconded his enthusiasm, much less followed his example. A dead silence ensued for several minutes. At last, a captain of dragoons, bolder than the rest, ventured to remark that "he hardly thought his was sweet enough," and asked for some sugar; Charles the Second recommended "a little cream;" whilst Oliver Cromwell called aloud to the servant "to take away the filthy stuff!"



There was a universal consternation, relieved by a few laughs, followed by a long-frozen silence. The ice at last was broken by the timid observation of Mary Queen of Scots, that "the pudding was far from bad, but she did not see any plums."

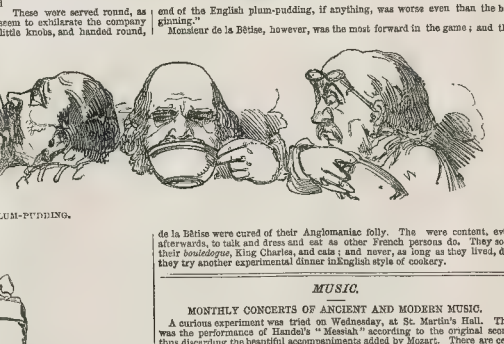
Whereupon the lid was removed, and the plums were found to be all at the bottom of the tea-urn!

More consternation; but Madame de la Bêtise, with great presence of mind, assured her dear friends that it was perfectly correct. The plums were always kept to the last. In the nobleman's family with whom she had the honour of living, in Whetstone Park—*(great sensation)*—the plums were always reserved for a famous game towards the latter part of the evening—which game was called *snapdragon*. Would any of her dear friends like to try a hand at it?

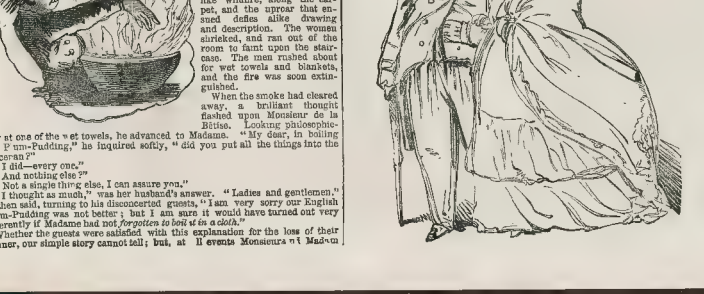


The proposition was received with cheers. A large basin was procured and filled, according to Madame's instructions, and the flame was applied. Poor Monsieur de la Bêtise's face began to light up. The company arranged themselves round the table, and proceeded to enter with warmth into the burning spirit of the game.

But the guests, finding that *snapdragon* was a game at which they only burnt their fingers and got no plums, gradually retired from it, with a generally-expressed opinion that "the end of the English plum-pudding, if anything, was worse even than the beginning."



Monsieur de la Bêtise, however, was the most forward in the game; and the more he burnt his fingers, the louder he shouted, "Oh! It is very much beautiful! Yes."



TASTING THE FRENCH PLUM-PUDDING.

The captain of Dragoons, again bolder than the rest, or more accustomed, probably, than his companions, to standing British fire, thrust his hand right into the midst of the flaming washhand-basin. Not approving of the sensation, however, he withdrew his fingers hastily, and, in so doing, upset the bowl. The spirit ran, like wildfire, along the carpet, and the uproar that ensued defies alike drawing and description. The women shrieked, and ran out of the room to faint upon the staircase. The men rushed about for wet towels and blankets, and the fire was soon extinguished.

When the smoke had cleared away, a brilliant thought flashed upon Monsieur de la Bêtise. Looking philosophically at one of the wet towels, he advanced to Madame. "My dear, in boiling the Plum-Pudding," he inquired softly, "did you put all the things into the saucepan?"

"I did—every one."

"And nothing else?"

"Not a single thing else, I can assure you."

"I thought as much," was her husband's answer. "Ladies and gentlemen," he then said, turning to his disconcerted guests, "I am very sorry our English Plum-Pudding was not better; but I am sure it would have turned out very differently if Madame had not *forgotten to boil it for a clock*."

Whether the guests were satisfied with this explanation for the loss of their dinner, our simple story cannot tell; but, at ll events Monsieur nt Madame de la Bêtise were cured of their Anglomaniac folly. The were content, ever afterwards, to talk and dress and eat as other French persons do. They sold their *bouledogue*, King Charles, and cats; and never, as long as they lived, did they try another experimental dinner inAnglish style of cookery.

MUSIC.

MONTHLY CONCERTS OF ANCIENT AND MODERN MUSIC.

A curious experiment was tried on Wednesday, at St. Martin's Hall. This was the performance of Handel's "Messiah" according to the original score, thus discarding the beautiful accompaniments added by Mozart. There are certain amateurs who will not permit, on any pretext, that the works of composers should be interfered with in the slightest manner. If the production should last considerably beyond what human patience, even with a most voracious musical appetite, can endure, "Let the score be respected," say the purists; "either give the opera—or oratorio, as it may be—in its entirety, or do not perform it at all." This extreme principle is, of course, very absurd, and, if fully acted upon, would exclude many noble inspirations from the theatre and concert-room. To respect truly and sincerely a composer's text must be left to the discretion, to a certain extent, of the musical director. On him will devolve the responsibilities of curtailments or changes; and public opinion will generally be right in deciding whether he have exercised taste, tact, and judgment. Handel's "Messiah" has been almost universally admitted to have been marvellously improved by the genius of Mozart, in writing those accompaniments of instruments, the uses of which were unknown in Handel's time. How conscientiously Mozart has respected the conceptions of Handel, is well known; where the orchestration of the latter was thin and meagre, Mozart has filled it up with exquisite instrumental imagery, without altering or adding a single idea, and being always in strict harmony with Handel's treatment. We need scarcely refer to the airs "How beautiful are the feet," "O thou that tellest," "Why do the nations," "The people that walked in darkness," "Thou shalt break them," &c., as instances of Mozart's judicious scoring. The effect of Handel's original instrumentation on Wednesday night was felt to be dull and monotonous, except in the choral portions; Handel's vocal part-writing for masses requiring little increase either of brass or wood, as Mozart proved. Mr. Hullah will take nothing by

thus "going back," his tendency to which we have noticed on a former occasion. The restoration of the bass air, "Thou art gone up on high," and of certain second parts to other airs, only increased the length of the oratorio, already sufficiently long. The disputed points, as to whether the air "But who may abide" ought to be sung by a bass or contralto, and as to the air "His shall feed his flock" being sung by two sopranos or by a soprano and contralto, are not of sufficient importance to disturb the existing arrangements.

The solos were excellently sung by Misses Birch, Kearns, M. Williams, Messrs. Lockey and Phillips.

For the third concert, the first scene from Purcell's "King Arthur," Mendelssohn's "Walpurgis Night," and four sacred compositions by M. Gounod, about whose new opera, "Sapho," there is so much curiosity in Paris, are announced. Works by Bennett and Macfarren will also be produced by Mr. Hullah. This is the right policy, and infinitely better than going back to past times for matters of musical interest.

GRAND NATIONAL CONCERTS.

Mdlle. Angri has terminated her engagement at Her Majesty's Theatre, after having acquired immense popularity by her excellent singing in every school. The energy with which she gave the National Anthem will not easily be forgotten; she was frequently called upon to sing the verses even without the chorus, the public being delighted and inspired by her enthusiastic and forcible style.

Lindpaintner's Grand Battle Overture has been a great favourite. Like all descriptive pieces of that warlike class, it is full of noisy strife; but the conception is clever, and the general treatment, as might be expected from such a composer, effective and inspiring.

M. Sciption Rousselot's Grand Quadrille Fantastique, "The Crystal Palace," was announced for last night (Friday), of which we shall report progress next week.

Mr. Balfe's benefit is fixed for next Monday night, as a testimonial on the part of the managers for the zeal and ability he has displayed during the series of concerts. Great attraction will be provided for this entertainment; which, we believe, will close the season, on which we shall have a few remarks to submit.

MUSICAL EVENTS.

Ernst, the celebrated violinist, Mdlle. Angri, the famed contralto, who has acquired such popularity at the Royal Italian Opera and at the Grand National Concerts, accompanied by Sales Schicklmayer, one of the accomplished singers of Swiss melodies, and Salvator Tamburini, son of the distinguished artist of that name, will make a tour in the provinces and in Ireland, at the close of January, up to the first week in March.

The Musical Entertainment of the fascinating Madame Thillon and the vivacious Mr. Hudson produced quite a sensation in Liverpool; this week they will present it at Dublin.

Mr. J. L. Hatton, the composer, pianist, and vocalist, has returned from his second trip to the United States

Mr John Parry will be at home" at the Music Hall, next Monday, with his "Notes Vocal and Instrumental"

Mendelssohn's "Elijah" will be performed, next Monday, at Exeter-Hall, by the Sacred Harmonic Society, conducted by Costa, with Misses Birch, Eliza Birch, Dolby, M. Williams, and Messrs. Lockey and Phillips, as principal singers.

Next Friday (the 27th), the London Sacred Harmonic Society will perform Handel's "Messiah," conducted by Mr. Surman.

In celebration of the twenty seventh anniversary of the foundation of the London Mechanics' Institution, Mr Henry Phillips delivered his new musical entertainment, "Our Village," founded on work, last night, at that institution. In the first part, Mr. Phillips has seven MS. ballads; and in the second, songs by Shield, John Barnett, J. L. Hatton, and J. P. Knight. Mr. Phillips gave his services gratuitously.

M. Oury, the violinist, assisted by Madame Oury, the *pianiste*, Madame Macfarren, Mr. and Mrs. Sims Reeves, vocalists, gave a concert on Friday night, at Brighton.

The Choral Harmonists held their third meeting last Monday, at the London Tavern. In the first part, there were the overture and selection from Handel's "Judas Maccabeus;" and in the second, John Barnett's madrigal, "Merrily wake Music's measure;" Miss Parkes's "Gondolier" canzonet, "Ohone;" and the over ure and selections from Mozart's "Don Giovanni." Mr. William Rae played a concerto by Mendelssohn in first-rate style. The next meeting will be on Jan. 13.

Amongst the eminent musicians who have signified their intention of visiting London in 1851, are Lisst, Hensselt, Dohler, Thalberg, Leopold de Meyer, Ernst, Sivori, Madame Pleyel, Sophie Dussek, Madame Dulcken, Madame Pratzer, Piotow, Thomas, David, Onslow, Lindpaintner, Standigl, Pischeck, Fetis, Wagner, Drayschock, De Beriot, Alard, Batta, Franchomme, Halfé, Elwart, Clapisson, Labarre, Mdlle. Puget, Grisar, Musard, Labitsky, Moscheles, Tilmant, Vieuxtemps, Madame Wartel, Rosenhain, Hutenbrenner, &c., besides a host of singers from every part of Germany, Italy, France, the Netherlands, &c. the companies at the two Italian Opera Houses, and the great choral societies of the Rhine.

Miss Catherine Hayes will return from Italy for the season 1851, prior to her trip to the United States

SACRED HARMONIC SOCIETY.—Mendelssohn's "Elijah" is to be performed on Monday next, the 23rd instant.

FOREIGN MUSICAL NEWS.

Letters from Paris state that Auber's "Enfant Prodigue" is a decided success, and gains nightly in popularity. The favourite solos are Massol's air, "Toi qui versas la lumière!" Mdlle. Dameron's romance, "Allez sauvez votre pensée," in the first act; Massol's romance, "Ah! quelle nuit!" in the second act, nightly received with acclamations, and quite an Auberian gem; the couplets of the camel driver, sung by Mdlle. Petit-Brière, "Tin, tin;" the romance, "J'ai tout perdu, sceptre," sung by Ruger, in the fourth act; and Massol's air in the last act, "Mon fils, c'est toi" Mdme. Laborde's brilliant and florid airs in the first and fourth acts, also, please much. Of the concerted pieces, there is the fine quintet in the third act, the chorus of the same act with the organ of the priests, and the trio *finale* of the first act. The two marches of the bull *Apis*, and of the Caravan, the "Pas du Delta," danced by Mdlle. Robert, "L'Almée," danced by Mdlle. Plunkett, are also much admired. The overture is also winning favour. There are four leading themes—the two tenor airs of *Asaël*, the Caravan March, and the bacchanal of the Mysteries of Isis After this spirited overture, the curtain rises on a pastoral of great beauty. The prayer "O ma fee cleux." If it does not rival the famous one in "La Muette," is very effective. There is but one opinion as to the unparalleled magnificence of the *mise en scène*, of the beauty of the incidental *divertissements* by St. Léon, and of the picturesqueness of the scenery. The honours are still to Massol, in the character of the father of the "Prodigal Son," although Roger, in the latter, has improved since the first night.

Mdme. Viardot again played *Fidès* in the "Prophète," last Sunday, and is now studying *Sappho* for Gounod's new opera of that name, which will be the next operatic novelty.

Donizetti's "Lucrezia Borgia," for the *début* of Ivanhoff in *Gennaro*, was to have been produced last Tuesday.

Scribe and Halévy's "Dame de Pique" will be produced at the Opéra Comique before the end of the month.

The advices from Madrid state that Mdme. Frezzolini's *début*, at the new Italian Opera-house, L'Oriente, as *Rivira*, in Bellini's "Puritani," had been quite successful: Ronconi was hailed with enthusiasm in *Riccardo*; and Gardoni as *Arturo*, and Herr Formes as *Giorgio*, had completed a most triumphal representation, at which the Queen, and all the notabilities of the Spanish capital, were present

Meyerbeer was present at Mdme. Castellan's delineation of *Alice*, in his "Robert le Diable," and applauded heartily her admirable singing and acting.

THE THEATRES.

PRINCESS'.

We last week stated that Mr. Bartley would return to the stage at this theatre on Saturday, and we have now to record his perfect success in the difficult character of *Falstaff*. The tragedy of "Henry IV." was gorgeously produced for the occasion; the mounting was assisted by the powerful acting of Mr. and Mrs. Kean in *Hotspur* and *Lady Katherine*. Mr. Kean's *Hotspur*, we are bold to pronounce, has not its equal on the stage—such is the fire, the passion, and the poetry which he manifests in the character. The other parts are also filled in a very superior manner, recalling the best days of the stage, when Mr. Harley and Mr. Keeley, with Mrs. Keeley, as now, went on the principle of strengthening the cast of the drama, instead of asserting a supposed right to a long and independent part. While the management is upon their present rule, they will command as well as deserve success.

The comedy of "The Wonder" followed; Mr. and Mrs. Kean admirably supporting the characters of *Felix* and *Violante*. The house was crowded.

CHRISMAS ENTERTAINMENTS.

"King Charming; or, the Blue Bird of Paradise," is the title of the new burlesque extravaganza at the Lyceum, from the pen of Mr. Planché, whom the accomplished pen of Mr. Planché, himself the "King" of our burlesque writers. Madame Vestris and all the leading members of the company are included in the cast

The Christmas novelty at the Adelphi is a burlesque choreographic spectacle by Mr. Albert Smith, founded on the popular ballet of "La Tarentella," in which Madame Celeste will appear.

At the Haymarket, the Christmas entertainment will be the joint production of the Brothers Brough.

Drury-Lane Theatre will open on the 26th with the "Winter's Tale;" the pantomime will be "Harlequin and Humpty Dumpty; or, the First Lord Mayor of London."

The pantomime at the Princess' is founded on Mat. Lewis's celebrated ballad of "Alonzo the Brave and the Fair Imogene;" a subject rich in suggestion, and which there is no doubt the management will produce in magnificent style

At the Surrey, the pantomime is a Shakspearian burlesque "The Merry Wives of Windsor; or, Harlequin and Sir John Falstaff and the Demon Hu ter of the Enchanted Del."—interspersed with airs selected from Shakspeare's melodies

At Astley's, the equestrian pantomime is by Mr. Rodwell, and entitled "Harlequin and O'Donoghue; or, the White Horse of Killarney."

The pantomime at the Marylebone Theatre is entitled "Harlequin Alfred the Great; or, the Magic Banjo and the Mystic Raven." It is by Mr. Rodwell, and therefore of good promise.

Mr. Nelson Lee is in the field, as usual, and right early provides pantomimes both for town and country. That at the City of London Theatre bears the unique and novel title of "Knife, Fork, and Spoon; or, Harlequin Breakfast, Dinner, Tea, and Supper." Mr. Nelson Lee is also concerned in the comic portion of the following pantomimes:—The Theatre Royal Drury-Lane, the Royal Victoria, the Marylebone; the entire of the Theatre Royal Dublin, the Theatre Royal Norwich, the Adelphi Theatre (Liverpool), the Theatre Royal Ashton-under-Line, and the Theatre Royal Aberdeen, with others.

LAKE OF LUCERNE.—Mr. Burford's panorama, illustrated by Mr. Selous' drawings, of this celebrated lake, is a remarkably fine picture. A description of a spot so well known as not required from us; our task is limited to the merely critical, and that again to the pleasant duty of commendation. The handling of the heights and distances is in Mr Burford's very best style, and the figures introduced by Mr. Selous into the landscape are so picturesque as they are accurate. The beauty and the romance of this delightful lake are vividly realized; nay, we might add the majesty and the grandeur. The scene is one of a sublime character, made tender by endearing associations, and will, no doubt, become greatly popular.

THE PEACE CONGRESS.—PROPOSED DUEL.—MR. COBDEN AND SIR T. HASTINGS

A lengthened correspondence has been published in the morning papers between Sir Thomas Hastings, Mr. Bright, M.P., and Mr. Cobden, M.P. Sir Thomas charges Mr Bright, in a speech delivered by that gentleman at a meeting of the Peace Congress, lately held at Birmingham, with a slanderous misrepresentation of his evidence before the House of Commons in 1848, on the inquiry into the Navy, Army, and Ordnance Estimates. The following is the extract complained of. Mr. Bright said—

"There was the danger to which England was exposed? There was no superstition greater than the fear of a war with France a superstition which had been handed down to us from the French war. He mentioned the name of Sir Thomas Hastings, as the British Officer who was examined before a committee of the House of Commons a short time ago, was haunted with the fear of France During his examination, he was pressed harder and harder as to the authority upon which he founded his statements. At last it came out in answer to what he had been informed by a priest. no, not by a priest, but by the Bishop of Japan (loud laughter), that the information he (Sir Thomas) received was from a landsman (Cheers). Only imagine, the only authority upon which a British Admiral anticipated war was an old story told by the Bishop of Japan."

Mr. Bright, in a letter (Dec. 1), justifies his statement by saying that it was made upon the authority of Mr. Cobden; Mr. Cobden (Dec. 6) acknowledges that the anecdote was mentioned by him to Mr. B., and maintains that the substance of it, though not in words, was strictly correct. He makes a variety of remark in the committee, who afterwards expunged that portion of Sir Thomas Hastings's evidence. Sir Thomas (Dec. 10), d satisfied with Mr. Cobden's reply, calls upon him to withdraw his statement, which he declines to do. Mr. Bright's attack upon his character is not sustained by the facts of the case. Mr. Cobden (Dec. 13), in answer to Sir Thomas, says that he is not responsible for the statements being reported, and he repeats that it is substantially correct. Sir Thomas (Dec. 14), in his reply, says

I once more call on you to state, directly and explicitly, whether, after re-perusing my evidence, you can with truth and honour declare that any one sentence of the hostile feeling of France to this country up to 1844 was founded on an idle story told of the Bishop of Japan, which Mr Bright distinctly expressly he asserted in public on your authority, and you, therefore, are responsible to me. And should you, in order to evade a clear, refuse to give me a satisfactory explanation, I shall conclude that it was and is your intention to insult me, and I shall, plus our correspondence in the hands of a friend, who will wait on you on my behalf —or, should you prefer it, he will confer with some friend of yours.

No answer was immediately returned to this communication, and Sir Thomas again wrote (Dec. 17) to Mr. Cobden, saying—

I gave you a fair opportunity to correct your error This you have not had sufficient truthfulness or manly candour to correct, nor have yet disclaimed the intention of, or apologized for, insulting me. I observe to you, that when a gentleman unintentionally misrepresents another, he atones for it by disavowing the intention when called on to do so, or by giving satisfaction to the aggrieved party. I am, therefore, in the sense of justice of the people of England as so great, that I appeal substantially to their verdict

On the 18th (Wednesday last), Mr. Cobden replies, in a letter from Crumpsall House, near Manchester, in which he says—

"Sir,—If in my earlier days my admiration for the genius of Sheridan had not tempted me to witness the mimic exploits of Sir Lucius O'Trigger, I might have been at a loss to comprehend the meaning of your letter Aided, however, by my own recollections of last night's ebullition, I understand you to propose that we should lay down our pens, and have a personal interview, not to talk over the matter in dispute, but to settle it by a resort to the weapons of barbarians. I will not cut or stand at twelve paces apart, with pistols in hand, and endeavour to blow out each other's brains. Now, I am satisfied, without the necessity of any reference to my own feelings, that, because of the great prejudice which you entertain against me, and the strong conviction of your own rectitude, you would not hesitate to take the life of the man who, you might think, had taken your character away. But I am not disposed to be the victim of such a delusion, even though I should be induced to believe that you would be the victim of justice, and every religious sentiment. Therefore, I must decline the honour which you have so kindly proposed to confer upon me, and I have no doubt that every one who has read what I said on that occasion, and who knows me, will approve of the decision which I have arrived at, and will kindly intend it as an act entirely consistent with my character as a man of peace, and with my sincere desire to promote, by every means in my power, the cause of peace and good will among men.

"I am, Sir, your obedient servant, (Signed) RICHD. COBDEN

Sir Thomas Hastings, R.N.

The prosecutor in a case of highway robbery, recently tried, was asked by the counsel for the defence if one of the men attacked him was not a near relative of his? "Not very," exclaimed the witness, in surprise "How far would you go back to prove it?" "I'll tell you what relationship there is between me and the prisoner. I believe that my wife's father and his grandmother are about half cousins!" This answer caused much merriment, in which Mr. Justice Patteson heartily joined.

A letter bearing the Devonport post-mark, and containing 4s. 6d. in postage stamps, was received last week by an artisan in the Plymouth dockyard, stating that the writer picked the pocket of his son eleven years since, when employed as a weeding boy, of half a crown, his week's wages, and that it rested so heavily on his mind, that he returned the above as an atonement.

The length of the railways now open in France is 2171 kilometres (1357 English miles), and the number of locomotives on them is 725, or 58 more than in the preceding year. The number of steam-vessels is 279, set in movement by machinery of 23,000 horse-power. The quantity of goods carried by them during the year was 730,948 tons, whilst that of the year before was 696,666 tons. It is calculated that all the steam machinery now at work in France represents 116,178 horse-power.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

The English Market has not maintained the buoyancy and firmness during the past week that marked the one preceding. Although, on Monday, Consols opened at 96⅞ ⅞ and afterwards improved to 96⅞ to 97, an increased demand for money, on Tuesday, in both the Foreign and Home Market settlements, produced heaviness and inactivity, which was followed by a fall of ⅛ per cent. in prices on Wednesday. On Thursday, however, the market became firmer, and a better tone generally prevailed; Consols quoted 96⅞ 97 ex. div. for the opening in January. It must be remembered that all quotations of Consols are now made without the dividend and for the Opening, the books of transfer being at present closed. Exchequer Bills indicated a downward tendency as money increased in demand. India Bonds have not materially varied. The market, towards the close of the week, although firmer for the moment, did not appear to be in a settled state, an uneasy feeling evidently existing. Very little use in the state of the exchanges. Prices at the close of business stood—For Consols, 96⅞, and 97 for the January account; Reduced, 97⅛ ⅛; Three-and-a-Quarter per Cents, 98⅝ ⅝; Bank Stock, 211½ 211. Exchequer Bills, 67s; and India Bonds, 87s. 89s.

Prices in the Foreign Market were well supported on Monday, but inactivity and dullness succeeded, until Thursday, when quotations in a great degree recovered. Mexican Stock has been in demand, and has improved upon the rise of last week, being the anticipated result upon the speculators realising. Dutch Two-and-a-Half per Cents have been gradually creeping up, the Stock forming a medium of exchange for the transactions that were done between London and Amsterdam. Russian Stock, of both descriptions, has again attained the prices quoted before the German armed display, and Spanish Three per Cents have improved since the cession of the Spanish Government with regard to the other portions of the debt. In Foreign Securities generally fractional variations only have occurred. The closing prices of the week are—Mexican Bonds, 36; Chilian Six per Cents, 104; Granada, 18⅝; Peruvian, 83½; Ditto, Deferred, 36⅝; Spanish Five per Cents, 18⅝; Ditto Three per Cents, 40⅛; Portuguese Four per Cents, 33½; Russian, 109½; Ditto Four-and-a-Half per Cents, 97⅛; Belgian Four-and-a-Half per Cents, 89⅛; and Dutch Two-and-a-Half per Cents, 59.

Shares have been largely dealt in; but towards the close of the week business decreased, and prices in some instances gave way, as the following list will demonstrate:—Aberdeen, 10⅝; Ditto, Preference, ⅝ dis; Ambergate, Nottingham, Boston, and Eastern Junction, 28½; Bristol and Exeter, 76; Caledonian, 10⅛ 47 Ostend and Rotyhead, Preference, 14; East Anglian (£3 10s. paid), 1⅞. 1 Eastern Counties, 6⅛; Ditto, New, Preference, 1⅞; East Lancashire, 12⅜ 1 Lincolnshire, 32; Edinburgh, Perth, and Dundee, 7⅜; Great Northern, 17⅜; Ditto Halves, A, 6⅜; Ditto, Halves, B, 11⅜; Ditto, Preference, 12⅛; Great Western, 78; Ditto, New, 111; Hull and Selby, 106; Lancaster and Carlisle, 70; Lancashire and Yorkshire, 58½; Ditto, Fifths, 4⅜; London, Brighton, and South Coast, 87; London and North-Western, 125⅞ Ditto, New, Quarters, 21; London and North-Western, Fifths, 10⅛; North British, 9⅜; Ditto, Preference, 9; London and South-Western, 74; Manchester, Buxton, and Matlock, 1⅜; Manchester, Sheffield, and Lincolnshire, New, £10 Preference, 10⅜; Ditto, Manchester and Leeds Junction, 3 dis; Midland, 48; Ditto, £50 Shares, 15⅜; Ditto, Consolidated, Bristol and Birmingham, 130; North Staffordshire, 9⅛; Oxford, Worcester, and Wolverhampton, 20⅜; Reading, Guildford, and Reigate, 19⅜; Shrewsbury and Birmingham, Class A, 5⅞ dis.; Ditto, Class B, 4⅜ dis.; South Devon, 15; South Eastern, 23⅜. York, Newcastle, and Berwick, 18⅜; Ditto, Extension, 14; Ditto, G N E, Purchase or Preference (£17 paid), 16; York and North Midland, 24; Anglo-Italian, 2½; Bolognese and Amiens, 9; Central of France, 16⅛; Luxemburg (£8 paid), 1½; Ditto (£10 paid), 2⅛; Northern of France, 15⅛; Orleans and Bordeaux, 2⅛, Paris and Strasbourg, 9⅛; Rouen and Havre, 11; Sambre and Meuse, 3⅜; Tours and Nantes, 5 ex div.

MONDAY AFTERNOON.—The Continental news being somewhat favourable, the Consol Market has ruled steady to-day, and prices have tended upward. The Three per Cents ex div. are 96⅞ to 97. Bank Stock, 213½; Exchequer Bills, 64s. to 67s.; and India Bonds, 84s. to 87s. pm. Foreign Bonds and Railway Shares without material alteration.

THE MARKETS.

CORN-EXCHANGE (Friday).—During the past week the receipts of English wheat for our Market have been on the increase, the arrivals coastwise amounted to 2770 quarters, mostly from Essex, Kent, and Suffolk. The supply of this grain coming fresh to-day, by land carriage and by coastwise, is moderately small, and in very middling condition. The attendance of both town and country millers being but limited, the demand for all kinds of wheat of home produce ruled heavy, at barely late rates. Upwards of 11,000 quarters of foreign wheat have arrived this week, mostly from the Baltic and Hamburg, lately held at Birmingham, with a handsome numerpresentation of his evidence before the House of Commons in 1848, on the inquiry into the Navy, Army, and Ordnance Estimates. The following is the extract complained of. Mr. Bright said—

"There was the danger to which England was exposed? There was no superstition greater than the fear of a war with France a superstition which had been handed down to us from the French war. He mentioned the name of Sir Thomas Hastings, as the British Officer who was examined before a committee of the House of Commons a short time ago, was haunted with the fear of France During his examination, he was pressed harder and harder as to the authority upon which he founded his statements. At last it came out in answer to what he had been informed by a priest. no, not by a priest, but by the Bishop of Japan (loud laughter), that the information he (Sir Thomas) received was from a landsman (Cheers). Only imagine, the only authority upon which a British Admiral anticipated war was an old story told by the Bishop of Japan."

Mr. Bright, in a letter (Dec. 1), justifies his statement by saying that it was made upon the authority of Mr. Cobden; Mr. Cobden (Dec. 6) acknowledges that the anecdote was mentioned by him to Mr. B., and maintains that the substance of it, though not in words, was strictly correct. He makes a variety of remark in the committee, who afterwards expunged that portion of Sir Thomas Hastings's evidence. Sir Thomas (Dec. 10), d satisfied with Mr. Cobden's reply, calls upon him to withdraw his statement, which he declines to do. Mr. Bright's attack upon his character is not sustained by the facts of the case. Mr. Cobden (Dec. 13), in answer to Sir Thomas, says that he is not responsible for the statements being reported, and he repeats that it is substantially correct. Sir Thomas (Dec. 14), in his reply, says

I once more call on you to state, directly and explicitly, whether, after re-perusing my evidence, you can with truth and honour declare that any one sentence of the hostile feeling of France to this country up to 1844 was founded on an idle story told of the Bishop of Japan, which Mr Bright distinctly expressly he asserted in public on your authority, and you, therefore, are responsible to me. And should you, in order to evade a clear, refuse to give me a satisfactory explanation, I shall conclude that it was and is your intention to insult me, and I shall, plus our correspondence in the hands of a friend, who will wait on you on my behalf —or, should you prefer it, he will confer with some friend of yours.

No answer was immediately returned to this communication, and Sir Thomas again wrote (Dec. 17) to Mr. Cobden, saying—

I gave you a fair opportunity to correct your error This you have not had sufficient truthfulness or manly candour to correct, nor have yet disclaimed the intention of, or apologized for, insulting me. I observe to you, that when a gentleman unintentionally misrepresents another, he atones for it by disavowing the intention when called on to do so, or by giving satisfaction to the aggrieved party. I am, therefore, in the sense of justice of the people of England as so great, that I appeal substantially to their verdict

On the 18th (Wednesday last), Mr. Cobden replies, in a letter from Crumpsall House, near Manchester, in which he says—

"Sir,—If in my earlier days my admiration for the genius of Sheridan had not tempted me to witness the mimic exploits of Sir Lucius O'Trigger, I might have been at a loss to comprehend the meaning of your letter Aided, however, by my own recollections of last night's ebullition, I understand you to propose that we should lay down our pens, and have a personal interview, not to talk over the matter in dispute, but to settle it by a resort to the weapons of barbarians. A BEAUTIFUL BOOK FOR PRESENTATION.
In small 4to (suitable bound, price 10s 6d),
ILLUSTRATED DITTIES of OLDEN TIME.
The Embellishments of this very attractive and beautiful Book are from the original Designs of a Lady, and Illustrate, in a peculiarly novel and most effective manner, a choice selection of the ancient Nursery Rhymes of England
"The Book" (Athenæum) "is unquestionably the most elegant book that can be selected for a Christmas present or New Year's gift, for the originality of the designs and beauty of the execution far surpass any illustrated work that we remember to have seen."
From the "Athenæum."—"Here is a little volume of rare merit, not forth without show or pretension; but there is no book of the day at all comparable to these 'Illustrated Ditties' for purity of feeling and beautiful fancy."
From the "Spectator."—"The invention is truly beautiful, and the whole presents a unity most unusual in a work of the kind. The design is not burlesque at all, but is perfectly serious and earnest, very simple and unaffected, graceful and appropriate."
H. FOLTHORP, Brighton, and D. BOGUE, London

Delivered free within five miles of their establishment.

ROYAL OSBORNE SAUCE, prepared by her Majesty's Chemist in the Isle of Wight; patronised and used by the Royal Family, Queen Dowager, &c., is decidedly the most delicious piquant and economical Sauce extant. It promotes the appetite, assists the digestion, and imparts an excellent flavour to fish, game, hot and cold meats, gravies, &c. &c. Sold by CROSSE and BLACKWELL, 21, Queen-street-place, Cheapside, London. Retailed by druggists, grocers, and oilmen generally.

FOOD for INFANTS, LADIES SUCKLING, and INVALIDS.—BULLOCK'S SEMOLA is agreeable to the taste, easy of digestion, and the most nutritious substance ever introduced. For mothers suckling, for weak children, and invalids suffering from debility of any kind, it is invaluable. This Food is sanctioned by the leading members of the profession. Sold in packets, 1s., 2s. 6d., and 7s. 6d. each, by LLOYD BULLOCK, 22, Conduit-street, Regent-street, and may be had of chemists and grocers in town and country.

TRELOAR'S COCOA-NUT FIBRE MATTING WAREHOUSE, 42, Ludgate-hill, London.—"The false designated 'best' at Treloar's is really of superior texture and workmanship, and cannot be equalled."—Times.

HOLYLAND'S NEW COAT.—The BERKELEY, a WINTER OVERCOAT, impervious to moisture, light, warm, and of superior appearance. The uniform character of this fabric for the last half article of fashion, is more than apparent in these garments. SHIRTS.—SIX very superior SHIRTS for 21s., from the best and largest stock in London, emancipating all the recent improvements as to the cut.
Also, Fashionable Coloured Shirts, 3ix for 21, or very best, made to measure, Six for 30s. A fine choice of 300 new patterns (as usual) guaranteed to all purchasers, or the money returned.
Patterns of the new Coloured Shirtings, with detailed lists of prices, and directions for self-measurement, post-free
RODGERS and CO., 32, St. Martin's-lane, and No. 9, at the corner of New-street, Covent-garden (established 90 years)
N.B. Boys' Shirts in all sizes

CLARK'S PATENT ELONGATING GUTTA PERCHA GALOSHES will be found invaluable in their advantages over every other galosh or over-shoe. They may be put on or taken off without touching with the hands, and the very easiness of fastening they are to wear, than any galosh yet made. Orders of the wish makes them very easy in wear; they are not liable to slip on the smoothest flags; they are sufficiently open in the upper not to confine the perspiration of the foot, and they are perfectly waterproof.
Sold by all respectable Boot and Shoe-makers. Wholesale agent for London, A. H. DYMOND, 1, Regent-street, Cavendish-square.

BRIGHT and CO.'S PATENT POWER-loom BRUSSELS CARPETS.—These Goods are strongly recommended to the Trade and the Public as the following points:—They are woven by Steam Power, and are, therefore, more firmly made than can be the case with hand-woven goods. They have the same good quality of Worsted throughout; whereas in the common Brussels the dark colours are generally made of an inferior Worsted. They are printed by a patent process, and by patent machinery, and the colours are more durable, and will stand more severe tests than those of the ordinary method of carpet. The pattern also consists of an almost unlimited variety of shades or colours; patterns are, therefore, always clearly defined, and the carpet looks well worn. They can be offered at a price about 20 per cent. below that of goods of equal quality made in the ordinary mode. In quality, variety, and beauty of colours, and in price, the Patent Power-loom Brussels Carpets offer great advantages to the Public.—BRIGHT and CO., 39, Skinner-street, Snowhill, London; 32, New Brown-street, Manchester

PATENT POWER-LOOM BRUSSELS CARPETS.—These Carpets, manufactured by BRIGHT and Co., have now stood the test of time and wear; and the process of manufacture, in variety of pattern, and in brilliancy and durability of colours, they fully warrant what has been said in their favour. Notwithstanding this, parties interested in preventing the introduction of any new fabric are, as usual, unscrupulous enough to distract from the merits of the invention which offer such great advantage to the public. BRIGHT and CO.'s Power-Loom Brussels Carpets can be offered 20 per cent. lower than any other goods of the same quality, and can assure the public that we have laid down upwards of 20,000 yards of them within a few months.—LACE CURTAINS, &c., 39, Skinner-street, Snow-hill, London; 32, New Brown-street, Manchester

STEAM COMMUNICATION with the BRAZILS and RIVER PLATE.—ROYAL MAIL STEAM-PACKET COMPANY.—On the 9th January, 1851, the "Teviot," Captain Reeves, and thenceforward on the 9th of each month, or either of this Company's Steamers, will leave Southampton, with Mails, Passengers, &c., for Rio de Janeiro, Montevideo, and Buenos Ayres. Pernambuco, Bahia, and Rio de Janeiro, and from thence by branch steamer to Monte Video and Buenos Ayres, returning by the same route to Southampton.
Particulars, as to rates of fares, freights, &c., may be had on application to the Company's Office, 3, Lombard-street, London, or at Southampton, where parcels, packages, and publications will be received for the places above mentioned.
Goods taken on moderate freight outward to Bahia, Rio de Janeiro, Monte Video, and Buenos Ayres, and homeward from the same places, as well as from Pernambuco, St Vincent (Cape de Verds), Teneriffe, and Madeira.
Passengers are recommended to make early application for securing proper berths.
E. CHAPPELL, Secretary,
No. 55, Moorgate-street, London.

NEW SHOW-ROOMS for BEDSTEADS.—HEAL and SON have erected some extensive Warerooms for the purpose of exhibiting a large Stock of Bedsteads. In their Stock will include every sort manufactured, from the cheap Stump, for servants' use, to the handsomest Spring Mattress and Bedstead Company, as well as Brass Bedsteads of every shape and pattern; and in wooden Bedsteads they have always on sale a large assortment of the most elegant patterns of Furniture Chintzes, Damasks, and Dimities, so as to render their Stock complete for the furnishing of a Bedroom as well as Bedding. Without attempting to compete with the prices at which the lowest class of Ironmongers sell, and which, for that particular purpose, their new Stock will be found to be priced on the same principle by which their Bedding and Spring Mattress Trade during the last few years, have so successfully extended, and the goods, whether of a plain and simple pattern, or of a handsomer and more expensive character, are of well-seasoned wood, and the workmanship guaranteed. Illustrated HEAL and SON'S List of Bedding, containing full particulars and of Weights, Sizes, and Prices of every description of Bedding, sent by post on application to their Factory, 196 (opposite the Chapel), Tottenham-court-road, London.

SEASONABLE PRESENTS.—At this festive period of the year, when friends and lovers assemble at the [illegible] and [illegible] [illegible] [illegible]

THE SHIP "ORIENTAL," OF NEW YORK.

THE SHIP "ORIENTAL."

Although many British ships have arrived at New York and Boston from China, since the alteration in the Navigation Laws, the first American ship (the *Oriental*) arrived in the West India Docks on the 3rd instant, and has made the fastest voyage on record from China, by a sailing vessel.

The ship *Oriental*, of New York, Captain Palmer (above 1000 tons), was built for the China trade: she sailed from New York on her first voyage the 14th September, 1849; and arrived at Hong-Kong by the Eastern Passage, January 1, 1850, being 109 days. She discharged and took in a full cargo for New York, sailed 26th January, and arrived in New York April 21st, making eighty-one days' passage; discharged and took in full cargo, and sailed May 18, for Hong-Kong; arrived August 8, making eighty-one days' passage: discharged and took in full cargo, and sailed for London, August 28: beat down the China Sea against the S.W. monsoon in twenty-one days to Anjer, and arrived off Scilly in ninety-one days, and into the West India Dock in ninety-seven days. A period of fourteen months and nineteen days has elapsed since she sailed on her first voyage from New York, since which time she has sailed 67,000 miles, and is now chartered to sail again for Canton on 10th January, 1851. The above facts are taken from the log-book, by permission of Capt T. D. Palmer, by Mr. J. Spiller, of Wapping.

We should add that the *Oriental* brings about 1600 tons of tea at £6 per ton, whilst all the ships leading at Whampoa at the same time only got £3 10s. The bulk of her cargo is consigned to three firms of the highest eminence, whose Correspondents availed themselves of the opportunity even at such a high rate of freight, the *Oriental* being known for her fast-sailing qualities, which she fully verified. The main dimensions of the *Oriental* are—Length, 183 feet; beam, 36 feet; hold, 21 feet; poop deck, 45 feet; top-gallant forecastle, 30 feet.

NIMROUD SCULPTURES AT THE BRITISH MUSEUM.

The last-received Nimroud Sculptures will, undoubtedly, prove very attractive to Christmas visitors to the Museum. We have engraved two slabs from the series.

Nos. 7 and 8.—These two slabs form one subject, viz. the King drinking in the presence of the divinities of Assyria. On the right is a winged divinity, wearing on his head the horned cap, the symbol of strength and power; and in the position and attitude so often described. The Assyrian monarch is represented as seated on his throne, attended by two of the principal officers of his household. In his right hand is the cup that has been presented to him by the cup-bearer, who stands before him with the "Marhammah," or embroidered napkin, over his shoulder. On the right of this officer is the "Mnsabs," or fly-flap, while in his left he holds the under-cup, or, possibly, the wine-strainer, an instrument in common use among the Etruscans, and of which there are many examples in the museums of Europe. Behind the throne stands the King's "Silikdar," or sword-bearer, and officer of high rank in eastern courts. This functionary, also, is occupied in the same manner as the cup-bearer; that is, in dispersing the flies and fanning the King. So, likewise, at this time, the Prime Minister of a Basha or Sultan would be occupied while his master was drinking a glass of sherbet, or sipping a cup of coffee. The throne or square stool on which the King is seated is decorated with a fringe, and surmounted by a cushion ornamented with a honeycomb pattern; each corner of the seat terminates in a bull's-head, some of which, very beautifully cast or wrought in bronze, were found in the excavations of Khorsabad, and brought to Paris by M. Botta. The King's feet rest upon a footstool with clawed legs. His dress consists of the long fringed robe and furred mantle, and the usual truncated cap and ornaments; but he is quite unarmed. Twenty lines of inscription run across figures and ground of this work. These two slabs are not only interesting because they are of the finest Assyrian sculpture that has yet arrived in this country, and because they are in a high state of preservation, but more particularly because they embody a metaphor frequently used in the Psalms, and other of the sacred Books of the Old Testament, expressive of the interference of the Divinity in human affairs. Thus, in the 16th Psalm, it is said, "The Lord is the portion of mine inheritance and of *my cup*: thou maintainest my lot." And again, in the 23rd Psalm, "Thou preparest a table before me in the presence of mine enemies: thou anointest my head with oil; *my cup* runneth over."

No. 11.—These figures represent tribute-bearers in the presence of the King. In the first, the bended knee and uplifted hands is expressive (as in the Obelisk) of submission and respect. Behind him follows his companion, bearing on his shoulder a monkey, and leading another by a cord. They are both similarly attired, and wear on their feet the buskins turned up at the toes, like the *papooch* of Constantinople. These figures are short and muscular in form, resembling very much, also, in countenance, the people of Caramania. Eighteen lines of cuneiform inscription traverse this slab.

TRIBUTE BEARERS. ASSYRIAN KING AND SWORD-BEARER.

NIMROUD SCULPTURES AT THE BRITISH MUSEUM.

SUPPLEMENT TO THE ILLUSTRATED LONDON NEWS.

No. 461.—VOL. XVII.] CHRISTMAS, 1850. [NUMBER AND SUPPLEMENT, 1s.

THE GROCER'S SHOP ON CHRISTMAS EVE.

BY JOHN OXENFORD.

WITH AN ILLUSTRATION BY FOSTER.

THERE are two several shops for comestibles, which, on two several occasions, make a remarkably fine figure in the depth of a London winter. One is the Grocer's Shop on Christmas Eve, the other is the Confectioner's Shop towards the festival of the Epiphany. However, it is the first only which produces the real national excitement. The spectators of Twelfth-Night luxuries have, for the most part, every reason to believe that their participation will be confined to the sense of sight. Fine combinations of saccharine splendour for the eyes; Kings and Queens, ill-formed but gorgeously gilt and frosted for the eyes; pippin-paste involved into curious scrolls—all for the eyes. But the interest of the Grocer's Shop on Christmas Eve penetrates far more deeply into the soul of the surveying crowd. Many, many of them, far beyond the limits of twelfth-cake consumers, hope to share practically in the boiled luxury. While the twelfth-cake is more an aristocratic type, the plum-pudding is a national symbol. It does not represent a class or a caste, but the bulk of the English nation. There is not a man, woman, or child raised above what the French would call *prolétaires*, that does not expect to taste a plum-pudding of some sort or other on Christmas Day.

A certain superstition, current among the people, shows how deep-rooted is the reverence for plum-pudding. "As many plum-puddings as you eat about Christmas-time," says the superstition (and why should not a superstition *say*, seeing that it has so often been the cause of speech in others?), "so many happy months shall you pass in the course of the year." Thus, according to popular tradition, English felicity is intimately bound up with Christmas pudding: the latter regulates the former—is the condition precedent. The pudding not only conveys a pleasing sensation during the minutes required for its mastication, but it spreads a genial glow over the ensuing year. Happy the man who eats of twelve plum-puddings; for, lo! his happiness is secured till Christmas comes again, and brings with it a chance that he may renew his lease of bliss. That *is*—if the saying be a true saying; and who would presume to inhale a spirit of scepticism at Christmas time; the time when old wives' tales are so generally allowed to pass current, that even the publisher, prompted by commercial wishes, turns to practical account the flash of belief that once a year manifests itself in an unbelieving age, and thinks he may win the public to an inspection of fairy lore, if he will only wrap up that lore in the guise of a "Christmas book."

The pride of housewives of the old school is never brought out so conspicuously as in the matter of Christmas puddings. Elderly female friends, who would withhold from each other no ordinary secrets, deem the recipe for their own peculiar pudding a mystery that friendship should not unfold. Hopes are expressed in each domicile, that the especial pudding there composed may turn out better than any which is created in other familiar mansions. With some it is no uncommon practice to order up the pudding when it is cold, that the chance-visitor, who did not make one at the Christmas dinner-table, may have an opportunity of appreciating its merits. Nay, fanatics in the culinary art have been known to invite the whole of the Christmas party a day beforehand, that each guest might stir the pudding, before it was enveloped in the form-giving cloth. There is something in this initiatory ceremony, which renders even the making of the pudding a solemn act, and forcibly sanctifies the unique sanctity attached to this peculiarly British compound.

We have a story of a Frenchman, who essayed to make a Christmas pudding, and was perfectly correct in the choice of his materials, but forgot or never learned the all-important article of the cloth, so that, instead of a tempting globe, an unseemly shapeless mass made its appearance, quivering in a tureen. This story is dreadfully old, but its very antiquity seems to show that at a remote date the English regarded themselves as marked with the peculiar distinction of being a pudding-making people. As, in the mythical legends of most nations, some deity makes his appearance to introduce the peculiar art or product by which each nation afterwards became distinguished—one introducing the use of the plough, another planting the vine, a third stamping forth the horse—so do we greatly wonder that there is no legend according to which some friendly genius instructed the English in the art of pudding-making. "Britannia presenting her children with the first Pudding-cloth," would be no ill subject for a national fresco!

That there is something very solemn and mysterious in pudding-making, is amply proved by the superstitions and practices to which we have already alluded. But in what direction does the mystery point? As types of Christmas, the pudding and the mistletoe are closely associated, and the mistletoe we know comes to us from the Druids. Can it be that the pudding-cloth comes from the Druids also; that the use of

THE GROCER'S SHOP AT CHRISTMAS.—DRAWN BY FOSTER.

it was one of those secret arts which the ancient hierarchy withheld from the knowledge of the profane, and that, therefore, it has remained a characteristic possession of this island?

The admiration paid to the Grocer's shop-window on Christmas Eve is easily explained, when we regard the plum-pudding as the great national symbol, and reflect that the several ingredients exhibited are but the plum-pudding in posse. Granted that the grocer is an artist in his way, that he spreads out his currants into a black ground, whereon he draws fantastic patterns with a lighter-coloured fruit, that he arranges his luscious hemispheres (or rather hemi-ellipsoids) of citron and lemon so as to form symmetrical lines of partition, that he constructs slender columns of cinnamon—granted all this, we say, still it will not account for his establishment drawing a crowd exceeding that attracted by the jeweller, the silversmith, or the print-seller. His means of splendour, with all the addition of the holly-leaf and berry, are but humble in the ranks of magnificence. The true secret of the homage lies in the importance of the pudding. The crowd worships the pudding *in posse*. Thus do the Japanese adore the egg out of which the world was fashioned. Thus, according to mystical interpreters of Greek mythology, the goddess Leto or Latona is worshipped as the primitive darkness out of which light afterwards emanated. Those currants, those raisins, those rolls of cinnamon, those citron hemispheres are the Yule chaos out of which the pudding is to emerge.

If the form of the pudding, produced by the cloth, dates from the earliest ages, and offers itself as a type of oldest England, perhaps Britain, the material of the pudding, collected from the remotest parts of the globe, will form no inapt representation of the more modern commercial enterprise of our nation. When the Druids (assuming that they were the real originators) promulgated their idea of a pudding, it must have been something very different from the pudding of the present day. Sources of spice and other modern luxuries must have been unknown to the sacred barbarians. A globe of the simplest material, rolled from the mystic chalk, must have been the sole manifestation of their skill. But the plum-pudding of the present day is a result of that spirit, which, in its reckless promptings, sent Christopher Columbus to look for the East Indies the wrong way. That penetrating commercial spirit, which scorns difficulties of space and time, and which regards Horace's third Ode as so much rank heresy, cannot be more aptly typified than by the chief ornament of the Christmas dinner-table. Some thirty years ago, there was, we recollect, a nursery-book called the "History of a Plum-pudding," in which all the sources of the articles were explained, feebly in rhyme, but forcibly in pictures. It was a kind of inchoate "Peter Parley." There were views in the East Indies and the West Indies, to account for the spice and the sugar; and there were ships in full sail cross-ing the seas, to show how the dainties were conveyed to us; and the whole terminated with a juvenile party round a Christmas table, preparing to devour the product of many lands. The moral was grand, and might furnish a subject for a fresco companion to the one we have already recommended. "The nations of the earth presenting Britannia with the materials for a Christmas Pudding!"

Pursued to all its ramifications, the pudding is still symbolical. In some neighbourhoods—not the most aristocratic—the investigator into life will find notifications of the existence of a "pudding club," rendered conspicuous by a coloured portraiture of the object. This picture, which will often be found in the grocers' shops of the suburbs, is founded somewhat on a principle of exaggeration. The pudding, which is to be the prize of the clubbist, is of enormous dimensions. Children, with rose-pink cheeks, are shown in attitudes of exultation at its appearance; and the words that visibly flow from their mother's lips explain to the *pater familias* the advantage of pudding-clubs in general: but still one looks uneasily at the pictorial display, and cannot help feeling that if the pudding rolls from its plate—a very likely occurrence—the whole family will be smothered as by an avalanche.

Our more opulent readers, probably, do not know what a "pudding-club" really is. It is a type of the reckless generosity and hospitality of our humbler classes, and therefore we have referred to it in illustration of our statement, that the pudding is symbolical throughout. Properly speaking, there is no club at all. The several subscribers pay a trifling amount per week, for a certain length of time, before Christmas Day; and when the total sum paid equals the value of materials for a pudding, these are duly delivered. The political economist naturally asks, "What is the use of this payment beforehand?" The tally system—a grand destroyer of the well-being of our humbler classes—is at once intelligible. The article of dress first, and the instalments are paid afterwards: the purchaser securing the object of his wishes wi hout ready money; and the vendor repaying himself for the absence of ready money by the largeness of his price. But the pudding-club is no result of a commercial principle; it takes root in a national sentimental peculiarity.

The peculiarity is this: the humbler classes of London cannot keep their own money. The stringent resolution to "put by" sixpence a week, backed by the most ingenious money-box, would break down before some call for the moment—a call probably arising not from a love of self, but from a good feeling for others. The visit of an old friend must be celebrated by a social glass—the distress of an unlucky neighbour must be immediately relieved—and how are these ends to be accomplished, except by an attack upon the reserved fund. With the humbler classes, there are, fortunately, always old friends, and, unfortunately, always unlucky neighbours; and, in the face of such a system, how could the amount requisite for the plum-pudding be ever raised, if the money were kept at home? The household god of the London family would ever be incensed at the absence of his proper offering. But the grocer, who institutes the so called "pudding-club," officiates as banker. The man who cannot trust himself with money, pays it away in the form of a subscription; and thus it accumulates, in spite of generous impulses, till the proper sum is raised. Is not this a great national fact, that our hard-working people of the humbler ranks require a check upon their impulsive generosity, even when the enjoyment of the one general holiday in the long, long year is the premium offered for a little frugality.

When the plum-pudding symbolises so much English antiquity—English superstition—English enterprise—English generosity—and, above all, English taste, can we wonder that the Grocer's Shop-window is a popular object on Christmas-Eve.

WELCOME TO CHRISTMAS.

BY MARY HOWITT.

He comes—the brave old Christmas!
His sturdy steps I hear;
We will give him a hearty welcome,
For he comes but once a year!

And of all our old acquaintance
'Tis he we like the best;
There's a jolly old way about him—
There's a warm heart in his breast.

He is not too proud to enter
Your house though it be mean;
Yet is company fit for a courtier,
And is welcomed by the Queen!

He can tell you a hundred stories
Of the Old World's whims and ways,
And how they merrily wish'd him joy
In our father's courting days.

He laughs with the heartiest laughter,
That does one good to hear;
'Tis a pity so brave an old fellow
Should come but once a year!

But once, then, let us be ready
With all that he can desire—
With plenty of holly and ivy,
And a huge log for the fire;

With plenty of noble actions,
And plenty of warm good-will;
With our hearts as full of kindness
As the board we mean to fill.

With plenty of store in the larder,
And plenty of wine in the bin;
And plenty of mirth for the kitchen;
Then open and let him in!

Oh, he is a fine old fellow—
His heart's in the truest place;
You may know that at once by the children,
Who glory to see his face.

For he never forgets the children,
They all are dear to him;
You'll see that with wonderful presents
His pockets are crammed to the brim.

Nor will he forget the servants,
Whether you've many or one;
Nor the poor old man at the corner;
Nor the widow who lives alone.

He is rich as a Jew, is Old Christmas,
I wish he would make me his heir;
But he has plenty to do with his money,
And he is not given to spare.

Not he—bless the good old fellow!
He hates to hoard his pelf;
He wishes to make all people
As gay as he is himself.

So he goes to the parish unions—
North, south, and west, and east—
And there he gives the paupers,
At his own expense, a feast.

He gives the old men tobacco,
And the women a cup of tea;
And he takes the pauper children,
And dances them on his knee.

I wish you could see those paupers
Sit down to his noble cheer,
You would wish, like them, and no wonder,
That he stay'd the liveiong year.

Yes, he is the best old fellow
That ever on earth you met;
And he gave us a boon when first he came,
Which we can never forget.

So we will give him a welcome
Shall gladden his old heart's core!
And let us in good and gracious deeds
Resemble him more and more!

THE MISERABLE CLUB;

OR,

THE WOES OF BROWN AND WIGGINS.

BY LANCELOT WIGGINS.

OUR club has its anniversary meeting on Christmas Eve. We call ourselves the "Miserables," and think that we are justified in assuming that title. I still call it "our" club, although I am no longer a member. It formerly consisted of thirteen; but the year before last it dwindled down to nine. Last year the number was reduced to seven, by the expulsion of my friend Percy Brown and myself. I was the original founder and perpetual president of the club. I was proud of my position, and, though I consider myself unjustly expelled, I still hold that club to be the brightest spot in a world of sorrow. All the members are miserable upon principle. Without sufficient proof of misery, no one can be admitted into that select circle. One peculiarity of our club is, that although upon sufficient proof of happiness we expel a member, we never excommunicate him: we deny his right to be called a member, but we allow him to attend our meetings as a friend and visitor, and to do anything he pleases except to vote. The principal members are Serjeant Wrangles, Lord Fitzboodle, Mr. Smith, Mr. Penultimus Green, and Mr. Hugh Fitzhugh.

The rules of the Miserable Club are, that every year it shall be imperative that the expulsion of two or more members shall be formally moved and seconded, on the ground of disqualification by happiness. Such commonplace and vulgar misery as poverty, ill health, ungrateful children, or a scolding wife, are no qualifications. They do not reach our true standard. The accused is bound to defend himself against the charge, and to adduce proofs of his misery, if he desire to continue in the enjoyment of the high distinction of being one of us. If the proofs be deemed satisfactory by a majority of the club, he is allowed to remain in full possession of the privileges of membership. If not, he is politely informed that he may go and join the outer world of the happy. By these means the members periodically fortify themselves in their misery, refresh their sympathy for their brothers' woes, and maintain the principles of the club in their utmost vigour.

The first case decided last year was that of Mr. Percival Brown, a much-respected member of the club, and a man whose fame is national property. Mr. Brown is a wit and a philosopher, a man of genius, and a man of common sense. Let no cuckoo (without wings) repeat the old song, that genius and common sense never work together. I will maintain against all disputants, what and wheresoever, that there is no genius without common sense; and that it is a stupid fallacy to imagine with that great poet, who gave his own dictum the lie, that

> Great wit and madness surely are allied,
> And their partitions do their bonds divide.

Mr. Brown's writings are highly esteemed, and not more so than they deserve. Although his reputation is so great, he is as modest and simple-hearted as a child. He is in the very prime of his manhood; on the vernal slope of the mountain of life; pursues the avocation that he loves; and has no cause of complaint that the world is ungrateful to his merits, or denies him bread while living, upon the understanding that he is to have a stone when dead.

It was Lord Fitzboodle who undertook to prove that, in justice to the club, Mr. Brown ought to be expelled. He dwelt very emphatically and severely upon the various elements of happiness that united in his life, character, and circumstances. "Mr. Brown," said his Lordship, "has a wife, such grace, such modesty, such wit, such virtue, such good temper, such unaffected piety, such a small white hand, such a pure complexion, such a captivating smile, such bright eyes, and such a happy soul looking through them, are seldom united so happily as in Mrs. Brown. I have been at Mr. Brown's house. I have shared his conversation and his hospitality. His house is a gem of good order and good taste. I am positive, moreover, from what I have seen, that Mr. Brown loves and is beloved by Mrs. Brown; that, in fact, all the affection which he bestows, she returns with usury. Knowing all these things, as I do, I must say, that, however much I may honour, respect, and even envy Mr. Brown, he is not a fit member of our club."

Serjeant Wrangles was Mr. Brown's next accuser. The Serjeant, miserable man, makes between £7000 and £8000 per annum by his profession, and calculates, with a very good prospect of success, upon a judgeship for his declining years. He is the leader of a circuit, and of the court in which he practises; and is not only a lawyer, but something better. The Serjeant corroborated all that Lord Fitzboodle had said; expressed himself in the strongest terms of horror upon the utter absence of delicacy displayed by Mr. Brown in remaining, after repeated remonstrances, a member of a club for which he was so totally disqualified.

"Gentlemen," said Mr. Brown, "I will not retort upon my accusers the charges which they have so wantonly heaped upon my head. Upon what corn my shoe pinches, I alone can tell. What screw in the complex machinery of my happiness is out of order, it is not Lord Fitzboodle or Serjeant Wrangles that can determine. So far from being disqualified for the club, I believe that I only am properly qualified among all the gentlemen present; and that, in fact, Mr. Wiggins, our respected President, Lord Fitzboodle, Serjeant Wrangles, and every one of you, except myself, are interlopers and pretenders. The only real and legitimate miserable is Percival Brown. It is most true that I have a wife and children, whom I dearly love; that I enjoy good health; that my spirits are generally light, and my conscience tolerably clear. But what then? The woes of humanity do not pass my door without looking in upon me, and putting my manhood to the proof. All men have their particular liking—some pleasure which they prize above all others. Most men contrive to indulge in it. I alone am an exception. I dote upon quiet, and I have a most sensitive ear against discord. Hence these tears. *C'est pourquoi je m'enrage.* I cannot obtain quiet. The boys of Savoy, with their accursed organs—the savage bag-pipers of the Highlands—old hurdy-gurdy women—itinerant ballad-singers—mackerel men—jew boys—and a whole army of similar pests, that swarm in this metropolis of London, wherein I am compelled to live, combine to assault my nerves by horrible noises, by mock music, by barbarous discords, and to render study and seclusion almost impossible, and I verily believe to drive me mad ultimately, to the ruin of my family. When I married, I unluckily purchased a house, in its walls were of the ordinary thickness. But, alas! brick walls were no protection. The house did not stand alone; it was one of a terrace. I incurred considerable expense in furnishing and embellishing this house, and thought I should be at peace in my study, amid my books. But no sooner was I fairly installed, than my miseries began. A young lady, fresh from boarding-school, with all the rawness of sixteen imprinted upon her pretty face, made her appearance in the next house within ten days after my furnishing was complete. A piano forte, that never was allowed to rest, gave me hourly proof of her existence. The vile instrument was placed with its back against my wall, and every jingle of its strings was perfectly audible in every part of my house. My drawingroom was no longer my own. My study was so far from being impervious against her abominable squalling, that I heard every sound as plainly as if she had been at my elbow. I was inhuman enough to hate all young ladies for her sake, and to wish that I had been a despotic sovereign, that I might have issued an edict for the utter destruction, breaking up, and annihilation of all piano fortes and musical instruments whatsoever, and for the incarceration for life in a convent or in a dungeon of any and every shrieking, screaming, yelling, sol-fa-ing miss that dared to learn music and singing in any house, village, or tenement, that was not removed for a couple of miles at least from the study of Percival Brown. The slop-builders of London came in for their due share of my wrath—rogues infinitely worse than slop-tailors, and dealers in 'sham' to a far larger and more vexatious extent. Day and night, noon and even, the discord stirred up by my tormentor filled me with vindictive thoughts. The jingle of her piano-forte and her agonising shrieks under the discipline of her music-master, and in her solitary hours while she practised his lessons, racked me with spasmodic misery. I sometimes flung down my useless pen in an agony of despair, and resolved to commit suicide if she did not immediately desist. I cannot tolerate divine harmony itself—much as I love it—when I am engaged in writing; and there are times when not even the sweet strains of a Jenny Lind, or a Sontag, could fill me with any other emotions than those of annoyance that they distracted my attention, and whirled me away into spheres where mental labour is impossible. But to be persecuted by one whose most successful attempts at music were foul murder, was more than I could bear. I died a daily death. I was sacrificed by slow torment to the demon of discord; and my brain, that might have teemed with gentle fancies—with wisdom or with wit—seared and simmered with fiendish thoughts of revenge. But I restrained myself, and I did not perpetrate. At the end of three months, however, the torment became still more insupportable. An old gentleman took the house on the other side of me. He had nothing in the world to do but to weed his little garden—talk to a parrot—scold the servants—and play the violoncello! Oh, that monster violoncello! Oh, that horrible fiddle! From till ten at night, it was never silent for above half an hour at a time. With what a genuine hatred I hated that old man! He could play but one tune; and, as he played it imperfectly, he was always learning it. Often and often have I longed and yearned to commit justifiable homicide upon him. I beat time to the abominable discords of the hateful instrument still resound in my brain! Human nature could not stand the double infliction of the young girl's treble and the old man's bass. I sold my house at a great sacrifice, and removed into a detached villa. I thought it was a happy day when I quitted that terrace. In my new villa I hoped to be at peace. But it was otherwise decreed; though there were no next-door neighbours for about a fortnight, when a thought struck me that I might cure the disease of *the précis-writer* by a little homœopathic treatment. Intensely as I hate the bagpipes, I hired a wheezy Highlander, and engaged him to take his stand every evening in the road opposite to the villa where my new tormenter lodged, and strike up some barbarous pibroch as soon as the horn practice commenced. I must own that I derived very considerable enjoyment from the struggle that ensued betwixt the rivals. The piper was the more strenuous of the two, and at last the horn-blower became inaudible amid the rushing torrents of sound that escaped from the bag of his opponent. The *précis-writer* was fairly foiled, and I have no doubt bestowed as many curses upon the pipes, as I had bestowed upon his *cornet-à-piston*. I do not know whether he discovered the secret, but the Highlander played me false. I incautiously let him into the secret of my motives, and he forthwith gave notice to all the organ-grinders, hurdy-gurdy musicians, and ruffians that play brazen instruments in the streets of the metropolis, that in my house there lived a man who hated the annoyance of music, and one who might be induced to bribe off his persecutors and purchase quietness for a fair consideration. I have had no peace since: the *cornet-à-piston* is still heard in the calm evening air, discounting most eloquent misery to me. An Italian rascal with a perambulating box of discord as large as a moderate-sized cottage, drawn upon a waggon by a strong horse, sometimes stations himself for a full hour at the corner of my street, and has again and again refused to be conciliated under half-a-crown. I have tried the system of bribery and of coercion, but both have proved useless for my effectual relief. To bribe, is like anointing mya. with honey to keep away the wasps, or standing unarmed on the road-side with a pile of silver and gold before me to deter robbers. Oh, the miseries of a London street to the man of quiet habits and reflective mind! What is to become of Philosophy, of Science or of Poetry, of Music itself, if these pests who grind organs in every street are to be allowed to pursue their trade? There are Italian organ-boys in London sufficient to mar all the metaphysics of all the Fichtes and Schellings that ever lived, and to destroy the intellect and poetry of any new Shakspeare or Milton that this age might otherwise produce. If I could live out of London, I would; but I would as soon die, as be altogether banished from that most delicious of capitals. The miseries of all the other members of the club are as nothing to mine. You may be unhappy; but I—miserable that I am—am driven frantic!"

This was the story told by Mr. Brown. His case was duly put to the club; and it was resolved unanimously, that, great as the misery was, it was scarcely a qualification for membership. He was expelled accordingly; it being understood, of course, that he was free to remain and make himself miserable in our company, without any privilege of voting or of membership.

My turn came next; and, having been accused by the public prosecutor, Fitzboodle—seconded, as usual, by Wrangles—of being too happy I stated my case as follows, and claimed the full privilege of misery:—

"My surname," said I, "is Wiggins; my Christian name is Lancelot. I am thirty-three years of age. I have an estate of £10,000 per annum, clear and unencumbered, left to me by my father—a successful, prudent, thrifty merchant of the city of London. I inherit all his money, and some portion of his prudence: I neither hoard nor squander; but take the full enjoyment, and no more (not to the shadow of a fraction of a farthing) than is consistent with the maintenance of that comfortable income to my posterity, should I have any. I have no wife—a circumstance which I sometimes think is an

increase of misery. This is a point which, however, remains o be proved, as I am engaged to be married to the most beautiful, the most gentle, the most warm-hearted, the most—— But why should I detail her merits or her charms? It is a matter in which the club has no concern. I cannot deny that I have many reasons to be grateful, in addition to those already mentioned. I have been largely endowed by nature with strength and the capacity of enjoyment. She has given me a good constitution; I eat well, drink well, and sleep well. I have picked up, since I left school and college, a pretty fair education, and think every day to have been mis-spent in which I have not learnt something. I have a keen sense of beauty. I love it in every shape, animate or inanimate, visible, audible or tangible, natural or artificial. I consider all nature to be my inheritance, my birth-right, my own property, of the usufruct of which nothing can deprive me, except the coldness of my reason. Fortune may rob me of my £10,000 per annum; but she shall not rob me of my landscapes—my morning walks—my evening rambles—my delight in the beauties, the graces, the sublimities, and the terrors of nature. I consider myself, generally speaking, to be at peace with all mankind. As for women, I love them and esteem them all, provided they are not ugly; and, lest any member of the club should mistake my meaning, I assert, in the most emphatic manner, that whatever the age of a woman may be, and whatever may be the colour of her eyes or her hair, and whatever the shape of her nose, there never yet existed, and never will exist, a good-tempered woman who was ugly in the estimation of Lancelot Wiggins.

I have my political principles too, which I cherish with as much pertinacity as is consistent with my firm conviction that I was a greater fool a year ago than I am now; and that in a year hence I shall look back upon my present state of moral and political knowledge with a feeling akin to pity for my former blindness. I may say of myself generally, that I am the enemy of ignorance, oppression, and intemperance, and that I never behold ignorance without a wish to become instrumental in removing it. I have moreover a pretty strong notion, notwithstanding my own misery, that the world is not so bad a place as some people represent it to be; and that, in fact, there are many Utopias, which only remain Utopias because men obstinately persist in calling them so. Feeling acutely my own misery, I have a fellow-feeling for the miseries of others, however unlike my own they may happen to be. I endeavour to extend my sympathies beyond the folds of my own cloak, or the prickles of my own shell. In so doing I discover many evils, which I am the enemy of ignorance, oppression, and intemperance, and that I never should rejoice to remove, or, failing in that, to alleviate. It may be supposed that, with all these advantages, I ought to be a happy man. But 'ought to be' and 'be' are two forms of the verb that do not always consort together as lovingly, and fit in as mathematically, as eternal morality and justice intended that they should. I am not simply unhappy, but I am miserable; and the more miserable, because my obstinate fellow-creatures, give, instead of their sympathy, their contemptuous pity or scornful laughter, as their only answer to my grievances. 'Mr. Wiggins suffers from hypochondria,' says a wise member. The wise member is wrong. Mr. Wiggins suffers from no such thing. He indulges in no distempered fancies. He does not, and never did, imagine himself to be a tea-pot—or a jug—or a punch-ladle—or a roasting-jack—or a pair of tongs—or a pump-handle—or a beer-barrel—or the Pope—or an Emperor. 'What is the matter, then?' it may be asked; 'Are you a debtor or a creditor?—or a disappointed author—acidulated into a critic?—or a broken-down orator?—or a damaged statesman?—or a *roué* with shattered nerves?—or one who has committed some dreadful crime? Perhaps you murdered Eliza Grimwood, or the barmaid in the Regent's Park?' To which I reply, that I am none of these things—and *did* none of these things, and that I cannot say that I suffer from pangs of conscience. However, it is true, I have committed in my time some faults and follies. If I have, I have suffered for them; and though I do feel a regret now and then, and a sense of repentance for peccadilloes and follies, the feeling never deepens into remorse. My conscience, all things considered, does not dig any very sharp or excruciating spurs into my side. In addition to all this, I can say that I have neither been jilted by woman nor deceived by man; and that I neither crave honour, power, or money from a human being. I have more money than I want, and far more than I can spend. I would rather be plain Lancelot Wiggins than Sir Lancelot, or Viscount Wiggins, or the Marquis de Wiggins, or the Duke de Wiggins. What besides is there better to meet it? Tobacco. Again, what man ever meditate suicide with a pipe or cigar in his mouth? Never! and no man ever will. The influence of the plant is so genial, that when any thought of the kind shoots across the brain of the dejected and the forlorn, they have but to light a pipe or cigar and be reconciled to their miserable existence. All ideas of the rope or the razor, of the dock or a leap from Waterloo-bridge, vanish before the perfumes of a choice Havannah. The troubles of the mind yield to the delicious influence of the blessed weed. And great as are these benefits and fascinations, all derivable from tobacco, I hold that there are many others which should make the man in a high state of civilisation cry to providence for so splendid and beneficent a gift. Worn with the undue pressure upon the brain consequent upon the fierce competition of the present day—debilitated rather than depressed—overwrought in the struggle to subsist, or to maintain a respectable position in the world, the man of educated nerves has a friend that lies gentle as sleep, soft as down, luxurious as sunshine, upon his senses. That friend is tobacco. Even when the nerves are not shattered—when the man is sound of wind and limb, and unannoyed by the cares and sorrows of the world—when the mind is, as it were, fallow, and waiting to bring forth a crop of ideas, the balmy influence of tobacco prepossess it to fructification. None but those who have smoked know the heavenly luxury of a cigar after dinner. It is then, that, reclining in an easy-chair, or stretched at full-length upon a sofa, we are aware of certain half-formed thoughts and fancies which go flitting across the camera-lucida of the inner life; it is then that the whole world seems to float lazily, quietly, beautifully, beatifically—like a light cloud upon the evening sky, looking down complacently upon the clay above which it soars, yet from which it sprang, and to which it belongs. Supposing the cynic to be reclining on a sofa, at his own fireside, under the light of his own resplendent chandelier—comfortable, as all mankind are there not, the careless luxury of the vicinity of the world to be afforded him by the clouds of thin blue smoke which he discharges from his mouth and nostrils? The love of woman! Alas! in what is it better or more substantial than the vapours of his Havannah? Possession of gold! Alas! and double and trebly alas! what signifies it? What is it worth after all? Can it soothe the wrath, repay the grey and aching head, or the seared and aching heart? Will it soothe the troubled conscience? Will it bring healing to the sick? No; but tobacco will; and therefore are the fumes of pipe or cigar, in producing this effect, more valuable by far than the possession of treasure. Is fame more worthy? Pshaw! 'Tis but a breath, and is even more unsubstantial than the whiff of a meerschaum. Oftentimes, indeed, it is far more evanescent. Equally apt for its illustration of another phase of human life and character, is the smoke which the smoker exhales. Should he be an epicurean, easy and good-natured, at peace with himself and with all the world, observe how the exhalation from the weed, while he lives in it, all the harmless enjoyment that he can; an enemy of no man, but simply the enemy of care, vexation, annoyance, and all the rude and strong passions that might disturb the ceaseless serenity of his soul—the light fumes of his hookah or his Havannah afford him abundant opportunities to moralise upon earthly vanity. What, for instance, is grief, that it should weigh upon his immortal mind? 'Tis nothing—'tis but a puff of smoke, and it is gone. What is anger, that it should indge in his breast—and what is there in the world that is worth being angry about? Nothing, nothing—unless the thin fleecy cloud that hovers above his face as he puffs his cigar be worthy of being deemed a something, and of entering into the large list of respectable entities. Spite, jealousy, malice, envy—all the other little mean paltry passions—are infinitely less than smoke in the estimation of such a man as this is. As for the big, grandiloquent tragic passions, they are no better than the little ones. They are like the smoke out of an evil tobacconist; furnace, man to be consumed with the smoke of his pipe, which is altogether benevolent. But, after all, the principal virtue of tobacco is that it is friendly of itself, and is the cause of friendliness in others. If two men have ever been in the habit of smoking together, there is peace between them. To smoke with a man in modern times, is tantamount to the practice among the ancients of breaking bread with him. It is a sign of hospitality and good-will. It may not always make people friends, but it prevents them from becoming enemies while the smoking lasts. We are told that many a friendship which adorned a life, and only concluded with it, arose in the early ages of the world, over a crust of bread. I have no doubt that many a friendship, equally pure, disinterested, and constant, owes its origin, in the present age, to a proffered cigar; to the demand for, and the concession of, a light; or to the graceful and common courtesy of a pinch out of a neighbour's snuff-box."

"The same friendships would exist if there were no such thing as tobacco in the world," said L. "Human nature was not born of the tobacco plant. The widely-spread prevalence of the habit of smoking cannot be urged as proving its benefit. I do not deny that smokers find an enjoyment in their habit. I admit it, and deplore it. Multitudes of men and women, in Europe and America, find an enjoyment in drinking to excess of gin, whiskey, rum, and brandy; other multitudes still more dense, in Asia, find an enjoyment equally fierce in drinking laudanum and eating opium: but are we to defend the gin-drinker, the whiskey-swiller, and the opium-eater, because he is not alone in his insanity, and because he has the countenance of the society in which he moves for his beastly indulgence? Let me retract the offensive epithet, oh ye four-legged beasts! Ye live according to the laws of nature, and only eat and drink what she has prescribed for you. No animal except man indulges in intoxication, whether of tobacco, of alcohol, or of opium. The pig, it is true, has been known to go drunk, when man took advantage of his ignorance, and placed the brewer's wash in his way; and the goose has also been observed to become slightly intoxicated, when betrayed into it by man; but even pig and goose revolt indignantly against tobacco. No temptation can make them tolerate smoke for an instant. Boileau has said that—

> Tous les hommes sont fous, et malgré tous leurs soins,
> Ne different entre eux, que du plus ou du moins.

And Pope after him has repeated that Nature can do no more than tell us we are fools. If proof were needed to confirm the dicta of these poetical philosophers, the passion for tobacco would of itself be sufficient. But, since it is as you will, tobacco is poison—poison to the nose, poison to the palate, poison to the lungs, and poison for the stomach. In the form of smoke, it is doubly poisonous—for it not only poisons the smoker himself, but the harmless inhaler of the common atmosphere, who has the misfortune to be in the same room, or on the top of the same coach with him. Good results may spring from the use of a poison, if administered medicinally. Were tobacco only taken by men as prussic acid is, in obedience to the prescription of a skilful physician, I should cheerfully acknowledge, that, like prussic acid, or any other respectable poison created by an all-wise and all-beneficent Providence, it had its uses. But men do not use tobacco as a medicine—they abuse it as a luxury. They love it for its unwholesome excitement; and with all the delicious sensations which you have described as flowing from it are produced by opium, the use of which even you would not defend. Nevertheless, every argument for tobacco is an argument for alcohol and for opium. If tobacco be found useful as a stimulant, so are other poisons; and if stimulants be so good, so necessary, and so delightful, why should we confine ourselves to the one poison, when all the potions of all-bounteous Nature are before us? Why do we leave opium to the Chinese only? The strength temporarily given by laudanum to weak and nervous people, who addict themselves to its use, is quite as great as that afforded by tobacco; and the bright visions that may be conjured up in the diseased brain of him who eats opium, are far greater than any that dawn upon the dark mind of the tobacco smoker; but we think we shall escape the penalty more easily with tobacco than with either of them. But all such excitements are ultimately injurious. Nature is inexorable. She exacts a penalty for all transgressions. She is filled with benevolence, but she never pardons a wrong done against her Majesty and her laws. Nature cannot forgive a wrong against Nature. She punishes the use of tobacco, in all its forms of smoking, snuffing, and chewing, and has decreed that its abuse shall destroy the stomach and emaciate the frame; that it shall create unnatural thirst, and consequently lead to over-indulgence in the use of spirituous liquors. She has also decreed that it shall make the teeth black or yellow, cause the breath to become offensive, and that it shall disorder and impair the intellect."

"I grant you," said Fitzboodle, "that these are the results of the abuse of tobacco. I only defended its use. A man may abuse bread itself, and overgorge himself with dough, French rolls, or pastry crust; but are we to denounce corn for that? An alderman may take too much turtle; but is not turtle good? and are we to denounce its use because it makes a man gouty and apoplectic when taken immoderately?"

"Mere sophistry," replied I; "the smallest use of that which is not wholesome, or necessary, is an abuse. As for your pictures of the cynic and the epicure, they are—

> Beni, ma mal trovati.

They are very well as pictures; but they are irrelevant to the matter of tobacco. Pope, that great poet, who was no smoker, outshines your cynic in his contempt for fame, riches, and all the *etceteras* upon which you have dwelt. Solomon declared that 'all things were vanity and vexation of spirit.' He wanted no Havanna fumes to teach him that."

"He might have excepted the cigar from the catalogue of vanities, had he known it. Judging from his wisdom in other respects, he would have assuredly done so," said Fitzboodle.

"I was about to observe that illustrations of the vanity of all human enjoyments abounded before tobacco ever was used or abused by man. As for your epicurean, he would be but a poor and sham epicurean who could not nurse his philosophy with less than thousands of smiii better than those you have put into his mouth, in your miserable apology for the intoxication produced by tobacco. Cynicism and epicureanism need no illustrations from the pipe. They were known to and took their names among a people who never smoked. Could you imagine Plato with a meerschaum? or, Socrates with a cigar? or, Diogenes with a quiz?"

"Of course, I could," replied Fitzboodle; "and love them all the better for the fancy. Only imagine what Shakspeare is, and what he might have been if he had smoked!"

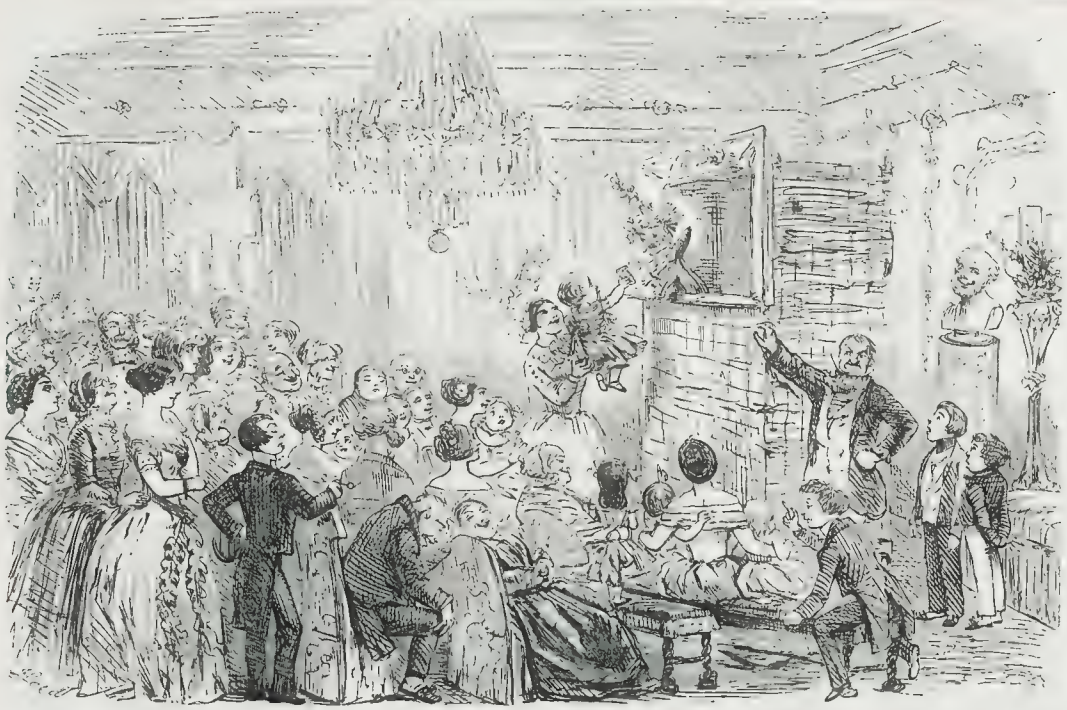
"Thank Heaven!" I said, "that Homer and Shakspeare were equally guiltless of tobacco. I reflect upon that fact, and am less miserable. And now, having denounced the 'weed' in prose, I will give you my malediction upon it in rhyme:—

SONG.

> Upon his mouth may curses fall,
> May it be dead to savour;
> His mellow brain be embers dry,
> His wines devoid of flavour;
> His bread be sawdust in his jaws!
> And may his teeth, so black oh,
> Turn all his sweets to bitter sour—
> The vile tobacco-smoker!
>
> May never lady press his lips,
> His proffer'd love returning,
> Who makes a furnace of his mouth,
> And keeps its chimney burning!
> May each true woman shun his sight,
> For fear his fumes might choke her!
> And none but hags, who smoke themselves,
> Have kisses for a smoker!"

Thus ended my denunciation of the poisonous weed. It was the last speech I ever made as a member of the club. My right and title to the privilege of membership were put to the vote and solemnly denied; and it was forthwith notified to me, that I was to consider myself for the future as an outer barbarian, whose company the club would be at all times miserable to enjoy. I am, however re-eligible, and shall put in a claim on another occasion to be restored to my position. If elected, as I hope to be by next Christmas, it is my intention to examine the claims of Fitzboodle and Wiggins to the title of miserable, and avenge upon them the injustice they have done me. Oh, that I were an absolute sovereign! Smoking in the streets should be an offence to be punished by decapitation; and no man should smoke in his own room, under the penalty of an annual tax of seventy-five per cent. on his income!

C. M



PUNCH AND JUDY AT CHRISTMAS.—DRAWN BY LEECH.

CHRISTMAS INTERIORS.

BY THE OLD BACHELOR.

WITH ILLUSTRATIONS BY LEECH.

I AM sure my title is appropriate, for Christmas is peculiarly the season of Interiors in England. Its charities cluster round bright and crackling hearths; its memories are of families met, often from long separation, round happy household tables; its festivities are all associated with close-drawn curtains, glowing fires, soft carpets, ruddy lights, familiar faces, the prattle and laughter of young voices, the unspoken love of man and wife; the union of the past, the present, and the future in grandparents, parents, and children; with all the sweetest and most satisfying sights, and sounds, and sentiments of home. Festivals change their character with the scene of their celebration. When the holly, and misletoe, and laurestinus make a green bower of the village church, and the robin nestles under the sheltering layers of the snow-thatched yew, at most times that the words of peace upon earth, and goodwill towards men are solemnly spoken from an English pulpit, what wonder that few of us recall, in connexion with Christmas, the broad and sun-scorched plains of Eastern Chaldæa, with their sapphire night-sky, unclouded stars, and watching shepherds. Milton, in his "Hymn to the Nativity," has gone so far as to transfer to the Oriental scene of the Nativity the snow and wintry bleakness of our own northern climate:—

> It was the winter wild
> While the Heaven-born child,
> All meanly wrapt, in the rude manger lies;
> Nature, in awe, to Him
> Hath doff'd her gaudy trim,
> With her great Master so to sympathize.
>
> It was no season then for her
> To wanton with the sun, her lusty paramour.
>
> Only with speeches fair
> She woos the gentle air,
> To hide her guilty front with innocent snow,
> And on her naked shame,
> Pollute with sinful blame,
> The saintly veil of maiden white to throw;
> Confounded, that her Maker's eyes
> Should look so near upon her foul deformities.

Our English Christmas-tide, then, is a season of Interiors—bright and warm often; often, alas! dark and cold: most of them joyous, but many sad with memories. A few of these Interiors are here humbly presented to the readers of the ILLUSTRATED LONDON NEWS, by joint service of pencil and pen, as an offering appropriate to the happy and holy time.

Here we are *among the Children*—where we ought all of us to be at Christmas time. Whatever invitations I decline, whatever invitations I accept, at Christmas, I take care of one thing, that where I *go*, there must be children—children of all ages, from the little fatling, who looks at my hard face out of wondering round eyes, and then, with dimpled, waxen fingers, gravely proceeds, in a roundabout way, to pull off my spectacles—from that little innocent, up through the toddler of three years old, who asks questions you can't answer, and *will* have a reason for everything—to dawning girlhood of ten, that blushes, and is beginning to feel the womanhood stir strangely in it—and so on, by romping boyhood of twelve, and shy hobbadehoyhood, growing too long for the arms of its jacket and the legs of its trousers, even up to the sweet maidenhood of seventeen (fatal to me, an old bachelor)—and there I stop—for as to the "young men" and "young women," all accomplishments and conceit, of them I don't care how little I see at Christmas or any other time of year. No; take me to the children, and keep me there—and oh, do let me make the acquaintance, in their company, or *Punch in the drawing-room*.

"THERE IS NO DECEPTION, LADIES."—DRAWN BY LEECH.

Mr. Punch, I grieve to say, is ceasing to be a mystery. Faith has failed us here as in other religions. I do not think we believe in Punch as we used to do before we knew as much about him behind the scenes as we know now, thanks to London Correspondents and such discoverers. But *I* have a great deal of ancient veneration; and when, the other day, I was asked by pleasant Mrs. Eyebright to engage Mr. Punch for her Christmas party, I felt a sort of fluttering—such as I remember to have first experienced, some years ago, when I had a five-act play in MS., and was solemnly introduced to the eminent tragedian of the day.

I had the pleasure of introducing Mr. Punch into Mrs. Eyebright's drawingroom, and a most distinguished figure he made. I should hardly have known him from the greengrocer from round the corner, who waits, as he appeared in his black suit and white tie, which looked quite smart and fresh in the lamp-light. He behaved with an easy dignity, which yet seemed in harmony with the humour of his conversation. But he accounted for this by his familiarity with the great.

"This 'ere's a nice party," he remarked to me confidentially, "and refreshments werry liberal; but, bless you, I've performed afore 'arf the Docks and Markisses in England, I 'ave."

His "pardner" (as the gentleman is called, who converses with Mr. Punch when that individual is not occupied in murdering his friends and disposing of the bodies of his victims, or suffering from illness or remorse) was a grave man, who appeared to treat Punch with much respect, calling him "Mr." scrupulously, or addressing him, as Boswell addressed Dr. Johnson, with the addition of "Sir." He was much looked up to by the children; but some of them were puzzled at the difference of size between the two interlocutors of the dialogue. And when little Mary Eyebright had been solemnly taken up by funny Mr. Edkins (who seemed to be on almost as free and easy terms with Mr. Punch as the pardner himself), to be introduced to Mr. Punch, and to offer him a piece of cake, which he accepted with a profusion of bows over the front of his box (like a dramatic author on a first night), saying, "Th—h—ank you, Miss—err-r-w-se-t," Mary was looked upon as a heroine by her little companions for the rest of the evening, and conducted herself accordingly, with a great increase of dignity. It was very painful to see Mr. Twinge, Q.C. (he is Mrs. Eyebright's uncle, and has thus acquired a right to bore us at all the family parties, labouring to undermine the children's faith by explaining to them that Mr. Punch does not really kill his wife and child and Shallabala, and is not really carried off by the Devil in the fifth act.

Confound him, why couldn't he let them believe it all, as I saw they did, the little darlings, all but Master Clutterbuck, who is a boy of a rationalistic turn of mind, and could not be kept from peeping through the curtain, and declaring contemptuously "they were not alive, and were taken out of a box." They were charmingly perplexed between Mr. Punch's humour and murderous propensities—just as one is in judging of a real man. For that is the great point in Punch, which makes the conception of him a work of genius (as unctuous old Mr. Easy explained with immense relish to jolly old Mrs. Roley during the performance, which they enjoyed as much as any of the children). "That's it, ma'am. You see, he's a confounded rogue and vagabond; but he's so pleasant with it all, one can't help liking him: rogues almost always are pleasant people. And then, as for his murdering his wife and child, and singing while he arranges them in the coffin, it's human nature, Mrs. Roley; we are all made so more or less. We jolly dogs, very pleasant fellows, are deuced disagreeable to live with; and Mr. Punch is uncommonly popular in society, from which he retires, not unfrequently, to beat poor Judy."

Before the last act, I was mysteriously beckoned by the "pardner" to the side of the box. He and Mr. Punch, inside (technically called the "swatchel cove," from the swatchel, a little instrument of tin, through which Mr. Punch speaks), were in grave debate. "Will they stand him, d'ye think, sir?" asked Mr. Punch.

"Stand him! Whom?"

"Why, the Devil, sir, and the comic carrying-off business arter all! We does it, nows and thens, sir, with the nobility; but most times we leaves it out in the droring-room version. Ax the lady, sir. Do 'ave it, if you can, sir; I don't feel to do it right without him."

I answered for Mrs. Eyebright, who is a w·····an above vulgar prejudices, and we *had* the Devil.

I talked to Mr. Punch after the performance, on the subject of the omission, and found his reasoning against a Bowdlerised version of his tragedy very sound and logical.

"They don't consider it's a reg'lar play, sir," he said, "and angs together one part on it with another. 'Ow would they like if Macready or Charles Kean was to tip 'em 'Amlet,' or 'Richard the Third,' or such like, with never no fifth hact? It aint likely, sir; and it's enough to pison the children's minds, it is, if they sees Mr. Punch come off

easy and quiet after sich conduct, and no moral retribootion, which is the Devil, in course; and so I tells 'em when they says it's low, wich I own it *is* low, and can't be otherwise; but still it's wot Punch 'as been and arned, and it's wot he ought to get, in my opinion, and I've worked him these five-and-twenty years, and ought to know. I can't abear to leave it out, sir, and that's the fact; but we can't go agin the public taste, you know, sir, as all us performers finds out—me, and the Operas, and theatres, and Hastley's, and all on us. 'Owsumever, you stood up for the Devil, sir, to-night; and we've 'ad it right out, as I likes it, and I'm obleeged to you, sir, and 'ere's your 'ealth; 'ere's towards you, Jem," and, with a bow to me, and a nod to his "pardner," he buried his nose in the pewter pot, which the president kindness of Mr. Lethbridge had set out for him in the bar-keeper, where he and his "pardner" had what they called "eight o'clock out," greatly to the amazement of the children, who clustered round the door, and, peeping fearfully in, saw, with much disappointment, that Mr. Punch was *not* in the chair, with Shallabala, Judy, and the rest of the *dramatis personæ* seated round the table.

I had bowed Mr. Punch and "pardner" out, and was on my way back to the drawingroom, when I heard a terrific burst, half terror, half laughter, with cries, and rushings to and fro, and gigglings and shouts. Opening the door—Oh these children! what miracle will not their happy presence work on the sourest, and most rational and atrabilious of us old folks!—if there was not grave and iconoclastic Mr. Twinge, Q.C., with all his weight of law, and fifty-six years on his head, performing the "Giant," draped in Mr. Eyebright's dressing-gown, surmounted by a wonderful extempore mask, held in his uplifted hands. Yes, there was the severe Twinge, as great a child as any there, exhibited by funny Mr. Edkins as "the Californian Giant, and no deception, ladies!"—mopping and mowing and knocking his hat against the chandelier, and breaking his shins over the furniture, and becoming enamoured of the young ladies, and delighting the bold children, and terrifying the timid ones into fits. I couldn't exactly understand the expression of his face when it was all over, and he had bowed his way out, and, undraping on the landing, caught my eye. He looked as if he was ashamed, and ashamed of his shame, and proud and angry, and pleased and vexed all at the same time. For my own part, I have never thought him half such a bore since.

WHERE YOU SHOULD NOT DINE ON CHRISTMAS DAY.—DRAWN BY LEECH.

Temple. We needn't say how it came about, but on Christmas Day, 184—, Tom Smithers found himself with no invitation to dinner, not a rap in his pocket, and not so much as a mutton-chop in the cupboard of the laundress's den, called a pantry, in his four-pair back in Elm-court. People may pooh-pooh my story for its improbability. A student of an inn of court without friends to ask him to a Christmas dinner, without money, without credit? Preposterous!

All I can say is, that it is not only possible, but true; and Tom Smithers told me so, and is living, and has got into practice, and is a leader of his sessions at this day, to corroborate me.

What was to be done? "Confound it!" thought Tom, "there must be some one one knows hanging out on a Christmas Day. Some of 'em *might* have asked me, though. Let's see; there's the ——, and the ——," and he ran over on his fingers the names of the people he was in the habit of dining with. "I'll be hanged if I don't go and ask the Reddies to ask me."

Resolved and done. Tom dressed, and sallied out of the Temple. It was six o'clock; the Strand was almost deserted; first-floor windows over shops gleamed ruddily; and, as he drew westwards, there was light in drawingrooms; and down on area walls the kitchen firelight danced promisingly, and Tom felt there was dinner in the land for everybody but him. The Reddies lived in —— street, ——square. There was no light in their kitchen window, and their drawingroom was dark. Tom's heart sank within him.

"They're dining out," sighed Tom. "I can't call at this time of day, and dressed too. The servants would twig I was sponging for a dinner. Can't stand that, either. Let's see; who is there hereabouts I know? Oh, the Tiptons! Yes, there's Fred Tipton has asked me to come a hundred times; and I know they make a rule of having a family party on Christmas Day. They can't refuse to take a poor devil in who has no family to go to."

And, made bold by the very sense of his own homelessness and hopelessness, Tom made the best of his way to the stately portico of the Tiptons. They had crept nearer to the square, and were, in fact, just shouldering it. Their ambition was to be in it—and into it they were safe to get, sooner or later, for they had set what they called their hearts on it.

There was light enough in the kitchen here, and brilliant was the range of drawingroom windows; and there was a warm glow through the chink of the diningroom shutters, which bespoke wax-lights and plate, and red curtains and fire, and all the other luxuries of the season. Tom's heart yearned to it all; not so much for the warmth, and good fare, and wine, and other creature comforts, as for the sense of cosy family gathering it suggested.

"I will, by Jove!" he said, at last, after a pause to screw his courage to the sticking-place; and rat-tat rat-a-tat-tat went the knocker, and the gorgeous footman opened the door, and in walked Tom, as bold as if he had been an invited guest.

"Mr. Smithers!" roared the gorgeous footman. "Mr. Smithers!" repeated the other gorgeous footman on the first landing. "Mr. Smithers!" firmly and sonorously uttered the gentleman in black, who threw open for him the drawingroom door.

Tom's heart sank within him as his name fell on the blank and dreary circle.

In spite of lustres, and lamps, and mirrors, and curtains, and sofas, and ottomans, and a roaring fire in the grate, and all other appliances of ease and wealth and warmth, there was a cold, icy chill nipped every look, and cramped every movement of every soul in the room.

Mr. Tipton, a magnificent man in a stiff white cravat, advanced in a stately manner, with his eyebrows raised, in a way that expressed distinctly to Tom Smithers, "What the deuce brought *you* here?" Mrs. Tipton, a thin lady, with a general hungriness of aspect, reared herself bolter upright, if possible, and repeated Mr. Tipton's look. The poor Miss Tiptons shrank into their shoes, and seemed to grow visibly chiller; and even Tom's friend Fred, who passed for "a dev'lish good fellow," seemed to have lost all his natural elasticity under the influence of the family vault of a drawingroom. Tom couldn't make his heart up to tell the truth, so he stammered out something about a "late call." Tom felt he had got into the house where you ought *not* to dine on a Christmas Day—the house where they make a duty of every pleasure, and, among others of these painful duties, duly observe the tradition of a family dinner at Christmas. Not that it isn't a capital custom when the family feeling crowns and inspires the family gathering. But here it was the magnificent Mr. Tipton, whose selfishness was so far narrower than most men's, that it seemed hardly to extend beyond himself to his family; and frozen Mrs. Tipton, who never betrayed, by a spark in her eye, the presence of any warmth whatever in her heart; the poor girls, who, between the father's magnificence and the mother's chilliness, had subsided into dreary social machines; the son, who felt papa, mamma, sisters, and family party "a confounded bore," as he didn't scruple to tell Tom Smithers, when they got five minutes' confidential communication; an elderly aunt, from whom they had expectations, and who, being of the same kidney with themselves, knew that they had them, and was perpetually letting them know that she knew it, to have the pleasure of making them uncomfortable; a deaf uncle, who was a rival for a good place in the will of the rich aunt, and whom it was necessary to ask, lest he should steal a march on the family. Then there were two poor relations, for whom Tom Smithers's heart bled—a poor young girl, and a sort of decayed and mangy-looking man, of indescribable age—one of the men who are always living from one agency to another, who diverge from "a snug little bottle-ale business," into "a fine opening in the coal trade, on commission."

Tom didn't envy them their family party, though he heard a good many hints given them while he was there, of "the great pleasure it was to Mr. Tipton to meet them as members of the family," and so on; which they meekly and uncomfortably acknowledged—the poor girl, because suffering had made her meek and uncomplaining; and the mangy man, because Mr. Tipton overpowered him.

There was no move to ask Tom to dinner; and he felt grateful for it before he had been ten minutes there. He tried to converse, to sentimentalise, to argue, to rattle—it was in vain. Every subject dropped dead as soon as it was started—ideas could not live in that atmosphere—it was too grand and genteel for anything.

At last, driven to desperation, Tom sprang up; and, just as the gentlemanly man in black opened the door to announce "Dinner," Tom made a bolt, and escaped from the numbing, freezing house into the less numbing, freezing cold without, leaving the Tiptons equally scandalised by his unseasonable entrance and abrupt departure.

As he rushes past the Reddies, on his way back to Chambers, he casts up a disconsolate glance at the house ——Can it be? There is light in the kitchen—there is light in the drawingroom! Huzza! "They *are* at home!" And he knew them of old—the best people alive; and their house he knows for a house where reign truth, kindliness, and a hearty welcome, without ostentation; and which is warmed by that best of Christmas fires, the warmth of honest and loving hearts: and before the ice of the Tiptons has thawed well off him, Tom Smithers is shaking hands with a bluff and genial host and a bright-eyed and cordial hostess, in THE HOUSE WHERE YOU OUGHT TO DINE ON A CHRISTMAS DAY.

THE FAIRY TALE OF FAIRY TALES.

ARRANGED FROM THE ORIGINAL MSS. IN THE ARCHIVES OF FEEFOO, IN THE IMPERIAL LIBRARY OF ARAGAMETA.

BY ANTHONY B. MONTALBA.

WITH ILLUSTRATIONS BY GILBERT.

CENTURIES before the race of the Nekyes—before the wars and adventures of Osiris, Orus, and Typhon—before the wanderings of Isis—before the transformation of Egypt's gods into beetles, serpents, birds, crocodiles and cows, the ancient Spirit King *Tien* reigned supreme. Towards the end of one of those mysterious cycles, that closed a period in which years acted the part of a day, centuries that of a month, ages that of a year, the King, in his wisdom, to give high and solemn importance to the celebration of the coming nativity, the eve and vigil of the birth of Mittoras, had assembled all the great and the mighty of the universe around him. Seated in all the splendour of fairy Majesty and divinity, having gracefully accepted the "happy and many returns of the seasons" from the loyal multitude, the Monarch rose, and, after returning thanks, thus addressed his four beauteous daughters seated at the foot of his throne:—

"My children, age has whitened my hair and beard, the cares of government have furrowed my brow, my eyes grow dim, my arm is feeble, and my head can no longer support the weight of my four golden crowns. I have resolved, therefore, to transfer the government of my kingdoms to you, my beloved daughters, that I may henceforth enjoy repose."

Thalatta, the eldest, was invariably arrayed in a garb of green, interwoven with silver threads, and her long down-falling tresses, which were of a sea-green hue, were crowned with a wreath of red coral. She delighted much in ornaments, and, although she had frequently been told that "pearls betoken tears," she was never seen unadorned by a row of fine pearls round her neck, and bracelets of pearls on her arms. She loved every kind of motion, the wilder the more welcome, and during her childhood was incessantly in her swing, or on the rocking-horse. When she grew older her greatest enjoyment was dancing; but in this alone she showed much caprice, for sometimes she would bound about in the wildest excitement, and then her motion would become equally calm and gentle, so that people much delighted to join in the dance with her, although they never could entirely depend upon her humour.

The second sister, Ætheria, was a little whirligig from her very birth, and after she was grown up, her disposition and temper ever remained exceedingly inconstant. She carried, according to the saying, smiles and tears in the same bag; for scarcely had she smiled on any one with her blue loving eyes, ere her countenance would cloud itself, and she would burst into tears. She was equally capricious in her attire: for festal-days and grand occasions, she had been provided with a dress interwoven of the most delicate material, and richly adorned with gems, which, especially at night, sparkled brilliantly. Yet she would often not hear of putting it on: whilst not unfrequently she would early in the morning array herself in the most splendid robe, at mid day repeat be enveloped in a homely gray wrapper, with the hood drawn over her head; then all of a sudden she would fling aside her veil and grey mantle, and appearing in her light blue dress, skip away with her face arrayed in smiles.

Still less, however, was the third princess, whose name was Fiamma, to be trifled with. Her presence produced a sensation of awe, for her favourite hue was black. Not only was her apparel always black, but her hair and eyes were black as coals. But as coals, which now

seem dead and dull as night, and then again revive and glow, so also Fiamma's eyes had the same property, and it was often remarked that they seemed to emit sparks. It was even dangerous to approach too near the train of her robe, for, at the slightest motion imparted to it, flames would dart forth, which consumed with fiery tongues whatever came within their reach.

The fourth of these sisters was, on the contrary, a right gentle and modest maiden. To wreathe May flowers in her fair hair, or to trim her little white robe with blue corn-flowers, satisfied her ambition. Violets, were the flowers she loved the best; but these she never plucked, being content to sit beside them with her work.

Such were the four maidens whom the ancient Monarch now summoned around him.

"My daughters," said he, "your dispositions and habits have not been unobserved by me; and I trust that I may be able so to divide my kingdoms, amongst you, that each of my beloved children shall be satisfied with her portion. To thee, Ætheria, I commit the empire of the skies, together with the sun, moon, and stars. Henceforth thou shalt dwell alone beneath my blue pavilion. Be careful in thy dealings with the lightning; and, when thou art desirous to take an airing, avoid, as much as possible, to make use of the thunder phaeton, which is somewhat out of repair. You had better let a couple of hurricanes be put to the cloud chariot; or, if you would have a still more luxurious airing, cause yourself to be borne on the wings of the early dawn, and upon these you may travel as far as you please.

Ætheria gratefully kissed her father's hand, and requested that she might be immediately put in possession of the key of the thunder-chamber; being anxious to examine into the stores, as she proposed to announce her accession by a little tempest

"And to thee, my dance-loving Thalatta, to thee will I confide the dominion of the ocean. There thou may'st oscillate to thy heart's content, and adorn thee at will with pearl and coral."

"And shall I also have carriages and horses?" enquired Thalatta, with delighted curiosity; "and a numerous establishment, and music, and all else that appertain to a brilliant court?"

"All, my child," replied her father; "thy carriage will be of mother-of-pearl, drawn by eight sea-horses; by thy side dolphins shall disport in the waves, and tritons blow their conches, and thou shalt always be attended by a brilliant escort."

Who was more delighted than Thalatta? She gracefully gathered up her green garment with the tips of her fingers, and made oscillatory movements with her arms and shoulders, as though she were already floating on the waves.

Wrapped in her own thoughts sat Fiamma, the third sister; and seemed as if she felt no interest in the distribution.

"Come nearer, dear Fiamma," cried her father; "I hope to endow thee also as rich as thou can'st possibly desire. My subterranean empire, which no mortal eye has ever beheld, situated in the very centre of the earth, where, on a golden altar, glows the eternal fire, I consign to thee. Fire-breathing dragons shall draw thy golden-wheeled car, and all power over the hidden metals of the earth is committed to thy hands."

Never before had the dark eyes of Fiamma been seen to flash so joyfully. "My gracious King and sire," cried she, "you have gratified my most earnest wish; might it but please you, father, at once to command for me a flash of lightning, whereby I may be transported swift as an arrow to the innermost depth of my fiery empire?"

"Where is my chamberlain, my fire-carrying eagle?" said the old King; "let him immediately prepare a flash of lightning for my daughter Fiamma!"

The eagle shook his plumes, whetted his beak on the footstep of the throne, but remained immoveable on his perch.

"Well," repeated the Monarch, "does it not please thee to obey?"

"As soon as my sovereign mistress commands me," replied the eagle, inclining himself respectfully. "My King has abdicated, and I am no longer in his pay."

"Out on thee," wrathfully exclaimed the Monarch. "I'll try whether a thunderbolt can make thee find thy wings." He stretched out his hand for his bunch of keys, but Ætheria had already made off with them, in order to inspect the arsenal.

"Follow her, my dear Fiamma," said he; "request your sister, in my name, to furnish you with a flash of lightning; and I feel sure that she will oblige you."

Fiamma went in search of her sister, though she was very unwilling to ask the favour.

"But we are quite forgetting our little Hertha," resumed the father; thou also shalt be a Queen."

Hertha obediently tripped towards the throne, which she ascended step by step, in the manner of a child.

"For thee, my beloved pet," said her father as he stroked her fair smooth locks, "I have only remaining my earthly kingdom, which thou seest lying yonder below." It is so long since I have been there, that I cannot very accurately describe to thee what kind of a place it is; but thou hast ever been moderate in thy desires, and thou wilt now be satisfied with thy inheritance."

"Is that my kingdom?" asked the youthful Hertha; "where I see the gentle lambs and sprightly deer playing by the stream that flows through those flowery meadows? Oh, how delighted I am!"

At that moment a great disturbance was heard in the ante-chamber; the voices of Ætheria and Fiamma were distinctly heard interchanging sharp words. The door was thrown open, and the two sisters were seen struggling for a flash of lightning, of which each grasped one extremity, resolved not to let it go.

"The kingdom of fire belongs to me," cried Fiamma," and wherever I find flames, they are mine."

"Were it so," replied Ætheria, 'all the light of my aërial kingdom would not be safe from your clutches, neither sun, moon, nor stars. It is only subterranean, not heavenly fire that belongs to thee."

"As long as I do not burn my finger," cried Fiamma, still more indignantly, "nothing shall withhold me from playing with your stars, and carrying off, if I think proper, a lapfull of them."

So saying, she endeavoured with both hands to break off one of the barbed points from the lightning, which dilated under her fingers, and hissing like a serpent scattered burning sparks around. Hertha, in alarm, retired to the furthest corner; but Thalatta, who had already become familiar with the virtues of her element, seized one of the ethereal silver urns, and discharged such a flood over the lightning and her two contending sisters, that, wrapped in a dense cloud of the hissing vapour, they could no longer see out of their eyes. Their father profited by this confusion to restore peace. Whilst they were rubbing the water from their eyes, he snatched the lightning from them, exclaiming, "It was not that you might war with each other that I divided amongst you my powers and dominions. Not an instant longer shall you remain near me; for I see before me the rapid destruction of all my four kingdoms, if I do not separate you forthwith. My beloved Hertha alone has a gentle nature, and shall be rewarded accordingly."

* * * * * * *

"I am now become a poor man," said the old King to Hertha; "for your ill-conditioned sisters have carried off my keys and my sceptre, and even my eagle has gone to take a flight."

Hertha looked down with tearful eyes on the lambs as they browsed below; and as the clear drops rolled down her cheeks, and the sun's rays shone upon them, they formed themselves into a wonderful bright-coloured arch, which extended from her feet down to the green hills below. "There!" exclaimed her father, "thou hast constructed for thyself a right beautiful bridge, on which thou canst glide down happily. Take my blessing. My best wishes will always be with thee, even if we should never see each other again."

At these words Hertha wept still more, which only rendered the rainbow more and more resplendent; and great was her delight when, on descending from it, the lambs, so far from being frightened and running away, approached her confidingly, and continued sniffing at her little basket, until she drew from it some bread of heaven, which they immediately ate from her hand. For her especial favourite, however, she selected a little gazelle, who, as soon as she appeared, went down on his knees before her, and gazed so imploringly at her with tears in his eyes, that she could never resolve to part from him. When Hertha became tired with walking, the gazelle knelt down for her to mount upon his back, and she soon learned to ride him as expertly as the Virgin Laurentia of Tangermünde used to ride her stag.

* * * * * * *

At this period dwelt in the Himalaya Mountains, in India, the enchanter Fohi; he had an only son, whose name was Andrea.

"Andrea," said Fohi to his son, "thou hast now attained to years of wisdom; wherefore seek thy fortune in foreign parts, and select for thyself a wife. Now it has come to pass that the aged Monarch Tien has divided his four empires amongst the four Princesses, his daughters; and I think, verily, that thou wilt not demand in vain the hand of one of these young Queens. Mark attentively their respective names: they are called Ætheria, Fiamma, Thalatta, and Hertha. Take this magic mirror. As soon as thou shalt pronounce the name of one of these young Sovereigns, her image shall appear in it, and thou hast only to follow that shadow, in order to arrive in her presence. Not less useful to thee will prove this little mantle, which will serve thee for a ship on the ocean, for wings in the air, and will bear thee unscathed through fire and water. But the best preservative I can bestow on thee for thy pilgrimage is the following saying, which I wish thee to engrave indelibly on thy memory. Listen to it with attention:—

If too high thy hopes aspire,
Despised shall be thy low degree;
Think not to find by fiercest fire
The genial warmth that's meet for thee.
The swelling waves, their boundaries flowing o'er,
Lost in the sand, shall fertilise no more,
But Earth, content, and looking to her source,
A child in security by a god is fore."

In addition to all this, the father liberally filled his son's purse, and packed in his portmanteau two plates, two goblets, and two dishes, together with a spoon, and knife and fork; in order that he might not be obliged, in obscure inns, to take his meals off inferior table-services; and gave him, withal, much good advice.

Andrea thanked his father with great tenderness, and they took an affectionate and moving leave.

No sooner had Andrea emerged from the mountains to the open plain, than he thought to himself that it was high time to consult his magic mirror. He drew it from its case, wiped it very clean with a bandana, so that not the smallest particle of dust remained on it. Remembering the last instructions, he breathed in a gentle whisper the name Ætheria, and behold, his breath formed itself into mist, the mist became a cloud, then the heavens represented in the glass gradually grew clear, and the image of the Queen of the Skies, wearing a lustrous crown of stars, appeared to him.

"To behold thee face to face, to cast myself at thy feet," exclaimed the enraptured Andrea, "is now my sole desire;"—and, at that moment, he felt himself upborne by his mantle, which expanded around him like an air-balloon, ascending higher and higher after the image, from which he never withdrew his eyes, as it floated before him. He had long left the moon far behind him when he arrived at the gates of the Heavenly Palace, which flew open at his approach. A temple with twelve columns and seven steps stood before him, he entered, and whilst now the image grew gradually paler, and at length vanished, he beheld seated on a throne of gold, and shrouded by an azure veil, on which glittered actual stars, the fair Ætheria, her head reclininng, her arms listlessly hanging by her side, for she was sleeping.

The unusual noise awakened her. Andrea in courteous terms besought her forgiveness for having thus disturbed her, and was about to retire, when Ætheria, who did not appear to be at all startled, beckoned to him to approach.

"The Sun-rose of Ispahan informed me this morning of your arrival, and of your intended courtship," said she; "and if my impatience made the time before you came pass so heavily, that I fell asleep whilst thinking of you, you must not interpret this as an unfavourable omen."

"Since my courtship has already been announced to you, fair Ætheria," said Andrea with modest dignity, "I am spared the embarrassing task of telling you how happy I should esteem myself, to divide with you the cares of government, and share with you the joys of your aërial kingdom."

"You are vastly obliging," scornfully replied the haughty Ætheria; and, as they were about to seat themselves at table, and the service of silver was displayed, said to her guest, "As you have, perhaps, hitherto been only accustomed to dine off earthen vessels, I know not whether you will relish your meal from a silver plate?"

"I am doubtful of it myself," said Andrea, to whom her arrogance appeared insupportable. Taking from his travelling-case his plate of gold, he flung the silver one out of the window, saying, "As at home I only eat off gold, excuse me if I make use of my own service.'

Ætheria, without appearing the least discomposed, coolly answered "Pray do as you are accustomed to do."

When, however, he had placed his two golden plates before him, in readiness for eating, the Queen opened the window, and, to the no small astonishment of her guest, brought in a few slices of the moon, and placed them thereon. Andrea found them very well flavoured; but when, on rising from the table, he wished to replace his own plates in the case, he found himself completely unable to lift up the heavy slices, which had, besides, pressed his plates as flat as a couple of poppy petals. Annoyed at this impertinent jest of the Queen, he yet considered it best to be silent, and put up with the loss as well as he could. His hostess, also, informed him that her chariot was waiting.

"To a pedestrian," said the Queen, "it cannot but be beneficial to take an agreeable drive; only I must request you not to carry your golden plates; they might prove too heavy for the horses."

Andrea had scarcely seated himself, before the chariot rolled on with a noise like thunder. The noise was so great that Andrea vainly strove to make the Queen aware that this drive was altogether unpleasant to him, intent as she was on the splendour and pomp of her empire, as she drove by the constellations on her right and left, which inclined themselves reverentially before her as she passed. Orion saluted with his flaming sword; the Great Bear reared himself on his hind-legs like a poodle; the Lion crouched down caressingly like a kitten; the Crab bowed before her with his claws crossed: but all this made but a slight impression on our young friend, who was suffering from a most violent headache caused by the noise of the thunder-car, and the shaking of this rattling carriage.

"To the Milky Way," said the Queen; and the horses immediately took a side direction, and the carriage glided gently and softly, without jolting or thunder, along the smoothest way imaginable.

Andrea took breath, and the Queen inquired whether he now felt any respect for her dignity and splendour?

"How should I not admire your magnificence, which is truly divine, especially when I look down from this elevation!" answered Andrea. As he said this, the thought of his father's words: "If too high thy hopes aspire;" and he had all along secretly resolved to seize the first opportunity that should present itself, to take his leave of the Queen. She, on the contrary, seemed to consider that she was quite sure of him, and, in order to bind him to her still more completely, she drew from her finger a gold ring, in which was set a planet of considerable value.

"Accept," said she, "this ring, in memory of our excursion?"

Andrea, however, clearly perceived that affixed to the ring was a very fine chain, which, had he put the ring on his finger, would have held him for ever. Feigning, therefore, to take all possible pains to draw off a very tight glove, he looked about on all sides for some means of slipping away. The Queen at that moment directed his attention to a passing comet, and advised him to draw back his head to avoid being singed. This comet, thought Andrea, comes very opportunely, and as it shot by, he boldly grasped it by the tail, and was carried out of the chariot by it as it pursued its course.

"Farewell, beauteous Queen," cried he; "to catch such birds as I, you must set your snares more cunningly!"

Vainly strove the Queen to urge on her steeds; the wheels of the car turned heavily in the deep ruts of the Milky Way, which the intense heat of the comet had to a considerable degree curdled. Andrea, hanging to the fiery tail, soon vanished from her sight.

Even if Ætheria did not permit her vexation at thus finding her hope of chaining the wanderer to her for ever to become apparent; we may, nevertheless, be very certain that she did not return to her palace that day in the best of humours.

* * * * * * *

As soon as Andrea felt certain that he was quite beyond the power of the ethereal Queen, he spread his mantle, slipped from the comet, and, in a few hours time, found himself again on the spot whence he had started in the morning. He was right glad to pass the night beneath a palm tree; but so soon as the morning sun awakened him, he began to think of looking after the second Princess. He washed the drowsiness from his eyes in a neighbouring spring, drew forth his mirror, and pronounced the name "Fiamma!" Lightning seemed at once to flash within the mirror, which so dazzled him that he only very gradually could accustom his eyes to gaze on the image that appeared therein. Still he resolutely followed whither the form led; and, after some days, he arrived at a mountain, from the summit of which ascended, at intervals, columns of fire; at the foot of the mountain was a dark cavern. Thither the form beckoned him, and he descended unappalled a flight of rocky steps. At length, after another turn, the cave became more lofty and spacious; he found him-

self at the bottom of the steps, and, in place of the image, he beheld the Queen of the subterranean empire seated on her throne, wearing on her head a crown of flames. He beat nervertially before her, delivered a greeting to her from his father, the potent Fohi; and, although he did not reveal to her the especial object of his coming, Fiamma discovered it at once.

Having found the solitude of the subterranean world somewhat tedious, she rejoiced indeed at the thought of being able to secure for herself an agreeable companion. Less proud than Ætheria, she requested Andrea to seat himself beside her.

He had scarcely taken his place on the throne when several of the flaming domestics presented to him, in glowing goblets, melted gold, of which the Queen partook with much relish. Andrea courteously declined the beverage. Whereupon, music of a very peculiar kind was heard issuing from a side cavern, for the musicians appeared to be neither more nor less than worthy blacksmiths, who struck alternately with their hammers on anvils and bells, which called forth harmony forcibly reminding Andrea of the thunder from which he had escaped so recently. Next appeared, on a kind of stage, the floor of which was a large metallic mirror, two spirits of flame, who danced with the greatest steadiness a very graceful minuet; soon interrupted, however, by the appearance of two armed Titans, who, in unison with the blows of the hammers, struck their shields with their swords, but, at the same time, commenced a fight in good earnest with the two minuet dancers. Not a stroke failed; they cut the flame spirits several times asunder; but, nevertheless, soon had to fight with a dozen flames instead of two, which at length grew so high as to be far above their heads. Wherever any metal was to be found on the accoutrements of the Titans, the flames licked it with their glowing tongues till it melted. Their helmets trickled down in hot drops over their foreheads; their swords, shields, and breast-plates flowed to the earth like liquified butter. The fiery giants or Titans, who had at first presented themselves in glittering armour, now appeared burnt out as skeletons, with naked skulls and whitened joints, and retired clattering from the scene. The music ceased, and the flame spirits danced up to the throne of their Sovereign, who graciously extended her hand to be kissed by them. They thought it was requisite to pay our young friend, who still occupied the place of honour by the Queen, the same respect; and although he declined the compliment in the most courteous manner, they seized his hands, and holding them fast, soon kissed through his gloves, so that the fire burnt him to the very nails; and it was only by waving his mantle that he could at all succeed in keeping off the officious flames. Fortunately, the Queen rose from her seat; on a sign from her the flames hastily retired.

"It begins to grow cool in the grotto," said she; "let us go and see the fireworks, for we shall catch cold here!"

Meantime the dragon car had been prepared; there was no means of avoiding the entertainment; the Queen ascended the car, and Andrea again took his place beside her. The tunnel or subterranean passage through which they drove had a high and vaulted roof, and was illumined by many thousand gas-flames. It terminated in a spacious hall, in which, seated on benches as in an amphitheatre, was assembled the *élite* of the subterranean court. The Queen and her guest again occupied the seats of honour, and the bursting of a volcano was the signal for the commencement of the fireworks. Thunders growled in the abyss, from whence fierce lightnings issued, and Andrea now first perceived that he was in one of those vast chambers the store-house of the infernal material to which the craters of Amateva, Hecla, and Ætna serve as ventilators. First of all a fountain of fire began to play: it rose high in the distance like a crystal column, and in its sparkling crown thousands of golden oranges danced, and were cast forth by it amongst the spectators. Our young friend quickly caught some of them, for having been in his boyhood very expert at playing at ball, not an orange that came within his reach escaped him. This sort of performance was that of the first acts and, from the loud applause with which it was received, Andrea inferred that it was a favourite entertainment with the subterranean public. From the depth of the abyss arose a tree, the stem and branches of which were of gold, and its leaves were the most beautiful precious stones of all colours, emeralds, sapphires, chrisoprase, and jacinths. Birds of Paradise by thousands sat on the branches; and as they fluttered their wings, the most costly glowing wine streamed up in lofty arches from their beaks. Each of the spectators had come provided with a goblet, and they were so expert in catching the wine-streams that not a drop was wasted. The wine naturally raised the spirits of the company, in some cases even to excess; and when the last entertainment, the game of the air-balloons, commenced, they all rose and approached the rim of the crater, in order to take part in the sport, which consisted of the ascent and descent of two air-balloons, chained to each other, so that as one rose, up the other went down. This forming a swing, the fun consisted in one keeping the other either so high up as to be chilled by the cold mountain air, or down in the abyss till almost suffocated.

When this diversion had continued for some time, the Queen said, "Will you not enter the balloon, and try a turn with me?"

"I much fear," replied Andrea, "that I am too heavy, and that you would not be able to raise me again from the depth."

"Fear it not," said the Queen; "the reverse is far more likely to occur, for my crown alone outweighs you full ten times!"

This was precisely what Andrea desired. In order to render himself as light as possible, he laid aside his golden spurs, and retained about him only his mirror, whilst the Queen, to ensure what she had said, not only took her crown and sceptre with her, but secretly put a little basket-full of the golden apples into the car of the balloon. How did Andrea rejoice, when he perceived that his balloon immediately sank! The air of heaven blew softly around his head, and far on high he beheld the moon floating in the azure distance. He at once decided on his plan, spread out his mantle, and springing from the car, escaped happily through the aperture of the crater from the subterranean empire. The indignant Queen, who, from the rapidity with which she sank into the abyss, at once perceived the trick that had been played upon her, sent a shower of red-hot stones after the fugitive; but he was already beyond her reach. It required much effort to extract the Queen from the depth into which she had sunk, and she then returned highly disconcerted to her dwelling. Both the opera and the play for the ensuing night were countermanded.

* * * * * * *

In order to cool himself from the very heating diversion he had gone through, Andrea bent his course to the sea-shore, where the sea breezes greatly refreshed and invigorated him.

"I have almost renounced the hope," said he, as he reposed on a rock washed by the spray of the foaming waves, "of finding a Princess in accordance with my desires."

The time, however, passed tediously; and, after he had arranged his toilet, he fell to re-polishing his mirror.

"Well," said he, "there are still two of these fair Princesses remaining, but I will take good care not to invoke either of them. I remember their names perfectly," added he, as he rubbed the last speck off his mirror. "Yes, perfectly; the one is called Thalatta, the other——but what do I behold? Truly there is the Princess already in the mirror, and she beckons me to follow her!"

He felt himself irresistibly drawn down from the rock on which he sat into the waters: gentle billows wafted him still further out into the open sea; and, as the image sank lower and lower, he followed in spite of all his efforts to the contrary. His silken mantle closed, as he plunged lower and lower, over his head, so that he sat within it as in a transparent diving-bell, which he found very agreeable, he being able distinctly to see whatever passed around him. He was very soon followed by a numerous train of lobsters, crabs, and other sportive fish, who were very desirous to find out what strange guest was come to pay them a visit. As soon as he reached the submarine plain on which stood the Palace of the Ocean Queen, the warder of the tower blew his horn, and announced that an illustrious Prince, with a numerous suite approached. Her Majesty sent four of her porpoises in waiting to attend upon him, each of whom wore on his back fin the golden key of office: they were charged to enquire his commands, and to conduct him to her presence. Arrived within the vaulted crystal grot, into which no drop of water could penetrate, Andrea withdrew his mantle, and stood with astonished gaze before the Queen. Neither the splendour of the aerial throne-chamber, nor the wondrous lustre of the subterranean hall, had struck him so forcibly as Thalatta's magic palace. The dome, formed of the purest aquamarine, was supported by crystal columns, round which were entwined garlands of coral. Between the columns stood ornamental vases, formed of shells, containing the rarest flowers, which shed around the most delightful fragrance; curiously contrived fountains, whose drops were the finest pearls, played in the softened sunlight which penetrated the depths; and, in a basin lined with mother-of-pearl, swam golden fish, who were not mute, like ordinary ones, but sang, both under and above the surface of the water, melodious songs.

"You find me at table," said the Queen, "and I beg you will do me the favour to join me."

Andrea would have politely declined; but the attentive porpoises had already taken his hat from him, placed a chair for him, and, whilst on the one side the finest oysters were presented to him, on the other, foaming champagne was poured into an elegantly wreathed drinking-horn. Andrea scarcely believed the evidence of his palate; until, after several repeated experiments, the Queen said to him,

"You are under no mistake; the wine is genuine and good, and was only very lately brought me as a tribute from France; for you must know that all lands pay *me* tribute; and, in my store-house, there is abundance of all the treasures of the air, the earth, and the subterranean world. My High Admiral has his duty well; and neither the silver laden flotillas of America, nor the gold from California, nor the tea and coffee freighted vessels from India and Africa, escape his vigilance. Sometimes he thrusts beneath them a rocky reef, at others he causes them to run ashore on the sand, and whatever goes to the bottom is my prize. My dolphins are besides decidedly partial to the human species particularly to poets and musicians; one of them has very lately obtained the medal for having carried a celebrated vocalist, Signor Orion, whom the treacherous mariners had plundered and thrown into the sea, safe to land."

Neither was there any want of fruit; oranges, pines, and the sweetest grapes were placed on the table. When the repast was over, the Queen proposed an airing.

"You have only to command," said she, "to what clime we shall bend our course. If you are inclined to hear tidings from home, we will proceed to the India Ocean, where the Ganges flows into my dominions; or, should you prefer the latest news from Africa, we will hasten to that part of the coast where the Nile by its seven mouths imparts to me its communications. The Oronoko and the Mississippi bring me the latest gazettes from America, as do also the Danube and the Rhine those of Europe, so that I am constantly in the closest communication with all parts of the world. And only consider me as an *overflow!* all flows towards my empire, whilst not even the smallest rivulet flows back from me towards the land."

"Well," said Andrea, "I should like to make a little excursion to the Ganges, as I may, from the mouth of that river, hear, perhaps, news of my dear father, whose dwelling is situated on its banks."

"The red mussel car, to-day," said the Queen, "with the two sea-horses!" Anon, a great splashing was heard in the waves.

The Court porpoises were again very attentive: they brought to the Queen a very richly carved fan; whilst her pages—four small sea-dogs—bore her train, and took care, as she ascended the car, that no part of it was caught between the doors.

One of the most unpleasant sensations that Andrea ever remembered to have felt, was when the Queen presented her arm to him, which, although it was of dazzling whiteness, and full and round, felt to him cold and damp, as though he were touching a frog. Never in his life had he so missed his gloves as on this occasion.

Twelve Tritons blowing their conches rode in advance, and a train of nereids, singing in chorus, accompanied the chariot. No wonder, then, that they found the labourers, who heard the noise long before the procession approached them, in full activity. The superintendent of the works was Admiral Whale, and the chief of the shipwrights was the beaver; and it was really gratifying to see how accurately and smoothly the saw-fish, as ship's carpenter, turned off the planks and boards, which were then pierced by the pholads at the points marked out. Turbots planed down the rough parts with their backs, and some strong sturgeons, provided with rasp-like tumours, understood thoroughly how to put the keel together, and fasten it with nails. In another workshop sea spiders were busy in spinning yarn for sail-cloth, which was afterwards fabricated by mermaids in power-looms. The whole guild of crabs and lobsters was occupied in cutting out the cloth with their double shears; and, in fact, there was not a single subject of the immense empire to whom some task was not assigned.

"I should much like," said the Queen, when they had arrived at the region where the Ganges empties itself into the ocean, "to proceed inland a little, in order to enjoy with my attendants the fine view of the cocoa distant mountains."

The sea-dogs in waiting and the dolphin chamberlains at this proposition looked somewhat seriously at their fish tails, but ill calculated for parties of pleasure by land, whilst they assured their mistress that they would hasten forward without delay, to gain information.

"We will leave that to our Grand Admiral; and a shell boat was immediately prepared for him, which he entered in order to row up the stream. The Queen and her suite had thoughtlessly ventured too near the shore, forgetting that the sea is in the habit of breathing twice a day, on which occasion it first retires from the land, and then again flows on. Just at that moment the sea had drawn the deep inspiration which produces what we call the ebb, and the Queen beheld herself and all her suite left upon the sand. In vain did she stimulate the sea-horses with her golden whip, the wheels of the car sank deeper and deeper in the slime, and neither sea-dogs nor sea-lions were in condition to give assistance. They floundered clumsily about in the soft sand, and the couches of the advanced guard of Tritons had become so filled with sand that not a single clear tone could be extracted from them. Our friend Andrea did not let this favourable opportunity for escape pass without availing himself of it. He found no difficulty in reaching the river by dint of his fist boat. He rowed vigorously and took place. "There is, indeed, another kind of element, our own flowing sea!" remarked one of the sea-dogs. The whole company uttered joyful cries of "Thalatta! Thalatta!" and all beat with fins and tails the smooth surface of the water to such a degree, that not even a well-pleased audience at a public theatre could ever, by any means, excel it. The advanced guard of Tritons had become so filled with sand that not a single clear tone could be extracted from them. * * * * * * *

When he found himself in safety, Andrea's first act was to take out his mirror again, as he thus spoke: "Three times has this treacherous mirror shown me a deceptive image of happiness; I will not be a fourth time betrayed by it. I have a pair of good eyes, which are able to show me the right path, and I think I can rely upon my own heart to guide me." He ascended an eminence bordered on one side by a deep ravine, and threw the mirror backwards over his head into the abyss, without casting a single glance after it. He then cut from a neighbouring tree a stout staff, saying, "Henceforth thou shalt be my guide and companion." He wandered thus for several days by the beautiful banks of the Ganges, where the delicious fruit and milk of the palm-trees supplied him with sustenance, and their broad fan-like fronds afforded him shelter. One evening, when he already felt very tired, he heard at a distance the tinkling of a little bell, and soon after distinguished a soft childish voice. He listened, went nearer to the spot where the voice proceeded, and as he gently put back the bushes with his hand, he saw the most charming child ever beheld by human eyes.

"Come nearer; fear not," cried the lovely maiden; "I am bringing you a cup of milk, and a whole lap-full of flowers and herbs I have just plucked for you!"

Andrea was beginning to fancy that this friendly invitation was designed for him, when he saw a tame gazelle approach the child; but which, however, had not so entirely laid aside his natural timidity as at once to put his nose into the dish as a lap-dog would have done. The desire of the gazelle to drink the fresh milk was evident; it drew back its little head with a look half playful, half shy.

"Come, come," repeated the little maid, as she held the dish with great care, in order not to spill the smallest drop; "if you do not drink this very minute, I will give it to the kitten." The kitten, who lay under a bench playing with the loose string by which the gazelle was usually led, hearing this, got up directly, and rubbed herself coaxingly against her little mistress, on which the gazelle then first found sufficient resolution to drink out of the proffered cup. The kitten still continued to coax and purr, and at last received a part of the milk, whilst a handful of fresh flowers was presented to the gazelle. In order to draw the little maiden's attention, and at the same time to avoid frightening her, Andrea put the branches of the other apart, and stepped forward, respectfully saluting her. But on being alarmed, the child went to meet Andrea, as if she had long known him, offered him her hand and said:

"You are welcome to me, Andrea. At last, then, you are come; I have often seen you already, but hitherto only in dreams."

Andrea, who, so far from being prepared for this cordial and confidental reception, expected that he should have to explain his intrusion and endeavour to tranquillise a terrified child, felt so surprised and embarrassed that he was at a loss for words, as he had never imagined it was possible that the bright and innocent eyes of a child could have so disturbed him; still more was he struck and confused when he perceived that the child, whose hand he retained in his, increasedin size, and stood before him in the form of a young woman.

"Do you not know me?" enquired she; I am greatly surprised at that, for I have already been long acquainted with you."

"Yes, truly," cried Andrea, with most entire trust, "thou art Hertha, Queen of the empire of Earth. to whom no magic mirror has led my steps, to whom I had no guide but this staff and my own heart."

"Then you are double welcome to me," said Hertha. "Come with me to my cabin, and although I cannot place a crown and sceptre in your hand, you will yet assuredly find with me calm and quiet enjoyment."

Touched by so much grace and kindness, Andrea followed the fair Hertha, and rejoiced to think that his father's saying—

A child in seeming, but a god in force—

was likely to be realised here.

Those were festal days that followed. The governors of the four provinces. with their vassals and splendid retinues, assembled to swear fealty. From the east came Spring, with the winged band of the genii of the flowers. From the south, Summer approached, with his industrious field labourers, who laid garlands, formed of the ears of corn, at the feet of the youthful pair. Autumn led up from the west the gay company of the grape-gatherers, who brought not only rich bunches of the sweetest grapes, but ornamental pitchers filled to the brim with wine. From the north, however, Father Winter came, and, with his merry attendants, gave the young couple the spectacle of a sledge party; when the bells with which the shaggy coats of the ice-bears were hung, and the cracking of the outriders, who were mounted on rein-deer, made no trifling noise.

Hertha's good fortune could not long remain unknown to the other sisters. The babbling springs which had witnessed the bridal days, gossipped about them to the forest streams, who, in their turn, related what they had heard to the rivers. These had no business so pressing as to give information of the event to the great rivers, who, on their part, could not avoid rushing on, open-mouthed, with their news, and when they reached the sea made such a noise that the Queen of the Ocean quickly heard whither her fugitive had betaken himself. Ætheria received the news still earlier. Some sportive zephyrs, who had wandered to Earth, and were murmuring unobserved amongst the trees under which the happy pair reposed, carried the information to the aërial kingdom; and did not fail, according to the custom of such airy gentry, to add all kinds of facts. Ætheria, without delay, commissioned a flash of lightning to inform her sister Fiamma of the marriage of their youngest sister, and, at the same time, to request that she would play a few tricks on the young pair, who had been so unpolite as not to invite their eldest sister either to the bridal eve or the wedding. Thalatta, also, was persuaded to join in the conspiracy, and was soon ready to perform her part in these spiteful tricks. We all know well enough how matters go when grand folks begin to tease. To play with a lion is very different from caressing a kitten, and the jests of an angle are something more serious than those of a canary-bird. Thus it was in this instance, and all the more so, inasmuch as a certain portion of disappointment and ill-nature mingled in the sport. As samples of these little jests, not to mention that Ætheria, one day, when Andrea and Hertha were walking through their green and flourishing corn-fields, and entertaining the most cheering hopes of a rich harvest, suddenly poured down a violent hailstorm, and annihilated the fair promise. Another time, in the month of May, she unexpectedly covered the violets and hawthorns, and the gay tulip-beds, which the spring had excited forth, with a thick layer of snow, and they were all frozen to death.

Nor were the jests that Fiamma enacted much gentler. At night, when Andrea and Hertha had retired to repose, and were sleeping sweetly, a subterraneous clatter was heard, the house rocked, and the earth heaved as if its firm crust were about to burst. Sometimes the would scize the shafts which fixed the pillars of heaven in the sea, and shake them with such force that she shook the snow from their summits, and then dreadful avalanches descended which buried fruitful vallies. Still more dangerous were the tricks she allowed herself to play with the subterranean fire, on which she permitted the cauldron of melted ore and dross to boil over so frequently, that the scalding broth flowed in full streams through the clefts of the rocks, and destroyed the most beautiful vineyards. Thalatta, also, willingly lent her aid, in company with the other sisters, to torment the faithless Andrea, who had left her unaided to sit on the leafy land till the return of the tide. She begged Ætheria to send her a couple of her most spirited hurricanes, to set the ocean in a fluster, and to drive the swelling waves over the land, so as to inundate the dwellings scattered on the shore.

All these tricks, vexatious as they were, did not, however, prevent Hertha and her husband, with the aid of industrious assistance, from soon repairing the damage: the reeds were soon growing up again fresh and green; and, as soon as the tempests and hailstones had passed away, orange gardens were laid out again on more remote eminences, where the waves of the shores could not reach them and Fiamma might shake the earth as much as she pleased, but she was unable to disturb the happiness of the loving pair. Even to this very day, the hostile sisters cannot forget their ancient grudge.

——Hark! do you not hear the whistling of the chill Decem ber wind? do you not see the icy flakes changing the hue of all around? do you not feel the nipping cold, killing all verdure, and benumbing the weary traveller? Ah! but Summer must come again. And even now, with its gay festivities—its cheerful blaze—its joyful dance —its merry games, its holly and its mistletoe, CHRISTMAS is near!

and, as in the times of Tien, on the eve of the birth of Mittoras, all saluted the Spirit King with "a hail, and happy return of the season," so we, on the vigil of the greater Nativity, hail you all with "*A merry Christmas and a happy New Year!*"

THE SICK GIANT AND THE DOCTOR DWARF.

BY DOUGLAS JERROLD.

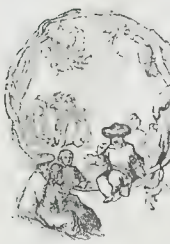
CHAPTER I.



NCE upon a time——

(How oft the old, old words, like silver bells, have rung us to a brief holiday—summoned the gravest of us to the hearth, to take from the lips of fable sweetest truth!)

Once upon a time, there lived a Giant and a Dwarf.

Far away, away across the sea, and glowing like a jewel in the light of heaven, there lay an island; an island heaped, like Plenty's lap, with the best bounties of the earth. Trees, fruits, and flowers, with the freshness, flavour, and scents of Paradise, adorned and enriched the spot; and there was no foul, no hurtful thing, to beset with fear and danger valley, field, or wood.

This island was inhabited by a race of little people—so little, that the tallest of them would scarcely reach the knee of ordinary men; but their wisdom, their goodness was as the knowledge and virtue of the noblest of mortals. Indeed, it might be said of them, that, in their small anatomies there was no room for evil thoughts; that intelligence and virtue alone possessed them.

When or how these little folk became the lords of the island we know not, and seek not to know. Any way, they were blessed people. Their happy land seemed to lie nearer heaven than does the common earth. They seemed to have a more direct intelligence with nature; or, it may be, that the purity of their hearts and lives made them readier scholars; for truth and wisdom came to them as with the air they drew; and a harmony of thought and action was their daily, household music—constant in their bosoms as the rippling sea, that died in murmurs on the golden beach.

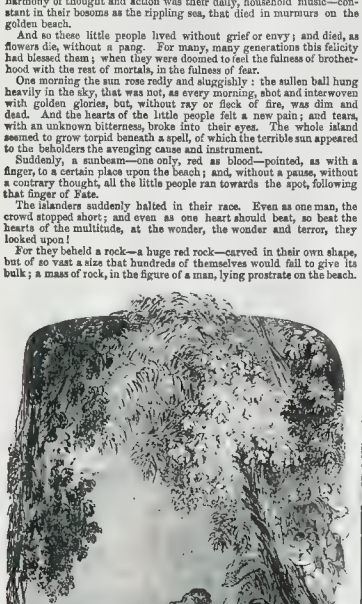
And so these little people lived without grief or envy; and died, as flowers die, without a pang. For many, many generations this felicity had blessed them; when they were doomed to feel the fulness of brotherhood with the rest of mortals, in the fulness of fear.

One morning the sun rose redly and sluggishly: the sullen ball hung heavily in the sky, that was not, as every morning, shot and interwoven with golden glories, but, without ray or fleck of fire, was dim and dead. And the hearts of the little people felt a new pain; and tears, with an unknown bitterness, broke into their eyes. The whole island seemed to grow torpid beneath a spell, of which the terrible sun appeared to the beholders the avenging cause and instrument.

Suddenly, a sunbeam—one only, red as blood—pointed, as with a finger, to a certain place upon the beach; and, without a pause, without a contrary thought, all the little people ran towards the spot, following that finger of Fate.

The islanders suddenly halted in their race. Even as one man, the crowd stopped short; and even as one heart should beat, so beat the hearts of the multitude, at the wonder, the wonder and terror, they looked upon!

For they beheld a rock—a huge red rock—carved in their own shape, but of so vast a size that hundreds of themselves would fall to give its bulk; a mass of rock, in the figure of a man, lying prostrate on the beach.



With what wonder—wonder deepened by a strange fear—the little islanders looked, and peeped, and pried about the monster! Its head wore a very wood of hair; and wild tangled bushes were its beard. Its eyes were shut; but then, it was a thing of rock, a senseless mass; therefore what need even of the show of eyes?

It was strange; but the mere presence of that mute, rock monster, seemed on the sudden to cloud the clear thoughts and affright the constant hearts of the little people. Many of them felt and knew their pure souls leaving them as they looked upon the wonder, and then—they could not break from the charm—they looked the more intently.

"It is plain," said one of the islanders, "plain that this thing has fallen from the sun; has been dropped upon our island, that as our god we might worship it. The sun sends it us, and the sun's finger of light shows us the divinity. Let us kneel to it and adore it."

Now, although the crowd made no signs of worship, nevertheless they uttered no word of rebuke; they heard the folly, but had no heart to gainsay the foolishness. And still they looked upon the prostrate mass; and there seemed—so were the faces of the beholders darkened—as though a cloud of error rose from that hideous bulk, a cloud that shadowed the brows of men, and for awhile obscured the face of heaven.

"Let us worship and adore it," repeated the first speaker.

"Worship it with fire, and then adore its ashes," cried another; and his voice sang like an arrow through the crowd, so did it smite them.

"Fire and ashes!" was the cry: the better hearts of the multitude returned to them; and as the shout arose, the brightened sun leapt higher in the heavens.

Instantly, the crowd sought fire. In a few minutes, flaming torches, thick as fire-flies, moved and danced about the mass of rock; then—and for a moment only—scorched it!

With a loud, long roar, like shouts of linked thunder, that tremendous mass leapt to its feet; it clenched its fists—like the huge boles of knotted oaks they looked—and stamped the earth, that shuddered at the shock. Gnashing its teeth, while, like the vexed sea, its features worked with rage, it seemed as though some mountain-peak had, at a word, been thrown up from the bowels of the earth—a clayey mass, possessed by devils.

All the islanders, with frozen hearts, fell back—their torches flying from their hands like anvil-sparks. And still the Giant roared; and towering to his fullest height, he cast a blighting shadow on that lovely island.

How came the Giant there? What fate had flung him, like a stranded sea-monster, on the shore of that beautiful and innocent spot? Why was the happiness of a good and gentle race made the doomed sport of a mountain mass, that seemed human, but had within it no touch of human truth? Indeed, we know not; and, docile reader, seek not you to know.

After a while, the Giant still smarting from the torches, and still rubbing the burns with his hands until he roared the louder, rushed, to cool himself, into the sea.

Oh! how the hearts of the islanders rose with hope! The monster was a monster of the deep, and would return to his old abyss. No. Still the Giant tumbled and wallowed in the sea, like a rudderless hulk; and then, after awhile, he stood upright, and again strode back to the island.

"Bakkuk! Bakkuk!" cried the monster; and it seemed to the islanders that the Giant called his own name. Be this as it may; as "Bakkuk" was the first articulate sound uttered by the creature, so, among the trembling islanders, Bakkuk was the known name of their terror.

How the little folk shuddered as they beheld the Giant stare about him with a growing malice in his looks! Heavily he groaned, and with his clenched hand smote his belly, as though some pain was gnawing there. Could he be hungry? was the shuddering thought that, like a blighting gust, swept strangely through the crowd. Could the Giant be hungry? and, if so, what would be the Giant's food?

Again Bakkuk—for that shall be the Giant's name—growled and roared, and with his doubled hand struck himself. Poor, empty comfort! To unreasoning giants, knocks will not go down for flesh.

A dreadful grin pulled out the features of the Giant as he strode towards a clump of cocoa trees. In a moment he had gathered the fruit; with a thought had torn away the husk, and was grinding the kernels with his teeth.

A ray of comfort dawned upon the islanders as they lay scattered and bidden around. "The Giant eats fruit; he is not a cruel monster; he shall live upon yams, and have green sugar-cane. Bakkuk may be made serviceable and neighbourly. The Giant is, without doubt, a tender and a bloodless Giant."

These were the thoughts creeping through the hearts of the crowd. Poor souls! they lived upon fruits and pulse; they never bought a meal with a life. But Bakkuk was of very different stomach. What food supplied his baby dinners, who fed him, and how the morsels were minced and sauced to make them savoury to his infant palate, we must be content to leave in the realm of riddle. But it is plain that Bakkuk will in no way content himself with fruits or corn, whilst islanders—whom he is hereafter to discover—shall abound. There is a look of uneasy contempt in the Giant—moreover a hungry glance as of an appetite falsely provoked—as he throws away the husks and shells; the enquiring look of a man who asks of himself, "What next?" We shall see.

CHAPTER II.

INSTINCTIVELY the Dwarf people, made anxious by the hungry looks of the Giant—for, in their innocence, they had the like terror of Bakkuk, that small singing-birds have of hawks—withdrew themselves among the thickets and bushes, that they might, by many opening narrow ways, reach a plain in the centre of the island. Here they would meet in general council, to consider means of defence and deliverance. And here, as the sun shone in the midst of the heavens, that wore their wonted brightness and serenity, here all the people, their homes left empty, were gathered together.

"Zim! Zim!" cried the multitude, as from one throat; "Zim!"

Immediately, a dwarf, with some forty years, light as a crown of flowers, upon his brow, arose and prepared to address himself to the people. Ere, however, he could speak, there arose shouts of "Death to the Monster!"

"Long life to the Giant!" was the only answer of Zim, the dwarf. A low long buzz of discontent ran through the crowd; nevertheless, no one thought to speak against the authority of that wise Dwarf—that good, benevolent little one, whose wisdom and whose virtue made the wonder and the reverence of the island. For Zim knew all things; and knowing them, was the gentler for the knowledge. When only an hour old—so ran the story—Zim had been carried from his mother's bosom by a fairy; carried to some distant place to learn all things even in his babihood, his mother sleeping the while—years passing with her eyes as balmy minutes. That Zim might know the beginning of all things, he was conveyed into an egg, so said certain folks of the island; but this story was derided by others, who received it only as a fancy, the fantastic shadow of some mysterious truth.

"By the egg of Zim!" was, nevertheless, the most solemn form of speech to all the islanders. And so let it pass that the baby Zim, an hour old, was nourished in the egg of an ostrich; that, whilst so nourished, the baby learned the beginning and progress of all natural causes; that, after a time, the infant dwelt in that ostrich shell. There were those of the islanders who had pictures of the egg, with its little wicket gate, and its one long window, the sun passing through it in golden rain. But these stories are given even as parts of a Christmas feast—at the will of the guests to be swallowed or refused.

Any way, Zim was reverenced by all the island folk; and to him, in their present peril, they looked for succour against the monster cast among them.

"Speak!" said Zim, having waited until the murmur was hushed; "speak!" and the good Dwarf smiled. "If you will the Giant's death, how shall I kill him?"

"Shiver him like wind-swept dust."—

"Strike him dead as a stone."—

"Watch him where he lies down to sleep, and then, with a flash, toss him to the clouds."—

Such were the destroying words of divers councillors; for they knew that Zim, with even a wire's point, could work what force he would: he had so many times shown the island folks his mysterious mastery.

"Shall we not first learn," asked Zim, "whether the Giant be nothing but evil?"

"It is learnt—learnt in his looks," was the answer.

"But, granting the monster to be wicked, though not all wickedness, may we not find some good, and make it further grow in him?" inquired Zim.

"Find wild honey in the sea sand!" was the reproach.

"Well, then," answered Zim, "the Giant must die."

"Hurrah! The good Zim! the great Zim!" shouted all the island folk.

"When," continued Zim, "the Giant shall be proved all bad, all worthless. The shell shall be shivered to atoms, if it be known there is not even a seed pearl within it. For my part, I am content to run every risk."

"Ha! ha!" laughed an old dwarf; and then he frowned, and again he chuckled, sneeringly, "Yes, mighty Zim, 'tis well for you—you are safe. Not a thousand giants, and you would hinder them, could enter your house; let them lay their little finger on your latch, and they are struck down as by a stone from heaven. With a thought, too, you can leap into your tulip-boat; and that air-bubble—haven't we seen it float and glitter in the sky?—lifts it to the sun. Well enough for you," repeated the aged scoffer; "but we have no tulip-boats, no air-bubbles to fly away with us."

At this moment the whole island echoed with the savage laughter of the Giant. The island people groaned; and then, gnashing their teeth muttered, "Death to the monster!"

And Zim, with a yet brighter smile and blither voice, cried, "Live the Giant!"

Again the horrid roar of Bakkuk seemed to rend the island; and the women screamed and trembled, and hugged their little ones closer to their breasts.

"There's hope in laughter," said Zim. "I have a mind to see what pleases the monster. Who will attend me? The sight may be worth the journey. Who?" There was a pause, and each looked in each other's face; a pause, and no answer. "It matters not," said Zim, "I'll go alone; and in good season bring you tidings of the Giant."

And as Zim turned to go on his way, all the crowd looked the lighter, and all shouted, "The good Zim! the great Zim! By the mighty Egg, the magnificent Zim!"

For two days and two nights, Zim, unseen, followed the footsteps of the Giant. Still did the Dwarf watch the monster Giant at his meals, as he wildly plucked the bread-fruit, and biting and then snarling at it, flung it away. Then the Giant would throw himself upon the earth and tangle his nails in the underwood, and tear it up, and drag it through his teeth, as though he had a dim sense that some strange, some wild enjoyment might be torn from it. And then the monster would stretch himself at length, and with his blood-rimmed eyes flash hatred to the sun.

On the third morning, the Giant, urged by some headlong will, strode towards that part of the island where rose the houses and temples of the dwarf-people. Still Zim followed the steps of the monster. As the Giant looked down upon the roofs, there gleamed in his eyes a strange half-witted glance. Gabbling, he passed on until he towered over the house of Zim, which, unseen by Bakkuk, the mighty little Dwarf entered. Now, this house stood upon a small eminence, alone, and at some distance from all other habitations. Cunningly, curiously did Bakkuk pry down upon the abode of the wizard Dwarf; then, jabbering, the Giant dropt upon his knees, and peeped about the dwelling as a baboon would look into a twisted shell. Then Bakkuk laid his hand upon a little piece of metal, no thicker than a rush, and with the act the Giant was flung to the earth in a twisted heap, roaring like a volcano. And many of the island folk who had left the crowd upon the plain, many of them hid in trees and holes around, clapped their hands and shouted; for they acknowledged in the overthrow of the monster the wisdom dwelling in the powers of Zim.

All night the Giant lay insensible, and still Zim turned a deaf ear to the desires of the little people; he would not kill the monster. "Wait awhile, let us see; there may be good in him. Wherefore kill, when, as you see, I can, at a thought, make him powerless?"

The little folk appeared to yield to the reasons of Zim; nevertheless, one among another, they angrily asked, "Wherefore not kill him?"

"Wait awhile," again urged the wise and placid Zim; "wait awhile; the monster's very ignorance shall help to tame him."

The next day, Bakkuk began slowly to move. With many groans he rose from the earth, and with a kind of half-brutish, half-reasoning look, stared and gazed at the house of Zim. A higher sense seemed to be awakening in him.

The monster retraced his way; and turning, passed into the gloom of a forest—a forest never entered by any of the islanders. By common consent it seemed a placed to be shunned alike by speech or foot: no man spoke of it—walked in it. Nevertheless Zim, chartered by his sense, tracked the monster, who, like a hound following the scent, went eagerly into the darkness. There was a lurid look of appetite kindled in the Giant's face: he jabbered and gabbled, and his huge chest heaved like a mountainous wave with the storm still dying in it. Then the giant dropped like a stone upon the rank grass and tangled underwood; and, as he tore up all that grew about him, he howled and screamed with terrible delight—howled as a wolf howls and tears at a grave, its paw close upon the dead man's cheek.

The whole frame of the Giant seemed shaken with a horrid joy. His hair was twisted and stirred like waking snakes. Louder and louder he yelled; then broke into snaffling laughter.

Still the monster tears at grass and roots; still digs, digs into the earth, until with hungry fingers, and elbow-deep he sweats in the soil Suddenly he screams with rapture; screams like a slave of the mine, that, with a diamond, finds his liberty. He snatches his hand from the earth, it grasps a root twisted like an adder; with a shout of joy he buries it in his mouth and grinds it beneath his teeth; and as he drinks the delicious poison of its juice, his eyes glow and sparkle, and his face grows purple as a grape.

CHAPTER III.

READFUL throughout the island was the joyous howling of the monster. From that forbidden forest came cries, and shouts, and horrid laughter, as though a band of fiends were keeping devilish holiday; and then the Giant would break into a sort of chant—then a minute pause, as though wondering at his own music—and then laugh the louder, and chant a wilder and a wilder note.

Crowds of the people had gradually been drawn towards the forest. They listened with wonder as they tried to piece out of the Giant's music some rude meaning. In vain; they only heard the outbreak of a brutal nature, drunk to madness. For still the Giant clawed

and dug in the earth; still did he pluck up root after root; and, still crushing the juice between his teeth, still did he feed his fury, still rising and raging with the drug.

For a day and night the Giant kept his horrid revel. For a day and night Zim refused to listen to the prayers of the multitude, who implored him, at a thought, to destroy the Giant. For they had known the mighty little Dwarf to lift a mountain with a wire; they had seen him with his magic snap an oak like a dry reed; and they knew that in his will was the life of the monster.

"In good time," said Zim; "in good time. You shall see how this evil will become goodness. You shall learn that it is nobler to reform than to destroy. What, now, if this brute mass of power, this Bakkuk, becomes a kind and gentle creature? What if he be tamed even by his own intelligence—his own affections, when duly taught, when duly touched?"

"And what will teach him?" asked the old man, who called the loudest for the Giant's death. "What," he repeated, "will teach him?"

"Suffering," answered Zim.

"Suffering! And if he comes out of the forest, and mad as he is—ay, and madder still, for his rage seems rising like a tempest—if he ravage the whole island"——

"Peace!" said Zim.

At this moment, and as if in mockery of the word, Bakkuk shouted the louder.

"You hear," cried the old man; "and you will not end this terror?"

"But I will end it," said Zim.

"And how—by lightning?" asked another.

"By gentleness," answered the mighty Dwarf; and the people murmured, for they hoped that Zim would, with a spell drawn from heaven, wither up the Giant, as the fire from the cloud crumbles an oak.

And still the Giant roared and laughed. Hark! The earth groans and seems to shrink—the Giant has jumped to his feet; and now, like a whirlwind, he rushes from the forest, his face, his frame, as fiery as the setting sun that, with dropt jaw and foolish heavy eyes, he stares upon. He is become drunk, insanely drunk, with the juice of the roots of the forest; and the islanders see revealed in the Giant the truth of the legend they were born to—that whosoever lost himself in that forest would find madness.

The little people crouch and shrink away, and the Giant, stupified and half-blinded by his drink, sees them not. After a while, the islanders take courage, and with strange curiosity observe the antics of the Giant. Now he staggers and rolls—now tumbles on the earth, and roars laughter as he falls. And now, squat, he tears the grass about him, and brings it to his leaden eyes, and tries to look at blade from blade; and then hideously simpers at his own defeat. The stars come out, and, as they tremble in their light, he winks at them, and grins to see them wink again. And now the red moon climbs the heavens; and, with a purpose in his face, the Giant turns him round, and, swaying to and fro, tries with his hands to raise himself. Gasping and groaning he at length reels upon his feet; and then, with a broken shout, throws forth his arms to tear the moon out of the sky. With a crash he tumbles again to the ground, and with stupid looks gazes in his hand; and, then, beholding the moon, he, howling, knocks his head upon the earth.

"See you not," said Zim to the old man, "see you not there is hope of the monster?"

"Hope! What! to see him jump at the moon? Why, 'tis like a baby!"

"Just so," answered Zim. "Didn't I say there was hope?"

Again the monster rose; again, with a shout, made towards the forest—again entered its shade—again dug and dug for roots; and then broke forth from his lair, and, shrieking and raving, rushed abroad; and none of the islanders—so were they appalled by his new fury—dared to follow him.

"Let him pass," said Zim. "This rage will spend itself. We shall hear of him."

"Hear of him!" said the old man. "Yes, we shall hear too much of him, when he has destroyed the island, destroyed all of us—no, not all; you are safe—you are a match for the monster; therefore, why need you care?"

"Peace, and patience," was the only answer of Zim.

For the whole night, and at intervals throughout the next day, the islanders who remained abroad heard the roarings of the Giant. Then came one of them with disastrous tidings: the monster had destroyed half the town, flinging aside houses with his feet as he would storm pebbles. The multitude threatened Zim. He should instantly destroy the monster with lightning; if not ——

But Zim was calm and passionless. "Houses may be built," said the great Dwarf; "ignorance may be taught; but who can restore the Giant? Patience."

The next night came, and the voice of the Giant was heard in agony; it seemed to pierce the island; and the people who had called for the destruction of the monster, now looked upon one another with mute pity in their faces.

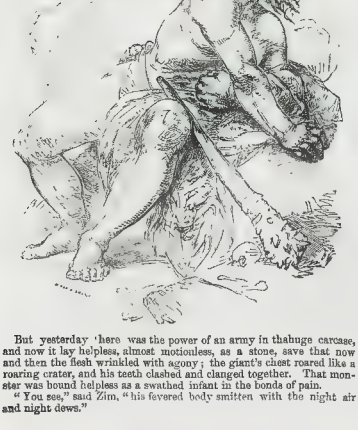
Oh, it was terrible to hear that voice of anguish. It seemed the suffering of a very crowd of men, so loud, so various, so searching was the torture.

"And now," said Zim, "begins the Giant's teaching. Let those who will, follow me to the monster's haunt, even to his very presence."

"What, to be torn to bits?" asked the old doubter. "No; you may go, for, as I've said, you are safe."

Zim, with a smile, prepared to depart, when numbers crowded about him, praying him not to attempt the danger; but Zim, with cheerful looks and hopeful words, smiled on their counsel, saying, "The time for the teacher is come." He then turned upon his way, and was followed by a few.

Pursuing the sound, that, with every footstep, became louder and sharper, as though torn from writhing torture, Zim and his followers reached the entrance of a cave, that now with the groans of the monster echoed with awful misery.



But yesterday there was the power of an army in that huge carcase, and now it lay helpless, almost motionless, as a stone, save that now and then the flesh wrinkled with agony; the giant's chest roared like a roaring crater, and his teeth clashed and clanged together. That monster was bound helpless as a swathed infant in the bonds of pain.

"You see," said Zim, "his fevered body smitten with the night air and night dews."

"Plain," broke in the old doubter, who, even unwillingly, had been drawn thither by his curiosity; "plain; I see the symptoms. Even giants can't stand against rheumatism."

"Even so," replied Zim. "And now begins the Giant's schooling."

"Schooling," cried the old man; "the doctor first, I should say, before the schoolmaster."

"They shall both work together," answered Zim, and, entering the cave, he sat down at the end of the Giant's right hand. With a roar, the Giant clutched the Dwarf, and Zim's companions, screaming, fled. It was but for a moment; a spasm of agony shot through the Giant's arm, and the Doctor Dwarf stood on his feet, unbruised, unhurt.

Zim called out to his companions, who made no answer: he then went out of the cave to satisfy them, lest they should go back to the people with a false story of his death. When they saw him come from the cave, they ran to him, and besought him not to persevere in his mad intent: his life would be cast away upon the Giant.

"Kill the monster! kill him!" cried all the people.

"Teach him! teach him!" answered Zim, with a smile, and again he turned to re-enter the cave, and again the people crowded about him, beseeching him.

"The lightning! the lightning!" they said. "No teacher like the lightning. That is the readiest means. Kill the monster where he lies, and let the cave be his burying-place."

"Why that would be the easiest way," said Zim.

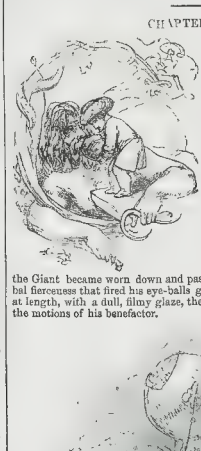
"The easiest, and the best," answered the people. "Hurrah, Zim! you'll kill him."

"I think not," answered the Doctor, with a humorous look. "No, I think I'll teach him."

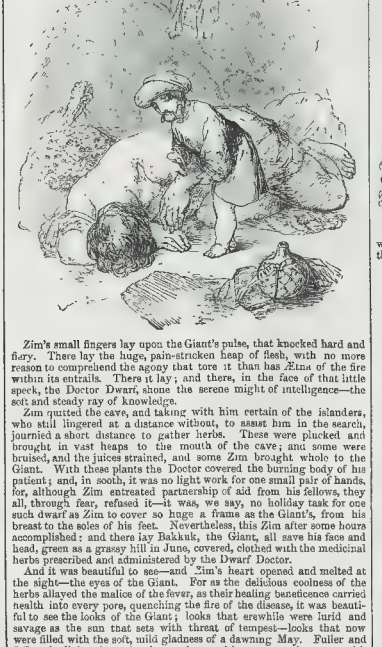
"Teach him! And with what?" asked the old doubter, with a sneer.

"With this, for one thing," said the Doctor Dwarf; and, at the word he plucked a wild flower growing at the mouth of the cave, and then motioning farewell to the people, passed in to his Giant patient.

CHAPTER IV.



AUTIOUSLY and tenderly did Zim approach the sufferer, whose every nerve in its agony was as a burning chain upon him. The Giant could not move a finger, that the motion was not punished by a torment; and so he lay motionless; now piteously groaning, and now with flashing and malignant eyes mowing and jabbering at the Dwarf Doctor, who, with a benignant smile, began to move more confidently around the monstrous bulk of flesh, Bakkuk still following the motions of Zim with hateful glances. Twice or thrice Bakkuk strove to snatch at his benefactor, and every time yelled with pain, and every time yielded to the chastising master. And so the Giant became worn down and passive; and, by degrees, the cannibal fierceness that fired his eye-balls grew dim and was quenched; and, at length, with a dull, filmy glaze, the monster scarcely seemed to note the motions of his benefactor.



Zim's small fingers lay upon the Giant's pulse, that knocked hard and fiery. There lay the huge, pain-stricken heap of flesh, with no more reason to comprehend the agony that tore it than has Zim of the fire within its entrails. There it lay; and there, in the face of that little speck, the Doctor Dwarf, shone the serene might of intelligence—the soft and steady ray of knowledge.

Zim quitted the cave, and taking with him certain of the islanders, who still lingered at a distance without, to assist him in the search, journied a short distance to gather herbs. These were plucked and brought in vast heaps to the mouth of the cave; and some were bruised, and the juices strained, and some Zim brought whole to the Giant. With these plants the Doctor covered the burning body of his patient; and, in sooth, it was no light work for one small pair of hands, for, although Zim entreated partnership of aid from his fellows, they all, through fear, refused it—it was, we say, no holiday task for one such dwarf as Zim to cover so huge a frame as the Giant's, from his breast to the soles of his feet. Nevertheless, this Zim after some hours accomplished: and there lay Bakkuk, the Giant, all save his face and head, green as a grassy hill in June, covered, clothed with the medicinal herbs prescribed and administered by the Dwarf Doctor.

And it was beautiful to see—and Zim's heart opened and melted at the sight—the eyes of the Giant. For as the delicious coolness of the herbs allayed the malice of the fever, as their healing beneficence carried health into every pore, quenching the fire of the disease, it was beautiful to see the looks of the Giant; looks that erewhile were lurid and savage as the sun that sets with threat of tempest—looks that now were filled with the soft, mild gladness of a dawning May. Fuller and fuller the light shone in them—shone with new consciousness, with deeper and deeper intelligence. The heart of the Doctor Dwarf leapt within him; and, having filled a large gourd, thrice the size of his own head—so big, so heavy, he staggered with it—filled it to the brim with the juice of herbs, he clambered up the Giant, toiling his weary way until he reached his chest; and there, panting from his labour, there stood the little Doctor, with his medicine under the brow of the giant's chin. How the islanders—for a few of the boldest had, one by one, edged into the cave—how they marvelled at the bold perseverance of Zim; and how, with a scream, they rushed back from the cave, when they beheld the giant drop his jaw, and show his terrible teeth! But Zim was stout of heart, and saw in the Giant's eyes that the Giant had a dawning sense of the further good prepared for him; and, so believing, accommodated his vast mouth to the puny endeavours of the Doctor. With much trouble, Zim emptied the gourd into the mouth of the Giant, who, with milder looks, and in his only manner, grunted thanks. Again and again did Zim perform his journey up the Giant's frame; again and again drenched his monster patient.

And for three days and nights Zim tended and watched the sick Giant; and for three days and nights beheld the countenance of the monster change from brute ferocity to passive gentleness. On the morning of the fourth day the fever was wholly subdued; and, as the early breeze from the sea blew into the cave, the breast of the Giant seemed labouring with a new emotion; his bosom gently heaved and heaved, as broad and gentle as the distant wave. And then his eyes grew softer and softer, and at length melted into floods of thanksgiving tears.

And Zim knelt beside the Giant—knelt, and himself gave thanks for the precious bounty, the teaching beneficence, of such tears; for he knew that they came from the Giant's heart. Grateful Nature had smitten the stone, and it gushed forth healing water.

And then the little island folk began to crowd into the den, the news of the change in the Giant having passed from mouth to mouth. And the Giant turned his looks upon them; and his former sullen, rugged face was softened and refined by smiles. And the islanders, wondering at the marvel, uttered prayers and gave praises to Zim. Now, who so great as Zim—the good Zim—the mighty Zim?

And days pass by, and every day brings strength and gentleness to the Giant; and every day takes with it some savage trace, some harsh and angry line. The storm of brutal passions that had darkened the features of Bakkuk was gradually dispelled, and simple goodness dawned throughout. Long and painful was the labour of the Doctor Dwarf, resolved to teach the Giant; who, from signs, grew into the use and knowledge of articulate sounds; and still his outward aspect became softer, gentler, with every acquitted task.

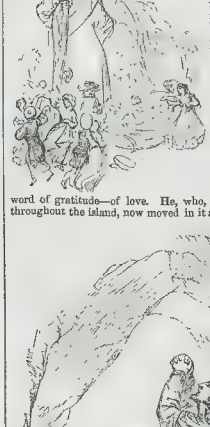
When Bakkuk had sufficiently mastered words whereby to attempt a revelation of his thoughts, Zim sought to know the Giant's history. How came he on the island? Where had he dwelt before? What his condition? And then Bakkuk would press his head with his hands; and, for awhile, pore dreamily upon the ground; then cast disordered looks into the heavens; then throw apart his arms, as though despairingly he would scatter the clouds that darkened him. No; he remembered nothing—nothing distinct. He would smile, and clap his hands at the murmur of the sea. And when Zim made the Giant place a shell to his ear, he listened and listened, and smiles crept over his face; and his eyes softened at the sound; and then he placed the shell at his heart, as though it spoke to that.

But the wonder of Bakkuk—his marvel of marvels—was a little child. He would hold his breath with awe, when Zim brought him his little son, that would stand in the Giant's palm, and laugh up in his huge face, softened into reverence and love. And Bakkuk would compare the child's arm with his own; compare finger with finger; and then laugh, and then look sad; and then new affection for the little one would gleam in the Giant's eyes. Then again and again he would wish to throw himself upon the earth, that he might worship Zim; who ever reproved the Giant, teaching him by his own motion to look into the heavens and pray.

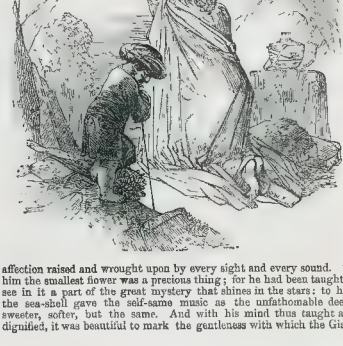
For many months Bakkuk remained in the cave, and was fed by the labour of the islanders, who—so willingly were they guided by the counsels of Zim—cheerfully worked for the savage; nay, sometimes stinted themselves, that Bakkuk might have his mighty fill. And still Zim taught his pupil, every week advancing: taught him the frame of the globe; its bones of rock and stone—its flesh of earth—its outward verdure. So taught him the beautiful mystery of a flower, that the Giant would look upon the simplest bud with all the awe and reverence that the savage brings to the foulest idol: taught him the fabric of the heavens, with the rising and the setting of the sun; taught him to know the stars as they came glittering forth; taught him to know the motion of the moon as she swam into the firmament.

And every lesson, we say, brought its added light, that, from the mind of the Giant, shone in his face, and gave to him the beauty of love and gentleness. And Bakkuk learned to know the wonders about him as only the shadows of a greater wonder—learned to listen to the beating of his heart only as an instrument whose every throb told of a nearer and a nearer world.

CHAPTER V.



OVE—love for his teacher was of daily growth in the heart of the Giant. And great was the joy of Zim when he beheld his patient, controlled by the grateful impulse, cast himself upon his knees, and heard him utter prayers for his preserver; heard the poor, enfranchised monster pour forth thanksgiving for the blessings of his redemption. With every touch of truth, of knowledge, Bakkuk had received a ray of light, a look of gentleness; and when, at length he stood before the assembled people—what a holiday was that time of triumph!—his face was beautiful in its mingled look of power and peace; and his every word, a word of gratitude—of love. He, who, with brute license, had raged throughout the island, now moved in it as in a temple; his wonder, his



affection raised and wrought upon by every sight and every sound. To him the smallest flower was a precious thing; for he had been taught to see in it a part of the great mystery that shines in the stars: to him the sea-shell gave the self-same music as the unfathomable deep; sweeter, softer, but the same. And with his mind thus taught and dignified, it was beautiful to mark the gentleness with which the Giant

bore himself towards the little people of the island. It seemed that he had lost all sense of his surpassing bulk and strength, in humility and thankfulness towards his benefactors.

After a time, Zim led the Giant to the spot where, in his ignorance, he had thrown down houses and temples. When Bakkuk saw the ruins he blushed; and then begged to be taught, that night and day he might labour to restore them.

"In good time," said Zim, and then led him to the forest.

"It was here," said the Dwarf, "here that you sought the means of madness." And then, to the questions of the Giant, Zim recounted the story of Bakkuk's frenzy.

"Now, then," said the Giant, "let me pay recompense. Give me this place: let me labour here."

"It is an evil place," said Zim; "all men shun it: a place whose shadows are as griefs—whose dews are as misery."

"Give it me," cried the Giant. "You shall teach, and I will work."

"Be it so," said Zim. "I can answer for the people; do what you will."

Next morning, at sunrise, the Giant went forth to work in the forest. Before the sun had set, he had plucked up every tree, piling them in many a heap. Then he went before to the piles; and for days and days tended the flames, fanning them as they failed, and feeding them with new offerings. At length, that ill-boding forest lay in so much dust upon the earth—the ground scathed and mortified by fire. Great was the rejoicing of the islanders, when they beheld the sun fall upon the earth so late deformed and blotted by that fatal wood.

The Giant's next task was to till the land. That land, redeemed from evil, should be his first offering to his benefactors. Corn should grow there, and his heart would rejoice and melt at the harvest. And so, indeed, it happened. Bakkuk, instructed by Zim, laboured early and late; and—how quick the seasons passed!—many a broad acre was covered with golden corn; corn of larger, fuller growth, than heretofore had flourished in the island. The Giant's harvest-home was, indeed, a holiday, and its memory held in celebration for many an age.

"Better to teach than to kill," said Zim, quietly, to the ancient doubter; as the Dwarf pointed to the large shocks of wheat sown, reaped, and piled by Bakkuk.

But there was no part of the island that did not bear some mark of the Giant's zeal and gratitude.

"We must have a star-tower," said Zim; "a mighty pile, from whose top we may better survey the heavens."

And Bakkuk quarried the marble, and carried the blocks; and, with his mighty force, laid stone upon stone, the brain of little Zim teaching and directing him. And when the tower was completed, Zim ascended to the top, taking with him the old sceptic. And as the stars trembled close above their heads, training down looks of peace and love, the doubter said—"Beautiful, beautiful stars! I could not have thought ye so glorious and so lovely."

And Zim replied, "You owe the knowledge to Bakkuk, without his help, this sight, in the fullness of its magnificence, had been denied you. Brother, I ask again, is it not better to teach than to kill?"

And thus the labours of the Giant filled the island with blessings; and the Giant was blessed in the reward of his labours—in the wages of respect and love he enjoyed of his masters. They had taught him the true dignity of life; and, whilst he ministered to their higher delights, they repaid him with gentleness and affection.

And at length, old, and very old, the Giant could no longer labour. His hair became as snow, and the light died in his eyes; and the old blind Giant was loved and cherished for the bygone days of his strength. He was, in his very helplessness, reverenced as the monument of departed vigour.

At length Bakkuk, the Giant, died. He died upon a hill, beneath the open sky, feeling, he said, though he saw them not, the stars upon his face.

And where Bakkuk was buried there grew a mighty banyan-tree—a tree in which the fancies of after-generations would see and trace the bones and sinews of the Giant; a tree that would give shelter and food to thousands. And, it is said, never did man seek the hospitality of its shade, or the nourishment of its fruit, that he did not bless the memory of the good Giant, that he did not think with love and tenderness upon the Doctor Dwarf.

BLACK-AND-ALL-BLACK.

A LEGEND OF THE PADEREEN MARE.

RELATED ON A CHRISTMAS EVE, BY AN OLD SENACHIE.

BY W. CARLETON.

WITH ILLUSTRATIONS BY WEIR.

Poor Paddy Phats! I remember the little man like yesterday, and think I see him waddling along, making two parenthetical curves with his broad, flat feet, precisely after the manner of a duck, whose gait, or going his very much resembled; and, for this reason, he was never known by any other name than that of "Duck-foot." Poor Paddy was a very worthy little fellow, exceedingly civil, obliging, and good-natured; full of fun and drollery, and a perfect miser in everything relating to truth. He insisted that truth was a commodity much too valuable for general use, and that any man who possessed it ought by all means to keep it to himself, and communicate as little of it, in his conversation and dealings with the world, as possible. "What," he would exclaim, "is tellin' truth to the *boys* you meet, both man and women, but throwin' pearls before swine, and settin' them, besides, a bad example?" In accordance with this principle, he economised it to such a notorious degree, that not a single sort of his acquaintance for a moment dreamt of expecting it from him: and whenever any person had related an anecdote, or told a story that set all credibility at defiance, he was gratified by the compliment of being told that that was one of Paddy Phats's.

Paddy, in addition to this parsimonious use of truth, possessed also a snug

and comfortable relish for the good things of this life; and if there was one little delicacy in it which he loved better than another, it was a bit of mutton, in a quiet and unobtrusive way. It is true, he farmed no land, with the exception of a small garden, and kept no sheep; but, notwithstanding his disdain of agriculture and pasturage, he always contrived, somehow, to be able to treat himself without anything like ostentation, we must admit—to a tidy little joint of mutton. We know that there was a good deal of speculation abroad, as to who the fortunate individual could have been who stood to him in the capacity of butcher. Speculation here, however, as well as in many other affairs of our life, continued woefully at fault, and Paddy's butcher remained anonymous to the last. This, indeed, was the more surprising, inasmuch as we can assure the reader that many earnest antiquarian researches were made for the discovery of that important secret. It was supposed that Paddy must have had some private and insecurable crypts in his house or garden, the knowledge of which would have possessed much interest to those who were publicly engaged in the science of discovery at the time. We fear, however, that the cause of failure was altogether the fault of these antiquarians themselves; for, whenever they approached Paddy's house and garden, for the purpose of instituting these archæological investigations, they were foolish enough to dress themselves in the garb of police officers, in order to impress him with a belief that they were sanctioned by Government authority—a fact which induced Paddy to guard his own secret with tenfold caution. And in this he succeeded. Many interesting osteological relics they certainly were fortunate enough to get by digging in his garden, and a good deal of shorn peltry, to which Paddy made them heartily welcome; but, as to the name of the butcher whom he patronised, it remains, like that of Junius, a profound secret down to the present day.

Paddy was also remarkable as a Senachie, or story-teller; and, when not employed in negociating with his butcher, there could be no pleasanter companion in the chimney-corner nor in a wake-house, of a winter's night. Many a tale and anecdote, seasoned with his own peculiar unction, have we listened to in both places from his lips. It mattered not how great and startling was the fiction which Paddy heard in his intercourse with the world, he was always able at once, by the extraordinary force and prodigality of his invention, to make it appear as nothing. For instance, we remember once to have heard, one winter's evening, at our own happy hearth, a neighbour of ours, and of his also, stating that he recollected his father having in his possession a beautiful walking-stick, made of a stalk of heather! This thumper was received by the company present with shouts of laughter, the only exception being Paddy, who pretended never to doubt any fiction, no matter how extravagant.

"Oh! Tom," said we to Peter Sunonyeus, for such was the name of the narrator, "don't think we can swallow *that*."

"Indeed, then," observed Paddy, "he's tellin' yez nothing but the truth." For be it known that Paddy was liberal enough to support all rivals who opposed him, and generally indorsed their lies in such a manner as to make them perfectly ridiculous. "It's truth," said Paddy; "I seen the stick he talks of. And by the same token, Tom," he added, "you forgot to tell them that your father (God be merciful to him!), whenever he happened to go a long journey, always carried his razor, shaving-box, and a change of linen in the head of it. I mention the linen, bekaise this daicent man wore it *very fine* in his day, Tom, *especially during warm weather*" (by which he meant that Peter's father seldom wore any). "Talkin' of heather, however," he proceeded, "brings to my mind a discovery my father made when I was a mere chap. He planted two stalks of heather in our own garden, and in the course of about five and twenty years they were two of as purty trees as you could wish to see. My father God forgive him, he often did foolish things—was buildin' an inside kiln at the time, and what did he do, but cuts them down in order to make summer beams of them for the kiln?" Summer beams were two or more large beams placed over the kiln-pot, and which were traversed in an opposite direction, or, to speak more plainly, crossed by a number of removable ribs, which again were covered with straw; over which was spread the oats, in order to be dried by the heat of the fire from below. This description of kiln, which has now nearly if not altogether disappeared, has been replaced by that of sheet iron studded with holes; and again he went on: "That remimbers me of what I'm goin' to mention. My grandfather (God be good to him!) or my great-grandfather (the heavens be his bed!) once planted a tree in a field of ours when we lived in the town of Sky. Well now, do you know that that tree grew to a great size. However, *it took the drop*" (*i. e.* received the rain through a hole in the bark) "just where the branches divided from the trunk, and in the course of time the body inside the bark rotted out of it, and left nothing to keep it up but the bark itself. It was as large a tree now as you'd wish to see I remember myself, when I was a shot of a boy about eighteen or nineteen, we was breakin' a horse; and whenever there came a wet day I used to ride him inside the tree, and gallop him round, wavin' a long whip about my head all the time, but never could touch the bark. The time our house and outhouses were all burned, we lived in it till they were built again, an' had plenty of stablin' and other room for the cattle."

"And what became of the bark, Paddy?"

"The King hearin' of its great size, sent for it, and got three or four of the portiest ships that ever crossed salt water built out of it; and from that day to this, every ship built upon the same plan, in honour of the truth I'm tellin' you, was ordhered to be called a *Bark*. That horse, indeed, that I broke in, it was the best horse we ever had, barrin' his twin brother; and they were so well matched, that no one was ever able to say which was the best at anything. The name of the one was Whiskey, and the other Brandy; and sure it was upon them that that fine merry tune was made, that's known by the name of 'Whiskey and Brandy' to this day. Now that I'm spakin' about them, I'll tell you a thing my father did wid them, that he won a trifle of money by. He laid a wager wid a neighbour of his—one Pat's Flounather—that he would plough more wid the same two horses than the oth r would with the best three couple he could procure within the bounds of the whole parish. Well, to make a long story short, they met—but I forgot to tell you that the choice of the ground was to be left to my father; and what kind of soil should he pitch upon, but the side of one of the roughest mountains in the whole country. It was all full of stones and heathery hillocks; and as the saison happened to be Midsummer, the horses dashed on at sich a rate, and knocked so much fire out o' the stones, that by the time they had been about three-quarthers of an hour at work, the whole mountain, which was as dry as powder, became one sheet of flame, and upwards of four hundred acres of it was burned and reclaimed afterwards, and my father got a handsome present from the landlord. Well and good; but that's not all of it. My father on his way home happened to suck down a drap of poteen at a sheebeen-house, and his spirits got up in such a way, that by the time he reached the town of Aughnacloy, he took it into his head to propose another wager, that he would turn a furrow up the centhre of the street. Now all the world knows that the main street of Aughnacloy is one of the widest and best paved, considerin' the size of the town, in the three kingdoms. Well, at all events, he came in from the Trough side; and when he got as far as Mill-street, he enthers the plough, and touches up 'Whiskey and Brandy.'"

Here Paddy feigned a disposition to stop, for the roguish purpose of stimulating curiosity.

"Well, Paddy, and what happened then?"

"Augh!" said Paddy, with assumed indifference, "nothing to talk of. The horses danced up Tullyhogue, my brother himself, of coorse, handlin' the plough; and at such a rate they went, and put their shoulthers to it in such style, that the pavin' stones, every one of them as large as sixpenny loaves, flew off to the right and to the left, and shivered the windows to pieces on both sides as they went along. When he had got half the length of the street, the townspeople came out on seein' what was the occasion of it, and offered to make him up a sum of money if he'd go no farther. My father, who was as stiff as they were stout, said he should win his wager. They then offered to double the amount of the wager on him, which they did, and on that account he went no farther. The glaziers of Aughnacloy made him a present of a silver snuff-box, and hoped that he'd soon make another wager of the same kind."

"But, Paddy," we asked, "didn't you shoot a great salmon some years ago? Will you tell us about that?"

"No," replied Paddy, gravely, "I shot no *great* salmon."

"Well, some big fish or other, at any rate."

"I never shot any big fish, but I once did my endeavours to shoot a salmon; and I'll tell you how it came about:—I was out, one day, shootin'; and it so happened that I found myself run short of shot. I was walkin' up the side of the Blackwather, and it was one evenin' in the month of September, and, happenin' to look into the river, I seen what I thought a middlin'-sized fish. It was purty high up near the surface; and it struck me, that if I had any shot in my gun, I might have a chance of it—in regard that I had often shot middlin' fair fish in size, say about 56 lb. or so. Well, I looked about me, and scratched my head; and what did I spy beside me but a fine thorn-bush, loaded wid beautiful large haws. I'll carry it, thought I; and, as the thought struck me, I pulled down a handful or two, and put them into my gun instead of shot. The salmon remained still in the same place, only a little nearer to the surface of the wather. At all events, I banged at it: but whether I hit it or not, was more than I could say at the time. At any rate, it was about eight or nine years afther wards that I was passin' along the same river, and seein' a beautiful whitethorn three, wid a blackbird singin' on it, I made for the white churn-staff bleaching in its branches, I thought nothing of the matther, and was passin' on; when, to my great amazement, I found that the thorn three was coming along wid me; and what made the thing more remarkable, it was goin' against the stream too, as I was myself. Well, to be sure, I began to feel timorous, and think it might be a fairy thorn, when, on lookin' close into the wather, what does I see but an immense fish, havin' a thorn tree in full blossom growin' out of his back! I then remembered the haws, and the shot I had made them into years before, and, as it was now near the bank, I jumps upon its back, and, seizin' upon the churn-staff, I broke the skull of it at the first whack. When measured, it was a purty good size, too, about sixteen feet long, and five wide: and little I thought, when I put the charge of haws into it, that ever they'd grow into a thorn tree out of its back. Indeed, that was as curious a shot as ever I made. But what was very odd, we had a great crop of blackbirds in the tree; and when I reared them, which I did, the devil a thing God pardon me for swearin'—could keep them out of the wather: they swam and dived like so many ducks, and no wondher, for, to tell you the truth, every one o' them was wobfoot d'."

"Well, but Paddy," we would say, "won't you tell us about the race between Black-and-all-Black and the Padereen Mare?"

Paddy, in general, made no reply to this, but took a whiff of the pipe in silence, after which he usually commenced the legend, something in the following manner:—

"There was once a race-horse, and some said it was in consequence of his colour that he was called Black-and-all-Black, whilst others said it was owing to a worse cause than that. Be this as it may, the raven's wing wasn't smoother or blacker than his skin; for you had only to look at it, and you'd see the whole country round you the same as in a lookin'-glass, and that, I suppose, was what made the people say that he had quicksilver in his veins. This 'Black-and-all-Black' was the admiration of every one who ever seen him. It was said he was swifter than the wind, and that he could run on a dead level, as fast as the crow could fly. At all events, one thing was well known on all sides, which was that no horse ever had a chance with him in racin'; and, indeed, when you come to understand everythin', you wont wonder at that."

"Why so, Paddy? what was there so wondherful in that? The horse was sompler than any other horse, and that wasn't extraordinary, sure?"

Paddy gave the speaker a look of calm and withering contempt, after which he puffed away the smoke from his dudeen and gravely proceeded:—

"You see there was an ould squire in the neighbourhood, a mimber of the Hellfire Club—the Lord guard us! and the same squire was so roguish and wicked, that no one ever made a bargain wid him that wasn't taken in. In spite of all his cheating, however, he was always poor; for, indeed, it's no lie to say that he went along upon the true Irish principle of livin' upon three times his income, for there's no man alive can watch an Irishman at *that*. This squire, whose name was Gunpowdher George, drank, and swore, and gambled, kept hunthers and hounds, and other cattle that shall be nameless; and the general opinion was that he had a crust of sin upon his sowl a foot thick. That, however, 's neither here nor there. At any rate, one morning he found himself hard pressed for money fairly run aground, and he took it into his head to sell himself to the devil—the Lord save and guard us from the dirty beast! and, accordingly, the bargain was struck; George signed the agreement wid three drops of his own blood, and everything went on well enough till the ould boy began to make enquiries into his character, when he found it was a regular bite, and that George had taken him in as well as he did every one else that had dealings wid him. The ould fellow was nettled, you may be sure, to find himself outdone, and thought he'd appeal to George's generosity to let him out of the bargain."

"What timptation came over me," says he to himself, "to buy sich a precious piece of goods at sich a price, an article that I was sure of in any case at the long-run."

"Accordingly, he went to George, and began to spake him as fair as he could.

"George," says he, 'I'll go down on my two knees to you if you'll only let me out o' this bargain.'

"'Are you there?' said George, laughing.

"'Troth I am,' says the other, 'and it's a shamed face I carry in regard to this unfortunate transaction betwen us. Nobody will place dependence in me for the future when it's known that I am honester than Gunpowdher George. My name and character's gone for ever,' says he.

"'So you *are* there?' said George again, still laughing.

"'I am,' said the other; 'and a purty figure I cut here.'

"'And the greater rogue's there,' says George; 'and it's a proud man I am to think that I have outdone you.'

"George had a gun in his hand as he spoke, and just at the moment a beautiful white pigeon flew near where he was standing. He put the gun to his shoulder, covered the bird, and was about to fire, when he checked himself. 'Pass on, poor bird,' says he; 'for once in my life I'll spare the innocent.'

"Satan got back in the ould way upon the words; for you see there was mercy and kindness to the harmless and moffensive in them.

"'George,' says he, changing his mind, 'let the bargain stay as it is; it must stand good. I'll perform my part of it; and I'll take care that you shall perform yours.'

"George laid his fore-finger along his nose, gave him a grin, and desired him, as the weather was could, to go and take air o' the fire.

"Now you see the nation I mintion the bargain betwen these honest creatures is this: it was almost immediately afterwards that Black-and-all-Black made his appearance in that part of the country. There was great mysthery about him; nobody knew where he came from; nobody ever saw where he went to; nor could anybody tell what became of him after the race was over: instead of that, he seemed to vanish like the shadow of an April cloud when the sun suddenly bursts out in the sky. However, as was known, wherever this wondherful horse was, there was Gunpowdher George too, although he didn't pretend to be his owner. The same he won upon him, however, were beyant all count, for no horse had any chance at all wid him. He was as black as night; his jockey, too, was dressed in black; the saddle, bridle, stirrups, and stirrup-irons were all black; and it was said by thousands, that when he was going at full flight the fire was seen to come out of his mouth, and he touched the ground so lightly that the sharpest ear could not hear the sound of his fut."

"Now it so happened, that, at the time I'm spakin' of, there was livin' in the same parish wid Gunpowdher George and this name he got bekaise he was the greatest fighter in all that part of the country, barring Fighting Fitzgerald himself, that fought forty-four duels: and, by the same token, no person could become a mimber of the Hellfire Club that hadn't killed two men in a challenge. Well, there lived, as I was saying, a priest in the same parish w.d George, named Father M'Sod, who owned such a racer that never had been beaten any more than Black-and-all-Black. This mare had no name at the time; but, whenever she ran, no doubt she left all those horses that ran against her little chance. She did not appear, however, until some time after Black-and-all-Black had the country to himself; and she was looked upon now as the general that had any chance against him. All the kingdom was loud for a trial of speed between them; and, as Gunpowdher George met Father M'Sod, one day, he challenged the white mare to a trial wid Black-and-all-Black.

were both going in the same direction, that is, towards Father M'Sod's house; when George asked his reverence to let him get a sight of his famous mare. The priest nodded towards the stable, and told the other he might go in if he liked. George, accordingly, went in; but sorra a white mare was there for him, nor anything but the priest's hay back that he always rode to the chapel, as well as to the christenings and stations of the parish. There was an empty stall, to be sure, but never a thing could he see but a white pigeon sittin' upon the top of the rack.

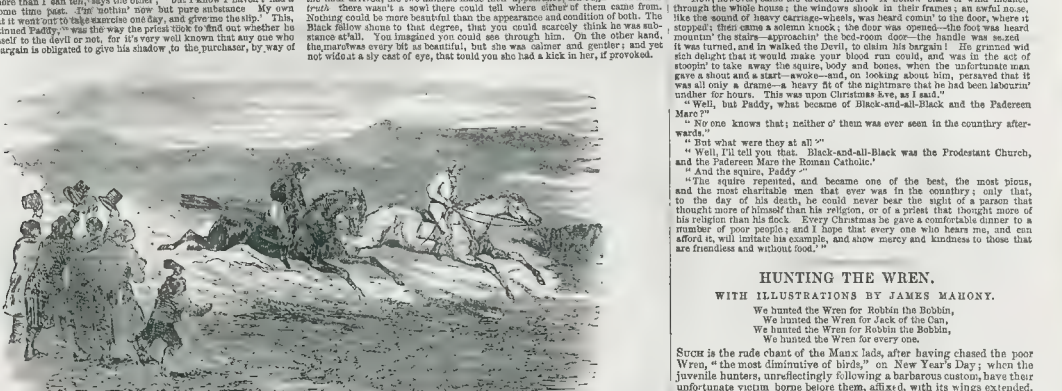
"'Father M'Sod,' says he, on joinin' his reverence in the house, 'this wonderful mare isn't in the stable.'

"The priest said nothing, only asked him to take a glass of wine, which the other agreed to; but—*Ah, this is truth*—the priest, you see, was in the habit of making the sign of the blessed cross over everything he either ate or drank, or dreamt of by night. The people, he thought, were walkin' about in some happy land, where there appeared to be neither care nor sorrow, but where all were filled with pleasure and delight. It was covered with lovely groves and rose-bows, beautiful rivers ran through it, and multitudes of happy beings walkin' along their green banks. Altogether, the sight wrung his heart when he compared it wid the terrible place that was preparin' for himself. On rubbin' his eyes, however, it all vanished, and he saw nothing but the beautiful milk-white mare, as she stood pretty and quietly before him. He then looked up to the top of the rack, after the white pigeon, but, whatever had become of it, he saw that it was no longer there.

"In the mane time, the races were comin' on; and it had gone abroad like wildfire over the whole country that the *Padereen* Mare (for so his reverence had christened her) was to run against Black-and-all-Black, that had beaten and distanced every horse that was ever put against him. Nothing, indeed, could siquil the state the country was in upon the subject. The Protestants all supported Black-and-all-Black, and se stuck like glory to the priest and the *Padereen* Mare. In truth, to tell yez the truth, the race and all the wagers depindin' on it took a religious turn; and it was said, that, if the mare had been a horse, his reverence would have called him 'The Cardinal,' for it appears, by all accounts, that some of the cardinals have a good beauty, and can go over a piece of rough ground with a very light foot, glory be to God! At all events, the bets and wagers were beyant count. All that part of the kingdom was in a blaze about it. The leadin' men on both sides, who were all well up to trap, were as active as lamp-lighters in makin' preparations for the great day that was to decide this wonderful race. The people could not sleep in their beds for it. Guid men raved upon it; young men, when they *did* sleep, dreamt of it instead of dreaming about their sweethearts: and the girls were as bad and as mad on'the other side; for, instead of dreaming of their bachelors, as they ought to have done, they dreamt only of the great race between Black-and-all-Black and the Padereen Mare. The very children had a mighty waistin for Bobby-horses, and ran races against each other in the names of the two celebrated cattle I am talking of.

"At last the day came. Such crowds—such thousands upon thousands as flocked to the race-course, were never seen at a race-course before or since. Two or three races went off, but nobody troubled their heads about them.

"'Where's Black-and-all-Black? Where's the *Padereen* Mare?' was the cry in every one's month. *This* race was to come off at two o'clock: and exactly as the hour arrived, the two animals made their appearance, although—*and that is truth*—there wasn't a sowl there could tell where either of them came from. Nothing could be more beautiful than the appearance and condition of both. The Black fellow shone to that degree, that you could scarcely think he was substance at'all. You imagined you could see through him. On the other hand, the mare was every bit as beautiful, but she was rather slimmer and gentler; and yet not wid out a sly cast of eye, that tould you she had a kick in her, if provoked.



"When the second bell was rung, the two jockeys went down to the scales to be weighed; Quagswobbler George accompanyin' Black-and-all-Black and his jockey, whilst Father M'Sod attended the mare and hers. The black jockey was exactly the weight—not a scrapin either more or less; but it so happened, hat the other was about three ounces light.

"'The worst o,' said the squire; 'three ounces is a great deal in a race like this. I have myself a pair of horses so aiquil in speed and bottom, that the weight of the kay of the stable is enough to make either of them beat the other. Thank you for nothing, Father M'Sod; make up the weight, sir.'

"Father M'Sod put his hand in his pocket, and pulling out his beads, hung them about his jockey's neck, and lo and behold you they just made him the exact weight! The race was to be a four-mile one, the best of three heats. The squire had bet all he was worth in the world upon his favourite, barrin' one or-two, and that he wished to keep for a rainy day. At length the two animals came to the start—got the word, and off they flew like the wind. By all accounts Black-and-all-Black's feet scarcely touched the ground. There he went—coal black far ahead of the mare; and it was thought at first that he would double distance her wid ease.

"'Am I doin' it purty?' said the horse to his rider."

"'Why, Paddy, said one of his audience, do you mane to say that the horse spoke?'

"'To be sure, I mane to say it,' replied Paddy; "isn't it well known he did sure the song tells you that."*

"'Am I doin' it purty?' asked the horse.

"'Beautiful,' said the jockey; 'and better than that; you're goin' it all to pieces. The fire's in you, my blackbird. It'll be a double distance against her at the least.'

"'Something's wrong, for all that,' replied the horse; 'I feel the wind goin out of me, and you're getting heavier and heavier at every stride I make.'

"'Be Gad, you're beginning to fight it shy, sure enough,' replied the jockey. 'Move on: by the powdhers o' war she's creepin' up!'

"'It's not *Padereen*,' said the horse; 'they'll be the death and disgrace o' me. However, here goes for a rush, at all events.'

"'More pewer,' said his jockey, as he pushed him on.

"The black racer, however, showed great bottom; he increased his speed, came in a good way first, and the Padereen Mare barely saved her distance.

"The course was now in an uproar. All the backers of Black-and-all-Black were on the high horse wid delight. There was no end to the wagers they made and the odds offered. The quiet betted like the rest, and last estate, his last acre, nice coat on his back, the shoes to his feet, and the hat on his head.

"'Come,' said he, patting the horse on the neck; 'if you don't win this, you leave me a ragged man, with neither sou nor bawbee that I can call my own. Put your right foot foremost, my boy, and tell them you'll see them when you come back, but not till then.'

"The friends of the Padereen Mare, on the other hand, weren't a bit cast down. They saw that, although the horse ran away from her at the beginning, she gained upon him at the close, and at any rate saved her distance. Father M'Sod had crowds comin' to consult him as to what they should do. His reverence, however, gave them a knowin' wink, and only said '*Na bocklish*. Take all the bets you get.' This gave them courage, and the betting was a miracle to see.

"Well, they started for the second heat, and off went Black-and-all-Black as if he had wings, and off went the beautiful Padereen neck for neck beside him. A rouk! There was no runnin' away from her now. It wasn't run she did, but fly. As the horse, he outdid all his former doin's; but go as he would, there was the darlin' at his side. The day was dark—oh, this is truth!—and what do you think was seen? Why, then, I'll tell yez. As the horse flew along so they could hardly keep up wid him, the people were amazed, astonished, and frightened to see that he left a train of deep red fire behind him, whilst the mare, on the other hand, left behind her a beautiful line of light. Oh, you needn't shake your heads; it's gospel I'm tellin' down to yez. If I was a man in the habit of tellin' things that never happened, you might misdoubt me—but you all know that as I said, it's only gospel I dale in.

"At all events, devil a one of the horses but did his best—and wonders, how somever there was that against him that he couldn't outdo. On their way back the winnin' post, the mare, to the admiration of all, shot before him wid the end of a cannon-ball, leaving him hard set to save his distance; but save it he did, and, between ourselves, it was as much as he could do.

"And now may be the coorse didn't become mad in airnest. That bout was over, and, so far, they wereeven—the mare beatin' him about the same distance he bet her at first. This was the first time that ever Black-and-all-Black was overcome; and the beautiful mare was kissed and hugged by men, women, and childre, whilst the Protestants showed very long faces, and began to tremble for their money.

"'Come,' he went on, 'I'll bet five thousand pounds against all you're worth in the world, if you have the spirit.'

"To make a long story short, the wager was drawn up on paper, signed by each, and witnessed by Father White's curate, who had just returned from a sick call.

"'I suppose your mare has been out takin' her gallop,' said the squire; 'and, as it's likely she has returned, I'll have a peep into the stable again before I go.'

"'To be,' said the priest, 'and I myself will go with you.'

"On entering the stable, sure enough, there she was—a milk-white beauty that the world could not surpass. Not like Black-and-all-Black, her eye was mild and clear; there was a small frown there, too, like that of roses; her skin shone like ivory; and what was most wonderful, when the squire looked into it, he thought he saw one of the most beautiful countries that ever was seen or dreamt of by man. The people, he thought, were walkin' about in some happy land, where there appeared to be neither care nor sorrow, but where all were filled with pleasure and delight. It was covered with lovely groves and rose-bows, beautiful rivers ran through it, and multitudes of happy beings walkin' along their green banks. Altogether, the sight wrung his heart when he compared it wid the terrible place that was preparin' for himself. On rubbin' his eyes, however, it all vanished, and he saw nothing but the beautiful milk-white mare, as she stood pretty and quietly before him. He then looked up to the top of the rack, after the white pigeon, but, whatever had become of it, he saw that it was no longer there

"In the mane time, the races were comin' on; and it had gone abroad like wildfire over the whole country that the *Padereen* Mare (for so his reverence had christened her) was to run against Black-and-all-Black, that had beaten and distanced every horse that was ever put against him. Nothing, indeed, could siquil the state the country was in upon the subject. The Protestants all supported Black-and-all-Black, and se stuck like glory to the priest and the *Padereen* Mare. In truth, to tell yez the truth, the race and all the wagers depindin' on it took a religious turn; and it was said, that, if the mare had been a horse, his reverence would have called him 'The Cardinal,' for it appears, by all accounts, that some of the cardinals have a good beauty, and can go over a piece of rough ground with a very light foot, glory be to God! At all events, the bets and wagers were beyant count. All that part of the kingdom was in a blaze about it. The leadin' men on both sides, who were all well up to trap, were as active as lamp-lighters in makin' preparations for the great day that was to decide this wonderful race. The people could not sleep in their beds for it. Guid men raved upon it; young men, when they *did* sleep, dreamt of it instead of dreaming about their sweethearts: and the girls were as bad and as mad on'the other side; for, instead of dreaming of their bachelors, as they ought to have done, they dreamt only of the great race between Black-and-all-Black and the Padereen Mare. The very children had a mighty waistin for Bobby-horses, and ran races against each other in the names of the two celebrated cattle I am talking of.

"At last the day came. Such crowds—such thousands upon thousands as flocked to the race-course, were never seen at a race-course before or since. Two or three races went off, but nobody troubled their heads about them.

"'Where's Black-and-all-Black? Where's the *Padereen* Mare?' was the cry in every one's month. *This* race was to come off at two o'clock: and exactly as the hour arrived, the two animals made their appearance, although—*and that is truth*—there wasn't a sowl there could tell where either of them came from. Nothing could be more beautiful than the appearance and condition of both. The Black fellow shone to that degree, that you could scarcely think he was substance at'all. You imagined you could see through him. On the other hand, the mare was every bit as beautiful, but she was rather slimmer and gentler; and yet not wid out a sly cast of eye, that tould you she had a kick in her, if provoked.

"Well, and off they went; but, if their speed was great before, it was wonderful now. Nothing like it was ever seen or dreamt of. Padereen, the darlin' o' the world, shot before him, and gained on him at every stride. At long last, as they were on their return, she set out at a new pace; and, before he knew where he was, she passed the winnin'-post, leaving him two distances behind—so that she beat him by a double distance, and won this great and extraordinary race. But what was most amazin' was this the fire that came from Black-and-all-Black in the last heat used to flame out terribly at times, but by degrees it became less and less, and darker and darker, until at last it disappeared altogether, and ended only in smoke, that smelled very strongly of brimstone; whilst the light that the beautiful Padereen left behind her grew larger and larger, and brighter and brighter, until, when she came home to the winning-post, she was surrounded by a brightness so great that the people were hardly able to see her. Now, yez needn't laugh; for if I tould yez a word of pure gospel to-night, *this is it.*

"Well, when the Prodestants found that their great favourite was *bet*, there was no keepin' them widin bounds. They rushed in crowds to revenge themselves on the horse that had so completely deceived and ruined them. They might as well spare themselves the trouble, however; go where they might, and search where they might, there was no Black-and-all-Black to be found. It seemed as if the earth had swallowed both him and his rider. Ay, and it was the very same case wid the Padereen Mare. When her frinds, that had won such oceans of money by her, strove to get near her, to pat and hug and kiss her as a friend, she too could n't be seen, any more than her jockey. While they were all looking for her a white pigeon rose from the crowd, and flew away in the direction of the priest's house. Well and good although it was anything but that for the mare, he, rode homewards, a ruined man, and broken-hearted. That very night at midnight—and it was upon a Christmas Eve—the Devil, Lord be about us! was to come for him; and how to act, or what to do, he knew not no more than the man in the moon and water.

"'There is no hope for me,' says he; 'I see nothing but destruction before me. I may as well despair at once. What an unfortunate doom is mine! I led a life of pleasure, and yet it wasn't quite a sinful one, for you can any man have that violates the commandments of God, and is an enemy to his kind? Many a happy heart I might have made by my riches: but, instead of that, what did I do but scatter misery, and shame, and sorrow around me.'

"Just as he had spoken the last words, a white pigeon flew towards him and lit upon his right shoulder

"'Don't despair,' said the pigeon, 'but repent. I know that Satan is to come for you at midnight. He is now on his way home, you must pass the priest's door; call on him, and let him be with you when Satan comes, and you have a chance yet. But if every one should desart you, I won't, provided you repent. I am kept back your hand from the defenceless and the innocent, and that's a proof that your heart is not *all* evil.' After saying this, i iflew away, and left him to pursue his journey. Well, he did so; he called upon the priest; and, in order to have two strings to his bow, he called also on the parson. He told them both his circumstances, and mentioned especially the visitor he was to have at midnight, and the cause of the visit. The parson was the man he called on first; and havin' mentioned his business, together with his intention of having the priest also, that worthy gentleman, who was drinkin' his wine after dinner, said, 'I have always been maintainin' a warfare against Satan and his works; but my hand kept back your hand from the defenceless and the innocent, and that's a proof that your heart is not *all* evil.' After saying this, i iflew away, and left him to pursue his journey. Well, he did so; he called upon the priest; and, in order to have two strings to his bow, he called also on the parson. He told them both his circumstances, and mentioned especially the visitor he was to have at midnight, and the cause of the visit. The parson was the man he called on first; and havin' mentioned his business, together with his intention of having the priest also, that worthy gentleman, who was drinkin' his wine after dinner, said, 'I have always been maintainin' a warfare against Satan and his works; but my stronghold against him is the pulpit. To meet him face to face would be—them!—to give him aiquil terms. I could not think, my friend, of doing that—he is every way unworthy of it. Besides, I have another still more serious objection: you are calling in the aid of that Papist priest. Now, I tell you that, in attempting to save your soul by connecting myself with an idolator, I would run a great risk of losing my own. Besides, I should miss my pulpit cushion; for you don't know, my friend, how the energetic thumping of a pulpit cushion carries fear and dismay into the spirit of Satan; it makes him, in fact, quake in his fingers into his ears. No, my friend, excuse me; not that—ahem!—I fear the comin' to personal encounter with him—hem!—I am not, I trust, a cowardly soldier; but I

* Paddy was quite correct. The victory gained by the famous Padereen Mare over Black-and-all-Black was celebrated in a song which was once very popular in Ireland. In that production, as in Homer, both the horse and the mare were represented, not only as speaking to their respective jockies, but as holding a hot polemical controversy during the race, in which, by the way, the horse was certainly beaten. We may observe that in Ireland the people have a strong and a surprisingly ready tendency to allegorise, and to give any legend at least a possible air of it a polemical hue. We remember being present at a race where a horse called "Dan O'Connell" ran against another named "Peacemaker;" but the people on that occasion did not look upon "Dan" as a mere common horse, but immediately allegorised him into the representative of a principle, an embodiment of their religious and political feelings.

HUNTING THE WREN.

WITH ILLUSTRATIONS BY JAMES MAHONY.

We hunted the Wren for Robbin the Bobbin,
We hunted the Wren for Jack of the Can,
We hunted the Wren for Robbin the Bobbin,
We hunted the Wren for every one.

Such is the rude chant of the Manx lads, after having chased the poor Wren, "the most diminutive of birds," on New Year's Day; when the juvenile hunters, unreflectingly following a barbarous custom, have their unfortunate victim borne before them, affixed, with its wings extended, to the top of a pole, the company, out of the chimney-hood wall, form a circle, and dance to music especially provided for the occasion.

A tradition lies at the root of this ceremony. Once on a time, a fairy of uncommon beauty by the sweetness of her voice fascinated the men of the Isle of Man to follow her footsteps, till by degrees she led them into the sea, where they perished. At length, a knight-errant resolved on counteravailing the charms of the Syren; but, on attempting the task, and almost in the moment of success, the subtle minx took the form of a Wren, and escaped him. The evil-disposed fairy thus evaded instant destruction; but was, nevertheless, subjected to a spell, by which she was condemned, on every succeeding New Year's Day, to re-animate the form, with the definitive sentence that she must ultimately perish by human hand.

Elsewhere, Christmas Day and St. Stephen's Day are dedicated to this barbarous hunting. Aubrey, in his "Miscellanies," records that, at the last battle fought in the north of Ireland, between the Protestants and the Papists, in Glinsly, in the county of Donegal, "near the same place, a party of the Protestants had been surprised, sleeping, by the Popish Irish, were it not for several Wrens, that just awakened them by dancing and pecking on the drums as the enemy were approaching. For this reason the wild Irish mortally hate these birds to this day, killing them the 'Jove's servants,' and whipping them whenever they can catch them. They teach their children to thrust them full of thorns; you'll see sometimes, on holidays, a whole parish running like madmen, from hedge to hedge, a *Wren-hunting.*"

Alas, poor Wren! of what guilt wert thou the doer, in the state of pre-existence, that they race should thus have become the victims of a various superstition? For we read, that, not only in the Isle of Man and in Ireland, but in France likewise, this little bird is, in like manner, superstitiously sacrificed. Once, however, as name imports, it had been participant of better fortune. By the Druids it was esteemed the King of Birds, and of the augurs of old it was held to be the favourite. These distinctions, however, were fatal to its continued happiness. The superstitious respect shewn to it gave offence, it is said, "to our first Christian missionaries, and, by their commands, he is still hunted and killed by the peasants on Christmas Day; and on the following (St. Stephen's Day) he is carried about, hung by the leg in the centre of two hoops"—(such is the account given by Colonel Vallancy, in his "Collectanea de Rebus Hibernicis")—"crossing each other at right angles; and a procession made in every village, of men, women, and children, singing an Irish catch, importing him to be the King of all Birds."

By some authorities, the antipathy of the Irish to the Wren is connected with the invasion of the Danes, respecting whom a similar tale is told us by Aubrey of the Protestants.

Disputes among the learned have arisen touching the proper day of the Hunt—whether St. Stephen's or Christmas Day? The latter is that on which the Hunt now takes place, whilst the doggrel rhymes anent the Hunting, quoted, "good St. Stephen's Day" is that of merriment. Young and old join in the sport, as illustrated in the accompanying Sketch.

To the sport, the ceremony of the "Wren-bush" succeeds, wherein, as above stated, the feathered sacrifice is borne in funeral state from door to door. The bush is composed of holly and ivy, which deck, on Christmas Eve, the kitchen, the parlour, and the hall, and from which portions are contributed by rich and poor. "Bedecked with ribbons gay," the royal bird was, of old, borne aloft by selected attendants, and paraded in a processional group as picturesque as it was fantastical—hobby horses, fiery dragons, and rampant serpents, whisking terribly their tails about, having been amongst the accessories of the scene, to the intense enjoyment of the assembled crowd. But of these ancient honours the ceremony is now

"HUNTING THE WREN," AT CHRISTMAS.

ORIGIN OF HUNTING THE WREN.—THE BIRD AWAKING THE DANES.

HUNTING THE WREN AT CHRISTMAS.

sborn. It has dwindled down, we are told by a Correspondent, to "a gay affair;" but amongst the celebrators may yet be seen examples of the costumes of the last century, such as linger yet among the people. The still unextinguished wit, too, of the peasantry, with the usual incidents of Irish fun, frolic, dancing, and love-making, enliven the occasion.

"I can never forget," says our informant, "a visit from the 'Bush Boys' to the house of a dear relation. Upon making our appearance in the yard, we found such a group! such a clatter!—all seemed to have had but one thought—pure fun and merriment. All, from the crowing cock, the chuckling turkey (whose day had not yet arrived), the squalling pig, the hurraing and unfortunate multitude, up to the dancing squireen with his creaking whip, and the girls and children, created such an uproar as can only be imagined, not described. Meanwhile, the laughter-exciting Drolleen held forth his old stocking to receive the largess, and sang the following ditty:—

The Wren, the Wren,
The King of all birds
St. Stephen's day,
He was caught in the firs,
And, although he is little,
His family's great,
So arise, landlady,
And give us a treat.

And if you fill it
Of the small,
It will not do
For our boys at all;
But if you fill
It of the best,
We hope in heaven
Your soul may rest!

Oh, Mr. —— is a worthy man,
And to his house
We have brought
Our Wren
Sing holly, sing vy,
Sing ivy, sing holly—
And he'll give us a drop,
Just to drown melancholy.

"The recollection of the cordial welcome with which the 'Wren boys, sy, and girls too,' were greeted in the farmer's yard or at the landlord's porch, where the 'drop just to drown melancholy' was given by the landlady, or some young damsel of the house, with a kindliness of spirit that drew around them for the coming year the warm affections of their dependants, is still dear to many a heart. Of these the great mass of the crowd was constituted, who then and there sincerely offered up the fervent orison for the health and prosperity of the donors."

The office of the Drolleen on these occasions was a post of ambition and required divers qualifications. He must be the wittiest and readiest of the group, quick at repartee, armed at all points; for by the amount of his fun was regulated that of the *largesse*. The receipts were, of course, spent in the evening in a seasonable jollification, not omitting dance and song, and the sparkling eye of the merry colleens who had joined in the day's sport, willing to encourage the boys with an opportunity for "a bit of coortin'." This latter is carried on until Shrovetide, when the willing fair ones learn which of them must visit the bleak and dreary cliffs of Skillig on the old maid's penance, and which may seek the cosey little parlour of Father Tom, with its bright and cheerful fire, its bowl and benediction, and its kindly wishes for the future. Many such a merry Christmas! many such a happy New Year!

SECOND VERSE.

Said Winter to the maid I love,—
"What makes thee prize me, maiden fair?
I strip the verdure from the grove,
And hush the music of the air."
Sweet was *her smile*, as she replied,—
"Oh, Winter wild, though this be true,
You come with *Christmas* at your side—
You give affection work to do:
The suffering and the poor you seek,
With kindly words and offerings free,
And dry the tears on sorrow's cheek.—
We love you for your charity."

THIRD VERSE.

Old Winter kiss'd the blushing maid,
To old and young he held his hand;—
"Who loves me in this guise," he said,
"Need fear no winter in the land;
On them *I'll ask* my daughter Spring
Her choicest blooms and balms to pour,
The *Summer* on their path shall sing,
And Autumn bless them with its store.
So be ye happy on the earth,
Whate'er your name or station be,
Who mingle with your Christmas mirth
Your bounteous Christmas charity."

*** The words in *italics* must be repeated in singing.

EDITH THE SWAN-NECKED.

BY MRS. T. K. HERVEY.

[After the Battle of Hastings, the body of King Harold was sought by two monks of Waltham, an abbey which he had founded. Not being able to find the remains of their benefactor, they applied to Edith, surnamed the "Swan-necked," who had been the mistress of Harold before he came to the throne. She accompanied them to the field, and, with the keen eye of affection, recognised the body of him whom she had loved.—*See Thierry's History of the Conquest.*]

Christmas has its merry tales,
And Christmas has its sad;
But there be some the sorrows
That make the true heart glad.

Ancient Manuscript.

The battle's rage is past and over;
Silent lies the field of blood:
Save that alone the vultures hover
Where the hearth-defenders stood,
Nought is there of life or motion
Not a sigh, and scarce a breath;
While slumber, as a slumbering ocean,
The last-born in the Land of Death!

The night-clouds wave like waving palls,
In sweeping folds the banner falls;
With unclosed eye, and lips dasparted,
Lowly lie the eagle-hearted!
From the white hairs of warriors old
The livery cesque ath back'ard roll'd,
And many a cheek in youth's first spring
Lies in the night air withering.
As mast and spar on some rude shore
Where angry waves contend no more—
So, scatter'd o er that lonely field,
Lie the tall spear and shatter'd shield;
And Saxon swords in broken row,
So late returning blow for blow,
Rest powerless by the alien bow!
So late, yet blood hath ceased to flow,
For closed is now the day of woe.
Each light is quench d, each spirit fled:
Yet o'er those slumberers' darken'd bed
No mass is sung, no prayer is said,
Nor loving hand the dust has spread:
Not yet the kindred tears are shed,
Nor yet the living mourn the dead.

Two monks alone that field are pacing,
Like eager spoilers of the dead;
But oh! not theirs the hands defacing
The slumbering forms around them spread
They, where her best and bravest met,
Behold the star of England set:
And while in deep and utter woe
They mourn'd their benefactor low,
Yet only ask'd from 'midst his foes
To bear him to the grave's repose.
And see the earth around him close!

In vain their toil: the field was wide,
And many a corse lay side by side,
Disfigured all, or blood-bestrew'd,
Or in one pile together heap'd
In vain they sought the red plain through,
Amid the battle's baleful dew;
Still, darker gloom'd the lowering skies,
And veil'd him from their searching eyes.

Sad, weak, despairing, and dismay'd
They wander'd to a woodland dell,
Where dwelt, beside a hermit's cell,
One who alone their search might aid,
For she had loved that sleeper well:

'Twas night, in night's most dreary hour;
A hush like death was in the dell,
And not a struggling moonbeam fell
Upon the hermit's lonely cell
And long forsaken bower.

The walls with dews of years were damp;
The hermit's solitary lamp
Through latticed window shone no more;
The beams with moss were crusted o'er;
The rushes moulder'd on the floor.
Within the cell, half veil'd in dust,
The wicker cage, deserted, clung;
And from a nail all red with rust
The holy beads in order hung;
But cold was now the hand that strung!
Far from the light of living day
The saint's meek step had pass'd away;
And she whose foot alone might press
That threshold's dark desertedness,
With stifled heart, nor sees nor heeds
The creeping moss, the gathering weeds.
Before a cross of crumbling stone
The Saxon woman knelt alone;
A being in her second youth
A child of sin, but full of truth!

With hair unbound, and flowing veil
Down-hanging from her drooping head;
With cheek and brow as marble pale,
And arms across her bosom spread;
Like to a form of sculptured woe,
So knelt she in her meekness low:
Like to a lily of that vale,
Once even as pure, and once as frail:
And though a fatal food bel ef
In human truth had stain'd its leaf,
Now purified in holiest eyes,
By breath of penitential sighs,
And through the long remorseful years
Wash'd by the precious dew of tears.

No tedious tale their lips unfold,
A few brief words and all is told;
And she hath risen and pass'd them by,
With a strange gladness in her eye,
And with a look which seem'd to say
"Death waiteth for me by the way;
For one who sleeps my prayer is said,
And I go with him to the dead!"

A change had fallen o'er the field of repose,
As the night of the battle drew near to its close;
And many were there who never before
Had gazed on the clay where the soul dwelt no more:
Some in the crush of their agony bow'd,
Some weeping in silence, some mourning aloud;
The partner of years, and the bride of a day,
The serf from his labour, the child from its play,
The sire and the grandsire, the matron and mother,
The playmate of childhood, the sister and brother—
All mournfully bent o'er their cherished clay.

And where is she whose truth must burn
Brightest in sorrow's darken'd urn?
Like some lone pillar of the waste—
A column by the clouds embraced
Apart in her stricken hour they found her
With the shades of death already around her.
They saw by her eye that her moments were number'd,
And a corse at her feet in its royalty slumber'd.

It needed not a seer to say
That *there*, before her face, he lay,
The earthly-born, by death perfected,
Thus found by love, thus love protected!
While tearless all, and soul-subdued,
And like a dove by her slaughter'd brood,
The love-lorn in her anguish stood:
With dull or inattentive ear,
That heeded not, or could not hear
The voice of wailing wild and loud:—
Her eye upturn'd to the rolling cloud,
Time, place, and presence, all forgot;
With lip that moved, but utter'd not,
And forward step that yet delay'd,
But knew not where nor why it stay'd.
Had one beheld them where they perish'd
Who both with equal love had cherish'd,
I know not which had most been wept,
The living corse or him that slept!
As when a cloud its gloom disparts,
So night had sunk on both their hearts.

And suddenly, like night, she fell
Upon that life-deserted breast;
And made the heart she loved so well,
The pillow of her rest.
Like night she fell! but never more,
Like the young morn, on earth to rise—
A joyful world to wander o'er,
Or cast the dew-mist from her eyes;
Yet both shall know, though life be gone
A resurrection like the Dawn,
When, from the grave of buried night,
She cometh forth, a Soul of Light!

PROLOGUE, BY BARRY CORNWALL,

To "Recollections of Old Christmas," a Masque, by T. Crofton Croker, F.S.A.; to be performed on Tuesday next (Christmas Eve), at Grimston Park, near Tadcaster, the seat of Lord Londesborough:

When winter nights grow long
And winds without make moan,
We sit in a ring round the warm wood-fire,
And listen to stories told
And we try to fan graves (as maids should be)
When the mead bring in boughs of the mistletoe.

O the laurel, the evergreen tree!
The gods have loved—and why not we?

How pleasant, when night falls down,
And hides the wintry sun,
To see them come in the blazing fire,
And know that their work is done;
Whilst many bring in, with a laugh or rhyme
Green branches of holly for Christmas time!

O the holly, the bright green holly!
It took (like a tongue) that the times are jolly!

Sometimes,—(in our grave house
Observe this happeneth not:)
But at times, the evergreen laurel boughs,
And the holly are all forgot:
And then! what then? why the men laugh low,
And hang up a branch of—the mistletoe!
Oh, brave is the laurel and brave is the holly!
But the mistletoe banisheth melancholy!
Ah, nobody knows, not ever *Merlin* knows
What is done under the mistletoe!

Now that far country reach'd have they,
Have now subdued, now rule it o'er;
And every harvest bless the day
Whereon they left their native shore.

Prepare thee, Soul, to quit this spot,
Where life is sorrow, doubt, and pain:
There is a land where these are not,
A land where Peace and Plenty reign.

And, after all, is Earth thy Home?
Thy place of Exile, rather, where
Thou wert convey'd, ere thought could come,
To make thy young remembrance clear.

Oh! there in thee are traces still,
Which of that other country tell—
That angel-land where came no ill,
Where thou art destined yet to dwell.

Yon azure depth thou yet shalt sail,
And, lark-like, sing at heaven's gate;
The bark that shall through air prevail,
Even now thy pleasure doth await.

The Ship of Souls will third the space
'Twixt earth and heaven with sudden flight:
Dread not the darkness to embrace,
That leads thee to the Land of Light!

THE EMIGRANT'S HOME.

BY JOHN A. HERAUD.

Is Earth thy Home, where thou would'st stay
Where thou far ever would'st abide;
Though of that Country far away,
Bright rumours come with every tide?

Let calm reflection make thee bold,
The perils of the deep to brave;
Think of the Emigrants, untold
In number, who have cross'd the wave.

Friends stood upon the shore in grief,
And watch'd the bark dissolve and fade;
And whom it bore, in their belief,
Were lost to sight in endless shade.

What think ye in that bark, meanwhile,
Charmed with the adventurous spirits there?
Hope, joy, and triumph, jest and smile,
Laughter and mirth their voyage cheer.

They scorn the pauper left behind,
His scanty diet paning o'er;
And fee themselves for sway design'd,
Once landed on that other shore.

The fathers of a future race,
Progenitors of realms unborn,
Whose memories shall hold a place
Made radiant with the beams of morn.

CHRISTMAS EVE IN DEVONSHIRE.

WITH AN ILLUSTRATION BY STOCKDALE.

CHRISTMAS is a season when the heart of man is evidently enlarged by sympathies of hospitality towards his fellow-creatures, in providing good cheer for himself and those whom Fortune has less favoured. Nowhere is this more substantially realised than amongst the farmers of Devon, who also preserve forms and ceremonies which the march of intellect has swept from other places. Ourselves wishing to see some of the sports in which our forefathers revelled, stepped over on Christmas Eve to Farmer B.'s. Passing the village, we were surprised at the silence prevailing; but an old woman cleared the mystery, by saying, "All the volk be up at the varm:" and, approaching this, the loud laugh and cheering light streaming through the chequered glass—making more dark the dull cold night without—told of a warm reception within. Entering the kitchen, amidst steam reeking from huge rounds of beef, joints of pork, heaps of turnips and potatoes, with puddings of monster rotundity, we discovered the burly host dealing out with unsparing hand to gladden the hearts of his lusty labourers. And truly, each seemed possessed of an appetite equal to the occasion—and, we trust, with powers of digestion such as we dyspeptics know of but by hearsay. Cider also flowed abundantly; and we felt that this meal to the man who receives but 6s. or 7s. a week as wages, must have proved a feast on which he could dwell with a satisfying delight. We could not but consider that the scene before us disproved the landlords' assertion so frequently made, and responded to by the gallant yeomen, "that the farmers are in a starving condition;" nor could we see that our host's provisions enjoyed protection, for all seemed to make free-trade with them.

"Bring in the fagot!"

"Behold him here!"

Fagots, like most other things, are by many in these parts termed of the masculine distinction.

"Clear the way!"

Now the ashen mass of 3 cwt. is raised on the dogs of the hearth, and in a few minutes the blaze from the scissing, crackling sticks,

heightened the ruddy hue of the rustic guests. Song succeeded song and when one presented more stupidity than another, shouts of laughter and bravos applauded to the skies. Now and then a fine voice broke upon the ear, leading us to regret that it was possessed by those whose souls had never been attuned to harmony. Many of their tunes were of the old English ballad class, and charmed us, not only as beings of the past, but having beauty in melody. Our hostess singing the song of "Barbara Allen," awakened the memory to emotions of the past; for we had listened to this song on a similar festivity, now thirty years agone. Thou rapid, rolling flood—O Time! where hast thou borne those lips that sang, those ears that listened, those hearts that warmed with ours, leaving us alone to live again the associate scene?

Hark! what shout is that on which confusion seizes all—men, women, and children, rushing pell-mell, scrambling to the highest bench—"The mummers are coming, hurrah! The mummers are coming, hurrah!" And then entered six or seven youths fantastically bedecked with ribbons, and gay, antiquated garments, ransacked from the bureaus of the grand-dames; here and there, a new bright silken bow, worn as a favour from their own dear Marys. Space being cleared, the play representing the unconquerable of Old England partially attracted the attention of the noisy audience. A warrior, lip corked *à la moustache*, personating the ambitious Napoleon, is brought to encounter St. George, who, after a fierce encounter, lays the vaunting Gallic dead upon the earth, the walls echoing the boisterous applause that greets his downfall. However, by the interposition of old Father Christmas, he is restored, to partake again of the season's blessings.

Near this point our Sketch is taken. At the right are seated those whose hunger craves relief, which the farmer's wife is labouring to accord. Facing are they who, with their senses quickened by the juice of apple, shout at the valiant heroes. Inclining against the chimney, behold the farmer watching to supply the wants of any of his friends. Beneath are placed a group of children, whose minds are wondering at so strange a sight. The old sheep-dog, from custom, appears a complacent observer; whilst the younger one barks at the gaunt intruders. Above the door the fiddlers three add discord to the din; and from confusion worse confounded we gladly made a retreat.

S.

BOW BELLS.

BY JOHN TIMBS.

WITH AN ILLUSTRATION.

Far as loud Bow's stupendous bells resound.—POPE.

A VAST amount of antiquarian pleasantry and amusing research have been expended upon the history and practice of Bell-ringing. It was once a favourite pastime with grave and learned men, though there are few of us who care to recollect our forefathers as *bell-ringers*. Still, Sir Symonds D'Ewes, who was lord of the manor of Lavenham, in Suffolk, and one of the most accomplished antiquaries of his time, was fond of bell-ringing; as was Sir Matthew Hale, Lord Chief Justice of the Common Pleas: as was also the great Lord Burghley, Lord High Treasurer to Queen Elizabeth. Time, however, rings as many changes as bells themselves: our high functionaries no longer seek recreation from their official cares in bell-ringing; and Sir John Jervis and Lord John Russell are not very likely to ascend into the belfry of Bow, to shake off the unusual labours of the Common Pleas, or the weightier cares of Downing-street, by ringing a Christmas peal.

We must not be tempted to stray among the poets for their love of bells, else it may be as difficult to stop as the peal itself. Nor do we feel disposed to meddle with the *quesito vexata*—when bells ought to be rung. Certainly, they are sometimes rung on very strange occasions, as when a gentleman, become very unpopular, has been most unjustly defeated in a lawsuit; and when the Beer Shop Bill was passed. We agree with a writer in the "Parish Choir," that there can be no harm in ringing the bells in honour of any important public event, or the arrival of any distinguished personage, or of any other event at which *a Christian may lawfully rejoice*; whilst to ring them for any party triumph, or for any malicious purpose, is abominable. "Let me," says this intelligent correspondent, "express my regret at that lamentable want of Christian feeling in the public and amongst parochial authorities, of which the prevalent abuses in the ringing of church bells afford an example. The weddings of the rich are graced by their mercenary sounds, whilst those of their poorer brethren are unheeded; and any political triumph or secular anniversary is greeted with merriment, whilst the leading events of the Christian year are passed over, unbonoured." From this kindly indignation must, however, be excepted CHRISTMAS, when, although much of the custom of profuse hospitality has passed away, this is yet universally recognised as a season when every Christian should show his gratitude to the Almighty, for the inestimable benefits procured to us by the Nativity of our Blessed Saviour, by an ample display of goodwill towards our fellow-men. And we do not know how this feeling can be better quickened than by a joyous peal of Bells. "the poor man's only muse," "the mosaic of the air." Dr. Burney, the great authority on matters musical, has pointed out the innumerable rich and strange melodic passages that flit across one's ear in listening to a good peal of bells, which the writer in the "Parish Choir" cleverly compares to a *musical kaleidoscope*.

The writer just quoted, "John Clapper," remarks that any one who walks from the City of London westward at night (say on Christmas Eve) cannot fail to notice how vastly more soft and silvery are the tones of the City bells than of the more modern ones. The peal named at the head of this paper are a harmonious exemplification of this fact, and their history is of curious celebrity.

"The Church of St. Mary-le-Bow, or Bow Church," in the words of old Stow, "for divers accidents happening there, hath been made more famous than any other parish church of the whole City or suburbs." If not originally a Roman temple, as was once believed, it was one of the earliest churches built by our Norman conquerors. It has been destroyed by storm and by fire; was at one time garrisoned and besieged, and was afterwards the scene of an assassination. Our present business is, however, specially with Bow Bells, of which the citizens of London have ever been proud; and it was from their extreme loudness for them in old times, that a genuine Cockney has ever been supposed to be born within the sound of Bow Bells. According to Fynes Moryson, "the Londoners, and all within the sound of Bow Bells, are in reproach called Cockneys and eaters of buttered toasts." Beaumont and Fletcher speak of "Bow Bell suckers," as does Mr. Dyce properly explains it, "children born within the sound of Bow Bells." *Anthony Wood*, a countryman, addressing *Gettings*, a citizen, in Shirley's "Contention for Honour and Riches," says, "Thou liest, and I am none of thy countryman: I was born out of the sound of yo r pancake bell," s e the Apprentices' Shrove Tuesday Bell, when pancakes were in request, as they still are, and the London apprentices held a riotous holiday.—(*Cunningham's* "*Hand book of London.*")

"In the year 1549 (says Stow), it was ordained by a Common Council that the Bow Bells should be nightly rung at nine of the clock. Shortly after, John Dowse, mercer, by his testament, dated 1472, gave to the person and churchwardens two tenements in Hosier-lane (now Bow-lane) to the maintenance of Bow Bell, the same to be rung as aforesaid, and other things to be observed, as by the will appeareth. This Bell being usually rung somewhat late, as seemed to the young men, 'prentices, and others in Cheap, they made and set up a rhyme against the clerk as followeth:—

Clarke of the Bow bell, with the yellow lockes,
For thy late ringing thy head shall have knockes.

As well as the clerk's reply—

Children of Cheape, hold you all still,
I or you shall have the Bow bell rung at your will.

William Copeland, churchwarden, either gave a new bell for this purpose, or caused the old one to be re-cast in 1515—Weever says the former."

This ringing of Bow Bell, observed to the present day, is a vestige of the Norman curfew. It is also observed at Charter House; St. George the Martyr, in Southwark; and in a few other parishes of the metropolis. At the same time that the order was given, in 1549, for the ringing of Bow Bells, lights were to be exhibited in the steeple during the night, to direct the traveller towards London.

The Bells, Steeple, and Church all shared the common fate in the Great Fire of 1666. The tower is shown in the View of London, 1543 (in the Sutherland Collection, in the Bodleian Library, Oxford); it is somewhat lofty, has a central lantern or bell-turret, and a pinnacle at each corner. The church was rebuilt by Sir Christopher Wren; and on the steeple being finished, in 1679, part of £400 paid by the City to the united parishes for the site of Allhallows Church and churchyard, on which to build the present Honey-lane Market, was appropriated to a set of bells; Dame Dyonis Wilkinson having given £2000 towards erecting and beautifying the steeple. The belfry was prepared for twelve bells, but only eight were placed: these got sadly out of order, and after various repairs it was reported, in 1739, that *the Great Bell was cracked*; however, the peal was made good at the expense of £290.

In 1758, a petition was presented to the vestry from several respectable citizens, setting forth that on all public occasions the Bells of Bow are particularly employed, that *the tenor bell is the completest in Europe*, but the other seven are very much inferior, and by no means suitable to the said tenor. "Your petitioners, therefore, request that they may be allowed, at their own expense, to re-cast the seven smaller bells, and to add two trebles." This the parishes permitted, after an examination of the steeple by Dance and Chambers, the two ablest architects of the day, who reported that "such additional weight, nor any weight that can be put upon the steeple, will have any greater effect than the number of bells now placed there." Accordingly, the act of ten bells was completed by subscription, and was first rung June 4, 1762, the anniversary of the birth of King George III.

The weight of the Bells is as follows:—

	cwt.	q.	lb.		cwt.	q.	lb.
1st	6	3	7	6th	17	0	11
2nd	9	2	0	7th	20	2	26
3rd	10	1	4	8th	24	3	5
4th	12	0	6	9th	34	2	6
5th	12	0	24	10th	53	0	23

In 1820, the steeple was repaired, at a great expense, under the able direction of Mr. George Gwilt. The belfry was then surrounded with strong iron braces, both internally, and also in the masonry itself; the ashlar, or external face, being cut through to admit the same, and space being left to admit of the expansion of the metal: the weight of these braces is about six tons. At the above time it was said, or sung—

They're cut a yard off Bow Church steeple,

which was believed to be considerably lower than before the repairs: the fact, however, is, that, from some slight difference in the new work, the spire is four inches higher; the whole height from the bottom of the old Church being 239 ft. 6 in.

In the year 1822, some fear was expressed that the use of the bells would endanger the steeple; but, at a vestry, it was decided, by a large majority, to ring them for a trial; and as, *from a subsequent examination of the steeple*, there did not appear to be any cause for alarm, the amateurs of bell-ringing, and the Cockneys at large, have often since been gratified by the *sound of Bow Bells*.

The present set is much heavier, and more powerful in tone, than the first peal of Bells. It requires two men to ring the largest (the tenor, 53 cwt., key C), in consequence of its not being properly hung about two years since, on account of an accident having befallen it.

The ringers belong to a society called the "College Youths," founded in 1637, by Lord Bereton, Chief Justice Hale, Marquis of Salisbury, Lord Dacre, joined by several of the City Aldermen. The Society takes its name from the College of St. Spirit and Mary, founded by Sir Richard Whittington, on College-hill, Upper Thames-street, which was burnt down in the Great Fire. Its church had a peal of six bells; but the present church (St Michael's), at the same place, has no bells. A book recording the names of the founders and members of "the College Youths," from 1637 to 1724, was lost about that time, and only recovered ten years since. It was found in the possession of a Bristol bookseller, who, having purchased it at a sale of a private library in Gloucestershire, advertised it in the *Gentleman's Magazine*, when it was repurchased by the members for six guineas. Each member subscribes 1d. a week for the expenses of keeping up the register, hand-bells, &c.; the certificate costs 6d.; admission fee, 2s. 6d. All the members (who are competent) can ring if they choose. There are about 200 members in the society, residing in different parts of the country, and fifty in London: they ring principally at St. Saviour's, Southwark (twelve bells); but they formerly rung at St. Martin's for sixty years. They generally ring the peal for pleasure; but, on Christmas Day, and other holidays, they are paid two guineas among the eleven. They ring once a month for practice and to gratify the neighbourhood. On Christmas Eve they ring at nine, New Year's Eve, from half-past seven to half-past twelve. At St. Saviour's, on Christmas Eve, they ring at twelve. Another society, called the "Cumberland Society," rang for a few years at Bow Church. There is a peal called the "Whittington Peal," which can only be rung on twelve bells; and the College Youths are anxious to have two bells added, to the present number, as the peal is considered incomplete.

The accompanying Illustration shows the Bow Church Belfry, during a peal; and we agree with John Clapper, that "an awful thing it is to be in the belfry chamber, and witness the actual ringing of a set of Bells: what with the ponderous masses of metal swinging round and back again, the wheels in perpetual motion, the stunning sound, and the whole fabric trembling, with a constant hurtling humming sound, and the shaking of the tower itself, you might well be excused for feeling a little nervous."

THE OLD AND NEW YEAR.

BY JOHN HERAUD.

THE Bells will soon ring. Open the window, that we may hear the earliest sound of St. Paul's, or of the old bells of Bow. The Land of the dial-plate is on the stroke of Twelve, then will the merry peal begin. It will continue till the same hand is on the stroke of One, and then cease. The Old Year will have been thus tolled out, and the New Year tolled in.

Open the window. How suggestive is the Silence in the Air, like those quiet places in the best poems and dramas, which, with a few words, thrill and awe the thoughtful student! Such is the influence of Repose in all great works of art. Of all such works, Nature is the greatest; but then her Artist is Divine. This sacred Silence is the isthmus that connects two periods of Time—the Present is over the bridge between the Past and the Future. The Dying Old Year a second will transfigure into the New-born, wherewith the universe now teems in expectation.

Time, however, is older at the moment of the New Year's nativity than it was at that of the Old Year's demise. Time is older than the year by nearly six thousand of such annual revolutions as that which has just accomplished its destiny. The Years are his Children, he being of all the common Parent—they for ever new, and he for ever old.

Well may the moment of transition be celebrated by Silence; distinguished from the evanished and the advening, it stands for the present—ever an express image of the Eternal. And now, it has itself evanished, and, with its precursor, merged into the abyss of indistinction.

But there is Silence no more. As the Morning Stars sang together at Time's beginning, so now sang, or ring, both solemnly and merrily, the Bells at the New Year's. The infinite has been taken into the voice of a Principle is heard in their harmonious chime—their chorus is the manifold utterance of an Idea, the concert of many Thoughts. The Past has had its History, so will have the Future; and such history has been, and will be, the evolution of a Truth.

How significant have been the teachings of the year just passed away! Like the moment already referred to, it, also, was a period of transition—a path leading from Anarchy to Order. But what Order? There have been those who have "made a desolation, and called it Peace." Ere now, "Order" has "reigned at Warsaw." Non-resistance to oppressive tyranny has been eulogised as the most desirable state of social comfort. But this, we trust, is neither the kind nor condition of Order contemplated in the Future. No! we look forward with Hope, not with Dread. We have left behind us the Plain of Terrors, and journey with glad heart toward the Land of Promise.

Yes, the Old Year syllabled us Days and hours and months a Principle. It has had a Beginning, a Middle, and an End; and thus, categorically, has announced the Idea, which was once a Mystery, and is now a Revelation. The weeks and months were a series of Thoughts—the moments, in their rapid succession, appeared as a cluster of Sensations. With the Old Year expired a Power that had exhausted all its forces.

The Year of Transition, with its suppressed treacheries and ambitions, with its one instinct of Peace and Order; with its fears, but not with its hopes, has descended to the shades, become a shade itself, and may henceforth haunt the world only as a ghost. Its Napoleonisms and its Changarnierisms have perished. No shadows even remain of them; themselves never having been substances, but figments—vague desires of mistaken self-interest, demoniac equivocations, chaotic illusions,

"Pinnacled dim in the intense inane."

The world, like that part of it called France, now "desires Repose above all things." Yet "wars and rumours of war" are and become more and more prevalent. Prophetic heralds of a new Power—foretellings by an aspiring potentate touching his successor—the coming pre-interred in the present and the passing—ye were, indeed, rife in the latter days of 1850, and your echoes are heard in this first hour of 1851. Phantom armies then traversed "the Fatherland" of Europe. Antagonistic principles drew themselves up in martial array; and the year closes, declaring the antagonism, but leaving the decision to its successors. Papal bulls, also, having the same meaning, reached England, fulminating Hibernianisms; and Guy Fawkeses in our Protestant country made their "Pilgrim's Progress" through our streets in double state and of more than double size—the Bunyan effigies of Worldly Wiseman. To sum up all, Germany and Rome, as of old, are once more opposed. What then? And wherefore, O benevolent Diocesan! who startest at the spectre of an Archbishop of Westminster, and wouldest drive away the "horrible shadow" of Papal usurpation, risen from its burial-place with "twenty mortal murders on its crown"—wherefore, O respectable Prelate, dost thou charge thy clergy with the unreasonable admonition that the criticism of the Teuton are more to be dreaded than the blasphemies of the Italian? O worthy Episcopus, fearest thou Philosophy more than thou latest Superstition? Verily, I know that by such an absurd incubus many clerical minds, otherwise enlightened, have been hag-ridden. The true Churchman, meanwhile, sees but one object of dread—Superstition! For such negations as infidelity and atheism a more positive teaching is a facile and appropriate panacea. Be thus warned, O ye flamens of the capital, by one of the Disconnate, lest ye be found wanting in the day of trouble.

"Something too much of this." And yet, whatever subordinate political or ecclesiastical signification events may have, the antagonism now suggested, let the word of a thoughtful man be taken for it, is the chief and fontal one. France, Russia, and Austria, so far as they are identified in interest, mean this element of it; and Prussia, Germany, and England, so far as they are identified in interest, mean that. Each has its Shibboleth; neither will pronounce the other's. Protestantism signifies Philosophy—Papalism, Superstition. These are the two watchwords, under these banners must the belligerents take the field, and to one of these must victory pertain. No well-beloved and charitable metropolitan will be permitted to trim an even balance between these two; but one, it is destined by "the Watchers," shall kick the beam.

Listen! Yes; such are the sayings of the Bells, as they ring from all our church steeples, faithful to the churches that support them.

Ring out, ye bells! a merry peal for the year 1851, when its Industrial Exhibition, the child of Philosophy and Science, and the grandchild of Art, progenitor of both. The world, under the sway of Superstition, has lived in fear of Love and Beauty. But Philosophy solicits both; and the great aim of the future, to make life ornamental, is at last intelligibly enuncned. Wherefore a Crystal Palace rises, as if by magic, in the midst of an enchanted Circle, and in the National Pleasure-ground sets wide its gates for the reception of the Congress of Peoples. At this solemnity a Prince presides, the Consort of England's Queen; even she at whom Pio Nono from the Vatican launches his idle thunders; but who, from her Temple of glass, needing no defence, serenely appeals to Truth, whose invisible ægis protects the sacred edifice with its rich contents, and the multitudes that defile through its long, extensive galleries, contemplating in its gathered treasures the accumulation of ages of invention, the history of social progress in many lands.

Life should be ornamental. The beggarly elements of asceticism are not at all in harmony with the truly pious soul. Activity and production are the laws of well-being. The most poetic minds are those that *do* most; the worthiest are the most poetic. The hero is a poet. To be the Husband of a Wife, and the Father of a Child, is to be one of the best of poets, and of heroes. Such was the first poet and the first man. The celibate is indolent and barren save of evil, loves no woman that is virtuous, owns no issue that is lawful, does no work that is profitable. His talent is concealed in a napkin, and his heart lies stillborn in his bosom, alike its cradle and its coffin.

Some vital dynamic sages have stated that the animals are abortive men. Such an imperfect example of the perfect human is that man, be he priest or not, to whom, by his religious creed, Love and Beauty are prohibited. Without both these, what were the Soul, with her sentiment of Immortality, with her sense of Immutability and her self-satisfaction with her one unchanging Form? Both, nay, both she creates in her own sublime substance, and also creates for her perception in the world of fancy and of fact. Love, the impulse deprived of desire, and from its object, she *here* no more in existence, but simply lends vitality to death, and slumbers a carrion corpse in the mausoleum of the universe. Embalmed or not, sacred or profane, the corpse is but a corpse, and the mausoleum not a temple for the living, but a tomb for the dead.

And the Old Year is dead; and this bright cope of Heaven, "fretted with golden fires," has lighted forth the obsequies of the departing Phantom, as shade by shade it melted into distance. And, behold! a little Angel, having "on his baby brow the top and round of sovereignty," ascends as it were from the Sea of Space, and in the Orient precedes the Sun, like an infant Aurora, impatient to dispel the darkness. It is the New-born Year, attended by Beauty and Love. Ere long the Night that has so long veiled the nations shall dissolve before the breath of the Morning and the glory of the Day. Call the Cherub that now appears by the name of Hope; baptize it with the dews of the dawn, and crown it with the radiance of the day-spring, which from on high anon revisits the awakened earth, relinding the year of promise.

And, lo! the Bells have ceased pealing, as the steeple-clocks boom out the hour of One. They have celebrated both Death and Birth—the departure of the Old, and the arrival of the New. And now again there is Silence in the Air; and, through it, the Stars and Planets shed benignant influence and consolation. So still, yet move they in harmonious dance; so hushed, yet "ever singing as they shine." That music to man, "grossly bemused in" by the "muddy vesture of decay," is now inaudible; those "unexpressive notes" to the unsphered spirit of a Plato may only apprehend; or if, as sometimes we vividly believe, they have power to touch our senses—then, in the language of Milton, "Ring out, ye crystal spheres!"

Nay, let us instruct our joy to be proud, and credit that in this auspicious hour a choir of Celestials might descend to welcome the New-born. Methinks, they do already. Such Hope reanimates the enthusiastic bosom, that, with its warmth, the Past and the Future are interfused. Not only hath Time run back, and "fetched the age of gold," but we have dreamed of the Millenium, when—

"Truth and justice
Will down return to men,
Orbed in the rainbow; and, like glories wearing,
Mercy will sit between,
Throned in celestial sheen,
With radiant feet the tissued clouds down steering;
And Heaven, as at some festival,
Will open wide the gates of her high palace hall."

"But wiser Fate says, No." Teeming with Promise, the New Year lies yet but "in smiling infancy," though, it is confessed, with more of "Heaven about it" than the majority of its predecessors. Let us remember that the Law of Progress supposes contest and suffering, because of old antagonisms in new shapes, of distinct superstitions galvanically renewed, and of audacity perverted both in Church and State. There will still be "philosophies falsely so called," and "religions falsely so called;" and the latter will still oppose the true philosophy, as the former will the true religion. But, in both cases, the issue concerns the honour of Truth; and Truth, in vindication of her sacred character, will put forth her greatness and prevail.

Of the "full and perfect bliss" that we all expect, my present faith maintains that the present Hour is the last bowed beginning. But the bright-eyed oracles above, if not dumb, are yet beyond our mortal hearing; and Astrology has long ceased to deceive the scientific. Truly, this Stillness itself is ominous of Error's fall. Better, it is more to say, absolute Silence than a lying Utterance; for, now is it that Falsehood, both in word and act, has become enthroned among the Principalities and Powers? Is it not that Conjecture has substituted Knowledge, and Language preceded Experience? Shames of Philosophy, let days of Grace duplity are numbered; and popular Delusions, belying their name, hold now rather of the few than of the many. The sullen Moloch of the Past has become fugitive, and

"Left in shadows dread,
His burning idol all of blackest hue
In vain with cymbals' ring,
They call the grisly King,
In dismal dance about the furnace blue."

Ay, in vain. The "War of Principles," foretold by a British statesman, has commenced; but even at this first hour of the New Year, the prophet-soul may appropriate the victory and adjudge the laurel. The two triple powers now antagonised are unequally matched. Divided France believes not in the Pontiff whom she has restored; Austria nurtures revolution in her bosom; and Russia, besides being schismatic, is no longer secure from the influence of European opinion: whereas England, having survived Chartism, and pledged to self regeneration, were equal to the emergency, even though Germany with its learning, and Prussia with its education, should prove deficient in the hour of trial. To me this New Year with its triumphs of industries, with its appeals to peace, with

THE ILLUSTRATED LONDON NEWS

No. 462.—VOL. XVII.] SATURDAY, DECEMBER 28, 1850. [SIXPENCE. {WITH SUPPLEMENT, GRATIS.

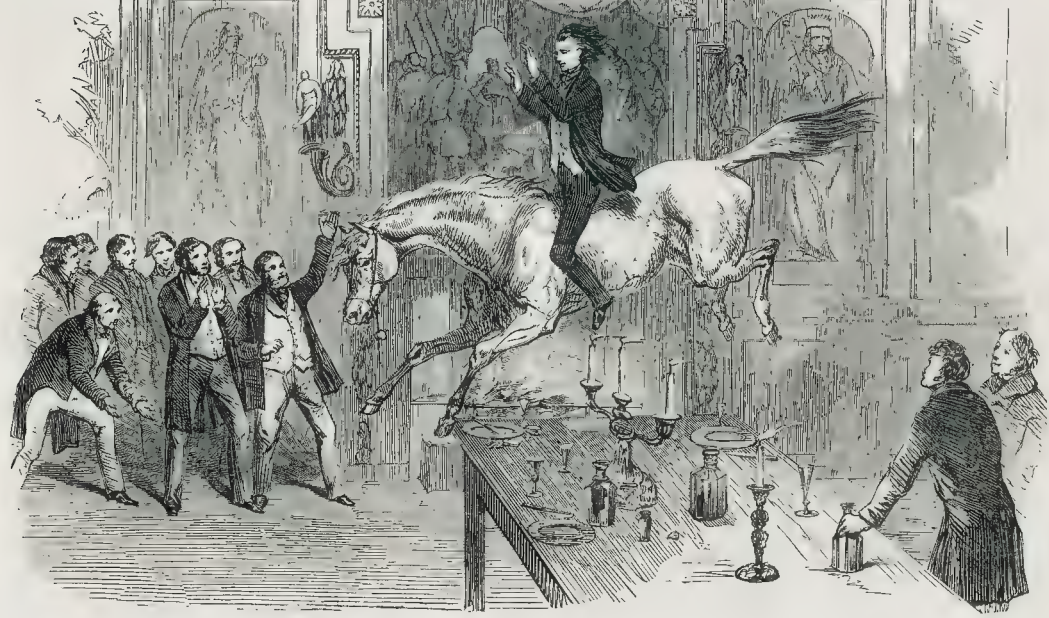
ENGLAND IN 1850.

In the affairs of individuals, the point of time between the infinite past and the infinite future is always present; but it is only on great and rare occasions, such as the close of an old, and the commencement of a new year, that the mind attempts to halt upon it—to pass in solemn review the deeds of the past, either for good or for evil, or to take courage from the promises of the unborn seasons. Many an aching, and, it is to be hoped, many a happy heart, will perform this duty for the year 1850. Many a life will be weighed in the balance of self-judgment; many a bright promise of past years will be compared with a comparatively dim and dull performance; and many a debtor and creditor account of good and bad actions will be drawn up for the impartial examination of the great auditor, Conscience, to the advantage, present or proximate, of every one who submits himself with an earnest and humble spirit to so wholesome a scrutiny.

In the affairs of nations, as well as in those of individuals, it is right that those whose function it is to record the progress of events, should conform to the practice, and, on behalf of the public, take a review of the history of the expiring year, and draw from it such auguries of the future as may seem fairly deducible from it. We offered in our last Number a few remarks upon the general state of the world in 1850; we now proceed to trace, in a similar spirit, its domestic history. The events of the year now approaching so rapidly to its completion, are but few. Calm in the midst of turmoil—at peace when her neighbours are either in actual warfare with one another, or engaged in preparations for it—Great Britain has offered to the perplexed nations of the world an example worthy of their imitation. Her old civilisation—by many deemed so old as to be effete—has bequeathed her many evils to endure or to remove—an immense debt, a fearful pauperism, an uneducated multitude, a divided Church, and an impatient public spirit.

The past year, if it have not done much to diminish any of the deep-rooted evils of the nation, has at least shown, in the clearest manner, one great and cheering truth, in the bosom of which lie enfolded the germs of future progress. It has shown that the energy and resources of the British people are unsurpassed by those of any nation in the world; that, with a fair field for her industry and free scope for the commercial genius of her sons, not even the pressure of an unparalleled debt can impair her vigour or prevent her from running the race of improvement with the youngest and most untrammelled of her compeers either in the Old World or in the New. The year has been the trial and the triumph of Free Trade, proving, even after a period of difficulty, distress, and peril, after a time of rash or insane speculation, succeeded by famine and pestilence, that the British nation, strong and self-reliant, and warned by past experience of error, has resources within itself sufficient to meet all demands upon its justice, its credit, and its charity. While taxes have been diminished and expenses increased, the national revenue, under the operation of the wise principles of Free Trade, has presented a surplus scarcely expected, and not the deficiency so confidently predicted by those whose commercial ideas are based upon a contrary theory. In this respect Great Britain has set an example which only requires the verdict of success to command imitators among all civilised nations. The state of the revenue has been the true index to the social condition of the people. Pauperism and crime have alike diminished; and every able and willing hand has found remunerative employment. Even the agriculturists, who have too long been in the habit of laying the blame of their distresses upon the wrong shoulders, and exonerating themselves at the expense of others who were in nowise responsible for their commercial success or failure, have shared in the general prosperity. Those who predicted their own ruin have not been ruined; those who alleged that land would go out of cultivation if the corn-laws were repealed, have seen tract after tract of improvable soil taken into the common stock of corn-growing country; and might, if they had wished, have heard of the approaching reclamation from the sea-shore of a district as large as a county. Farms have let as readily as usual; and landlords and tenants, finding none to help them from above or below, have quietly begun to accommodate themselves to the new order of things, and to adjust, on an equitable basis, their future relationship towards each other.

Such, in few words, is the social history of the year 1850. The drama, however, had its tragic episode in the untimely death of Sir Robert Peel. The nation, in comparison with whose high destinies, the life or death of one man, however eminent, and however able, is but of little moment, will long regret that the victor was snatched away in the moment of his triumph; that the lofty head was suddenly laid low just as those who had long misunderstood were beginning to appreciate him, and as the voice of hostility was about to be converted into one of commendation or gratitude. Beyond the appreciation of an approving conscience, he sought no other reward, than the kindly judgment of the people whom he had served. He tasted the former, we cannot doubt; and, if he did not receive the latter to the extent he deserved, posterity will, to all appearance, do justice to his memory. In the times of difficulty that may yet arise, many will, doubtless, continue to deplore the loss of a statesman so honest, so clear-headed, and so practical as Sir Robert Peel; but let these take comfort. In the future, as in the past, new times will produce new men. We may be well assured, however much it may be the fashion among the crowd of



DARING LEAP IN THE DINING-ROOM OF THE WHITE HART HOTEL, AYLESBURY.—(SEE NEXT PAGE.)

mediocrities to disparage their great contemporaries, that hearts large enough for all perils, and intellects clear enough for all difficulties, will be found among our statesmen wherever a demand shall be made by the public necessities upon their wisdom or their energies.

Upon the theological history of the departing year we would not stir up unpleasant feelings, by dwelling at any length. We therefore make but little addition to our statement of last week. The first heat of the controversy has subsided, and the dust and smoke of the battle have, to some extent, cleared away. The future progress of the question may be expected to be less acrimonious and more rational than it has been, and the real objects in dispute to be more clearly and satisfactorily defined. As to the foreign Prince who has so wantonly provoked the feelings, traditions, and the belief of three centuries, the nation may well afford to pity him. The troubles of the Papacy are but in their beginning: France is too impoverished to maintain 40,000 men in Rome for a much longer period; and M. Mazzini, when he next proclaims a Roman Republic, will not be quite so much misunderstood, or so deficient in friends and admirers in this country as he was in 1849 and 1850. Many a voice will bid him "God speed" at a future time, that in the time past had not a good word to say for him or for the cause of Italian freedom. It is not the least extraordinary event of the year, that such a Prince, at such a time, should have looked abroad instead of at home, and that he should have committed so huge a blunder as his late aggression upon the independence and Protestantism of this country. In conclusion, we may affirm in one sentence, that the triumphs of 1850 in England, are twofold—the triumphs of Free Trade, and of Free Opinion. With unshackled commerce, and with thought at free to express itself in religion as in politics, this country will maintain its high social, intellectual, and intellectual position. One thing alone is wanting; and, if our progress in wealth and knowledge shall lead us by degrees to eradicate from amongst us the plague spots of pauperism and criminality, we shall not only be the wealthiest and most religious, but the happiest of nations.

DARING LEAP.

THE feat represented upon the preceding page reminds one of an incident in the life of Mr. John Mytton, of sporting fame. The following are the details of the present feat:—At the stewards' ordinary, at the White Hart Hotel, Aylesbury, after the late aristocratic steeple-chase, the conversation turning on the feat of bringing a horse up into the dining-room in which the company were then assembled, which had once done by Lord Jocelyn and Mr. Ricardo, during the meeting of the Royal Hunt some few years ago, Mr. Charles Symonds, of Oxford, offered to bring a grey horse of his upstairs and lead him round the table. The animal shortly announced his progress by a loud clattering on the old oak staircase. In a few minutes the horse was gazing on the assembled company. His owner then led him over a flight of chairs, which he jumped beautifully. Nothing then would satisfy the company but that he must jump the dining tables. The proprietor of the hotel, fearing lest some serious accident might occur, as the room is of great antiquity, having been built by the Earl of Rochester in the time of Charles II., strongly objected; but he was overruled, and the horse was led over the tables, everything standing. The champagne glasses rattled, the plates quivered, the candlesticks shook, but nothing was displaced, back again he went, clearing everything at a bound. Whereupon Mr. Manning, of Wendover, volunteered to ride him barebacked over, and he did so without bridle or saddle. The celebrated gentleman jock, Captain Barlowe, next essayed, and managed to make a smash of one table with its contents. This was only a temporary check; for, in the face of a tremendous fire, and the clearing of all present, he cleared the feat gallantly. It was now time to desist, and to get the horse down stairs; this was sooner said than done, for the stairs and passages being kept polished, the gallant grey slipped about dreadfully, and was evidently afraid of the descent. Nothing daunted, however, at the suggestion of a worthy Baronet, he was blindfolded, and thus descended into the entrance-hall, but managed to break about a dozen of the carved oak banisters in his progress. (*Bucks Chronicle*). The above has been but a feeble imitation.

The fine old room of the above scene is now occupied by Mr F. Calvert's Committee, who are conducting his election for the borough and hundreds of Aylesbury. The length of the apartment is 40 feet by 22: the stove is traditionally said to have once belonged to Henry VIII.'s palace. The sides of the room present a tasteful display of carved oak and panel painting.

NORTH LONDON SCHOOL OF DESIGN.—A very valuable institution, intended to afford to the working-classes more extensive aid than they may be disposed to join in it, the means of learning the art of design, on the principles taught at the Government School at Somerset House, was opened some time since, and we had great pleasure in attending the fact. In order to assist the funds, and generally to further the object of the institution, several artists of high rank have interested themselves in the formation of a collection of works connected with the fine arts, for public exhibition. Amongst the artists whose works are here exhibited are Mulready, Sheffield, Cattermole, Armitage, F. Madox, Brown, Hunt, Harding, Topham, Pyne, &c. Some sketches by Etty are also there. The majority of the works exhibited are oil and water-colour paintings, some of which have been sent by their owners, but we also some sindies, sketches, and casts that are wholly new. Mr. Baily has contributed the cast of a statute of Flaxman, and a statuette of the late Sir Robert Peel. The exhibition (which has been opened this week) also includes some illustrations of the art of design in connection with manufactures. As a whole, the collection is extremely interesting, and those who may attend it for the purpose of gratifying their curiosity and taste, will have the satisfaction of knowing that they are contributing to an institution of a very useful kind, likely to advance the art-manufactures of England in the department where they are at present most deficient that of design. The exhibition is held at the school itself, in St Mary's-terrace, Camden Town

MOVEMENT AGAINST THE PAPER DUTY.—We are glad to find that an organisation has been effected for the purpose of securing the repeal of this obnoxious impost, which operates so injuriously, not only upon the diffusion of knowledge among the people, by means of a cheap press, but also upon the industrial interests of the country. An influential and effective committee has been formed, and, we hope, the plan of operation which it is proposed to follow, embraces the following particulars:—1. The supply of statistics, and other matter illustrating the evils of the paper duty to the country press. 2. A series of large public meetings, and the delivery of lectures in the metropolis and principal towns of the kingdom. 3 Petitions from every class of the community affected more or less directly by the tax, and from every mechanics' and literary institution, &c. We are glad to see the matter taken up so energetically, and heartily commend the movement to public favour

THE COUNTY RATES EXPENDITURE, &c.—At a very fully attended meeting of the vestry of St Marylebone, on Saturday last (F. H. Bridgman, Esq., churchwarden, in the chair), Mr. Nicholay brought forward a motion which had been given notice, for the appointment of a committee to prepare a petition to Parliament to co-operate with the other parishes to obtain a representative and responsible board in reference to county expenditure, upon the principle that taxation without representation was an injustice. He complained of the irresponsible character of the magistracy with regard to the expenditure of county rates. They were elected for life, and the ratepayers had only to find the money for these gentlemen to spend without any control. What they wanted was to have some representatives at a financial county board to control the expenditure, that those representatives should be elected annually; and then, if they did not do their duty, the ratepayers could turn them out. The resolution was carried unanimously.

IMPROVEMENT AT THE GENERAL POST-OFFICE.—Workmen are busily engaged in a very extensive improvement at the General Post-office, in St Martin's-le-Grand; the yard from the grand portico to the north entrance having been excavated for the purpose of forming a range of workshops (carpenters', plumbers', &c.) underground. The roof will be of glass, and externally there will be no alteration in the appearance of the edifice. The improvement has been deemed necessary in consequence of the vast accumulation of papers in the vaults, in some of which were the workshops. The new foundation will be carried out as far as the outer railings in St. Martin's-le-Grand, and it is contemplated to continue the works on the south side towards Cheapside.

On Saturday last the election to the scholarship of the Royal Academy of Music, took place. The successful candidates were Miss E. Sadler and Mr. W. H. Aylward, an academy student

The contract for the supply of 50,000 lb. of Congou tea for the use of her Majesty's navy—the largest contract yet submitted to the trade—has just been taken by Messrs. Stericker and Co., of Fenchurch-street.

DARING ROBBERY.—On Wednesday (Christmas) morning, between seven and eight o'clock, a robbery was committed at some houses belonging to J. Croxford, Esq., of the firm of Combe, De Mafeld, and Co., situate in Union-court, Holborn-hill. The thieves entered an empty house, broke a hole through the roof, and then stripped the houses of a large quantity of lead. The neighbours opposite saw them in the act, but thought they were the plumbers at work; and the robbery was not discovered till the bricklayers went to look over the houses, which were undergoing repair.

The National Council of Switzerland, in the sitting of the 18th inst., voted 6000f. for the expenses of the Exhibition of London.

Mr. Daniel O'Connell, youngest son of the "Liberator," has met with a serious accident while shooting at Killarney, a barrel of his gun having burst and shattered his right hand. Serious fears are entertained that it will terminate in lock-jaw.

The vessel *Ada*, which has arrived in the docks from Mogador, has on board at the very large number of 5000 tortoises as a portion of her cargo

FOREIGN AND COLONIAL NEWS.

PARISIANA.

(From our own Correspondent.)

PARIS, Wednesday.

Christmas Day in Paris is at best but a dreary affair. To those who are accustomed to the hearty and kindly welcome, the honest, joyous cordiality of our Christmas in England, the hollow-hearted frivolity, the unmeaning *politesse* and the rouged elegance of the Parisian festivities of this season are but a miserable substitute. There is no dearth here of complimentary interchange; indeed, the Parisians far excell us in the vehemence of their ejaculations and expressions on this occasion; but "we start, for soul is wanting there." The jovial greetings which on this day in England come trooping upon us at every step, appear but ill at ease in the tawdry attire of the French language, and, to the Englishman in France, Christmas is a day rather *sombre* than *creêt notanda*. However, it comes but once a year, and this is not the season for moaning. The blue-devils must not be permitted to triumph on such a day as this, even over those who happen to be distant from the roast beef of Old England.

The Republic takes but little note of this sacred feat-val. This, which is to all Christians the most joyous event in the year, is unrecognised by the Republican Government. The Bourse and some of the public offices are closed earlier than usual, and the Cafés, and Champe Elysées, and Tuileries, and Palais Royal Gardens are more crowded than usual; but there are none of those family gatherings, those gladdening greetings, for the hallowed laughter of merry children ringing in one's ears, to remind one of the healthful joyousness of this day. Lord and Lady Normanby give a great dinner to-day; as also does the President, who will entertain his guests with roast beef and plum-pudding, for which he will probably be rated to-morrow by the ill-natured Republican Journals.

Vast multitudes of English continue pouring into Paris, and the "cry is still they come." As the railroad disgorges its prey, you meet cabs full of our disconsolate countrymen driving about in search of shelter, rejected at every hotel, and searching in vain for quarters. There was a great ball at the opera on Saturday night, a charity subscription ball for the relief of the poor of the 8th *arrondissement* of Paris, and, on a moderate computation, two-thirds of the persons present were English. The President remained until a late hour, and walked about the "Foyer" with Lord Normanby and M. Drouyn. The entire *corps diplomatique* and all the Ministers were there also: indeed, the glories of this ball were scarcely eclipsed by those of the Assembly the other night, at the Hotel de Ville, which, *by the way*, was one of the most gorgeous festivals that ever was seen.

And yet, despite all these gaieties and grand entertainments, the shopkeepers are all complaining that trade is dull, and that the purchases made by the English, they would be ruined. The workshops in the Faubourgs are, however, ringing with the preparations for the forthcoming Exhibition in London; and let our manufacturers look to their guard, for the French are straining every nerve to obtain the supremacy among the nations which are about to contend for the prizes. M. Dupin has already granted the applications for space which have been sent in by no less than 1721 exhibitors in Paris and the environs; and from other parts of France there will be 2480 exhibitors. The looms of Lyons are striving to outstrip those of Spitalfields in the race for public favour; and in articles of *bijouterie*, and more especially clocks, you will see some of the most exquisite designs and beautiful workmanship that the imagination can conceive. There will be some lamps and candelabra of surpassing splendour and elegance; but, nevertheless, when the nations of the earth are assembled at this grand banquet, we shall find that England will retain that place which it has occupied with honour and dignity for centuries.

FRANCE

Amidst the matters of trivial import which wholly occupy the political world in Paris at present, there is one which shows how little progress the French people have made towards a just conception of "the liberty of the subject," even though they have thrown off what they regarded as the fettering influences of Royal authority, and rushed forth untrammelled upon the wide domain of Republican self-government.

In monarchical England, the employment of spies would not be tolerated one moment after it became known that there was any attempt at base corruption to have recourse to such a mode of managing the affairs of the country. In Republican France, not only is a system of Government espionage, publicly and openly recognised as useful and necessary, but a deputation of the Assembly, elected by the Bureaux and by members of the Legislature, no desirable, that, when a secret agent of the police has been found to denounce innocent men as accomplices in a conspiracy which never existed, it is deemed a boundden duty to screen him from the consequences of his wicked ingenuity or malicious folly. Whether he was the dupe of his own credulity or the wilful inventor of a pretended plot, the wrong done to his proposed victims and the injury to society at large, would be equally the same in the eye of justice.

During the late parliamentary recess, the public in Paris were alarmed, and the Legislative Assembly was on the point of being hastily re-assembled in consequence of M. Yon, Commissary of Police attached to the Assembly, having reported to the Parliamentary Committee, to whom the interests of the country were entrusted during the prorogation, that an agent of his, named Allais, had discovered a plot for assassinating the President of the Assembly and General Changarnier, both of whom at the time had assumed an attitude of hostility to the President of the Republic, on account of his rumoured intention to raise himself to the Imperial throne, by means of a *coup d'état* supported by the military, with whom it was supposed he had successfully laboured to become popular during the autumn; and the persons denounced as the conspirators were workmen connected with a mutual aid society, called the "Tenth of December," which was composed of the partizans of Louis Napoleon. Thus a train was laid for entangling the President of the Republic in suspicions of complicity with a band of assassins. The plot, on investigation, turned out to be a pure fabrication, either of Allais himself, or of persons who made him their dupe. Had the scheme succeeded, an outcry would have been raised against Louis Napoleon, whom would go far to enable the Orleanists to carry out their plans for the restoration of the Royal family. The scheme, however, failed, and Allais was ordered to be tried for perjury.

The trial, which commenced on Tuesday, was resumed on Thursday; and has not been yet finished. In the course of his examination Allais, who seemed as if prompted by persons in a superior position, stuck to his original story about the pretended plot, but was contradicted by the witnesses on every point. M. Yon, the Commissary of the Assembly, endeavoured to shield him; but his own conduct in the affair has been so strange that he appears to be more culpable than a witness. There were not wanting, however, some members of the Assembly who volunteered their services to give him a good character. The Questors of the Assembly still declare that they will make a struggle to retain M. Yon as Commissary of the Assembly.

The most lamentable, as well as the most astonishing part of the matter, however, is, that the public at the present time look upon this public exposure of a worse than Austrian system of *espionage*, with the utmost indifference.

On Tuesday the Court of Assizes of the Seine passed judgment on two persons named Vitou, sen., and Courtin, who had not made their appearance on the trial concerning the affair of the secret society called the Nemesis. The Court condemned, by default, each to one year's imprisonment, 500f. fine, and two years' interdiction of civil rights.

The publisher of *La Voix Universel* was tried on Monday for two libellous articles published in that journal a week or two since. On one charge he was acquitted, but on the second he was pronounced guilty, and sentenced to six months' imprisonment, and a fine of 500f.

Lord Brougham was the lecturer at the Academy of Sciences on Monday, when he read a paper on light, which excited much attention.

It is said that an English gentleman has offered to engage Mdlle. Rachel for the whole time of her *congé* (fifteen months), at the enormous sum of 800,000f., for St. Petersburg and other places. The *Union* mentions the name of Mr. Mitchell, the late lessee of the St. James's Theatre, as the bold speculator, and states that the United States is one of the countries to which he proposes to take Mdlle Rachel As Mr. Mitchell would have to engage actors to accompany her, the total risk to him would not be much less than £50,000 sterling.

M. Hitzoff, brother of the Minister of Commerce of the Emperor of Russia, and Inspector-General of Customs in that country, has just arrived at Paris. He is charged with a commercial mission to France and England.—*Galignani*.

GERMAN STATES.

The "Free Conferences" of the Plenipotentiaries of the several German States, which it had been agreed on, in the treaty of Olmütz, to convene for the purpose of making a satisfactory adjustment of their international disputes and differences, were opened at Dresden on the 23rd inst., but the business transacted was only of a preliminary character. From the general feeling manifested by the representatives present, the best results were anticipated. The next sitting was fixed for the 26th inst.

The King of Prussia has granted an amnesty to all those who, having entered the army in obedience to the order of the 6th November, are now suffering punishment for crimes and misdemeanours, not exceeding six months, or a fine not amounting to more than 100 thalers.

By accounts from Hamburgh of the 23rd, we learn that the Danes were vigilantly watching every movement of the insurgents; and that, two days before, the Danish troops attacked one of the outposts of the enemy, killing two of the peasants, and taking five prisoners.

UNITED STATES.

Accounts from New York to the 10th inst. have been received. A treaty with Mexico had been concluded, and a copy despatched to that Government. It was reported that the Lower House is resolved to sustain the Fugitive Slave Law, but the report rests wholly on the known opinions of honourable members, rather than upon any declared "intention."

Nothing of moment had occurred as yet in Washington.

From Boston it is stated that the cloth factory of Messrs. Hamilton and Co. had been destroyed by fire, involving a loss of about £40,000

Mdlle. Lind continued to enjoy recurring triumphs. On the 9th she appeared at Baltimore, when the receipts were about £300 sterling

Rumours were current that the wreck of the screw-steamer *Helena Sloowan* had been picked up off the coast

A large amount of United States Government bonds had been stolen from the mail-bags of the *Helena*, and had been offered in the New York market. Some of the suspected parties had been captured.

By the United States Mint returns, it appears that nearly 5,000,000 dollars worth of gold came into the country in the month of November alone.

Panama and Chagres accounts state that large numbers of passengers had arrived on the Isthmus, *en route* to and from the States to the Pacific coast. Much rain had fallen, and the roads were in a terrible condition

From San Francisco we have accounts to the 1st of November. At San Francisco, on the 20th of October, a steamboat explosion occurred, by which from 80 to 100 lives were lost. Cholera had also broken out in the city and was spreading with rapidity. Fire had destroyed the city hospital on the 31st of October, but all the inmates were saved.

WEST INDIES.

Intelligence from Jamaica to the 1st inst. states that the cholera had considerably abated, particularly at St. Catherine's, Port Royal, and Kingston, where it had hitherto been so dreadfully fatal, upwards of 5000 persons having died in the latter place: but this consolatory information is somewhat marred by the fact of its having assumed a more deadly form in the country districts. Such mortality and destruction was said to exist in those places where the cholera had prevailed as well as where it had departed, and an appeal to the public had been made in behalf of the orphans, and it was hoped that an asylum for the fatherless would be the result of the appeal to the public sympathy

The Hon. House of Assembly had passed a bill to afford additional pecuniary relief to the parishes suffering with the cholera, voting the sum of £10,000 for the purpose, which was placed in the hands of the Central Board Commissioners.

THE LONDON AND NORTH-WESTERN RAILWAY

DIRECTORS AND THEIR ENGINEMEN.

Differences have arisen between the enginemen on the northern division of the London and North-Western Railway and the locomotive committee of directors, which have at length caused the latter to decide upon such a course as to render an interruption of the traffic on the line an event of not improbable occurrence. The principal cause of dispute has originated in a resolution recently come to by the directors, requiring from all new enginemen and firemen taken into the employ of the company an engagement not to quit the service without giving three months' notice. The directors state that their object in imposing this condition upon the new hands is not to bring about a reduction of wages, but simply to prevent the possibility of sudden stoppage of the line, occasioned, perhaps, by some misunderstanding between the enginemen and the locomotive superintendent; and, in order to make it apparent that their views extend no further than to the accomplishment of this object, they announce that the usual fortnight's notice shall be considered sufficient in the case of any engineman who desires to make a *bond fide* engagement with another company, or who, from any valid reason shall feel unconnected with a general strike, shall wish to separate himself from the service of the company. The imposition of this condition on the new hands having excited a strong feeling of dissatisfaction on the Northern division of the line, a meeting of the enginemen was held, at which resolutions were passed, demanding the total abolition of the three months' notice system; the erasure of the names of those who had already signed the three months' undertaking; and the restoration to their former position of those men who were reduced for declining to sign it. The resolutions were forwarded to the directors of the locomotive committee, and underwent a long discussion between them and a deputation of the enginemen.

Subsequently a written reply to the demands contained in the resolutions was sent by the committee, in which they set forth the reasons that dictated the enactment of the obnoxious condition, and returned a direct denial to the statement that any registered engineman or fireman had been, or was intended to be, reduced for refusing to sign the three months' notice, though they avow their determination of giving a preference to all candidates for promotion who are willing to conform to the regulation. In regard to another demand, that no engineman should be obliged to take any but his own fireman, except in case of emergency, the committee offer to engage that every engineman shall be provided with a competent and efficient fireman; and, as a general rule, offer no objection to their remaining together, according to the present custom. It appears that the answers of the committee have failed to give confidence to the men, whose dissatisfaction is so great and general, that it is apprehended that a general strike will be made by them on the northern division of the line immediately.

Several meetings have been held by the enginemen of the southern division of the line, at Camden Town, at which deputations from the northern enginemen were present, urging them to make common cause with the latter, though the southern men are not brought under the three months' notice; and on Monday night a deputation of the latter men, who had seen Mr. M'Connell, the locomotive superintendent, announced to a meeting that that gentleman stated he had Mr. Glyn's authority for declaring that the directors had no intention whatever of reducing the wages of the firemen, and that he (Mr. M'Connell) never had contemplated, and did not contemplate, the introduction of the three months' notice, which had been so much objected to by the men of the northern division

No resolutions were passed on the occasion.

On Tuesday Mr. Glyn, the Chairman of the Company, received a deputation from those of the southern division of the line, at Euston-square, who stated to him their impression that the determination of the authorities on the northern division of the line, to compel the engine-drivers and firemen on that division to sign the three months' notices, was with the view to reduce the wages of the men; and that, in May next, in lieu of the present northern and local management, the entire line would be consolidated in one management, they apprehended the same system would be extended to the southern division. After hearing the statements of the men, Mr. Glyn replied that he (Mr. Glyn) would act as mediator between the men of the northern division of the line and the present locomotive superintendent and management of the division, Mr. Allen, deceased, the men to be the judges of the effect:—That with respect to the long notice, so far as he was aware, no intention existed to make any change whatever in the southern division. Speaking his own individual views only, he was bound to say, no man that wished or might be the views of the directors, the proceedings which the drivers were now pursuing would, if persevered in, inevitably force the Government to bring about, by legislative enactments, that which but for such proceedings might never have been mooted as respected the southern division. He then cautioned them very earnestly not to come to any rash conclusion, and not to continue the present excitement, as their perseverance in such a course must of necessity compel the directors to make other provisions for the conduct of the business of the company. He, as a director, had on a former occasion been the means of bringing about an arrangement by which the old hands who had sent in their notices were restored to their former situations, and he hoped he was enabled to say—not as a threat, but giving it as the advice of a friend—that if the men should elect on this occasion, without personal complaint, to quit their duty in furtherance of the objects of another and distinct body of men, he could not accept of their being, either by his interference or otherwise, reinstated in the company's service. It was for them, therefore, to consider, not merely what was due to themselves but to their families, before they took any rash proceedings

The directors are already taking measures to ensure the safety of the public by a reduction of the trains in the event of the men carrying out their determination to strike, as shown by the following notice:—

NORTH-WESTERN RAILWAY.—REDUCTION OF TRAINS.—The public are informed that, in consequence of a threatened strike of the engine-drivers, it is probable that a very considerable reduction of passenger trains may be temporarily made on the line, and their attention is directed to the time tables, which will be issued.

By order, (Signed) R. H. S.

General Manager's Office, Euston-station, Dec. 24

It is stated, upon what is considered undoubted authority, that out of about 154 trains running daily on this enormous trunk line and its numerous tributaries, the company, rather than submit to the dictation on the part of the men, are determined to stop for a time no less than 238 trains, confining them, of course, principally to the branch lines. The company, it is said, have made arrangements to secure the efficient and safe working of the remaining 110 trains, and that in the course of two or three weeks they will also be enabled to restore the working of the entire line to its present efficient condition.

THE ROYAL BARON OF BEEF.—The baron of beef which graced the royal dinner table at Windsor Castle, on Christmas Day, was put down to roast at Mr. Redwood's, Windsor, on Monday morning, and the process of cooking was not completed before ten o'clock at night. The noble baron was taken from an unusually fine Scotch ox, supplied by Mr. Minton, the Royal butcher, and weighed 368 lbs. It was served up cold, and placed on a side table in the dining-room on Christmas Day

QUEEN'S HOSPITAL BALL, BIRMINGHAM.—The annual dress ball, for the benefit of the above excellent institution, will be held in the Town Hall on Thursday evening next. Weippert's quadrille band has been engaged; and the band of the 4th Royal Irish Dragoon Guards will also attend. The institution extends to fancy dresses. The list of stewards, is headed by W. Lucy, Esq., the Mayor. As most institutions of expenditure now-a-days are supported by voluntary subscriptions, the Queen's Hospital has no funded property at present, no great musical festival to fall back upon. The charity has to rely on the generosity of the benevolent; the fees from students, generously given up by the medical officers; and the proceeds of the Christmas ball.

THE ROYAL SOCIETY.—This society, at the last annual meeting, awarded the Royal Medal to Benjamin Brodie, Esq., F.R.S., eldest son of Sir Benjamin Brodie, Bart., her Majesty's serjeant-surgeon, for his papers on "The Chemical Nature of Wax." It is now nearly forty years since the Royal Society awarded the Copley Medal to Sir Benjamin Brodie for his paper on "Poisons and the influence of father and mother" receiving the same distinction

SEASONABLE BENEVOLENCE AT DE ELMS.—A society, having for its object the relief of the necessitous and deserving poor of the neighbourhood, has been established at the Railway Hotel since 1848, the funds of which are raised from weekly subscriptions of a penny each member. On Tuesday last the committee distributed 5lbs. of prime beef, 12lbs. of bread, 2lbs. of flour, 14lbs. of fruit, 4lb. of suet, 14lbs. of potatoes, and 2 cwt. of coal, to 137 families, including 574 persons. We consider this movement to be highly creditable to all parties concerned, and there can be no doubt is afforded to many widows and orphans (who otherwise would have spent a cheerless Christmas-day) a hearty meal, with plenty for the remainder of the week. Looking at it in any means by which all this is done in so contracted a neighbourhood, it is much to be hoped that other localities will immediately set about establishing similar societies, and thus induce many others to "go and do likewise."

CHESS.

TO CORRESPONDENTS.

THIN CUT CAM.—Don't permit a problem in four moves to conquer you. Try it again and [illegible].

F. I. G.—When a player gives "double check," that is check with two pieces, the adverse King must move. He has no other way of releasing himself from the danger.

R. D. M.—Rodgers. No. 678 we can vouch for. It is perfectly correct, and well deserving all the commendation bestowed.

ROTTERDAM.—1. Q to her 3 6th. 2. Kt to K 4 th. 3. Q to her 4th. Mate. Will our correspondent favour us with the names and addresses of two or three of the most influential Chess-players in Rotterdam?

CHARLTON.—Why have they safely arrived, and shall be reported on in our next.

CHESS-IENUS.—You will get all the back numbers of the *Chess-Players' Chronicle* of Hastings, the publisher, in Carey-street, Lincoln's-inn-fields.

A Mc C, Hyde-park Gardens.—We have much pleasure in accepting the challenge, and propose the moderate stakes of a set of the large Staunton Chess-men in ivory.

I. L, Ireland.—I White cannot under such, or any other circumstance, move his King into the range of the adverse Bishop's action. 2. A player can have a second or a third Queen on the board at the same time with his first Queen.

INDUSEN.—We hope next week to give the names of the gentlemen who compose the committee now organising in Paris in connexion with the Central Committee of which Monsieur [illegible] is George's Chess Club, London.

A CHESS AMATEUR.—Inserted games and communication from Mr. Horwitz, of Breslau, may be directed to our office.

PATER-FAMILIAS.—A set of the new Chess-men, and one of Meehi's beautiful Chess-boards, form about as elegant and appropriate a prize as you can offer to them.

W. C. KEMORTH.—We are glad to hear from our Correspondent W C again. His communications are always acceptable.

P, of Graham's Town.—1. Problem No. 360 cannot be solved in three moves. 2. It can. 3. We referred to the Problem 357.

ALPHA.—There is no law which limits the time within which a player must make his move.

TEMOLEON.—We cannot undertake to receive subscriptions in the absence of the Secretary for next year; they should be sent to Mr Robert Longbottom, 3, Cavendish-square, by whom they will be paid into the appointed bankers', to the account of the managing committee.

AP JENKIN.—Country members are admissible to the St George s-Club at an annual subscription of one guinea. *Provincial players desirous of witnessing the contests at the Great Congress* [illegible] *to avail themselves of the few vacancies, and join the club with at delay.*

W. W. [illegible] It is an abuse of terms to call such things Problems. Pray content yourself, for the present, by solving the compositions of others, and don t attempt to construct yourself.

HASTINGS.—Parties in the country to whom subscription lists in aid of the Congress next year have been sent, are requested to return them before the end of February.

X, Paris.—Enquiry should be made at the Post-office. Two copies of the magazine in question were dispatched on the 2d of this month, to Messrs Cochrane and Morton, of Cavendish-square, by Mr. Staunton, Professor Williamsbeck, of Altona, Kisseritzky, of Paris, private communications have just been forwarded.

SOLUTIONS RECEIVED to 359, by F. of Graham's Town, Milo, Argus, C A W, of Birkenhead; Rotterdam, are correct. All others are wrong

SOLUTIONS RECEIVED No. 360, by Belamy, Flash-chess, Amicus, Pila, Cattle, S G, are correct.

SOLUTIONS OF PROBLEM No. 361, by W B W, R Mc C, Sigma, Jack of Worcester, P G R Jody, Bellary, St Edmund, M P, Clarens, P T M. THE GREAT CHESS TOURNAMENT.

(To the Editor of the ILLUSTRATED LONDON NEWS.*)*

SIR,—All doubts respecting the Congress of 1851 must now have been removed from the minds of even the most sceptical; the Committee of Management appointed by the St. George's Club, being one that cannot command the confidence and cordial sympathy of every well-wisher to the game of Chess. It now rests with provincial amateurs to support the good cause by their assistance. Often have they complained that so few games, contested by really first-rate players, have lately appeared in print. It has been urged that there were many matches played between De La Bourdonnais and M'Donnell, but that only one contest has taken place between Messrs. Staunton and St. Amant. The Congress must show them that there exists no longer the spirit of lethargy. My object in troubling you with these remarks is to point out how, by a very unobjectionable process, the funds of the Congress may be increased. Besides subscriptions from individuals, which, I trust, will be numerous, I would propose that a series of matches be at once played in all the clubs of Great Britain. These matches can be played, each for a small stake, which should be appropriated to the general subscription. Let provincial clubs rest assured that they themselves will be gainers by the adoption of this plan. This Congress, properly managed, and these matches all pointing towards it, will not be of temporary influence, but add an energy to the cause of Chess which will be felt throughout the world. Can we forget, sir, the impulse given to Chess by the great match between Messrs. Staunton and St. Amant?—an impulse which vibrated, perhaps unconsciously, through the minds of this kingdom. Its effect in the provinces was electrical. The players who sprang from it exceed the fabled brood of the Hydra. How much greater, then, ought to be the result of a Congress, with players from all parts of the world as its representatives! I thought it to be the duty of a provincial rather than a London player to point out the immense importance of this Congress in its future influence on provincial clubs, as well as in the momentary pleasure which it will afford all zealous amateurs. It was for this reason that I was not reluctant to take up your valuable space.

I have the honour to be, sir, your obedient servant,

Oxford, Hermes Chess-club, December, 1850. OXONIENSIS

THE ILLUSTRATED LONDON NEWS.

COUNTRY NEWS.

THE MANCHESTER SCHOOL OF DESIGN.—The pupils of this institution held their second social soiree on Monday evening: Mr. Cobden, M.P., Mr. Brotherton, M.P., the Mayors of Manchester and Salford, and other influential merchants and gentlemen being present. Mr. Thomas Bazley, President of the Chamber of Commerce, presided on the occasion, and delivered an interesting address, in which he dwelt upon the important influence which the Exhibition of 1851 would exert upon the arts in general, and upon that of design in particular. Mr. Joseph Brotherton recommended the establishment of a museum in connexion with the school. There, he argued, was not in-tuitive; the eye must be tutored, and it could only be tutored by comparisons, facilities for making which such museums would afford. Mr. Brotherton referred to the Museums bill, which he and others had been instrumental in carrying—a bill which empowered the levy of a rate of a halfpenny in the pound to provide buildings for the reception of works of art, &c., and he recommended the directors of the school to endeavour to bring their institution within the operation of this act. Mr. Cobden, M.P., also made reference to a local rate for the support of the school. He was not fond, he said, of Government interference; but he would say that, if a local rate in Manchester could be legitimately raised for anything in the shape of education, it might be raised for the purpose of supporting a school of design. He would rather have money raised by a local rate than derived from the Exchequer. Local rates, if locally raised, it would be better applied. If money was raised where it was spent, it was well looked after; there was very little jobbing about its disposal, while there was a great deal of jobbing about money dispensed from the central Government. One halfpenny in the pound upon the Manchester assessment would realise the sum of £2300 a year, while, if Salford were to join in the movement, upwards of £4000 might be secured for the support of the school, and for the establishment of a museum. (Hear, hear.) The company were afterwards addressed by the Mayors of Manchester and Salford; by Mr. J. A. Hammersley, head master of the school; and by other gentlemen. The rooms of the institution, all of which were thrown open, were decorated with the productions of the pupils, some of the paintings and drawings being of a very superior character.

DARING BURGLARIES.—UPWARDS OF £600 STOLEN.—One of the most daring burglaries which has disgraced Herefordshire was perpetrated in the parish of Longtown, during the night succeeding Saturday last. Between twelve and one o'clock the house of Mr. Pritchard, a freeholder, living in the above parish, was forcibly entered by means of a pane of glass in the back window sash, broke open the door, at which one of them then kept guard, whilst the other two entered the house to search for money. Mrs. Pritchard had contrived to remove from a cupboard some gold and silver coin into a bag of barley-meal. The men, however, succeeded in finding a £5 note, a sovereign, 2s. in silver, and a bank receipt for £600, after which they sat down and regaled themselves with the best fare which Mr. Pritchard's cupboard could afford. Drunk, and in high glee. During the time they were this employed Mr. Pritchard made his escape from the house in his shirt, to the house of Mr. Griffiths, about half a mile distant from his own; but, on his arrival, the villains had fled. At the time they entered the house there were no other persons therein, except Mr. and Mrs. Pritchard and a little girl. Each of the gang had a handkerchief tied round his head, so as to conceal his features, his eyes, nose, and mouth being only left distinguishable. During the night of Tuesday week the shop of a poor widow, named Parry, in the same place, was broken into, and a number of things were stolen. It would appear that the parties who perpetrated this burglary had previously practised and adopts in their calling, as they effected an entrance through the panel of a very thick door.

CONFLAGRATION AT THE CHARTHAM PAPER-MILLS.—One of the most destructive conflagrations known for many years in the county of Kent broke out at an early hour on Monday morning, involving the destruction of highly valuable property, and throwing some 130 or 150 workpeople out of employ. The scene of the disaster was the extensive paper-mills of Messrs. Smith, Iverby, situate at Chartham, about three miles from Canterbury. The premises were 260 feet in length, and of proportionate width, and were divided into separate buildings used severally for boiling, drying, &c. Large stacks of waste paper finished, or in various stages of manufacture, were on hand. The fire was first accidentally discovered by the workmen who went to get the machinery into gear, and it was at first attempted to stifle the flames, but found necessary to send for the engines from Canterbury; and, before these could arrive, the whole range of building was wrapped in flames. When the engines had been brought to bear on the fire, several hours elapsed before the progress of the flames could be stopped. The engine-houses, machine-rooms, drying-house, and stores, were more or less consumed; and, although a considerable portion of the machinery has been saved, the loss is estimated as great as the amount of the united insurances effected in the Kent Sun, and National Mercantile Offices for £16,000. Of the origin of the fire nothing is as yet known, further than that it was in or near the drying-room.

TRANSMISSION OF BARE COIN BY RAILWAY.—On Friday week a parcel, supposed to contain base coin, lying at the London and North-Western Railway parcel-office, at Manchester, directed "William Johnson, Railway Station, Manchester; to be left till called for," was claimed by a man, who signed "William Johnson." He was followed to No. 12, Clock-alley, Manchester, and on the police going in shortly afterwards they saw the parcel lying on a table, and found, wrapped up in a quantity of rags and paper, 72 half-crowns and four crowns, all base coin. The parties in the house were taken into custody.

THE ROMAN CATHOLIC CHURCH IN SCOTLAND.—On Sunday last, the chapel recently erected in North Woodside-road, Glasgow, for the use of the Catholic body, was opened for divine worship according to the formulæ of their communion. After the celebration of high mass, the Right Rev. Bishop Murdoch, the senior Vicar-Apostolic of this district, delivered an appropriate discourse, embracing the opportunity to give utterance to the gratulations suggested by the event of the day. The chapel was crowded, admission being by ticket. It is dedicated to Saint Joseph, and is really a neat and handsome edifice. Externally there is little ornament presented—the plainness and simplicity, but the interior is richly decorated. It is calculated to accommodate nigh 800 persons. The Rev. Daniel Gallacher has been presented to the pastoral charge of the congregation. Thus a fourth chapel of this kind has been added to those formerly existing in Glasgow, while another, situated in the Townhead district is rapidly approaching completion.

FATAL RAILWAY ACCIDENT.—An accident, attended with the loss of three lives, occurred on the Leeds and Selby Railway on Monday. The place where the fatal occurrence happened was not far from the Milford junction, where the Leeds and Selby line joins the York and North-Midland line. A heavily-laden luggage train had proceeded from Leeds, and, on arriving at a rather steep ascent on the line called the Milford Bank, the engine was found incapable of dragging it up, or the speed at which it would be able to accomplish the ascent was so slow that those in charge of the train deemed it advisable to divide it into two parts. With the former part they proceeded to the summit of the bank, intending to return with the engine for the portion left behind. That portion, however, by the merest accident, or some other cause, was set in motion, and went back with increasing velocity down the incline, where it came into collision with another luggage train proceeding from Leeds on the same line of rails. The collision was literally tremendous and tender were smashed to pieces, and the engineman, the stoker, and another man (employed as a pointsman), were all killed, or received such injuries as caused their death the same evening. Two of the unfortunate men who lost their lives, if not all, were married, and have families for whom to provide.

DARING HIGHWAY ROBBERY.—On Monday morning, between four and five o'clock, as Mr. Fearn, a butcher, in Birmingham, was proceeding thence in his gig, accompanied by a friend, to a farm-house near, when about six miles from Birmingham he was attacked by six ruffians, who dragged him from the gig, while the reins having been cut, his friend was started off in the gig at a furious rate towards Solihull. Mr. Fearn, after a severe struggle with the villains for some time, but ultimately was laid insensible on the ground, and they succeeded in carrying off £223 in cash. His friend, when the horse came to a pause, gave the alarm, and brought assistance to Mr. Fearn, who was dreadfully beaten about the head. Four men, two of whom Mr. Fearn identified as amongst his assailants, were taken during the day.

SUPPOSED BURGLAR SHOT.—A young man, giving the name of Tyrell was brought before the magistrates at Manchester on Monday, charged with shooting a young man named Joseph Haigh, about seven days ago. The prisoner, who had surrendered voluntarily, said he was sleeping at a lodging-house in Burton-street, and about three o'clock in the morning he heard some one attempting to force the back door and the back window-shutters alternately. He looked out from the back bed-room window, and saw two men there. He told them to desist, and threatened to fire if they did not. One man still persisted, and Tyrell, having a large gun in his room, and fearing from what he had these men had some knowledge of it, he in his alarm fired a pistol at the man who was still vigorously attempting to force the door. The man then exclaimed "D—n you, impudence!" and went away. He did not know whether the charge took effect at the time, but called a policeman, and told him what he had done. Haigh, it appears, received the charge in one shoulder, and went away. Next day he called at a neighbour's for medicine for it, as it was in a shoulder with, not telling that the perforations had been produced by a pistol wound, but stating that he had fallen down some cellar steps. The neglect had been considerable, and mortification had set in. Information was subsequently made for the gentleman who fired the shots, which induced him to surrender. Haigh has been once convicted of burglary. The prisoner was admitted to bail in two sureties of £50 each.

PLANK ROBBERIES.—Nottingham has for several weeks past been the scene of several robberies of plate, jewellery, &c., and the manner in which an entrance has been effected into the premises so nearly accords that the police are inclined to entertain the opinion that the robberies have been committed by the same gang. On Sunday night, a robbery of jewellery, &c., took place on the premises of Mr. Joshua Driver, jeweller, &c., Long-row, in that town. The plan by which the robbery was effected is curious. Mr. Driver's back premises are connected with the Crown Hotel yard; and it appears that the thieves scaled a very high wall in that yard, broke a pane of glass in Mr. Driver's kitchen, and the aperture thus formed was sufficiently large to allow of a boy being put through. It is supposed that the lad, having thus gained admission, supplied the robbers with all the valuables he could lay his hands on. Mr. Driver does not sleep on the premises, and the boy had, therefore, the whole range of the premises without fear of being disturbed. Amongst the property stolen were upwards of sixty valuable brooches, a number of Geneva watches, a quantity of costly chains and watch-guards, &c. The value of the property stolen has not yet been ascertained; but, from the quantity of plate and jewellery scattered about the premises, there is every reason to suppose the robbers were disturbed.—Similar small apertures, allowing just sufficient room for the body of a boy, were made on the premises of Mr. Bayley and Mr. Travell, at Nottingham, on a short time ago.—Another daring burglary was effected on the premises of the late Mayor of Nottingham (W. Heworth, Esq.), of Sherwood Hill, near that town. This robbery took place on Sunday morning, while the family were attending Divine worship; and, although the property stolen was considerable comprising a valuable assortment of plate and £22 in gold—the thieves, in this case, also, are supposed to have been disturbed. A burglary was also effected on the premises of Mr. Williams, bookseller, &c., Carlton-street, Nottingham, on the previous Friday night, and gold to the amount of £15 and other valuable property stolen. The police are actively on the alert, and we trust the burglars will ere long be apprehended. The town and neighbourhood were never, at any former period, so infested with thieves.

CAPTURE OF DARTMOOR CONVICTS.—On Friday week, three convicts, that had made their escape on the previous Wednesday from Dartmoor Prison, were seen to pass through West-street, Exeter, and were shortly afterwards captured. They stated that they had entered Plymouth during Wednesday night, and, being informed of the London road, for which they enquired, passed several policemen in Exeter-street, and arriving at the Lairs-gate, toll being demanded, and not having any money, got over the walls, and proceeded through Heybridge, through Buckfastleigh, and on to Ashburton. Their sufferings and privations during the three days were very great, having existed for some time on corn which they pulled from a stack, and some field turnips.

FATAL ACCIDENT AT RAMSGATE.—On the afternoon of Saturday last, two men, known as Bob Kidd and Jerry Quigley, left the harbour for the purpose of hauling their cod lines. When they started the weather looked very dull and windy, and it is presumed that a sudden squall upset the boat, as it was seen at sea bottom upwards. No tidings whatever have been had of the men, and the presumption is, that they are drowned. Two widows and nine children are left destitute.

ALARMING COLLISIONS ON THE EASTERN COUNTIES RAILWAY.

On Monday evening, during the density of the fog, two very serious collisions happened on the Eastern Counties Railway, which involved serious injury to a number of individuals. The first mishap occurred to the half-past four o'clock train to Enfield, and was followed by instantaneous stations between Bishopsgate and Stratford. A quarter of an hour after its departure from London, viz. at a quarter to five, the express-train to Enfield leaves, and, it appears, does not stop between the terminus and Tottenham. At that time the Hertford train was behind its time on arriving at Stratford; but this was unavoidable, from the density of the fog. While the Stratford passengers were alighting, the Enfield express was heard approaching, and it dashed into the rear of the Hertford train, dividing up a second-class carriage, wherein were seated, it is said, upwards of twenty passengers, and throwing the latter part of the train off the line. The screams of the injured occupants are described to have been of the most painful character; and, as if to add to their sufferings, the fog compelled with the steam and smoke, completely obscured the position of the unfortunate parties. Although the numerous staff of officers attached to the works at Stratford were immediately on the spot, much delay necessarily transpired ere they could all be extricated. It was then discovered that the chief portion of the persons in the carriage were sadly hurt, more or less. Having been carefully removed to the refreshing-rooms of the station, and several medical gentlemen having been sent for, it was found necessary to despatch several to the London Hospital, while others had their injuries attended to on the spot, and were removed to neighbouring taverns.

The second collision took place shortly before eleven o'clock, close to the Brick-lane goods *dépôt*. It was the last train up from Colchester, due at Bishopsgate at half-past ten. It was proceeding at a very cautious rate, and, within a short time after having the Mile-end station, it was run into by the Norwich express. The shock was fearful. The last carriage of the Colchester train was a third-class, in which were a number of passengers on a Christmas visit to their friends in London. So great was the concussion that it appears a perfect wreck; the end, roof, and sides were demolished, and how the unfortunate passengers escaped mortal injury, appeared to the casual observer most miraculous. Many of them were bleeding from wounds in their heads and several parts of their bodies. As in the former instance, the density of the atmosphere added to the alarm. Several passengers in other parts of the train sustained bruised injuries. On the arrival of the train at Bishopsgate many persons were seen in a similar predicament; but it is gratifying to state that no broken limbs were amongst those injured. Mr. Hancorn, a surgeon residing near the terminus, and who had been called by the company to those injured on the previous occasion, was in the train, and immediately offered his services in alleviating these most hurt.

An official inquiry has been instituted by the Directors into the circumstances of this two-fold calamity, but nothing further of importance has been elicited than the details above given, except that the aggrieved trains, in both instances, were going at a rapid rate, instead of the cautious pace of three miles an hour fixed by the company's rules, to be observed in fog.

OFFICIAL LIST OF THE SUFFERERS AND THEIR INJURIES.

The following is an accurate list of the passengers who sustained injury by the collision of the Enfield and Hertford trains at Stratford, compiled by Mr. Hancorn, the surgeon

IN THE LONDON HOSPITAL.—Miss Ann Oliver, aged 38, of Enfield; committed fracture of both legs. Mr. John Kirby, aged 35, a plumber and glazier, carrying on business at Tottenham; compound fracture of right thigh, and fracture of the left leg. Mr. Thomas Airey, aged 31, clerk at the Bank of England, residence at Totenham; fracture of both bones of the right leg

SUFFERERS FROM OTHER PLACES.—Miss Mills (at Stratford), residence not mentioned; toes cut off, next one fractured, right leg seriously bruised, and various contused wounds on both legs. John Pay, a labourer in Norfolk, seriously bruised. Mr. James Robinson, of Edmonton; contusion of elbow joint, amputation requisite. A man, name unknown, laceration of the nose, and other injuries. Mr. and Mrs Head (of the firm of Courrington and Co., the brewers); the wife, contused right leg; similar injury received by Mr. Head, but not so extensively. Mr. Child, laceration of the knee. Mr. Hooper, of Brighton, contused with the East India House; face lacerated. Mr. Hooper, jun.; bruses leg. Mrs. Greaves of Waltham; bruised, and other injuries; and Master Greaves; thigh broken

The sufferers by the second collision are thus described in the same report.

Alfred Turner, apparently a farm labourer, belonging to Norfolk; bruised legs. Charles Taylor, a boy about seven years old; laceration of the head. Mrs. Griggs, of 19, Princes-street, Tottenham-court-road; injured. Mr. Blunderfield, 36, Upper Seymour-street, Portman-square; bruised shoulder. Daniel Cliff, contused leg. Mr. Maidon; eye lacerated. Sara Turner; severe blow on the head, and otherwise much injured. Mrs. Elizabeth Gowers; contused wounds. Harriett Turner; bruised leg. John Sutherwood; severe cut and blow on the head: and Mrs. Hart and her child, severely bruised and otherwise injured.

The last accounts of the state of the unfortunate parties in the hospital pronounce them to be going on favourably.

SAN FRANCISCO, IN UPPER CALIFORNIA.

We have to thank Mr. Frank Marryat, author of "Sketches in Borneo," son of the late Captain Marryat, R.N., for the original of the accompanying Illustration. Mr. Marryat is now in California, with a view of writing a descriptive account of that auriferous country.

On one side of the picture is the beach, and in front are the extensive premises of Starkey, Brothers, and Co., including a large iron warehouse, the first erection of the kind in California. The motley population in the street includes Chinese labourers, Kanakas, or Sandwich Islanders, drivers of bullock-carts; whilst horseback is a Californian Mexican, in the rich and picturesque costume of the country.

Among the latest received intelligence from the Gold Region, is the following from the *Placer Times*, of October 26

"It is very difficult at the present time to collect information as to the produce of the various mines of California. From the manner of persons employed upon the various rivers is but to a limited extent known. Those who have travelled extensively through the country, and explored the various rivers high up into the mountains, of course can form very correct conclusions; but these are comparatively few who have done this. Most miners have but partially explored the country, and even those who have made extensive examinations, have felt but little inclination to convey the information to others. For this reason we are not more willingly by the estimates which we give below before our readers, believing, although they are somewhat imperfect, that they will be of use to those who have not had the leisure or inclination to make thorough examinations. We commence with the southern mines, and proceed northward. Feather River, upon the north, to the Cosumnes, upon the south, which contains, at the least, two-thirds of all the miners employed in the country. The mining region upon Feather River commences below the foot-hills of the mountains, about 30 miles from Marysville, and extends back upon the mountains for something like 80 miles. There are probably not less than 9000 persons at work upon this river. The most productive portions of the past season have been in the foot-hills and upon the south fork of the river. It is the general impression that the sum averaged by miners upon this river has been about six dollars per day to the man. This, allowing 24 working days to the month, would give, for five months, (which, probably, as most of the miners will labour during the rainy season), for each miner 120 dollars per month, and 600 dollars for the five months, producing an aggregate of 5,400,000 dollars. The Yuba, with its tributaries, Dear Creek, Gold Runs, &c., has a population of about 6000. The mines in this region have, in many instances, paid more than those of any other portion of California; but there has been a large number who have succeeded but poorly, which has reduced the average to each man to something less than that upon Feather River. Upon this stream we believe the average has not been over four dollars to each person employed. This would give for the total amount of gold that taken out in five months 14,400,000 dollars. Bear River, the next stream upon the south, contains, probably, a population of 3000. This stream, although no very large amounts have been realized by persons, has produced a fair average, say 4 dollars to each miner, which will give in the aggregate 1,440,000 dollars. The American River, we presume, contains a population of 16,000, distributed on its tributaries as follows:—5000 upon the North Fork, 5000 upon the Middle Fork; and 6000 upon the South Fork, which, at 5 dollars

BEDOUINS OF THE DESERT.

as the average, would produce, as above, in five months, 9,000,000 dollars. This would give, in the aggregate, for Feather, Yuba, Bear, and the American Rivers, together with their tributaries, the sum of 30,240,000 dollars, as the product of the labour of 87,000 persons. This sum, we believe, is as near an average of the produce of the mines upon the rivers named for the past five months as can well be ascertained at the present time. We have, in our estimate, taken but a portion of the mining region of California, as our readers will see; but we presume the quantity of gold dust taken from these streams, or from their immediate neighbourhoods, constitutes at least two-thirds of all the gold taken from the mines of California. The quantity obtained by miners during the last winter was small in proportion to what it ought to have been. Miners then looked forward to the opening of spring, anticipating far richer diggings in the beds of rivers when the waters should subside. In anticipation of rich harvests, the winter was suffered to pass without proper exertions upon the part of the miners."

THE MASSACRE IN ALEPPO.

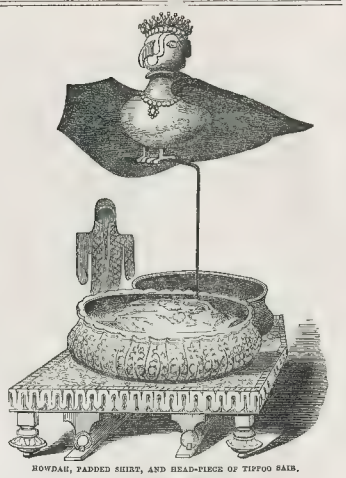
BEDOUINS OF THE DESERT.

The large and formidable tribe of Bedouins occupying the country around Palmyra acted a conspicuous part in the recent revolt and massacre at Aleppo. The Bedouins consider themselves the primitive aristocracy of the Desert, and it is true enough, so far as that they have never been conquered, nor were they ever in subjection at any time to foreign powers. The few who become permanent residents near large cities acknowledge a kind of submission to the powers that be, but more from necessity than choice; as, by this means, they can favour their own tribes in the Desert, and thus carry on an intercourse with the bazaars, which their brethren of the Desert dare not do with impunity when at variance with the town or city authorities, which is very generally the case. This tribe exert their authority over travellers and caravans very often in no very agreeable manner—exact their black mail, and pillage whole villages like a flight of locusts, as they sweep through a country. Their Sheikhs are generally mounted on thoroughbred Arab mares, whose speed exceeds that of any of our first-rate racing steeds in Europe, for a given time.

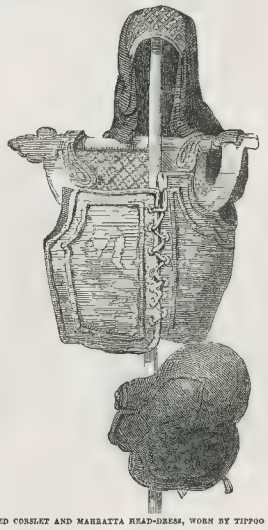
The Bedouin, on going on an express, prepares his favourite mare, by allowing her some camel's milk at night, and some raw beefsteak to masticate and champ in her mouth in the morning, an hour before starting. The writer of this lived for a considerable period in an encampment of the Anyzee tribe of Arabs, one of the largest and most powerful of the Desert, and can speak from observation. They are remarkably hospitable, yet still a strange compound of humanity—treat you well to-day, and send out scouts beyond their frontier and plunder their guest on the next, if he were not as liberal in his presents as they hoped, from the deference and attentions shown him during his stay. Their tents and mode of life are exactly the same now as in the days of Ishmael; and it is very remarkable that their mode of cooking animal food—entire animals especially—resembles in every particular that of the New Zealanders; their war-cry and dance is also somewhat similar, or at least as nearly so as pure Arabic and the Maori language can assimilate.

The only object the Bedouins could have had in joining the Moslems of Aleppo on this late occasion, was from the hope of gaining something by pillage they are independent of the Government as regards conscription, and they are less fanatical towards Christians than the town Moslems. There are Christian sects amongst some of the Bedouin tribes in the Hourane, east of Damascus. Bedouins have a great dislike to stay, for a night even, in or near any of the large towns or cities, and live very simply; partake of very little animal food; enjoy good health to a very advanced period of life; never suffer from the diseases incidental to the natives of the East, resident in large populous cities, are never known to suffer from epidemic disease—a strong argument in favour of the fact, that all such subjects resolve themselves into a question of pure air, and thus simplify our future sanitary precautions very materially. The tribe of Bedouins represented in our Engraving, range the country from the Euphrates to the south, as far as the Jordan, indeed, may be said to be in the possession of the whole country from Dan to Beersheba, and from the Mediterranean to the eastward as far as Medina and Mecca. They obtain a bagsheesh from the Turkish Government for the safe escort of the Mecca caravan, which leaves Damascus, sometimes as large as seventy and eighty thousand people, and are joined by the great Cairo caravan, consisting of as many more; but of late years there is a great falling-off in the numbers, pomp, and importance of these caravans. At one time the train of camels and baggage of a noble descendant of the Prophet extended along a desert track some fourteen miles in length, strung together at a short distance as camel or dromedary caravans are harnessed in marching order. The Bedouins imagine that people partake of the qualities of the animal food they live upon consequently, they not only reject strong meat as unclean, but, from this motive, those tribes that live on camels' flesh are said to be very vindictive, and those tribes eating dried locusts are exceedingly volatile.

*** In our next Number we purpose giving a Portrait of the Pasha of Aleppo, and a brief memoir of his life, as being, at this moment, an interesting personage. His deposition is not likely to affect his promotion in another Pashalic, for he could not have acted otherwise under the circumstances.



HOWDAH, PADDED SHIRT, AND HEAD-PIECE OF TIPPOO SAIB.



QUILTED CORSLET AND MAHRATTA HEAD-DRESS, WORN BY TIPPOO SAIB.

THE EAST INDIA COMPANY'S MUSEUM.

MEMORIALS OF TIPPOO SAIB.

The Museum of the Hon. East India Company, at their House, in Leadenhall-street (liberally opened to the public without fee), is rich in what may be termed the curiosities of conquest. We have engraved two interesting specimens.

First is Tippoo Saib's Howdah, being the seat used in elephant riding. It is composed of silver, and contains two seats; the inferior one being for an attendant. The bird, which forms a canopy, is likewise of silver; the inside of the wings is coloured, and the eyes are said to be composed of precious stones. The padded shirt and head-piece in the same group belonged, it is stated, likewise to Tippoo Saib.

Next is a quilted Corslet, formerly worn by Tippoo Saib. It is lined with blue diaper. With it are two quilted Mahratta Head-pieces, belonging to the same.

STREET VIEW IN SAN FRANCISCO, FROM A SKETCH BY A CORRESPONDENT.

NIMROUD SCULPTURES, AT THE BRITISH MUSEUM.

Foremost among the novelties at this truly national establishment, and especially fitted for the gratification of the holiday visitors, are the Nimroud Sculptures, the last arrival of which we have already in part illustrated.—(*See page* 484.) We now resume our descriptive details:—

No. 3 of the present series is a colossal figure of a winged man or divinity. It is in higher relief than the former Sculptures from Nimroud, and of greater dimensions, being 13 feet in height. The head of this figure is turned towards the spectator; but he resembles, in position, the other winged figures of the collection, holding in his right hand the fir cone, and in his left the square basket. The dress is also like those we have formerly described, consisting of the egg-shaped two-horned cap, the short fringed tunic, and long furred mantle. We have Illustrated this magnificent specimen.

No. 4 is identical in all respects with the last described, except that the body is turned towards the left, from which we augur they were companion guardians of some Assyrian portal, or, as painters say, pendant subjects. These slabs have been sawn in two, for the convenience of transport. The alabaster employed is of a mottled kind, differing in this respect from the material of the other sculptures. In point of style, we are inclined to think these figures inferior to the other works of art in this collection; the hands are large, the wrists thicker than the ankles, and the legs feeble for the upper part of the figure. Both these figures must have been long exposed to the rain, for the whole surface is corroded, and the features are water-worn in a remarkable degree.

Nos. 5, 6, 7, 8, 9, 10, and 11, we presume, were taken from the same chamber of the palace at Nimroud, as the slabs are nearly of the same size, measuring all of them 7 feet 8 inches in height, and about 6 feet 8 inches in width. No. 5 represents a winged divinity, with the egg-shaped and two-horned headdress, the hair and beard curled in the mode so often described. He faces to the left of the spectator, and upholds in his upraised right hand the fir cone, and in his left the basket. As usual, he wears the short fringed tunic and long fringed mantle, which has likewise the embroidered border; but in the present situation of these *reliefs* it is impossible to make out the device. In his belt appear two daggers. The usual tassels, sandals, earrings, bead necklace, armlets, and rose and star clasp bracelets, so frequently described, are all duly exhibited. The second figure of this slab, having his back to the last, and therefore facing to the right, is that of one of the King's beardless chamberlains or officers. He is clad in a long fringed embroidered robe and short furred mantle, and wears earrings, necklace, armlets, and bracelets, and he holds his bow in his left hand, and in his right the whip-like instrument we have before mentioned, as apparently indicating command. Over his shoulder is slung his quiver full of arrows, the heads of which are so perfect as to show the indentation for receiving the bow-string. His sword scabbard is ornamented with two fighting lions, but the hilt has no device. Across the entire slab run twenty lines of cuneiform inscription.

Nos. 7 and 8 were Engraved in our Journal of last week.—(*See page* 484.)

No. 9.—In this slab are two figures, both facing the left. The eunuch precisely resembles the last in his dress; but, instead of the fly-flap, he holds in his right hand the instrument of authority, and in his left the bow. Behind this officer is a divinity, in every respect resembling the others of this series, exhibiting in the contour of the limbs an herculean strength, and in the position of the legs an unchangeable stability.

No. 10. This slab is the only one of the series unbroken. It contains a figure of a divinity precisely like the former, and the whole-length portrait of the King holding two arrows in his right hand, and resting his left on his bow. His dress is so exactly similar to that before detailed, that further description is unnecessary. It may be observed that his bow is less angular in its curve than in the other representations, although its efficiency is still very problematical.

No. 11 was also Illustrated last week.

Numerous fragments, some of which are those of an enormous bull, in the same style of art as Nos. 3 and 4, complete this collection.

The foregoing includes the whole of the last arrival from Nineveh; but next week we purpose continuing the catalogue by describing and explaining those subject pieces of the former importation which we have not yet furnished in detail. Thus, in the absence of any regular or numerical arrangement of these remarkable records, the minuteness with which we have entered into each particular piece of sculpture, will render our catalogue a guide available to every visitor to the British Museum, and one which will possess the further advantage that it can be resumed from time to time, as fresh discoveries reach this country, without interfering with the arrangement of those which we have previously published. J. B.

NIMROUD SCULPTURES AT THE BRITISH MUSEUM.—COLOSSAL FIGURE OF WINGED MAN OR DIVINITY.

(From a Correspondent.)

I have no doubt that to many of your readers the question contained in this letter will be nothing new; but as none have given expression to it, I venture to do so. It is stated that the ruins of Nimroud have been buried for a period of not less than 3500 years; now I find in those ruins that the Assyrian Empire, or at least the object of Assyrian worship, is represented by a winged lion or a winged bull; and I have little doubt that the Empire was known in the days of her existence, and in the periods immediately subsequent, under this symbol, since which period in ancient history we do not hear of its use as symbolical in reference either to the Assyrian or any other empire or kingdom. Venice, it is true, has, for a long period, had a winged lion for its symbol; but this does not affect the question. Now, I find, in the 7th chapter of the prophecies of Daniel, that the Babylonian Kingdom (which was a part of the Assyrian Empire) was represented under this very figure of a lion with eagle's wings. Might not this be used justly as a strong argument for the antiquity of Daniel's prophecies, and that they were written at a time when the Assyrian Empire was remembered, or the Babylonian Empire (its most important part) was known by this figure. Allow me to refer your readers to the whole of the 7th chapter, and to the 2nd chapter also, in which (under the figure of an image of divers metals) the same successive empires are spoken of. On this point all writers are agreed.

I write only a first impression.

A. M.

St. Bartholomew Medal.—Mr. Peter Whelan, has just produced a handsome fac-simile (about the size of a half-crown) of the medal, with the inscription of *Stragies Hugonottorum*, struck by order of Pope Gregory XIII. to commemorate the St. Bartholomew's Eve of 1572, when more than 3000 Protestants were massacred in Paris only, and many thousands more throughout France, by order of King Charles IX.

Presentation of Plate.—On Wednesday, the 18th inst., the students in the classical department of the Manchester Free Grammar School, presented the Rev. N. Germon with a handsome silver epergne, as a memorial of their respect and esteem for the uniform kindness and impartial conduct which he has shown whilst fulfilling the duty of "High Master."

The estates of the following nobility and gentry, recently deceased, have paid probate and administration duties on the following amounts:—Lord Newark, £20,000; Countess of Marlborough, £1800; Countess of Blessington, £1000; Sir J. W. Marshall, £14,000; W. Marshall, £50,000; F. Tadlock, £50,000; W. Willett, £85,000; T. Wing, £50,000; T. Wade, £40,000; J. Hasler, £140,000; and J. B. Boothby, £25,000.

PLYMOUTH A GOVERNMENT MAIL-PACKET STATION.

Monday, the 16th instant, was an important day for Plymouth, or then the port was first opened as a Government Mail-Packet Station. The Corporations of Plymouth and Devonport conveyed the first despatch of Cape mails from the Post-office in grand procession through the town to the screw-steamer *Bosphorus*, waiting to receive them.

Our Artist has sketched the procession passing the theatre. In the evening the Mayor and Corporation gave a grand dinner to the directors of the Screw Steam-ship Company, in honour of the occasion.

The procession consisted of flags and banners, bands of the Royal Marines and the Royal Welsh Fusileers from the Citadel; flags and banners borne by sailors from her Majesty's ship *Billerophon*, &c. In an open carriage, drawn by four white horses, were seated the Mayor of Plymouth and the Mayor of Devonport, in their full robes; and the town-clerks. On the box of the carriage were two mace-bearers in robes. Next was a carriage containing the Rev. the Vicar of St. Andrew's and others; on the box, two corporation mace-bearers in robes. Then followed about twenty carriages, containing members of the corporation and many influential persons; the band of the 4th (King's Own) Regiment; banners borne by sailors; omnibus, drawn by four white horses, and containing the postmaster of Plymouth and other authorities, with the letter-bags piled up on the top; flags, &c.

GRAND PROCESSION AT PLYMOUTH, ON THE FIRST DESPATCH OF THE CAPE MAILS.

*** The Title-page and Index to the present Volume of the ILLUSTRATED LONDON NEWS will be given with the Number for January 11, 1851.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, DECEMBER 28, 1850.

THE Scotch people seem at present inclined to agitate for a National Poor-rate. Suffering under an incomplete, cumbrous, and antiquated Poor-law system, which does not go the length of recognising any right whatever in the able-bodied pauper to his subsistence from the public rates, but which throws him entirely on private charity and church-door contributions, they are yet overrun with paupers. The towns swarm with unhappy creatures who have been ejected by the distressed proprietors of involved estates in the Western Highlands and Islands, and who seem to have no legal claim either on their landlords or on the public. It is thought, if the Poor-rate were made national instead of local, that these highland properties would pay a fairer share of the public burdens than they pay at present; and that, if the rate were assessed upon income, and not upon rental, those best able to pay a poor-rate would be more effectually reached than they are, or can be, under the present system.

We differ altogether from this view of the case, and think, as we have already stated, that much of the distress existing in the agricultural and pastoral districts of the remote Highlands has arisen from the want of that very local Poor-law which, even in its present partial form, the Scotch ratepayers in the great towns seem willing to abolish. As long as the law does not recognise any right in the able-bodied poor to be supported from the public rate of the parish in which they were born, so long will impoverished lairds imitate the example of the Irish proprietors of past times, and "shovel" them out upon the towns, to live or die, as they please. A National Poor-rate, even if it went the length of the English and Irish Poor-law systems, as regards the relief of the able-bodied, would not mend the matter as regards the towns. If the relief were not local, the local proprietors would continue to evict the poor as at present, wherever they were themselves too poor to find them profitable employment, and would pay their share of a National Poor-rate without the trouble of looking after the paupers, or without the spur in their sides of being compelled to diminish the numbers on their estates by the best and only safe process, that of making them cultivators. A purely agricultural and pastoral country, where land is owned in large masses, cannot maintain a numerous population upon the large farm system. The inevitable result is pauperism. The question is upon whom the burden of the pauperism ought to fall; whether it should be upon the shoulders of those who own the land in these large masses, and thus prevent its cultivation by the people, or upon the inhabitants of the towns, whose proximity gives land additional value; or upon the towns and rural districts combined. It seems to us that the English system is the only just one; and that, in striving for a different one, the Scotch towns would struggle for a curse instead of a blessing. Under a national system of rating, either in England or in Scotland, the towns would become the great receptacles and *depôts* of all the pauperism of the country, and the proprietors of the soil would be relieved from a duty which is for the interest of the whole public that they should zealously perform—the duty of diminishing pauperism by the cultivation of the soil.

A Poor-law is itself an evil, as medicine is; but pauperism is worse, because it is the disease which the medicine is intended to alleviate or to remove; and the problem is how to make the necessary evil of a Poor-law as effective for its purpose as possible. It is curious, in elucidation of this subject, to note that the only two portions of the United Kingdom where large traces of cultivable land have been allowed to lie waste—where landlords have been wofully embarrassed—where the people have been physically deteriorated—where they have increased much too rapidly for their means of subsistence—and where they have been by sure degrees reduced from the nutritious diet of bread to the cheaper, less nutritious, and at the same time more precarious, diet of potatoes—are precisely those portions of the country where there has either been no Poor-law at all, or a Poor-law which only partially recognised the right of the aged and impotent poor to their legal quite ignorant the right of the strong man able to work, but unable to procure it. Those two portions of the empire are Ireland and Scotland; and if the southern part of Scotland has proved an exception, it has solely been that southern Scotland has not been a purely agricultural country, but possesses valuable mines of iron and coal, large textile and other manufactures, and an extensive commerce. Surely these facts, and the beneficial but rough change now in operation in Ireland, ought to open the eyes of the Scotch to the real nature of the remedy for the public pauperism which now afflicts them. A National Poor-rate would aggravate rather than relieve the disease, and would tend to keep land out of cultivation, and cause a very troublesome and perilous congestion of pauperism in all the great towns, to the advantage of no one, and to the great loss of the whole country. The English Poor-law system is by no means perfect, but it is by far the best of the three systems in operation in the three parts of the kingdom; and, severe as it sometimes proves, it has neither ruined nor impoverished the landlords, nor reduced the peasantry from a diet of bread into a diet of potatoes. It may be capable of amendment, and it may produce, with many benefits, a plentiful crop of mischief; but, compared either with the present Scottish system, or with the proposed system of a national rate, it is wisdom itself. Of all the forms of centralization a centralization of pauperism into the towns would unquestionably be the worst. There are some kinds of centralization which are good for the country; but any system which should abolish the local liability for the support of and the local control of the poor, would be a national calamity. Scottish pauperism is as difficult to deal with as that of Ireland, but it proceeds from the same causes, and can only be removed or reduced in the same manner. In justice to the peasantry, the labouring population must be raised above a potato diet; and in justice to the industrious dwellers in towns, they must not be called upon to support the poor of the rural districts in addition to their own. There is but one means of checking these evils. England first, and now Ireland, has set the example. The Scotch had better follow it as fast as they can.

COURT AND HAUT TON.

THE COURT AT WINDSOR CASTLE.

The courtly hospitalities of the past week have been almost exclusively confined to her Royal Highness the Duchess of Kent, and the ladies and gentlemen of the Royal household.

On Monday the Queen and the Prince came to town, travelling by a special train on the Great Western Railway. On arriving at the Paddington terminus, her Majesty and his Royal Highness, with the ladies and gent emen in attendance, entered two of the Royal carriages, and proceeded to the "Crystal Palace" in Hyde-Park. Lieutenant-Colonel Reid (Royal Engineers), Chairman of the Executive Committee of the Royal Commission, received the Queen and the Prince, and conducted her Majesty through the different parts of the building. Her Majesty and the Prince subsequently went to Gloucester House, Piccadilly, to pay a visit to her Royal Highness the Duchess of Gloucester. The Royal party returned to Windsor Castle early in the afternoon.

On Tuesday his Royal Highness Prince Albert enjoyed the diversion of shooting. His Royal Highness was accompanied by the Earl of Lincoln, and attended by Lord Camoys, Col. the Hon. C. B. Phipps. Col. the Hon. C. Grey, and Col. Bouverie.

On Christmas Day her Majesty and his Royal Highness Prince Albert, her Royal Highness the Princess Royal, the ladies and gentlemen of the Court, and the domestic household attended Divine service in the private chapel. The Hon. and Rev. Gerald Wellesley officiated. The Duchess of Kent was also present at the service. In the evening the Royal dinner circle included her Royal Highness the Duchess of Kent, Lady Mary Howard, the Baroness de Speth, Major-General and Lady Isabella Wemyss, Lieutenant-Colonel the Hon. C. B. and Mrs. Phipps and Miss Bathurst, the Hon. Mrs. Charles Grey, Mrs. Bouverie, Mr. Birch, and Mr. Glover.

On Thursday his Royal Highness Prince Albert went out shooting, attended by Lord Camoys, Lieut.-Colonel Hon. C. B. Phipps, Colonel Hon. Charles Grey, and Colonel Bouverie

The Royal family have taken their accustomed walking and pony exercise, in the grounds adjacent to the Castle, during the week.

Lord Camoys has relieved the Earl of Listowel in his duty as Lord in Waiting to her Majesty; and Lieutenant-General Sir Edward Bowater has relieved Captain the Hon. J. Denman, R.N., in his duty as Groom in Waiting to her Majesty.

Her Royal Highness the Duchess of Gloucester, who has been indisposed for some days, was much better on Tuesday. The Duchess of Cambridge and the Princess Mary, and the Grand Duke and Duchess of Mecklenburg-Strelitz, visited their illustrious relative on Monday.

Their Royal Highnesses the Hereditary Grand Duke and Duchess of Mecklenburg-Strelitz honoured the establishment of Mr. C. F. Hancock with a visit on Tuesday.

We regret to hear that the Duke of Beaufort continues indisposed at Beaufort House. The Duchess and the Ladies Somerset will pass the Christmas recess in town.

The Duke of Devonshire came to town on Saturday from Brighton. His Grace intends to pass the Christmas in town.

The Marquis of Bath was among the passengers in the Oriental Company's steam-ship the *Rupon*, which left Southampton on Friday week.

The Marquis and Marchioness of Lansdowne are surrounded by a large party at Bowood Park, Wilts

Viscount and Viscountess Palmerston returned to Broadlands on Tuesday, from visiting Lord Normanby and Marchioness of Lansdowne at Bowood. The noble Viscount and Viscountess will receive a large circle of guests during the holidays.

We regret to learn that Viscount Alford, M.P., continues seriously indisposed. His Lordship has not derived that benefit from his lengthened tour in the East which his medical attendants anticipated. The family are at present staying at Ashridge-Park.

Lord and Lady John Russell have gone to Woburn Abbey on a visit to the Duke and Duchess of Bedford.

We regret to learn that Lord and Lady Rivers have sustained a severe domestic affliction by the demise of their eldest son, the Hon. George Horace Pitt, who died on Friday afternoon after a short illness. The hon. deceased was in his 17th year, having been born in March, 1834.

Lord Adolphus Fitzclarence has left town on a tour of visits during the festive season.

CHURCH, UNIVERSITIES, &c.

CAMBRIDGE.

Notice of the following academical prizes for the ensuing year has been issued; viz.:

1. The Royal Highness the Prince Albert, Chancellor of the University, being pleased to give annually a gold medal, for the encouragement of English poetry, the Vice-Chancellor has given notice that the prize will be given this year to such resident under-graduate as shall compose the best poem on "Gustavus Adolphus."

2. For the Most Noble the Marquis of Camden's gold medal, for the best exercise in Latin Hexameter verse, the subject for the present year is "Scythæ."

3. The representatives in Parliament for this University, give annually two prizes, of fifteen guineas each, for the encouragement of Latin prose composition. To be open to all Bachelors of Arts, without distinction of years, who are not of sufficient standing to take the degree of Masters of Arts; and two other prizes of fifteen guineas each, to be open to all under-graduates who shall have resided not less than seven terms at the time when the exercises are to be sent. The subjects for the present year are, for the Bachelors, "Quænam præcipue fuerint in casibi our Religio Reformata quæ vocatur fines quos in Europâ intra paucos annos attigit numquam superaverit?" For the Under-graduates, "Quonam Reformatum gentium indoles a priore earum statu explicari possit?" N.B. The exercises are to be sent in on or before April 30, 1851

4. For Sir William Browne's three gold medals, of the value of five guineas each, to such resident under-graduates as shall compose the best Greek Ode in imitation of Sappho; the best Latin Ode, in imitation of Horace; the best Greek Epigram, after the model of the Anthologia; and the best Latin Epigram, after the model of Martial; the subjects for the present year are—For the Greek Ode, "Oraculorum defectu." For the Latin Ode, "Carolus Albertus Sardiniæ Rex;" for the Greek epigram, "σκότοσ ἐμὴν φάοσ" for the Latin epigram, "In vitium ducit culpæ fuga."

5. The Porson Prize is the interest of £400 stock, to be annually employed in the purchase of books, which are to be given to such resident undergraduates as shall make the best translation of a proposed passage in Shakspere, Ben Jonson, Massinger, or Beaumont and Fletcher, into Greek verse. The subject for the present year is Shakspere's "Henry IV.," part 2, act iv., scene 4:—"O King Henry. Come hither Harry, sit thou by my bed," to the words "May waste the memory of the former days." N.B. The metre to be Tragicum Iambicum Trimetrum Acatalecticum

CELEBRATION OF THE FIFTH CENTENARY OF TRINITY HALL.—The five hundredth anniversary of this institution, formerly formed as a school of civil law, and still doing service in the cause of legal education, was commemorated on Monday, by a grand banquet in the Hall. Monie H. J. Fust presided, supported by the Right Hon. H. Goulburn, M.P.; Sir A. E. Cockburn, M.P.; Mr. Baron Alderson; Mr. Justice Talfourd; Mr. Wigram, M.P.; the Hon. F. Campbell, M.P., Master of the Temple; Dr. Lushington, &c. The learned chairman having pledged the memory of the founder in a grace cup, and given the routine toasts, proposed "The Church," taking occasion to make a passing reference to the late Romish movement. "It is sufficient for us," said the learned chairman, "to know that this attack has been made—that it must be met by all means in our power—and that, if these are insufficient, others must be devised." In proposing the toast of the day, "The Old House," the chairman mentioned that Thomas Thirlby, once Bishop of Westminster, and to the present hour the only rightful possessor of that title," was a member of their fraternity.—Baron Alderson, in acknowledging "The Health of her Majesty's Judges," said that he could not feel alarmed because a silly elderly gentleman at Rome chose to imagine himself Gregory the Great instead of mere Pius IX.—Mr. Justice Talfourd proposed the health of the Master and Fellows of Trinity Hall, and alluded to old Robert Herrick as once a member of their society which one of the greatest novelists of the present age, Sir E. Bulwer Lytton, still enjoyed.—Mr. Justice Talfourd proposed "The English Bar," and paid a liberal compliment to Sir A. E. Cockburn, whose name, as Solicitor-General, was connected with the toast. The chairman having given the "Next merry Meeting," the party broke up, after partaking of coffee, and a large proportion then retired to the College Combination-room.

PREFERMENTS AND APPOINTMENTS.—The following preferments and appointments have recently taken place.—*Rectories:* The Rev. J. Hawtrey, to the Rectory of Kingston-Seymour, Somerset; the Rev. — Wood, to the Rectory of Lydgate, near Newmarket; the Rev. G. Urquhart, to the Rectory of Andeley, with Combwich annexed, Lincolnshire. *Vicarages:* The Rev. R. D. Kasterby, to the Vicarage of Lastingham, Yorkshire; the Rev. John Edwards, to the Vicarage of Llanfihangel-ar-arth, Carmarthenshire; the Rev. John Edwin Pelt, to the Vicarage of Acklam-in-Pelt; the Rev. William Hallen, to the Vicarage of Holewell, Northamptonshire; the Rev. J. W. Joyce, to the Vicarage of Dorking, Surrey; the Rev. J. Jackson, to the Vicarage of St. Sepulchre, London; the Rev. G. Ormsby, to the Vicarage of Fishlake, Yorkshire; the Rev. William Collings Lukis, to the Vicarage of Great Bedwyn, Wilts; the Rev. Abraham Le Sueur, to the Vicarage of the parish of Gronville, Jersey.

TESTIMONIALS.—The following clergymen have recently received testimonials of their esteem and regard:—The Rev. Henry Curate of St. Nicholas, Rochester, from the parishioners, on the occasion of his marriage; the Rev. C. E. Carles, late Lecturer at St. Mary's, Warwick, from the congregation; the Rev. George Crosby, late Curate of Whickham, from the parishioners; the Rev. George Bellett, Incumbent, from the parishioners of St. Leonard's, Bridgnorth, the Rev. Nicholas Germon, High Master of Manchester Free Grammar School, from the scholars of the upper rclassical department.

VACANCIES.—*Rectory:* South Runcton, with Holme Rectory and Watlington Rectory, Norfolk, diocese Norwich; value £590, with residence; patron, R. Peel, Esq.; Rev. J. F. Edwards, deceased. *Lectureship:* Lincoln, St. Peter-at-Arches; Rev. T. A. Scott, promoted. *Clerical Secretaryship:* Additional Curates' Society; Rev. G. Ainslie, promoted. *Masterships:* Chesterfield Grammar School, Derbyshire; Third Mastership; W. J. Acres, promoted.

POSTSCRIPT.

PAPAL AGGRESSION.

LORD CAMOYS has addressed a letter to the *Times*, stating why he, though one of the laity, refused to sign the address to Cardinal Wiseman. "Seeing how the Roman Catholic Church in Great Britain," he says, "was prospering, I may well doubt the wisdom of petitioning for, as I may also question the policy of establishing the hierarchy. But be that as it may, when I contrast the quiescent state of the country as it was last September with the unfriendly animosities and recriminations, unaccompanied with danger to the public peace, which have since prevailed, and still prevail—a state of irritation unfortunately aggravated by other influences, yet all the direct consequences of the publication of the Papal document, and certain pastorals accompanying it—I cannot join in an expression of thanks to the chief, though, I am sure, unintentional promoter of this wide-spread and, to the Roman Catholic body, I fear, lasting mischief."

MR. BENNETT.—The Bishop of London, in answer to an address numerously signed, has stated that he is under the painful necessity of adhering to his decision to accept Mr. Bennett's resignation.

THE ROYAL BOUNTY.—On Monday and Tuesday, in the current week, her Majesty's Royal bounties, in various sums, were issued to upwards of 1000 poor and aged persons, under the supervision of the Lord Bishop of Oxford, Lord High Almoner, by Joseph Hanby, Esq., Secretary and Yeoman of the Almonry in Ordinary.

UNIVERSITY COLLEGE HOSPITAL.—On Thursday afternoon a meeting of the governors of the above hospital was held in the board-room. The medical report stated, that from November last year up to the present day, there had been 18,683 persons admitted to its benefits, of whom 1194 were in-patients and 3932 were out-patients. 739 poor women had been attended in child birth at their own homes, 310 were ophthalmic cases, and 19,240 were sufferers from accidents, more or less severe.

THE LONDON AND NORTH-WESTERN RAILWAY DIRECTORS AND THEIR ENGINEMEN.—On Thursday night a meeting of the engine-drivers and firemen on the southern division of the line took place at the Railway Tavern, Hampstead-road, at which a deputation from the drivers of the northern division was present. There were also present deputations from the Great Western, Eastern Counties, Great Northern, South-Western, South-Eastern, and other important lines. After some discussion, the following resolution was agreed to:

That this meeting, knowing the desire the enginemen and firemen engaged on the London and North-Western Railway have to keep on friendly terms with their employers, and to avoid the inconvenience to the company and the public from sudden strikes, do recommend to their fellow-workmen throughout the line to consent to the establishment of a month's notice, instead of a fortnight, as hitherto; and that the directors, in accordance with their expressed intention, not interfering with the question of wages, will be pleased to pass a minute of the board, guaranteeing the men now employed, or to be employed during three years from this time, from any reduction of wages, or increase in their daily work; and that the question may be adjourned to obtain the opinion of the men of the various districts on this proposition.

SURGICAL VOLUNTEERS WANTED.—Communications were made on Thursday from the City electric telegraph to the medical authorities at Edinburgh and Dublin, requesting them to obtain volunteer surgeons for the proposed to Jamaica and other West India Islands to give assistance in the cholera cases.

STATE APARTMENTS, WINDSOR CASTLE.—The *Gazette* of yesterday (Friday) evening contains the following:—"Lord Chamberlain's Office, Dec. 27.—Notice is hereby given, that the works at Windsor Castle connected with the State Apartments being now completed, the State Apartments will be open gratuitously to the public, from the 1st of January next, on Mondays, Tuesdays, Thursdays, and Fridays. The Lord Chamberlain's ticket may be had in London (gratis) of Messrs Paul and Dominic Colnaghi, printsellers, No. 14, Pall-mall East; of Mr. Moon, printseller, No. 20, Threadneedle-street, of Mr. Mitchell, bookseller, No. 33, Old Bond-street; of Messrs. Ackermann and Co., printsellers, No. 96, Strand; and of Mr. Wright, bookseller, No. 60, Pall-mall Of whom, also, Guide Books may be obtained, for one penny each. The tickets are available for one week from the day they are issued. They are not transferable; and it is contrary to her Majesty's commands that payment for, or in reference to, them, be made to any person whatever. The hours of admission to the State Apartments are—from the 1st of April to the 31st of October, between eleven and four; and from the 1st of November to the 31st of March, between eleven and three."

SUICIDE OF A PRISONER AT THE HOUSE OF DETENTION.—Christian Schmidt, a German, who was under examination at Marlborough-street, on a charge of having defrauded Mr. Aram Marks, silversmith and jeweller, of Far-gate, Sheffield, of a quantity of valuable property, reported to be to the extent of £200, committed suicide on Thursday. The prisoner, it appeared, fastened his handkerchief to the gas-pipe, and was enabled to effect strangulation.

LATEST FOREIGN NEWS.

FRANCE.

Our accounts of yesterday (Friday) from Paris, state that the trial of Allais, the spy, had not been yet brought to a close. With respect to this affair, the *Constitutionnel* charges M. Dupin with being the author of the explanation given in the *Débats* which first made known to the public the existence of the alleged conspiracy, the object of which was to have General Changarnier and himself assassinated. This is regarded as a new proof of the hostility of M. Dupin to Louis Napoleon.

The first-named journal contains a letter from Rome of the 14th inst., which states that the trial of the persons charged with the destruction of the confessionals in the churches of the Eternal City, in May, 1849, had terminated, and that the three principal individuals accused had been condemned to 15 years' imprisonment. The number of persons tried in the course of investigation by the criminal court, and it was said that there were more persons concerned in that horrid deed than had been generally supposed.

GERMAN STATES.

Accounts from Cassel of the 24th inst. state that rods had taken place between the South German troops and the Prussian garrison, which led to martial law being proclaimed, and to the arrest of the ringleaders.

METROPOLITAN NEWS.

MERCHANT SEAMEN'S SOCIETY.—The quarterly general court of this corporation, established for the relief of seamen and the widows and children of seamen in the merchant service, was held on Tuesday at the office in Birchin-lane: Mr. Cropper Lindsay in the chair. The minutes of the last court were read and confirmed. Receivers of dues for the outports of Inverness, Strangford, and Stranraer were then appointed, and the court adjourned. Immediately afterwards, a committee was formed for the consideration of cases for relief. Thirty-five applications were received by the committee, and relief was ordered in 30 cases. It appeared that during the present year upwards of 1100 applications for relief had been made, and in the greater proportion of the cases either permanent pension or temporary relief, as the circumstances seemed to require, had been granted.

BURIALS IN CHURCHES.—At a vestry meeting of the parishioners of St. Stephen's, Walbrook, held last week, it was stated that, in making the alterations necessary for the restoration of the church, no less than 4000 coffins had been found, in many places piled up to the very pavement of the aisles. The whole of the pestiferous mass now lies exposed, over which the floor will be laid, that again covered with concrete. The health of the congregation will, therefore, for the future, be preserved from the pernicious influences of the noxious effluvium.

ROMAN CATHOLIC ORDINATION.—On Saturday morning last, Cardinal Wiseman, assisted by the President of St. Edmund's College and several of the priests of the London district, held a general ordination in the Spanish Ambassador's Chapel, Spanish-place, Manchester-square. There were eighteen candidates for various degrees of ordination—one priest from St. Edmund's College, three deacons from the Oratory, two deacons and one sub-deacon from the Redemptionists at Clapham, and three received minor orders. There was rather a large attendance of spectators, as this was the first general ordination that has been held since the Reformation, the ordination of deacons having always hitherto taken place in their respective colleges. There seemed also to be some expectation that the Cardinal would address the candidates with respect to their duties on the present occasion, but nothing of the kind took place, nor were there any ceremonies beyond what are usually attended to at ordinations observed on this occasion.

NEW POOR-SCHOOLS.—On Monday, the ceremony of "opening" a new school-room for the education of the poor, took place at a public meeting held on the premises, Little James-street, Lisson-grove: Lord Ashley, M.P., in the chair. There was a large attendance of ladies and gentlemen, the former being in a considerable majority; and amongst the more distinguished persons present were the Rev. Dr. Waagen, rector of the district, the Rev. R. H. Herschell, the Rev. Dr. Beaumont, Mr. Broughton, the magistrate, &c. The proceedings having been opened by prayer, resolutions in accordance with the object of the meeting were agreed to.

ISLINGTON PARISH.—A conflict is going on at this moment in the parish of Islington which is unprecedented in the history of parochial strife. The question at issue refers to the management of the Stonefield estate, and the redistribution of no less a sum than £18,000 a year. The Stonefield estate was bequeathed to [illegible] Catholic gentleman, named Cloudesley, *temp.* Henry VIII., to the Catholic Church for the salvation of his soul by means of annual masses as well as to give a dole to a certain number of poor persons of the parish of St. Marv. To obtain this estate from the hands of the Church for the use of the poor and the promotion of education in the parish is the object of a large body of ratepayers denominated the Parochial Reform Association. For several years past the association has been making efforts to apply the funds to the relief of the poor-rates. A meeting for this purpose was held last week in Islington Church, the Rev. the Vicar presiding. After a most uproarious discussion, the adoption of the report, which suggested further examination into the object and intent of the charity and the present application of the funds, was agreed to. The meeting did not break up till nearly three o'clock in the morning.

On Christmas Day, at eleven o'clock A.M., a very interesting scene took place at the English Presbyterian Church, Chadwell-street, Myddleton-square, Pentonville. The Presbytery of London met there at that time for the purpose of ordaining the Rev. Walter Smith, M.A., to the office of the holy ministry, and the pastoral charge of the congregation who assemble there. The Rev. Thomas Alexander, M.A., of Chelsea, preached and presided. After this, the Rev. W. Chalmers, of Marylebone Presbyterian Church, explained the Presbyterian polity, and Mr. Alexander offered up the ordination prayer, when the young minister was solemnly set apart by the laying on of the hands of the Presbytery. After this, Mr. Smith received the right hand of fellowship from the Presbytery, and Mr. Fisher, of Southwark, charged the minister and congregation. The audience was very large; in fact, the lower part of the church was full. It is a singular fact, that Mr. Alexander and Mr. Smith were fellow-collegians. We may add that, from the great talent and energy of all of the young minister, and the great esteem in which he is held by his congregation, that he will rapidly become a very popular preacher, and not only strengthen the cause of Scottish Presbyterianism, but, in these dark days, be found to stand forth another faithful witness for the truth in this great metropolis. At the conclusion, Mr. Smith received the right hand of congratulation from each member of this communion.

CHRISTMAS RELIEF TO THE INDIGENT.—The customary gifts to the poor in the metropolis and its suburbs were distributed on Christmas Eve by the parochial authorities. The annual gifts of several benevolent individuals were likewise issued. Those of the Duchess of Kent, consisting of coals, money, bread, potatoes, blankets, and warm clothing, were dist ibuted to the deserving poor of Kensington. The Duke of Cambridge gave directions to provide a substantial dinner of roast beef and plum-pudding for every poor family in Kew and its vicinity, as well as a supply of coals, bread, and potatoes. His Majesty the King of Hanover also transmitted £50, to be distributed amongst the deserving poor of Kew parish, which, with coals, bread, and beef, were sent to the recipients of his Majesty's bounty. The ward officers and parochial authorities throughout the city were indefatigable in their exertions to provide comforts for the poor: large quantities of coals and provisions were distributed in the several districts, and tickets were issued for coals from the City Kitchen. The Ladies' Association in Southwark distributed coals and oatmeal, and, in some cases of extreme destitution or illness, money and warm clothing, to the poor inhabitants of Bermondsey and Newington. In St. Marylebone, the Ladies' Visiting Society directed 1121b. of coals to be issued to each poor room-keeper in the parish: this gift is independent of the parochial distribution, which consists of bread, meat, potatoes, and coals; and in cases of old age or infirmity, tea, sugar, and a small sum of money are added. In other parishes similar distributions took place.

THE METROPOLITAN WORKHOUSES, WORKHOUSES, &C., ON CHRISTMAS DAY.—The merry sound of pealing bells ushered in the great festival of all Christmas in the metropolis, and the morning, as it advanced, becoming bright and beautiful, a great number of persons started by the early trains to visit their country friends and enjoy the Christmas holidays. It was gratifying to observe that very few persons appeared in the street in a state of intoxication, as unfortunately too frequently happens to be the case. The day was observed as a legal holiday in all the Government and public offices, banks, and the Post-office, and no business of any kind transacted at them of a regular or ordinary nature. The inmates of the various hospitals were regaled with roast beef and plum-pudding. At the Royal Free Hospital, in Gray's-inn-road, cases are annually attended to and cured, a large party of the friends and supporters of that meritorious institution assembled to witness the distribution of the viands to the patients, between one and three o'clock. The inmates of the various and suburban workhouses were regaled with an extra allowance, consisting of roast beef, porter, plum-pudding, &c., in accordance with the decisions of the respective boards of guardians; whilst the out-door poor, in many instances, received additional donations in money and kind, so as to enable them to participate in the enjoyments and festivities of the season.

DESTRUCTIVE FIRE.—On Wednesday (Christmas) night, a fire of a very destructive character broke out upon the premises of Mr. Cay, a stick manufacturer and turner, at No. 7, Grange-road, Bermondsey, and within a short distance of the scene of the previous extensive conflagration in the same neighbourhood. The whole of the building were enveloped in flames. Two spacious buildings, belonging to Mr. Jenkinson, a leather dresser, also caught fire, and appeared at one time to be beyond preservation. After three hours of hard work, the firemen succeeded in mortifying the fire; but not until Mr. Clay's premises were destroyed; two spacious buildings, belonging to Mr. Jenkinson, greatly damaged; and considerable injury had been sustained by the adjoining houses from the action of both fire and water. The property was all insured.

ST. BARNABAS, PIMLICO.—This church was re-opened publicly and ordered on Christmas Day, especially by its regular frequenters, though there was also a considerable number apparently drawn thither by curiosity to witness the innovations in the service. The square pews of modern date had undergone a complete removal, and the old-fashioned high pews had unanimously given place to open benches. The Litany was intoned as usual at this Chapel. Priests, deacons, and acolytes bowed, saluted, crossed, re-crossed, genuflected. The Rev. Mr. De Teissier being selected the 26th chapter of the 1st book of Chronicles, and the Rev. John, delivered therefrom a short discourse applicable to the day. The congregation quietly dispersed, and there was not the slightest manifestation of feeling either in the interior or in the neighbourhood of the building. Mr. Bennett did not appear at the church during the day.

FATAL ACCIDENT ON THE RIVER.—On Christmas-eve, Mr. Bedford held an inquest at the Charing-cross Hospital, on the body of Henry Scarlett, aged 54 years, who lost his life under the following circumstances:—It appeared from the evidence of Inspector Woollet, of the Thames police force, that on Saturday morning last, deceased had the charge of a sailing barge, which was drifting down the river with the tide. Deceased was on the after part of the barge, and his son and the watermen of the vessel were forward. Numerous accidents are constantly occurring at Westminster-bridge, in consequence of so many of the arches being blocked up. The tide sets to the centre of each bridge, and watermen have considerable difficulty in passing between the two channels of the bridge on the north and south shores, often the force of the current carries their vessels against the arches that are blocked up, and they are upset. The deceased's vessel was thus impelled to the north channel, and as he reached the bridge the barge appeared to incline towards the centre arch, upon which he became much excited, and left the rudder in haste, for the purpose of assisting his son. The boy, in fact, caught the iron bar to which the sails are fastened, and he was thrown violently upon the gunwale of the barge. He never moved; a little blood issued from his mouth, and he was carried to the hospital, but was found to be quite dead. There was only a small bruise on his nose, and no other marks of violence which could indicate the cause of death. Mr. Tingham, the house-surgeon, had not made a *post mortem* examination of the body, but he was of opinion that the deceased had received a dislocation of the neck, which caused instantaneous death. Verdict "Accidental death."

STREET ROBBERY AND ATTEMPTED STRANGULATION.—William Thompson, *alias* the "Black Diamond," charged with having been concerned in committing a daring robbery, accompanied with violence, on the person of Mr. A. Dubois (the particulars of which appeared in last week's paper), was re-examined at Marlborough-street police-office on Monday. The evidence adduced on the former examination having been read over by Mr. Leadley, the chief-clerk, the prisoner's solicitor then proceeded to cross-examine the prosecutor as to his identity of the prisoner, but elicited nothing whatever to shake the evidence so offered on the previous occasion. Mr. Dubois (prosecutor) being confident the prisoner was the man who gagged and robbed him. Several gentlemen who had been robbed by similar means were in court, but could not distinctly swear that the prisoner was the person who committed the offence.—The prisoner, who persisted in his innocence, was fully committed for trial.

BIRTHS AND DEATHS.—Births registered in the week ending Saturday, Dec. 21—Males, 729; females, 748; total, 1477. Deaths during the same period:—Males, 864; females, 602; total, 1166. The result shows a small increase on the average of corresponding weeks in the ten years 1840-9, which is 1146 (without correction for probable increase of population); the numbers several times returned in the same weeks having been less than 1000, and having risen to 1252 in 1846, and, by the force of influenza, to 1946 in 1847. During the three weeks which have just elapsed of the current month, 1904, 1690, and 1166 deaths have been successively recorded. It is to be observed that the favourable increase in the present return is caused not excitively or principally by an augmented rate of mortality, but by an influx of coroner's cases, which occurred at dates anterior to last week. In respect to registration of them has been postponed till the close of the quarter. Of the deaths on which inquests were held, the largest proportion fall under the category of "violence;" and of these, 4 are ascribed to murder and poison, 21 to burns and scalds, 9 under hanging and suffocation, 2 under drowning, and 27 under fractures and wounds (of which 14 occurred to men by accidental falls in the street, and by falling from windows and other heights). Two boys, 3 girls, and an aged woman were burnt by the clothes taking fire: 3 children were accidentally suffocated in bed; 6 children died from want of breast-milk; a woman was poisoned by an overdose of laudanum, and a child by Godfrey's cordial. Infanticide was fatal to a man and a woman, by drowning themselves; and a miller of 19 years died from "disease of lungs and knee-joint (about 4 months)," whose illness is stated to have arisen from inhaling the dust of his mill. Amongst the fatal cases of last week, those of "disease of the lungs and organs of respiration" are conspicuous on the list; they amount to 274, nearly the same as in the previous week, and still slightly exceed the average. Brain stands numbers 102, pneumonia 117, and hooping-cough 31. The tubercular class, there are 8 from scrofula, 16 from tabes mesenterica, 29 from hydrocephalus (or water in the head), and 112 from consumption. Amongst epidemics, small-pox carried off 21 children and 4 adults, nearly the same numbers as in the former week; measles 9, scarlatina 30, hooping-cough has risen from 42 to 74: croup numbers 10, diarrhœa 16, typhus 43, and erysipelas 11. A single case of cholera was registered, as follows:—In the workhouse, Mile-end New Town, on 19th of December, a boy, aged 3 years, English children (48 hours) consecutive fever (3 days.)" An analysis of the 1166 cases registered last week, shows that—

The causes of death were certified by written statements of medical attendants in 1044 cases	
Coroners' inquests on cases held on	100 "
Medical attendance was not obtained, nor inquests held, in	9 "
Causes of death were not certified, or only by oral statement of attendant or informant, in	22 "
Total	1166

Hence it appears that the causes of death, either certified by the medical profession, or which became the subjects of investigation before coroners' juries, form 97 per cent. of the total number.

METEOROLOGICAL OBSERVATIONS.—At the Royal Observatory, Greenwich, the mean daily reading of the barometer rose to 30.027 in. on Friday, and was 30 [illegible] in. on Saturday; the mean of the week was 29 4.2 inches. The mean dai[illegible] temperature, which was 48.9 deg. on Sunday, continuously decreased throughout the week, and was 33 deg. on Saturday; the mean of the week was 38 6 d[illegible]rather less than the average of the same week in seven years. Having been 8 deg. above the average of the same day on Sunday, it was 5 deg. below on Saturday. The wind, which was generally in the south-west on the first three days, afterwards changed to north-west.

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

At the close of the poll on Tuesday in the election of a member to serve in Parliament for the borough of St. Albans, vacant by the demise of the late Mr. Raphael; Mr. Bell, the Free Trade candidate, was declared elected by a majority over his rival, Mr. Alderman Carden, of 276 to 147.

As Mr. Morris, one of the *corps dramatique* of the Lyceum, was proceeding towards the stage to act his part on Saturday night last, his foot slipped, and he fell with such violence that he severely injured his leg, and had instantly to be removed to the King's College Hospital, where his injury was attended to by the house surgeon; and, there being no vacant bed in the hospital, he was conveyed to his lodgings in the greatest agony.

Mr. Joseph Hanby, long accounting to about 1100 in number, employed at the iron foundry and locomotive manufactory, Hunslet, near Leeds, known as Messrs. Wilson and Co.'s Railway foundry, have left work, owing to some alleged grievance on the part of Mr. Stetham, a newly-appointed foreman from Manchester.

Agreeably to annual custom, there was no delivery of letters within the limits of the London district post on the afternoon of Christmas-day. The collection of letters and newspapers from the different receiving-houses for delivery by the general post, and to be despatched by the foreign mails took place last week.

Sir John Athnell Bannatyne Murray Macgregor is appointed President and Senior Member of Council at the Virgin Islands; and Mr. Philip E. Wodehouse, for some years employed in the Civil Service at Ceylon, District Judge and Member of Council in that island, will succeed Major Fancourt as superintendent at Honduras.

The York, Newcastle, and Berwick Railway Company have this week abandoned their staiths in the river Wear, and have commenced to load the whole of the coals brought down their Durham and Sunderland branch railway on the staiths on the Sunderland dock.

Nearly twenty vessels have been on the rocks near Flamborough Lighthouse during the foggy weather which has prevailed to such an extent since the commencement of the present month. There being little wind, and the sea smooth, they were eventually all here off, more or less damaged.

On Tuesday week, a fearful explosion took place at the Springfield colliery, Hindley, by which two youths, named William Weston, aged 17, and Thomas Beetham, aged 16, lost their lives.

Last week, J. Williams, aged nine, while observing some other children who were in a swing-boat, in "the Orchard," Peckham, was caught by a hook in the boat, which entered his skull, just above the ear, and in that position he was carried backwards and forwards by the swing to a great height, and for some time before he could be released. When the swing was stopped, the little sufferer was released from the hook, and carried to the hospital, when death quickly followed from the wound.

Mrs. Hindmarch, of the post-office, Belford, lately received a letter from her husband, Captain Hindmarch, master of the ship *Fanny*, of Liverpool, now at Honolulu, in the Sandwich Islands, states that on making inquiry concerning Messrs. William and James Dinning, sons of Henry Dinning, Esq., formerly of Eiford and Newlands, he learned that these young gentlemen had lately gone to the gold mines, and that one of them had died of sickness and the other had been shot by the Indians, the body having been found two days after the murder had been committed.

The advices from New York, by the *Atlantic*, report the receipt at that port lately by the steamer *George* of 2,500,000 dols. from California; and a further sum of 1,500,000 dols. on its way by the steamer *Cherokee*.

Lord Kinnaird's Spirit-dealers' Licensing Bill, it is understood, will not be introduced into the House of Commons by Sir George Clerk, as the right hon. baronet has repeatedly intimated his disapproval of the bill, and said that, if any measure affecting licences were introduced, it should emanate from the Government.

Yesterday, says the *Edinburgh Post*, having purchased somefresh herrings on Friday, found in one of them a very neat figure of a child with book on knee, reading. The figure is rather less than a square inch, carved in a flinty substance. Such a morsel may have been nibbled in the Gulph of Venice, or at the mouth of the Tiber!

A grey horse, the property of Mr. J. R. Bedford, of Devizes, lately died suddenly. It had always been a good worker, and was a valuable animal. Not having previously shown symptoms of illness, curiosity was excited as to the cause of its death; the stomach was opened and a substance weighing 20 lb., and of the solidity of very hard stone, was extracted. Mr. Bedford has preserved it.

At Antigua, two shocks of earthquake were experienced on November 4, the second a quarter of an hour after the first. The first shock was rather a smart one, and continued long; the other happened about two o'clock.

The Tribunal of Commerce at Paris, on Saturday, delivered a judgment declaring M. Alexandre Dumas a bankrupt, on the ground of his having engaged in commercial transactions by taking part in a theatrical speculation with M. Doligny. Notice of appeal was immediately lodged against this decision; it being contended that M. Dumas has not made himself liable to the bankrupt laws.

On Sunday, the 15th inst., the society of ringers at Dronfield (Derbyshire), ascended the spire of the church, for the purpose of ringing, as they are most likely by the usual morning service; they had been thus employed for a short period, when, to their great surprise, they were arrested by the falling out of the clapper of the second bell, which, in its course, struck the first one, and split it from top to bottom.

From the returns published returns of railway traffic on railways in the United Kingdom, that, during 49 weeks of the present year, the receipts amounted to £13,036,164, and for the corresponding period of 1849, to £12,789,370, showing an increase of £246,370, or 1 per cent. The average receipts per mile, in 1850, on 6240 miles, amounted to £2111, and, for the corresponding period of 1849, on 5160, to £2183 per mile; the increase in the mileage being 1080 miles.

The *Pacific*, with a general cargo from Honduras, has put into Passage, Cork, and reports that in latitude 24. 30 N., longitude 25 W., she fell in with the ship *Charles Carroll*, of Boston, with a cargo of salt and coals from Liverpool, for Charleston, United States, in a sinking state, and took off her crew of fifteen.

Intelligence arrived at Wisbech, on the 12th inst., of the wreck of the *Laurel*, of that port, Mr. Luke Cooper, master. He was making his way from Leghorn with goods; and on the 20th of November, being a thick fog, ran on a rock of the island of Majorca. The crew took to the boats, and were saved; but, in consequence of the quarantine laws being in force, they were kept on the sea three or four days, and, when allowed to land, were not permitted to cross the shore until they had had a medical examination. Bread, however, was sent to them; and getting some poles and canvas from the wreck, they were protected from the weather. The vessel became a total loss, and broke up.

We learn, says the *Scottish Guardian*, that Lord Nigil Kennedy, a brother of the present Marquis of Ailsa, has embraced the Roman Catholic faith His Lordship, who resides near Ayr, is quite a youth, and held a pew in the episcopal chapel, but now waits on the ministration of Father Thompson, the Popish priest for that district.

The Society of Friends have agreed to place stones over the grave of their deceased relatives, at Bishopsgate Cemetery, with a brief statement of their names inscribed upon them, in the same way as a stone was placed over the grave of their founder, George Fox, at his decease.

In the *Newcastle Journal* it is stated that no less than seven couples from Northumberland and Durham were married at Berwick on Saturday last, one day last week, with a view to being married (broomstick fashion) over the border.

The *Limerick Reporter*, after mentioning the conversion of Mr. Monsell, M.P., to the Roman Catholic faith, says:—"We have also to mention the conversion to the Catholic Church of Lady Anna Maria Monsell, sister of the Earl of Dunraven. The conversion to the ancient faith of a nobleman with a hereditary Irish title, and the head of the aristocracy of his native county, whose name, however we cannot at present, for obvious reasons, publish, is confidently stated within the last few days."

The Irish Prelates who sit in Parliament in the ensuing session are the Archbishop of Dublin and the Bishops of Ossory, Cork, and Killala.

The office to which Mr. Flannegan, the late secretary to the Encumbered Estates Court, has been appointed, is not that of an additional commissioner, but a new office, created for the purpose of facilitating the business of the court—that of Master, whose duties will comprehend the direction of all surveys, examination of deeds, leases, &c.; and Mr. Carey, the present registrar, to do the duty of secretary as well as those of present office.

The Edinburgh committee for procuring the erection of a monument to the memory of the late Lord Jeffrey have decided that it shall take the form of a work of sculpture. It will probably be a statue, for the Parliament House. Proposals, with estimates, are to be received by [illegible].

Memorials have been drawn up in the City requesting the Colonial Secretary and the Lords of the Admiralty to take immediate measures for sending medical stores and drugs to Jamaica by the steamer leaving on the 2nd January next. The memorials lie at the Commercial Sale Rooms, Corn Exchange, Hall of Commerce, North and South American, Jerusalem, Baltic, and Jamaica coffee-houses.

The strike of the 1100 hands employed at the extensive railway engine works of E. B. Wilson and Co., Leeds, terminated yesterday by an amicable arrangement between the employers and the men.

The charter placing the borough of Hartlepool under the Municipal Reform Act was received last week. The elections under it will take place on the 6th of January, and there are already twenty candidates for the twelve seats in the corporation.

Mr. William Turner, of Norfolk-row, Sheffield, extensive cattle-dealer, has issued a circular, making reference to the fact of having, in the year 1826, been unfortunate[illegible] ouncing to his creditors, that from subsequ[illegible]f, and attair[illegible] that enables[illegible]s conduct so com[illegible] conveys its o[illegible]

The *Gazette* of Vienna of December 19, contains in its non-official sheet the correspondence which took place between the Cabinets of London and Vienna relative to the attack on General Haynau. Lord Palmerston not having instituted a Government prosecution in the affair, and General Haynau having refused to complain, the Austrian Government has resolved to let the matter drop, reserving to itself, however, the right of reciprocity in a parallel case.

DEPUTATION FROM THE COURT OF LIEUTENANCY OF THE CITY OF LONDON.

PRESENTATION TO THE QUEEN OF THE ADDRESSES

FROM THE CITY OF LONDON, AND THE UNIVERSITIES OF OXFORD AND CAMBRIDGE, ON PAPAL AGGRESSION.

We now present our readers with the promised Illustrations of the important ceremonial of the presentation of the addresses to her Majesty at Windsor Castle, as fully described in the Illustrated London News of Saturday, the 14th inst. The three deputations are portrayed upon the first page, and opposite is the impressive scene of her Majesty seated upon the throne in St. George's Hall, receiving the Address of the Corporation of London.

It will be unnecessary here to repeat the details of the forms observed upon each of these occasions. A characteristic anecdote is related of "the Duke" and the Vice-Chancellor of Oxford:—"The Duke of Wellington, as Chancellor of the University of Oxford, arrived at Windsor Castle some time before the appointed hour for the presentation of the address. The City functionaries had

THE OXFORD UNIVERSITY DEPUTATION.

been ushered into the presence of her Majesty—a portion of the Oxford deputation had assembled in one of the reception rooms—the illustrious octogenarian was seated by himself, arrayed in his robes of office—and all were waiting the arrival of Dr. Plumptre, the Master of the University College, who holds the office of Vice-Chancellor for the present year. About half-past twelve o'clock, Dr. Plumptre arrived in great haste, and mentioning something about the unexpected detention of the train, offered his most humble apology for keeping his Grace waiting. The Duke, with characteristic brevity, replied, 'No apology is necessary to me, sir; the Queen appointed twelve o'clock.' The Queen had ap-

CAMBRIDGE UNIVERSITY DEPUTATION

PRESENTATION OF THE ADDRESS OF THE CORPORATION OF LONDON TO HER MAJESTY, IN ST. GEORGE'S HALL WINDSOR CASTLE.

pointed twelve o'clock, but the citizens and scholars, less punctual than her Majesty, did not arrive in time to commence the ceremony of presentation at that hour. It was half-past twelve before the first address was presented, and the ceremony lasted forty-five minutes."—*Windsor and Eton Express.*

THE PAPAL AGGRESSION.

MEETINGS.

County of Devon.—This being Christmas week, the meetings are neither numerous nor important. Last week, however, there took place in Devonshire, at Exeter, an important county meeting. It was called in consequence of a requisition, and the High Sheriff presided. Earl Fortescue, Lord Ebrington, Lord Courtenay, and a great number of distinguished commoners were present. The attendance was otherwise numerous and respectable. Earl Fortescue moved the address to her Majesty, which expressed, amongst other things, an opinion that the step of the Court of Rome has been taken under a gross misapprehension of the feelings of her Majesty's subjects, and said that the meeting was under no alarm lest the principles of the Reformation, so dear to the hearts of all British Protestants, should be endangered by this Papal aggression. To this motion, Mr. Buck, M.P., moved an amendment, casting blame on the Puseyite party in the Church, and also saying, "We feel confident that this aggression has been encouraged by the grants to Papal institutions by successive Governments, and by the acknowledgment of the titles of Romish prelates in Ireland and the colonies." After very long debates, Mr. Buck's amendment was lost, and Lord Fortescue's address was carried. But an address moved by the Rev. Mr. Gorham, in which a strong opinion was expressed at the conduct of a party in the Church, Mr. Gorham's opponents, and declaring great alarm in consequence, was also carried; and the sheriff declared that he must present both addresses. The meeting gave, as usual, three cheers for the Queen, and then separated, after a very lengthened contention.

The Hereford County Meeting came off on Saturday. The requisition was signed by Earl Somers, Lord Oxford, Lord Eastnor, Lord Gifford, Lord Bateman, Sir H. Hoskyns, Sir Villiers Cornwall, Sir E. J. T. Stanhope, Sir Thomas Hastings, &c. Mr. Hooker moved the address, Mr. Goodenham, a Catholic gentleman, moved an amendment, which was lost; but an amendment, moved by the Rev. Mr. Fenn, calling on her Majesty to put down Tractarianism, was added to the address.

EVENTS.

Address to Cardinal Wiseman.—On Saturday about thirty English Catholic noblemen and gentlemen, at the episcopal residence in Golden-square, presented an address to Cardinal Wiseman. It was numerously signed. Lord Petre read the address. It alleged, as an additional motive for addressing him, the misrepresentations that have prevailed, and the unprovoked insults offered to the Holy Father, and to his Eminence, in addition to them misapprehensions on the Cardinal's answer states:—"Were it an expression only of kindness and attachment towards myself, I might be flattered by the public manifestation of sentiments of which I have had so many individual proofs. But far more do I value the declaration which you have here embodied in a higher and more sacred feelings, those of inviolable fidelity to the great principles of our holy religion, and of filial love and reverence for our supreme and venerable Pontiff. When, however, I see the names attached to this address, and know how many of them are present families as noble by ancestral religion as they are by their unblemished escutcheons—families which have remained faithful to God and to their Sovereign through ages of proscription, in spite of fine and confiscation—families which have proved their religious sincerity and steadfastness in the prison, as well as their unshaken loyalty in the field—I cannot be surprised at finding those who now bear those illustrious names at the head of the Catholic laity, when circumstances call them forward to avow their religious principles and their attachment to the Church. And on my own behalf, again tendering to you my sincere thanks, I earnestly pray God to bestow on you and your families every temporal and an eternal blessing."

Cardinal Wiseman concluded, on last Sunday, his lectures on the Papal Hierarchy.

St. Barnabas was on Sunday re-opened for worship. The Rev. Mr. De Gex, the Rev. Mr. Fyffe, and the Rev. Mr. Cowie officiating. There was no crowd, and the service was conducted without any confusion or infringement of decorum. The large wax candles which stand on the altar were not lighted, according to the custom which has been hitherto observed.

A correspondence has taken place between Mr. Sadler, an alderman of Oxford, and the Bishop of that diocese, in which the worthy magistrate handles the right revd. Prelate rather roughly, for countenancing semi-Popery in his diocese. The Bishop replies by showing, that Dr. Pusey is not under his jurisdiction; and two of the other cases quoted by Mr. Sadler are also out of his diocese

Mr. Moswell, M.P., has conformed to the Romish Church.

DOCUMENTS.

The Earl of St. Germans has explained his reasons for having taken no part in the country or other meetings that have been held to address her Majesty on the subject of the Roman Catholic hierarchy. The mere substitution of territorial bishops for vicars apostolic is not in itself, he says, an infringement upon the Constitution, though he admits that it has been done in an offensive manner. He remarks that the titles of the Irish Roman Catholic Bishops have been recognised in Parliament; and adds:—"The Protestant Episcopal Church is, by the Act of Union, the United Church of England and Ireland. The supremacy of the Queen is part and parcel of the Constitution in Ireland. The bishopric of Galway, created long ago by the Pope, was, to all intents and purposes, as much within the diocese of a Bishop of the Established Church as the archbishopric of Westminster. No complaint of its creation was, however, made. The law does not acknowledge the right to create territorial bishoprics, or to appoint Bishops with territorial titles, in Ireland any more than it does in England. Parliament, in proceeding to legislate on the subject, will, therefore, find itself in this dilemma—either that which exists in England, by which it permits in Ireland, or it must prohibit in Ireland that which has been immemorially done in that country without let or hindrance. By taking the former course, Parliament will perhaps destroy the unity of the Church; by taking the latter, it will cause great and general discontent among the Roman Catholics in Ireland, will increase the difficulty of governing that country, and will encumber the statute-book with a law destined, like so many others, to become a dead letter." His Lordship takes the opportunity of correcting a misrepresentation which has gone abroad as the diocesan titles of Irish Roman Catholic Bishops having been recognised by Government. He states and there can be few better authorities for the fact—that when the Charitable Bequests Bill was passed in Parliament, giving the Roman Catholic prelates a seat at the board, they were not, as is generally supposed, recognised as the Archbishop of Dublin and Archbishop of Armagh, but simply as Archbishop Murray and Archbishop Crolly. The same style, he adds, has been followed by the present Government in their official dealings with the Roman Catholic prelates; but, on the other hand, petitions signed by the Archbishop of Tuam—there being no Protestant Archbishop of that see—have been received by Parliament, after formal deliberation; so that there can be no doubt of the parliamentary recognition of that title.

The Roman Catholic Church in Great Britain.—The forthcoming "Roman Catholic Directory" for 1851 contains the following in its "Statistics of the Catholic Church in Great Britain:"—Total of churches and chapels in England and Wales, 897; ditto in Scotland, 97, besides 26 stations where divine service is performed. Colleges—Roman, 10; Scotland, 1. Religious houses of men in England, 17; convents in ditto, 53. Priests in England and Wales, 826; in Scotland, 118. Total priests in Great Britain, including Bishops, 972. Total increase of priests, as compared with last year, 43. "Our Colonies" also give the names of 45 Roman Catholic Bishops and vicars apostolic in the British colonies and possessions.

Munificent Charity.—On Saturday last a special meeting of the vestry of St. James's, Clerkenwell, was held in the vestry-room, adjoining the church, Piccadilly (Wm. Geesin, Esq., in the chair), to distribute to twenty poor persons, who are, or have been, householders in the said parish, sums of £13 3s. 7d. each, being interest, amounting to £263 11s. 2d., of a principal sum of money of £10,000, left by the will of Mr. Peter Le Quintrec, who, having come over to this country an exile, after a lengthened period in business in the parish of St. James, amassed considerable wealth. He left the interest of the £10,000 in an only daughter; and, in the event of her dying without issue, to the parish of St. James's, to be distributed in the aforesaid manner. A large number of poor persons annually apply for this grant, and, after a scrutiny of the cases, the vestry decide by vote upon those who are most entitled to it from their character and necessities

The Hungarian Refugees in Turkey.—The *Gomer Polski* announces that the Hungarian refugees in Turkey, who have requested to go to America has offered them an asylum which they have accepted, and has undertaken to provide for their wants; the Ottoman Government pays their expenses to Liverpool, and the English Government their expenses from thence to America. This arrangement was proposed by the Ottoman Government, and acceded to by England and America.

Civil List Pensions.—Pensions on the Civil List, of £100 a year each, have been granted to George Attis, Esq., LL.D., and Sir Henry, M.D. Mr. Petrie is a member of the Royal Hibernian Academy of Arts, and Vice-President of the Royal Irish Academy of Sciences. He is author of the well known treatise on the "Round Towers of Ireland," and of many other antiquarian works. Dr. Kitto has been deaf and dumb from an accident when a boy, in spite of which difficulties he travelled through many lands in connexion with the Missionary Society. With his physical failings, he has done much for the cause of biblical literature, and is the author of many works, such as the "Pictorial Bible," "History of Palestine," "Cyclopædia of Biblical Literature," &c.

Seizure of Illicit Spirits.—On Tuesday a large seizure of illicit spirits was made by Mr. Cartwright, supervisor of the excise, in the Old Fordroad, Victoria-park. Having some suspicions of a man whom he observed carrying a sack, he followed him as to which direction he was carrying, and he replied that it was varnish that he was going to take to his master's Knowing him to be an old offender, Mr. Cartwright determined upon examining the contents of the sack, which he found to consist of bladders filled with spirits of illicit manufacture. He then took the man into custody, who gave the name of Taylor, but whose real name is Allen. The officer had scarcely disposed of this same, when, passing along North-street, Mile-end, he saw two men, in the dresses of countrymen, calling at different houses. He watched their manœuvres, and eventually went up to them, and found upon them three bladders filled with illicit spirits, four pewter measures, and a bottle of colouring liquid to give the spirits the colour of brandy. They were then taken into custody, and the spirits secured.

GREAT INDUSTRIAL EXHIBITION OF 1851.

The visit of her Majesty, accompanied by Prince Albert, to the works on the 23d, is reported as very gratifying. Her Majesty was received by the Executive Committee, the contractors, and the architect, and, after an inspection of the more prominent parts of the building, she left, expressing her surprise at the extraordinary enterprise and skill of the contractors. The loud cheers of the workmen testified the interest and satisfaction which they felt in her Majesty's visit.

The advance in all departments of the works is rapid beyond parallel. The framework of the western extremity is set, and but little of the eastern end remains to be completed. The glazing of the transept is commenced, and the permanent flooring of the ground floor and the galleries has been laid down to a considerable extent. The ridges for the circular roof are formed, and partly fixed. The principle of the "ridge and furrow" is carried out in the glazing of the transept, as in the other portions of the flat roof; but the sash-bars are fixed obliquely, so as to carry off the rain. The ornaments and flag-sockets outside have in several parts been set; and the external appearance of the "Palace" testifies to an unpractised eye how much has been done during the past week.

Despite all the interruption and disadvantages which the industrial arts on the Continent generally have lately endured, there is still an unflagging interest aroused towards the Great Exhibition. Holland, Germany, Bavaria, Prussia, and Austria are now actively preparing to forward their contributions; and their cloths, stuffs, silks, metal, glass, porcelain, and jewellery we have on various occasions specially alluded to, as likely to be largely attractive. The German manufacturers in the several districts are also personally anxious to visit the great metropolis; and associations among some of their principal towns and factories have been commenced, on similar principles to those of our workmen's visiting clubs. The Austrian, Belgian, and French Governments have determined that *aliens* from some of the public schools shall specially report on the character and contents of the great assemblage of art and industry; a staff of some thirty or forty gentlemen, fully qualified, are to inspect and furnish accounts of the various departments by Austria; and a working commission, in cooperation with the Royal Commission in London, has been authorised by that Government to protect the interests of her exhibitors, under the presidency of M. Rusbeck, an eminent manufacturer: this is a judicious step, when we remember that the Austrian contributors nearly number one thousand. Hungary, it is said, will forward samples of silk, which will not fall far short of that furnished by the Italian provinces: the climate is so favourable for its cultivation, that it is likely to become largely produced.

Messrs. Lightly and Benson, of 123, Fenchurch-street, are the accredited agents for the French Government in connexion with the Exhibition: the Central Commission will consign all the articles it adopts from contributors to these gentlemen. Considerable anxiety prevails in Paris among the minds of the French manufacturers, not only respecting the protection of their goods, to which we have so frequently alluded, but also to the requirements of our Custom House authorities.

The regulations for the outports which may receive goods for the Great Exhibition, enjoin that all packages are to be entered separately, by a warehousing bill of sight, plainly inscribed "Goods for the Great Exhibition only" the special reports of their contents being dispensed with. Upon the production of the bill of lading, a landing order is to be issued as usual, and bond having been given for the value, or, in the absence of such information, then at the rate of 10*l.* per package, the goods are to be forwarded to Officer of Customs, Great Exhibition, Hyde Park. A letter of advice, enclosing the bill of sight (to be perfected in London) with name of London consignee, weight and dimensions of each package, to be sent forwardly by post; a receipt to be returned, which, if according with the entry in the landing book, will be attached to it in discharge of the account. All packages to be delivered *free*. Packages arriving at Liverpool, Bristol, Hull, Leith, Greenock, Dover, Folkestone, or Southampton, to be placed separately in a bonded warehouse until the Hyde Park is ready to receive them.

The Custom House officers on duty at the building, will receive goods landed at London from the hands of licensed carmen, under charge of an officer, who will produce duplicate cart-notes of the weight, &c., of the packages. Goods from the out-ports will be forwarded by rail as one does, and a separate station number is to be affixed, but received at two doors, the rotation numbers are to be odd. At the one entrance, thus—Nos. 1, 3, 5, &c.; and at the other even, as Nos. 2, 4, 6, &c., each package marked with a number to be inserted in the compartment allotted to its nation. Then follow instructions for the landing waiters, whose accounts are to show the total number of articles taken out of each case before commencing the examination in detail. All goods not cleared, by payment of duty or for exportation, at the close of the Exhibition within a month, are to be removed to a bonded warehouse, and there fall under the usual regulations, but under no pretext whatever, are goods to be taken away before the closing of the Exhibition. Indeed, it is to be remarked, that the Board of Customs, appear to wish to meet all the demands of foreign exhibitors, and to place them on an equally fair footing with British subjects, instructions of a purely technical nature are also published for agents and consignees.

On their part, the Executive Committee notify that those packages only will be admitted into the building which are accompanied by a certificate from the Central Commission of the country from whence they are sent, or from the proper authorities in India, or the British foreign possessions. All other packages imported for the Exhibition should be placed in the Queen's warehouse, at the Custom House, and the bill of lading, with a description of the goods, to the Executive Committee, who will consider the question as to their admission; and they are not to be admitted to the Exhibition, until permission under the signature of the Chairman of the Executive Committee be given and received at the Custom-House.

An official circular from the Executive Committee, accompanied by the arrangements already made for the reception of the various classes of articles of designs only, has been forwarded to the local committees, so that each exhibitor may learn how far he may be benefitted by the steps taken to prevent piracy of articles which may be produced in this country, and also to assist in the friendships of the existing patent laws. The metropolitan Chairmen of Sectional Committees have allotted the spaces for the contributors under the several divisions. We regret to see that one or two gentlemen have been blundering forth their election to the post of chairman of a section, apart from the list generally declared of the whole of such officers. Such a vanity is only remarkable among those who are uncertain of their merit and position: otherwise, the performance of their several duties is highly to be commended, and has generally commanded satisfaction amongst interested visitors. It may be as well to remark that exhibitors in nearly every department will be allowed to fit up their counter or wall space exactly according to their own taste.

Letters from the Austrian empire confirm the public news of the efforts of certain manufacturers at Brunn, Reichenberg, Furth, &c. The Vienna committee has been untiring in its exertions to beat down certain prejudices as to the security of articles of novelty and recent inventions, and to negative the impediments thrown in the progress of the Exhibition by the agents and commission-houses, who do not wish their profits to be too narrowly examined by producers.

The great gold and silver-smiths of Malta, so renowned for their chains, bracelets, and personal ornaments, are fully prepared. Each master workman (says the *Malta Times*) will produce a specimen of his skill in the art of working in filigree. Lapidary work, stone-cutting, and inlaying of marbles are also mentioned: and the lace, and mittens so highly and justly admired, will be carefully selected among the special products of the island.

The editor of the Delhi paper has seen the seals which are being cut for the Queen and Prince Albert, to be shown in 1851. Budr-oo-deen Ulee Khan, the well-known chief of accounts at Delhi, at his own suggestion all the Native authorities for years, has exhausted his skill in producing these *chef d'œuvres*. The seal for her Majesty is a cornelian, with the corners neatly cut off; the size about one inch square. The device is cut:—

Shah-in-Shá Suleman Jah, Jeem Bargah Khaqan Sochtan-oo-buhr, Morei ultaf, [illegible] rihman Badshah Englistan-o-Ireland, Farmás Mómalik- Hind. Nasir-oo-deen-i-Museeh—Mulkh Mo-umma. Victoria.

Translation.—First monarch of the world, as Solomon in magnificence, with a court like Jemsheed, Emperor of the age. Sovereign of the Seas. The source of beneficence. By the grace of God, Queen of England and Ireland. Ruler of the kingdoms of Hindustan. Defender of the faith of Christ, the great Queen Victoria.

Prince Albert's seal is of the same size, but cut on a blood stone, and has the following:—

Ul Muhood ba tuyeed-i Ilahee, Fukhr Khandan Shah-in Shah Brunswick, umeen Mo-uris Mulkh Mo-umma, Shazada. Rufee od qudr wala shan o sur anud Burgah-i-Englistan. Albert Francis Augustus Charles Emanuel.

Translation.—The distinguished by the aid of God. The noblest of the families of Emperors. The honoured companion of the great Queen. Prince, highest in [illegible] great in dignity, the chief in excellence of the English Court, Albert, A.

He has prepared two beautiful emeralds for seal rings, to be presented by himself as specimens of his art. One for the Queen, three-eighths of an inch in length by two-eighths in breadth, on which the following lines are beautifully cut:—

Badshah Ruhr-o-buhr.
Adil, bu tuyeed-i-Kuoda.
Hookm ran dar hoft
Kishwar. Malkah Victoria

Translation. Sovereign of the sea and land The just by the favour of God Governor of the world (or the seven climate- Queen Victoria.

The one for Prince Albert is of the same size, but has simply the Christian names before enumerated.

The Dumfries local commissioners declare that 180 superficial feet is sufficient space for the contributions of the town, which have been apportioned and passed in review.

One night's performance of Mr. Cooke's well-known travelling equestrian circus at Bristol secured an amount of £50 for the finances of the Royal Commission. The Mayor and corporation supported the entertainment.

The *Brymbophone Journal* affords the following particulars respecting the great specimen of coal from Tipton, for the Exhibition. The block was drawn from the Hange Colliery, Twidale, and such was its weight, that the nine-ring upon which the rope (or hoisting it was wound, broke in two places cast iron six inches broad and one inch thick. Its weight is about five tons; it is six feet high and eighteen feet in circumference, and is probably the largest piece ever taken out of the mine. None but the South Staffordshire coal seam co ild produce such a specimen. The men who got the coal and sent it to the wharf gave their services gratuitously.

A full-sized quilt, knitted by hand, is offered by the wife of a house-painter at Dorchester. It is lined with rose-coloured silk, and is knitted from one continuous unbroken thread on pins by hand, and in its style it resembles the finest and most perfect lace trimming.

Mr. Bianconi, the noted Irish car-proprietor, has publicly notified to the Limerick committee that he will afford every aid in his power to facilitate the transit of his country's produce, wherever he is enabled to do so.

The *Morning Chronicle*, in noticing the German enthusiasm respecting intending visitors to the Great Exhibition, gives an amusing extract from an "Exhibition Conversational Grammar." It is taken from a portion of the work devoted to "a conversation between the visitor and a policeman"

Visitor: Hallo! Are you a policeman.—Policeman: I am, sir.
Visitor: Is this Fleet-street?—Policeman: This is Fleet-street.
Visitor: Where is the path leading to the Exhibition?—Policeman: That is the pathway either towards the Exhibition.
Visitor: Good by, sir,—and is about to proceed on his path.—Policeman: Hallos, sir
Visitor: What is it?—Policeman: Would you not like to go in a coach? There is a coach; its fare is only threepence.
Visitor: Thank you, sir (steps in the coach). Good by

The mineral wealth of Great Britain will be adequately shown, *malgré* much apathy from the mineralogists of certain districts; the products of the north Derbyshire quarries, say the local journals, are to be contributed by the bosses of the marble works of Bakewell, &c.; while the spars, marbles, stalactite from Matlock, and the blue flour spar, locally called blue John, found exclusively at Castleton, in the Peak, and which is one of the most exquisite (in its combined colours of blue, red, and purple) of the Derbyshire underground riches, will appear in the shape of a colossal antique vase. The same contributor offers a collection of ornamental marble tables, vases, and chimney-slabs. The peculiar wealth of the country will be carefully and scientifically illustrated, and will compete with the rare specimens promised by the collectors of Irish and Scotch mineralogical treasures.

Reports from Jersey are similarly gratifying; the granite, &c., of the island are in preparation, and the allotments of space are to be presented to the subscribers of the fund for the Exhibition.

Prizes, it may be recollected, were proposed by the Bolton Operative Fund for the best design in figured textile fabrics to be forwarded to the Exhibition. The jury of manufactures have awarded £5 for the best design of a damask furniture, and £3 for the best design of a shawl pattern, £3 for the best design of a muslin for ladies' dresses. The subscriptions among the visiting clubs are reported in progress, and practically demonstrate the increasing interest of the working classes of the metropolis in the Exhibition.

We gave last week the principal features of the Catalogue, which the Executive Committee are now expediting. So as to ensure uniformity, forms have been prepared for sale to be recollected, when purchased, are to be written in a peculiar manner in black, machinery in blue, manufactures in red, and the fine arts in yellow ink: each of the four vary in size, so as to obviate confusion.

The Mayor and Council of Southampton have addressed the President of the American Republic regarding Southampton as the port of arrival of the line-of-battle ship conveying the contributions from the other side of the Atlantic. They express the earnest sympathies of the town with the purposes of the Great Exhibition, and add that their port offers suitable dock and railway accommodation; while the navigation to the Thames is notoriously insecure from the Isle of Wight. As the freight of the vessel is unique, we heartily sympathise in the spirit of the address; our own well-founded opinion being that two-thirds of vessels trading to London should discharge cargo at Southampton, from the insecure harbourage, currents, &c., of the whole river, even past the Downs. All charges on the vessels would be suspended by the dock company, and the railway company are to be asked to convey all the articles landed from the vessel free of charge.

The London accommodation for visitors, it is suggested, may be increased by the establishment of "mechanics' homes," temporarily erected near the termini of the railways running into town. Inquiries have already been set on foot in this direction by one of the largest hotel-keepers in the metropolis.

The pecuniary demand for additional strength to the police force is so considerable, that some idea has been entertained of watchmen, &c., appurtenant to the building, &c., only, under the control of the Executive Council. It seems to us that such a step would be more economical, more independent, and more agreeable to the public if adopted, than any considerable increase of the metropolitan police.

Northam, Bradford, Chatsworth, Gosport, Devizes, parts of Yorkshire, Edinburgh, Newcastle, Glasgow, and the great seats of industry at Manchester, Birmingham, Sheffield, &c., all report the satisfactory progress of the subscription clubs. Even in some of the agricultural localities, these associations are thriving; and it is generally acknowledged that they will be the means of begetting a sense of the value of providence and foresight among those classes who are rarely enabled to exercise those virtues. At Cirencester, Cheltenham, Farnham, Dorking, and Abingdon, steps have already been commenced in this direction—somewhat partially, but still sufficiently promising to evince the local feeling of labourers and others in the towns.

OBITUARY OF EMINENT PERSONS RECENTLY DECEASED.

JAMES, LORD TALBOT DE MALAHIDE.

This nobleman, who succeeded his brother, 29th October, 1849, and had consequently held the title little more than a year, died on the 20th instant, at Evercreech House, Somersetshire, of which county he was a magistrate and Deputy-Lieutenant. His Lordship was second son of the late Richard Talbot, Esq., of Malahide Castle, county Dublin, by his wife Margaret, daughter of James O'Reilly, Esq., of Ballinlough, county Westmeath, which lady was created, in 1831, Baroness Talbot and Malahide. He married, 26th December, 1804, Anne-Sarah, second daughter and co-heir of Samuel Rodbard, Esq., of Evercreech House, county Somerset, and leaves a numerous family, the eldest son of which is James, present Lord Talbot and Malahide. Few houses in the empire are of greater antiquity or more distinguished ancestry than that of Talbot of Malahide. The Castle of Malahide, which stands on the sea coast, near Dublin, have been possessed by the Talbots from a period contemporary with the first introduction of English government into Ireland, and, at this moment they furnish an example of a family of great antiquity in that country, which derived its name from the parish of Hawking in the hundred of Folkestone. There were two other daughters and co-heirs of the late Mr. Hawkins: one married to Henry Butterworth Lord Teynham, and the other to Henry Goold, Esq. The issue of Lady Knatchbull consisted of two sons and six daughters.

JOHN PETER BRUNO BOWDON, ESQ., OF SOUTHGATE-HOUSE, COUNTY DERBY, A MAGISTRATE FOR THAT SHIRE.

This gentleman, whose death took place on the 17th inst., aged sixty-three, represented, paternally, the old family of Bowdon, of Bowdon Hall, county Derby, and maternally, the equally ancient and still more eminent house of Erdeswick, of Hartley Green, county Stafford, of which was the famous antiquary.

Mr. Bowdon succeeded to the estates at the decease of his father, in 1833, and served as High Sheriff of Derbyshire in 1841. He married, 26th February, 1812, Mary Martha, eldest daughter of Edward Ferrers, Esq., of Baddesley Clinton, county Warwick, and has issue by her (who survives him) two daughters, Helena-Mary, is wife of Peter Constable Maxwell, Esq., of the Grove, Richmond, Yorkshire; and the second, Barbara, of Edward Wright, Esq., of Kelvedon Hall, Essex, two sons—Henry Bowdon, now a Southgate Horse and Reighton-fields, Justice of the Peace, and John Butler-Bowdon, Esq., of Pleasington Hall, county Lancaster.

COLONEL WILLIAMS.

Colonel George Williams, formerly M.P. for Ashton, died at Woolton, near Liverpool, on the 19th inst. He was born at St. John's, Newfoundland, of which dependency his father was Chief Justice. At the age of twelve he joined General Prescott's army in America, and was present at the Battle of Stillwater: after which he accompanied Lady Harriett Acland on her memorable expedition down the Hudson to join her husband in captivity, but was not made prisoner by General Gates on account, it is supposed, of his juvenile youth; for afterwards we find him carrying the flag of truce into the enemy's lines on the capitulation of Saratoga. At the conclusion of the American war, he joined H.M 20th Regiment, and served with it during twenty-three years in Jamaica and St. Domingo, and in Holland; and on the staff of General Crampagnol in Ireland, during the French invasion of 1798. In 1800 he quitted the army; and from that time, until the passing of the Reform Bill, was present in the political history of Lancashire as the stern and consistent supporter of civil and religious liberty. He represented Ashton in the first Reform Parliament. He died at the age of 87, and is supposed to have been the last survivor of the army which surrendered at Saratoga.

The Late Lord Leigh.—In our Journal of last week, it was erroneously stated that the late Lord Leigh was a Roman Catholic: whereas, his Lordship was distinguished by "his steady adherence to the Established Church, in which he had been a most influential member through life in its close." Our information was derived from the Peerage list in the "Royal Kalendar for 1841" (about two years after his Lordship's elevation), in which the noble Lord is stated as a Roman Catholic.

One Hundred Years and more.—An old man named John Dixon, alias Scotch John, who was born in January, 1736, being now nearly 113 years of age, a farmer, resident at Knowl-hill, Spofland further-side, about five miles from Rochdale, on the Haslingden-road, sent word to the Rochdale board of guardians on Friday week, that his wife should him very much, and he wished to be removed to the workhouse. He had kept the farm above fifty years, and he had seven cows, but during the last six months he had been confined to his bed; he had neither been washed nor shaved for above half a year, and his wife exhibited him at two-pence for each person. The relieving officer was directed to go for the aged man and place him in the workhouse, and accordingly he has since been removed to Spotland workhouse.

MUSIC.

SACRED HARMONIC SOCIETY.

Notwithstanding the severity of the weather and the thick fog last Monday night, the performance of Mendelssohn's "Elijah" was, on the whole, magnificent. There were, however, some contrarieties amongst the principals.—Miss Birch having a bad cold, and Mr. Whitworth singing, as a very short notice, the part of *Elijah*, in the absence of Mr. Phillips from indisposition; but Miss Dolby and Miss M. Williams, who divided the contralto pieces, and Mr. Lockey, who had the tenor portion, were in excellent voice, and sang with their well-known skill. Miss Eliza Birch, a pupil of Manuel Garcia and Sir George Smart, shared, with her sister, in the soprano parts, and made a highly favourable impression, particularly in the lovely trio, with Misses Williams and Dolby, "Lift thine eyes." Mr. Whitworth, who was so effective in the "Messiah" a few nights since, was not so fortunate in the "Elijah;" but every allowance must be made for a first attempt under such circumstances: he has a very fine voice, and it will be his own fault if he should not hold the highest position as a basso.

The choral singing, despite of the choking mist, was excellent—we may notice the "Yet doth the Lord," "Blessed are the men," "Baal, we cry to thee," the call and answer," &c., as remarkable instances of the nice observance of light and shade. The "Thanks be to God" was most majestically rendered, the brilliant under-current of the orchestration being most exquisitely developed by Costa judiciously using the time shake somewhat slower than had been recently the case under other *bâtons*. The long and elaborate instrumental symphony, after the opening declamatory recitative, might, we think, be accelerated with advantage. In the second part, the "Be not afraid," and the "He, watching over Israel," by the chorus, left nothing to be desired. The point "Upon your faces fall," in the chorus "The fire descends from heaven," was made by the singers with thrilling effect, and such artistical beauties in the interpretation of solos compensate for any trifling casualties that might be indicated, if such a vigorous *ensemble* be analyzed with hypercritical spirit.

One word to the principals—they will they persist in making such exertions to "sing" the recitative portions, instead of declaiming them naturally, with the dramatic intelligence and force intended by the composer?

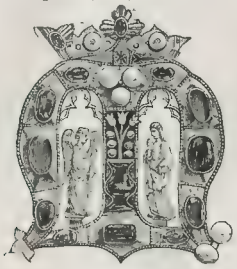
GRAND NATIONAL CONCERTS.

These musical entertainments, which commenced on the 15th of October, terminated on the 23rd (last Monday). Sixty concerts have been given by the "executive committee, directors, and managers," at a loss, it is rumoured, of an average of more than one hundred pounds on each concert. This disastrous result, for the sake of art-progress, is certainly to be regretted; but so many mistakes have been made by the management, that little surprise can be felt at this financial ruin. The idea of the concerts was a national one, and the public and public conceived that "national" meant "English!"—the acts of the executive committee have proved that there has been no nationality of any kind in the undertaking. The programme has rested upon a foreign basis; and of the "talent" of the nation given to the concerts. This unfortunate programme, bombastic and inflated in tone, was impossible in execution: it played fast and loose with music, promising everything, from the oratorio down to the polka, and performing nothing. Of the performances never took place; and of the "monumental productions of Germany, Italy, France, and England, to be classed under one head," there never was, out of the sixty nights, one single example. Those are strong passage in this prospectus, verified by the result, as they are grossly exaggerated was already known, and, when the truth was, to a certain extent, observed. Down almost to the scheme of the last concert, the names of Berlioz and Meyerbeer David were retained in the bills as "principal composers," and not a note of their music has been heard no less, certainly, as regards David. Sivori's name was equally exhibited and turned to account long after it must have been known that he would not visit London before the next spring. "M. Thalberg," who, the bills stated, "will introduce several new *morceaux*, written expressly for these concerts," has never been forthcoming, although he has been for some time in Vienna. Mr. E. Loder's "Telemachus" or "Calypso" has been actually announced night after night, and yet was not produced. A new symphony by Molique, Rossini's "Stabat Mater," and Mendelssohn's "Walpurgis Night" were also advertised, withdrawn, advertised again, and finally never performed. In short, nothing announced, at last, became so uncertain, that not the slightest faith could be placed by the public as to the night's performance. On some of the administrative blunders it is now useless to dwell; it has been evident that there must have been considerable vacillation and timidity of purpose in the concerts. We prefer to mention the doings of the executive rather than to record the misdoings. The great event has been the importation of the Berlin Choir, not the "fifty male voices" mentioned in the bills, but twenty-four men and boys, one-half of the Chapel Royal body at Berlin; quite sufficient, however, in numbers, under their efficient conductor, Herr Kapelmeister Neithardt, to delight the public with the most perfect part-singing of the kind in this country. If this choir had remained the whole of the concerts, it would alone have sufficed to attract crowds to Her Majesty's Theatre. Two out of the three English serenata, by Macfarren, Bennett, Cooper, and Loder were produced; the first, "The Sleeper Awakened," although a great artistical success, was not calculated far a promenade concert; the second, "Hero and Leander," by Mr. Howard Glover, gave the cue to the German Reed Entertainment; and Mr. Loder's Overture, which, from the reputation of the composer of "Giselle," might have saved the credit of the management, so compromised by permitting the "Hero and Leander" to be produced, was not performed at all. The new symphonies by Spohr and Tanbert made no sensation, but it was praiseworthy to have tried them. Balfe's MS. Overture and Hunting Chorus were not worthy of his reputation. Lablatzky's "Quadrille of all Nations" and Rousselot's "Grand Galop Chinois" were the most not sufficiently clap-trap for promenade purposes; Jullien's highly-spiced "potage" being more to the palate of the "gents." The sixty schemes have presented the eighty pieces of Beethoven (the choral No. 9 alone the choral Fantasia), about Mozart's "Jupiter," and Mendelssohn's A minor, besides the following overtures:—"Gustavus," "Zanetta," "Fra Diavolo," "Domino Noir," "Masaniello," "Guillaume Tell," "Oberon," "Der Freyschütz," "Der Sommernachtstraum," "Fidelio," "Leonora," "Egmont;" Cherubini's "Anacreon;" Mendelssohn's "Melusina," "Isles of Fingal," "Midsummer Night's Dream;" "Der Freyschütz;" Spohr's "Jessonda" and Concert Overture; Beethoven's "Leonora," "Fidelio," and

CURIOSITIES.

RELIQUE OF WILLIAM OF WYKEHAM, NEW COLLEGE, OXFORD.

This elegant specimen of mediæval jewellery is presumed by some antiquarians to have been one of the elaborate enrichments of the jewelled mitre of the renowned Bishop of Winchester, William of Wykeham; other antiquaries have considered it to be a morse, or clasp; and we think this latter opinion is in some degree borne out by a representation, in the elaborate work of Felibien, "His toire de l'Abbaye Royale de St. Denis," of a similarly jewelled M, one of the treasures of the famed Abbey of St. Denis. The discussion of this archæological controversy, however, we leave to abler antiquaries than ourselves; we therefore briefly notice the character of the Jewel. In shape it is a capital letter M, crowned. The centre of the letter has a vase, from which spring three lilies, emblems of the Virgin, beautifully enamelled, and in the spaces on either side, which have beautifully wrought Gothic tracery in their headings, are figures of the Virgin and the Angel Gabriel, forming, in fact, the subject of the Annunciation. The Jewel is set with precious stones and pearls, in addition to the enamel work



LETTER-RACK.—WILLIAM OF WYKEHAM'S JEWEL.

NOOKS AND CORNERS OF OLD ENGLAND.

BINHAM PRIORY CHURCH, NORFOLK.

Blomefield, in his "History of Norfolk," says:—"This celebrated Priory of Benedictine Monks, dedicated to St. Mary, as a cell to the Abbey of St. Albans, was founded (A.D. 1205) by Peter, Lord Valoins, the Conqueror's nephew, who endowed it with the lordship of the town, and other grants of land from the adjoining parishes, which were considerably increased by his successors. King Henry VIII. afterwards granted the site of this Priory, the manor and rectory, with other lands in Walsingham, Wells, Gunthorpe, Barney, and Thursford, to Thomas Paston, Esq., one of whose successors sold the lordship, with others, to a merchant in London.

"The Church was dedicated to the Holy Cross, and the rectory appropriated to the Priory. A print of the ruins, with the Church (a great part of the west end of which was then standing), was published by a Mr. Buck, in the year 1738."

The west front of the Priory Church is very fine Early English. On the ground is a rich arcade, with perforated panels in the spandrils and under the heads of the side arches; the centre arch is a doorway with fine mouldings, and varieties of the enriched tooth ornament. Above the arcade is a magnificent west window, of two principal lights and a foliated circle in the head, each light subdivided in the same manner; but the whole has been long built up with bricks, with the exception of the foliated circle at the top, which was glazed a few years since at the sole expense of the late T. T. Clarke, Esq., the impropriator, the lord of the manor, and principal proprietor of the parish. The ends

SOUTH-WEST VIEW OF BINHAM PRIORY RUINS, NORFOLK.

of the aisles, which form part of the west front, had each a small doorway, and over it a tall window of two lights, with transoms and sub-arches, and a foliated circle in the head; the cusps of the large circle and some of the small ones have flowered points. On the gable is an early English bell-cot, with a bell in it. The pleasant and picturesque village of Binham is much frequented in the summer by families visiting at Cromer and other watering-places on the coast.

Proposed Park for Finsbury.—A deputation, consisting of Lord Robert Grosvenor, M.P., Sir James Duke, Bart., M.P., Mr. Wakley, M.P., and several persons of local importance, waited upon Lord John Russell, on Tuesday, at his official residence, in Downing-street, to present a memorial agreed to at a meeting of nearly 3000 inhabitants of Finsbury, on the subject of the new park, so much desired in that borough. The deputation was introduced by Mr. Wakley. Mr. Woodward urged the necessity of procuring an open space in the northern district of London for the healthful recreation and exercise of the vast multitudes it contained. He also impressed upon his Lordship that, as a sanitary measure, the proposed park had the strongest claims upon the favourable consideration of the Government. Lord Robert Grosvenor observed that he had presided at the meeting from which the memorial had emanated, from a strong conviction, not merely that a park north of London was necessary, but also because he thought it but just that the same provision should be made out of the public resources for Finsbury as had been made for the metropolitan inhabitants south and east of the Thames. His Lordship added, that the site of the proposed park was equi-distant from Regent's and Victoria Parks, and would, if adopted, complete the circle of parks round London. Mr. Lloyd then explained to the Premier, at the request of Lord Grosvenor, the plan and situation of the proposed park. Three plans were alluded to, viz. one containing an area of 540 acres, which, it was estimated, would cost £340,000; 480 acres, at a cost of £260,000; and 280 acres, for £180,000. Lord John Russell manifested some surprise that the City of London had not interfered, and pressed some open spaces as had been alluded to by Mr. Lloyd, to being combined with Finsbury.—Mr. Parsons said that Lord Seymour and Sir George Grey had both admitted the importance of the object, but had suggested difficulties, on the ground of expense; and it was for that reason the deputation had waited on his Lordship's assistance and support.—After some observations from Mr. Wakley and other members of the deputation, Lord John Russell remarked that it appeared to him that the proposed park was desirable, and he would confer with Sir George Grey and Lord Seymour on the subject.—The deputation, having thanked his Lordship, withdrew.

Public Park at Macclesfield.—At a meeting of the committee for establishing a public park and free library in this town, last week, it was stated that about £300 had been collected, almost exclusively in pence, from the working classes, the middle and higher classes not yet having been solicited. It was also mentioned that Mr. Frost, machine maker, had offered to provide palisading, and do any kind of ironwork that might be necessary in carrying out the undertaking, free of charge.

THE THEATRES.

THE CHRISTMAS ENTERTAINMENTS.

PANTOMIMES and Burlesque divide the dramatic throne at Christmas, in these days. The exclusive reign of the former no longer continues. Nevertheless, the number of Pantomines is rather increased than diminished; while in regard to Burlesques, they have of late years literally spawned at every holiday, and not infrequently at other seasons also. Judging from rumours, and also from the titles and subjects of the pieces, the present Boxing Night promised to be rich in entertainment. Nor has the result been a disappointment.

The note of promise recorded in our Journal of last week has been successfully responded to at the several metropolitan theatres; each producing a pantomime, or extravaganza, for the special gratification of the Christmas holiday visitors.

LYCEUM.

At this theatre, Mr. Planché presents us with an exquisite version of "L'Oiseau Bleu," from the famed repertory of the Countess d'Aulnois. It is entitled "King Charming; or, the Blue Bird of Paradise." The original story has been closely followed. Madame Vestris enacts *King Charming* with right royal grace: her dress was evidently taken from the state costume of the Nepaulese Ambassador. Mr. Frank Matthews and his wife, as *King Hempseik* and his spouse, were admirably comic; and Miss St. George was very fascinating as the heroine. It is impossible to bestow too much praise upon the scenery, painted by Mr. Beverly and Mr. Meadows: from the rising of the curtain to its final descent, all was perfect; some of the scenic effects even surpassing those of former wonders.

The principal characters are sustained by Madame Vestris, Miss Julia St. George, and Mr. and Mrs. Frank Matthews. With such actors, a piece from Planché's pen, and the exquisite scenic effects with which this theatre always augments its dramatic effects, we need hardly say that a pleasing and brilliant result was produced.

The plot of the piece hinges chiefly upon the resolve of a queenly step-mother to marry her own rather than her step-daughter to *King Charming*, who is accordingly tricked into eloping with the "wrong lady;" and when, on discovering his blunder, he refuses to wed the lady, is transformed by her fairy god-mother into a bird of paradise—a blue one (the "oiseau bleu" of the original story), and in this guise discovered and slain by the Queen-Mother; but, restored to life and the human form once more, on condition that he shall within six months marry the lady whom he does *not* love. The incidents of the first act bring us to this point of the history; and the second is devoted to the efforts of the heroine for the discovery and release of her lover, which are at length effected; and the fates relenting, forgive the "*condition* of the bond," and permit the union of the true lovers.

We have engraved one of the most splendid scenes of this elegant spectacle, in which author and artists have alike achieved new triumphs.

PRINCESS'.—SCENE FROM "ALONZO THE BRAVE AND THE FAIR IMOGENE."

HAYMARKET.

The lessee of this theatre was, as usual, prepared with a first-rate *Christmas Box* for the play-going public on Boxing night. After the comedy of "Every Man has his Fault" (very creditably played), an entirely new burlesque extravaganza was produced; it is called "The Second Calendar, and the Queen of Beauty who had to fight with the Genie;" by the brothers Brough, authors of several very successful pieces of this description. The piece is most splendidly got up, both as to costume and scenery, and was highly successful.

The plot of the piece is very well arranged; it is taken from not only the celebrated story whose name it bears, but also from another tale in the same work, the celebrated "Arabian Nights' Entertainment," the two stories being very ingeniously *done-tailed* with each other. The introductory scene is a picnic in the Desert, in which the *King of the Ebony Isles* (Mr. J. Bland) incurs the displeasure of a malignant genie, *Jarparkes* (Mr. E. Selby). The latter foregoes his intent of revenge which he threatened, on consideration of receiving the hand of the fair daughter of the *King*, the *Princess Gulnare* (Mrs. L. S Buckingham), and immediately starts for his demon palace with his fair prize in a Hansom cab. The *Prince Agib* (Miss Anne Romer, her first appearance at this theatre), has been robbed by banditti, and is discovered bound to a tree by *Codja*, a woodman (Mr. Buckstone), who kindly employs his axe and his woodcraft, liberates the *Prince*, and cuts down the tree. This done, they discover a secret entrance to the *Genie's* dwelling, in which *Gulnare* is imprisoned; of course the *Prince* falls in love with the *Princess*, and the *Genie*, in his rage on discovering it, transforms the handsome *Prince* into an *Ape* (played by Mr. Lebarr). The *Woodman*, the *Ape*, and *Zobeydeh* (Mrs. Fitzwilliam), maid of all-work to the *Genie*, make their way to the Court of the *Rajah of Mullingatawny* (Mr. J. Bland again), and find him in a sad dilemma: he has discharged his Ministry, and advertises for a Secretary of State; and submits, as a test of superiority, that he who writes the best hand shall have the *Portfolio*. There are many competitors; amongst them, the *Monkey Prince*, who, though transformed in person, still retains the use of his superior endowments. He is made the *Rajah's* secretary. The *Princess Zaida*, the Queen of Beauty (Miss Priscilla Horton), the *Rajah's* daughter, has been long trying to establish an Industrial Exhibition of all Nations at Mulligatawny, but has hitherto been foiled by *Jarparkes*, the evil genie. She herself has fairy powers; and, meeting her enemy, they fight. She conquers; restores *Prince Agib* to his former state, establishes her Grand Exhibition; and the piece ends to the satisfaction of all, except the *Genie*

The performance was capital. The *débutante* Miss Anne Romer was most loudly applauded and encored in her songs, and will prove a valuable acquisition to the company. Miss P. Horton sang with her usual taste and effect; some of her songs were excellent—a duet she has with the *Rajah*, in which she wishes to try her necromancy on him, was in capital taste. Buckstone, as the *Woodman*, together with Mrs. Fitzwilliam, was comic in the extreme. Mrs. Buckingham looked and played her little part well, as did in fact the whole of them. Bland and Selby are indispensable to this part of the drama, and did all the authors could wish them.

The whole of the actors, especially Miss Romer, was loudly called for, and appeared, as did the author. The piece is a decided hit.

We have Engraved the opening scene of the action between *Codja* and *Prince Agib*.

OLYMPIC.—SCENE FROM "PRINCE DORUS; OR, THE ROMANCE OF THE NOSE."

SADLER'S WELLS.

The pantomime here is a sort of *piece de circonstance* touching the forthcoming Exhibition of 1851, with the *apropos* title of "Harlequin and the House that Jack built in 1851; or, the Genie of the Ring and Aladdin's Wonderful Lamp." The enchanted workshop of *Jack-of-all-trades* opens the drama; who announces to his workpeople that he means to build a house of industrial exhibition. *Invention* ultimately intrudes, on the plea that *Jack's* exhibition cannot take place till May, whilst her's comes off on this present Boxing Night. The fairy part of the business is adapted from the celebrated Arabian story which gives the sub-title to the piece. This is very cleverly adapted to the scene. After which the transformations commence, and the pantomime proper proceeds with spirit. The scenery is upon a much more splendid scale than ordinary at this house with this class of entertainment. Notice is particularly merited by the scenes of the enchanted cavern, the Royal gardens, the flying palace, and the factory of invention. The hits and the tricks were of a popular character, and proved very effective. Cobden and the Army Estimates, Louis Napoleon, Haynau and Barclay's draymen, the Pope, and Lord Brougham were the principal butts. A morris dance by the pupils of Mr. Frampton was, in particular, very much liked by the audience.

The piece was preceded by Southern's play of "Isabella;" in which Miss Glyn supported the part of the heroine with that originality and power for which she is so remarkable. Her reading of this character is, indeed, entirely new; but on this we must take another opportunity to dilate.

We have engraved a ludicrous scene in the opening.

PRINCESS'.

After "The Stranger," followed the pantomime, already announced, "Alonzo the Brave and the Fair Imogene"—a title implying an ambitious design, if not a poetical conception. The legend is followed with good effect. The quarrel between the fairies *Fidelity* and *Infidelity* is suggestive; and the scenic effect of moonlight melting into sunlight, and then of the landscape itself dissolving into another view, is eminently pleasing. Thus brought into the presence of Le Brave and the Fair, doomed soon to separate—he for the Holy Land, and she for her lonely bower—*Imogene*, however, as in the ballad, swears inviolable constancy; and, also as in the ballad, violates both her vow and constancy at once, being "dazzled" and "bewildered" by the gold and jewellery of an enormously wealthy baron. Previous to the wedding, however, the faithless fair one hears of the death of her lover; but this circumstance not absolving her from her vow, conjures up terrors in her looking glass. Nevertheless, under the direction of Soyer, the nuptial festivities proceed. At the hour of one a stranger guest appears seated at the banquet, with his countenance concealed by his beaver. He proves, of course, to be the ghost of *Alonzo*, come to claim or to reproach the lady. He demands the fulfilment of her oath:—

> If I be living, or if I be dead,
> I swear by the Virgin, no one in your stead,
> Shall the husband of Imogene be.

There is no chance either for the Baron or for her; and off she must have gone but for the interference of the fairies *Affirmative* and *Negative*, who decide upon giving the lovers another trial as *Harlequin*, *Columbine*, and *Pantaloon* (Mr. Cormack, Miss le Clercq, and Mr. Paulo); Mr. Flexmore being the *Clown*. In all respects the piece was well appointed, and admirably represented.

We have engraved the beautiful moonlight scene.

OLYMPIC.

Mr. Tom Taylor takes the subject of Madame D'Arbley's "Prince Dorus" for his Christmas piece—the pet of the good and the prey of wicked fairies. The latter curse the child in its cradle with a big nose. *Furiosa* is the name of the "heldam," whose nasal malediction becomes so inconveniently objective in another. The consternation of the Royal pa and ma is excessive; but, in the second scene (by which time, with railway speed, the youth has become a man of one-and-twenty), they have got accustomed to the enormity of their son's "prominent feature." He now advertises for a wife, and receives in reply the portraits of all the princesses in the world—all at least who are marriageable. The portraits are cartoyant, and discourse with the lover, who thus holds a chat with the *Princess of Mopsonette*, and subsequently has an interview with the lady herself. But the nose! She would fly from that. Pursued, through earth, air, and water, she is at last caught napping by the *Prince*, who, in stooping to

DRURY-LANE.—SCENE FROM "HARLEQUIN AND HUMPTY DUMPTY."

ADELPHI.—SCENE FROM "LA TARANTULA; OR, THE SPIDER KING."

kiss the sleeping beauty, finds his nose too long. On this discovery depended the spell. It is made, and the nose sinks from a non-natural to a natural organ of sense. No longer blind to his own defects, on their removal nothing thenceforth stands in the way of his cherished object. And thus successfully ends the "Romance of the N—se,"

with a splendid *tableau*,
The scenes being all in the style of Watteau.

We have engraved the cleverly-managed scene of the interview.

DRURY-LANE.

This theatre re-opened for its brief holiday season on Thursday, with the "Winter's Tale;" Miss Vandenhoff performing *Hermone*, and Mr. Anderson *Leontes*. The pantomime, in which the lessees has, we believe, been assisted by Mr. Fitzball, is entitled "Harlequin Humpty Dumpty; or, Robin de Bobbin, and the First Lord Mayor of London." The subject unfortunately lies under the disadvantage of not being generally known. The hero, who, in legendary lore, is mentioned in connexion with the *Old Woman of Finchley*, is *Humpty-Dumpty* and opposed to *Big Ben*, of Highgate, *alias Robin de Bobbin*, a giant, who is celebrated for his cormorant propensities. It is recorded of him that

He swallowed a cow and a calf,
A butcher and a half,
A church, the steeple,
And all the people;

During the absence of *King Richard* in the Holy Land, *Robin* becomes an outlaw, and levies black-mail on the good citizens of London. *Maude*, the "fayre maide of Chepe," is the heroine, who is loved by *Hal Fitz-Hearte-of-Oak*, whose ultimate happiness is secured by the agency of *Humpty-Dumpty*. But the old *Crone of Finchley*, determined to prolong their trials, transforms them into *Harlequin* and *Columbine*. All this, and much more, is not so clearly represented in the pantomime as might have been desired. The scenes are numerous and long; costly in their getting up, but requiring to be abridged both in their business and dialogue. Neatness and directness of purpose are required in all pantomimic exhibitions; for, unless they tell their tale at once, they are ineffective. The tricks, though numerous, and the hits, though well intended, were not quite palpable enough. The scene of the Glass Palace in Hyde-Park is one of the most effective; and that of General Haynau turned out of "a general thrashing machine," and attacked by the mob of draymen, excited most laughter. The whole concluded with a brilliant set scene, representing the "Fairy Abode of Britannia." The pantomime characters were well supported; Mr. Deulin being *Harlequin*; Mdlle. Theodore, *Columbine*; Mr. J. Deulin, *Pantaloon*, Signor Farkuil, *Sprite*; and Mr. Seymour, *Clown*. The performance lasted till past one in the morning. The music has been selected by Mr. Henri Laurent, and was of so pleasing a character that it went far to redeem the scene from the weariness incident to their too great length. When reduced in quantity, the pantomime may be more favourably received than it was on Boxing Night.

We have engraved a scene in which the hero figures in grotesque rotundity.

SURREY.—SCENE FROM "THE MERRY WIVES OF WINDSOR; OR, HARLEQUIN AND SIR JOHN FALSTAFF"

ADELPHI.

Here Mr. Albert Smith presents us with "The Tarantula; or, the Spider-King."

The piece opens with a scene, representing the Realm of Reptiles, in which *Spiderion*, the King of the Spiders, and other unearthly objects, are brought into notice, so as to constitute a Monster Meeting, which is terminated in a skilful manner by its transformation into a cloud. In a subsequent scene the height of the ridiculous is attained in a "coaching incident," in which a car is introduced, drawn by horses made of boys, two to each horse.

Luigi (Miss Woolgar) is the victim of the tarantula, receiving what is supposed to be a fatal bite; and, on the strength of this belief, *Luigi's* betrothed, *Loretta* (Madame Celeste) is affianced to *Dr. Gimcpanico* (Mr. Wright), but *Luigi's* recovery slightly deranges this secondary arrangement, and restores the *status quo*. In the course of the piece "the village in flames" furnishes opportunity for a very brilliant and effective scene.

[illegible] of the piece Madame Celeste greatly contributed, by the [illegible]; and Miss Woolgar played with her usual dash and high [illegible] Mr. Paul Bedford as the *Bandit*, and Mr. Wright as the *Quack Doctor*, were perfection. The scenery is throughout good; and the Magic Cave, at the close, is brilliant.

The Illustration is a most effective *tableau* of the principal characters.

SURREY.

This transpontine theatre has turned "The Merry Wives of Windsor" into harlequinade. The Christmas pantomime is, in fact, "Shakspeare Burlesqued;" and, as characterising the management of the theatre generally, it may, perhaps, be permitted to pass without censure. Windsor-Park and environs furnish the subjects of the scene, and the story of the drama is literally followed, up to the commencement of the transformation. *Falstaff*, *Ford*, and *Page*, with their wives, &c., being reproduced in exaggerated semblances. Sorry work; but to this profanation great poets are subjected by the irreverent and the selfish. All the appointments are of a costly description. The gorgeous pavilion of butterflies and the National Exhibition of 1851 are both attractive scenes.

The scene engraved is the never-to-be-forgotten incident of the back-basket, in Datchet Mead.

MARYLEBONE

It does not say much for the management, that the pantomime at this house was preceded by the long-discarded tragedy of "George Barnwell." The former is called "Harlequin Alfred the Great; or, the Magic Banjo and the Mystic Raven." *Blue Devils* in the playground of Despair, and in four *tableaux* lead off the piece, from which they are driven by *Hope* and *Old Joe Grimaldi*. The *Cupe*, the *King*, and the *Dame* form the chief historical incident, and the comic business ends with the transformation of an English oak forest into the English Fleet. The *Clown* was performed by Tom Matthews.

ASTLEY'S.

The equestrian drama at this theatre is altogether a grand affair. "Harlequin and Donoghue; or, the White Horse of Killarney" is unrivalled for gorgeousness of effect. It was preceded by the spectacle of "Kenilworth;" thus filling for an entire evening the eye with magnificence.

We have now gone through the principal theatres; others of less repute, however, have not been wanting. Nelson Lee's "Knife, Fork, and Spoon," at the City of London, is novel in its subject and striking in its development; at the Queen's we have "Cinderella and the Glass Slipper;" at the Victoria, "Harlequin Georgey Barnwell, the Fatted London Apprentice;" at the Grecian Saloon, "Harlequin and the Crystal Palace of 1851;" at the Pavilion, "Sugar and Spice, and all things nice;" and at the Standard, "Buttercups and Daisies."

Diorama of the Holy Land.—The very successful painters of the Panorama of the Nile have very nearly completed a large moving Diorama Picture of Syria and Palestine, illustrating not only the localities referred to in Biblical history, as the various scenes of Holy Writ; but also modern events and recent discoveries. The effects will be novel—the route the most attractive; and the whole will be painted from original sketches, so as to "present the Holy Land as it now appears to the traveller, in its picturesque beauty, and its many hallowed associations."

Mr. W. West, formerly of the Haymarket Theatre, was well received in his entertainment of a "Hit at Men and Manners," on Monday last, at the National Hall. Miss Vaughan was deservedly applauded and encored in all her songs.

An infant prodigy, armed *cap-à-pie*, *à la* Betty, was announced for Monday, at the Soho Theatre, in certain parts of "Hamlet" and "Richard III." Exhibitions of this kind are primarily objectionable, if successful: to the present we need not urge the censure, as the condition is wanting by way of motive.

NAVAL AND MILITARY INTELLIGENCE.

Recruits.—Major General Brown, the adjutant-general to the forces, when examined by the select committee on army expenditure, stated that not more than one-third of the recruits were natives of Ireland; and that out of 12,000 men required for the service during the present year, 6000 or 7000 would be exclusively English. The greater number, and better men, are enlisted from London than from the agricultural or manufacturing districts.

Royal Naval Female School.—Lieut. Tattnall has given an additional donation of thirty guineas to this institution.

Admiral Sir Edward Codrington, G.C.B., his friends will be glad to hear, has perfectly recovered from the complaint (water on the chest) which at his time of life (above 80) it was expected would have been fatal.

Admiralty Agents to the Cape Mail-Packets.—The Admiralty have appointed a commander (Commander Wplrige) as the agent to the first Cape mail-packet, instead of a Lieutenant, as in all other mail steam-packets, and it is understood that in these packets their Lordships have determined to appoint all Commanders, in order that they may have an opportunity afforded them, in the voyages to the Cape of Good Hope in these screw-vessels, of making themselves thoroughly acquainted with their principle of propulsion which, there is not the slightest doubt, will in a few years be applied to every ship of war in the navy.

Deaths of General Officers.—Since 1846 so many as 108 general officers have died.

Naval Commander-in-Chief.—Vice Admiral Sir George Francis Seymour, C.B., G.C.H., has accepted the appointment of naval Commander-in-chief of the West Indies, Halifax, and North American station.

Great Coats.—Circular.—Horse Guards, 18th of December, 1850. Memorandum.—Troops, when proceeding by railway during the winter months, and in cold weather at other seasons of the year, are, invariably, to wear their great coats.—By command, G. Browne, A.G.

New Pattern Coat for the Infantry.—The Duke of Cambridge has sent two red frock coats to the Board of General Officers, as patterns both for officers and men.

Retirement from the Foot Guards.—Colonel Lascelles, the senior officer in the Grenadier Guards, is, it is said, about to retire from the service by the sale of his commissions. The regulation value of these commissions is £9000, but it is notorious amongst military circles that much more is given in similar cases. Colonel Lascelles served with the Guards both in the Peninsula and at Waterloo.

PARIS FASHIONS FOR THE NEW YEAR.

The two great events of the week, which will certainly have great influence on fashion, are the ball at the Hotel de Ville (town-hall) and the opening of the President's drawing-rooms.

Unfortunately, it is difficult to describe the novelties; the fashions for balls and *soirées* are little sought after at present in Paris, as the gay season is but just commencing; and in London these toilets would create little interest. We shall, therefore, only describe the Morning Dresses.

Rich dress is the order of the day; not a bonnet but that is covered with ornaments, or a dress but of rich stuff; nothing but velvet morning cloaks, trimmed with fur, lace, or embroidery.

Dresses with the body open in front are so much the fashion, that even the severity of the weather cannot do away with them.

The fur which binds the velvet cloaks is always sable; this fur should form a tippet, to the end of the cloak. The shape of the close-fitting paletot is alone adopted for cloaks trimmed with fur.

Coins du feu are still rather short, but they all seem different from the variety of ornaments; they are also made of velvet, black, green, or garnet; corners rounded or square, and trimmed with a silk braid, or with embroidered lace-work; or completely covered with embroidery or braid.

We have seen in Paris, at Hervé Larchevesque's, Rue de la Paix, some *coins du feu*, which are quite Turkish ladies' jackets; they are made of brilliant coloured velvet, such as scarlet, bright green, or blue, and embroidered with small gold lace at the edge only. However, few, as yet, have dared give themselves up to this profusion of oriental braiding.

A charming novelty is the ornamented lining of the pagoda sleeves; the lining originally was made to show by means of their width; in order to obviate this unseemly sight, the sleeves are lined with white taffeta as well as the rest of the body; at the elbow, from the point where the sleeve widens, appear little flounces or puffs of taffeta ribbon, terminated by a quilling at the inside edge of the sleeve, matching the outside ornament. To this refinement we propose that the interior ornament should be a repetition of the exterior ornament of the sleeve, with this difference, that the inside should be white, and the outside should agree with the shade of the dress.

PARIS FASHIONS FOR THE NEW YEAR.

For Evening and Ball Dresses, the bodices are still open and square in front (Louis XV.), and trimmed with an infinite variety of ornaments. The stuffs chiefly worn at the *soirée* of the 10th of December, and at the Presidence, are those which are mentioned in our last Number. The antique watered silks are in the majority. The skirts of the dresses are infinitely and variously ornamented. First come lace flounces, laid on flat, either relieved with knots of ribbon or flowers, or trimmed above with a top-knot of satin ribbon, No. 3; then a dress of warped taffeta, white ground with cherry-coloured flowers and stripes very wide apart, with a short tunic. Another dress of taffeta, with two skirts, the upper one trimmed with two puffed flounces, the under skirt forming a third flounce, which is pinked at the bottom with large teeth, similar to the flounces.

THE ILLUSTRATIONS

Mousquetaire or Talma Cloak, bell-shaped; small collar, trimmed with mousquetaire gimp, with buttons; lined with silk. The upper part of the cloak only is wadded, tippet-shaped, so as to keep the back, shoulders, and breast warm, the rest is simply lined with silk, without being wadded, which permits of the bottom of the cloak being flexible. Dress, of plain taffeta, trimmed down the

NEW MUSIC, &c.

COMIC SONGS.—"COURTING'S VERY CHARMING," "My WIFE is a WOMAN of MIND." Composed by J. BLEWITT. Price 2s. each (sent postage free). These songs are the most humorous and popular ever published. "Courting's very Charming" is one of the best comic songs for a lady that has appeared for some time." My Wife is a Woman of Mind" is accompanied by tenor or baritone voices, being in the compass of most singers. The veteran Blewitt proves himself to be the most effective song he has ever written. It makes quite a sensation wherever he sings it.

DUFF and HODGSON, 65, Oxford-street.

"LAUGH WHILE YOU CAN," Illustrated SONG for the Season; Dedicated to all Sufferers in Mind, Body, or Pocket, 2s 6d. "Better than grumbling and swearing at a dull party." "We heartily welcome Mr. Fast. The philosophy of his song is delightful, and the music sparkling." For other favourable notices, see "Church and State," "Daily News," "Herald," &c Price 2s 6d, postage free.—LEADER, Printer-terrace, Kensington.

"THE MOUNTAIN DAISY," sung by Mdlle. JETTY TREFFZ, at M. Jullien's Concerts, and nightly encored; is now published; also, "The Boy of Naples," "The First Violet," and all the songs sung by Mdlle Treffz, may be obtained of JULLIEN and CO., 214, Regent-street

JULLIEN'S ALBUM for 1851.—This very favourite musical annual is now published, and contains all the newest dances performed at M. Jullien's Concerts, including the new vocal compositions by Augusina, Balfe, Baker, Barker, Loder, Macfarren, Maynard, Reed-Albert, and other composers of eminence. The illustrations include two beautifully-coloured Portraits of Miss Jenny Lind and Jetty Treffz, in oil-colours, by Baxter, patentee; together with a Fancy Frontispiece, by Brandard; and several Plates, engraved French covers, viz: in illuminated tinting, 18s each. JULLIEN and CO., 214, Regent-street, and all music-sellers.

JULLIEN'S CADEAU for 1851.—This elegant presents now published, and contains the newest waltz, quadrille, polka, and galop by Jullien and Koenig, with a new illustration in gold of the Crystal Palace by Brandard; the music beautifully printed on full music size paper, gilt edged, and tied with ribband in a handsome envelope, forming the most elegant present for a lady in any part of the kingdom. London: JULLIEN and CO., 214, Regent-street, and all musicsellers.

JULLIEN and CO.'S MUSICAL PRESENTATION and CIRCULATING LIBRARY established. Terms of subscription, 3 guineas per annum. The principal feature which distinguishes this Library from all others is the Presentation Copy being liberally supplied on loan during the year with all standard and new vocal and pianoforte compositions, are also presented with three guineas' worth of Music, selected by subscribers, which they can keep themselves during the term of subscription.—Prospectuses forwarded free on application.—JULLIEN and CO., 214, Regent-street.

JULLIEN'S ETRENNES for 1851.—JULLIEN and CO have now completed their collection of MUSICAL ALBUMS, Annuals, Bijoux, Gadeaux, and musical publications suited for Christmas Presents and New Year's Gifts, the whole of which are arranged for inspection similar to the Exposition du Jour de l'An à Paris. To the great advantage of this Exposition is that purchasers can see in one collection all the works published in London, and, after arrangement with the publishers, can purchase at more advantage than can elsewhere be obtained.—JULLIEN and Co., 214, Regent-street.

THE HON. MRS. NORTON'S NEW SET of ENGLISH BALLADS, entitled MUSIC ON THE WAVES, with a Coloured Title, Dedication, and Illustration by her Grace the Duchess of Montrose, bound and illustrated in colours, with an Original Drawing by SHIELDS, is just published, and forms by far the most attractive gift book for the season. Price 15s.—CHAPPELL, 50, New Bond-street.

PIANOFORTES for HIRE, at CHAPPELL'S, 50, NEW BOND-STREET.—Every variety of Grand, Cottage, and Square Pianofortes, by Broadwood, Erard, Collard, Dulcimers, Harps, and Harps by Erard, for Sale or Hire. Any one during a Piano for not less that one year can (if desired) choose a perfectly new Instrument from the factories of any of the best makers.—50, New Bond-street.

TOLKIEN'S 25-GUINEA ROYAL MINUTO PIANOFORTES, nearly 7 octaves, O G fall, metallic plate, with all the improvements made, warranted for three years, at sober-wood. The great peculiarity and worth of these pianos is, that they are not only of the most elegant and chaste design, but have a singularly beautiful tone and touch.—TOLKIEN, Manufacturer, 87, 88, and 89, Newman-street, Oxford-street, and at 30, Regent-street, two doors from Piccadilly. Drawings post-free.

REEVES' WATER-COLOURS.—REEVES' DRAWING PENCILS, Oil Colours, Brushes, and every article connected with Painting, of the best quality, and at moderate prices. London: May be had of all Stationers and Booksellers in town or country.

JONES'S £4 4s. SILVER LEVER WATCHES, and £10 10s. THE BOAR-HUNT,—PAINTED BY RUBENS,—FROM THE GALLERY OF THE LATE KING OF HOLLAND.

PARIS FASHIONS FOR THE NEW YEAR.

(*Continued from page* 514.)

front with a wide velvet ribbon and small lace of the same width. We have also seen dresses of Valencias with designs, one of which we describe: plain grey, or dark-coloured ground, with a large plaid ribbon down the front of the dress, which is surtout-shaped. Capote, with a flexible crown, trimmed with sloped satin to the middle of the front, trimmed at the edge with small lace, applied flat, and turning on the curtain, with a small ostrich feather.

Paletot, of chesnut, or black cloth; without waist, or buttons behind; lined with goffered stuff, in imitation of quilted silk; facing and collar of the same, edged with silk lace, as well as the pockets. Coats are still short in the skirt, and trousers rounded on the boots; the side stripes diminish daily.

PARIS FASHIONS FOR THE NEW YEAR.

PARIS FASHIONS FOR THE NEW YEAR.

Boys' Dress, of dark-coloured cloth or velvet, trimmed with a small braid down the edges, with gaiters similar to the dress, or drab only.

Girls' Dress is different: but only in the latter having, as in the picture, small bonnets, the front of which is slightly depressed towards the middle.

FINE ARTS.

THE BOAR-HUNT, PAINTED BY RUBENS.

This magnificent picture was formerly in the gallery of the late King of Holland, at the Hague, disposed of by auction in August last. It represents a forest at day-break; the brilliancy of the rising sun brings out the forms of the trees with fine effect. A boar, pursued by two cavaliers, is furiously advancing; a throng of armed peasants, partly screened by an uprooted tree, are rushing to the onslaught with their spears, and the dogs are attacking in every direction. Other cavaliers and peasants, with dogs, form several groups in the picture, which, as a composition, possesses high merit, and is painted in the artist's best manner. Rubens's hunting-pieces, it will be recollected, rank among his finest works. The struggle and energy of the incident of this picture are most vividly depicted. "Action and life," says one of the painter's critics, "he never failed to represent as no other painter has done before or since; and this alone, in our opinion, entitles him to a place in the very foremost rank of artists."

The reader will find other Illustrations of some of the *chef-d'œuvres* in the above collection, at pages 133, 227, 308, 309 of the present volume.

SUPPLEMENT.

VOL. XVII.] SATURDAY, DECEMBER 28, 1850. [GRATIS.

CHRISTMAS AND THE NEW YEAR.

THE Illustration which we present of *the Cooking of the Royal Christmas Dinner in the Kitchen of Windsor Castle*, is a domestic type of a domestic time. Circles that can hardly ever contrive to assemble without a gap, endeavour to meet on the festival which is not less remarkable for its universal celebration, than for its family and home inspirations. From the palace to the cottage, the consciousness of a pervading world-wide sentiment makes people fly inward to express what is everywhere outside. It is the only means of symbolising the ecumenical joy. Separate circles solemnise the general unity.

Here, then, in the Christmas Kitchen of old Windsor Castle, our thoughts on the time shall, not inaptly, take their starting-post. From that point "we will put a girdle round the earth." The first thing that we remark is, that everybody seems more confidential than usual. Christmas is like wine to many persons. It developes the full force of their individualities. The most secret characters written by nature on the soul become legible when held to the genial fire of joys and charities which the season lights up. The moroseness which had been little noticed amid the jarring noises of the year's work, becomes a painfully prominent discord in the softened festival sounds. Many amiabilities which had half slumbered, awake into pleasant activity. Their time is come.

Every age pays a tribute to the joyous season. The old make presents, and the young take them. The heads of schools announce the hour which ushers in the inevitable holidays, which are holidays to the givers also. And Christmas goes nodding about, with bays and red berries decorating his "frosty pow." The serenaders break the sleep of those who are too merry to be angry, and who hum a slumbrous accompaniment to a welcome disturbance. It is but the "wake;" and they sleep again under a serene influence peculiar to the hallowed time. Here are some such verses as might serve the purpose:—

O Christmas! I discern thy serious meaning,
But yet thy smile is very sweet;
And I have seen thee like a mother leaning,
While I have gamboll'd at thy feet.

When long ago the Christmas eve had darken'd,
I could not sleep with inward joy;
But to the crowing of the cock still hearken'd,*
Musing on mysteries, though a boy.

Yes, all a boy! there was a footpad creeping
About the galleries towards day,

* Some say that ever 'gainst that season comes
Wherein our Saviour's birth is celebrated,
This bird of dawning singeth all night long.
Marcellus, in *Hamlet*.

At every sound the urchin's heart was leaping
To be the first to say one to say.

"A merry Christmas! and a Christmas-box you owe me
And soft! beware how you proceed;
For there's another footpad just below me,
Resolved to win the self-same meed!"

And then the great church bells begin their pealing,
Scattering glad tidings far and near,
And blending rapture with a mystic feeling,
Deep awe with all that is most dear.

The rest is merriment and gratulation;
Bold Frolic plays his freest pranks;
Fond bands unite, who soon in separation,
Are doom'd to break their transient ranks.

If days be blest with frosty suns which spangle,
The vague low wavelike distant hare;
And diamond glories from the branches dangle,
Dying, yet smiling, with the blaze:

The skates are braced and o'er the ice-paved water
Swift gliding gamus of peril go;
Or wars demand (all innocent of slaughter)
The white artillery of snow.

Many bright seasons mark the year's gyration
But Christmas is the time of glee.
Many fond days bring mites of consolation,
But Christmas is the time for me!

Such are the verses. Judge them kindly; for they come from the heart. We have referred to Shakspeare's words—"*The bird of dawning singeth all night long.*" For all the nights, and all the night of all the nights, are but the dawning of a mystic day to come. A good time indeed—the day of peace to those who are but willing that peace should be theirs—has arrived. For eighteen centuries, in the cold of the north, amid the bloom of the south, in the forest hut, in the city mansion, in cottage, in palace, round the lake, in the plain, under the glacier of the mountain, even at sea on the deck of the far-wandering ship, throughout the world, this sweet time has been kept so festive that it could not but be holy, so holy that it could not but be festive, full of the joy which almost weeps (it is so joyous), and of the solemnity which—like that of the prophet king—must dance from its own oppressive exuberance. From every part of the earth ascends a harmonious voice, victorious over the confusion of tongues, reminding the adoptive children of many societies and nations that they are the sympathising members of one family.

In our hemisphere, Christmas is associated with the snows and storms of mid-winter. In Australia, Christmas comes with the bloom and perfume of midsummer. The calendar day which is setting here, is the calendar day which is rising elsewhere. All is different in the accidents, yet the same in the sense; and because the accidents are so different, therefore is the essential significance so one. It is no paltry local festival. It is kept by mankind, if not in the plenitude of actual fact, yet in this sense—that the children of those who do not now keep it, shall keep it hereafter. It unites all living men in one tender tie; and more than this, it binds the living with seventy generations of the dead in an equally tender recollection. And as this is so, is it not the time for making up differences, for flinging away rancours, for forgetting injuries, whether they be between individuals or between classes? Do we not all join in one common rejoicing, as our ancestors have always done, and as our descendants will do for ever? And is the scowl of estrangement befitting to the genius of a united witnessing of mirth, and sincerity, and social gratulation, overshadowed, as it were, and laterally tinged by the light of higher, and more solemn, more serene associations? Just look at the honest, shining countenance of friendly old Christmas, and then say can you cherish any bitterness in such a presence? As through a glass, darkly, he intimates the meaning of things more permanent than the miserable quarrels, distrusts, and heart-burnings of the hour. We are all united; and here in England we will have no half-Christmas feeling, but a right-jovial and right-earnest hand-shaking, hearty, and gleeful recognition of the prescriptive rights of the season. A truce to bickerings, if not a peace! Can less be said? And now, let us call the attention of the benevolent to a seemingly hard case, and a pathetic history. We allude to that of a year; any year you like. At the Antipodes, as we have already hinted, the year begins his career amid verdure, and all the smiles of nature, carolling, laughing, and jubilant. His storms and trials come on him in his prime of life, then begin to abate and leave the evening of his days full of peace and sunshine. His end again is sudden, amidst all that is blooming and splendid. We will take the case of the year of our own hemisphere; but it will be seen that, though not in form, yet in substance, the grievances which excite his anxiety are precisely similar to those under which the year of the Southern Cross is doomed to labour.

The year, then, as he is on this, with us, the upside of the world, begins life, like most infants, in the cradle of wintry cries and moanings; then he proceeds, gathering strength and courage, passes through the *lumen juvenescens juventæ*—the purple bloom of youth—and through the hardy prime of manhood, into the dignity and sedateness of his autumn. Winter meets him, and materially changes his aspect, his constitution, and his temper: still he marches steadily forward; but whither? He is not unendued with sentiment, and, like ourselves, shudders at annihilation—a thought which never entered his head, either in the merry days of youth or the robust time of manhood, and visited him but rarely in the first period even of declining age. But now, all those stages of life are passed, and he is much altered. First, bloom, and then vigour, have successfully abandoned his limbs. And yet he is still marching onward. He must do so. Fate—necessity, will it. He must

THE ROYAL KITCHEN IN WINDSOR CASTLE.

be must advance; but whither? Is he to die? A horrible question, to which when it first and again and again occurs to him, the only answer is his sensibly diminishing power. Inexpressibly depressed, the poor Year continues to totter on towards his last stage, filled with the deepest melancholy, shedding frequent tears, his head covered with the snows of sadness, blown upon and beaten by tempests, and enveloped in chilling and gloomy mists. "Alas!" he says, "must it indeed end thus? Did all the joyous, the bright days I have seen, which distanded my heart with exhilaration, portend no better conclusion?" And he bows his head, and he faints with his march, and he is in despair. Just then he hears the chimes of toy-bells. He looks up, and he sees the landscape, which, a moment before, had been so ghostly, suddenly assume an aspect which faintly reminds him of his long-past springtime. Bonfires illumine and cheer, and evergreens deck the prospect. While still marvelling what this can mean, he perceives a figure, if figure that might be which rather seems a shadow a little way before him, on the road. A dim hand outstretches a crown of laurels; and a voice that scarce seems earthly, says: "Dying Year, as you believe yourself to be—Dying Year! if you will abandon your terrestrial dispositions, your natural animosities, and earthly feelings, you shall not taste of that annihilation, the thought of which inpuls you now. You, who must soon pass away, to make room for successors, differing from you in a thousand particulars, shall be changed into something which never will itself know change. You, who are today, and to-morrow cannot be found, shall become that which will last always—which indeed for a space, during each revolution of the sun, but never dies—into Christmas, which will live till time itself be ended!"

The tottering Old Year accepts the conditions, is crowned with the laurel, recovers the beauty of high spirits, and becomes immortal. Whatever he has been that has passed away, he is now what will not pass away while the earth endures. He is metamorphosed into jocund Christmas, which belongs alike to the past, the present, and the future, ever ancient and ever new, sublime and imperishable, the delight of the young and the meditation of the aged, with a venerable but radiant face, the maker of many friendships and the destroyer of a thousand estrangements. One hand is pointed to the dim and distant past, towards an outstanding and august event, the memory of which concerns all men; the other hand scatters bounties and kindnesses far and near. Around the knees of the season, so to speak, around the knees of the mystic visitant who incorporates the closing year into his own glorious character, are grouped innumerable happy circles. A maze of gracious scenes, and a confused rhapsody of hilarity, surround the great central figure. In the distance, though not put utterly to flight, yet scared away for a time, are various evil shapes. If you pursue them, and overtake them, and bring them to close examination, you hardly know the late familiar troublers. They have half lost their wonted aspects. Harshness looks irresolute; Suspicion is timid; Avarice itself, with its rigid lineaments, seems touched, and, for a brief moment, softened. All that is bad stands rebuked, if it hides not its head, before the benign influence of that time in which the happiest event in human history is celebrated. Such is old Christmas, and as such let us welcome it duly.

THE ROYAL KITCHEN AT WINDSOR CASTLE.

THE Kitchen is a noble apartment of nearly 50 feet in height—situated on the northern side of the Castle. And the Christmas good cheer requires ample space. As many as 60 turkeys are roasted for the Royal table at this season. The household and the domestics help, of course, to consume them. Large fires at both ends of the kitchen look enormous, and, with the viands slowly revolving on the spits, present a wonderful picture. On either side there are also charcoal fires for the more delicate cookery—for the *chefs d'œuvres* of French invention—aided by certain mysterious utensils used in the process that sadly bewilder the uninitiated, whose astonishment is moreover excited by the great size and number of the culinary vessels displayed ostentatiously round the huge fire-places

Among the standing dishes, we are informed, on her Majesty's table, there is a baron of beef, an immeasurable pie, and a boar's head, two or three brawns, and a large woodcock pie, which, by old custom, is sent over by the Viceroy of Ireland

As might have been expected, the staff of persons employed in the kitchen is numerous. It consists of *chef de cuisine* (an important post, now filled by M. Morel), two master cooks, two yeomen of the kitchen, two grooms of the kitchen, two roasting cooks, two larderers, five scowers, one steam-man, three kitchen maids, two men in the green office, as it is called, their duty being to clean the vegetables; that of the steam-man is to cook them; and there are four apprentices, to learn the art and mystery of cooking.

The scene in the Kitchen is one of great order; no bustle, no confusion; all the details, even of the largest dinner, being so subdivided and arranged that each person has his own part to attend to, and, in consequence, there is no disorder. The quiet is remarkable. The chief scene of activity is when the footmen are in attendance to receive dishes from the boy slaves in the centre of the kitchen, on which they are disposed, to the apartments in which they are to be served. We say apartments, as it often happens that her Majesty dines in private; and, besides, there are many for whom provision is made that the supply seems at all times enormous.

FINE ARTS.

DECORATIONS OF THE GREAT EXHIBITION BUILDING.

A meeting of the Royal Institute of British Architects was held on the 16th inst., when Mr. Owen Jones read a paper on "The Decorations proposed for the Exhibition Building in Hyde-Park." The attendance of members was unusually large, and the greatest interest appeared to be felt by those present in the subject to which the paper referred.

The chair was taken by A. Salvin, Esq. The usual routine of the Institute having been disposed of,

Mr. Owen Jones proceeded with the reading of his paper, as follows.

"Mr. President and Gentlemen,—I propose to offer you this evening some observations on the mode of treatment of the interior of the Exhibition Building in Hyde-Park; and as the specimen I have already executed there has excited some attention from my professional brethren, and in some quarters met with very severe censure, I will say how you the more willingly guided me in the selection of the mode of colouring I have proposed, and explain the principles on which I have acted in carrying out that system in detail. I am in the position of a surgeon about to perform a difficult operation to whom it has been objected that he will kill his patient through want of skill, and who, therefore, invites objectors to come forward whilst the patient yet lives, not with vague prophecies of failure, but with a full knowledge of the case intended to be treated. No one can in this world hope to obtain the universal acceptance of his views on any subject, more especially on one so unsettled amongst us as decoration. What pleases one person will be distasteful to another. Yet as truth is always truth, however differently men may receive it with different impressions, if I can but arrive at an approximation to true principles in the decoration I propose, I may hope to obtain the votes of the greater number of my professional brethren, and I must bear, as best I may, the disapprobation of the rest. The man of cultivated mind will be supposed insensible to the beauty of colour, which nature distributes over the earth so lavishly; yet it is certain that, as there are many persons who have no ear for music, so there are many who have no eye for colour. Others, again, sing out of tune, and see colours falsely. Some may sing or play without knowledge of music; so may others colour well by natural instinct: but study and cultivation will improve both the ear and the eye. Of late in this country the improved appreciation of colour has made most rapid strides throughout Europe, but England has lagged far behind, which is the more remarkable as her painters have long been renowned as colorists. The Flemish, Italian, Spanish, and Venetian schools, in that we have too long neglected this essential portion of our architectural studies and practice. The interior of our houses have been given over to the upholsterer and decorators, many of them men of great taste and talent, I admit; but, still, we must regret that our architects have not directed more of their skill and learning to this subject, and been prepared to lead rather than to follow. (Cheers.) We are only now beginning to shake off the trammels in which the last age of universal whitewashing (laughter) had enthralled us. Everything but pure white was considered universally, and still is considered by many, as wanting in good taste. The evidences of colour on the monuments of Greece were, as we all know, at first carefully denied, and then supposed to be the works of after barbarous ages. When this position was no longer tenable, it was said that the ancients, though perfect masters of form, were ignorant of colour, or at all events misapplied it. Men were ordered to give up the long-established tints of the white marble of the Parthenon and the simplicity of its forms, and refused to regard it as a building coloured in every part, and covered with a most elaborate system of ornament in colour. Greece and Egypt left us, Gothic cathedrals has lost half its beauty from the entire absence of colour. He who without prejudice surveys a Gothic building, for the first time picked out in colour, will be forced to admit that until then he had not understood or appreciated Gothic architecture, and would find that many of the geometrical forms and ornaments before him depended entirely on colour for their full development. We are too apt to consider that which we find established around us as the right; and however deep-rooted the Puritan prejudices on colour may have been, we [illegible] making them off, and when we have done completely so there will be no reason to fear that England will be behind other nations in the race, as she may, we trust, make up by the increased energy, industry, and superior perseverance of her sons, when once earnestly set to work, the time lost in the commencement of the struggle. (Cheers.) Those who go first may, and perhaps will, necessarily fail; but as in the storming of a fortress the ramparts are at last reached over the dead bodies of the "forlorn hope," so will the mistakes of those who lead the way in coloured architecture contribute to the successes of those who follow. (Cheers.) It is not necessary for me to describe the building, the painting of which we are now about to discuss; it is well known to most of you, by its marvellous dimensions, the simplicity of its construction, and the advantage which has been taken of the power which the repetition of simple forms will give in producing grandeur of effect: and I wish now to show that this grandeur may be still further enhanced by a system of colouring which, by marking distinctly every line in the building, shall tend to increase its height, its width, and its bulk. The very materials of the building of which this temple is mainly constructed, viz. iron, requires that it should be painted. On what principle shall we do this? Should we be justified in adopting a simple tint of blue or stone colour, the common method of painting? Now, if it must be borne in mind that this building will be covered on the south side, and over the whole of the roof, with canvas, so that there can be but little light and shade. The myriads of similar lines therefore, of which the building is composed, falling one before the other, would lose all distinctness, and would in fact form one dull cloud overhanging the Exhibition. A line of columns, as even now may be seen at the building, would present the effect of a white wall, and it would be impossible in the distance to distinguish one column from another. This mode of painting would have the further disadvantage of rendering the building totally unconnected with the various objects it is destined to hold. Should the building be painted of a dark colour, like the roof of some of our railway stations? This, equally with the white method, would present one mass of indistinctness. The relief of the cast-iron would disappear—each column and girder would present to the eye but a flat silhouette. Let us now consider the building painted with some pale neutral tint—dull green or buff: in doing this we should be perfectly safe. Provided the colours were not too pale to be indistinct, or so dark as sensibly to reduce the height, we could hardly make a mistake. The same and monotonous would be the result. It would be necessary that this tint, whatever we might choose, should be of such a subdued neutral character as to avoid a difficulty well known to painters of drawings and pictures of perspective galleries, viz. that in proportion as you incline to any shade of colour, in that exact proportion you injure or destroy those objects it is intended to relieve which may have similar colours. We should then be reduced to a dull monotonous colour without character. How unworthy would this be of the great occasion! How little would it impress the public! How little would it teach the artist! It would be to cut, instead of patiently to unravel, the knot. (Cheers.) We are now brought to the consideration of the only other method of painting which presents itself, viz. parti-colouring. This, I conceive, if successfully carried out, would bring the building and its contents into one perfect harmony; it would fitly carry out with the objects for which this Exhibition was founded, viz. that of promoting the union of fine arts with manufactures. It would be an experiment on an immense scale, which, if successful, would tend to dispel the prejudices of those whose eyes are yet unformed to colour, to develop the latent power of appreciations of others, and save this country from the reproach which foreign visitors, more educated in this particular than ourselves, would not fail to make were the building otherwise painted. It would everywhere bring out the construction of the building, and I said before, would appear lighter, higher, and more solid. (Hear.) To produce this result, it is essential not to make a mistake—parti-colouring may become the most vulgar, as it may be the most beautiful, of objects. It is necessary therefore, to proceed with great caution, to calculate the effect of every step, not to be misled by the appearance of any one portion of the building; but to bear in mind always the effect the building will have when complete and furnished. I have not shrunk from treading a path beset with so many difficulties, and I willingly appear before you this evening to meet your criticisms, and to weigh any opinions which the experience of my brother architects may suggest. (Cheers.) If we examine the remains of the architecture of the ancients we shall find everywhere that in the early periods the prevailing colours used in decoration were the "primaries," blue, red, and yellow, the "secondaries" green, orange, and purple. We find this equally in the remains of Nineveh, Central America, of Egypt, and Greece, and throughout the earlier civilizations generally. We find also everywhere that, as time wore on, the secondary colours invaded the dominion of the primaries. Blue and red were supplanted by green and purple. In Egypt, in its temples built by the Ptolemies, blue, red, and yellow mainly prevailed; whilst in those built by the Ptolomies the greens and purples take their places. In those of the Roman period, colours are still further degraded to a dull and incongruous mundanedness. In the Greek temples, as far as we can gather from the few remains of colour we have, the same law prevails; whilst in Pompeii we find the secondaries and tertiaries as the ruling harmonies. In the Alhambra, the blue and red of the Moors were painted over with green and purple by Charles V. and his successors, and with the worst effect. In modern Cairo, and in the East generally, we have green constantly appearing side by side with red, where blue would have been used in earlier times. It is equally true of the works of the middle ages. In the early manuscripts and stained glass, though other colours were not excluded, yet the primaries were chiefly used; whilst in later times we have every variety of shade and tint, and rarely what is good success. It would seem, either that the human mind, ever seeking for change, became weary of the simple harmonies which the primaries afforded, and sought more complicated effects from the secondaries and tertiaries; or probably it arose from the decline of art, and the inability of the artist, who, unable to deal with the primary colours in their pure state, took refuge in the secondaries and tertiaries, where error in the balance of colour was less fatal, although it destroyed the grandeur and simplicity of effect. The tertiaries is no doubt much more difficult. (Hear.) Amongst modern examples of the use of colour, we may cite the Royal Chapel at Munich, in which blue, red, and gold form the harmonies, as far as regards the colour, and the character of the same city, in which the secondary and tertiary colours prevail. At Paris, in the Church of St. Vincent de Paul, decidedly the most perfect specimen of modern decoration as regards the colours and the blue, red, and gold, separated by white; this church contrasts admirably with the decorations of St. Denis, St. Germain des Près, and other churches of Paris in which the secondaries and tertiaries prevail. When the secondary colours were used in the best periods in conjunction with the primaries, they were kept subordinate to the latter in those parts of the building, following, in this, Nature, who uses for her flowers the primaries, and reserves the secondaries for her leaves and stalks. In the decoration of the Exhibition Building, I have proposed to use the colours blue, red, and yellow, in such relative quantities as to neutralize or destroy each other: thus no one colour will be dominant, or fatigue the eye, and all the exhibited objects will stand out and be assisted by the colours of the building itself (Cheers.) In house decoration we occasionally find a run upon one colour; we have a green room, a pink room, and a red room, &c. It would obviously be unwise to adopt any one colour for this building, where the contents will be of all imaginable hues, from white to black. Discarding, on the other hand, the perfect neutral white, as unfit for the occasion, we naturally adopt blue, red, and yellow, in or near the neutral proportions of eight, five, and three; but to avoid any parts assuming these primary colours when in contact, or any undesired complimentary secondaries arising from the immediate proximity of the primaries, I propose in all cases to interpose a line of white between them, which will soften them and give them their true values. It is well known that if blue and red come together without the interposition of white, they will each become tinged with the complimentary colour of the other: thus the red would become slightly orange, and the blue slightly green. If the coloured bodies reflect some white rays, the white in juxtaposition, by its superior force extinguishes these white rays, and we see the colours purer, at the same time that the white becomes tinged with the complimentary colour of the primary when in contact, or any undesired complimentary secondaries arising from the immediate proximity of the primaries, I propose in all cases to interpose a line of white between them, which will soften them and give them their true values. It is well known that if blue and red come together without the interposition of white, they will each become tinged with the complimentary colour of the other: thus the red would become slightly orange, and the blue slightly green. If the coloured bodies reflect some white rays, the white in juxtaposition, by its superior force extinguishes these white rays, and we see the colours purer, at the same time that the white becomes tinged with the complimentary colour of the primary against which it is placed, thus further heightening the effect. As one of the objects of decorating a building is to increase the effect of light and shade, the bands means of using blue, red, and yellow, is to place blue, which relieves, on the concave surface; yellow, which advances, on the convex; and red, the neutral tint, in the middle distance, on the horizontal planes; the neutral white on the vertical spaces. Following out this principle on the building before us, we have red for the undersides of the cornices, yellow on the convex mouldings, and white, divided in the hollows of the capitals. Now it is necessary not only to put the several colours in the right places, but they must also be used in their due proportions to each other. Mr. Field, in his admirable work on colour, has shown, by direct experiment, that white light consists of blue, red, and yellow, neutralizing each other in the proportions of 8, 5, and 3. It will readily be seen that the nearer we can arrive at this state of neutrality, the more harmonious will be the colouring of a building becomes; and an examination of the most perfect specimens of harmonious colouring of the ancients will show that this proportion has generally obtained. That is to say, that there has been as much blue as the yellow and red put together. Thus the light and the shade are made to balance each other. Of course we cannot, in decorating buildings, always command the exact proportions of coloured surface we require, but the balance of colours can always be obtained by a change in the colours themselves; thus, if the surface to be covered should give too much yellow, we should make the red more crimson and the blue more purple—that is, we should take the yellow out of them. So, if we had too much blue, we should make the red more orange, and the blue more green. The practised eye will as readily do this as a man may tune a musical instrument. It is here that science abandons the artist, who must trust to his own perception, cultivated by repeated trials and failures, for the requisite knowledge to do this in the presence of the world at large. In ordinary cases the architect may shut up his building till it is complete; here the public will watch every step from the first to the last. In this case I would request you to suspend your judgment; and beg of those who have already seen the specimen at the building, or who may see the work in its progress, to banish constantly from their minds all subjects by which it is surrounded. It is evident to all that a yellow and blue colour will appear very differently when seen with a carpet or other hangings for a back ground, to what it does now, with a background of deal boards, and a foreground of carpenters' benches. This I had the honour of pointing out to the Royal Commissioners a few days since, by suspending a series of carpets at a distance of twenty-four feet from the columns. The yellow and blue stripes stood out clear and solid; whilst on the red columns the red fell back to the level of the red floor cloth and the brown carpets, and the colours lost its brightness and solidity. I may as well here mention that this red colour, which has been the subject of some misapprehension, never formed any part of my plan. (Hear, hear.) I painted it in obedience to the wishes of some critics, who thought it would be preferred to the yellow and blue colours; but as it was in direct violation of the principle I had laid down to start with, I knew that it would not do, and as the event has proved. The column painted a neutral tint, when viewed in front of the carpets, lost all form, and might as well have been a round one, and all advantage would have been lost of the very beautiful form of the column, for which we are indebted to Mr. Barry. I would ask you, also, to banish from your mind the glare of light by which these decorations are now seen; to forget the rough foreground, where men are engaged in everyvariety of occupation for the completion of this great building; and I would ask you to supply it in imagination with the gorgeous products of every clime, which will be displayed in the finished building. I will ask you to picture to yourselves in the foreground the brilliant primaries, blue, red, and yellow, the rich secondaries, purple, orange, and green, moulded in forms of every conceivable diversity, and setting against them darker tertiaries fading into neutral perspective. (Hear, hear.) Such an effort, difficult even to the artist, accustomed to abstract his attention from present interruptions, and to calculate future harmonies, is impossible to the uninstructed spectator, who from the experimental decoration of a single column draws a premature, and necessarily a fallacious, inference as to the collective effect of the whole. (Hear, hear.) From my brother architects I hope for a more patient, a more comprehensive, and a fairer appreciation. For myself, I have a confident hope, grounded on the experience of many years devoted to this particular branch of study, that the principles and plans I have had the honour to propose to the Royal Commission for the decoration of this magnificent structure, will be found, when complete, not to disappoint public expectation, or prove wholly unworthy of the great occasion."

The reading of the paper was followed by considerable applause.

Mr. Fanson said that he considered the painting of the under side of the girders very a departure from that good taste which was doubtlessly displayed in the other portions of the building.

"Mr. Jones stated that the same opinion had been entertained by several members of the Royal Commission, who had looked upward to one or two girders which were coloured red; but, upon stepping back, at his suggestion, and looking forward instead of upward, their opinion immediately changed, and they stated that they would hardly have known it for the same thing. The spectator would, in viewing this portion of the decorations, have to consider that there were many thousands of girders in the building, besides the one or two immediately under which he was standing; and it was to the effect of the whole that he must look, rather than to the appearance of one or two isolated girders.

In answer to a question put by a member,

Mr. Jones stated that it had been intended to have had the arms of the different towns painted upon silk pennants in the spandrils of the nave. The offer of the person to supply these ornaments had not, however, been accepted by the Commissioners; and he believed it was now intended, at the suggestion of Sir Barry, to have flags of different countries placed in the angles of the roof of the nave. The defect of the building, for such it undoubtedly was, was its immense nave with a flat roof. Had a circular roof been adopted for the nave, similar to that of the transept, the building would, no doubt, have been one of the finest in the world.

Mr. D. Wyatt stated that there were difficulties in the way of constructing a circular roof of such a magnitude as would be required for the nave, independent of the question of expense, which had induced the Commissioners to decide in favour of the present flat roof.

Mr. Garling, in moving a vote of thanks to Mr. O. Jones, for the valuable and interesting paper which he had read, stated that, whatever might be the differences of opinion on the subject of the decorations of this unique structure, there could be but one opinion with respect to the amount of skill, taste, and exactness which Mr. O. Jones had brought to bear upon the subject; and, for himself, he had no doubt whatever but that the result of his exertions would be completely successful.

The thanks of the meeting were unanimously accorded to Mr. Jones; and the meeting broke up.

MUSICAL REVIEW.

THE MUSICAL TREASURY, VOCAL and INSTRUMENTAL, for the FAMILY PIANOFORTE. G. H. Davidson.

A handsome volume has just been issued, with a full-length portrait of ELIZA COOK, and a prettily-illustrated title-page. The selection of pieces has been made for all tastes—sacred and secular works, and dance music, being mixed up, somewhat injudiciously, it must be confessed. Amongst the composers are Handel, Haydn, Mozart, Jackson, Kent, Mozart, Sir H. R. Bishop, Henry Russell, Yates, Dr. Calicott, Purcell, Schubert, Lindpaintner, Klüxen, Auber, Dempster, Meyerbeer, Keller, Whitaker, Pagni, Parmentier, &c.; and amongst the poets, in addition to Eliza Cook, are Charles Mackay, Mrs. Hemans, F. L. Blanchard, Planché, C. Dibdin, jun., &c.

FLUTINA OF ACCORDION MELODIST AND PRECEPTOR. DAVIDSON'S INSTRUMENTAL GEMS DAVIDSON'S PIANOFORTE DUETS. G. H. Davidson.

The above publications are continuations of those popular selections of music of every school, printed at a very low price, which Mr. Davidson has issued with such success. Thus, many excellent compositions and standard works are placed within the reach of amateurs of very moderate means. The tact and taste displayed in these gleanings are the result of the careful editorship of a musician, competent to execute his task with judgment and fidelity. The notation is clear and distinct, and the typography is unexceptionable.

THE HOME POLKA. By AMELIA EDWARDS. J. Williams.

Himmel's well known song, "An Alexis send ich dich," an English version of which was published in the "Vocal Gems of Germany," under the title of "Come away, love, come away," in four flats, three-four time, has been a very suggestive theme to divers composers, or rather arrangers. The fair writer of the above-named dance has been unable to resist the fascinating *motif*, and has, by transformation of the key and time in the original song, rendered it a pretty and exhilarating polka.

QUADRILLE FOR ALL NATIONS. By HENRY FARMER. POLKA D'AMOUR. Ditto. J. Williams.

Mr. Henry Farmer is a professor at Nottingham, whose reputation stands high in the provinces as a skilful musician. His "Quadrille for All Nations," dedicated to Prince Albert on commemoration of the Exhibition of 1851, we have published, as we are informed, prior to the quadrilles on the same subject by Labitzky and Jullien. National airs, of course, are transformed into quadrilles by Mr. Farmer, as they have been in the same style by all composers; thus we have "Rule Britannia," "La Marseillaise," "Yankee Doodle," German, and Russian melodies skilfully set in two-four, three-four, or six-eight time; and at the close, a combination of themes in each country. There is merit of such a quadrille in more than of arrangement than of invention: in the quality of rendering his subjects thoroughly dancing, Mr. Farmer has displayed no little ingenuity. The Polka is preceded by a very nicely written introduction, although the dance itself be not marked by peculiar originality, polka conception being now very nearly exhausted.

THE HANDBOOK to the PIANOFORTE, By J. AUGUSTINE WADE. Edited and Revised by JOHN BARNETT. Whittaker and Co.

The names of the two distinguished musicians on the title-page of the above elegant rudimental work, would alone suffice to guarantee the excellence and superiority of the "Handbook." J. Augustine Wade is more: this accomplished professor and profound scholar was cut off in the prime of life, after having afforded ample evidence, in his chequered career, of his great attainments as a composer, a theorist, and a critic. His pianoforte instructions are remarkable for their clearness and comprehensiveness; and the tedium of tuition is delightfully relieved by Wade's lucidity, terseness of manner, and enthusiastic style.

The chapter on the elements of harmony is full of classic research, and renders the study of it to the simplest capacity easy. The introductory essay is on the genius of the pianoforte, followed by the history of the origin, progress, and mechanical improvements of that popular instrument. In the new edition that has just been published, with the addition of a page to the Emperor of the pianists, numerous additions to Wade's labours have been made by John Barnett, one of the greatest musicians this country has produced, but who, in default of a Boswell, has left no memorial of his genius. The

BOOKS FOR THE SEASON.

Christmas and the New Year bring their gay bevy of books; and the tributes of the Season partake of a highly intellectual colour which invests the memories of the past with charming novelty. The multiplied resources of the sister arts of Engraving and Decorative Printing have largely contributed to the splendour and popularity of the gift-books of the present day, and, although they may occasionally take too imitative a turn for the advancement of design, it cannot be denied that they largely add to the artistic means of indulging liberal taste and rewarding meritorious ingenuity.

*Christmas with the Poets** is the first claimant upon our notice. This is a Collection of "Songs, Carols, and Descriptive Verses," illustrative of Christmas and its Festivities, ranging from the Anglo-Norman period to the present hour, and classed in Six Divisions: the first extends to the time of the Reformation, and commences with the Carol of the thirteenth century, as sung by the minstrels in the court-yards of the castles of the Norman nobility; and of such a scene, Mr. Birket Foster presents us with a very characteristic picture. To this succeed the Carols of the fifteenth century, which are imbued with high religious feeling. Next are the Carols of the Boar's Head, the Holly, and the Jug, which are most picturesquely treated by the Artist. The chase of the boar, and the bringing in of the head to the sound of trumpet are depicted—the latter, by the way, is kept up to this day in some of our College halls, and in the Royal Castle of Windsor. The Elizabethan era has furnished the Second Division of Poems: Tusser's Housekeeping, with the Dole to

The neighbour, the stranger, and all that have need,

supplies the first picture; with two other of Tusser's phases, the Husbandly Fare in the Hall, and the Singing of the Carol by the Firesides. Four charming illustrations of Shakspeare's Winter Song; a pair of pictures of the Old and Young Courtier; and Mumming and the Wassail Bowl, are among the more striking illustrations of this section. The third division is entirely drawn from the Christmas Poems of Herrick: we find illustrated the Bringing the Log into the Hall, the Carol in Whitehall, and a Party of Wassailers in the Snow. The time of the Civil Wars, the Commonwealth, and the Restoration furnishes the Fourth Division: George Wither's Merry Christmas has two spirited scenes; Wassailing Fruit-trees yields another; and the Singing of the Carol at the Old Hall is truly picturesque. The Fifth Division is mainly from Gay, Bampfylde, and Thom. The Sixth Division opens with Scott's charming picture of Christmas, from "Marmion," and the scene of the Baron's Hall; Wordsworth's Christmas Minstrelsy has a medallic illustration: there are two clever interiors—a decked Hall, and a Christmas Peal in a groined belfry; and the volume appropriately closes with a Dirge for the Year, by Shelley; and the Death of the Old Year, by Tennyson. The result is a very pleasant collection, hardly antiquarian and bibliographical enough for some tastes; but one that accords with the general character of these several phases of beauty: the classic which has its coloured counterpart—the Gothic, and a Christmas celebration. To complete the characteristics, the cover has an illuminated lettering-place, with a broad *bordure* of holly-leaves and holly and mistletoe-berries. This is, altogether a very charming production.

The *Court Album*† is, in every respect, a worthy successor to the *Book of Beauty*, with this difference—considerably larger, and are in the chalk style, instead of the elaborately finished line manner. The drawings are by John Hayter, and they are cleverly engraved. The gallery contains fourteen portraits of the fairest daughters of the Court of Queen Victoria: those of Lady Claud Hamilton, Miss de Burgh, Lady Victoria Talbot, Miss Caroline Wyndham, and the Hon. Helen Duncombe, are, we can testify, admirable likenesses. The series is a fair presentment of these several phases of beauty: the classic and the romantic, the sentimental and meditative, and the *ruinée*, with its "wreathed smiles," altogether, fascinating evidence of the superior loveliness of English women, set off by a *dapper* style of costume which is very winning. The plates are accompanied by neatly-written memoirs of the distinguished persons portrayed.

The *Keepsake*‡ is an established favourite, and almost the last of the guinea throng. The plates, engraved under the superintendence of Mr. F. A. Heath, present the usual variety of character portrait, incident, and scenic illustration. In the roll of contributors are Mrs. P. O'Neill, Mrs. Romer, the Hon. Julia A. Maynard, Mrs. Abdy, Mrs. S. C. Hall, and Mr. Newton Crosland; H. F. Chorley, Alfred Tennyson, Lord John Manners, Barry Cornwall, Sir E. Bulwer Lytton, Dr. Shelton Mackenzie, Mrs. Norton, Miss Costello, Mrs. Sperry, and Albert Smith. The staple of the volume is historic anecdote, gracefully narrated; the sketch of life that seizes the salient points of a class: mirthful, now plaintive, and then in dancing spirits; by all, the thoughts are not idly stirred, but led through some chastening sympathy. We quote two poetic specimens:—

STANZAS. BY ALFRED TENNYSON.

WHAT time I wasted youthful hours,
One of the shining winged powers
Show'd me vast cliffs, with crowns of towers.

As towards that gracious light I bow'd,
They seem'd high palaces and proud,
Hid now and then with sliding cloud.

He said, "The labour is not small;
Yet winds the pathway free to all:—
Take care thine own feet fear to fall!"

STANZAS SENT TO A LADY, WITH A BALLAD ON THE DEATH OF MONTROSE.

LADY! perchance thou'lt not disdain
To read this simple story,
Which tells how trial, shame, and pain
May end in deathless glory.

That hero-bard all things above
Placed high the claims of duty;
Above the lures of ease, or love,
Above the smiles of beauty.

All earthly hopes—all earthly fears,
By that iron will were shattered:
The foeman's curse—his young bride's tears
To Heaven's winds were scattered.

Thus, after conquest's bright career,
Unmatched for deeds of daring,
He met with calm, undaunted cheer,
The taunts of foes unsparing.

And while he felt those traitors' power,
Their threats and offers spurning,
He triumphed in that dreadful hour—
Disgrace to glory turning.

And thou, in early womanhood,
Hast known both care and sorrow;
And learn'd, in sad, desponding mood,
To trust not to the morrow.

Yet, in the darkest hour of grief
Would Faith thy gloom enlighten,
With daily duties luring relief,
And all the future brighten.

So courage and a constant heart,
Through all life's cares and changes,
Upbear the soul that will not start
At aught that God arranges.

LORD JOHN MANNERS.

A batch of pretty little books for very young children has fallen among some *tomes* of higher pretension, and, we perhaps, less amusement. These gracefully trifles bear the imprint of "Honeysuckle,"§ a sweet lure for childhood. They are filled with clever woodcuts, mostly coloured, the great merit of which is their artistic representation of natural objects—grouped in outline, yet truly picturesque in effect—a happy destitute combination in books for the young. Thus, we have "The Tiny Alphabet," "The Young Lady's Alphabet," "Spring Flowers," and "Ripe Fruit." "The Good Child's Alphabet" is a step higher, and "Wild Flowers for Children," and "Master Woodbine's Alphabet for all good Children," are an advance further in embellishment. "The Flower and the Star; or, the Courses of the Stream," is a Child's Story, with Dreameyes, Sancymouth, Sobsheek, and Brightface for its agents: the scene is laid amidst a romantic country of lake and mountain, amid whose sublimity the writer is at home; and the little book is profusely illustrated by his master-hand with some beautiful sketches of scenery: the moral is thus prettily conveyed: "Let the stream teach the young ones, that, though the Heartsease be lost, it may be found again. Seek it cheerfully; never despair; and the Star of the Flower shall light you ever homeward."

The love of travel and enterprise has never failed to yield the most attractive books for children of a somewhat advanced growth. Two works of this class have just appeared in the holiday lists. The first is a volume of "Adventures in Australia,"‖ by Mrs. Lee (formerly the wife of a traveller, Mr. Bowdich), and who has written achiever life of the great Cuvier. The scenes of the present work are laid in the Bush and the Wilds of Australia—a new country to readers of every growth: its natural productions and features, and the habits of its natives are ably pictured within the framework of "The Wanderings of Capt. Spencer." The "natural history" is very carefully and pleasingly conveyed: and the moral of God's providence to preserve the mariner in his perilous course. The scenes of chase and capture, of piracy, wreck, and marvellous escape, are vividly narrated; and the minor points of character relieve the sterner realities of the story. Mr. Duncan's able pictures of ships and whaling craft are admirable.

As good-natured satire is the humour of the day, we see no reason why it should not enter into our Christmas festivities. Mr. M. A. Titmarsh is evidently of this opinion, and has, accordingly, produced *The Kickleburys on the Rhine*,** a set of piquant sketches of tourists, by no means sparing the travelling English. Here is a specimen:—

"The chief of the party was evidently the stout lady. One parasol being left free, she waved it about, and commanded the luggage and the menials to and fro. 'Horace, we will sit there,' she exclaimed, pointing to a comfortable place on the deck. Horace went and placed the shawls and the guide-books. 'Hirsch, say you conty les bagages? tront sett moro ong too? The German courier said, 'Oui Miladi,' and went. 'Bowles, you will see that Hirsch is comfortable, and send her to me.' The gigantic Bowman, a gentleman in an undress uniform, with very large and splendid armorial buttons, and with traces of the powder of the season still lingering in his hair, bows, and speeds upon my Lady's errand.

"I recognise Hirsch, a well-known face upon the Europ-an high-road, where he has travelled with many acquaintances. With whom is he making the tour now? Mr. Hirsch is acting as courier to Mr. and Mrs. Horace Mildew. They have not been married many months, and they are travelling, Hirsch says, with a contraction of his bushy eyebrows, with Miladi, Mrs. Milliken's mamma. And who is her Ladyship? Hirsch's brow knits into deeper furrows. 'It is Miladi Giggleburv,' he says, 'Mr. Didmarsh. Berhaps, you know her.' He scowls around at her, as she calls out loudly, 'Hirsch, Hirsch,' and obeys that summons.

"It is the great Lady Kicklebury of Pocklington-square, about whom I remember Mrs. Perkins made so much ado at her last ball; and whom old Perkins could not be induced to support. When Sir Thomas Kicklebury died (he was one of the tenants of the square), who does not remember the scutcheon with the coronet with two balls, that flamed over No. 36? Her son was at Eton then, and has subsequently taken an honorary degree at Oxford, and been an ornament of Brown's and the Cowardly Club. He fled into St. James's from the great house in Pocklington-square; and from St. James's to Italy and the Mediterranean, where he has been for some time in a wholesome exile. Her eldest daughter's marriage with Lord Roughhead was talked about last year; but Lord Roughhead, it is known, married Miss Brent; and Horace Milliken, very much to his surprise, found himself the affianced husband of Miss Lavinia Kicklebury, after an agitating evening at Lady Pinkhurst's, when Miss Lavinia, feeling herself faint, went out on to the leads (the terrace, Lady Polkimore *will* call it), on the arm of Mr. Milliken. They were married in January—it's not a bad match for Miss K. Lady Kicklebury goes and resides with the Duke of Bayswater, her son-in-law's father and brother-in-law; and now that they are come abroad, she comes too. She must be with Lavinia, under the present circumstances.

"'When I am arm-in-arm, I tell this story glibly off to Bowles, who is astonished at my knowledge of the world, and says, 'Why, Titmarsh, you know everything.' 'I *do* know a few things, Larkin, my boy,' is my answer. 'A man don't live in society, and *pretty good* society, let me tell you, for nothing.' The fact is, that all the above details are known to any man in our neighbourhood. Lady Kicklebury does not meet with us much, and has greater folks than we can pretend to be at her parties. But we know about them. We'll condescend to some gossiping articles about *whom* we know; and she may overdraw her account, but of that, of course, I know nothing. When Lankin and I go down stairs to breakfast, we find, if not the best, at least the most conspicuous places in a corner of the coffee-room, and the lurking Londoner makes a darkness in the cabin, as he stoops through it bearing cups and plates to his employers.

"'Why do they always put round into coffee on board steamers? Why does the tea generally taste of boiled boots? Why is the milk scarce and thin? And why do they have those bleeding legs of boiled mutton for dinner? I ask you, my brethren of other nations, you are well fed. Is it impossible that Britannia, who confessedly rules the waves, should attend to the victuals a little, and that meat should be well cooked under a Union Jack?"

* * * * * * *

"The boat is full of all sorts and conditions of men. Forard there are peasants and soldiers; stumpy, placid-looking little warriors for the most part, smoking feeble cigars, and looking quite harmless under their enormous helmets.

"Yonder walks a handsome soldier who has just been marrying a wife. How happy they seem! and how pleased that everybody should remark their happiness. It is a fact, that, in the full sunshine, and before a couple of hundred people on board the *Joseph Miller* steamer, the soldier absolutely kissed Mrs. Soldier, at which she went Fanny Kicklebury red to blush.

"We were standing together looking at the various groups, the pretty peasant woman (really pretty for once), with the red head-dress and fluttering ribbons, and the child in her arms; the jolly fat old gentleman with the gold chain, the sentimental young students who came with us across Somn, with their national colours in their caps: with their picturesque looks, their yellow ringlets, their budding mustaches, and with cuts upon almost every one of their noses, obtained in duels at the University—most silencing to see these young fellows, indeed—but, ah, why need they have such black hands?

"Near us is a type too, a man who adorns his own tale, and points his own moral. 'Yonder, in his carriage, sits the man who won't go to work.' Without that dismal old chariot, though it is shabby, costly, and clumsy; and though the wicked Red Republicans come and smoke under his very nose—yes, Miss Fanny, it is the lusty young Germany, pulling the nose of the worn out old world."

The gambling propensities of the tourists are prominent enough:—

"So many thousands of English folks have been at Rougesnoirbourg in this and past seasons, that it is scarcely needful to alter the name of that pretty little gay wicked place. There were so many English there this year that the Hotel des Quatre Saisons the Hotel de Westminster, the Hotel de Londres, and the Hotel de Paris, were full—full to overflowing. There were judges and their wives, serjeants and their ladies, Queen's counsel learned in the law, the northern circuit and the western circuit, the Welsh circuit, the half-pay and full-pay military officers, naval officers, and sheriff's officers. There were people of high fashion and rank, and people of no rank at all—there were men and women of reputation, and of the two kinds of reputation there were Brummels playing cricket; Englishmen putting up the German partridges, and English guns knocking them down; there were women whose husbands, and men whose wives were at home, there was high church and low church; England turned out in force at Rougesnoirbourg.

From the motley gallery we select the polished Jonathan:

"Among the travellers in Europe, who are daily multiplying in numbers and increasing in splendour, the United States dandies must not be omitted. They seem as rich as the Milor of old days, they crowd in European capitals, they have showed our people of the old country from many hotels which we must to frequent; they adopt the French fashion of dressing rather than ours, and they grow handsomer beards than English beards; as some plants are found to flourish and shoot up prodigiously when introduced into a new soil. The ladies seem to be as well dressed as Parisians, and as handsome, though somewhat more delicate, perhaps, than the native English roses. They drive the finest carriages, they keep the handsomest rooms, they have the handsomest company, and, in a word, the Broadway swell has now taken his station and asserted his dignity amongst the grandees of Europe. He is fond of asking Count Reineck to dinner, and Grafton Laura will come and dine upon a gentleman who has millions of dollars. Here comes a pair of New Yorkers. Behold their elegant curling beards, their velvet coats, their delicate primrose gloves, and sambric handkerchiefs, and the aristocratic beauty of their boots. Why, if you had sixteen quarterings, you could not have smaller feet than those; and if you were descended from a line of Kings you could not smoke better or bigger cigars.

A bit of Rhine romance is thus disposed of: the party are persuaded to inspect the interior of a famed palace, and thus the charm is broken:

"There was no Sleeping Beauty in any chamber that we saw; nor any fairies, good or malevolent. There was a shabby set of clean old rooms, which looked as if they belonged to a prince about to put out his money, and whose ten-crown-jewels would not fetch more than King Stephen's pantaloons. A fugitive prince; a brave prince struggling with the storms of fate, a prince in exile may be poor; but a prince, looking out of the dusty windows, with a cracked pane or two of the carpets all hanging, and set them justly down at a low figure. 'These German princes,' she said, 'are not to be put on a level with English noblemen.' 'Indeed,' we answer, 'there is nothing so perfect as England; nothing so good as our aristocracy; nothing so perfect as our institutions.' 'Nothing! *nothing!*' says Lady K. An English princess was once brought to reign here; and almost the whole of the little Court was kept upon her dowry. The poor child would not hear her own family's name, and the Schloss, the rooms which she inhabited. Her old books are still there—her old furniture brought from home; the presents and keepsakes sent by her family, are as they were in the princess's lifetime. Every clock has the name of a Windsor maker on its face; and portraits of all her numerous race decorate the homely walls of the now empty chambers. There is the benighted old King, his beard hanging down to the star on his breast; there he perfects our institutions.' 'Nothing! *nothing!*' says Lady K. An English princess was once brought to reign here; and almost the whole of the little Court was kept upon her dowry. The poor child would not hear her own family's name, and the Schloss, the rooms which she inhabited. Her old books are still there—her old furniture brought from home; the presents and keepsakes sent by her family, are as they were in the princess's lifetime. Every clock has the name of a Windsor maker on its face; and portraits of all her numerous race decorate the homely walls of the now empty chambers. There is the benighted old King, his beard hanging down to the star on his breast; there he perfects our institutions, and sets them justly down at a low figure. 'These German princes,' she said, 'are not to be put on a level with English noblemen.' 'Indeed,' we answer, 'there is nothing so perfect as England; nothing so good as our aristocracy; nothing so perfect as

THE TRANSEPT BY NIGHT.—THE "BONFIRE."

THE GREAT EXHIBITION BUILDING.—DETAILS OF CONSTRUCTION.

(*Continued from page 454.*)

TRANSEPT BY NIGHT—LOOKING SOUTH.

PERHAPS the most beautiful and striking view of the works of the Crystal Palace, now rapidly approaching to completion, is produced at night, when occasionally the shavings and chips collected into some convenient spot are fired, partly in order to get rid of, by degrees, so great an accumulation of waste stuff, and partly to gratify the numerous lovers of the picturesque who have purposely remained behind amid winter's fog and cold, to behold what may truly be called a grand spectacle. By the kindness of the contractors, such a fire was specially lighted for our Artist on the evening of Friday, the 13th inst.; and we now present to our friends a view taken on that occasion of the southern division of the transept.

The principal features lighted up on the occasion referred to are the ribs or main timbers of the semi-circular roof—the three tiers of cast-iron columns on either side of the transept and south side of centre aisle, to the westward; the "diagonal bracing," about which a good deal has already been said; and, lastly, one of the stately trees which has been spared from the hands of the destroyer, which appears as though it had forced its way through the floor of the gallery, crossing the south end of the transept, and which connects the longitudinal galleries, extending to each end of the structure.

As the "diagonal bracing" has not, as yet, been represented in any of our Illustrations, we shall introduce a few words on the subject. We need scarcely say that the introduction of these diagonal ties, not only at the intersecting angles of the central aisle and transept, but also under all the gallery-crossings, has sadly destroyed many of the beautiful vistas which a week ago were visible in so many directions; but even the appearance of additional safety will have a charm for the million, far surpassing the scenic effects which are thus lost by the introduction of the bracing, especially after the stir which has been made by some of the brick-and-mortar adherents. This fortification, as we may call it, except at the angles of the transept and central aisle, was as sudden in its appearance as it was unexpected.

The diagonal bracing at the meeting of the central aisle and the transept consists of round iron rods of 1-inch diameter, strengthened at the lower ends by 1¼-inch square shoulders; and the upper ends are prepared with screws, which pass through an open boss, and are secured within by screw and nut. Iron plates are fixed round each of the columns, at about 2 feet from the lower ends of the ties; and four vertical iron bars are firmly secured to the plates at the top, and to the projecting flanches of the column and socket at bottom.

At each of the meeting angles there are altogether twelve sets of braces; there are likewise four sets of braces at each of the inner angles of the 24-feet walk or avenue.

Under each of the gallery-crossings, or passing-places, are four sets of diagonal ties, and in some of them we find an ornamental boss, introduced so that the screw-ends and nuts are entirely concealed.

UPPER PORTION OF COLUMN.

In the *View a, the upper part of one of the columns*, the ends of three of the *twenty-four* feet cast-iron trussed girders are shown at their junction therewith. The man on the left of the view, suspended from the scaffold-pole, by means of ropes and pulleys, is in the act of keying up the lower angle of the girder; the two men on the right are hauling up materials. In the central aisle and transept there are three tiers of columns, with as many junctions and girders in the direction of the length and breadth of the building respectively, and similar to those shown in the view; the lower tier is 22 feet 2 inches in height, the gallery tier 20 feet in height, and the upper tier also 20 feet in height to the under side of the framed wooden gutter; the columns are in horizontal section circular, 8 inches in diameter, with four straight and parallel projections of ⅞ of an inch and 3½ inches wide; the interior of the column, 6 inches in diameter, is open throughout, forming a water-way from the gutters to the drain-pipes in connexion with the sockets of the columns. All the columns and connecting pieces are faced by machinery before arriving at the works.

VENTILATION.

In a building destined to be occupied from day to day, and from morning till evening, during the hottest portion of the year, a large concourse of persons of all nations, including large numbers of those who regard not the bath as a necessary part of their daily occupation, it is of the utmost importance to pay very great attention to the mode of introducing continually streams of fresh air, so as to keep the internal atmosphere as pure and undefiled as possible. We need scarcely say that this important point has received the utmost attention, and, by the details which we shall presently give, it will be seen that the admission of almost any amount of fresh air can be effected at pleasure, and that in a way so as not to produce injurious draughts or currents.

In the spaces or panels formed by the iron and wooden columns *vertically*, and by the sill and plate *horizontally*, as already described, are introduced the lower tier of ventilators, originally intended to have been formed of *louver* or *louvre* boarding, similar to that so extensively

SOUTH END OF THE BUILDING, FROM THE PARK ROAD.

used in breweries, and whiting and other establishments; but, as scarcely any one detail in the construction of the "imposing structure" is the same as that at first designed, so in the present instance we find a vast improvement in the details of the ventilators, which, in their present form, have a light appearance, and are more easily *opened* or *shut* when required, than by the ancient and cumbersome luffer-board plan already alluded to. Each frame of the lower tier of ventilators is constructed of *seven-eighths* deal, is *seven feet* long, *four feet three inches* high, and *four inches and a half* deep, being dovetailed at angles, and further strengthened behind by angle-ties. The *blades* or *luffers* are of sheet-iron, forming a flat S curve. Each blade is hung as a swing dressing-glass, with two ⅜th-inch pivots resting in proper bearings fixed in the sides of the frame. The blades, which are placed horizontally, are *six inches* from *centre* to *centre*; the whole being connected together by a vertical deal chamfered bar by means of forked iron arms *three inches and a half* long, and fixed to the sides of a sinking or groove in the vertical connecting bar, which is *three inches* in width, and of sufficient length to embrace the *eight* blades. By the weight of a single pound, all the *blades* can be opened or shut at will, so that a simple lever apparatus will complete this very important part of the construction of the "Industrial Palace." The particular form of the blades is admirably calculated for excluding rain. A wooden stop is introduced, both at top and bottom of the frame, to prevent the upper and lower blades from moving beyond their prescribed limits, when closed. And here we would venture to suggest to those who have the special charge of the internal decoration, to avail themselves of the opportunity presented by the particular form of the blades of the ventilators, of introducing a mode of ornamental painting which is to be found in Switzerland and other countries, in which outside blinds form so important a feature in the exterior of their buildings: we allude to the mode of shading off each lath—say from a light blue to a grey, and then merging into a white; the effect is pleasing and elegant in the extreme, and would add considerably to the general effect of the internal decoration of the great building, if adopted with regard to the mode of painting the ventilators.

The construction of the upper tier of ventilators is similar to that of the lower tier; but, instead of *eight* blades, there are only *five* in each frame. The upper ventilators occupy the spaces above the close boarding, and are immediately behind the ornamental iron fan-lights, or panels, seen in the *View of the South front* (at page 432 of THE ILLUSTRATED LONDON NEWS for December 7th), which is taken from the carriage-drive running between the building and the Kensington-road. The close boarding is to be painted (externally) stone colour throughout.

DRAINAGE.

The drainage of a building having a horizontal area of roofing of something like eighteen acres, requires not a little skill in arranging the various lines of the main drains, and in apportioning accurately the sectional areas of the gutters, pipes, and drains, so as effectually to carry off the largest amount of rain-water likely to fall at any period, causing temporary stoppages, or, what is worse, that which is known among bricklayers as the drains "blowing up." Moreover, the "ridge and furrow" plan of roofing, so admirably calculated for covering in the Palace of International Industry, requires that every length, both of longitudinal or transverse furrow or gutter, should be so formed as to carry off half the rain-water received into it from the skylights in one direction, and the remainder in the other direction. This is effected by *cambering* every length of gutter, which not only secures the above important condition, but also prevents what is termed *sagging*—that is, sinking of the timber below its proper level line: thus, each gutter plate is considerably curved upward, and, looking along under a continuous line of skylights, the effect is very striking. The surface water from the skylights is received into the longitudinal or three-way gutters, and these again empty themselves into the framed transverse gutters at either end; the sectional area of the former being about 5 square inches, whilst that of the latter is 27½ square inches.

The iron columns which support the various gutters act as so many rain-water pipes, in conveying the water from the roof into the cast-iron drain-pipes, running in parallel lines along the whole length of the building, and which have each a sectional area of 28½ square inches. Thus it will be perceived, that, as the stream from its fountain-head, increases gradually until it widens out into a mighty river, so the system of drainage pursued in the model structure, for the use of all nations, following nature as its guide, presents the gradual increase of sectional area until it reaches the capacious culvert, which finally discharges itself into the intricacies of the sewers of the great metropolis.

The principal drain, or more properly culvert, runs along under the ground at the east end of the building. It is of egg-shape, or natural oval; its height being 2 feet 6 inches, its width 2 feet, and length 390 feet, to its junction with the metropolitan sewer under the carriage-drive on the south side of the Great Building. To the same outlet, a similar culvert, from the central transverse drain, runs under the same road just outside the outer line of the footpath, having a fall of 1 in 288, and extending altogether 855 feet.

The main cross drain is placed 24 feet to the east of the central transverse line of the building, is 18 inches in diameter, extends 294 feet southward, and has a fall of 1 in 240. This cross drain is continued by a 24-inch drain, having a similar inclination to the last, and running into the culvert in front of the building, a distance of 190 feet.

The next to be noticed is a 12-inch drain-tube, extending westward under the same road, the rate of inclination being 1 in 288, and its whole length being 964 feet to its junction with another sewer. At the west end of the building, a 12-inch drain-pipe, 156 feet long, extends from the central line of the building to join the 12-inch drain-tube under the road.

On the north side of the building, and running eastward, is a 9-inch tube in connexion with one of the lines of 6-inch cast-iron pipes, 348 feet long, and falling 1 in 192. Then there is a 12-inch drain, also, on the north side of the building, 672 feet in length, and returning southward 78 feet; and further extended in the same direction 144 feet, to meet one of the lines of longitudinal 6-inch cast-iron drain-pipes.

Finally, there are 38 6-inch inlets from the bottoms of columns to the drain on the north side of the building, and which completes the entire system. We have been thus particular in describing the extent of drainage, because we are fully aware of its great interest.

(For the progress of the Exhibition arrangements, see the Number with which the present Supplement is published.)

RODERICK DHU—The daughter of a co-heiress has a right, when married, to have her mother's arms quartered with her paternal coat
A B, Bucks The usage of the seals would render the bearer liable to the armorial tax
PROFESSOR FORBES, Edinburgh—Your Correspondent at Aix-la-Chapelle to explain, that Professor Kinkel, of Bonn, was not condemned to death by the sentence of a court-martial, as stated at page 417. He was only sentenced by the first Imperial court, but the punishment was increased to imprisonment for life in a fortress. After this, General Herchfeld and the prisoner ought to have been condemned to death; but the King graciously condescended to confirm the verdict, instead of subverting it, and ordered Kinkel to be sent to a house of correction, which was, in fact, increasing his punishment

WINTER BIRDS.

As the mellow fruitfulness of autumn leads on to the barrenness of winter, when the woods, divested of their summer robes, assume a wilder aspect, except with regard to the class of evergreens which here and there decorate the scene, it is no small gratification to the lover of ornithological pursuits, as it must be also to every pedestrian who is a careful observer, to mark the arrival of those several migratory visitors which come under the general term of Winter Birds. Each returning season, indeed, brings with it its peculiar characteristics and its gratifying associations; and, although one portion of the year may, especially with regard to the weather, be more pleasant than the other, the intentions of Providence are manifested and his wisdom is perfected.

> How many things by season seasoned are
> To their right praise and true perfection!

The return of the several winter visitors to their respective localities may be traced to the fact that, when the winter sets in in the north of Europe, they seek a comparatively milder climate, which is not only more congenial to their habits, but provides them with food. Here is the true explanation; and however much we may wonder at the instinct which dictates so long a journey, however puzzled at the impulse, mysterious as it undoubtedly is, which points out their unerring course and destination, we cannot but be struck with the marvellous intelligence which is thus brought into operation. By the exercise of careful attention in visiting those several scenes which they frequent, whether it be the moor and mountain, the open common or the inclosed field, the swamp and the marsh, the margin of extensive woods, or in their most dense recesses, by running brooks, expanded lakes, or silent rivers, our old favourites may be met with, and welcomed with grateful feelings, viz.: Ringousel, redwing, fieldfare, royston crow, woodcock, snipe, jack snipe, wood-pigeon, wild swan, wild goose, wild duck, widgeon, pochard, teal, crossbeak, crossbill, silktail.

The three latter, however, are only occasional wanderers; and, unlike the others enumerated, are uncertain, not only with regard to their visits, but as to the localities in which they make their appearance. During the severity of last winter, at one period, the large open plains around South Shields, the moors, the wax-wing, or Bohemian chatterer, engravings of which appeared at the time in the ILLUSTRATED LONDON NEWS. But all these strangers are thrice welcome. Their peculiar habits, and even their very plumage abound with interest and gratification. But, besides the pleasures arising from observation in a zoological point of view, there are others, certainly more exciting and adventurous in their character connected with the pursuit of some of these interesting favourites. Cockshooting, for instance, in well-managed and magnificent woods, has always been considered the most gentlemanly of diversions with the gun; especially if the bearer of the genuine Manton is accompanied by well-trained little springers and skilful keepers. The sylvan abode never rings with a more joyous roar than when the dappled favourite falls before the unerring shot; or the succeeding words, "Mark, cock!" prepare for another and another welcome and exhilarating scene, until the bag contains what is deemed a sufficient number, without any feeling of wanton destruction, much less a desire for utter extermination; although the habits of the bird may be closely observed, and the advantages of experience taken as a future opportunity for a renewal of the sport, varied, probably, by the state of the weather, when the more open brooks are coated with ice, and those sports are then resorted to under the lee of the wood, deeper in its recesses, or possessing those peculiarities in soil and surface which suit the habits and provide for the food of the woodcock.

The flight of the Woodcock is different from that of the Snipe; and, although many a good shot fails to bring down the latter, the "old hand, aware of the zigzag and twisting course of the latter, feels sure for a moment until such peculiarity has ceased, and then, with a steady aim, adds to his store as well as his reputation.

But the pursuit of the winter aquatic fowl is the more adventurous; requiring more exertion, more vigilance, more determination, and more alacrity than mere cover shooting. This arises principally from the nature and extent of the ground—namely, the lines of large open drains, over lonely carrs, through dreary and lonely swamps, along the lines of rivers, by large ponds, or noble lakes—to each of which they resort.

> Best of all pools, the fowler loves
> The great Lochmaben tarn.

It is also requisite that the dogs should be of superior description, well trained and accustomed to the sport; although the plan may be resorted to of lying in ambush, beside some lake, for instance, to which the ducks return in small parties early in the morning, after having visited their feeding-grounds, and which often lies at a considerable distance from their place of security by day.

Much interest is also attached to the arrival—sometimes in immense numbers—of the large family of the Wood-Pigeon. In severe weather they betake themselves to the beech woods, which fatten them amazingly. Since, however, the destruction of beech woods in various parts of the country, these visits in large flocks are not so frequent as was once the case. Still, however, they are not wholly banished from their old haunts, feeding upon acorns, and, during the prevalence of frost and snow, on the turnip lands; with this peculiarity, that watch-birds are almost invariably placed on the neighbouring trees to give alarm at the least indication of danger, when they immediately take wing, and sail away to the neighbouring woods.

Nor is the beautiful Fieldfare, and his congeners the Redwing and the Ringousel, devoid of interest. They are not unfrequently seen in small parties, lingering hither and thither, according to the state of the weather, and the supply of food; visiting the lines of the hedgerows, along the margin of woods, in ancient pastures, where old thorns abound from time immemorial, feeding upon haws and other berries provided for their subsistence, generally shy and difficult of approach, unless tamed by intense frost and deep snow; and, strange as it may seem, sleeping upon the ground. Having reached their southern destination, they pursue a like course in returning northward, only to take wing for their native haunts in summer; but affording diversion to schoolboys, and that ardent class of sportsmen who come under the general term of "hedge-peppers."

The Wild Swan is more rarely met with. But, by seeking much caution, the Wild Goose may be approached at daybreak, particularly if they had only arrived on the preceding evening; and, in visiting their temporary home, the Widgeon, the Pochard, and the Little Teal will increase the interest and contribute to the excitement; while, perhaps, the Royston Crow is winging his flight overhead, within shot; and the scene is enlivened by the "flaher Heron watching eels," and the shrill cry of the Golden Plover.

Thus, even the winter season, with its clouds and gloom, its "eager air," and ringing frosts, is not destitute of attractions. Diversion is afforded, and knowledge, in a zoological point of view, increased; and, while vigour of frame is maintained and the spirits enlivened, the blessings of health, which give an additional zest to all enjoyments, is happily promoted and firmly established.

FRED HOLDERSWORTH; OR, LOVE AND PRIDE.

BY THOMAS MILLER.

(Continued from page 468.)

CHAPTER IX.

While the events transpired which we have recorded in our last chapter, Fred remained at Margate, managing to get over his interview with his uncle before starting, without suspicion, and contriving to send a letter to Tollerton, as we have before stated, by an early coach, to meet him on the pier. That same morning his uncles had had a long conversation together, and the old officer had promised to walk out with Fred, and, if possible, to obtain his reasons for speaking and acting in so strange a manner as he had done; also to ascertain whether or not he had any dislike to his pretty cousin, or had formed any other engagement, all of which he was to communicate to his brother, the wine-merchant, when he returned to his country residence. Such anything the nephew might state in confidence should remain sacred between them, for on no other condition would the honest soldier undertake the negotiation. "What I pledge my honour to keep secret, brother," said he, placing his hand on the wine-merchant's arm, "you will not, I am sure, require me to divulge, knowing how much I have the interest and happiness of all at heart." And so they parted, with an understanding that if Fred wished to return on the morrow, he was to do so.

The Captain had a notion that he was unequalled in getting through a matter of delicacy or difficulty, having been the foremost to enter many a dangerous breach, and lead a forlorn hope when no other was found bold enough to occupy such dangerous posts; he thought there was nothing like coming to the point, and resolution might accomplish by coming at the point at once, for he had no idea of "round-about" policy, but hated all subterfuge. Straightforward himself in all he said or did, he believed that every one around him would be followed by others in thus dealing honestly with them. "Right or wrong, yes or no," he would say, "embody everything. If you ask a man a question, and he cannot or will not answer it, let him say so at once, and then there need be no further waste of words"

Upon this hint he spake

"Tell me candidly, Fred," said the Captain, as they were walking along the cliffs, after the steamer had started, "have you any dislike to your cousin?"

"Not the least in the world," replied Fred.

"Then why hum and ha about the matter?" said the uncle. "She is a worthy young lady. Fred, you will not deceive me."

"But there is an obstacle in the way which prevents me, uncle," said Fred.

"What is it?" inquired the Captain, twirling his cane, and inclining his head towards his nephew, so that he might hear his words.

"I do not like to tell you," replied Fred, looking on the ground, as if he had stolen something, and was about to confess to the theft.

"Pish! Nonsense! If you tell me in confidence, it goes no further," said the Captain. "If your affections are already engaged, why, there's an end of the matter. For I should despise you, if you broke your word with any one, especially a lady. I am certain whoever she may be, she will be no discredit to the old family of the Holderworths."

Fred winced at the latter remark, as if to say, "I am not so sure of that;" but he well knew how proud both his uncles were, and how much they delighted to talk about "gentle blood," and of the many wars in avoiding the one in a certain aunt who had married a tide-waiter in the Customs, and of whom Mrs. Holderworth, when compelled to speak at all, to make the best of the matter, always described the husband as holding a highly responsible situation under Government.

"I know, whatever I may have done," said Fred, "I can rely upon your forgiveness, and also that you will keep the matter a secret from your brother. I am engaged, and cannot have my cousin."

"That is speaking out as you should do," replied the Captain, "and we must now abandon the siege. You are sure you love her?"

"I do indeed," said Fred, raising his eyes; "and I also know how much she loves me; and it is this which makes me so unhappy; for I promised to return yesterday, and I have never been away from her before, since we were married."

"Married!" exclaimed the uncle, springing back as if a shell had exploded at his feet. "This is being engaged with a vengeance, and not a shadow of a chance of retreating." Then, pausing a moment, he added, "Well, I wish you joy and happiness. But this has been a sudden affair, and no mistake, drilling, too. Well, well! Who is she? What is she? Some old family, I hope? Property, of course?"

"Not much," answered Fred: "a little freehold. She herself is a treasure, uncle. I married for love, not riches; and I am sure, when you see her, you will approve of my choice. She is an angel."

"No doubt, no doubt of that," answered the uncle. "Bless them, they are all angels; that is, when they like. Freehold, eh? some old father, too, who will be damning us about his pedigree. Ah! we once had a mansion, parks, and lands, that still occupy a large space in the map of the county; but they are lost and gone, and have passed away from our hands, like what they may. Is the family large?"

"Only the mother; and the daughter I have married," answered the nephew, wishing the worst was known: "her father is dead."

"Where is their property?" said the Captain; "and what is the name of the family?"

"I will be candid with you, uncle," said Fred, thinking it better to plunge in overhead at once, than to stand with one foot in the water shivering beside the bank; "their property is the little cottage at which I took apartments. The mother is a superior kind of laundress, and I have married her daughter"

"Married the daughter of a laundress!" exclaimed the Captain; "quartered the *arms* of our house with a wash-tub, and two flat irons for supporters. Hang it, nephew, this is too bad! Had it been some broken-down gentlewoman that got her living by clear-starching, I should not have minded so much, so long as there had been the true blood; but to throw an old honourable name into a sea of soap-suds, it is unpardonable. When my brother knows this, he will disinherit you—cut you off with a penny, maybe, or something of that sort." Then his better nature again stepping in, and ostaining the mastery over this family pride, he said: "This must be kept a secret from my brother, and I must go and break the tidings as delicately as I can to your aunt and cousin, and let them know that you are engaged. Has there ever been a coat of arms, or anything of that sort, in the family? If there has, I can pull through it somehow with my brother. You must see to this."

Fred doubted very much whether any of the family could boast of armorial bearings, but said that his wife had a beautiful aquiline nose, and that, from all he had read, it denoted a high descent. He, however, succeeded in obtaining a promise from the wine-merchant-elect that the marriage should be kept a secret, and, further, that he would inform the pretty cousin of his engagement, but nothing more.

While the uncle went to reconnoitre, as he termed it, Fred continued his walk, bemoaning his hard fate, and sometimes peeping over the edge of the cliffs, to see if there were either pirates or smugglers moored beneath, to whom he might offer his services, and "do the romantic" for a few months, in huge water-boots, striped shirt, and cap, belt, and pistols. He could have been a Red Rover and such like represented on the stage. He had some dim notion that he might by such means capture a rich prize, come home and bed defiance to his rich uncle, then repose for the remainder of his days on the fortune he had amassed and the laurels he had gathered. Then he resolved he would take to drinking—plunge in somewhere and swallow a large tumbler of brandy; but he was afraid it might disagree with him, as he had never ventured beyond a few glasses of wine; so he abandoned that method of burying his troubles. Then he thought that he would immortalize himself by composing such a poem on the sea as never had, nor never would be again written. But he could not bring himself to fall to work forming the first line, and then for the life of him he could not find a rhyme to the last word; so he lit a cigar, and smoked "for want of thought," instead of thinking.

While he sat with his feet hanging over the cliff [illegible] memory once more wandered to his pretty little w[illegible] and before-mentioned cousin, and pictured her with her arms round him at his wharf, sew in disappointment and despair and the tears stood in Fred's eyes as his fancy pursued the vision; and he wished he and she were the two white sea-gulls which he saw wheeling and flying with the sunshine on their wings, without ever troubling themselves as to what their relations thought of their union.

Meantime, the Captain had taken Mary out for a walk, and kept every now and then clearing his cane, and carrying off the head of a nettle, while he studied how to break the tidings. After a few preliminary "hems" he thus commenced:—

"Before I joined the army, my dear, I commenced by inuring myself to a soldier's life and a soldier's fare, and you have no idea of the good service this sharp practice did for me when I arrived in India: I was ready prepared for anything, from supping off a raw tiger, to champing a leaden bullet when we were beyond the reach of bitted steel. Now I wish to prepare you for what I am about to communicate," and bang went his piece without hanging fire: "Fred is engaged!"

"Engaged, uncle?" said the niece, her face almost as white as the dress she wore; "how? to whom? when?"

"To a young lady, or something of the sort," replied the Captain; "he's engaged to marry her, so he told me this morning."

"Then he did very wrong to conceal it from me," she said, stifling a rising sigh. "I was not prepared for this," and she wiped her eyes, for the tears fell in spite of the effort she made to restrain her feelings. She then added, "and I am rejected."

"No, not rejected," said the old soldier; "the fact is he has exchanged his word and honour, I mean fairly enlisted, and I am sure you would despise him as much as I should if he deserted his colours. It cannot be helped. How to break the matter to my brother is now the difficulty, you must come to my aid."

"Oh, uncle!" she said, sobbing aloud, "it is hard to fix the heart on anything, and then have that thing taken from you, and be told you must forget it." Then, hand across her face, as if ashamed of the tears she was shedding, she said, "Let him go! What is he that I should care for him, or humble myself as I am now doing? I thought him not; it was my aunt's and uncle's wish. I will never to think of him again: let him go." And she hurried on as if Fred were behind her, and she was trying to outstep him, and held up her pretty haughty head, and stepped out manfully. The old officer was astonished to find so much spirit in such a little body. She strode along like a little Corinthian in petticoats after banishing his countrymen. But this lasted not long; pride and passion soon fled like distant thunder, and then the rain came down. She had far outstripped her uncle, and stood leaning her head on a stile, crying over her little foot with her parasol, and biting the fingers of her glove, and weeping bitterly when the old soldier again came up with her, and, raising her hand gently, said, "Take it not so to heart, darling: let Fred go, and think no more of him, or even of your own feelings."

"I know it is very foolish of me," she said; "but I cannot help it. Only this morning he said he would not deceive me for the world, and I believed him; and"

"What! did he say he loved you?" exclaimed the fiery old soldier. "If he did, I'll go back and beat every bone in him into a jelly. Hang him, if he wants two wives, let him get another in the pipe-clay and ironing line, then he'll be the same every Monday morning they traverse his beat. He's disgraced the family enough already by marrying a washerwoman."

"Marrying a washerwoman!" echoed the niece. "Dear uncle, you are surely not in earnest?"

The honest old soldier (as they say) "tried to look nine ways at once," and stood utterly dumbfoundered to think that he had divulged a secret which he had promised to keep. "Eh? what? It's not the case, niece; truth comes out as natural y when a man's drunk or in a passion, as lying does to a rogue when he's first seized upon by a constable. Then to make love to you, my dear! I'll beat him into powder-blue—make soft-soap of him, then send him home to his wife, and let her make the best use of him she can. And yet! Fred is more very wrong to break my promise: he's acted like a fool, and I unlike a gentleman. Niece, you will promise to keep this marriage a secret. Poor fellow! he will stand in need of friends. You must assist me."

"I will keep it secret," replied the niece, "for his sake. He never confessed that he liked me beyond a sister. Uncle, he did not deceive me. I see it all now, and I dread the effect these tidings will produce on your brother. I care not for myself. He will never forgive my poor cousin."

"He must not know it," answered the Captain. "It would be like springing a mine—ruin, destruction, and annihilation to every thing where my treasure. Neither must your aunt know a word of what has happened. has disgraced us, and there's an end of it."

"And yet she may be worthy of him, uncle," replied the forgiving niece. "You know your own favourite Shakspeare says—

> The selfsame sun that shines upon the court
> Hides not his visage from the cottage, but
> Looks on alike.

Fred was always romantic; but I cannot think he would select any one for—for a wife" (the last word seemed difficult to utter)—"unless she possessed some accomplishment. Many a once-proud family have been reduced by misfortune to labour for their bread. Let us not judge too severely. I forgive him."

"So do I, so do I, with all my heart," said the Captain. "But, confound it, love, he might have picked up a young woman with a more respectable profession, a governess, a genteel little milliner, or a pretty actress might have been pardonable; but washerwomen generally have such deuced red arms, and are so fond of indulging in gin and periwinkles; but I hope Fred's wife is an exception."

Poor Matilda! he little thought what thy true heart was then suffering—little dreamed what a priceless treasure his unworthy nephew had found in thee, now that he knows thee, the honourable old soldier would never have covered his tongue with gunpowder and fired it, than have uttered a single word against thee.

Nature so ordained it that none of us come into the world covered with horn-fly trumpery—naked we leap forth to win our own nobility, like the gladiators of old. Not that any one has a right to despise the

Tenth transmuter of a foolish race

But our business is now in London: for how Fred passed the remainder of that miserable day at Margate, or how he reached home on the following day, and was received by his pretty wife, would be of little interest to our readers.

CHAPTER X.

It may be fancy, but we have often thought that some people, after passing a few weeks by the sea-side, or elsewhere, making holiday and spending a few pounds, come back to business, keen, cross, and resolved to make up the amount they have squandered as speedily as possible. Such invariably present you with your I O U (if they chance to hold one), instead of holding out the hand of welcome when they return. Into renewing your bill, you might as well plead to the sea cliffs or green hills they have just quitted, as expect such favour until they have settled down for at least a week or two. The best thing to be done is to find out some one who owes the party money and can pay, and to present yourself under the shelter of his opulent wing.

It certainly does try a man's temper, after basking in the sunshine for weeks and watching the waves chase one another as if in play, hour after hour, and feeling the breeze blow about you as sweet and fresh as if it had come direct from the ever-green gardens of heaven, to come from such scenes and sit down in a dim dusty counting-house, reckoning up how many halfpence make a pound. Then

Premiums payable yearly, half-yearly, quarterly, monthly, or weekly.
Prospectuses, &c., to be obtained on application at the Office, 36, Moorgate-street.

A PREMIUM of FIVE GUINEAS is offered by the COMMITTEE of the ROYAL SOCIETY for the PROTECTION of LIFE from FIRE, for a DESIGN and MOTTO that shall, in their opinion, be the most suitable for the Society's Premium Mark. For presentation to individuals personally rescuing life from Fire. Also required, that of a crown piece. Metts may be sent in English or Latin, conveying a recognition of God's mercy in the rescue attending such a exertion, would be preferred.
The Design must be forwarded to the secretary before the 15th of January. By authority of the Committee.
SIMPSON LOW, Junior, Secretary.
165, Fleet-street, Dec 18.

MEDICAL, INVALID, and GENERAL LIFE ASSURANCE SOCIETY. Offices: London, 25, Paternoster-row; Manchester, 64, Newmarket; Frankfort, Gross Eschenheimer Gasse; Hamburg, Neuer-wall; Stockholm, Lilla Nygatan.
Directors.

Geo. Alex. Walker, Esq., M.D., 3, Finsbury-place, Russell-square
Alfred Waddilove, D.C.L., Doctors' Commons
James Whishaw, Esq., F.S.A., 64, Gower-street
At the ANNUAL GENERAL MEETING of this Society, held on Thursday, the 26th day of December, 1850,
BENJAMIN PHILLIPS, Esq., F.R.S., in the chair;
The accounts for the ninth year of the Society's business ending the 30th September, 1850, were laid before the Meeting, and the Report of the Auditors thereon having been read and duly received, the following Report of the Directors was also read:—
REPORT.
"The Directors are happy to be in their power to inform the Shareholders, that the financial year ending the 30th September, 1850, has furnished most satisfactory results which they feel will lead to a large bonus the Shareholders, whether as regards the amount of new business done, or the extent of losses incurred.
"During the year ending the 30th September, 1850, there have been issued no fewer than 569 policies for assurances, amounting to £234,549 sterling, and since the annual meeting, on the same period, 315 thus effected, of 49163 12s 7d.
"The extent and amount of business transacted by this office in any former year, not only in the number of policies, and the sums insured by those policies, but also in the yearly premiums payable upon them.
"The following table shows the results of the business transacted in each year since the establishment of the Society:—

Year.	Number of New Policies issued in each Year.	Sums Assured by New Policies in each Year.	Annual Premiums payable on New Policies in each Year.
1842	130	£55,345 1 0	£1889 13 7
1843	206	87,830 16 11	4992 18 6
1844	197	80,415 4 6	4193 4 3
1845	256	102,014 11 0	5353 17 0
1846	196	83,700 14 0	4363 6 3
1847	313	113,547 4 8	4327 3 4
1848	448	174,436 17 9	6206 0 4
1849	475	201,711 15 0	7496 0 6
1850	569	213,469 16 11	8163 13 7
Total	3791	£1,062,390 6 8	£47,492 1 6

"It is plain, from this statement, that in the course of a very few years, the Society has acquired a very large amount of business, equalled by few of the Assurance Companies in the metropolis.
"The Directors wish to call the attention of the Shareholders to the important fact that this rapid acquisition of business is not owing to any accidental cause, but to the steady and constant progress of the healthful state of the Society's operations, showing clearly the confidence reposed in the Society by the public.
"It is also most gratifying to be able to report that the losses by deaths during the past year have been less than in any preceding year since 1844, from which period it appears that the exceptions of the three first years of the Society, when the number of policies in force was but small, the losses have steadily increased, but have never been less than in any other.
"The Directors have only further to state, that the Members of the Board going out of office by rotation are Edward Doubleday, Esq. and Thomas Hawkins, Esq., who being eligible, offer themselves for re-election by rotation are James Parker Deane, D.C.L. and Martel Lawrence Welsh, Esq., all of whom being eligible, offer themselves for re-election.
"It would be unnecessary to add that the Directors have been duly re-elected without opposition, the usual votes of thanks were given."

Prospectuses, containing very full tables of rates, forms of proposal, &c., may be had on application at the Office, 36, Moorgate-street, or on application to any of the society's Agents, or to the Secretary, at the chief office, 25, Pall-Mall.
F. G. P. NEISON, Actuary.
C. DOLGAN, North Secretary.

LADIES' IMPROVED FELT BONNETS.—These are elegant, and fashionable Bonnets, manufactured in great variety, of beautiful colours, by T. BROWNE and CO., who beg to offer them to the Public as the most useful article ever delivered at the Manufactory, Fig a Marsh, Mitcham, or by their Agent, C. Parrett, No. 1, Little Love-lane, Wood-street, where the Bonnets can be seen.

THE SALE of MOURNING ATTIRE, in REGENT-STREET.—The PROPRIETORS RETIRING from the GENERAL BUSINESS, Display and Manufacture of Mourning, will themselves of this opportunity of returning thanks to their numerous and distinguished patrons for the very liberal and extensive support bestowed upon them for so many years, and to inform them they will now have an unique opportunity of purchasing goods of the very highest class, manufactured now three months for the intention to sell off the whole of their valuable stock, consisting of every novel of the season, at Jackets, Cloaks, Mantles, Dresses, and Millinery, at No. 61, East-street, Brighton. Families requiring First-Mourning will find their orders executed by the experienced assistants, with the greatest care and attention.
Messrs. COOK and CO. would direct particular attention to their Sale Department, which is replete with every article that the fashionable mart is so eminently distinguished.
All Goods sold for Cash only, and each article will be marked in plain figures, and reduced to half the usual price.—The PARISIAN and GENERAL MOURNING WAREHOUSE, 61, and 62, Regent-street, and 24, Argyll-street.

TO PARENTS and GUARDIANS.—The tendency of modern taste, as exercised in boys dress, is happily free from the grievous fogy to which girls are subjected for the improvement of figure and gait, as well as health. In the garments ready made by Messrs. NICOLL, of Regent-street and Cornhill, the chest and limbs, throughout the United Kingdom, are properly considered, and the result is, a better chance of having, in after life, a well-formed chest, and free play of the limbs, than under other vital organs. It may here be mentioned that a suit of Warm Overcoat for Boys has been recently produced at the above Establishments, which the Gentlemen prove an exceedingly useful garment, the general price of which is about one guinea.
Portion of the extensive premises in Regent-street, occupied by Messrs NICOLL, will in future be devoted for the production of BOYS' and YOUTHS' CLOTHING, and all the various articles of dress, mantle, and finish, besides having a further recommendation in their durability and very moderate prices.
College Caps and gowns, with every kind of garment calculated for pleasure, duties, or exercise, and which are now worn by young gentlemen at the college, at their respective homes, or abroad, may be had to meet with at the warrooms of H. J. and D. NICOLL, Merchant Clothiers, 114 and 116, Regent-street, corner of Vigo-street, and 22, Cornhill, (a few doors from the Royal Exchange).
Cautious purchasers have secured the use of the word "PALETOT," but Messrs. NICOLL are the sole Patentees of the design and material of the Waterproof Paletot, recommended by the Faculty, manufacture of this expensive and gentlemanly article of costume.
Is on parle Francais. Hier spricht man Deutsch.

TO the TRAVELLING PUBLIC.—A great saving of time, trouble, and expense, by the use of PALETOT, is a novel adaptation of the old Railway Rug, without its horse-cloth appearance, to a double purpose—that is to say, besides being used as a wrapper for the knees, it can be used as a cloak for the shoulders.
Thus, by simply drawing in a string, rests are formed for the shoulders, and the garment assumes the graceful appearance of the ancient Togs (whence its name).
The price is 1 Guinea, or with a hood (now in general use for travelling in France), and bound with braid, it is One Guinea and a Half.
When the Toga is used as a wrapper for the knees, the hood forms a most convenient receptacle for papers, &c.
Scroll Toga Wrapper is registered 6 and 7 Vic., cap. 65, and can be had in London only, of H. J. and D. NICOLL, Merchant-Clothiers, 114 and 116, Regent-street, corner of Vigo-street, and 22, Cornhill (a few doors from the Royal Exchange).
Caution.—Purchasers have requested the use of the word "PALETOT," but Messrs. NICOLL are the sole Patentees of the design and material of the Waterproof Paletot recommended by the Faculty, manufacture of this expensive and gentlemanly article of costume.
Is on parle Francais. Hier spricht man Deutsch.

WINSOR and NEWTON'S PRIZE MEDALS of HOMBURG, near FRANKFORT-ON-THE-MAINE. The Winsor Season offers to tourists and to the fashionable public all the advantages, and more, than are presented by Baden-Baden, Wiesbaden, &c. Long established, during ten years, the renown of the Baths of Homburg

FORD, Habit-maker to her Majesty, &c. &c., 19, Holles-street, Cavendish-square, London.

WAX FLOWERS.—All who study this beautiful art should purchase the materials at MINT. ARN S, by the means: nursing brilliancy as well as permanency of colour, combined with the most simple instructions, which is by no means without their use as justly celebrated Ladies, to prevent its position. Sould purchase of their AUTHORIZED AGENTS, or at their residence, 36, Soho-square. Wax Stocks, 6s. 6d. per gross, sorted colours.

ALPACA UMBRELLAS.—The economy of both in the cost and wear of this umbrella has been fully established, and proves that Alpaca is the best and most economical material ever introduced for umbrellas. It may be obtained of most umbrella-dealers in the United Kingdom, and w

FRED HOLDERSWORTH; OR, LOVE AND PRIDE.

(*Continued from page 522.*)

what is worse than all, people generally contrive to come back in the villainous cut-throat month of November, when the streets of London are filled with fog, and one old cough joins in chorus with another, as they come from under faded gingham umbrellas on each side of the street; and if you take up a paper at such a season, ten to one you begin by looking out for coroners' inquests. You envy the house results of paint, the hearth of coal-dust, and that there is a kind of boiled "cabbageiness" all over the place. You wish it were all darkness, instead of that dirty woolly sort of light which you cannot see through; for a room with closed shutters, wax candles, and comfortable fire, seems the only habitable spot in the city.

At such a season, Fred had to go to Peckham Rye every night, and come to town every morning. Sunday excepted, and, worse than all, to meet with a "freezing winter" in the cold looks of his wealthy uncle. True, his marriage was still kept secret from the wine merchant and his wife, but neither of them looked upon him as they had before ever since he had rejected the hand of their niece. Neither was there a word said about quitting the apartments he had taken; but he came and went unquestioned, and very often without exchanging such common civilities as—"Good night" or "Good morning;" for if he spoke, it was a great chance if either his aunt or uncle deigned to reply to him. As for his pretty cousin, she was like the matchless *Miranda* in the "Tempest"—"ten times more gentle than her 'uncle crabbed.'" Not that she would ever consent to see Fred's wife; but when over she had the chance, showed as much kindness to him as if she had really been his sister, for either she or Tollerton were ever at hand to cheer his despondency. Nor did the old officer at a l hang back, but had many a hearty battle with his nephew about his unluckiness in Fred. The very clerks and porters seemed to take their cue from the wine merchant, and to treat the nephew with disrespect; nor did the uncle care to check them, although he one day smiled when Fred floored one of the fellows for his insolence before his face.

Fred still staid at times to dine with them, as he always had done before his marriage, and although the Captain and cousin tried their best to make him comfortable while he remained, there were times when he felt as if his meals would choke him, so conscious was he that he "ate the bread of bitterness." Still he had not the spirit to rise up and repel these insults to resign his situation, and seek some other place where he might earn and eat the bread of independence. It is just probable that he would have turned round upon his uncle, while writhing under some "official" insult, but for the advice of the Captain and Tollerton, this very morning, have sprung from passion, more than the cool deliberate valour of self-respect

But Fred still yearned after the "flesh-pots of Egypt:" his cousin at her harp, the wine sparkling on the table, the blazing fire, and all the comforts of a splendid town house, formed a great contrast to the Cottage of Content in the dreary month of November. First, there was running in "hot haste" to get a seat in the omnibus among the many, who assemble at the same hour they at home—devourers of under-done chops and steaks, hard beer, and rum-and-water, after which they came steaming into the omnibus on a rainy or foggy night, and made the windows look like ground glass in a few seconds. Then all their conversation was about funds and failures, banks and bankrupts, discounts and defaulters, stocks and joint-stock companies; and sometimes they leant across and whispered to one another, and that whisper affected some poor tradesman on the following morning when he came to offer his bills to be discounted. And there Fred would sit in a corner and wonder what crime he had committed, to be shut up for nearly an hour amongst twelve men who were human columns of the money market, harmless enough to read in the papers, but odious when bodily before his eyes, in flesh and blood, instead of being ranged in the silent ranks of type.

Nor when he got home did things appear to him a bit more pleasant, for there was too often fog at Peckham-rye, as well as in the city: and in that little hive of industry there was ever something going on, very different from that ease and indolence which he had been accustomed to after business in his uncle's snug sitting-room. The parlour looked small and confined, and, as he said in his ill-tempered moods, "there was scarcely room to swing a cat." Then he cared not where he threw the things that chanced to be in his hand on the side-board, for he minded not the table cloth, as a spite" against everything that belonged to the unfortunate washing. Sometimes, when in these moods—seeming as if he would fall out with his own shadow—his sweet wife would look at him with her mild beseeching eyes as if to rebuke him, though it was very rarely that any angry word escaped her pretty lips. But if he hated one thing more than another, it was washing-day, which, as he said, "began before he was out of bed in a morning, and lasted until he couldn't tell how late at night."

The old woman who came to wash knocked at the door before it was light, then Matilda, who always studied her mother's comfort, had to get up and let her in: and there was no sleep after she entered, for the banging of tubs, and rattling of pans, and plashing of water, together with smoke and steam, which always ascends, and which Fred swore the old washerwoman, by some means or another, contrived to drive wilfully into his bed-room. Then, when he got up, there were pans boiling here, there, and everywhere: if he stept to the right, he stumbled over some steaming vessel where the things had been "firsted:" if to the left, he came in contact with another pan where they had been "seconded: if outside the door, he tumbled over a basket full of wet clothes which were ready to be hung out, or broke his shins against a pail which held the "fine things" that were about to be "blued and rinced." He found clothes-pegs in his hat, and the blue-bag in his boot, while starch and soda stared him in the face wherever he moved. If he sat down without looking where he placed himself, ten to one he came "squelch" upon a pile of wet things, or sat on the soap and squeezed it flat: as for pins, they seemed to have broken loose, and to have run everywhere where there was room enough for them to lie down. Fred could never make it out why they clapped the things between their hands, and made them crack again, like boys who burst bladders, or why they stood shaking them at the door, and making no end of reports, like scores of successive pistol shots; or why, after drying the clothes, they sprinkled them again to make the n wet, and sent the water in all directions, like a bird washing itself; but he believed that all this was done to annoy him.

If he went out into the garden, there matters seemed worse; for when the wind blew it seemed as if a dozen old washerwomen were beating him with coarse aprons and rough towels, for so did they come flapping about his ears and shoulders. And sometimes the clothes-line broke—and, oh! what a crushing of plants, and setting on dart, and preparations for fresh rinsings: it was splash here, and dabble there, and wringing this, that, and the other out, until it fairly made his teeth ache to see into what forms the disastrous clothes were twisted.

But even this was nothing to when a sudden rattling shower of rain came down, without so much as saying "by your leave." Out they all rushed helter-skelter, head-over-heels—pulling, dragging, tearing down the lines—throwing them anywhere—then running out for more. In vain did Fred storm; they answered him in some sort of unintelligible gibberish, for they all had their mouths filled with pins—it seemed a marvel they were not choked: over head, over his coat, over himself, they threw clothes out. He would have thought a band of robbers were at hand, and that they were clearing all away before the plunderers came, such consternation did a sudden shower of rain spread. At last Fred bought a large syringe, and a pennyworth of ink he kept the enemy at bay, after having stown them what he could do on a clergyman's surplice.

Sometimes, in wet weather, the clothes-horse was placed in the parlour, until he arrived; and when the worthy laundress heard him at the gate, she hurried off as if for "very life," to get it into the kitchen before he came. On one occasion, in her haste she tred on the dog, who in its anger flew at Fred's dog, when both got under her feet, and down came the old lady in the passage, "clothes-horse and all," just as Fred entered in the dark. The parrot was flying about as it to see what had happened, and the monkey jabbering as fast and then make less noise; and there was such a "confusion of tongues" in the Cottage of Content as one may imagine took place amongst the bricklayers of old, when they first began to misunderstand one another at the building of Babel

Sometimes, when he sat down to dinner, he found that there was rubbish, his fire was bad, the coal nothing but slate. Then he poked it; then the dust flew over the clothes; then the mother-in-law came in. "Oh! such a Cottage of Content as he had come home in his tantrums!" as the old woman said who came to wash, "she never saw in her life."

It is just possible that he became affected by the domineering spirit of his uncle, when he himself had been operated upon, and came home to discharge his overladen battery upon these defenceless women, because he could find no other vent for it As children who have been beaten and starved domineer over [illegible] selves, forgetful of their oppressors, and seem retailing the tyranny which they have had dealt out to them in smaller quantities to such as they compel to take it.

Like a patient angel his wife sat amid these domestic storms, and looked on

More s row than in anger,

rarely r epoaching him, but sometimes placing her hand gently on his arm, and giving him cause to the words "Dear Fred;" and we will do him the justice to say that she never unt died in vain

There was now no smoking in the garden, or whiling away the hour in the pretty summer-house; nothing but the rustle of the dry leaves, the autumn wind moaning about the cottage, as it came over Forest Hill, or sweeping across the naked woods that overlook Sydenham. The birds and flowers were gone; and it seemed as if the wilder elements, now finding "space and verge enough," came to fill up the pause, and lend their sea-like voices over the solitudes Fred's specimens were all dead, and his study of natural history, for the season, at an end

Then he began to think how he had sacrificed himself by marrying a laundress's daughter; how, but for that, he might then have been rolling in plenty a partner in his uncle's business a great man in the City, coming to town every morning in his gig, being bowed and nodded to by the wealthy merchants, and we know not what beside. Poor ungrateful mortal! what was all the wealth in the world compared to that love which was ever showered upon him, in a hundred little attentions—secret proofs of sincere affection, which sought for no other reward but a smile, which looked for no other return than to see that they gave pleasure to the receiver. She seemed to bestow no thought upon herself, but only to live to make others happy: she was like an image of Peace between Fred and her moth [illegible] [illegible] [illegible]

WATERING-PLACES OF DEVON.

SIDMOUTH.

SIDMOUTH.

WE have the experience of a travelled writer in favour of a winter residence in Devonshire, in preference to a visit to Italy; and this opinion was given long before the classic land became harrowed up by Revolution, that has shaken the country to its very centre. "The more I see of Italy," says the writer referred to, "the more I doubt whether it be worth while for an invalid to encounter the fatigues of so long a journey for the sake of any advantages to be found in it, in respect of climate during the winter. To come to Italy with the hope of escaping the winter is a grievous mistake; this might be done by getting into the southern hemisphere, but in Europe it is impossible: and I believe that Devonshire, after all, may be the best place for an invalid during that season. In Devonshire, too, all the comforts of the country are directed against cold: here all the precautions are the other way. The streets are built as much as possible to exclude the rays of the sun, and are now as damp and cold as rain and frost can make them. And then what a difference between the warm carpets, the snug elbowed chair, and the blazing coal fire of the English winter -and the stone staircase, marble floors, and starving casements of an Italian house The only advantage of Italy then is, that your penance is shorter than it would be in England; for I repeat that, during the time it lasts, winter is more severely felt here than at Sidmouth, where I would even recommend an Italian invalid to repair from November till February, if he could possess himself of Fortunatus' cap to remove the difficulties of the journey."

Sidmouth is one of the most favoured of these western retreats. The mean temperature averages about three degrees warmer than London; and the difference is more decided during the winter months, at which time, in the more sheltered situations, its excess is from four to five degrees. Like Torquay, the town lies picturesquely sheltered. The beach is nearly in the centre of one of those hollows or curves which are abundant within the vast bay of Devon and Dorset extending from the Isle of Portland, on the east, to Start Point, on the west. At each end of the curve, east and west, rise two hills, about 500 feet high, running north and south, forming a deep valley between. Along the bottom of this valley lies the town of Sidmouth, with a considerable portion of its front towards the sea. On the slopes or sides of the valley, extending a mile or two inland, are the suburbs, studded with marine villas and cottages. These two hills, Salcombe and Peak, continue their shelter to the town till Harpford and Beacon hills on the one side, and Penhill on the other, take up its defence on the north-west and north. Sidmouth, by these hills, is sheltered from every quarter except the south, which is open to the sea, and may be considered as completely protected from all cold winds; for those from the south

EXMOUTH, FROM STARCROSS.

old or piercing in Devonshire. "Snow," says Dr. Mog- picturesque sketch of this place, "is seldom witnessed, and in very ... ons, when the surrounding hills are deeply covered, not a vestige, not a flake will remain in this warm and secluded vale."

The sea-wall, completed in 1838, not only defends the town from any further encroachments of the sea, but forms a dry and very agreeable promenade two- wards of 1700 feet in length. We need scarcely add that the town has the accommodation of a well-appointed watering-place.

The road to Exeter, with the lanes branching from it, and the Honiton road to the villages of Sidford and Sidbury, the former about two miles, and the latter three, on the same road (especially the latter), are scarcely to be exceeded for ruddiness and beauty of scenery. Whilst on this road, we would recommend the pedestrian or equestrian to endeavour to reach Penhill, merely to take a survey of the valley looking towards the sea. To attain the loftiest of the hills in this hilly neighbourhood—that of Sidbury—the stranger will take the road to the right, a little after leaving the town, over the bridge, and a zig-zag road or path will bring him there. From the summit of this cloud-capped cliff is seen the Dart and Channel, stretching far and wide on one side, and a most extensive land view on the other even to the Dartmoor Hills, forty miles distant.

EXMOUTH,

THE twin View, sketched by the artist from Starcross, is the oldest watering-place in the country, and was one of the principal ports of Devonshire in the reign of King John. In a chart drawn in the reign of Henry VIII., this place is set down at the mouth of the Exe, with a church and five or sixhouses surrounding it. For three centuries, the whole town consisted of a few straggling houses down the side of the hill to the east, and a few more towards the west, called the Strand. The sea at this time covered nearly the whole of the ground on which the north-western part of the town is now built, and washing the base of the cliffs on the north of the present turnpike road, on entering the town from Exeter. An embankment was commenced early in the present century; and a number of houses in the neighbourhood of the Parade and Beacon first gave to Exmouth the name of watering-place, and led to the buildings on the face or brow of the hill, called the Beacon-hill, which now forms the centre of its attractions. The Rolle family have been its great and generous patrons; the church and the market-house, the sea-wall, and nearly all the improvements have been made at their suggestion and expense. "The climate here," says Dr. Shuster, "partakes of the same character as that of the district, modified by the sea only; an inhabitant to whose opinion I would defer, thinks it more equable than on the coast, and that this may in some measure be owing to its exemption from the damp vapours so often experienced in the valley towns."

THE GREAT EXHIBITION OF 1851.

AN EXPLANATORY ANALYSIS OF THE RECENT STATUTE LAW AND REGULATIONS FOR GRANTING A PROVISIONAL COPYRIGHT IN THE DESIGNS OF SUCH ARTICLES AS ARE INTENDED FOR EXPOSITION IN THE EXHIBITION OF 1851.

AN act of Parliament and certain regulations consequent upon it have provided for a danger which, without such caution, might have occurred to most of the exhibitors at the forthcoming mighty Exposition of 1851. The articles of ornament and utility—many, perhaps most of them, of curiously original pattern and design—which the exhibitors were about to display, were liable to be copied, even on the first day of the Exposition, by any one who saw them, and the copies to be sold everywhere, before the proprietors could have a chance of realising the just remuneration which would subsequently attend the application of their models to the purposes of sale or profit on their own account.

The law, as it stood, gave an expensive and somewhat unnecessary remedy for this. According to that law, the designs of articles of ornament and utility obtain a complete copyright, on condition of registration at the Designs Office and the payment of rather heavy fees, which copyright protects the designs, and the articles made from them, not only in their exposition, but in their sale also. Now, as selling is not contemplated or proposed at the forthcoming Exhibition, protection to this extent would not be required. A mode has, therefore, been adopted, of granting a temporary copyright for a year or eighteen months, at a little, and, indeed eventually, no expense, on a simple plan, which will, no doubt, answer the purpose just as well. To make this clear to all—especially to those about to exhibit—it is materially necessary that we here propose to explain matters by detailing, as plainly as possible, first, the previous still existing law; and, then, the recent new law, grafted as it is upon the former.

Before, however, entering upon the subject, we would have it clearly understood, that the law of copyright of designs—whether the prior or the recent law—has nothing whatever to do with the law of patents for inventions. The distinction between the one and the other is positive and clear. The invention for which a patent may be procured, is a new art of working or making manufactures or articles of commerce, without regard to their shape or appearance, whilst a design which may obtain a copyright consists in the application of a novel and original pattern or form to any article of wear, ornament, or use already discovered or made. This distinction must be kept in mind in referring to the law we are about to unfold; since it relates merely to designs, and not even to patents, which are a far more difficult and far more expensive means of protection.

THE LAW OF COPYRIGHT OF DESIGNS AS IT WAS BEFORE THE RECENT ACT.

To begin with the prior and still-existing law of copyright of designs. This law is based on two acts of Parliament, viz. the 5 and 6 Vict., cap. 100, called the "Designs Act, 1842," and the 6 and 7 Vict., cap 65, called the "Designs Act, 1843." The former of these statutes relates to ornaments, the latter (which is an amendment and extension of the former) to articles of utility.

As to Ornaments, the copyright (for terms of years, or for shorter duration—see the table below) to any new and original design (except designs mentioned in the Sculpture Copyrights Acts, of which we shall presently speak), whether such new and original design be applicable to the ornamenting of any article of manufacture or of any substance artificial or natural, or partly artificial and partly natural, and whether the design be so applicable for the pattern, the shape or configuration of the article, or for the whole or any part of such purposes; and by whatever means the design may be so applicable, whether by printing, painting, sewing, modelling, casting, embroidery, weaving, embossing, engraving, staining, or by any other means whatsoever, manual, mechanical, or chemical, separate or combined.

As to Articles of Utility, a copyright for three years is given to any new and original design for the shape or configuration either of the whole or of any part of any article of manufacture having reference to some purpose of utility, whether such article be made in metal or any other substance.

Under the copyright the authors or proprietors of the respective designs of articles of ornament or utility have the sole and exclusive property in them, either for the purpose of exposition or sale, or for any purpose whatsoever.

The duration of this copyright depends on registration, on certain conditions, at the office of the Registrar of Designs, and the payment of certain fees, varying from five shillings to ten pounds.

Any person, without the registered proprietor's written license, infringing such copyright, is to forfeit for every offence a sum not less than five, and not more than thirty pounds, to the proprietor, who may recover the penalty either by an action at law, or summarily before two justices of the peace. Instead of this penalty, the proprietor may bring, if he elect to do so, an action for the recovery of the damages he has sustained by the infringement of his copyright.

By this registration under the Designs Acts of 1842 and 1843, the complete copyright or property given to the author or proprietor of any new or original design for any article of manufacture or substance may be further shewn, with the various terms and the various fees as specified in classes, in the following table:—

ORNAMENTAL ARTICLES— Class	Articles.	Copyright.	Registration Fees.
1.	Articles composed wholly or chiefly of Metal	3 Years	£ s. 3 0
2.	Articles do. do. Wood	3 ,, ...	1 0
3.	Articles do. do. do. Glass	3 ,, ...	1 0
4.	Articles do. do. do. Earthenware, Bone, *Papier Mâché*, or other solid substances not included in Classes 1, 2, and 3	3 ,, ...	1 0
5.	Paper-Hangings	3 ,, ...	1 0
6.	Carpets, Floor-Cloths, and Oil-Cloths	3 ,, ...	1 0
7.	Shawls (patterns printed)	9 Months	0 1
8.	Patterns (not printed)	3 Years	1 0
9.	Yarn, Thread, or Warp (printed)	9 Months	0 1
10.	Woven Fabrics (patterns printed), except those included in Class 11	9 Months	0 1
11.	Woven Fabrics, Lace, Lace patterns printed, the repeat exceeding 12 inches by 8 inches)	3 Years	0 5
12.	Woven Fabrics (patterns not printed)	12 Months	0 5
13.	Woven Fabrics, Damasks, Copyright extended to ...	3 Years	1 0
	Lace, and all other Articles	12 Months	0 5
ARTICLES OF UTILITY		3 Years	10 0

By the recent act, the 13 and 14 Vict., cap. 104, s. 9, the Board of Trade may order the period of copyright (in the case of ornamental designs (but not the copyright of articles of utility) to be extended for a period not exceeding three years in the above table damasks have obtained this extension, pursuant to an order of the Board of Trade, dated 8th November, 1850.

SCULPTURE COPYRIGHT.

For [illegible] law, it is enacted that every author, [illegible] the law so [illegible] the Act, [illegible] the 5th day of [illegible] original [illegible] part of [illegible] shape or [illegible] cast from nature [illegible] enjoys a copyright of [illegible] the first [illegible] publication; in addition to which a further [illegible] copyright is merely [illegible] before publication. [illegible] further [illegible] necessary to make the copyright by the above acts. Of registration, for further protection, we shall speak directly.

The remedy given for an infringement of this sculpture copyright, is an action at law, with double costs of suit, which must be brought within six calendar months after the discovery of the offence. We [illegible] see directly how the new law gives a more summary redress to the sculptor, on the fulfilment of certain further conditions.

THE NEW LAW.

This law is created by an act of Parliament passed last August. It is the 13th and 14th Vict., cap 104, and is to be called "The Designs Act, 1850." This act nowise repeals the former law under the above two Designs Acts of 1842 and 1843 and the two Sculpture Copyright Acts, but, on the contrary, it extends and amends it. The new law is made to [illegible] however, particularly and expressly intended for such exhibitions as that of 1851, and may, indeed, be said to have originated on account of that Great Exhibition only, though it is not merely confined to it.

The chief object of this new law is to protect the exhibitors in the original and useful designs in the Exhibition, and to give them the benefit of the copyright laws during the time of their exposition, without putting the authors or proprietors to the great expense of obtaining such a complete copyright as, not having a present sale in view, they might not require

We now proceed to detail this law.

By the new law, "The Designs Act, 1850," a provisional copyright of one year (which may be extended to a further period not exceeding six months, by order of the Board of Trade) is given to the author or proprietor of any ornamental or useful design mentioned in the above table. We may as well again briefly enumerate such designs:—

1. ORIGINAL DESIGNS FOR ORNAMENTING
Articles composed wholly or chiefly of Metal
Articles composed wholly or chiefly of Wood
Articles composed wholly or chiefly of Glass
Articles composed wholly or chiefly of Earthenware, Ivory, Bone, *Papier Mâché*, and other solid substances
Paper-Hangings.
Carpets, Floor-Cloths, and Oil-Cloths
Shawls (patterns printed and not printed).
Yarn, Thread, or Warp (printed)
Woven Fabrics (patterns printed and patterns not printed)
Lace and all other Articles.

2. NEW AND ORIGINAL DESIGNS FOR THE SHAPE OR CONFIGURATION, either of the whole or of part of any Article of Manufacture, such new shape or configuration having reference to some purpose of utility, whether such Articles be made in metal or any other substance.

This provisional copyright is given strictly on condition that there be no sale or exposure for sale. If the proprietor of such copyright sell, expose, or offer for sale any article, substance, or thing to which his design is applied, he forfeits the provisional copyright. He may, however, sell or transfer his right and property in the design itself, without injuring the copyright.

The copyright is, moreover, not destroyed by the proprietor exhibiting or exposing his design, or the article to which the design may have been, or be intended to be, applied in any place, whether public or private, *in which articles are not sold, or exposed, or exhibited for sale, and to which the public are not admitted gratuitously*, or in any place which shall have been previously certified by the Board of Trade to be a place of public exhibition within the meaning of this act; nor will a published account, or description of such design in any catalogue, paper, newspaper, periodical, or otherwise, destroy the copyright.

This copyright, be it observed, ceases at the end of twelve or eighteen months granted, and no further copyright of any kind for the same design can then be had. But, *at any time during the existence* of this provisional copyright, may be converted into a complete copyright under the former two Designs Acts of 1842 and 1843, on registration and payment of fees pursuant to those statutes and the rules of the Designs Office.

The provisional copyright depends, moreover, on registration and the payment of some slight fees.

The registration required will be sufficiently explained in the rules issued from the Designs Office, 4, Somerset-place, Somerset House. The following is a brief sketch of those rules

ORNAMENTAL DESIGNS.—Persons proposing to register a design for ornamenting must deliver or transmit to the Designs Office in Three exactly similar copies (drawings or tracings), or prints of it. 2. The name and address of the proprietor or proprietors, or the title of their firm.

These copies may consist of portions of the manufactured articles (except carpets, oil-cloths, and woollen shawls), when such can conveniently be done (as in the case of paper-hangings, calico prints, &c.)

2. DESIGNS FOR THE PURPOSES OF UTILITY.—Persons proposing to register a design for purposes of utility must deliver or transmit to the Designs Office the following particulars:—1st. The title of the design. 2nd. Three exactly similar drawings or prints of it. 3rd. The name and address of the proprietor or proprietors, or the title of their firm. 4th. Statement of the purpose of utility to which the shape or configuration has reference. 5th. Description in writing of the design. 6th. A short and distinct statement of such part or parts (if any) as shall not be new or original

The [illegible] about registering a design will obtain full particulars at the Designs Office, 4, Somerset-place, between four and five o'clock.

After registration [illegible] made according to the rules [illegible] the design must have, to preserve the provisional copyright, the words "Provisionally Registered," and the date of registration given to it.

By the Act for [illegible] this respect of ornamental designs, and [illegible] in respect of the designs for articles of utility. The registration is to be effected at the Designs Office, 4, Somerset-place, between eleven and three. But with regard to the Exhibition of 1851, the following special directions are issued: "When the designs registered have been certified as having been deposited in the Building of the Exhibition the fees will be returned; and on and after 1st February, 1851, the registry for the copyright of the Designs Office in Somerset House, exhibitors will be enabled to effect the registration at the Building of the Exhibition in Hyde Park without payment of any fees whatever."

The above necessary forms and conditions having been observed, and the provisional copyright being secured, the proprietor of the design may, from piracy, infringement, or fraudulent imitation, just as he would be under the Designs Acts of 1842 and 1843, viz. by a penalty of from £5 to £30 on the offender, to be recovered by action in the superior courts, or by summary proceedings before two justices; or, if the injured party prefer it, by an action against the offender for the actual damages sustained.

It may be also observed, that in all cases of infringement or piracy of copyright, the party injured, or likely to be injured, may apply to a Court of Equity to stop at once, by injunction, the further proceedings of the wrong-doers.

BENEFITS GIVEN TO THE SCULPTURE COPYRIGHT BY THE NEW ACT.

This copyright, as we have seen above, may be obtained without registration; and that its infringement has no other punishment under the Sculpture, Copyright Acts, than an action at law. By the new law, the Designs Act, 1850, a further protection similar to that granted for designs (i.e. the penalty from £5 to £30, and the summary remedy for piracy) is granted to the new and original sculptures, models, copies, and casts, as detailed above under the Sculpture Copyright Acts, during the whole or unexpired part of the fourteen or twenty-eight years given by those copyright acts. This sculpture copyright does not, for its further protection, depend on there being no sale nor exposure for sale. It is entirely independent of that, and is, in fact, absolute for all purposes. The condition for obtaining the further protection, consists in registration at the Designs Office, which is to be done on furnishing the registrar with a copy or description of the sculpture sufficient to identify it, with the proprietor's name and address, or the name or style of the firm under which he may trade. The sculptured article must also, after registration, be marked with the word "Registered," and the date of registration. The fee for sculpture registration is to be £5.

In conclusion, the following directions from the Designs Office may be useful:—

All communications for the registration of designs may be made either through the General Post-office, directed to "The Registrar of Designs, Designs Office, London," or by any other mode of conveyance and, generally, by the delivery of the parcel, &c., or a Parcel-Receipt order for the amount, payable at the Post-office, at No. 189, Strand, to James Hill Bowen Esq., Chief Cashier, the designs will be duly registered, and their fees duly paid, the parcels are free of expense. Postage-stamps, orders upon bankers or other persons, country and foreign bank-notes, and light gold, cannot be received in payment of fees. The Designs Office, No. 4, Somerset place, Somerset House, is open every day, between the hours of ten in the morning and four in the afternoon, during which time inquiries and searches may be made. Designs and transfers are registered from eleven until three, after which latter hour no money can be received for the same. Directions for registering designs for articles of utility may be procured at the office.

Finally, we would again call the reader's attention to the important fact, that the provisional copyright cannot be applied where protection by letters patent is necessary—a circumstance that may be easily ascertained, when we consider the extreme difficulty and great expense that at present attend the obtaining of a patent in this country. With regard to the law of patents, no short explanation will suffice. For that subject, as also for further details with regard to copyright, Godson and Peter Burke's works may be referred to.

Translations of the above Analysis, in the French and German Languages, will be found in the Number with which this Supplement is published.

THE CRYSTAL PALACE.

(To the Editor of the ILLUSTRATED LONDON NEWS.*)*

58, Pall-mall, 3rd January, 1851.

SIR,—In my letter of the 16th ultimo to your contemporary, I took the liberty to suggest, on the principle of truth in architecture, that the metallic character of Mr. Paxton's clever handiwork should not be destroyed by covering the same with any colour or colours misleading the mind with respect to the nature of the material.

Now, as iron, exposed to the atmospheric influences, requires coating, we cannot for a moment dispute the propriety of covering the present structure with a coat of paint as a preventive against rust. The question then arises, which is the proper and most appropriate mode of proceeding in this matter?

I suggested that a pale bronze, of moderate depth of tone of colour (neither too dark, nor too light) be introduced. My reason for so doing was, that, in my humble opinion, such a colour embodied the indisputable and unalterable principles of truth with respect to the nature of the material. The building is a metallic structure; *glass* and *metal* form its chief compounds—and if we attempt anything at all, it should be subservient to the main features of this material. And, as neither the cold and muddy colour of iron, nor the effect of a dismal British atmosphere, as seen through a plain white sheet of glass, will satisfy the discriminating artistic eye of a British or foreign public, I propose to ennoble both materials in a manner concordant with their true nature—the one, by transforming the iron into the nobler metal of bronze, and the other, from the simple state of common white sheet glass into the glowing brilliancy of the best specimens of York and Cologne Cathedrals.

There is an additional reason that induced me to recommend the use of a delicate bronze colour, inasmuch as it possesses a tranquillising—or, if I may use the expression, a peace-making medium—between the multiplicity of objects to be exhibited.

I consider we should not do justice to our exhibitors by applying to their wonderful and differently coloured productions such frames as would certainly, by their gaudiness, totally paralyse the effect desired by their producers. In a picture of Rubens, Tintoretto, Guido Reni, Joshua Reynolds, or any other artist delighting in the enchantment of colour, I need not say it would be right-down Vandalism to enclose the same in a gaudily decorated frame; and, therefore, on that account also, I maintain that the colour recommended by me is the proper one. I would carefully guard myself, however, from being misunderstood that the bronze colour is applicable to flat surfaces of walls. The flat surfaces of walls should receive a much lighter, and, in fact, a cheerful neutral tint, effecting (if I may take the liberty of so calling it) an harmonious contrast with the numerous exhibited objects.

A [illegible] more might, in my humble opinion, be done by the judicious introduction of coloured drapery; but I dare say, when the time of the Exhibition approaches, the clever discernment and sound judgment of the talented Committee will naturally be led to carry out many improvements so desirable in a national affair of so vast a magnitude, and in which the good repute of national taste is involved.

Meantime I cannot very well reconcile my architectural or artistic conscience to the taste of one of the numerous correspondents of the daily papers, who recommends cool sage greens, on the same grounds as mentioned before, that such tint, although pardonable, and even passable, in itself as a colour, does not at all remind us of the character of a metallic structure, and is only allowable on a moderate scale in the very bronze which I have proposed.

In leaving, then, the sage and pale onion greens proposed by one correspondent to the Capitolian feathered tribe in art, and the gaudy poles proposed by another to a gathering of the barbers,

I am, &c., FREDERICK SANG.

TO CORRESPONDENTS.
